calotte rising from the cube of masonry, was raised. This evolution of a rounded vault into a domed dome required the insertion of an octagonal intermediate story, the drum, and led in the interior to that development of the transition from the square to the round dome which constitute the constructive and decorative charm of all Muslim domed chambers (pictures of round vaulting in Diez, *Kunst der islamischen Völker*, Berlin 1913, 79). This development began with primitive corbelling, then passed to simple spherical corner arcades or *riches* and in the end took its own way in West and East, as will be dealt with under the separate countries. Alongside of this typical orthodox normal form of *kubba*, which is found from the Maghrib to the eastern Asiatic steppes and India, special forms, which are described under the different countries, arose in the lands conquered by the Turkish peoples, such as northern Iran, Mīzanderān, the lands of the Caucasus, Anatolia and Central Asia. The ornamentation of the buildings depended on the material and the systems of decorations in vogue in the different countries. So far and so long as brick predominated, we find also the primitive, probably almost always coloured, stucco covering, with which in Iran, and exceptionally also in Anatolia, is associated glaze, which gradually took the place of stucco. The stone buildings of the Ayyūbid and Mamlūk periods in Egypt and Syria, as well as in Anatolia and the Caucasus, attained their effects through alternating layers of colour and decoration in relief. The stone domes of the Cairo *kubbas* covered with geometrical patterns and scrolls rival the brightly decorated glazed domes of Iran.

We shall now deal with the form and development of the *kubba* in the various lands.

Maghrib. The *kubbas* or *marbūṭs* of the Maghrib are usually of uncertain age. Even the period of introduction of the different types is often difficult to determine. Comparisons with the architectural forms, especially with the decoration of the great dated mosques, sometimes afford a clue. The types of the different countries have their origins in old forms of the sepulchres of the people. The Tunisian type A has derived its octagonal drum from the monumental style; the Algerian type B shows the combination of the original domed circular structure with the later rectangle, with the addition of the pinnacles indigenous to African native architecture; the western type C also found in Spain conceals the dome under the pyramidal roof, which comes from building in wood and thus points to mountain valleys rich in wood and is a parallel phenomenon to the tomb of similar form in Mīzanderān on the south shore of the Caspian Sea. Type D is found among the *ṣomads* of the high Algerian plateau and follows the local style of building in clay of the nomad territory, with the egg-shaped dome and the usually tapering lower structure.

In view of this undoubtedly popular origin of the *kubbas*, we can hardly agree with the common assumption that the open type of *kubba*—a dome on four pillars—as represented in the *Cubola* in Palermo, is the oldest in the Maghrib (Marçais, *op. cit.*, 332). Several *kubbas* of the cemetery of Kayrawān might, according to Marçais, date from the same time as the domes of the Great Mosque (cf. Marçais, *op. cit.*, fig. 17). To the same group also appears to belong the *kubba* of Sidi el-Mazeri in Monastir which can be dated to the 6th/12th century.

In al-'Ubbād al-Suffi ("the Lower") near Tlemcen, Algeria, there are still several pre-Marīnid *kubbas* (i.e.

before 591/1195) built of brick and *pasé* on four pillars with horse-shoe arches and semi-niches pendentives as arcades and octagonal domes (Marçais, *op. cit.*, fig. 310). The walls were either crowned with wreaths of pinnacles or with corner pinnacles. In the old cemetery of Sidi Ya'qub outside Tlemcen is the "Tomb of the Sultāna", the rounded arches in nine sections of which piercing the eight sides of the lower drum make a date is the early 7th/13th century certain. The octagonal drum made the arcades superfluous here. The Kibbat Beni Merin ("Tombs of the Marinids") in Shāliā (Chella) near Rabat link up with the preceding type from Tlemcen. Here from 763-801/1361-98 were buried four successors of Abu 'l-Hasan 'Alī. One of these *kubbās* has a quadrangular drum, pierced by four horse-shoe arches, and a dome with twelve sections. The arcades have again the form of semi-pendentives. The mausoleum of Abu 'l-Hasan there, the most splendid of the Marīfud tombs, has also a square drum with slightly deformed horse shoe windows in three sides (H. Basset and E. Lévi-Provençal, *Chella, une nécropole mérinide*, in *Hesperia* [1922]; Marçais, *op. cit.*, 497). Next to these open *kubbās* just mentioned the closed *kubba* is by far the most frequent. These buildings have only one door, but within, three similarly formed blind niches. This is the form of the *kubbās* of Sidi Bū Medyen, the famous Spanish mystic, in Tlemcen which was already in existence in the 8th/14th century and restored at the end of the 18th century. The dome is divided inside by painting with intertwining bands into twelve sectors. The *kubba* in Tlemcen now called Sidi Brāhīm was built by Sidi Abū Hammūd Mūsā II (753-83/1352-86). The interior walls with the usual blind niches still possess their socles ornamented with glazes and their painted stucco relief. The dome divided into eight parts rests on Maghribi arcades in the form of semi-pendentives. These two last-named *kubbās* have pillared outer halls for the pilgrims. As elsewhere, in the Maghrib, particularly in Tunis, mosques and *madrasas* were rendered particularly sacred by the inclusion of a *kubba* (Marçais, *op. cit.*, 860).

Egypt. The oldest buildings of the *kubba* type in Cairo belong to the Fātimid period. The oldest is the *maghad* built by Badr al-Dīnānī, the builder of the second wall and its gates, and by his son al-Aīdal—the *maghad* of al-Dīyūshī on the Muḥaṭṭam hills. *Amir al-ḡuyūsh*, commander-in-chief of the army, was Badr's title. The date of the inscription was read as 478/1085 by van Berchem, *Notes d'archéologie arabe*, I, in *J.A.* (1891), 478-9 = *Opera minora*, Geneva 1928, 144-5. The building consists of a rectangular chamber, roofed by a high arcaded dome raised on an octagonal drum and five cross-vaults, which opens into a little court with three arcades on which a minaret is built (picture in Glück-Dier, *Die Kunst des Islam*, Propyläen Kunstgeschichte, 199; M. S. Briggs, *Muhammadan architecture in Egypt and Palestine*, Oxford 1924, figs. 35-8). The tomb chamber, left of the cupola, encloses the tomb of an unknown saint, whom the natives call Sidi Dīyūshī, and to which pilgrimage is made on certain days; van Berchem raises the question whether this is the tomb of Badr himself (*Notes*, 487-8 = *Opera minora*, 133-4; idem, *Une mosquée du temps des Fātimides*, in *Mémoires de l'Institut égyptien*, II [1888], 605-19). In the domed chapel is a finely painted stucco *mishrāb*. The transition from square to octagon is done with Persian single arcades which survive in Cairo down to the Ayyūbid period. Directly below the Dīnī al-Dīyūshī at the foot of the Muḥaṭṭam hills in the

Karāfa is a building similar in plan and construction to the *Maghad* on the Muḥaṭṭam, Dīnī al-Dīyūshī. It has no court or minaret. The arches here again have the Persian profile characteristic of the Fātimid period as well as the cupola. This building again is not a mosque but a *kubba*. There are four small *kubbās* of this period in the Karāfa near the *kubba* of Sidi 'Uqbā called by people *al-sab'a bandi* "the seven daughters" (van Berchem, *Notes*, loc. cit.). These are small square buildings with octagonal drum and cupolas, originally seven, already mentioned by Makrizi.

A *kubba* with tombs of 'Abbāsid caliphs situated behind the renovated mausoleum of Sayyida Nafīsa in the south of Cairo shows the characteristic forms of the transition to the Ayyūbid style (van Berchem, *Notes*, II, in *J.A.* [1892], repr., 20 ff.). A date 640/1243 in an inscription gives the *terminus ante*, which in view of the style of writing cannot be earlier than the beginning of the Ayyūbid period. Here the transition from square to octagonal drum is also produced through two series of *muḥarnas* [i.e.] niches which shows Turkish influence. This *kubba*, however, still follows Fātimid tradition as a brick building and in its stucco decoration. The profile of the cupola still retains its Persian form, indeed according to van Berchem, it is the only cupola of Cairo which still retains this cupola in completely characteristic fashion (*Notes*, II, 21). From the Ayyūbid period also date the *kubbās* of Sultān Šāliḥ Naḡm al-Dīn Ayyūb of 647-5/1249-50 and of his widow Šhedarat al-Durr of 648/1250. These are rectangular buildings of stone with octagonal drum and a thin, egg-shaped cupola with eight rectangular windows shooting up from it. Three keel-arched windows arranged in a triangle pierce each of the four principal sides of the drum. The façades of this *kubba* are ornamented with keel-arched flat niches and lozenge-shaped and circular shields decorated in stucco in the style of the Akmar mosque (519/1125) and other Fātimid buildings. In the interior, the transitions from the rectangular to the octagon are made with squinches and *muḥarnas*, the *mishrābs* were decorated with rich ornament and framed above with keel-arched *muḥarnas* in the form of a fan (pictures in the volumes of the Comité de Conservation, . . . in R. L. Devonshire, *Some Cairo mosques and their founders*, London 1922, fig. 32 and Briggs, *Muhammadan architecture*, figs. 72-5).

With the Bahri Mamūks (1250-1390) there began an increase in the height of the cupola by raising the drum, as could be seen in the ruins still standing in the early 20th century of the *kubbās* of the family of Sultān Kalāwūn (678-89/1279-90) (Dier, *Kunst d. isl. Völker*, figs. 187 and 153). The two *kubbās*, which were associated with *madrasas*, had rectangular substructures of stone with an octagonal drum of brick like those of the great mausoleums of Kalāwūn and al-Nāḡir Muḥammad. The two domes fell in and one was renovated. The interior of the drum had stepped recess niches with pillars from ancient buildings, but was otherwise bare. The substructures had windows of brick with pointed arches set into the stone walls, the fluted frames of which were decorated with stucco. The Syrian stoa and the local brick technique here encountered one another. With these ruins the last remnants of the *kubbās* of the Bahri Mamūks disappeared. The *kubba* of Kalāwūn himself is an exception; he had it built after the model of the Kubbat al-Sakhrā [i.e.] in Jerusalem, and therefore it is outside of the regular line of development. It also fell in, and was given a wooden cupola. In the

Bahri period, the melon cupola also appears in Cairo.

The *ḡubba* of Zayn al-Dīn Yūsuf, a Sūfī ḡayyḡh of the line of the Banū Umayyā, of 697/1298, is one of the most beautiful *ḡubbās* of Cairo, unfortunately much damaged in the interior by fire. The outside shows polygonal bevelling of the squinch area, a drum full of windows with a richly decorated calligraphic frieze about it, and a melon dome divided into numerous compartments. All the compartments and windows are framed in bands of stucco. The interior of the drum zone is broken up into richly ornamented, formerly painted, *mukarnas* (picture in Briggs, *op. cit.*, 73). On this rests a dome of 28 segments, the ribs of which are decorated with sprigs of leaves in relief and it is beautifully adorned at top and bottom by inscriptions (picture in Devonshire, *op. cit.*, 42). If the influence of the Central Asian style was already seen in the melon cupola of the *ḡubba* just considered, it became more and more powerful in the raising of the cupola, the drums of which were no longer borne by Persian squinches and the cell-work evolved from it, but by Turkish triangular consoles and their numerous interruptions and combinations with *mukarnas* honeycomb. The internal transition by means of such stereometric structures is henceforth shown outside also in triangular bevellings of the coxae of the drum storey. The dome is in the shape of a helmet and is placed like a helmet on the drum. The external decoration of these domes with network patterns of all kinds in high relief carved in glazed stone is one of the peculiarities of Cairo. The older so-called "Tombs of the Mamlūks" and the later so-called "Tombs of the caliphs" all belong to the second Mamlūk period and are similar.

Lists of the *ḡubbās* of Cairo are given in K. A. C. Creswell, *A brief chronology*, in *BFAO*, xvi, and Devonshire, *op. cit.*, 123-7.

Syria According to Wulzinger's list, there are still in Damascus and its neighbourhood over a hundred *ḡubbās*, which are there called *turba* and *raḡ* and are usually connected with small *madrasas* or *ḡimā's*. The general form is the same as everywhere else: a quadrangular-cubic building with a squinch storey, a window storey and dome. Nothing has survived from the Umayyad period. It was only under the Zangids and their successors the Ayyūbids that architecture began to flourish again. As, however, the sepulchral dome over the Nūrīyya *madrasa*, with its clusters of cells shows, architecture on the larger scale under Nūr al-Dīn b. Zangī was still dependent on other lands, and in this case imitated the Mesopotamian form (F. K. Wulzinger and C. Watzinger, *Damaskus, die antike und die islamische Stadt*, Berlin 1921-2, II, pl. 4b). Salāḡdīn's *ḡubba* above the 'Anṡīyya *madrasa* has a rather too small dome above the heavy substructure.

From the period of the Bahri Mamlūks, 1250-1390, many *turbas* still exist which are described by Wulzinger and Watzinger. Through the Crusaders, the Syrians learned to work in a way suitable to dressed stone. "A touch of Gothic, even in so far as the artistic side, the idea, the aesthetic norm is concerned, becomes perceptible in the time of Baybars, indeed half a century earlier, just as in Egypt. The dome now rises with still greater vigour, the drum becomes higher and the sikhonette steeper... In particular, the portal niche now becomes high and steep" (Wulzinger and Watzinger, 7). In keeping with this towering tendency, the *turba* of Rukn al-Dīn of 627/1224, which has a *masjid* associated with it, has already two transitional stories on a square sub-

structure, one octagonal with Persian concave squinches and the other 16-sided with windows, and a melon-shaped dome above (Wulzinger and Watzinger, fig. 42, pl. 8c and 9b). Very similar is the *turba* of 'Isa al-Dīn of 626/1228-9 and several others (Wulzinger and Watzinger, pl. 9a, figs 34, 35; pl. 7b, pl. 10a). A more modest type is represented by the Kildībiyya *turba* of 645/1247 built along with a *madrasa* for Sayf al-Dīn Kildī al-Nūrī. As frequently in Syria, there were originally here two domes separated by a gateway, but of the western one nothing has survived. Here one squinch-area was sufficient, since with the help of pendentive consoles the transition was made direct from the quadrilateral to the duodecagon, and then by twelve triangular consoles, which are placed in the spandrels of the twelve pointed drum windows, the round base of the dome was reached (Wulzinger and Watzinger, figs. 10-12; cf. also fig. 47). Open *ḡubbās* with four great gate arches are also found in the 7th/13th century (Wulzinger and Watzinger, pl. 7c). As an example of rich inner decoration with stucco-relief may be mentioned the al-Sālibīyya *turba* of the 7th/13th century (Wulzinger and Watzinger, pl. 12).

As in Egypt, so also in Syria under the Circassian Mamlūks, the architectural form rapidly lost vigour, and was replaced by a fondness for decorative detail (Wulzinger and Watzinger, 10). The exterior was brightened, as in Cairo, by the use of stones of many colours, which were also arranged in ornamental patterns. The dome shows a further tendency to increase in height. The Tāwūsīyya of 784/1382 betrays a marked slackening in creative power by its two window-storeys directly opposite and externally exactly like one another (Wulzinger and Watzinger, pl. 22b). As the al-Turkī *ḡubba* of 828/1425 shows, there are no further changes internally in the transition from square to octagon and sixteen-sided figure (Wulzinger and Watzinger, pl. 38a). The rich dome *mukarnas* of Egypt is not to be found in Syria, and it remained here confined to the niches of the gateway. Outside of Damascus we may mention the double dome of Khayrtek in Aleppo, also known as the *ḡubba* of Shayḡh 'Alī and Kā'it-Bay, of 924/1518 (Glück-Dier, *op. cit.*, 189 and Devonshire, *op. cit.*, 106).

The Ottoman *turbas* from 1517 A.D. offer, as in Egypt, little of interest and little variety. They are, as the *turba* of Darwish Pasha of 987/1579 shows, mainly octagonal with two drum storeys in the lower of which the corners are still decoratively rounded off with niches, although they are now functionally superfluous (Wulzinger and Watzinger, pl. 55).

Asia Minor and Armenia. In Saldūḡi Anatolia more than in other countries, the association of *madrasas* with the sepulchral domes of the founders was the rule. In Konya and the towns under its influence, such as Aksaray, we find in the open *madrasas*, as in those with domes courts, at each side of the *ḡubba*-*ḡimā* in the main axis behind the court a domed chamber, one of which is usually used as a tomb, the other as a lecture room; exceptionally both are tombs (Indge Minareli, cf. *masḡid*, Architecture). In Konya the transition to the dome is made partly still by lanthaped trikedal consoles and partly by sahent and re-entrant friezes of trikedal consoles (Kara Tāḡ, 649/1252-2), Indge Minareli, 650-684/1252-83, Sirdjeli *Madrasa*, 621/1243-4). The earliest, still clumsy, trihedal console friezes shrink in the course of development to narrower, ornamental friezes. This abstract stereometric rounding-off of the angles was brought by Turkish architects from Central Asia where they had developed it in wood-

work. In the more eastern Anatolian towns like Niğde, Kayseriya etc., the system of transition with arcades, most used in Iran and Syria, predominates. In addition to those already mentioned, attention may be called in Konya to the *turba* of Fağhr al-Din 'Alī (566-82/1267-83) which was also built as a *madrasa* with two domed sepulchral chambers (cf. F. Sarre, *Konya*, reprinted from *Persische Baudenkmäler*). The independent *ḡubba*, usually called *turba* or *ḡumbād*, also *ḡumbarī*, forms in Anatolia and Armenia a uniform group of tent-like buildings, mainly of stone, polygonal in Asia Minor, round in Armenia, with pyramidal or conical roofs.

A list of the more important *turbas*, so far as they have been published, follows. In Kayseriya: Çifte Gumbed, 645/1247; Döner Gumbed, 695/1276; Sirdeli Gumbed, 750/1349; 'Alī Dīqā'far, 750/1349; Amir 'Alī, 751/1350, all of stone, octagonal with pyramidal roof, except the last named which is square (cf. A. Gabriel, *Monuments turcs d'Asie mineure*). The transition from the polygon to the round dome is here usually effected through rows of pointed arches. The Köh-Madrese in the same town (740/1339-40) has an octagonal *turba* standing in its court. The mosque of Lala Paşa has an octagonal *turba* of the 8th/14th century built on to it. In Niğde the mosque of Sankur Bey has an octagonal *turba* of the year 620/1223 added to it. Outside of the town stands the octagonal *turba* of Khudabanda (712/1312-13); there are also several undated *turbas* in the vicinity (Gabriel, *op. cit.*). In Siwas is the octagonal *turba* of Husayn b. Dīqā'far of 629/1231-2 and the square one of Shaykh Hasan Beg (Guduk Minder) of 748/1347 (cf. van Berchem, *Mémoires pour un Corpus . . . Asie Mineure*, i. 27 and 39, pl. ii). In Diwrigi are the octagons of Amīr Kamāl al-Dīn, 529/1134-5 and of Amīr Shāhshāh (Sayyida Malik), 539/1134-5, also an anonymous *turba* (van Berchem, *op. cit.*, 94, pl. xli). In Tekke, a village near Zara-Diwrigi, is the undated *turba* of Shaykh Marzubān. In Beyşehir the Ashraf Rūm Dīqā'far has a square *turba* attached to it with a conical roof, the inner dome of which is decorated with unglazed mosaic such as we occasionally find in Konya. These stone *turbas* are usually decorated on the outside with bands of relief and in the entrance doorway with *muqarnas* lunettes. Of the *turbas* in Akşehir, Sarre mentions that of Sayyid Maḥmūd, 621/1224 (*Kleinasiens*, 22; CL. Huart, *Epigraphie arabe d'Asie Mineure*, in *Revue égyptologique* [1894:5]).

In Armenia there are several *turbas* of structural interest by Lake Van. They are cylindrical, like most northern Iranian sepulchral towers, with cement walls faced with hewn stone in the Armenian tradition, and occupy a special position in view of their subterranean tombs. The latter are vaulted on a square base and have concealed entrances. The interior chambers vaulted with pointed arched domes are therefore above the level of the ground, reached by steps and used as chapels. These sepulchral towers have further four entrances facing the four quarters with *muqarnas* lunettes. The exterior is decorated with arcades in relief and Armenian two-sided niches with friezes of *muqarnas* at the top. The combination of Turco-Islamic and Armenian traditions of structure constitutes their particular charm. The three great *turbas* in Akhlāt date from the end of the 7th/13th century, the small one from 862/1457-8, the *turba* in Voestan from 736/1334-5 (cf. W. Bachmann, *Kirchen und Moscheen in Armenien und Kurdistan*, 1913; Dies, *Kunst d. isl. Völker*, fig. 126 L, 128 L).

Ottoman Turkey. The building of *turbas* continued under the rule of the Ottomans without, however,

new types of artistic interest being created. The polygonal shape continues. The buildings show a stereometrically clear articulation of the façades, with triads of windows with pointed arches framed by straight lines. The often too large number of windows and the glazing of the windows make these *turbas* as a rule look plain and practical. In addition, the inner chambers lose in atmosphere by being too well lit and overfilled with sarcophagi. To give a list of the monuments by name seems hardly worth while here, in view of their large number and uniformity, as well as their lack of significance in the history of art; see on them G. Goodwin, *A history of Ottoman architecture*, London 1971.

Irāk, Iran and Central Asia. In Irāk and Iran the normal type of *ḡubba* was preceded by indigenous tomb-buildings. In Irāk these are the polygonal tombs with *muqarnas* domes above them, of which the best known example is the tomb of Sayyida Zubayda near Baghdād. Others are al-Nadīmī, al-Ashbā, Imām Dūr, Imāmshāh Taīl, etc. This type was also taken to Kūm (figs. in Sarre-Hersfeld, *Archaeologische Reise im Euphrat- und Tigris-Gebiet*, Berlin 1911-20; Sarre, *Persische Baudenkmäler*; Dies, *Kunst d. isl. Völker*, 100-101; or p. 29, 72-74 and *MUQARNAS*). Kūm (p. 29), as one of the holy places of Iran since an early date, still offers, with its 16 *ḡubbas* still standing, the most fruitful source for the study of this type in Iran. They are almost all octagonal with an inner dome, which is covered over by a polygonal tent roof. With one exception, they are built of red brick and have roofs of blue glaze. They date from the 6th/12th to the 10th/16th centuries. They are Shāhshāh Ibrāhīm, an octagonal domed building with eight high deep niches, a Saldjūk (?) precursor of the similar Safawid type (Khōdja Rahīf); Shāhshāh Ibrāhīm near the Kāshān Gate of 721/1321 and restored in 805/1402; Shāhshāh Ismā'īl 776/1374; 'Alī b. Dīqā'far 740/1339; 'Alī b. Abī 'Imād al-Dīn near the Kāshān Gate 762/1359; Khōdja 'Imād al-Dīn near the Kāshān Gate 792/1389; Khōdja Djamāl al-Dīn near the Kāshān Gate; Shāh Sayyid 'Alī outside the Rayy Gate; Shāhshāh Ahmad outside the Rayy Gate; Shāhshāh Imāmshāh outside the Rayy Gate; Shāhshāh Dīqā'far 707/1307; Shāhshāh Ahmad (Khōdja Farāgh); Shāhshāh Ahmad Kāsim; Chāl Akhtarān 905/1499; Shāhshāh Hamza; Shāhshāh 'Abd al-Bāh (A. U. Pope, *Preliminary report on the tombs of the sultans at Qum*, in *Bull. of the Amer. Inst. for Persian Art and Archaeology*, lv/1 [1935]). The Imāmshāh Karrār in Buzdān dated 528/1134 east of Isfahān was published by M. B. Smith and E. Herzfeld (*Arch. Mitt. aus Iran*, vii [1935]). It contains splendid stucco decoration. In northern Iran along the Elburz chain, much more frequently than the normal *ḡubba* we find in the period of the 4th/10th to the 7th/13th centuries cylindrical sepulchral towers of brick, usually called *mīl* or *ḡumbād*: Djurdjān, Rayy, Radkūn, Dāmghān, Denāwend, Kishwar, Wāramān, Nakhshewān, Marāgha, Bistām, etc. (figs. in Sarre, *op. cit.*; Dies, *Chur. Erdem.* and *Kunst d. isl. Völker*, etc.).

The type is found with variations beyond Iran as far as Khwārazm (Old Urgendī), although the norm in Central Asia is the domed *ḡubba*. These towers are mediaeval descendants of the very ancient Central Asian tombs, which were built by the sometimes nomadic, sometimes settled peoples of the steppes for their tribal chiefs and leaders. In form they are to be interpreted as a rendering of the prince's tent of the nomadic peoples in monumental form and sometimes they copy its textile character (cf. Dies, *Persien*,

islamische Baukunst in Churasan, 1923, 31-5, 73 ff.; R. Hillenbrand, *The tomb towers of Iran to 1350*, Oxford D. Phil. thesis 1974, unpublished). A particular type which is closer to that of the normal *kubba* developed in the province of Māsanderān on the southern shore of the Caspian Sea. These are quadrangular and polygonal brick buildings, with pyramidal tower-roofs mainly belonging to the 7th-8th/13th-14th centuries and are undoubtedly descendants of an older native type of wooden building (figs. in Sarre, *Persische Baudenkmäler*; Diez, *Kunst d. isl. Völker*, figs. 98, 99 or 75). The *kubba* proper was already latent in the old square building of stone with squinch dome, with which, however, it has nothing genetically to do. The few Sāsānid domed buildings of this kind that have survived are simply monumental examples of a much older Iranian type of house (cf. the eastern Iranian, Sāsānid domed building Rābāṭ Sefīd in Diez, *Persien*, fig. 2). Domed buildings of the *kubba* were probably already in use as fire-temples in the pre-Islamic period.

The oldest *kubba* in Irāk is, if Herzfeld's ascription is correct, the *Kubbat al-Sulaybiyya* in Sīnārā, which deserves our attention as the domed sepulchre of the caliph al-Muntaṣir, in which al-Mu'tazz and al-Mu'taḍī were perhaps also buried, as three graves were found: a domed building quadrangular in the interior, while outside the corners were cut off by the corridor-like octagonal pathway round it. The transition to the (now destroyed) dome was made by an octagonal series of squinches with niches, of which only fragments survive. There are four gates at the ends of the axes. The building follows the *Kubbat al-Ṣāḥra* in Jerusalem and its Christian predecessors (cf. E. Herzfeld, *Erster Bericht . . . von Samarra*, Berlin 1912, 28-32; Sarre-Herzfeld, *Arch. Reise in Euphrat u. Tigrisgebiet*, I, 83-6).

The oldest remaining *kubbas* in Central Asia and Iran date from the 3rd/9th century, and in contrast to Sāsānid domes, show an innovation in construction which opened up new possibilities of development: the corners are bridged over with keel arches instead of with the clumsy, funnel-shaped squinches proper. These, in smaller buildings, as in the *kubba* in Sāng-bāst, might be closed up with a filling of bricks arranged in a pattern, in larger buildings left open to the gallery passage behind, whereby the intramural passage which already existed in the great Sāsānid domes in Fārs in the squinch storey was now made visible for the first time and given an aesthetic function for the inner articulation of the chamber and the external articulation of the façades. The oldest *kubba* still preserved is the tomb of Ismā'īl b. Ahmad Sāmānī in Buḫārā of 296/907, the most celebrated and largest is the *ṭurba*—as Yāqūt calls it—of the Selḡūḳ Sultan Sanḡar (511-52/1117-57) in Marw. The building is of colossal dimensions. The square lower part, with walls 20 feet thick and sides 90 feet long, is 45 feet high and is crowned outside by a gallery 27 feet high, behind which rises the drum with the dome, originally covered with blue glaze, to a height of about 100 feet. The drum shows signs of its original concealment by a wall of niches, in the empty niches of which only the Buddhist idols are lacking to complete the resemblance to the stupas of similar structure—for example in Balḡh which is not far away. The direct connection between this decoration of the exterior of the *kubba* and the equally imposing stupas is undoubted. The gallery is ornamented with reliefs in brick and stucco. The interior walls are painted with ornamental designs, and have a frieze in Kūfic script around the top. The keel arches

bridging the corners connect the chamber with the gallery. Similar windows pierce the walls in the central axes. The spandrels between these eight windows in the zone of transition are decorated with *muḡarnas*. The vaulting of the dome which towers above this is adorned with ribbed arches arranged in fan-shaped and criss-cross patterns in plaster, a method of giving the dome a spheroidal shape, which in later buildings came to be painted and filled in with tessellated patterns (Diez, *Persien*, etc., 93 f.; E. Cohn-Wiener, *Das Mausoleum des Sultān Sanḡar*, in *Jb. d. As. Kunst*, xli/1, 1925; idem, *Turan, Islamische Baukunst in Mittelasien*, Berlin 1930).

In Old Sarāḡh on the Hart Rūd in the modern Turkmēnistān S.S.R. is a *kubba* similar in construction, but on a more modest scale (V. Zhukovskii, *Razvalini Sarāḡh Mera*, fig. 33). Two others in the region of the Muḡhāb and Zarāḡshan oases are Taḡhātān Bābā and Mazār Sultān Ismā'īl in Buḫārā, both of the 6th/12th century (Zhukovskii, *op. cit.*, figs. 30-2). Their squinches are still funnel-shaped like the Sāsānid ones and without a gallery. Like the tomb of Sanḡar, they are distinguished by their brick ornamentation and are evidence of a native pure brick style of a vigorous character in the Marw oasis area, of which Cohn-Wiener gives examples in his book. The small *kubba* with its richly decorated interior belonging to the former Rābāṭ of Sāngbāst in Maḡhāb is probably an outlier of this style on the Iranian highlands (Diez, *Churasanische Baudenkmäler*, 52 f., pls. 24-18; Glöck and Diez, *Die Kunst des Islam*, 192-3). The *kubba* of Sanḡar opens the important series of Central Asian-Iranian mausoleum *kubbas* of the 7th-11th/13th-17th centuries. If the emancipation of the squinches from the body of the dome and their becoming independent in an intermediate storey was the first step in this development, the second is the emancipation of the gallery storey from the squinch area. We see the process completed in the *kubba* of New Sarāḡh on the Persian side of the Hart Rūd, which was restored in the 8th/14th century, but probably dates from the beginning of the 7th/13th century (Diez, *Chur. Bldm.*, 62 fl., pls. 20-2; Glöck and Diez, *op. cit.*, 192). Here the gallery is included in the lower structure which makes the latter, and also the dome, higher. The dome is still resting on a square substructure with an octagonal drum formed by corner arches. This intermediate storey, however, no longer plays an important part in the articulation. It has already disappeared in the *kubbas* of Tūs almost contemporary with that of Sarāḡh (Diez, *Chur. Bldm.*, 55, pls. 19-20; idem, *Kunst d. isl. Völker*, coloured plate; idem, *Persien, Bauk.* in *Chur.*, fig. 40; Glöck and Diez, *op. cit.*, 191). In Tūs the four interior niches of the square main course have become broader, and these now become broader still. They were also made higher than before and linked up by a common framework with the niches above (cf. *Chur. Bldm.*, fig. 26, section). The four corner arches rising out of the squinches which make the transition from the square to the octagon are now also included by a common framework in the main body of the building, so that they no longer form as before a separate intermediate storey but bring about the change from square to octagon within the main storey. Formally, this is a fusion with combined effect, i.e. a step towards the decorative Islamisation of the interior. The development of the gallery as a factor in shaping the interior was thus more or less brought to an end. As Tūs is not dated (8th/14th century?), we cannot fix the time relation of this *kubba* with the Western

Persian one of Sultān Muḥammad Ūldjeytū Khudš-banda (703-16/1304-16) in Sulṭāniyya. In the interval, a variant had established itself there, the object of which was to transfer the gallery to the outside, an aim latent since the *kubba* of Sangar. We really have here a type of building of a different, namely octagonal, shape which, as Texier has already pointed out, was an Indian variant imitated in Iran. The interior gallery with corridor has here become a series of separate windows which resemble in shape and size the eight doorways below, so that two stories of equal size are created within, which gives the interior an effect of massive calm. On the other hand, a staircase within the wall leads up to a gallery above the window storey, which opens to the outside only and can no longer be regarded as an interior gallery. Equally peculiar are the eight minaret-like pillars which are placed at the corners of the roof terrace to buttress the dome (cf. the illustrations in *Kunst d. isl. Völker* and Diez's sketches in *Pers. Bakm.*). We shall return to this type of *kubba* in the section on India. Another *kubba*, the only one of its kind in Iran, is the Djabāli-Sing near Kirmān, an octagonal building of cement with dome and drum of brick, which resembles the Syrian *imbaras* (Diez, *Persien*, etc., 97 and fig. at p. 79; Creswell, *Persian domes before 1400 A.D.*, in *Burlington Magazine*, xxi [1913], 208, pl. 2). With the sepulchral dome of Ūldjeytū, the *kubbas* in Iran reached the considerable height of 165 feet.

Alongside of this line of development in construction, there was a second which began probably as early as the Salḡūk, but certainly in the Tīmūrid period; this aimed at the same object, the raising of the height of the dome, and attained it by other means, namely by a drum and double-shelled dome. In both cases, the aim is not so much to raise the height of the interior chamber as to give a towering effect to the exterior. For the inner shell of the dome makes the interior much lower than would appear from the outer shell. The Kubba-yi Sābz in Kirmān is the oldest—at latest dating from the middle of the 7th/13th century—sepulchral tomb of this kind (Diez, *Kunst d. isl. Völker*, fig. 115). The models for these towerlike stupas may possibly be found in the equally towerlike domes of Afghanistan and the Tarim basin, with domes built one above the other and chambers between them. Tīmūr's *kubba*, the Gūr-i Mir in Samarḡand of 808/1405, the dome of which structurally resembles the Kubba-yi Sābz, is the next monument of this style still standing; after it come the *kubbas* of the Tīmūrids at Shāh Ziād near Samarḡand and others in Herāt and Turkeṣtān (Diez, *Kunst d. isl. Völker*, fig. 116, 119; J. M. Rogers, tr., *V. V. Berthold's article O pogrēbni Timura ("The burial of Timūr")*, in *Iran, Journal of the RIPS*, xii [1974], 63-87). Gūr-i Mir has, it is true, a gallery, but this no longer opens on to the interior by open arches, piercing the wall, but only through grilles, which are in the plane of the wall, is it possible from the passage within the wall to get a glimpse of the interior, an innovation of decisive importance in the layout of the latter. In and around Herāt there were once many *kubbas*, of which only two still exist (Niedermayer-Diez, *Afghanistan*, figs. 163, 164; others east of Herāt (figs. 182-4).

The last phase of evolution in Iran was reached in the Ṣālawīd period. The very similar memorial buildings of Khudša Rabi' of 1030/1621 near Maṣḥad and Kadam-gāh of 1091/1680 east of Nīshāpūr (*Chen, Bakm.*, pls. 33, 39) are octagonal *kubbas* with galleries, which open to the outside in four great corner

niches. These buildings seem to have their origin in the Persian garden pavilion, as a comparison with the Herāt Bihisht in Iḡfāhān shows. But the idea of using garden pavilions as memorial buildings again comes from India. We may here mention also the *kubba* of Shaykh Dīām which has a court mosque and madrasa adjoining in Turbat-i Shaykh Dīām near the Afghan frontier, as an example of a *maṣḥad* on a large scale (Diez, *Chen, Bakm.*, 74 ff., pls. 35-7). The largest place of pilgrimage of this kind is the sanctuary of the Imām Ridā in Maṣḥad, with the domed sepulchres of the Imām (Diez, *Persien*, etc., figs. 44-56). In Afghanistan, the masters of Khudša Akeshi in Balkh and Maṣḥad-i Shāhī, with domed tombs, may be mentioned (O. Niedermayer-Diez, *Afghanistan*, 64 ff.).

India. The first Muslim dynasty to reign exclusively in India was descended from Rūṭh al-Dīn Aybak (q.v.), a former slave of Muḥammad Ghūrī who was installed by his master as viceroy in Dīhlī and on the latter's death declared himself independent (602/1206). It is only with this dynasty of the 'Slave Kings' or Sultāns of Dīhlī that monumental Muslim architecture begins in India. Nothing has survived of earlier buildings, which were probably built of perishable material. From the 7th/13th century, however, the building of tombs in the Muslim regions of India becomes important, and in keeping with the great expansion of Islam over the vast peninsula there are still in India far more *kubbas* than in the other lands of Islam. The influences interacting within the peninsula were very varied; the main genetic principle in the style of the *kubba*, as for all Indian Muslim architecture, can therefore only be said to be the combination of foreign and native Arabo-Turkish-Persian and Indian traditions. The amalgamation of these two traditions, which found expression in material, technique, shape and form, resulted in the manifold variations of the Indian types of *kubba*.

In the course of the general development, we can distinguish some ten different phases of style, or local styles (and when we use the word 'local' we must remember the great scale of India). Sir Alexander Cunningham distinguished the following styles (*Archaeological survey of India, Reports*, iii, iv): 1. The Indo-Turkish, which began with the Slave Kings dynasty, with pointed or overlapping arches of corbelled horizontal layers, i.e. still using the old Indian technique of vaulting, and with rich decoration in relief in stone: tomb of Sultān Iltutmish in Dīhlī (*Kunst d. isl. Völker*, fig. 228, 187). 2. The style of the Khilḡīs of the second dynasty (589-720/1290-1320), or decorated Turkish style with horseshoe arches of radiating layers and rich ornamentation. 3. The Tughlūkīd, called after the third Turkish dynasty (720-817/1320-1414), with sloping, very thick walls and cusped horseshoe arches. The domes rest on low drums and the walls of red limestone are panelled with white marble frames: *kubba* of Tughlūk Shāh in Tughlūkābād (op. cit., fig. 226, 188); also brick buildings inlaid with glazed bricks: sepulchral dome of Rūṭh al-Dawla in Multān. Later, we have still thicker walls without arches and inlay but with a covering of stucco, which was probably decorated and painted: *kubba* of Firūz Shāh in Firūzābād. 4. The Afghan style, called after the Afghan dynasties (Sayyids, Lodīs and Sūfīs) (817-962/1414-1555) with perpendicular walls, mostly octagonal mausoleums with arcades: tomb of Shēr Shāh (op. cit., fig. 224, 173); decorated with coloured stucco or with strips of glaze: *kubba* of Bahāuī Lōdī near Čirāk-Dīhlī; the octagonal mausoleums of

Sikandar in Old Khayrpur and others in Mubarakpur, Kotla and Khayrpur. Later, a coating of different coloured stones was preferred to the covering of stucco: mausoleums of Shēr Shāh and Husayn Khān in Sahasrām. 5. The Turkish style in Bengal, an independent provincial style; squat buildings of brick sometimes decorated with minute faience work: tombs in Hadrat Pandua (769/1368) and Gaur with curved brick roofs. 6. The Turkish style of the Sharāfids in Djawupūr (796-883/1394-1479) a provincial style similar to (1) and (2): tombs in Djawupūr. 7. The early Mughal style comprises the buildings of the reigns of Akbar and Jahāngir (963-1037/1556-1628). With the tomb of Humāyūn, finished in 980/1572, the Persian style established itself. In Akbar's tomb it again makes way for the Indian (here the old vibhāra type) to reappear in Jahāngir's tomb in Lahore—in the faience which decorates it, at least (ca. 1037/1630). Red sandstone is the material preferred. 8. The late Mughal style under Shāh Jahan (1037-68/1628-57) finds its most brilliant manifestation in the Taj Mahal, which shows the Indian and Persian traditions in perfect union.

To this list may be added: 9. The Deccan style, which covers the numerous sepulchral domes and around the old capital on the plateau of the Deccan, although they show as many varieties as localities and are only variations of the north Indian sepulchral domes of the Turkish dynasties who founded Muslim rule in the Deccan. 'Alā' al-Dīn Muḥammad Shāh of Dhillī was the first to establish himself here in 693/1294. Half a century later the Bahmanids succeeded in bringing the northern half of the Deccan under their rule (748-934/1347-1527). Their capital was Gulbargā [q.v.]. At the end of the 9th/15th century began the division of the Deccan under five dynasties: the 'Imād Shāhs in Berār (890-980/1485-1572), the Nizām Shāhs (897-1028/1492-1619) in Bidar, the 'Adl Shāhs (895-1097/1490-1686) in Bidjāpūr and the Kujb Shāhs (918-1098/1512-1687) in Golkondā. The most important sites for the study of the architecture are Gulbargā, the oldest capital, then Bidjāpūr, Bidar and Golkondā; Bidjāpūr, "the Palmyre of the Deccan", stands out from all for the richness and size of the buildings. The shape common to all domed tombs is here as in northern India a square building with a dome. Some of them, like the Ibrāhīm Rawḍa, the mausoleum of Ibrāhīm II (987-1096/1579-1626), and the incomplete 'Alī II Rawḍa of the last 'Adil Shāh in Bidjāpūr, are enclosed by long terraced arcades. Almost all the old buildings in the Deccan are built of hewn stone; in Bidjāpūr and elsewhere also we frequently find a reddish-brown basalt. The transition from the square to the dome was here again effected from the transition zone with corner arches to a kind of folding of the wall by means of crossing pendentive-like arches which led direct to the round of the dome without an intervening course. By far the largest of these tombs, indeed the largest ḥubba in the world, is that of Muḥammad 'Adil Shāh (1036-70/1626-60), the celebrated Gōl Gumbād in Bidjāpūr (pictures in *Kunst d. isl. Völker*, 223 and 271; *Die Kunst des Islam*, 319 and many other works); a square building with an interior diameter of 150 feet, i.e. larger than the interior of the Pantheon (110 feet). The interior narrows towards the top through a system of intersecting pendentives to a circular basis of about 105 feet in diameter no which rises the dome—leaving an inner gallery open—about 130 feet in diameter; the interior height is nearly 300 feet and the exterior 220 feet. The weight presses inwards through the pendentives, but is counteracted

by the weight of the dome, so that it was not necessary to counteract any outward pressure by massive walls.

In Gulbargā, which was the capital of the Bahmanids (748-920/1347-1514), still stand the simple ḥubbās of the early rulers of this dynasty, among them the tomb—here reproduced—of its founder Ḥasan Gangū 'Alā' al-Dīn (748-59/1347-58). The ḥubbās of the later Bahmanids from Ahmad Shāh Wali onwards (825-39/1422-56) are at Bidar and are already much larger and sometimes richly decorated, especially the mausoleum of Ahmad Shāh. The square building is transformed to the round by keel arches at the corners. The interior walls are brought into rhythm by three flat niches on each, of which the central ones on the north-south axis are opened as doors. The central niche on the west is deepened to form a pentagonal mihrāb. The niches are flanked with Indian pilasters. The painting of the interior is undoubtedly of later origin, but the old designs may survive in places. The painting of the dome resembles that of Khōdja Kabī' (in Khurāsān; see above), as does the frieze of inscription. Almost as large as that just mentioned, but without decoration in the interior, is the ḥubba of Mahmūd Shāh II (887-924/1482-1518). To this group also belongs an octagonal tomb without dome, obviously unfinished, which resembles the mausoleum of Khudābanda Shāh in Sulṭāniyya (Persia) and was built for Shāh Khālī Allāh Husayn, the iconoclast and saint, son of the tutor of Ahmad Shāh Bahman. The tombs of the Barīds who followed the Bahmanids are open ḥubbās standing on pillars.

The fine city of tombs of the Kujb Shāhs of Golkondā lies outside the town in a large walled garden, the ḥubbās of the last rulers of the dynasty, 'Abd Allāh (1045-83/1635-72) and of Abu 'l-Ḥasan (1083-98/1672-87), who died in Mughal captivity, built only up to the dome, outside the walls. The cubic buildings are sometimes surrounded by galleries of arcades as in Bidjāpūr. The bulbous domes rise out of a lotus pattern (see the illustrations). In the country around are ḥubbās of prominent families and saints, like the Čāhār Gumbād reproduced here. They belong to the same type. The last great group to be mentioned is: 10. The style of Guḍjārāt, with Ahmaddād as its capital, founded by the second ruler of the sultāns of Guḍjārāt, Ahmad Shāh I (814-46/1411-42); his descendants ruled till 998/1583. Ahmad Shāh's ḥubba or rawḍa in the centre of the town beside the 'Djāmi' Masjid, a square building with sides 90 feet long, consists of a domed chamber 35 feet high and four corner chambers connected by pillared halls. The preference for rich, pointed ornamentation peculiar to this style finds expression in the marble cenotaphs and fillings of the windows. In ḥubbās outside the city, as in the mausoleum of Deryā Khān of ca. 857/1453, we again find the Turco-Persian transition storeys with corner arches and gallery with a dome above built of horizontal layers (*Kunst d. isl. Völker*, fig. 214, and 182).

The most important groups have been mentioned. For the most notable Mughal tombs, which are only briefly mentioned above, see HIND, vii. Architecture, and MUḤĀLS, Architecture.

Finally, it should be noted that ḥubba "cover" occurs as a technical term in the construction of scales and balances, where the housing for the pointer (*hisān*), often used also as a carrying handle (cf. *Peñón de Alcalá: cōbba = manija del peso*), was called the ḥubba. See J. D. Latham, *The Interpretation of a passage on scales (mawāzin) in an Andalusian hisba manual*, in JSS, xliii (1976), 285-7.

(E. DIER*)

KUBBA (now Kuba), a district in the eastern Caucasus between Bākū and Derbend (q.v.). The district of Kubba, with an area of 2,300 sq. miles, is bounded on the north by a large river, the Samūr, which flows into the Caspian, on the west by the "district" of Samūr which belongs to Daghistan (q.v.), on the south by the southern slopes of the Caucasian range (peaks: Shāh-Dagh, 13,951 feet high, Bābā Dagh, 11,900) which separate Kubba from Shamākhā (cf. the article *gūṭawān*), on the south-east by the district of Bākū and on the east by the Caspian. The area between the mountains and the flat coast land is called *ḍiāl* (Vallée, I, 499; *ḍiāl*, "ad vegetationem principis destinatum nemus"). The plain between the rivers Yalama and Belbe is called Muskūr; Shābarān lies further north (cf. *gūṭawān*). The other cantons are Barmak (so-called after a member of the Barmakī family, who sought refuge here in the reign of Hārūn al-Raḡḡidī), Shish-pira, Tip, Khinalugh, Budagh, Yutkhur-bagh, Sirt, Anah-dara, and (sometimes) Kabistān (*Akh*, IV, 650).

The population in 1896 was 275,000; 36.7% Tāt (q.v.), speaking the Iranian dialect of Tāt; 25.3% of Agharbaydānī Turks; 24% of highlanders of the Kurā group (the Kurān (q.v.)); and 8% highlanders of the group (southeastern Daghistan group) formed of Khinalugh (q.v.), *Diek*, Kriz (q.v.) and Budagh, to whom the Udi of Shekid (q.v.) seem to be related. Muslims form 94% of the population (76.5% Sunnis, and 17.5% Shīʿīs). Jews, Russians and Armenians together number several thousands. The town of Kubba (16,300 inhabitants), only founded in about 1730, lies on the right bank of the river Kudāl; on the left bank is the Jewish quarter of the town. Near the mouth of the Kudāl is the roadstead of Nisābād (called Nizovaia by the Russians) which played an important part in Russian military operations in Transcaucasia.

The history of the district of Kubba, which at first must have formed part of the ancient Caucasian Albania, is mixed up with that of Shīrwān; Shābarān (now a ruined site on the river Kulhan, Russian Gulhian) had been an important centre inhabited by Christians (Mukaddasī, 376) before Shamākhā became the capital of Shīrwān. On the banks of the river Kulhan may still be seen ruins with a wall running

from the sea to Bābā Dagh. Near the town of Kubba is the tomb of the Shīrwān-Shāh Kāwūs b. Kaykubād (d. 774/1373).

It was only in the 18th century that Kubba enjoyed a period of independence. In the time of Shāh Sulaymān Ṣafawī, a member of the family of the ṣūmī of Kaytak (cf. *nāghustān*) called Husayn Khān arrived at the court of Isfahān. He became a Shīʿī and gained the favour of the Shāh, who appointed him Khān of Kubba and of Sāliyyān (at the mouth of the Kura). Husayn Khān built the castle of Khudād. His grandson Husayn 'Alī b. Ahmad, with the help of Peter the Great, regained the ancestral estates of the ṣūmī, but his position was threatened by the alliance of Surkhay, prince of the Kāzī-Kumūkh, with Hājīdīf Dāwād, religious chief of Muskur, who with the help of Turkey played a considerable part in Daghistan from 1712. Nādir Shāh restored Sāliyyān to Husayn 'Alī. After the death of Nādir, local dynasties arose everywhere. At this time Husayn 'Alī moved his capital from Khudād to Kubba where he built a town and annexed Shābarān and Kulhan. He died in 1771/1775. His son Fath 'Alī Khān who succeeded him sought the help of the empress Catherine II, who in 1789/1795 sent General de Meled to Derbend, under a pretext of avenging the death of the academician Gmelin, who had died on 27 June 1774 in captivity with the ṣūmī of Kayak. With the help of the Russians, Fath 'Alī re-established his authority over what he could regard as his hereditary *ḥef* (Daghistan, Kubba, Sāliyyān). He also took Shīrwān, and the Khān of Bākū appointed him his son's guardian. The influence of Fath 'Alī Khān gradually extended beyond the bounds of the district. In 1793/1798 he sent 9,000 men to Gilān to restore Hidayat Khān, who had been driven out by the Kājārs (q.v.). In 1802/1788 he seized Asidābil, whereupon the Shāh-sewān (q.v.) recognised his authority. The Khāns of Kara-Dagh and of Tabriz sought his support. Fath 'Alī is credited with ambitious designs on Agharbaydānī. To reconcile his plans with those of the king Irakli of Georgia, Fath 'Alī met the latter at Shamkūr (Shamkhor) but soon afterwards fell ill and died in 1802/1789.

The political and military work of Fath 'Alī Khān crumbled away under his successors. His young son Shāykh 'Alī Aghā (succeeded in 1791) had a very adventurous career. This young Khān relied on the support of the Kājārs, but Count Zubov took Derbend on 4 May 1796, and entrusted the government to his sister Ferīd-Jāhān Khānum. Taken prisoner by the Russians, Shāykh 'Alī Aghā escaped and renewed the struggle. On the accession of the emperor Paul, Russian policy suddenly changed and the Russian troops were withdrawn. Shāykh 'Alī returned to Derbend. In 1801 he and the other Khāns sent a delegation to Alexander I, but by 1805 he again fled. Shāykh 'Alī rebelling against the Russians to whom he caused continual trouble till 1826/1812. The khānate of Kubba was occupied by the Russians in 1806, and by the treaty of 1813 Persia renounced her claim to the eastern Caucasus. From its incorporation in the Russian empire, Kubba formed a "gouvernement" of Shīrwān (later of Bākū). Since 1919 Kubba has been part of the republic of Agharbaydānī, at first independent and then a Soviet SSR.

himself (1794-1846) was published at Baku in 1926 (*Travaux de la société scientifique de l'Azerbaïdjan*, part 4). The principal documents are in the collection by A. Bergé, Tiflis 1866 ff., 3-rii, index under *Darbūd-Kubba*. (V. MINORSKY)

AL-KUBBA, KUBBAT AL-ʿĀLAM, K. AL-ʿARḌ, K. ARṬH "the dome of the world, of the earth, of Arin", expressions used by the Islamic geographers and astronomers to denote the geographical centre of the earth (*wasaf al-ard*) at the zenith of which exists the *ḥubb al-samāʾ* or *wasaf al-samāʾ*; the *ḥubb al-ard*, defined as being equidistant from the four cardinal points or *qiblat* (see e.g. Ibn Rusth, 8, tr. Wiet, 7), is theoretically to be found at 90° from each of the poles and meridians of longitude zero and 180°, passing through the two extremities of the inhabited world (whether the longitudes are calculated starting from the east or the west). It is thus situated on the equator, and, for those authorities who followed Ptolemy, at 90° to the east of the meridian of the Fortunata Isles [see AL-BĠAZĀʾIR AL-KĀLIDĪY] taken as the starting point. Now, if the theoretical position of the *ḥubb* causes no problems, its localisation in practice does in fact pose an interesting one.

The author of the *Hudūd al-ʿĀlam* (tr. Minorsky, 56, § 4, No. 13) echoes a tradition which places the centre of the inhabited world in an island called Nara (read as Bāra by Minorsky) at a longitude of 90° east, and he adds that the astronomical tables and the position of the planets and fixed stars were calculated in relation to this equinoctial island (*istwāʾ al-ayl waʾl-nashāʾ*, cf. Ibn Rusth, 8, tr. 92, "l'Équatoriale"). However, al-Bīrūnī in his *al-Kānūn al-Masʿūdī*, whilst noting the fact that this island is mentioned by al-Fāzārī and Yaʿqūb b. Ṭārik, places it at 190° 50' longitude east, i.e. at 50° to the east of Yamakotī/Ḍamakotī/Ḍamagūd, which marked the extreme eastern boundary of the inhabited world, and he states that there are some more or less unknown places there. In his *Indice*, 137, tr. 4, 303-4, al-Bīrūnī notes that the name Yamakotī is reminiscent of Kankotī/Gangdā, which Abū Maʿshar al-Balkhī took as the starting place for the longitudes, calculated from east to west and no longer from west to east (cf. D. Pingree, *The Wonders of Abū Maʿshar*, London 1963, 41 and Index); al-Masʿūdī, *Murūdī*, II, 131 = § 555, recording an ancient Iranian tradition, attributes to Kay Kūshraw the foundation of Kankotī, and he notes specifically that certain authorities equate it with Yang-ch'ou; he further adds that several Chinese kings made it their capital. Al-Bīrūnī, *loc. cit.*, mentions Kay Kāwūs or Dīn/Ḍamāhid as founder of this legendary town which was to remain, at least theoretically, as the extreme limit of the known world for later scholars. Abū Maʿshar likewise places it to the east of China and at 90° from the *ḥubb al-ard*, but he identifies it with Urayn, which is a dangerous error.

The Indians used to calculate the longitudes from Lanka (Ceylon), whose southern tip is not very far from the equator, but they were led to displace the original meridian westwards and to adopt instead that of Uḡḡḡayn [4.0], which is near to the Tropic of Cancer but not at all near to the Equator. The name of this town, which has indeed a genuine geographical existence, was written in Arabic script *Uzayn/Uzayn* أُرَيْن [cf. Ibn Rusth, 32, tr. 19 and n. 6, with bibl.; al-Masʿūdī, *Tamāh*, ed. Šāwī, Cairo 1357/1937, 192], and then, by means of a wrong reading, *Arūn* أُرَيْن; it is under this latter form that this toponym appears in later works, that

it is transcribed in the mediaeval Latin translations, and that it appears even in some French lexica (Arise). Being unaware of the exact position of Uḡḡḡayn, some authors tended to consider it as an island in the Indian Ocean (cf. *Hudūd al-ʿĀlam*, tr. 190), or at least to place it quite naturally on the equator, totally unaware of their error (thus Ibn Rusth, *loc. cit.*, or al-Masʿūdī, *Tamāh*, *loc. cit.*). In this way, *ḥubb al-ard* and *ḥubb al-ard* became synonymous; an astronomer as recent as al-Rūdānī correctly defines the *ḥubb al-ard* or *al-ʿĀlam* as the point of intersection of the equator and the *dāʾirah* *naḡḡ al-naḡḡ* and still calls it the *ḥubb al-ard*, but he probably saw only there a traditional name without any direct connection with the town of Uḡḡḡayn.

Finally, it may be noted that the use of the word *ḥubb* to denote the geographical centre of the earth has given rise to the idea that a particularly high point of the earth is involved here. The Indian tradition which makes the zero meridian go through Ceylon, where Adam's Peak rises, may conceivably be influenced by this conception, which al-Bīrūnī attacked in his *Kāwūs* (cf. A. Bausani, in *Studies on Islam*, Amsterdam-London 1974, 28-9).

Bibliography: In addition to the sources already mentioned, see above all the *Hudūd al-ʿĀlam*, *comr.* 139, 245, 335-6; M. Reinsand, *Introduct. générale à la géographie des Orientaux*, Paris 1548, pp. cccxix ff.; Battānī, *Opus astronomicum*, ed. Nallino, Milan 1899-1907, passim; art. *BUCCALPIVA*. (CM. PELLAT)

KUBBAT AL-HAWĀ', "the Dome of the Winds", a popular appellation for isolated monuments situated on rocky spurs, for example, the (undated) domed tomb of a *shaykh* on the west bank of the Nile (cf. Murray's *Handbook for travellers in Upper and Lower Egypt*, 9th edition, ed. Mary Brodrick, London 1896, 920) above Aswān. This presumably postdates the destruction of an adjacent Coptic monastery, attested by a graffito, in Šams al-Dawla's Nubian expedition of 1173, though the monasteries of the area, to judge from desecratory Muslim visitation inscriptions in Arabic dated, *inter alia*, 694/1294-5. In the neighbouring monastery of "St. Simeon" (not mentioned in U. Monneret de Villard, *Description générale du monastère de St. Simeon d'Aswān*, Milan 1927), survived for a further century or more.

The most celebrated edifice of the name no longer exists. This is recorded by al-Kinī (*Faḍāʾi Misy*, ed. Guent, 147, II, 24-25; cf. al-Makrīzī, *Kāḡh*, II, Bāḡḡ 1853, 201, I, 211-202, II, 3-32) as a palace built by Ḥātim b. Harḡama, governor of Egypt in 194/809-11 on a spur of the Muḡattam hills. This was deliberately destroyed on the fall of the Tūlūnid dynasty and no trace of it exists. The exact site has been disputed, but its total disappearance makes it more probable that it was on the site later occupied by the Ayyūbīd Citadel of Cairo (K. A. C. Creswell, *The Muslim architecture of Egypt*, II, Oxford 1959, 6, and references) than higher on the Muḡattam hills in the neighbourhood of the Fāḡmīd *maḡḡad*, generally known as the Maḡḡad al-Dūyūḡhī. The site of this Kubbat al-Hawā' was subsequently converted into a cemetery, and various mosques, which have equally disappeared without trace, were erected there (P. Casanova, *Histoire et description de la Citadelle du Caire* [= MMAFC VI], Paris 1894, 557-62).

Though the possibility that the Cairene Kubbat al-Hawā' may be identified with the presumed Fāḡmīd observatory on the Muḡattam hills must be

discounted (cf. A. Sayfi, *The observatory in Islam and its place in the general history of the observatory*, Ankara 1960, 130-56), the sense of the term *Kubbat al-Hawā*² suggests the persistence into Islamic tradition of some reminiscences of the Athenian Tower of the Winds, described as an *horologium* by Varro (*De re rustica*, 3.5.17) and dated accordingly pre-37 B.C., but also representing the winds on its eight facets (H. S. Robinson, *The Tower of the Winds and the Roman market place, in American Journal of Archaeology*, xlvii [1943], 291-303; J. V. Noble and D. J. de Solla Price, *The water clock in the Tower of the Winds*, in *ibid.*, lxi [1968], 345-55). The term *Kubbat al-Hawā*² may thus have been used in Islam for structures associated with time-keeping or meteorology, though the evidence for this in the standard authorities is lacking. The reasons, incidentally, for the use, in the 18th century A.D., of the Tower of the Winds in Athens as a *samīyah* of the Kādiri dervishes (Hasluck, *Christianity and Islam under the Sultans*, Oxford 1928, I, 12 *et passim*) have still to be elucidated.

Bibliography: given in the article.

(J. M. ROGERS)

KUBBAT AL-ŠAKHRA, the Dome of the Rock, at times called the Mosque of 'Umar, is the oldest remaining monument of Islamic architecture, and probably the first conscious work of art of Islamic civilisation.

Location and description The Dome of the Rock is located on an artificial platform, roughly but not exactly in the centre of the Haram al-Šarīf (q.v.) in Jerusalem. The shape and emplacement of the platform were probably determined by the ruined state of the old Jewish Temple area, together with whatever Roman constructions may have been left; it is also possible that these were pious and historical or legendary associations with parts of this area of the Haram, but these are difficult to demonstrate (see below).

A celebrated inscription, in which al-Ma'mūn replaced 'Abd al-Malik's name with his own, dates the construction of the Dome (*qubba* in the inscription) to 72/693-4. It has been superbly described in all details by K. A. C. Creswell, and recent repairs have only confirmed most of his reconstruction of the original monument. It consists of a dome (20.44 m. in diameter and 30 m. in height) surrounded by two octagonal ambulatories, each side of the outer one being around 20.30 m. Interior supports consisted of piers and columns; the dome was set on a high drum and probably was from the very beginning a wooden double dome. There were fifty six windows in the drum and the octagons, a parapet on the outside, and simple porches. Two important architectural characteristics of the Dome of the Rock must be noted. One is the superb geometry of its layout, based on the extension of two squares inscribed in the circle of the rotunda. It is this geometry which provides the monument with its harmonious airiness and which makes it possible to perceive the whole building at a glance. The second characteristic is that, from the point of view of its plan and composition, the Dome of the Rock belongs to a high tradition of Byzantine architecture represented by monuments found in Ravenna, Syria (St. Simeon, Bostā), and Jerusalem (Holy Sepulchre, Church of the Ascension). It is almost certain that its builders and planners were Christians from Syria or Palestine.

The Dome of the Rock was lavishly decorated with marble, mosaics, and gilt bronze plaques. The cupola was gilded on the outside and the outer walls were

in large part covered with mosaics. Most of the exterior decoration has disappeared, but, in spite of numerous restorations, the interior still approximates to its original appearance of a glittering sheathing of mosaics. Almost every part of the walls was covered with vegetal and geometric designs, and these included the very unusual motif of royal crowns and jewels. A fairly complete description of all these themes has been provided by Marguerite van Berchem in Creswell's *Early Muslim architecture*. Although there is some debate about the origins of the mosaicists (Syrian or Byzantine), there is little disagreement about the stylistic origins of the decoration. Most of it derives from the rich vocabulary of Late Antique and early Byzantine art, but there are also definite Iranian elements. Together with the important absence of any figural representations, this mixture of sources indicates that a conscious new Muslim taste affected the decoration of the Dome of the Rock far more than its architecture. We shall return later to the interpretation which could be given to these mosaics, since it is closely related to the problem of the meaning of the whole monument. As we shall see, a key document for whatever interpretation is given lies in the long inscription in gold mosaic cubes which runs along both sides of the octagonal arcades. In addition to providing the date of the building, this inscription contains numerous Qur'anic passages which range from statements of the faith of Islam (cxii; xxiii, 34; xvii, xii, etc.) to the major Christological passages in the Holy Book (especially iv, 169-71 and xix, 34-7). These are our earliest dated fragments from the Qur'ān, and C. Kessler has shown recently that many letters were already provided with clear diacritical marks (see *Bibli.*).

Although the Dome of the Rock has been amazingly well preserved, it was affected by many alterations and repairs over the centuries. The exact chronology of all these changes is difficult to establish. The cupola was redone in Fatimid times and under the Ottomans; the roof of the octagons was repaired in 'Abbasid times; and their ceilings transformed under the Mamlūks. The Crusaders added a handsome iron screen around the Rock, which has now been removed, but it was the Ottomans who in the 10th/16th century covered the building's exterior walls with some of the best-known examples of Turkish ceramics. Between 1936 and 1964 a Restoration Committee under the leadership of Egyptian and Jordanian architects and authorities undertook a complete restoration of the monument. Some part, such as the dome, were totally redone, others, the mosaics for instance, cleaned and repaired. The guiding principle of this work was to put every part of the building back in its earliest documented shape. Although future research may quibble at some of the decisions taken (for instance, it is likely that the beams of the ambulatory's roof were visible, since painted ones were found there), it has been one of the most successful jobs of restoration known anywhere, and it is hoped that its carefully-kept records will soon be published.

Significance. The Dome of the Rock has excited more scholarly concern than any other Islamic monument, and this for several reasons. It is a unique building which was rarely copied for its shape (a few later mausoleums like the Sulaybiyya in Salmarrā or Kalkūn's tomb in Cairo may have used it as a model), and never for its functions. It does not fit into any architectural series. Also it is located on the site of the Jewish Temple, in the holy city of

Christianity, without showing obvious traces of impact from the two older monotheistic faiths. It does not look like a mosque, and the Akşa nearby fulfilled the congregational needs of the Muslim community. Finally, literary sources on the Dome of the Rock are confused and contradictory, even though the inscription on the building indicates that it was a major effort of the Umayyad dynasty.

The many explanations which exist can be divided into three broad groups. The first one is the traditional pious Muslim view, which interprets the Rock as the place whence the Prophet went on his celebrated Journey into Heaven (*mi'raǧ* [q.v.]). That such became eventually the holy meaning of the Dome of the Rock is undisputable, since the whole Haram became the *Masǧid al-Akṣá* of Kue'ín, XVII, 1. But, while the association between the Rock and the Prophet's Journey may have been made quite early, there is no trace of it in the most authentic document about the monument, sc. its long inscription.

The second explanation is concretely historical, and goes back to a passage from al-Ya'qūbī. This explanation holds that, during the struggle of the Umayyads with Ibn al-Zubayr, 'Abd al-Malik attempted to create in Jerusalem a shrine which would compete with the Ka'ba and the pilgrimage to Mecca. Recently, W. Caskel revived the theory by pointing out that the Umayyads as a dynasty did seek a cultic center in Syria or Palestine, and that Jerusalem was the only one which fulfilled the necessary conditions. The main objection to this theory is that, even though there are several literary indications of a special Umayyad attachment to Palestine, there is some doubt as to whether such a basic Islamic requirement as the pilgrimage to Mecca could be altered. Furthermore, al-Ya'qūbī was a violently anti-Umayyad polemicist, whose interpretations are open to criticism.

The third explanation is cultural-historical. Starting with the evidence of the inscriptions and of the mosaics, it proposes to see in the Dome of the Rock a monument proclaiming the new faith and empire in the city of the older two religions. It sanctified anew a Jewish sanctuary and slowly incorporated within itself the memories of Abraham and Joseph, among others. It set up the crowns of Byzantine and Persian kings like an offering around the centre of the monuments, and put up its own Christology above the crowns. It was a missionary monument of victory, built at a time when 'Abd al-Malik was concerned with Christian enmity, but especially when he sought to proclaim Islamic uniqueness within a common religious tradition, as, for instance, in his coinage. As the specific need of maintaining the cohesion of the community of faithful waned, pious associations grew up and eventually transformed the Dome of the Rock into the unique sanctuary it is today.

While this third explanation seems to us to reflect better than the first two the evidence of contemporary sources and of the spirit of the time, it is only fair to say that the debate is not yet closed. However it may be eventually resolved, two conclusions are pertinent. One is that, both as a work of art and as a cultural and pious document, the Dome of the Rock is a unique monument of Islamic culture in almost all respects. The second one is that it is a monument with a history, for, whatever its initial purpose may have been, it developed more and more complicated associations as time went on. It may indeed be a rare instance of a sanctuary whose holy

meaning grew after it had been built. But, as a work of art, it is one of the most telling documents about the gradual transformation of a local Syro-Palestinian Christian art into Islamic art.

Bibliography: All earlier works are listed and discussed in K. A. C. Creswell, *Early Muslim architecture*, 1, Oxford 1969. Of particular importance are O. Grabar, *The Umayyad Dome of the Rock*, in *Ars Orientalis*, III (1957), and C. Kessler, *Above the ceiling of ... the Dome of the Rock*, in *JRAS* (1964). Since 1969, one should see Grabar, *The formation of Islamic art*, New Haven 1973; Kessler, *'Abd al-Malik's inscription*, in *JRAS* (1970); M. Ecochard, *A propos du Dôme du Rocher*, in *BEO*, xxv (1972); W. Caskel, *Der Felsendom und die Wallfahrt nach Jerusalem*, Cologne 1963.

(O. GRABAR)

KUBBE WEZİRİ (ت): "vizier of the dome" was the name given, under the Ottomans, to the members of the imperial *Diwān* (*diwān-i hümāyūn* [q.v.]) who came together on several mornings each week around the Grand Vizier in the chamber of the Topkapı Palace called *Kubbe alī* because it was crowned by a dome. The *kubbe asirleri* were the *hadi-ashers* [q.v.] of Rumelia and Anatolia, the *hadi* of Istanbul, the *defterdar* [see *NAFTARAR*], the *ahundgi* [q.v.], the *aghas* of the Janissaries, the commander of the cavalry and, when he happened to be in the capital, the *kapudan paṣa* [q.v.]. This institution was abandoned under Ahmed III [q.v.].

KÜBÜR [in Central Asia], the most important of the taxes and impositions of Mongol origin in the Čingghizid period. It was originally a tax on flocks and herds, payable by the Mongols to their ruler. Such a levy was made by Čingiz Khān early in his career for the support of his ally and patron the Ong Khān of the Kerays (*Histoire secrète des Mongols*, ed. L. Ligeti, Budapest 1971, 107; Rashīd al-Dīn, *Sūhrak fetaṣṣis*, ed. Berzin, xiii, 176). In the formative years of the Mongol Empire, *kūbūr* was levied at a rate of one animal out of every 100 (*Djuyayūn*, III, 79; Rashīd al-Dīn, *Djām al-Tawārīkh*, ed. Blochet, 42). At this stage it seems to have been paid only by the nomads.

In 650/1252 the Great Khān Möngke introduced among other reforms a new method of taxation. Following the model that had been established in Transoxania by the governor Mahmūd Yalawāq, he imposed on the Empire a poll-tax, levied according to the wealth of the individual taxpayer on a sliding scale from ten *dīnars* down to one. Other rates are also mentioned. This tax was to be called *kūbūr*, and was to be paid by the subject population (*Djuyayūn*, I, 233-4). Such a tax inevitably involved periodical censuses of the conquered population (*Djuyayūn*, I, 25; cf. Grigor of Akanc', *History of the Nation of the Archers*, ed. and tr. Blake and Frye, Cambridge, Mass. 1954, 57). On the basis of a new census, *kūbūr* was reassessed in 656/1258 on a scale ranging from 500 *dīnars* to one. Thereafter the imposition of census and "poll-tax" *kūbūr* seems to have become a regular procedure, at least in the west, as new territory submitted to the Mongols or was conquered by them (see e.g. Rashīd al-Dīn, *Histoire des Mongols de la Perse*, ed. and tr. Quatremère, 256-7). It became something of a byword for Mongol oppression (see Minorsky, *Pārī Bahā and his poems*, in *Iranica*, Tehran 1964, 295).

The original "animal-levy" *kūbūr* continued to

be paid by the Mongols.—In Persia until the reign of Qhāzān, who abolished it (Rashīd al-Dīn, *Go-shāh-nāma*, ed. Jahn, 300). The sources consequently sometimes use the term *ḡubūr-i māwāḡ* for the animal-levy, in order to distinguish it from the poll-tax.

(D. O. MORGAN)

KUBILAY, Mongol Great Khān (1260-94), the brother and successor of Möngke (q.v.), was born in 1225. In 1251 Möngke entrusted him with the administration of Northern China, and he took part in the subsequent war which his brother launched against the Sung rulers of the South. The conquest of the Sung was finally completed only during his own reign (1279), when the whole of China was again united under one ruler for the first time since the tenth century. Already in 1260 he had transferred the capital of the Empire from Karakorum (q.v.) to Peking, in Mongol *Khān-Balgūn* (q.v.), i.e. "Khān's Town", and in 1272 he proclaimed the foundation of the Yuan Dynasty, the twentieth of the Chinese Official Dynasties. His right to the Khānate was at first disputed by his younger brother Ariq Böke, who perhaps had the stronger claim and who finally surrendered only in 1264; the struggle was then taken up by Kaydu (q.v.), who remained a thorn in Kubilay's side during the whole of his long reign. Nor was Kubilay more successful in his campaigns against the Japanese and the Indo-Chinese or in an attempt to gain a foothold on the island of Java. In China he encouraged the propagation of Tibetan Buddhism, but, like most of the Great Khāns, was favourably disposed to Islam and the Muslims; only for a time (during the years 1282-5), as a result of the events connected with the assassination of the minister Aḡmad, did the Muslims fall into disfavour with him. He was described by a European observer, who had travelled widely within his territories, the Venetian Marco Polo, as "the most puissant of men, in subjects, lands, and treasures, that there is on earth or ever was, from the time of our first father Adam to this day".

KUBRĀ, SHAYKH ANU 'L-DJANNĀN AḤMAD b. 'UMAR NAḌīm al-Dīn, eponymous founder of the Kubrawī Sūfī order, one of the major orders of the Mongol period in Central Asia and Khurāsān, from which stem numerous derivative initiatic lines. The sobriquet of Kubrā is an abbreviation of the Kur'ānic expression *al-faḡmāt al-kubrā*, "the major disaster", a nickname NaḌīm al-Dīn earned through his formidable talent in polemic and disputation.

Born in Kh'ārazm in 540/1145, he began his career as a scholar of *ḡadīth* and *ḡalām*, travelling

extensively in the cultivation of these disciplines. His interest in Sūfism was awakened in Egypt, where he became a *murīd* of Shaykh Rūsbihān al-Warrān al-Miṣrī, an initiate of the Suhrawardī order. After a number of years in Egypt, he went to Tabriz to pursue his studies of *ḡalām*, but came instead under the influence of a certain Bābī Farāḡī Tabrizī, who persuaded him definitively to abandon his concern with the external religious sciences and to devote himself fully to the Sūfī path. He then spent some time in the company of two other preceptors, 'Aḡmār b. Yāsir al-Bidhīl and Ismā'īl al-Kāfir, from both of whom he received the ritual *ḡharaka*, before returning to Shaykh Rūsbihān in Egypt. By then, Rūsbihān evidently regarded Kubrā as fully mature, for in about 540/1145 he sent him back to Kh'ārazm with full authority to train and initiate disciples. Kubrā swiftly gathered a large following, including a remarkable number of individuals who attained prominence in their own right as gnostics and writers on Sūfism; he is, in fact, frequently designated as *walī-tawāḡ*, the "manufacturer of saints". Among his foremost disciples were Maḡd al-Dīn Baḡhādī (d. 616/1219), Naḡm al-Dīn Dāya Rāzī (d. 654/1256; author of the celebrated Sūfī compendium *Mawāḍi' al-'ashāb*, ed. Amin Riyāhī, Tehran 1352/1972; Eng. tr. Hamid Algar, *The path of God's bondsmen from origin to return*, forthcoming), Sa'd al-Dīn Ḥamūya (d. 650/1252), Bābī Kamāl Dīwandī, Sayf al-Dīn Bāḡhādī (d. 658/1260; cf. Sa'īd Naḡfī, *Sayf al-Dīn Bāḡhādī*, in *Madjalla-y Dāniš-kade-i Adabiyyāt*, II/4 [Tūr 1334/October 1955], 2-13, and Iraqī Aḡhā, *Sargūshah-i Sayf al-Dīn Bāḡhādī*, Tehran 1341/1962), and Raḡī al-Dīn 'Alī Lālā (d. 642/1244). Kubrā died during the Mongol conquest of Kh'ārazm in 617/1220; according to the traditional accounts, he refused an invitation by the Mongols to leave the city before they proceeded with their massacre of the inhabitants, and died at the head of a band of followers while engaged in hand-to-hand combat. He is reputed to have been buried at the site of his *ḡhānabādh* outside the city, and his tomb, located in what subsequently became known as Kōhne-Urgenj [see GURĀNGJ], became a centre of pious visitation, retaining this function even under Soviet rule (cf. G. P. Soesarev, *Relikvii dzhennat'manskikh evropeiskii obratov u Uzbekov Khorezma*, Moscow 1969, 269, 433).

Kubrā left behind a number of brief but important works dominated by a concern with the analysis of the visionary experience. He discussed in them, for example, the various significances of dreams and visions; the degrees of luminous epiphany that are manifested to the mystic; the different classes of concept and image (*ḡhawāḡir*) that engage his attention; and the nature and interrelations of man's "subtle centres" (*ḡaḡā'ir*). Most important of Kubrā's treatises are *Fawā'id al-dīwandī wa-fawā'id al-ḡaḡā'ir* (edited with an exhaustive introduction on the life and work of Kubrā by F. Meier, Wiesbaden 1957), *al-Uṣūl al-'aḡhara* and *Riḡāḡat al-ḡaḡā'ir al-ḡalām min laḡmāt al-ḡalām* (edited, together with other lesser treatises, by M. Molé under the title of *Traité des mystères*, in *Annales Islamologiques* (Cairo), iv [1963], 1-78). In addition to these short works on the path, Kubrā also embarked on a Sūfī commentary on the Kur'ān that he was unable to complete but was continued after his death first by his *murīd* Naḡm al-Dīn Rāzī and then by another Kubrawī, 'Alā' al-Dīn Simnānī (cf. H. Corbin, *En Islam iranien*, Paris 1972, iii, 275-6, 276 n. 90, and Süleyman Ateş, *İspat teḡvīr okulu*, Ankara 1974, 139-60).

The line of Kubrā was perpetuated by several of his disciples. Sayf al-Dīn Bāgharī established a well-endowed *khānqāh* in Bukhārā. Waḳf documents relating to this *khānqāh* have been published by C. D. Čekjović, *Bukhārskije dokumenti XIV v.*, Tashkent 1965; it was there that Berke Khān, fifth ruler of the Golden Horde, proclaimed his acceptance of Islam (J. Richard, *La conversion de Berke et les débuts de l'islamisation de la Horde d'Or*, in *REI*, xxv [1967], 173-9). Badr al-Dīn Samarqandī, a *murīd* of Bāgharī, travelled to India and established there a branch of the Kubrawiyya that came to be known as the Firdawsiyya; its most important figure was Ahmad Yahyā Mandī (d. 773/1372), author of widely-read *Makrīdāt* (publ. Lucknow 1921). Sa'd al-Dīn Hamūya established a *khānqāh* at Bahrābād in Khūzistān, the direction of which was assumed by his son, Sa'd al-Dīn Ibrāhīm, who in 694/1295 presided over the conversion to Islam of Ghāzān Khān, the Ilkhānid ruler of Iran (cf. Rashīd al-Dīn Faḍl Allāh, *Ta'riḫ-i Muḥarrar-i Ghāzīnī*, ed. K. Jahn, London 1940, 76-80). Another *murīd* of Sa'd al-Dīn Hamūya was 'Azīs al-Dīn Nasāfi (d. 662/1263), author of several important treatises (published by Moll under the title *Kutūb al-Insān al-Aḥmad*, Tehran and Paris 1962).

The most long-lived and prolific initiate line deriving from Naḍīm al-Dīn Kubrā was probably that descending by way of Rādī al-Dīn 'Alī Lāh and two further links of the chain to 'Alī al-Dawīa Simnānī. Simnānī further elaborated the analysis of the *lawā'if* and also formulated a critique of Ibn 'Arabī's doctrine of *wahdat al-wuḥūd* that was to have much influence on Indian Nakṣhabandī circles (see H. Landolt's introduction to *Muḥallabāt-i 'Abd al-Rahmān Isfahānī wa 'Alī al-Dawīa Simnānī*, Tehran and Paris 1972, for a copious bibliography on Simnānī). 'Alī Hamadānī, a *murīd* successively of two of Simnānī's followers, Tāid al-Dīn Alḥī and Mahmūd Maḍahānī, introduced the Kubrawī order to Badakhshān and Kashghar. He died in 786/1385, and is variously reputed to have been buried in Khuttalān (present-day Kulūb, Tadzhik SSR) (see *KHUTTALĀN*) and Srīnagar (J. K. Taufel, *Eine Lebensbeschreibung des Scheichs 'Alī-i Hamadānī*, Leiden 1962; Sayyida Anḥar Zafar, *Amīr-i Kabīr Sayyid 'Alī Hamadānī*, Lahore 1972). He designated himself as a "second 'Alī", and although the branch of the Kubrawī order he introduced to Kashghar remains purely Sunnī to the present day, it is not surprising that various descendants of Hamadānī came to adopt Shī'ism. Isbāḥ al-Khuttalānī, successor of 'Alī Hamadānī, was murdered by emissaries of the Timurid ruler Shāhrukh in about 826/1423, but before dying appointed as his successor Muḥammad Nūrbakhsh. The majority of Khuttalānī's followers accepted Nūrbakhsh, but a minority gave their loyalty to 'Abd Allāh Barighābādī instead. This schism gave rise to two separate derivatives of the Kubrawiyya, each with its own name, but having in common an adoption of Shī'ism. One was the Nūrbakhshiyya, that survived in Iran into the Safavid period; the other came to acquire, at a date and in a fashion unknown, the designation of *Dhahabīyya*, and has survived down to the present in Iran, where its chief centre is Shīrāz (cf. R. Gramlich, *Die schiitischen Dervischorden Persiens*, in *AFKM*, xxvi/1 [1965], 24-26).

The latter history of the Kubrawiyya in its Central Asian homeland is not well-known. It is probable that it was almost universally displaced, even in Khūzistān, by the Nakṣhabendiyya from the early

9th/15th century onwards. The small town of Sāktarī near Bukhārā remained, however, an active centre of the Kubrawiyya until at least the early 11th/17th century (for a list of works produced by the *shaykhs* of Sāktarī, see A. A. Semenov, *Sobranie vostochnykh rukopisei Akademii Nauk Uzbekskoi SSR*, Tashkent 1955, iii, 327-8); and at some point the Kubrawiyya spread eastwards from Central Asia into the Muslim regions of China (cf. Muḥammad Tawādū, *al-Islām wa 'l-Shīn*, Cairo 1361/1945, 112).

Finally, there are traces of the Kubrawiyya in Turkey—a Kubrawī *shaykh* by the name of Muṣṭafā Dada is recorded to have fought in the ranks of the army that conquered Istanbul (Ayyūbarsī, *Ḥadīqat al-Ḥudūd*, Istanbul 1381/1361, ii, 267)—but no lasting implantation of the order appears to have taken place either in Turkey or the Arab lands. Only a nominal existence of the Kubrawiyya persisted in the western Islamic world as one of the multiple secondary affiliations professed by Nakṣhabandīs of the Mujaddidī Khālidī line (cf. Muḥammad As'ad al-Ibrīlī, *al-Risāla al-as'adiyya fi 'l-tarīq al-saliyya*, Istanbul 1343/1924, 29).

Bibliography. (in addition to that contained in the text): Meier's introduction to his edition of the *Faḥṣṣ al-ḡamal* contains a comprehensive listing of all sources on the life and work of Kubrā. See also Kamāl al-Dīn al-Harīrī, *Tiḏyān wasā'il al-bahā'ih wa-salāsīl al-faḥṣṣ*, ms. Ibrahim Elendi (Süleymaniye) 430, iii, ff. 79b-84a, Molé, *Les Kubrawiyya entre Sūnnisme et Shī'isme aux huitième et neuvième siècles de l'Hégire*, in *REI*, xxix (1961), 61-142 (a pioneering study, despite excessive emphasis on allegedly proto-Shī'ite elements in the early Kubrawiyya; cf. Algar, *Some observations on religion in Safavid Persia*, in *Iranian Studies*, vi/1-2 [winter-spring 1974], 287-90); Ya. E. Bertin's, *Četverostopnyj Shriḫ Naḍīm ad-Dīn Kubra*, in *Sufizm i sufizkaya literatura*, Moscow 1965, 324-8; Corbin, *L'Homme de lumière dans le soufisme iranien*, Paris 1972, 95-148; J. S. Trimingham, *The Sufi orders in Islam*, Oxford 1972, 55.

(H. ALGAR)

KUBRUS, modern Turkish Kıbrıs, Greek Κύπρος (etymologically derived probably from the word for "copper"), in western languages Cyprus, is the largest island in the Eastern Mediterranean, with a surface area of 9,251 km². The nearest distance to the mainland is from Cape Kormakiti in the north to Anamor on the southern coast of Turkey, 71 km. The distance to the Syrian coast between Cape Andreas and Ra's lha Khān north of al-Ladhīkiyya (p.s.) is 98 km. The distance to Crete (Arabic *Ḳirīṭīn* [p.s.]) is about 553 km. The island consists of two mountain ranges, Kyrenia-Karpas rising to 2,019 m. altitude in the north, and Troodos rising up to 2,952 m. in the south-west. In between lies a plain, the Mesocoria (Turkish Mesarya, Mesalya), which supports most of the island's agriculture, although its rainfall is marginal and the percentage of irrigated land is not large. Agriculture continues to be the mainstay of the economy. Copper has been mined since before 3,000 B.C., but its known veins, like those of other minerals (from pyrites), are near exhaustion. Non-metal minerals are available in exportable quantities, e.g. asbestos. Refining of salt is still revenue-producing; it is being extracted from salt lakes in the low lands near Limassol and Larnaca (old names Les Salines, Turkish Tuzla).

The geopolitical situation of Cyprus within the spheres of the ancient civilisations of the Near East explains why the island has always played a certain

role in history, although its importance has sometimes been overrated. Lying on the main sea routes of the Levant, within striking distance of the mainland, the island has always been in a dependent position to any of the surrounding big powers; political independence has rarely been attained (see below, *Later period*).

2. *Byzantium and Islam (632-1192)*

Cyprus' history in antiquity will not be dealt with here. When the expansion of Islam began, the island was a province of the Byzantine Empire, with its capital at Constantia, ancient Salamis. Since 431 (Council of Ephesus) the Orthodox Church of Cyprus has been autocephalous under an archbishop who ranks immediately behind the four great patriarchs. The church has moulded the island into a social, religious and cultural unit. The old and strong links between clergy and people have created a sense of social solidarity, which has remained characteristic for the history of the Orthodox Greek population of the island during the succession periods of foreign dominations. Cyprus's important cities at this time were: Salamis-Constantia, Citium (near Larnaca), Curium (near Episkopi), Tamassus (Nea Paphos, Neapolis (Nemesos) (= Limassol), Amathos, Arsinoe (Marium) (= Chrysokhou), Lapithos, Karpasia (Near Rhizo karpaso), Chytia (= Kythrea), Tremathus, Soli, Kerynia and Ledrae or Leukosia (= Nicosia).

It was after the reign of Heraklius (610-41) that Cyprus began to be invaded by the Arabs. According to a Greek writer, a raiding party under the caliph Abū Bakr appeared on the island in 632, which is not very probable. In 647 (648, 649?) Mu'awiya, governor of Syria, organised an expedition against the island, which was in fact the first large-scale maritime enterprise of the Arabs in the Mediterranean (cf. Balādhuri, tr. Hitti, I, 235 ff., 431 f.). His fleet of 27,000 sail, commanded by 'Abd Allāh b. Kayṣ, landed the Arab forces at Constantia. The city was besieged, surrendered and sacked. The whole island was overrun. Cyprus was compelled to pay a tribute of 7,000-7,200 goldpieces, to be paid annually to the governor at Damascus, a sum equal to the island's tribute to the Byzantine treasury. This seems to indicate a form of joint-rule over the island by the Emperor and the caliph. It was during this raid that Umm Hārūn, wife of 'Ubāda b. al-Sāmit, a relation of the Prophet, died and was buried near Larnaca. On that site was to be erected the most venerated shrine of the Muslims of Cyprus, the Hāla Sultan Tekke. A second raid was organised by Mu'awiya in 33/653-4 led by Abū T-Awāl. Lapithos was sacked, and a force of 12,000 occupied the island permanently till the caliph Yazid (680-3) withdrew it. The tributary relationship with the caliph at Damascus lasted till the time of caliph al-Manṣūr (754-75), it seems.

The peace treaty concluded between Constantine IV and 'Abd al-Malik in 685 and renewed in 688-9 with Justinian II provided for the division of the revenues of Armenia, Iberia and Cyprus. The last-mentioned emperor decided to transplant the Orthodox population of Cyprus to the south coast of the sea of Marmara near ancient Cyzicus, where the city of Nova Justiniana (Justinianopolis) was founded for the archbishop of Cyprus and his flock. (This town's name still figures in the title of the head of the church of Cyprus. This exile of the Cypriots lasted till 698, when the island became resettled by its old inhabitants, and also by those who had gone to

Muslim Syria.) For two-and-a-half centuries longer, there persisted the intermediate status of Cyprus between the Roman Emperor and the caliph. The island was normally used as a base for Arab maritime actions against Asia Minor.

In 747 a fleet from Alexandria was destroyed by a Byzantine force commanded by the admiral of the Cibyrhaote Theme. Raids and attacks followed each other in 772, 790 and 806 under command of the 'Abbasid governor in Syria, Humayd. The island nevertheless remained a part of the Byzantine Empire, and the Emperor Basil I (867-86) reorganised its administration temporarily into a theme, the general Alexios being governor. The tribute to the caliph was continued (cf. Constantine Porphyrogenitus, *De Themathibus*, Bonn ed., 40). Cyprus served as a base during the campaign of Himerios against the Arabs in Crete [see 1347/1351] in 902. In 921-22 an Arab force under Dmyana occupied the island for four months. Byzantine authority was restored after the recovery of Crete in 963. After ca. 963, Cyprus was hardly ever more troubled by Arab invasions, and was able to restore its economy. Evidence for the island's renewed florescence is the new foundation of the main cities, old sites on the sea coast being abandoned. In 1042-3 and in 1092 revolts against the Emperor Alexios Comnenus occurred.

Towards the end of that century, Cyprus became a base for operations of Byzantine land and sea forces, sometimes in combination with those of the Crusaders (in particular, Raymond de St. Gilles, Count of Toulouse, and his successors at Tripoli). Scanty evidence for the interior history of Cyprus in this period points to maladministration and the economic draining of the island's resources by the Byzantine government. The source of Nicolas Moursaleon, one-time archbishop of Cyprus, must, however, be considered suspect because of prejudice against the emperor. The first half of the 12th century left Cyprus in peace. Pilgrim traffic passed through it as usual, and relations with Muslim powers were correct. The *Awāl* of Beirut and many inhabitants of that city found refuge on Cyprus when Baldwin, king of Jerusalem, captured it on 13 May 1120. The first Maronites probably settled on the island around this time. Inhabitants of Tell Hamdūn in Little Armenia were removed to Cyprus by the Emperor John II Comnenus (Celaioannes) (Ibn al-Kalānisi, tr. H. A. R. Gibb, *The Damascus chronicle of the Crusades*, London 1932, 241). In 1128 Manuel Comnenus extended the commercial privileges of the Venetians to Crete and Cyprus. This marked the beginning of the Latin penetration.

In 1155 or 1156 the Crusader Renaud of Châtillon, in co-operation with Thoros II (1145-68) of Little Armenia (Armeno-Cilicia), launched an expedition against Cyprus and put the Byzantine authorities (the Duke John Comnenus) out of action. Cyprus suffered badly, and had to pay ransom for hostages from among principal members of the clergy and the lay population.

In 1153/1158 a fleet from Egypt raided Cyprus, and in 1162 pirates equipped by Raymond III of Antioch, Count of Tripoli, raided Cyprus and the coast of Cilicia. The last period of Byzantine dominion over Cyprus was the rule of Isaac Ducas Comnenus, the self-styled Emperor of Cyprus from 1185 to 1191, who was able with support of the Norman King William II to defeat an expedition sent by the Emperor Isaac II Angelus against him and to rule till he was dethroned by Richard the Lion Heart in 1191.

King Richard's fleet ran into heavy weather on its way to the Holy Land. The ship carrying his sister Joanna and his bride Berengaria, daughter of the King of Navarre, sought shelter in the port of Limassol. Isaac tried to take the ladies hostage, but Richard appeared on 6 May 1191 and landed in force on Cyprus. Having been joined by Crusader lords from Syria, among whom were Guy de Lusignan, a claimant to the crown of Jerusalem, Richard, after failure of a peaceful settlement, opened war against Isaac and defeated his forces. Isaac surrendered at the end of May 1191. The people of Cyprus delivered half of their possessions to the King of England, who confirmed the laws and institutions as granted to Cyprus by the Emperor Manuel Comnenus. Frankish garrisons took the place of the Greek ones, and two English gentlemen were appointed as justiciars and sheriffs to administer the island. It was to serve as the base to provision the Crusaders in Syria, and the island became essential for the operations of the Franks in the Holy Land during the next century, after Saladin had almost destroyed the Latin's position there at Hattin (1187).

2. The Frankish period (1190-1571)

(a) The rule of the House of Lusignan (1190-1489). — The King of England sold the island in July 1191 to the Knights of the Temple. During their rule, a rebellion broke out which was suppressed at great cost. In May 1192 King Richard resold Cyprus to Guy de Lusignan, husband to the heiress of the crown of Jerusalem. The Byzantine Emperor could only raise a protest on the diplomatic level.

Aimery de Lusignan succeeded his brother as lord of Cyprus (1194-1205). He continued the feudal organisation, granting fiefs to many Latin nobles and founding an extensive private domain. The state acquired its administrative institutions, and the castles of St. Hilarion ("Dieu d'amour"), Kyrenia (Cérine) and Buffavento were built. By Papal bulls of 20 February and 13 December 1196 a Latin hierarchy was installed under the archdiocese of Nicosia, with three suffragans, as a parallel to the Latin feudal institution. In 1197 Aimery acquired the title of King, holding his domain from the Emperor Henry VI with Papal assent. In the same year, the Syrian Crusader barons elected him King of Jerusalem in Acre. This personal union was restored under King Hugh III (1267-84) of Lusignan in 1269, to remain as a honorific title of the Kings of Cyprus after 1291. A third royal title was collected by the Lusignans, that of Armenia in 1358—again an empty title without land.

The new kingdom kept the peace with the Muslim powers in Syria till the 5th Crusade (1218-9). The Cypriots also participated in the expedition to Damietta of 1219-21. During the Seventh Crusade, the King of France, St. Louis, used the island as his support base in the campaign against Egypt, when Damietta was again taken in 1249, and both Kings entered the town triumphantly together. The Kings of Cyprus remained involved in the Crusaders' war till the end. In 1269 Hugh III became King of Jerusalem, but could not establish his authority over the unruly Crusader barons of Syria, Cyprus and the maritime republics of Italy. He withdrew from Acre in 1276, and when that town fell to the Mamluks in 1291, Cyprus became the last refuge for the Christians fleeing from Syria. This new position in the Levant was of advantage to Cyprus.

The 14th century was the great period of the king-

dom of the Lusignan "Kings of Cyprus and Jerusalem". Its legal foundation was the purest feudal constitution ever to come about in medieval times, involving an elected monarchy controlled by the feudal nobility. The latter had as instruments of their policy the *Haute Cour* (*Cour des Liges*) with all executive, legislative and judicial power, as the only organ entitled to establish the rightful succession to the throne. The King was its president, and he had to convene the *Haute Cour*, but the continuity of the dynasty ensured the strong and dominating position of the monarch versus the Latin nobility.

The royal administration was directed by the *sénéchal*, *chambellan*, *chancelier* and *Grand Bailli* for civil affairs, and the *comestable*, *maréchal*, *Grand Turcoplier* (commander of light cavalry) and an admiral for military affairs. The two main cities of Nicosia and Famagusta were administered by 2 viscounts assisted by *maîtres* (*maîtesseps*).

The King, together with the Crusader aristocracy of baronial families of French origin (*d'ibelin*, *de Noës*, etc.) and a smaller group of Frankish citizens, formed a small ruling class. The second element of Cyprus society formed the foreign merchants communities living in privileged, extraterritorial *fondachi*, Italians from Genoa and Venice, Catalans and Provençals.

The native Orthodox Greek-speaking people formed on the whole a class of subjects, ruled and exploited like slaves and *serfs*, *parics* and *perpersians*. Personally free were the Greek *lefteri* or *Francomans*. The division between native Greeks and foreign Franks became strengthened by the existence of two churches. In 1196 King Aimery installed a Roman Catholic ("Latin") hierarchy at the side of the Orthodox one. By 1260 Pope Alexander IV issued the *Constitutio Cypria* confirming the sapremacy of the Latins over the Greeks. The Latin archbishop solely remained as metropolitan of both hierarchies. However, the Orthodox clergy managed to subsist as a church organisation conserving the Greek ethnicity of its flock.

The Lusignan period was the first in which the island's produce and taxation became spent in and for the land itself. This alone must be considered a major cause of its economic growth. Next to that was the island's position as a transit trading station for the East-West trade, the *déchûs du Levant par excellence* after the disappearance of the Crusader states. Famagusta developed into a commercial centre connecting Genoa, Venice, Pisa, Florence, Barcelona and Montpellier with Alexandria, Damascus, Aleppo, and through to the Persian Gulf, with South and East Asia.

King Henry II (1285-1324) had to direct the influx of the refugees from Syria and Palestine after the fall of Acre (1291) and the settlement of the Syrian Crusader barons and merchants. In 1343 a Holy League between the Pope, Venice, the Knights of St. John at Rhodes and Cyprus was instituted against the emerging sea power of the *amirs* of Aydin (q.v.) in Anatolia. Smyrna was occupied on 20 October 1344. Otherwise, peaceful commercial relations were maintained with Mamluk Egypt and the southern Anatolian coastlands. King Peter I (1359-69) revived the ideal of a crusade against Islam. In 1361 Ghorghos (Krkalesi) was annexed and Antaiya (q.v.) was captured from the Turkman Amir Hamidoghlu Mehmed Bey. A European tour of the King, now styled *athleta Christi* by Pope Urban V, prepared for a Crusade: Venice, Cyprus and the Knights of St. John collected 10,000 troops transported in a fleet of 215 sail at Rhodes.

In October 1365 Alexandria was temporarily occupied, but the commercial interests of Venice and Genoa stopped any further confrontation with Mamlūk power. These two merchant republics were to dominate Cyprus's politics in the last century of its independent existence. At first, it was Genoa which gained the upper hand in the competition with Venice. In 1372 the Genoese Podestà (in Famagusta) defeated the Venetian Bailo, whose party received support from the Greek Cypriots. A Genoese force invaded Famagusta and Nicosia. In October 1374, a treaty was concluded which assured Genoa complete economic hegemony on Cyprus for 90 years. The *Maona Cypru* was the private mercantile organisation of Genoese bankers established at Famagusta. The King of Cyprus had to cede the town as a guarantee for the payment of reparations amounting to 2,146,400 florins and the yearly tribute to Genoa of 40,000 florins.

The next blow to Cyprus's independence was an invasion by the Mamlūk Sultan Barsbāy [q.v.]. On 7 July 1426, King Janus (1398-1432) and his army were defeated near Khrokita, and Nicosia was plundered. The King was set free on the condition of becoming a vassal, paying 200,000 florins' ransom and a yearly tribute of 8,000 florins. After this invasion, the island's economy began to decline. Social unrest within the Greek population worsened the situation. In 1448 Gorbigos fell under control of the Karaman amirats [see KARAMAN-ÖZGÜLLAR]. Cyprus lost her last continental interest.

When in 1458 Charlotte, the daughter of King John II, came to the throne, her half-brother James the Bastard (1440-73) disputed the succession. He applied to the Mamlūk sultan for support. In 1460, with the aid of Mamlūk auxiliaries, James II defeated the legitimist opposition and took the last stronghold of the Queen, Kyrenia, and the Genoese held Famagusta in 1464. To defend himself against a Genoese counter-attack, James II enlisted Venice as an ally, and chose a Venetian subject, Caterina Cornaro (d. 1510) as his Queen in 1472; after his death (1473), she was to rule as the last monarch of independent Cyprus till 1489. During her reign, Venice installed a virtual protectorate. A Venetian garrison and two Venetian counsellors to the Queen were not considered enough by the Venetian government to safeguard the island from the Ottoman Turks' expansion. In 1488 an Ottoman fleet appeared before Famagusta. On 26 February 1489, Queen Caterina abdicated in Famagusta, and the Venetian *Capitan Generale da Mar*, Francesco Priuli, took over the government of the island.

Thus it was Christian Venice that ended the last of the Crusader states in the East. The Signory of Venice duly notified and offered justification of the take-over to the Sultan Kā'it Bāy [q.v.] in Cairo, and the envoy carried with him presents and 26,000 ducats, being the tribute for 2 years. The Sultan thereupon agreed to the transfer of the Kingdom of Cyprus to Venice (February 1490).

(b) Venetian rule (1489-1572). — With the acquisition of Cyprus, the commercial 'colonial' empire of Venice reached its greatest dimensions. The new possession was reorganised. The centralised government, the *Rettori*, consisted of the *Luogotenente* and two counsellors. Venetian nobles elected for a two years' tenure, controlled the finances and administration, and resided at Nicosia. A quadrennial census was instituted, the first reliable population data of Cyprus's history. The governor of Famagusta, the *Capitan del Regno di Cipro*, acted

as commander-in-chief of the army and the fortresses in peace-time, and had a share in the civil administration. In time of war or menace, a provveditor-general was elected for two years to command. From the period of the Lusignan rule, two offices were retained only, the viscounts of Famagusta and Nicosia being reserved for Cypriots. A Great Council replaced the *Haute Cour*, but did not have any real power to the Frankish baronage, by now a commingling of military adventures from all over the Mediterranean world.

On the whole, Venetian administration was inefficient and corrupt. It estranged the local Latin ruling class and did not manage to gain the loyalty of the Greek population. The island remained a colony and a military base only for the Venetians, and one inadequately manned at that. The economy continued its decline, aggravated by natural disasters in the course of the century. The burden of the tribute to the Mamlūk sultans remained till 1517, when it became payable to the Ottoman sultan at Istanbul. The monopolistic exploitation of the island's resources did not encourage local enterprise. Apart from salt and grain, cotton, cultivated since the early 14th century, now became the major source of revenue, replacing sugar cane. Various forms of taxation pressed hard upon the labouring population. A conspiracy against Venice in 1562, led by a Greek, one Jacob Duasoria, was suppressed. Its dangerous aspect was that the rebels had made contact with the Ottomans. The Venetians now modernised the island's defences, and three fortresses, those of Kyrenia, Nicosia and Famagusta, were to be the sole defensible places; old fortifications like St. Hilarion, Buffavento and Kantara were dismantled by 1567.

The Ottoman threat hovered over Cyprus during the rule of Venice, and in the years following the Ottoman-Venetian peace treaty of 1540 (cf. texts ed. by Bonelli, Lehmann and Bombaci), pressure increased. The admiral Piyale Paşa promoted the continuation of a naval policy aimed at annexing the Latin-held islands in the Levant seas on the routes of Ottoman communications; Chios and Cyprus, the principal among them, were both already tributary to the Porte. In the end, the pro-Venetian peace party at the Porte, Solgolu Mehmed Paşa's, gave in to the war party, and the attack on Cyprus was decided for the early spring 1570. Joseph Nasi, alias Don Juan Micas, seems to have been implicated here.

Selim II (1566-74) issued his orders for war in 1568. A *fatwa* by the *şeyhül islām* provided a justification for breaking the peace (cf. text in Peacock, I, 386-7, tr. in d'Ohsson, *Tahsew*, ed. 1824, v, 73 f. — *GOR*, III, 366 f.). Preparations continued during 1569. On 28 March 1570 the Ottoman envoy Kubad formally handed to the Senate and the Doge Sultan Selim II's demand for the cession of Cyprus, which was refused. In the meantime, Lala Mustafa Paşa, the fifth vizier [q.v.], was appointed *serdar*, and Piyale Paşa, the third vizier [q.v.], was made commander of a fleet of 80 galleys and 30 galliots, followed by 'Ali Paşa with troops, munitions and materials for the land campaign.

On 3 July 1570 the Ottoman fleet appeared before Larnaca (*Les Salines*). A Holy League created by Pope Pius V, Spain and Venice failed to organise a timely counter-attack. The Venetian commander, the *Luogotenente* Nicolo Dandolo, had to limit himself to the defence of the fortress towns. On 25 July 1570 the siege of Nicosia began, and ended on 9 September when the city was taken by storm. Kyrenia capitulated without a fight 5 days later. The population

in the countryside seems not to have opposed the invaders at all. The fortress city of Famagusta still held out. The Ottomans began the siege in September 1570. The fleet of the Holy League never came nearer than Castelorizo island, and only small Venetian reinforcements reached Famagusta in January 1571. The new season of war began in the middle of April 1571, when work on the siege trenches and mines was begun in earnest. Heavy bombardments, mining and ensuing man-to-man fighting exacted a heavy toll (50-80,000 on the Turkish side, out of a force totalling 150,000 or more). Marc Antonio Bragadín surrendered on 1 August upon condition of a free withdrawal of troops with their dependents. Lala Mustafá Paşa did not, however, keep to the treaty of surrender in the end, and the Venetian commander and many of his staff were massacred.

3. Ottoman Rule (1571-1878).

By a treaty of 7 March 1573 Venice formally ceded Cyprus to the Ottoman Sultan and agreed to pay a war indemnity of 300,000 ducats.

Already, by an Imperial order of 9 September issued by the *savdır* Lala Mustafá Paşa after the capture of Nicosia, Cyprus had been made an *eyalet* or *beglerbeglik*, with Muzafer Paşa as the first Ottoman governor. Next to the *beglerbegs* were appointed, as usual, a chief *kâdî* of the province and a *defterdar*. The new province comprised eight *sandaks*: *mehke* or Nicosia (Lefkoşa), and on the mainland İcöl, Sis, Alaşlıyye (Alanya), Tarsüs, Tarâbüs and Şâm (till 1573) (all with the *hukûr* system), and Kyrenia, Paphos (Baf) and Famagusta (Magoşa) (with *şifâs* [g.v.]). Apart from the main towns, there were, according to the 1572 *tehrir*, 303 inhabited and 76 desolate villages.

Population numbers of Ottoman Cyprus fluctuated greatly; from the 18th century many observers indicated \pm 80,000, but some observers 200,000, both figures contrasting with the census result of 1572 which produced \pm 85,000 taxable heads of family (*âhşâr*). Ewliya Çelebi indicated 30,000 Moslems and 150,000 infidels in around 1670-5. Probably the reports of the depletion of the island in the first centuries of Ottoman rule have been exaggerated. The first census after the British occupation in 1881 showed a total population of 185,630.

The organisation of the new province was based on a new survey of population and revenue, *tahrir*, ordered by a *fermân* of 19 Djumâdâ II 999/9 October 1571 to the newly-appointed *beglerbeg* Sinân Paşa. This survey is recorded in the *defter-i muvazzat-ı Kıbrıs* dated 18 October 1572 (Ankara tapu ve kadastro arşivi, No. 506/64). Government was to be according to Islamic and Ottoman law. A major change was the grant of *miri* lands in usufruct to the native farmers, who were freed from serfdom, the feudal system being abolished. The amount of *çiftçis* (= *âhşâr*) [g.v.] was one gold piece per head of family. In the other forms of taxation, the Ottoman government also exercised moderation and produced a favourable change in respect to Venetian and Lusignan policy.

The abolition of the *mité du sel*, for instance, resulted in a sharp decrease of revenue, though production of salt was not reduced (Inalcik, *Ottoman policy* ... [see Bibl.], 60 f.). Forced labour was abolished in practice as well. From 45 % to 67 % of taxes were levied in kind, as elsewhere in the Ottoman provinces; *çiftçis* and *üçendîs* [g.v.] were paid in cash.

A squadron of galleys was stationed at Famagusta

and Kyrenia. Ottoman troops garrisoned on the island numbered 3,779 including 1,000 Janissaries, established in Nicosia, Limasol, Paphos, Famagusta and Kyrenia. A great number of Anatolian Turks from the regions of Konya, Karamân, Niğde, İcöl, Alanya, Antalya, Neanteşe and Deñizli were settled on the island as so-called *şifâs* (cf. Barkan, in *IFM*, xl [1949-50], xv [1955], *fermân* of Djumâdâ I 980/22 September 1571 to the *kâdîs* of Karamân, Anadolu and Dîlîkadiyye; see *Muhtesem defter*, 19, pp. 314-7, no. 669, publ. in *ibid.*, 352-3). In total, 1689 families immigrated by 1572, mainly farmers. In 1581 8,000 families were registered as immigrants (MD 43, cf. C. Orhonlu, art. in *Kıbrıs teşkilatı kongresi* [see Bibl.], 99-103). Conversion of Latin and Greek Christians added little to the number of Muslim "Turkish" population, amounting to only about 400.

A major contribution to the welfare of the native Greek population was the Ottoman decision to abolish the Roman Catholic hierarchy and to restore the Orthodox Church of Cyprus under its archbishop. This prelate was made representative of his community vis-à-vis the Ottoman government as the Ethnarch or head of the Greek community. It meant an increasing degree of autonomy for the Orthodox Greek population under its own chosen leaders, and the relatively unhindered development of its own cultural tradition into modern times. This privileged status of the Greek population, together with the new dominating but smaller group of Turkish Muslims on Cyprus, was to form the basic situation of the Cypriots down to modern times. The Latin element entirely lost its former status. It survived only in small numbers, profiting from diplomatic protection within the framework of the Capitulations system (see *muhtazâr*).

Ottoman possession of the island was not seriously threatened after 1571. The Grand Duke of Tuscany organised a raid on Famagusta in 1607 at the time of his grand oriental scheme involving Fakhr al-Din [g.v.], *amir* of the Druzes, and the rebel *Defterdar* 'Alî Paşa [g.v.]. The Veneto-Ottoman war of Candia (1645-69) did not have any great effect on Cyprus. In the 17th and 18th centuries, Cyprus was still an important centre of Levant trade, cotton and salt being valuable commodities. Consuls of Venice, France, of the Dutch Republic (since 1613) and of England resided at Larnaca, the factory (*şifâ* [g.v. in Suppl.]) of the island. The consuls and their national groups of foreign residents sometimes played an important political as well as a commercial role on the island, especially in times of rebellion.

The importance of Cyprus decreased after the conquest of Crete was completed in 1669. At that time, the *beglerbeglik* was incorporated into the provinces of the *Kapadân Paşa*, who sent a deputy governor, the *müsavvir*. The role of the Orthodox hierarchy in the administration increased at the same time. Strife among the Ottoman notables of Nicosia led to armed conflict, which in its turn caused the Porte to interfere by sending troops repeatedly. Çiftioğlu Ahmed Paşa at last succeeded in defeating the rebels and executing their leader Boyadji Mehmed Ağa in ca. 1690. In 1703 Cyprus was transformed into a *şifâs* domain of the Grand Vizier. The government was now exercised by a *mukassîf* (*teşvîidâr*) in the name of the latter, who was a farmer of taxes at the same time. The frequent change of these functionaries, as elsewhere, led to overburdening by taxation. In 1745 Cyprus once

again became an independent province under its own *pasha* for a few years. Abû Bekir Paşa (1746-8) exercised his charge satisfactorily, bequeathing to the island an aqueduct serving Larnaca, the harbour and passing ships (waḥḥiya of 12 Rabi' I 1161/12 March 1748, in Luke, *Cyprus*, 69-74).

In 1754 a *ḥaḳ-i ḥumîyân* was issued at the request of the Archbishop and suffragans to fix the amount of the *ḥarâḳ* together with the *maḥḥal* and *kurul* taxes at 22½ piastres per head on 10,000 assessments. The bishops acquired the status of *ḥaḳḥanḳâr* (Gr. *demogeron*), responsible for the peace and the payment of taxes by the Greek subject population. In 1764 Çil 'Oḡmân Agha, *muḥḥasîl* of the Grand Vizier and a *mulṭam*, doubled the *ḥarâḳ* on Christians and Muslims alike, who rose in revolt and killed him. The revolt lasted till August 1766. Cyprus suffered the depredations of the Russian fleet after the destruction of the Ottoman one (Çeḥme 5-7 July 1770) till 1774. From 1777 to 1783 Hâdîdî 'Abd ul-Bâkî Agha was *muḥḥasîl*. By this time, the actual administration and levying of taxes was shared between the Ottoman administrator and the Archbishop and bishops, who employed the Greek "Dragoman of the Saray" as their agent also. In 1804 a revolt of the Turkish troops broke out against the Archbishop and the dragoman Hâdîdî Georḡakis Kornesios (executed in 1809), and this lasted till 1805.

The Greek Cypriots contributed little to the Greek War of Independence (1821-9). The little involvement there was (1821) gave the *milîdîm* the pretext for, firstly, a general disarmament of all Christians. Then the leading personalities were arrested and put to death in July 1821, among them the Archbishop Kyprianos (1810-21) and three bishops. After the massacre there followed a partial confiscation of the possessions of the victims and of the churches and monasteries on the islands, although much was restored later. The Christians living within the fortresses of Nicosia, Famagusta and other towns were ordered to remove themselves to the outside, a situation which has remained. The archbishops never recovered their powerful pre-1821 position. The Greek Kingdom was recognised by the Porte in 1830, and this caused the beginning of nationalist aspirations of *enosis* amongst the Greek Cypriots. The overtaxation of the island's resources continued to frustrate a fundamental improvement of its economy, and revolts by both groups of the population occurred in 1833.

In 1838 the era of the *Tanzîmât* (q.v.) set in. By 1849 Cyprus was reformed as a *sandjak* of the province of the Islands of the Aegean Sea, *Diyâr-ı adlî* (q.v.) and administered by a *valî*, assisted by a *divân* or council where Christians and Muslims were represented. Governors followed each other in quick succession. In 1860s Cyprus became an independent *sandjak* (Hill, iv, 339). The second *tanẓîmât* decree of 1856 was applied in Cyprus, and the effects of reform were becoming noticeable during the last decades of the Ottoman administration (1856-78), when courts came into being. The population increased from ca. 100,000 in 1840 to 200,000 in 1862. The island's economy progressed moderately, and Larnaca remained the principal port. The administrative status of Cyprus was however reduced again in 1868 to a *sandjak* in the *vilâyet* of the Islands, but restored in 1870.

4. The British Occupation 1878-1959.

A few days before the Congress of Berlin, Great Britain concluded with Sultan 'Abd ul-Hamîd II

(q.v.) a secret Convention of Defensive Alliance in which she promised help to defend his empire against Russian encroachment. The Sultan ceded Cyprus for occupation and administration as a "place d'armes". In an annex of 2 July 1878 it was provided that the annual surplus revenue of Cyprus, assessed from the average of the previous 5 years, was to continue to be paid to the Sultan. The so-called "tribute" in fact never reached the Sultan, but was diverted to the creditors of the Ottoman Debt. Instead, and this arrangement remained in force till Sir Ronald Storrs' administration in 1917. The Sultan retained his sovereign rights to the island and continued appointing its *waḥḥ* and *ḥâḳîm*. This status gave little incentive to the British government to develop Cyprus, but elementary reforms and ameliorations were effected. With the outbreak of the First World War in 1914, Great Britain annexed the island. A representative régime was instituted (1922), with a council of 18 members, comprising 9 Greeks, 3 Turks and 6 British officials. Any proposal for union with Greece, *enosis*, could thus be deadlocked by the Turco-British bloc. The repeated refusal of *enosis* created tension between Greek Cypriots and the British. At the Peace of Lausanne (1923), Turkey formally renounced all claims to Cyprus. In 1925 Cyprus became a British crown colony.

A small number of Turks, however, opted for the Turkish nationality and left. The first great conflict between Greeks and British broke in 1931 during Sir Ronald Storrs' tenure as governor. A state of emergency was proclaimed. Military government remained till after World War II. Already in 1941, however, political parties were permitted again: a communist party A.K.E.L., a Greek nationalist party K.E.K., and a Turkish party. Trade Unions came about mainly under communist leadership. Municipal elections were held in 1943. After 1945 the British government did not consider any change of status for Cyprus. In 1950 Greek Cypriot nationalists organised a plebiscite among Greek Cypriots, and 96 % voted for *enosis*. The young Bishop of Kitios, Michael Mouskos, was the organiser of this demonstration. On 18 October 1950 he was elected the "Most Blessed and Most Reverend Archbishop of New Justiniana and all Cyprus" under the name Makarios III (1919-77). In 1954 a Cyprus-born Greek officer, George Grivas, began organising an anti-British guerrilla organisation, E.O.K.A. The British government devised a new constitution for the colony without giving any hopes for independence. In early 1955 the first discussion of the Cyprus problem in the U.N.O. failed to have a pro-Greek result. Soon afterwards guerrilla warfare by E.O.K.A. began. In July 1955 the British Premier Sir Anthony Eden held the first tripartite talks on the question, with Greece and Turkey, the latter also invited to have a say as an ally of N.A.T.O. Turkey's point of view was maintenance of the *status quo* as a guarantee against *enosis*. The leader of the Greek Cypriots, Archbishop Makarios III, protested against discussion of the interests of Cyprus without the presence of its own people, meaning only the Greek Cypriots. E.O.K.A. stepped up its activities. Field-Marshal Sir John Harding was appointed governor. He opened talks with Makarios upon the base of "a wide measure of self government". This was acceptable for the Turks and nearly so for Makarios. The talks were unexpectedly broken off by order of the London government, and Makarios deported to the Seychelles Islands (9 March 1956).

E.O.K.A. terrorism came into full fury. The

British began to recruit Turkish Cypriots as policemen, who consequently also fell victim to Greek bullets; the beginning of inter-communal violence dates back from this time. A Turkish militant organisation grew up, and a Turkish Cypriot leader emerged, Dr. Fazıl Küçük. At the U.N.O. meeting in February 1957, neither *enosis* nor its Turkish answer *taksim* (division of Cyprus into two parts) got sufficient support. The new British Prime Minister, Harold Macmillan, decided to release Makarios, who was not, however, allowed to return to his island, and Sir Hugh Foot was appointed governor. The Menenderes government in Ankara protested against this liberal figure succeeding the Field-Marshal, and blocked the plans for self-government of Cyprus, the return of the Archbishop and talks with all Cypriot leaders. A revised Foot-Macmillan constitutional proposal contained many elements later used in the London-Zürich treaties of 1959. At the time of its announcement, Cyprus experienced the worst terrorist fighting between the two communities, between E.O.K.A. and T.M.T., the Turkish National Defence Organisation, with 200 dead in two months. At this time there were 20,000 British troops on the island.

Civil war suddenly came to an end in July 1958, although E.O.K.A. continued its light against the British. Makarios, tearing an Anglo-Turkish co-operation to divide Cyprus, came forward in September with a proposal for independence under auspices of the U.N.O. Grivas did not support it, and *enosis* remained his only aim. Great Britain did not consider it either, but began to change its own position: 28,000 troops on Cyprus became too heavy a burden, and a Greco-Turkish conflict would harm N.A.T.O. Sovereign base areas in Cyprus would be sufficient for Britain's strategic needs. Athens wanted to prevent *taksim*; but Ankara could accept any compromise which prevented *enosis*. The U.S.A. made it clear that it would not continue supporting Great Britain in the Middle East. Any Greco-Turkish solution must be accepted.

In December 1958, the first talks between Greece and Turkey (by Averoff-Tossizza and Zorlu respectively) were held. In February 1959 the prime ministers and foreign secretaries reached agreements in Zürich. At a second meeting in London these and a draft constitution were submitted to the British government. The Cypriots had not taken part officially before, but the Cypriot leaders Makarios and Küçük were now invited to accept the agreements. Makarios was put under heavy pressure by Greece. In London, at Lancaster House on 19 February 1959, three treaties were signed by all parties:

- (1) a "Treaty of establishment", Britain declaring Cyprus independent, with the reservation of two sovereign base areas.
- (2) a "Treaty of guarantees": the 3 powers guarantee the independence of Cyprus and its status as defined in a number of fundamental articles of its Constitution. *Enosis* and *taksim* are forbidden, and in case of violation, all three powers together, or if not feasible, each separately, may take action to restore the *status quo*.
- (3) a "Treaty of alliance" between Cyprus, Greece and Turkey, a military alliance with headquarters at Nicosia, where 950 Greek and 650 Turkish soldiers will be stationed, was laid down as an extra guarantee for the other treaties.

Furthermore, a Constitution was laid down which came into force on 16 August 1960. The independent Republic of Cyprus, with a presidential régime and

Greek and Turkish as official languages, has an executive of one President and one Vice-President, a Greek and a Turk respectively, elected by their own communities. There is a council of 20 ministers, comprising 7 Greeks and 3 Turks, deciding with a majority vote. Its decisions are subject to a veto of President and/or Vice-President. There is a Parliament of 50 (35 plus 15), with a Greek speaker and a Turkish deputy speaker, deciding with a majority vote, except in electoral municipal and fiscal legislation, when separate communal majorities are needed. (Full text in: *Conference on Cyprus. Documents signed and initialled at Lancaster House on February 19, 1959*. Cmd. 679, London [H.M.S.O.] 1959).

3. Independence 1960

After the transitory period from 29 February 1959 to 15 August 1960, Cyprus became an independent state on 15 August 1960. Its population in about 1958 was estimated at 621,500 (last official census of 1960: 557,015, with 442,521 Greeks, 104,350 Turks, 3,628 Armenians, 2,708 Maronites, 3,332 British, 2,796 Latins and 18,261 others). Reliable estimates are that in 1970 the Greeks made up 78 % and Turks 18 %, which means a slight lack of increase of the Turks.

The application of the detailed and imposed constitution caused serious difficulties. The first opposition came from Grivas, who with his followers continued to insist on *enosis*. The formation of an army caused insurmountable difficulties; the Turks wanted separate communal units and Küçük in the end used his veto against Makarios. Appointments of civil servants became problematical because the Turks could not fill all the 30 % of posts due to them. The most serious conflict was caused by the separation of municipalities, no longer desired by the Greeks. The Turks took this point as a test case for the loyal application of the constitution. When the Turks proposed to continue with it in the end of 1962, Makarios blocked it. Both parties were considered to be wrong by the constitutional court, whose members ("neutral" German lawyers) left the country not long after for fear of their lives.

On the 1 January 1963 Makarios came forward with a proposal to amend 13 points of the constitution, which was no longer functioning. The idea was to install a more unified state, with guarantees for the Turkish Cypriots, Makarios and Küçük being co-presidents.

The Ankara government declined these proposals. The intercommunal deadlock led to civil war. On 4 March 1964 a United Nations peace force was organised and a U.N. mediator was appointed. Violence continued. Makarios introduced military service, and could thus mobilise a Greek National Guard to control the extremist bands directed by Grivas from Athens. The situation worsened in the course of the year. The U.S. President Lyndon Johnson warned the Prime Minister İsmet İnönü in June that Turkey would not be protected by N.A.T.O. in case of a Russian attack after Turkish unilateral action. All over the island the Turkish Cypriots withdrew inside fortified enclaves surrounded by Greek Cypriot guerrillas and men of the National Guard. This meant a definitive change of the old settlement pattern of 120 all-Turkish and 206 mixed villages. There was a relocation to Turkish-dominated areas of at least 25,000 Turkish refugees. In 1969, 223,289 Turk refugees still remained unsettled. A precarious balance was maintained by the U.N.

Force in Cyprus (U.N.F.I.C.Y.P.). Greek Cypriots dominated the greater part of the Republic. A U.N. mediator, Gato Plaza, began his work in March 1965. Makarios and Küçük did not act together any more, nor did the cabinet or parliament. Makarios kept on insisting that the imposed constitution was impracticable. Küçük maintained that a limitation of independence was necessary for the survival of the Turkish community, which must never be treated as a minority, and proposed *hakimî*. Neither of the two Cypriot parties was able to make concessions.

Greek-Turkish talks in 1966 led to no results. In the autumn of 1967, violence flared up again after Greek Cypriot provocation. The Ankara government threatened intervention. The Athens Junta government gave in, and withdrew Grivas from the island. Makarios's position had now become the stronger one. Küçük proclaimed a separate transitional government for all Turkish sectors in December 1967. On 25 February 1968, presidential elections were held which resulted in a 95.4 % vote for Makarios and his independence policy. Concessions were granted to the Turks. R. Denktaş was allowed to return and was elected president of the Turkish Communal Chamber. He conducted intercommunal talks with G. Clerides in June, July and autumn of 1968 and in the spring of 1969. On 8 March 1970, an attack was made on President Makarios, probably by Greek ex-E.O.K.A. members. Parliamentary elections were held in July 1970 separately by both communities.

The year 1971 saw talks on Cyprus by the governments of Athens and Ankara in Lisbon (by Foreign Ministers Olçay and Xanthopoulos-Palanas). The communal talks between Denktaş and Clerides were also continued. In September, General Grivas returned secretly to organise a new E.O.K.A. terrorist (1972) movement, mainly directed against Makarios' position, but also a menace to Turkish Cypriots. In March 1972 Grivas, assisted by the Bishops of Paphos, Kitium and Kyrenia, staged a coup to dethrone the President-Archbishop and followed it up with raids and killings among Makarios's party which continued during 1973. Grivas died on 27 January 1974. Makarios's conflict with the Athens Junta led to the overthrow by Greek army officers of his government on 15 July 1974.

Led by an E.O.K.A. terrorist, Nikos Sampson, the coup seemed to aim at *enosis*. The Turkish government invoked the Treaty of Guarantee and intervened unilaterally. On 20 July massive Turkish troop landings were effected near Kyrenia and elsewhere. A short war ensued between the Turkish army units and the Greek Cypriot National Guard, which led to a lasting division of the island along the cease-fire line, stretching from the East, south of Famagusta to the West, near Lefkia including the Turkish zone of Nicosia. Massive relocation of the population was the result, with at least 200,000 displaced persons. In December 1974 Makarios returned to Cyprus as President. His authority was now, however, less. The new leaders of the two communities are G. Clerides and R. Denktaş, both lawyers by profession. Intercommunal talks were continued by them in 1975 without significant results, and on 13 February 1975 Denktaş announced the formation of a separate Turkish state in the northern half of Cyprus. The intercommunal talks were resumed in Vienna in April under the auspices of U.N. Secretary-General K. Waldheim.

On 3 August 1977, President Archbishop Makarios

III died aged 63. S. Kyprianou succeeded him as President, and Bishop Chrysostomos of Paphos was elected head of the Orthodox Church of Cyprus in the course of the year. Intercommunal talks were resumed in January 1978 under auspices of the U.N.O. Secretary-General between Kyprianou and Denktaş.

The Cyprus Question, one of the last remnants of the Eastern Question, remains to be solved on the both national and international levels.

KUBU, a sub-district (*kacamatan*) of the regency (*kabupaten*) of Pontianak, situated in the south of the delta of the Great Kapuas river, in the Indonesian province of Western Kalimantan in Borneo (p.v. in Suppl.). In 1974 it had 16,932 inhabitants, among them 643 foreigners, most of them Chinese. The scattered population is mainly of mixed Arab, Buginese, or Malay origin, besides the Chinese and few Dayaks. Since 1955, the Indonesian government has tried to open some areas for Javanese immigrants.

The family which ruled this area until 1958 was of Arab descent originating from Hadramawt. The founder of the kingdom was Sayyid (according to others Sharif) Idrus al-Idrus, who settled not far from the mouth of the river Terentang with a few Arab, Buginese and Malay followers in ca. 1780, soon after his brother-in-law, the Arab adventurer Sharif 'Abd al-Rahmān al-Kadri, had founded the sultanate of Pontianak. The capital and kingdom received its name from an entrenchment (Malay *kubu*) thrown up as a defence against raids by pirates. He put himself under the protection of the Dutch East India Company, who recognised him as a ruler with the title *raja* (lord). One of his sons, 'Alawi bin Idrus, because of his opposition against the Dutch and favour of the British, left Kubu in 1853 and finally settled in Sarawak; some of his descendants have had a certain political influence there, especially since independence (1963).

In 1910, the Dutch introduced a *bestuur comité* in Kubu, consisting of three *notables*, each of whom was allotted a certain territory as an appanage. The last king, Hasan bin Zayn, was appointed as head of the *bestuur comité* by the Japanese in 1943, before he was elected head of the self-governing kingdom in 1949. In 1958, the monarchy was abolished and Kubu was transformed into its present administrative position as a *kacamatan*. The predominant religion is Islam, but this is mixed with animistic beliefs.

(W. H. RASSESS — [O. SCHUMANN])

KŪČAK KHĀN DJANGALĪ, Mīrā, known also as *Shaykh* Yūnus (1880-1921), Persian revolutionary and the first person to declare a republican régime in Iran. He was born into a lower middle class family of *Raght*, in the north of Iran, and studied Arabic and other religious subjects in the traditional schools in his region. He then moved to Tehran, continuing his studies in a religious school called the *madrasa-yi mahmūdiyya*. His early training in traditional schools, together with his association with the Russian revolutionaries in Tiflis and Baku in 1908, plus his close co-operation with the militant Iranians involved in the Persian Constitutional Revolution of 1905-11, developed in Kūčak Khān a strong sense both of revolutionary patriotism and also of devotion to Islam. We therefore see him occasionally consulting the Qur'ān as well as setting up sessions for reciting the heroic poetry of Firdawsī [q.v.] (Ibrāhīm Fakhrāʾī, *Savār-i Djangal Mīrā Kūčak Khān*, Tehran 1965, 37-8). In 1909 Kūčak joined the revolutionary group of Gilān aimed at overthrowing the then despotic Shāh, Muḥammad 'Alī (reigned 1907-9). The Gilān Bakhtīyārī forces moved on Tehran victoriously in July 1909 while Kūčak Khān was suffering a severe back injury caused by carrying a heavy gun during the expedition.

After this short-lived victory on the part of the constitutionalists, Muḥammad 'Alī Shāh fled to Russia, where he made an attempt to regain his throne. A year or so later he entered Iran and, with the help of some Turkoman supporters, he moved towards Tehran. At this time (1911) Kūčak Khān joined the government troops in Māsāndarān and "took many heroic actions" against the former Shāh's forces (Ahmad Kasravi, *Ta'rikh-i Asgharshāhi-yi Asgharshāhīyān*, Tehran 1961, 181). In this expedition, Kūčak Khān was wounded. After his recovery, he was denied residence in *Raght* by the then Consul-General of Tsarist Russia; hence he moved to Tehran, suffering extreme poverty.

While in Tehran, Kūčak Khān took an active interest in the idea of Pan-Islamism which was then (1913) being propagated by the Ottomans and which enjoyed a considerable following in Tehran and elsewhere. Kūčak Khān had a series of meetings and discussions with religious and political personalities concerned about the future of Iran, and finally decided to undertake armed struggles against the British-backed government of Iran. In 1914, therefore, he went to Gilān and rose against the government and, with the help of some German and Ottoman advisers, organised his Pan-Islamic group, with the newspaper *Djangal* as its official organ, the latter first appearing in 1917.

After the Soviet Revolution, the termination of Tsarist claims on Iran and the conclusion of the Anglo-Persian Agreement of 1919 which established British control over the Persian army, customs, and financial affairs, Kūčak Khān, like other revolutionary leaders such as Khayyabāni [q.v.] and Muḥammad Taqī Khān Pīšyān, intensified his campaign against the British. He established friendship with the Russian Bolshevik régime and in the name of the liberation of Iran, in May 1920, he proclaimed the Socialist Republic of Gilān.

To Kūčak Khān's revolution was, of course, opposed the British-backed government of Tehran; a number of clashes therefore took place between the

Djangalis and the opposing British and Persian troops. There were also internecine fights between Kūčak Khān on the one hand and other Djangali leaders, such as Iṣṣān Allāh Khān and Khān Kūshān and a number of the 'Adhlat Party members, who held extremist communist views. These conflicts finally resulted in the murder of a prominent revolutionary, Haydar Khān 'Amū Ughlī [q.v. in Suppl.]. In the meantime, the pro-British Sayyid Diyā' al-Dīn Ṭabātabāʾī set up the Zarganda Committee, which was joined by a number of the large landowners of Gilān such as Fath Allāh Khān Sardar Mansūr. At the same time the Soviets decided to establish friendship with the British and the government of Tehran, culminating in the Soviet-Persian Agreement of 1921, on the basis of which the Soviet Ambassador to Tehran, M. Rothstein, wrote a long letter to Kūčak Khān urging him to put an end to his revolutionary activities. Thus abandoned, Kūčak Khān took refuge in the forests of Gilān, and shortly afterwards his frozen corpse was found and his head was taken to the authorities.

Kūčak Khān's writings and manifestos suggest that he was aiming at a united Iran without any foreign interference, including that of the Soviets. He believed in land reform and in compulsory education, and during his short control over Gilān, he did carry out some land reform and founded a number of public primary schools in Sawma'sarā, Shāfi, Kasmā, and Masūla.

The evaluation of the revolutionary activities of Kūčak Khān has caused controversy, and many contradictory accounts have also been given concerning the factual history of the Djangali movement. He has been called a "willing puppet" of the Soviets (George Ienczowski, *Russia and the West in Iran, 1918-1948*, Ithaca 1949, 60). On the other hand, Soviet writers (*The borderslands of Soviet Central Asia, in Central Asian Review*, 10 [1955], 287-331), as well as the Iranian revolutionary groups (S. 'Awn Allāh, *Inshāb-i ḥabīb-i sūsiyāfīst-yi ukhtūr va mahdāt-i humanistī va hārgari-yi Irān*, and Taqī Mūsawī, *Inshāb-i ukhtūr va mahdāt-i Gilān*, both in *Inshāb-i ukhtūr va Irān*, ed. Hāzīr-i Tādā-yi Irān, 1967, 247-52, 263-74; *Djunbūh-i humanistī-yi Irān*, in *Tādā: Urgan-i āstānān-i inshāb-yi ḥabīb-i Tādā-yi Irān dar ḥārgari-yi as hārgar*, No. 25, 1969, 22 ff.) do not seem to have paid enough attention to the eventual Soviet abandonment of the Djangali movement; this latter question has constituted the point of emphasis of a number of other writers (Mustafā Shu'āʾī, *Nigāh-i ramābī-yi ghurāt va mahdāt-i inshāb-yi Djangal*, Tehran 1968) who have considered Kūčak Khān to be a national hero. A third group of the accounts are hostile to the movement, expressing openly the attitude of the big landowners of Iran, particularly of those of Gilān; the best example of this group of literature is the anonymously-written book *Ta'rikh-i Djangaliyān*, Tehran 1918.

(ABDUL-HADI HAJI)

KOČÂN, modern form of the mediaeval Islamic *Khabûshân/Khûdân*, a town of northern *Khurâshân* on the main highway connecting Tehran and *Naghshad*. It lies at an altitude of 4,060 feet in the fertile and populous *Atrak River-Kashaf Rûd* corridors, on the headwaters of the *Atrak* and between the parallel mountain ranges of the *Kûh-i Hazâr Masâjd* on the north and the *Kûh-i Shâh Dîbân* and *Kûh-i Bînâlûd* on the south; the modern town

lies several miles upstream, so. to the east-south-east, of the mediaeval town.

Khabûshân was apparently the earliest Islamic form of the town's name, although nothing is known about it during the period of the Arab conquests and the ensuing two or three centuries. But already in the 4th/10th and early 5th/11th centuries, such writers as Ibn Hawkal, ed. Kramers, 433, tr. Kramers-Wieck, 429; Mukaddasî, 318-19, the author of the *Hudûd al-'Alam*, tr. Minorsky, 103, § 23, and Bayhaqî, *Ta'rikh-i Masâdî*, ed. Ghani and Fayyâd, 604, 607, tr. Arends, 1, 735, 739, spell its name as *Khûdân*. Sam'ânî (who had personally visited the town), *Ashûb*, ed. Hyderabad, v, 223-4, repeated in Yâkût, ed. Beirut, ii, 399-400, says that the locals pronounced *Khâdîdân*. The geographers and others describe it as the chief-lieu (*hauad*) of the rich and flourishing rural district (*rastâh*) of *Ustuwâ* (the 'Astrawwâh of Greek sources), which was administratively a dependency of *Nishâpûr* and comprised 93 villages. It constituted the granary of *Nishâpûr*, growing corn and fruits in both rain-watered fields (*maḥdâh*) and in those irrigated by *kanûs* (q.v.), cf. Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran 994-1040*, 153-4. Cotton was also grown and textiles produced. Concerning the religious complexion of the district, we learn that in the early 5th/11th century the doctrines of the *Shâfi'î madhhab* were promoted in *Khûdân* and *Ustuwâ* by the *faḥī* Abû 'Amr Farîdî (Muḥammad b. al-Munawwar, *Asrâr al-tawhîd fi maḥabib al-Shaykh Abî Sa'îd*, ed. Dhabîb Allâh Sâhî, Tehran 1334/1953, 241; at this time, the famous *Shâfi'î* scholar Abû 'l-Hasan 'AR al-Mâwardî (q.v.) served for a while as *hâdî* of *Ustuwâ* before moving to *Baghdâd* (cf. H. Halm, *Die Ausbreitung des schafitischen Rechtsschule von den Anfängen bis zum 5./11. Jahrhundert*, Wiesbaden 1974, 96). By the 11-Khânid period, the name *Ustuwâ* was going out of use, though still used in the tax-registers, according to *Hamid Allâh Mustawî, Nûsha*, 150, tr. 149.

Kočân makes sporadic appearances in the mediaeval Islamic chronicles, since it lay on the principal route from *Gurgân* and the *Caspian* provinces to *Tûs* and *Nishâpûr*, and because the pasture grounds of the upper *Atrak* valley were especially attractive to powers with nomadic followings, such as the *Saldjûks*, the *Mongols* and the *Il-Khânids*. It played a part in the manoeuvrings of *Ma'wûd* of *Ghazna* and the *Saldjûks* under *Toghrlî Beg* during the struggle for *Khurâshân* (Bayhaqî, loc. cit.). In 557/1166 it was the meeting place of the *Kh-wârazm-Shâh* *Altû* (q.v.) and the *Karakhânid* *Mahmûd Khân*, after the latter had invited the *Shâh* into *Khurâshân* to combat the *Oghuz* captors of *Sultan Sanjar*, and it was in *Kočân* that *Altû* died shortly afterwards (Barthold, *Turkistan down to the Mongol invasion*, 1, 330-1). The town suffered badly during *Cingiz Khân's* attack on *Khurâshân*. According to *Dîwânî*, the *Mongol* general *Subetay* wrought great slaughter at *Khabûshân*, *Isfârîn* (q.v.) and (?) *Adnan*, and for nearly 40 years the town lay devastated and depopulated. Then in 654/1256, *Dîwânî*—who had with considerable acumen purchased a quarter of the town from its inhabitants—himself persuaded *Hülegü* to rebuild it. The latter issued a *yarlîq* for the repair of the *kanûs* and the rebuilding of the houses and markets, all at his own expense, and the *amîr* *Sayf al-Dîn Akâ* expended 3,000 *dirhams* on reconstructing and restoring the Friday mosque and cemetery (*Dîwânî-Boyle*, I, 146, ii, 617, cf. Boyle, in *Cambridge history of Iran*, v, 342).

Küçan thus enjoyed a recovery of prosperity under the later Mongols and Il-Khānids. Rashīd al-Dīn mentions that there was an imperial workshop (*shāhshāna*) there (Petrushevsky, in *ibid.*, v, 513), and also that Ghāzān, when governor of Khurāsān and himself still a Buddhist, built a Buddhist temple in the town for those devotees within the Mongol court entourage and official classes (*Dīwān al-tawārīkh*, ed. Alizadeh, in, Baku 1957, 373, cf. D'Osson, *Histoire des Mongols*, The Hague 1945, I, 147-8). However, Küçan had at some point of time also acquired an *imāmdād* or saint's tomb of some importance, so that of Ibrahim, son of the Eighth Imam of the Shī'a, 'Ab al-Ridā.

The whole Airek-Kashgh-Rūd corridor lay in the front line of Persian defenses against the Ūzbegs during the Safawid period. Hence Shāh 'Abbās I settled Kurdish tribesmen in northern Khurāsān, to the number, it is said, of 15,000 families, and subsequently, what were in effect a string of Kurdish tribal principalities grew up along the frontier, with hereditary chieftains and exemption from taxation in return for maintaining armed cavalrymen against incursions from Central Asia. Küçan came within the area of the Zafarānīd Kurds, whose hereditary leaders had the title of *Ilkhāni* bestowed upon them. Nādir Shāh had an especially consistent policy of resettling peoples in frontier regions for strategic purposes, and during his reign (1148-60/1736-47) there were considerable further implantations in northern Khurāsān, including the Küçan district (see on all these population movements, J. R. Perry, *Forced migration in Iran during the seventeenth and eighteenth centuries, in Iranian studies, Jnl. of the Society for Iranian Studies*, viii/4 (New York, Autumn 1975), 205 ff.).

The local chiefs of Küçan were nevertheless frequently in revolt against the Persian central government. Nādir Shāh was killed in 1160/1747 whilst engaged in the subjugation of the town, and a nearby hill is still called Nādir Tepe. In the reign of the Kādījī Fāth 'Alī Shāh, the *Ilkhāni* Rūdā Kūfī Khān (who entertained the British traveller J. B. Fraser in Küçan in 1822) revolted against his overlord, so that the Shāh's *wali* *ahd* or heir, 'Abbās Mirzā [s.c.], came and suppressed the outbreak, razing the town's walls and causing much destruction within it. Severe earthquakes in 1852, 1871, 1893 and 1895 increased the devastation, and Curzon, who was there in 1889, found many ruinous houses there, estimating the population at less than 12,000. With the pushing-forward in the later 19th century of the Russian frontier in Central Asia up to the natural frontier of the Kopet Dāgh-Khāzr Hazār Masūd range and the subjection to Imperial Russian rule of the formerly predatory Türkmen, the three Kurdish principalities of northern Khurāsān, Küçān, Badkūsh [s.c.] and Darrāh Gaz, lost much of their military and strategic *raison d'être*, and Curzon noted that the power and prestige of the then *Ilkhāni*, Shudjā' al-Dawla Husayn Khān b. Rūdā Kūfī Khān, had diminished (G. N. Curzon, *Persia and the Persian question*, London 1892, I, 94-112).

In the present century, Küçān has remained the centre of an important wheat-growing area, supplying much of the rest of Persia; these crops are grown, as in mediæval times, both as *kanūt*-irrigated land, and on *daymī*, dry-farmed (cf. *Admiralty hand-book*, *Persia* London 1945, 40, 43 439, 453). Administratively, Küçān is now the chief-lieu of a *ghahratān* or district of the 9th *ustān* or province of Khurāsān; the population of the *ghahratān* in

1950 was ca. 111,000 (cf. *Farkhang-i diughesfiyā-yi Irān*, ix, 307).

Bibliography: In addition to sources given in the article, see Le Strange, *The lands of the Eastern Caliphate*, 393, and for the accounts of European travellers who visited Küçān, see A. Gabriel, *Die Erforschung Persiens*, Vienna 1952, 157-61, 221-3, 252. (C. E. BOSWORTH)

KÜÇÜK KAYNARDJA (modern Turkish, Küçük Kaynarca, "little hot spring"), a village in north-eastern Bulgaria, 25 km. south-east of Silistre, noteworthy as the place at which was concluded between the Ottoman and Russian Empires on 12 Djumādā I 1188/1774, July 1774 one of the most famous and important treaties in the history of diplomacy. The Treaty of Küçük Kaynarja, which brought to an end a disastrous war over the partition of Poland on which the Porte had irresponsibly embarked six years previously, contained terms which were uniformly regrettable in their consequences for the Ottoman state and, in particular, for the khānate of the Crimea.

The treaty, which consisted of 28 articles and a separate secret convention of two articles, was the final outcome of protracted negotiations for a truce which had been conducted by the two sides since 1186/1772. Only in the campaign of 1188/1774, with Russian forces strongly entrenched south of the Danube and with the strong fortress of Shumen (Shumla, Shuman), which commanded the passage of the Balkan range, abandoned by the Ottomans, were negotiations pushed rapidly to a conclusion. The Ottoman field-commander (*serdar-ı cümle*), the Grand Vizier Muhsinzāde Mehmed Pasha, nominated as plenipotentiaries his *ahya-bei* Nishāndil/Tewhīf Ahmed Reim Efendi and the then *reis efendi* Ibrahim Munib (Munip) Efendi; the chief Russian negotiator, under the aegis of the Russian commander-in-chief, Field-Marshal Count Pyotr Alekseyevich Rumyantsev, was Prince Nikolai Repnin, who had served as Russian ambassador at the Porte prior to the outbreak of hostilities.

Negotiations were begun and rapidly concluded in the Russian camp before Shumen on 8 Djumādā I 1188/1774; the actual date and place of signing were stipulated by the Russians for their historical significance. The controlling text of the treaty was drawn up in Italian; Russian and Turkish versions were also signed by the respective plenipotentiaries. Contrary to a widely-held belief, there are only minor textual variations between the Russian and Turkish versions.

The consequences of the Treaty of Küçük Kaynarja were most unfortunate for the khānate of the Crimea. Although by the terms of art. 3 Russian forces were to evacuate its territory with the exception of the strong points of Kerč and Yehi Kal'e, the Ottomans were obliged to relinquish their suzerainty over the khānate, and to concede to the Crimean Tatars a specious and unlooked-for "independence" (*terbiyyiyet*). Religious supremacy over the Muslim inhabitants of the khānate was reserved to the Ottoman sultan as rightful caliph ("Supremo Califfa Maomettano"), a concept entirely alien to Islamic law, and one which was to cause endless diplomatic confusion, in part corrected by the convention explicative of Aynāl Kavak (3 Rabi' I 1193/1779, March 1779). The "independence" of the Crimea proved in fact to be merely a prelude to its absorption by Russia, on the pretext of misgovernment, in 1783 (see further, *ibid.*).

For the Ottomans, the consequences, in strategic

terms, of the treaty were equally ominous. Through her possession of the fortresses of Kliburun (Kliburun) [q.v.] (art. 16); Keré and Yefi Kaf'e [q.v.] (arts. 3 and 19); Azak (Azov) [q.v.] (art. 20) and Greater and Lesser Kabarda (see KABAARDA) (art. 21), and despite restitution to the Ottomans of Öks (Ochakov) and Bessarabia, including, *inter alia*, the fortresses of Ak Kermán, Kili, Isma'il, Bender and Khotin [q.v.], Russia gained a secure and permanent strategic foothold on the northern shores of the Black Sea, thus bringing to an end its four centuries' history as an Ottoman "Juke". This new position of strength Russia was able immediately to exploit through further concessions (art. 22) which gave her unrestricted commercial privileges in the Black Sea and through the Straits into the Mediterranean, and the right to establish consulates and vice-consulates at will on Ottoman territory and to maintain a permanent embassy at Istanbul. A further detailed clause afforded Russia a privileged position with regard to the Christian population and the semi-autonomous hospodars of Moldavia and Wallachia (Boghdan and Biliák [q.v.]) (art. 16), while by art. 13 the Porte was obliged to concede to Catherine II and her successors the title of *pádisháh* (*tsarism*) *Rusyskariñ pádisháh*, i.e. "Empress/Emperor of all the Russians".

Two articles in particular (arts. 7 and 12) of the treaty have given rise to much subsequent misunderstanding. Art. 7, which in fact specifically recognised the protection of the Ottoman government over its own Christian subjects, permitted Russia only to make representations on behalf of a single church building—an Orthodox church in *Ghalafta* [q.v. in Suppl.], separate from the Russian embassy chapel, where services were to be held according to the Russian rite—and those who served in it. Art. 12, which actually gave to Russia the right to establish a church in *Ghalafta* to serve the Russian community there "on the example of the other Powers"—i.e., France and Austria—had already been proposed in the negotiations of 1772-3. From these articles, or possibly from those which related to Moldavia and Wallachia, or to the Archipelago (still under the occupation of the Russian fleet: art. 17) or to Georgia and Mingrelia (art. 23), but more probably from a general claim to guardianship over the Orthodox in the Ottoman Empire which was put forward by Catherine II in 1775, there derived the widely held but erroneous belief that by the terms of the Treaty of Küçük Kaynardja Russia had acquired an "ill-defined 'right'" to exercise a protection over the largely Orthodox Christian subjects of the Sultan which might serve as a basis for subsequent diplomatic claims against the Ottoman state.

Two separate secret articles provided for the evacuation at an unspecified date of the Russian fleet from the Archipelago and for the payment by the Porte of a war indemnity of 15,000 purses (*asse*), i.e. 7.5 million *surush*.

The largely factitious "rights" in arts. 7 and 12 apart, the gains which were made by Russia as a consequence of the Treaty of Küçük Kaynardja were considerable, and the losses in territory and prestige in which the Ottoman state was obliged to acquiesce were correspondingly severe. For the *khánate* of the Crimea its consequences were sombre in the extreme. To Catherine II, Küçük Kaynardja was a treaty "the like of which Russia [had] never had before"; a recent historian has correctly characterised it as "a major step, possibly the greatest

single step prior to 1955, by Russia into the Near East".

Bibliography: No satisfactory edition of the three versions of the Treaty of Küçük Kaynardja exists. The original of the Italian and Russian-language treaty seems to be lost: the Russian text printed in Druzhina, cited below, 349-60, does not derive from it (for references to other published Russian versions, see Davison, below, 469, n. 25). The original of the Turkish and Russian version has not yet been found in the Başbakanlık Arşivi, Istanbul. A register book copy exists there (Enebeli Defterleri, 83/1, 138-49), which may be the source for the various printed versions (e.g. *Meflûmâtı muâhakkatı*, 5 vols., Istanbul 1294-8/1877-81, II, 254-75; *Dzvedet* (Cavdet), *Ta'rifâtı*, Istanbul 1301-9/1883-4 to 1891-2, I, 285-95; Mustafa Nuri Paşa, *Natâ'ijü al-muâhakkatı*, Istanbul 1294-1327/1877-1909, III, 56-64). The Italian text is reproduced (from a version published in the *Storia del Anno* for 1774) in G. Fr. Martens, *Recueil des principaux traités de l'Europe*, 7 vols., Göttinge 1792-1802, IV, 606-36; and edn. 8 vols., Göttinge 1817-35, II, 286-322; no other version appears to exist. A French version (of no legal standing but widely regarded as authoritative in the 19th century) is most conveniently accessible in Gabriel Elandi, Noradounghian, *Recueil d'actes internationaux de l'Empire Ottoman*, I, Paris 1897, 319-24, and in *Treaties between Turkey and Foreign Powers*, London 1855, 463 ff.

The sole monograph devoted to the Treaty of Küçük Kaynardja is E. I. Druzhina, *Kyuchuk-Kaynardzhiski mir 1774 goda*, Moscow 1955; a collection of essays of unequal value by Soviet and East European historians (N. Todorov, E. I. Druzhina and others) is contained in *Études Balkaniques* (Sofia), 1975/2, 72-127. For the effect of the treaty on the *khánate* of the Crimea, see A. W. Fisher, *The Russian annexation of the Crimea 1772-1783*, Cambridge 1970; for a more extended treatment from the Ottoman side, cf. Cemal Tokin, *Küçük Kaynardja*, in *IA*, VI, 1064-72. The most recent study is R. H. Davison, "Russian skill and Turkish incapacity": the treaty of Küçük Kaynardja reconsidered, in *Slavic Review*, XXXV (1976), 463-83. All these works contain supplementary bibliographies and further references to sources in the relevant languages.

(C. J. Havwood)

KÜÇÜK SA'İD PASHA (1838-1914), 19th century Ottoman statesman, seven times Grand Vizier under Sultan 'Abd al Hamid II, and twice in the Young Turk era. Born in Ezzurum, Sa'id received a traditional Muslim education until his father's death in 1853 forced him to seek an administrative career. Trained largely as an apprentice rather than in the new secular schools being established by the Tanzimat [q.v.], he served first as secretary to the governor of Ezzurum Province (1853-7) and secretary to the Anadolu Ordusu (1857-9) before entering the central bureaucracy in Istanbul. He served for some time as secretary in the *Meflûs-i Vâlâ* (1859-63), rising to various high positions in and out of Istanbul before becoming director of the Imperial Press (*Makbûs-i Şâhîrâ*) and editor of the official government newspaper *Tahtem-i Vebâkî* (1863-8). He continued to rise in the secretarial service, becoming director of a department in the Council of State (*Şûrâ-yi Devlet*) in 1868, and of the Courts Department of the *Divân-ı Ahkâm-ı Adliyye* in 1871, rising to become Chief Secretary of the Ministry of

Trada (*Tiğâret Nefâretî*) in 1874 and Chief Secretary of the Grand Vîzer a year later.

It was during these later years that Sa'îd Efendi came into contact with Prince 'Abd al-Ferîd, advising him on administrative matters, so that one of the latter's first acts after his accession to the sultanate was to raise him to the rank of Pasha and appoint him as Chief Secretary (1876-8), at which time he acquired the nickname *Küçük* ("the small one") to distinguish him from İngiliz Sa'îd Pasha, who also advised the sultan for a time until he was dismissed due to implication in the 'Alî Su'ûwî affair.

Küçük Sa'îd now became the Sultan's chief instrument in the Ottoman cabinet. As minister of justice (1878-9), he worked to modernise the *Nispetiyye* secular court system, introducing the institution of public defender, and also securing promulgation of new commercial and criminal codes of law. In seven terms as Grand Vîzier (1879-80, 1880-2, 1882, 1882-3, 1893, 1901-3, 1908), he faithfully carried out the sultan's reform programs, also taking the initiative to introduce important reforms. He developed a program to centralise government control of the provinces, modernised the financial system, increased tax collections and balanced the budgets, negotiated the settlement with the empire's foreign creditors that led to the creation of the Public Debt Commission (1883), established the Istanbul Chamber of Commerce to develop native trade and industry, modernised and expanded the system of secular schools on the elementary and higher technical levels in particular, reorganised and modernised the regular police, and made the secular courts fully independent of government interference so they could administer justice without fear of intervention. He played a major role in modernising the bureaucratic hierarchy, introducing examinations for appointment and promotion and establishing a pension system so that aged officials could retire without fear of poverty.

As the sultan became increasingly withdrawn and subject to the influence of his palace eunuchs, Sa'îd Pasha became more and more fearful of his master. At the same time, his rivalry with Mehmed Kâmil Pasha became so intense that he at times feared for his life, and at one point refused the sultan's call to resume the Grand Vîzerate. As a result, Sa'îd Pasha was not included in the disfavour of the Young Turks for most of the sultan's advisers following the Young Turk Revolution (1908), and in fact served twice more as grand vîzer during the Constitutional period which followed, in 1911 and 1912, with the support of the Committee of Union and Progress, leading its fight against the Liberal Union Party, and directing the government's efforts against the Italian invasions of Libya and of the Dodecanese Islands. In the face of strong military pressure in support of the Liberal Union, however, Sa'îd Pasha resigned for the final time (17 July 1912), so that the hero of the Russo-Turkish war, Ahmed Muhtar Pasha, could establish a non-party government to resolve the crisis. Sa'îd Pasha then served as chairman of the upper house of the legislature, the Council of Notables (1913-14) until he retired shortly before his death.

(S. J. Shaw)

KUÇUM KHÂN, a Tatar Khân of Siberia, in whose reign this country was conquered by the Russians. Abu'l Ghâzi (ed Desmaitens, 177), is the only authority to give information regarding his origin and his genealogical relation to the other descendants of Gîngis Khân. According to this source, he reigned for forty years in "Târân", lost his eyesight towards the end of his life, was driven from his kingdom by the Russians in 1003/1594-5, took refuge with the Mangghit (Nogay) and died among them. References to Kuçum are also found in the work of the Ottoman Turk Sayfî, said to have been written in 990/1582 (Leiden MS., No. 1971, tr. without a reference to the MS. by Ch. Schefer as an appendix to his translation of the history of Central Asia, *Histoire de l'Asie Centrale*, by 'Abd al-Karim Bukhârî, Paris 1876, 303 ff.). Kuçum's kingdom and its capital are there called "Tura"; the Russians had taken this town during Kuçum's absence, Kuçum afterwards returned and drove out the Russians after a long siege (one to two years), but the latter carried off his son a prisoner to Moscow. These stories seem to show that Sayfî's work was probably composed later than the year given in the title (Schefer, *loc. cit.*, Preface, p. iv, even gives the year 990 A.H. as date of death of the author).

The name of "Isker" for the capital of Kuçum (near the confluence of the Tobol and Irtysh) seems to be found only in Russian sources; it is only from the latter also that the principal events of his reign can be chronologically arranged. Kuçum did not inherit his kingdom from his father but had expelled his predecessor Vâdigâr; in 1563 Vâdigâr is still mentioned as king of Siberia, while in 1569 we find Kuçum. In 1568 Isker was conquered by Russian Cossacks under Yermak; the Cossacks owed their victory to the use of fire-arms, then still unknown in Siberia. Kuçum's son Makhmet-Kul (Muhammad Kalf) was sent a prisoner to Moscow. It was not till Yermak fell in an unexpected attack (1586 or 1585) that Isker was vacated by the Russians; but by the year 1587 we find troops, who had just arrived, building the Russian town of Tobolsk near this town. Kuçum did not suffer his last defeat at the hands of the Russians till 20 August 1598. He is said to have been slain by the Nogay, with whom he had taken refuge, out of revenge for his father's raids on them. The document used by Radloff (*Aus Sibirien*, Leipzig 1893, 146 ff.) dealing with an embassy from Kuçum to Bukhârâ and the order by 'Abd Allâh Khân to his governor in Kh'wârazm to send teachers of religion to Siberia, cannot be genuine. Kh'wârazm was at this date an independent kingdom and not under the rule of the Khân of Bukhârâ. The form "Köçüm" adopted by Radloff is also not to be found in any historical sources.

Bibliography. Sir H. Howarth, *History of the Mongols*, II, London 1880, 982 ff. and the Russian works used there; Hâdi Atlâsî, *Sibir ta'rihi*, Kazan 1912, 38, 46, 67 ff., and W. Barthold's review in *ZVOIRAO*, XXIII, 421 f. (W. BARTHOLD)

KUDĀ'A, a group of Arab tribes of obscure origin. The opinions of the genealogists about their origin are contradictory. Some of them assert that they were descendants of Ma'add, others say that they were from Hāmyar. Both parties had recourse to traditions and utterances attributed to the Prophet, in which he is said either to have declared that Ma'add's *huwaya* was Abū Kudā'a, or to have stated explicitly that Kudā'a is a descendant of Hāmyar. Harmonising traditions reported that the mother of Kudā'a was the wife of Mālik b. 'Amr b. Murra b. Mālik b. Hāmyar and later married Ma'add, bringing with her Kudā'a, her son from the first marriage, Kudā'a was therefore later called Kudā'a b. Ma'add. A contradictory tradition of this kind claimed that Kudā'a was the son of Ma'add; later his mother married Mālik b. 'Amr al-Hāmyari, who adopted the child, Kudā'a, and thus he was called Kudā'a al-Hāmyari (see M. J. Kister and M. Plessner, *Notes on Caste's Gansharai as-nasab*, in *Oriens*, xxv-xvii (1976), 56-7, and references in notes 43-51; also Nūr al-Dīn al-Haythamī, *Madīnat al-sūdā'id*, repr. Beirut 1967, I, 194-5; *Aghāni*, vii, 77-8; al-Hamdaal, *al-Ikhlāf*, ed. Muhammad al-Akwa' al-Hitwālī, Cairo 1383/1963, I, 180-90). Some traditions say explicitly that the Kudā'a tribes related themselves to Ma'add, but turned to the Hāmyari *nasab* under Mu'awiya's pressure and bribes (see e.g. Kister and Plessner, *op. cit.*, notes 51-7; Nūr al-Dīn al-Haythamī, *op. cit.*, I, 194; *Aghāni*, loc. cit.; Ibn al-Naṣī, *al-Aḥabīyya al-ḥababīyya wa-al-ḥarabīyya fī 'l-ghīr al-nasab*, Beirut 1964, 340-3; and see al-Kūfī, *al-Duḥān*, ed. Ibrāhīm al-Samarā'ī and Ahmad Maṭlūb, Beirut 1960, 34, 145, 147, 149; al-Kumayt, *Shi'at*, ed. Dāwūd Salīm, Baghdad 1969, nos 162, vv. 10-13, 469 vv. 1-7, 509 vv. 1-4, 523 v. 2, 550 v. 1, 606 v. 1). The name Kudā'a is an early one and can be traced in fragments of the old Arab poetry. The tribes recorded as Kudā'a were: Kalb (q.v.), Djuhayna, Baḥ, Bahā' (q.v.), Khawlan (q.v.), Mahra, Khushayn, Dharm, Udhra (q.v.), Balkayn (see *al-Kayn*), Tanūkh (q.v.) and Salū; the attribution of some of these tribes to Kudā'a (like Tanūkh, Khawlan and Mahra) was the subject of dispute among genealogists. Several of the clans of Kudā'a joined other tribes, adopting their pedigree and changing their tribal identity.

Among the prominent divisions of Kudā'a one may particularly refer here to Djuhayna and Baḥ.

1. The vast territory of Djuhayna, controlling the coastal route of the caravans between Syria and Mecca, included the localities of Sāḥrā', Sufayna, al-Marwa, al-Hawrā' and Yanbu'; to them belonged the mountains of Raḍwā (q.v.); and see M. von Oppenheim, *Die Beduener*, Leipzig 1943, I, 361, on the legendary story of the hidden *Imām* living in Raḍwā, Aḡḡar and 'Azwar and the *uḍḍis* of Iḡām and al-Ḥs (see e.g. al-Bakrī, *Muḍjam mā shā'arum*, ed. Muṣṭafā al-Sabḥī, Cairo 1364/1965; Yāqūt, s.v. Raḍwa; 'Arrām, *Asmā' al-djāhid* *Tihāma wa sukkānūhā*, in 'Abd al-Salām Ḥārūn's *Nawādir al-makhlūfāt*, Cairo 1373/1956, II, 8, 396-8 and indices; cf. Ḥamad al-Djāsir, *Bilād Yanbu'*, Riyāḍ n.d., *passim*, and see esp. the supplement: *bilād djuhayna wa-manāziluhā fī ḥadīṣa*, 156-7) Djuhayna seems to have had a clear perception of tribal identity, as can be gauged from a collection of tribal war poetry, the *ayyām Djuhayna*; some fragments of this poetry were recorded as late as the 4th/10th century (see al-Tayālīsī, *al-Makhlūfāt 'ind al-muḥḥārā*, ed. Muhammad al-Tanūkhī, in *Sharḥat al-Macmūṣi*, I [Ankara 1956], 37-9; see on Bughayt:

al-Āmidī, *al-Muḥallif wa 'l-muḥḥākī*, ed. Krenkow, Cairo 1354, 57-8; and see on Salāma b. al-Ya'qūb, *ibid.*, 53, 165; on the compilation of war poetry of the Kudā'a tribe of Balkayn, *aghār Banī 'l-Kayn*, see *ibid.*, 23-4).

According to a tradition recorded by Ibn al-Kalbī, a Djuhani, 'Abd al-Dār b. Hudayb (or Hudjayl in another version), intended to build a sanctuary in one of the centres of Djuhayna, Kawdam, to rival the Ka'ba of Mecca; however, he encountered opposition on the part of his people who were reluctant to aid him in carrying out his plan (Ibn al-Kalbī, *al-Aḥbāb*, ed. Ahmad Zakī Paṣṣa, Cairo 1343/1924, 43; Yāqūt, s.v. Kawdam). This report may give us a clue for assessing the attitude of some other tribal groups of Kudā'a. Ibn Hishām records a tradition according to which al-Ghawḥī, who was in charge of certain pilgrimage practices at Mecca, used to announce during one of the services, "O God I am following the example of others; if there is a sin in it is Kudā'a's" (Ibn Hishām, *Sira*, ed. al-Sakā, al-Abyārī, Ṣhalabī, Cairo 1355/1936, I, 126, l. 1; Goulbourne's translation, *The life of Muhammad*, Karachi 1967, 50, of the second hamistich "If that is wrong, the fault is Qudā'a's" is inaccurate). It is evident that this declaration points to certain sections within Kudā'a who were reluctant to acknowledge the authority of Mecca and the sanctity of the Ka'ba.

The relations of Djuhayna with the Aws and Khazraj seem to have been quite close; some Djuhani are recorded as allies of the Medinan families or clans (see e.g. Ibn Hishām, *Djāhshat anṣab al-ṣarab*, ed. 'Abd al-Salām Ḥārūn, Cairo 1962, 444). It is noteworthy that among the Ansārī group who gave the Prophet the oath of allegiance at the 'Aḥabā was an ally of the Banū Salma of Kalbi extraction, who joined Djuhayna and stayed with them, 'Abd Allāh b. Unays, he gained the honourable titles of *al-muḥaddiri*, *al-ansārī*, *al-salāmī*, *al-djāhānī* *al-ṣahābī* (see e.g. Ibn Hishām, II, 106 sup.; Ibn al-Kalbī, *Djuhayna*, Ms. Br. Mus., Add. 22346, f. 73a; Ibn Ḥaḡḡar, *al-Iṣṣāḥ*, ed. 'All al-Biḡḡawī, Cairo 1386/1970, IV, 15-17, no. 4553; Ibn Kudāma al-Makdīsī, *al-Iṣṣāḥ fī nasab al-salāma min al-ansār*, ed. 'All Nuwayhid, Beirut 1392/1972, 166-8; Ibn 'Abd al-Barr, *al-Iṣṣāḥ*, ed. al-Biḡḡawī, Cairo 1386/1960, 869-70, no. 1477; al-Balāḡhūrī, *Anṣab al-ṣahāb*, ed. Muhammad Ḥamīdullāh, Cairo 1959, I, 249). It was 'Abd Allāh b. Unays who asked the Prophet on which night he should come to Medina from his abode in al-Aḥl during Ramaḍān, and the Prophet bade him come on the night of 27 Ramaḍān; this night is therefore named "The Night of the Djuhani". It refers, of course, to the *laylat al-baḥr* (see e.g. al-Aḡḡanī, xvii, 133; Ibn 'Abd al-Barr, *op. cit.*, 870).

On the Day of Bu'āḡh (q.v.), Djuhayna fought on the side of the Khazrajī (*Aghāni*, xv, 162-3; Ibn Khaldūn, *al-Iṣṣāḥ*, Beirut 1956, II, 602), but on the eve of the encounter of *Badr al-maw'id* they were said to have hurried to Medina (together with Baḥ) as allies of the Aws (al-Wāḥidī, *Maḡāzī*, ed. Marsden Jones, Oxford 1966, 385, l. 11).

When the Prophet settled in Medina, he was, of course, concerned to establish peaceful relations with his neighbours, Djuhayna. Djuhayna, making a careful assessment of the fundamental change in the situation in Medina with the advent of the Prophet, were eager to secure their position in the new structure of power. According to some traditions, a delegation of Djuhayna came to the Prophet in Medina, pointed out that the Prophet alighted

"among them" (*bayna aṣṭurān*, i.e. in the area controlled by them) and requested him to conclude with them an agreement of mutual security (*fa-awḥāḥ lānā ḥalfā ma'manahā wa-lā'manānā*). This treaty was indeed agreed upon between the Prophet and Dhubayna. A peculiar aspect of this treaty was the tacit agreement by the Prophet for Dhubayna not to convert to Islam; this is clearly indicated in the account about the treaty, *wa-lam yuslimū*. The implementation of the treaty occurred a short time after its conclusion; the Prophet sent a troop of less than a hundred warriors to raid a tribal group of Kināna which dwelt in the neighbourhood of Dhubayna. When the Muslim warriors realised that the Kinānīs outnumbered them, they retreated asking refuge with Dhubayna. When the Dhubanīs interrogated them as to why they had gone out fighting in the holy month of Raddjāb, they justified their deed by mentioning that they were driven out from the *Ḥaram* (of Mecca) during the holy month. The account further tells about dissension among the Muslim warriors; a group of them wanted to remain in the place where they were staying, whilst another one planned to return to the Prophet to obtain a decision from him. When this group met the Prophet, he expressed his anger about the division that had occurred within the expedition, which having left in unity returned divided. He then appointed 'Abd Allāh b. Djabāh as the commander of the troop; 'Abd Allāh b. Djabāh was thus the first appointed *amīr* in Islam. (Ibn Abī Shaybā, *Ta'rikh*, Ms. Berlin 9409 = Sprunger 104, ff. 28b-30a; cf. Nūr al-Dīn al-Haythamī, *Mafāḥim al-sawād*, vi, 66-7, with an essential variant, that the Dhubanīs converted to Islam after the conclusion of the treaty; and see al-Bayhaqī, *Da'ī' al-awḥān*, ed. 'Abd al-Rahmān 'Uḥmān, Cairo 1389/1969, ii, 304-5 [the commander of the first troop, dispatched by the Prophet, was Sa'd b. Abī Waḳkās; Ibn Djuḡhul, *Ta'rikh*, Ms. Br. Mus., Or. 5912, i, 229b].

The reports about the first cases of co-operation between Dhubanīs and the nascent Muslim community at Medina, though sometimes divergent or even contradictory, point clearly to the period preceding the battle of Badr and are connected with the earliest attempts of the Prophet at impeding the free traffic of the Kurashī caravans. The detachments dispatched by the Prophet were relatively small and served a twofold purpose: that of reconnoitring in case a greater force of the enemy made an appearance, and of an attacking troop in case they met with a smaller division of the enemy. It was essential in such a situation to have at their disposal a territory with a friendly population both for military enterprises and as a resort to which the force could retreat in safety. The treaty with the Dhubanīs was indeed successful, and enabled the Prophet to launch his first attacks against some Kinānī allies of Kuraysh; the expeditions operated indeed in the territory controlled by Dhubayna.

Furthermore, some Dhubanīs carried out certain subtle and responsible duties for the Prophet's troops: Bashas b. 'Amr and 'Adī b. Abī 'I-Zaghbāṣ (both allies of the Anṣārī clans) served as spies for the Muslim troops (see e.g. Ibn Ḥazm, *Ḍawḥim al-sīra*, ed. Iḥṣān 'Abbās, Nāṣir al-Dīn al-Asad, Aḥmad Shākir, Cairo n.d., 110; Ibn Hishām, index; Ibn al-Athīr, *Usd al-ghāba*, Cairo 1280, i, 178 ult.-179; Ibn Hishām, *al-Iṣṭabā*, i, 288, no. 640, iv, 476, no. 3486; al-Wāḳidī, 40-1; al-Balāḡhūrī, *Anṣab*, i, 289). Another Dhubanī, Kaḡhad, granted shelter to two other spies of the Prophet, Talḡa b. 'Ubayd Allāh and Sa'd b.

Zayd; he misled the men of the Kurashī caravan who inquired about the spies sent by the Prophet. After the departure of the Kurashī caravan, Kaḡhad accompanied the two spies to Turbān, where he met the Prophet; the Prophet wanted to grant him Yanbūṣ (see an *igṣā'* or *ief*), but Kaḡhad advised the Prophet to grant it to one of his relatives (see e.g. al-Wāḳidī, 19-20; Ibn Ḥaḡḡar, v, 590, no. 7409; Ibn al-Athīr, *Usd*, iv, 239; al-Makrīzī, *Imṣāt al-sawāḥ*, ed. Maḡmūd Shākir, Cairo 1942, i, 62). Another Dhubanī, Maḡḡdī b. 'Amr, performed an even more complicated service for the Muslim detachment; he interposed between the small Muslim force under the command of Ḥamza b. 'Abd al-Muṭṭalib and the Kurashī caravan escorted by 300 Kurashī elders under the command of Abū Djabāh (see e.g. al-Wāḳidī, 9-10, 40-1; al-Bayhaqī, *Da'ī' al-awḥān*, ed. 'Abd al-Rahmān Muḥammad 'Uḥmān, Cairo 1389/1969, ii, 302; Ibn Ḥazm, *Ḍawḥim*, 446; idem, *Ḍawḥim*, 101, cl. 110; al-Makrīzī, *Imṣāt*, i, 51-2; Ibn Hishām, ii, 245, 269). Maḡḡdī succeeded in accomplishing his task as he was an ally (*ḥalīf*, *muwālī*) of both parties (i.e. of the Muslim party and the Kurashīs). It is noteworthy for the assessment of the personality of Maḡḡdī and the reliability of the traditions that some reports state that he did not convert to Islam (see e.g. al-Zurḡānī, *Shārik al-mawḥib al-ladunniyya*, Cairo 1345, i, 390).

The reports about the participation of Dhubanīs in the first encounters of the Prophet with Kuraysh seem to be sound, and are confirmed by a tradition recorded by al-Ṭabarānī, stating that the first tribe to fight on the side of the Prophet was Dhubayna (al-Ṭabarānī, *al-Awṣāṭ*, Ms. Br. Mus., Or. 1330, f. 196b).

Some factors which motivated Dhubayna in concluding the treaty with the Prophet can be deduced from a report recorded by al-Sambūḍī and al-Fayrūzābādī; the Prophet awaited at Dhu 'l-Marwa; Dhubanī people assembled at the place from the mountains and the plains and complained of being pressed by alien people, who were trying by force to get hold of their wells. Then the Prophet granted the people of Dhubayna the lands of Dhu 'l-Marwa, forbade them to be treated with iniquity and announced that the angel Jibrīl ordered him to consider Dhubayna as his allies (al-Sambūḍī, *Waḡḡ*, ed. Muḥammad Muḥyī 'l-Dīn 'Abd al-Ḥanīd, Cairo 1374/1955, 1205-6; al-Fayrūzābādī, *al-Maḡḡāsim al-muḥibba fi ma'ālim Māna*, ed. Ḥamad al-Dhāḡir, Riyāḍ 1389/1969, 379). It is plausible that this attitude of the Prophet confirmed Dhubayna's rights to their landed property and formed a warning for tribal groups to refrain from transgressing on the wells (see wells and other property) of Dhubayna, as they were the allies of the Prophet and their rights would be defended by the Prophet. The lands of Dhu 'l-Marwa were in fact granted by the Prophet to a man from Dhubayna (see Ibn Sa'd, *Ṭabaḡat*, Beirut 1380/1960, i, 271; see on 'Awsaḡja b. Ḥarmala, Ibn al-Kalbi-Castel, *Gamḡarat an-nasab*, ii, 216, Ibn Ḥaḡḡar, *al-Iṣṭabā*, iv, 739, no. 6093; on Dhu 'l-Marwa see al-Bakrī, *Muḡḡam*, v. Marwa).

The Prophet concluded several treaties with the various tribal groups of Dhubayna. Some of these treaties can be traced to the very early period of the Prophet's stay at Medina; they do not contain any stipulation as to conversion to Islam. There are, however, some treaties which may be attributed to a later period, when conversion to Islam became obligatory, and include instructions concerning the religious duties to be performed (cf. Ibn Sa'd, i,

270-1). A tradition recorded by Ibn Sa'd (I, 353) says that a delegation of Djuhayna embraced Islam at the advent of the Prophet to Medina; this story may, however, refer to a unit of Djuhayna, and certainly not to the whole tribe.

The early conversion of several groups of Djuhayna and another Kudā'i group, the Ādam, is reflected in some traditions attributed to the Prophet, in which Djuhayna is counted among the tribal groups surpassing (in virtues) the great tribes of Āṣad, Ḥaṣafān, Tamīm and 'Amir b. Sa'sā'a (see e.g. al-Humaydī, *Muṣannaf*, ed. Ḥabīb al-Raḥmān al-A'zamī, Beirut-Cairo 1381, II, no. 1048; 'Abd al-Razzāq, *al-Muṣannaf*, ed. al-A'zamī, Beirut 1392/1972, II, 47, no. 19877; al-Ṭabarānī, *al-Muṣannaf*, ed. 'Abd al-Raḥmān al-Uḥaymī, Cairo 1388/1968, I, 34, II, 151). Only few cases of opposition by some units of Djuhayna against the Muslim commonwealth of Medina are known (see e.g. al-Wāḥidī, 774-5; al-Ṭabarī, *Ta'wīḥ*, ed. Muḥammad Abū 'I-Ḥaḍīrah, Cairo 1969, III, 32, about the expedition of Abū 'Ubayda). When the Prophet set out for al-Budaybiya, some nomad Djuhānīs were disinclined to respond to his summons and to join him, fearing that the Muslims might be defeated by the Qurayshī forces (see e.g. Muḥammadī, *Ta'wīḥ*, ed. 'Abd al-Raḥmān al-Ṭabīb al-Sarāṭī, Beirut n.d., 601; Ibn 'Ukaym, *Ta'wīḥ*, Ms. Ahmad II, 74/II, ff. 160b, 166b; al-Wāḥidī, 574, 619; al-Nawawī al-Dīnī, *Mawāḥib lābiḥ*, Cairo 1393, II, 305; Ibn 'Ukaym, *Ta'wīḥ*, Cairo 1387/1967, XVI, 268, 348; al-Suyūṭī, *al-Durr al-maṭṭar*, Cairo 1324, VI, 72-73).

Djuhayna appeared as a strong force of 800 warriors and 50 riders (or 1200 warriors according to Ṭabarī, *Ta'wīḥ*, III, 65 sup.) on the expedition for the conquest of Mecca; four banners were borne by its leaders (see e.g. al-Wāḥidī, 799, 820, 896; al-Muttaḥī al-Hindī, *Kawr al-'Uṣṣal*, Hyderabad 1390/1970, XVII, 78, no. 199; and see Ibn 'Ukaym, *al-Isāba*, II, 445, no. 2549, II, 604 sup., no. 2897, VI, 165, no. 8069; Ibn al-Athīr, *Usd al-Iḥṣān*, I, 124, I, 124; Ibn 'Abd al-Barr, *al-Istīṣāḥ*, 871-2). The Djuhānī Rāfi' b. Makrūn was appointed by the Prophet as tax-collector (*muṣaddiq*) of his tribe (al-Wāḥidī, 1073). A number of Djuhānīs emigrated to Medina; the Prophet himself liked the place of the tribal mosque of Djuhayna in Medina (Ibn Sa'd, I, 353).

Djuhayna remained faithful to Islam after the death of the Prophet (cf. al-Wāḥidī, 1122) and favourable utterances attributed to the Prophet emphasised their virtues. The Prophet is said to have considered Djuhayna among his *muṣallīn* (see e.g. al-Aynī, *Umdat al-barr*, Cairo 1348, XVI, 75-6; al-Munawwār, *Fayḍ al-kadīr*, Beirut 1391/1972, IV, 516, no. 6122). The Prophet is said to have recommended seeking refuge in the mountains of Djuhayna during the periods of strife, *ṣifān* (see e.g. al-Bakrī, 154; Ḥamad al-Dīnī, *Abū 'Alī al-Hadīdī*, Riyāḍ 1388/1968, 192; and see the utterance of the Prophet in Ibn Sa'd, I, 353). In an alleged utterance, the Prophet is said to have recommended marrying Djuhānī women (Ibn Hibbān, *Kuṭb al-Maḥrūq*, ed. 'Azīz Beg al-Nakshbandī, Hyderabad 1390/1970, II, 10). A peculiar tradition attributed to the Prophet forbids anyone to harm Djuhayna, saying "he who harms Djuhayna harms me, and he who harms me harms God"; this utterance was instantly denied when transmitted to Nu'āwīya (al-Āmidī, *al-Mu'ta'īf*, 60, no. 147).

Djuhayna participated, together with other groups of Kudā'a, in the conquest of Egypt; some of them settled in Funjāṭ (cf. Ibn 'Abd al-Hakīm, *Fuṣṭāṭ*

Misr, ed. Torrey, New Haven 1922, Index). Djuhānīs lived in Manfalāt and Asyūṭ. After clashes with other tribal groups, Djuhayna migrated to Upper Egypt and settled in the region of Iḥmīm during the Fatimid period; they became one of the powerful Arab tribes of Egypt (see Makrūn, *al-Raḥmān wa 'Iṣṣāb* 'amūd *fi* *al-Misr min al-'Arab*, ed. 'Abd al-Majīd 'Abūdin, Cairo 1961; and see the researches of 'Abūdin, in *ibid.*, 77-8). Groups of Djuhayna penetrated in the 8th/14th century into the Christian kingdom of Nubia and got mastery over it. From Nubia, Djuhayna continued to push forward into the Sudan and mixed with the native tribes (see C. H. Becker, *Zur Geschichte des östlichen Sudan*, in *Id.*, I, 253-77; *idem*, *ET* art. *Djuhayna*; F. C. Thomas Jr., *The Juḥayna Arabs of Chad*, in *MEJ* [1959], 142-53; von Oppenheim, *op. cit.*, II, 359). In the Djuhānī territories of the Arab peninsula, the different sections of that tribe became controlled by the descendants of 'Alī, who succeeded in acquiring a great deal of landed property in these regions. Nevertheless, the various branches of Djuhayna succeeded in keeping their identity during the centuries. Although wavering at the beginning of the First World War, the majority of the tribe followed the sons of the 'Sharīf Ḥusayn; later, they changed attitude and became loyal subjects of the Sa'ūdī dynasty (see von Oppenheim, II, 360). In recent times, they have been exerting themselves in developing their region (see Ḥamad al-Dīnī, *Bilād Yanbu'*, *passim*).

2. To the north of the territory of Djuhayna was the region of Ball, another branch of Kudā'a. Staring at Wādī Idam, their usual habitations extended far to the north, including the places of Ḥaḣḣab, Badā and Taymā' (cf. Ibn Khaldūn, *Yasār*, II, 516; von Oppenheim, II, 325, 352-3). The Kudā'i tribal groups of Ball, Djuhayna and 'Udhra migrated, according to tradition, to the Wādī 'I-Kurā in which Jewish settlers cultivated the soil, dug the wells and planted palm-trees. According to an agreement between the Jewish settlers and these Kudā'i groups, the Jews undertook to give them a certain payment; in return Ball, Djuhayna and 'Udhra were under obligation to give protection to the Jewish settlements against the Bedouin tribes, including other Kudā'i units (see Yāqūt, s.v. al-Kurā; al-Bakrī, *Mu'āḥira*, I, 43). The stipulations of this agreement remained valid until the advent of Islam; then the 'Udhri Dījāra b. al-Nu'mān visited the Prophet and was given by him a grant of land. The Jewish settlers of the family of 'Urayd (or 'Arīd) were allowed by the Prophet to stay in their places; they were granted by the Prophet the privilege of receiving a certain annual payment (see Ibn Sa'd, I, 279; al-Bakrī, I, 44; cf. W. M. Watt, *Muḥammad at Medina*, Oxford 1956, 107-8). Some clans of Ball got involved in internal fighting; one of the fighting groups, the Banū Ḥuḣna, was compelled to seek refuge with the Jewish settlers of Taymā', and at their demand converted to Judaism. Some of these refugees left later for Medina and embraced Islam at the advent of the Prophet (see al-Bakrī, I, 29). A corroborating report counts among the Jewish tribal groups at Medina three groups from Ball (see Ibn Khaldūn, *op. cit.*, I, 556; and cf. al-Sambūḥī, *Wafā'* al-wafā', ed. Muḥammad Muḥyī 'I-Dīn 'Abd al-Hamīd, Cairo 1374/1955, I, 162-3, 194, 200, 223). Some traditions, in reporting of the migration of the Balawī clans to Medina, remark that they became allies (*ḥuḣāḥ*) of the Aws and Khazrajī (see e.g. al-Bakrī, I, 28; Ibn 'Abd al-Barr, *al-Iṣṣāḥ* 'alā

ḥabā' al-rusūl, Naǧǧal 1386/1966, 122). The position of Balī at Medina and their status can be gauged from the accounts about the 'Akaba meeting, reporting that seven members out of the seventy Ansārī group of delegates, who gave the Prophet the oath of allegiance, were of Balawī descent ('Uwaym b. Sa'īda [on whom see al-Balādhurī, *Ansāb*, i, 241; Ibn 'Abd al Barr, *al-Istisāb*, 1248, no. 2023; Ibn al-Athīr, *Usd*, iv, 128; cf. Ibn Ḥaǧǧar, *al-Iṣāba*, iv, 743 inf., no. 6116], Ma'm b. 'Adī [on whom see al-Balādhurī, *Ansāb*, i, 241; Ibn Kudāma, *al-Istisāb*, 297; Ibn al-Athīr, *Usd*, iv, 401], Khudūdī b. Uways [on whom see al-Balādhurī, i, 249; Ibn Ḥiǧhām, ii, 106], Abu 'I-Hayyān b. al-Tayyibān [see on him: al-Balādhurī, i, 249; Ibn Kudāma, *op. cit.*, 228], Abū Burda b. Niyār [on whom see Ibn Ḥiǧhām, ii, 198; al-Balādhurī, i, 241; al-Bakrī, *Muḥāsira*, i, 28 inf.], al-Nu'mān b. 'Amr [or b. 'Isr, on whom see Ibn al-Athīr, *Usd*, v, 27; Ibn Ḥaǧǧar, *Ḍiyāma*, 443], Yazīd b. Tha'āba [on whom see al-Balādhurī, i, 251; Ibn Kudāma, 202; al-Samhūdī, i, 228; Ibn Ḥaǧǧar, *al-Iṣāba*, vi, 650]. However, the Balawī descent of some of these persons is put in question in some of the sources. Balawī tribesmen took part in the battles between the Prophet and Quraysh on the side of the Prophet, and names of Balawī warriors can be found in the lists of those who were killed in the encounters. The traditions mention a peculiar letter of the Prophet sent to a Balawī group, the Banū Dī'u'ayl. According to this letter, the Prophet granted to them the privileges of being taxed no more than once a year and of not having to gather with their live stock in the tax-collection centres (*al-yuḥḥarūn wa-lā yu'ḥarūn*; this explanation given by Ibn Sa'd seems however to be uncertain: there are interpretations commenting that *yuḥḥar* and *yu'ḥar* refer to exemption from being levied and taxed), they were also appointed by the Prophet as tax-collectors of some other tribes. They were given the status of Qurashīs, as they were allies of the 'Abd Manāf (see Ibn Sa'd, i, 270-1; Watt, *Muḥammad at Medina*, 111). The favourable conditions granted to the Banū Dī'u'ayl were probably intended to gain the loyalty of a tribal group allied with Quraysh, securing their control over other tribal groups for the benefit of the Muslim community.

The expedition against the Balī sent in 8 A.H. was intended to gain their allegiance and their recourse for the Muslim community; it was essential for the latter to secure the co-operation of the Balī who dwelt in the northern regions of the peninsula, who controlled the road to Medina and Mecca, and of whom some members were in the service of the Byzantine army; the commander of the troop which fought the Muslim force at Mu'ta was a Balawī (see al-Wāḥidī, 760). It was a shrewd decision of the Prophet to appoint 'Amr b. al-'Ās, whose mother was from Balī, as commander of the Muslim force (*ibid.*, 770); the expedition was also directed at the Maḥra and Balkayn, two Kuḏā'ī tribes sojourning in the region of Balī. In 9 A.H. the Prophet met the delegation of Balī, who embraced Islam (see e.g. Ibn Sa'd, i, 330; al-Zurkānī, *Sharā al-ma'mūdī*, iv, 57-8; Ibn Kayyim al-Dīwānīyya, *Zād al-ma'ad*, Beirut n.d., 16, 49).

The forces of Balī played an important role in the conquest of Egypt; 'Amr b. al-'Ās fought under the banner of Balī (see Ibn 'Abd al-Hakam, i, 62). 'Umar established the pay of Balī warriors as equal to that of Muḍar, Kalb and Tayy, sc. 300-400 *dirhams*; it was lower than that of the Yememī tribes because they were closer to the places of

migration (see al-Dīḥī, *al-'Uḥmāwīyya*, ed. 'Abd al-Salām Ḥārūn, Cairo 1374/1955, 212). When 'Umar was informed that a man from Balī summoned his people in Syria by the battle-cry *yā Kuḏā'a*, he ordered a third of Kuḏā'a to be removed to Egypt; as Balī formed a third part of Kuḏā'a, they were indeed transferred to Egypt (Ibn 'Abd al-Hakam, 116; al-Makrīzī, *al-Bayān*, 29). It was a Balawī, 'Abd al-Rahmān b. 'Udayy, a Companion of the Prophet, who was at the head of a troop of riders in revolt against 'Uḥmān. He was later imprisoned by Mu'āwīya, and was killed on his flight from the prison (see al-Sam'ānī, *al-Awsāb*, Hyderabad 1963, ii, 324, Ibn al-Athīr, *Usd*, iii, 309 10; Ibn Ḥaǧǧar, *al-Iṣāba*, iv, 334, no. 3166; Muḥammad b. Yahyā al-Aḥḥārī al-Māldī, *al-Famīd al-bayān fī maḥal al-ḥabīb 'Uḥmān*, ed. Maḥmūd Yūsuf Zayd, Beirut 1964, index).

Balī settlements are mentioned in the regions of Akhmīm, Ayyūḥ and Uḡḡūn; they were expelled by Fāṭimid troops and were compelled to move to the south. In the 8th/14th century the Balī entered together with Djuḥayna, the Sudān and contributed considerably to the islamisation and arabisation of the native tribes of the Beǧja and the Balkhāra (q.v.); the Arabic language is known among the Beǧja even today as 'Balawīyyat', i.e. the language of Balī.

In the Arabian peninsula, the Balī played during the First World War an important role in the conflict between the Sharīf Ḥusayn and the Turkish authorities, finally (in 1918) following the lead of the sons of the Sharīf Ḥusayn.

Some groups of Balī joined the new régime in the Hīǧāz in 1925 and became loyal subjects of Sa'ūdī Arabia, but some rebellious units of Balī took refuge in the kingdom of Trans-Jordan. They crossed the borders at 'Akaba and raided, together with other rebels, the northern districts of Sa'ūdī Arabia in 1932, but were defeated by the Sa'ūdī forces (cf. von Oppenheim, ii, 354).

In Spain descendants of the Balī tribe lived in the region of Cordova or Kurtuba and it was reported that they excelled in hospitality. They were unable to speak Romance (*al-lafīnīyya*), and spoke only Arabic, according to Ibn Ḥaǧǧar, *Ḍiyāma*, 443.

(M. J. Kister)

KUḌĀMA a. **ḌU'Ā'AR AL-KĀTIB AL-BAGHDĀDĪ**, **ABU 'L-FARĀḌ**, philologist, historian, and one of the first scholars to introduce the systematic study of the figures of speech in Arabic literature. The date of his birth is nowhere mentioned and may have been as early as around the year 260/873-4. He died at an uncertain date which is variously given as "during the reign of al-Muktadir" (i.e. not later than 320/932), 328/939-40, and 337/948. The dates "shortly after 300" and 310 cannot be correct (see below).

Almost every aspect of Kudāma's biography, his work, and his personality as a scholar raises delicate problems which cannot be fully discussed, let alone answered, in the context of this article. The only data which are certain, or at least have not been questioned, are (a) that he converted from Christianity to Islam during the reign of al-Muktadir (289-95/902-8); (b) that he held unimportant positions in various divisions of the central administration in Baghdad till he won an appointment in Shawwāl

397/920, or shortly thereafter, to the *maḥfiṣ al-simān* in the *diwān al-maḥfiṣ* when Abū 'I-Ḥasan b. al-Furāt [q.v.] appointed his son, al-Muḥassin, as head of that office (thus according to Yāqūt, vi, 205, whose account however contradicts reports that al-Muḥassin was in charge of the *diwān al-waḥrī*); (c) that he was alive in 320/932; and (d) that he was the author of a *Kutāb al-Kharādī*, which has survived in part. Moreover, there can be little doubt that the famous and often-quoted *Kutāb Naḥd al-ghīr* was written by Kudāma, since al-Muṭarriz [q.v.] in his commentary on the *Maḥmūdī* of al-Ḥarīrī (quoted in the introduction to the edition of Kudāma's *Ḍawā'id*, 13), who lived three centuries later, is the only author to mention that the *Naḥd* was sometimes attributed to Kudāma's father.

The *Ta'riḥ al-Baḥdād* does not have a biography of Kudāma. It only mentions (vi, 205) one *Ḍa'far* b. Kudāma b. Ziyād whom the *Ḥaṭīb* describes as a learned and distinguished secretary. The *Ḥaṭīb* also mentions that *Ḍa'far* wrote books dealing with the secretarial art as well as other subjects, that he was often quoted as an authority by Abū 'I-Faradī al-Iṣḥānī, the author of the *Aḡḥānī*, and was himself a pupil of, among others, Ḥammād, the son of the famous Iṣḥāk b. Ibrāhīm al-Mawṣilī. Ibn al-Nadīm (*Fihrist*, 130) states that Kudāma's father, *Ḍa'far*, was a man without scholarly distinction, and this statement is repeated by Yāqūt, who clearly borrowed it from Ibn al-Nadīm. Since Yāqūt (ii, 412-13) also has a fairly elaborate biography of *Ḍa'far* b. Kudāma b. Ziyād al-Kālīb (he adds the kunya Abū 'I-Kāsim, cf. *Aḡḥānī*, i, 281, l. 7) he apparently did not believe that this *Ḍa'far* b. Kudāma was the father of our author, since otherwise he would have noticed the discrepancy between the facts as they appear from this biography and the characterisation of Kudāma's father as a man without learning (if the "poet-secretary", *Ḍa'far* b. Kudāma, mentioned in the *Fihrist*, 168, l. 7, is identical with the scholar mentioned in the *Ta'riḥ al-Baḥdād* and in Yāqūt, Ibn al-Nadīm must have held the same view). Yāqūt's contemporary, al-Mutarriz does not, however, hesitate to identify the scholar mentioned in the *Ta'riḥ al-Baḥdād* as the father of Kudāma. The question is of considerable interest, since, according to the *Aḡḥānī* (x, 280-5, xii, 32), *Ḍa'far* b. Kudāma [b. Ziyād al-Kālīb in several places in the *Aḡḥānī*] was a close friend of Ibn al-Mu'tazz [q.v.], the author of the *Kutāb al-Baḍī'*. Yet Kudāma is reported to have written a book to refute Ibn al-Mu'tazz (according to the version of the title of the book in Yāqūt, in order to refute Ibn al-Mu'tazz's views on the poet Abū Tammām) and makes no mention of his predecessor in the *Naḥd*, even though some of the subject matter is the same and may even have been borrowed by Kudāma from the *Kutāb al-Baḍī'* (see *Naḥd*, introd., 29-30). Kudāma also fails to use the term *baḍī'*, but here the explanation may be that, unlike Ibn al-Mu'tazz, Kudāma was not concerned with the identification of the figures of speech to which this term was applicable, and that the practice of using the term as a collective for figures of speech had not yet been established (cf. *Kutāb al-Baḍī'*, ed. I. Kratchkovsky, London 1935, 57, l. 15-58, l. 3, and S. Bonebakker, *Ibn Abi 'I-Isḥāq's text of the Kutāb al-Baḍī'*, in *Israel Oriental Studies*, ii, [1972], 89-90). One could also suggest that the *Naḥd* was written shortly after the abortive attempt to bring Ibn al-Mu'tazz to the throne and that Kudāma thought it wiser not to make any reference to the unfortunate "one-day

caliph". His attack on Ibn al-Mu'tazz could have been written in the same period as an attempt to dissociate himself from his famous predecessor. Still, the possibility remains that there were two personalities by the name of *Ḍa'far* b. Kudāma who could easily be confused. The first would have been a member of a Christian family and a professional secretary who occupied a minor position in the central administration, in which he was succeeded by his son, Kudāma; the second a Muslim official who enjoyed a considerable reputation as a scholar, distinguished himself as a poet, and won the favour of Ibn al-Mu'tazz, of Ibn al-Mu'tazz's champion, the vizier 'Alī b. 'Isā (see below), and later of 'Alī b. 'Isā's rival, the vizier Abū 'I-Ḥasan b. al-Furāt (see Hāṣil al-Ṣāḥib, *Fuḥṣ al-umamī* fi *ta'riḥ al-mu'marīn*, ed. H. F. Amedroz, Beirut 1904, 211-12; Yāqūt, ii, 412, ll. 9-10). It is curious that the *Aḡḥānī* nowhere mentions that *Ḍa'far* b. Kudāma was a Christian, and even suggests in two places that his name was *Ḍa'far* b. Muḥammad b. Kudāma (x, 131, note and xxiii, 115). That both this *Ḍa'far* and Kudāma were acquainted with members of the Ibn al-Furāt family and with the vizier 'Alī b. 'Isā [q.v.] may be due to the fact that both of them pursued the same type of official career (for 'Alī b. 'Isā and *Ḍa'far*, see Yāqūt, ii, 413, ll. 16-16; and for 'Alī b. 'Isā and Kudāma, see below). Similarly, the fact that *Ḍa'far* and Kudāma distinguished themselves as men of letters would account for their reliance on the same sources. Kudāma, in his *Kutāb al-Kharādī*, used the same sources as Ibn Khurruddāḡhīb [q.v.] (see de Goeje's ed., introd., xxii). *Ḍa'far* was acquainted with the same Ibn Khurruddāḡhīb, as is shown by an *ismā* in the *Aḡḥānī*, xxi, 201, l. 6. It appears certain that Kudāma knew a definition of the *ghāra* [q.v.] by Iṣḥāk b. Ibrāhīm al-Mawṣilī and a definition of the *taḥṣīm* by the same scholar (see Bonebakker, *Notes on the Kutāb Naḥd al-Iḡḥīrī*, Istanbul 1966, 28-19; idem, *Materials for the History of Arabic Rhetoric*, in *AIUON*, Suppl. no. 4 = vol. xxxv [1975], 36, 45, 48-50; cf. also *Naḥd*, introd., 26, ll. 17-17). *Ḍa'far* was a pupil of Iṣḥāk's son, Ḥammād. Less likely to be coincidental—and therefore to be considered an argument in favour of al-Mu'tarriz's identification—is the acquaintance of the two authors with the family of the Tūhūdīs (see *Materials*, 36-7; *Aḡḥānī*, v, 390, xi, 337, xviii, 125). Finally there is strong evidence that the author of the *Aḡḥānī*, who related many traditions from *Ḍa'far*, also knew Kudāma's work and may even have met him in person (see *Notes*, 17-18, 27-9; *Materials*, 39, 51). If al-Mu'tarriz is correct, one could suggest that Ibn al-Nadīm had wrongly identified a certain Abū Kudāma as the father of our author. This Abū Kudāma appears in al-Marzubānī's *al-Mawṣilīyāt* (Cairo 1385/1965, 572) as a *kātib* who composed bad verse (cf. also an anecdote on a certain Ibn Kudāma whom Yāqūt, ii, 414-5 is apparently unable to identify, and al-Sāli, *Kutāb al-Awṣāḥ: Akḥbār al-Rāḍī wa-'I-Muṭṭahī*, ed. J. Heyworth Dunne, Cairo 1354/1935, 212-13).

The date 337/948 for Kudāma's death which is reported by Ibn al-Dīnawarī (cf. *Muntazam*, vi, 363) and repeated by others, is rejected by Yāqūt (vi, 204). Yāqūt also rejects a statement by an unnamed commentator on the *Maḥmūdī* of al-Ḥarīrī who makes Kudāma a secretary of the Buwayhids. He argues that Kudāma was a contemporary of *Ḥaṭīb* (*adab al-kutub wa-'l-ḥaṭībīn*), al-Mubarrad, Abū Sa'īd al-Sukkārī, Ibn Kutayba, and other scholars of the same generation. Ibn Taghrībirdī, *Nuḥūm* (Cairo 1348, iii, 297-8) goes further and says

explicitly that Kudāma was a pupil of al-Muḥarrad, and according to Ibn al-Djawzī, he consulted Thaʿlab; but in the *Nahḍ* there is evidence only of a personal acquaintance between Kudāma and Thaʿlab (d. 592/1204) (*Nahḍ*, text, 35, 44, 45, 102, 119, 127, introd., 23-9). If Kudāma was indeed a pupil of Abū Saʿīd al-Sukkarī (d. at the latest 575/1183), this would mean that he was born around 260, which would not necessarily conflict with the date reported by Ibn al-Djawzī. Yāqūt offers the year 329/932 as the only reliable *terminus post quem*. Abū Ḥayyān al-Tawhīdī, to whom Yāqūt refers, mentions that in that year Abū ʿAmr (sic; read Abū ʿUmar wa-?) Kudāma b. Djaʿfar attended a famous disputation between Abū Saʿīd al-Sirāfī and Abū Ḥishām Maṭṭā b. Yūnus in the presence of Abū ʿI-Faṭḥ al-Jaḍī b. Djaʿfar b. al-Furāt (in 326 according to Abū Ḥayyān's *Imḍāʿ*, Cairo 1373/1953, I, 108, but cf. I, 129, l. 1; in 320 according to his *Muḥāsasāt*, Cairo 1347/1929, 69, and Vāḥūt, II, 106 and VI, 204, see also *JRAS* [1905], 82, 84-5). According to a second report by Abū Ḥayyān al-Tawhīdī (*Imḍāʿ*, II, 145-6), Kudāma showed (*ʿanaḍa*) his *Kutub al-Kharadī* to the vizier ʿAlī b. ʿIsā in that year.

The two other dates for Kudāma's death, "during the reign of al-Muqtadir" and 328, appear respectively in al-Suyūfī, *Taʾrīkh al-Khulafāʾ* (Cairo 1351, 256 = Cairo 1283/1964, 386) and in the *Ḍhayl taʾrīkh Baghdād* of Ibn al-Nadīm (q.v.) as quoted in an unedited section of the *Wafāʾ bi ʿl-Wafayāt* of al-Safadī (see Tabāna, 4 and 72).

Finally, mention should be made of de Slane's assertion that Kudāma belonged to a Christian family from Baṣra, possibly based on a statement by al-Idrīsī, who mentions one Kudāma al-Baṣrī among the sources which he used in compiling his monumental geography (*Opus geographicum*, I, Naples-Rome 1970, 6).

It is not easy to determine the range of Kudāma's scholarly interests on the basis of the titles of his works. So much seems certain that he was competent as a philosopher and commentator on Aristotle, as well as a historian, a philologist, and an expert on administration. To the list in the *Fihrist*, 130, 250, we should add a *Zahr al-rabʿ fi ʿl-ḥikmah* mentioned by al-Masʿūdī (*Murūʾī*, ed. Ch. Pellat, I, 15-6) and Yāqūt, and an *al-Bayānāt* (*Ḍayr al-Ḍayr*, *Ḍayr al-Ḍayr*?) listed by Abū Ḥayyān al-Tawhīdī (*al-Baṣrī* as *al-Ḍakḥāʾir*, Cairo 1373/1953, 6). Lists of titles given by later authors are probably unreliable (see below). Only three works have survived: (a) the *Kutub al-Kharadī*. The full title of this work is no doubt *Kutub al-Kharadī wa-sindʿat* (or *panʿat*) *al-hikmah*. Not only is this the form in which the title appears in the unique manuscript of this work in the Kōprülü Library (the manuscript in Paris is a late copy), but it also agrees with the contents of the work as far as they are known (Tabāna, 81-4; the *Sindʿat al-kutub* quoted by al-Kalīghandī, *Ṣubḥ al-aʿshā*, VI, 481, must be a work by Abū Djaʿfar al-Nabbās quoted by al-Kalīghandī elsewhere in the *Ṣubḥ*). Only the second half of the *Kutub al-Kharadī* (the 3th to the 8th *manāzil*) have survived. They deal not only with a wide range of technical matters, sc. the various departments which constitute the central government, taxation and its historical, geographical and legal foundations, etc., but also give attention to linguistic usage, literary traditions, and the proper forms for conducting official correspondence. The first half had a section (the 3rd *manāzil*) especially devoted to literary rhetoric (see Bonebakker, *A Fahmīd manual for secretaries*, in *AIUON*, xxxvii

[1977], 328), on which ʿAlī b. ʿIsā (quoted in the *Imḍāʿ*) had made some interesting observations. Some prose examples quoted on Kudāma's authority may go back to this section, and its fame may have earned Kudāma his proverbial reputation as a master of eloquence (see al-Harīrī, *Mahāmīd*, ed. de Sacy, 9; al-Kalīghandī, *Ṣubḥ*, XI, 306; al-Maḥḥārī, *Nafḥ al-Ṭib*, ed. ʿIḥṣān ʿAbbās, Beirut 1988/1968, II, 670). There is no satisfactory explanation for the statement of the *Fihrist* (repeated by others) that the book consisted of eight *manāzil*, to which Kudāma himself added a ninth (Tabāna, 93). This statement conflicts with the testimony of al-Muḥarrad, who had read the work and found that it had only seven. A note in the Chester Beatty manuscript of the *Fihrist* (quoted on p. 144 of the Tehran ed. of 1391/1971) lends support to al-Muḥarrad's assertion and suggests that the 8th *manāzil* did not originally belong to the *Kutub al-Kharadī*, though it may have been identical with a *Kutub al-Sayra* by Kudāma which is also listed in the *Fihrist*. This 8th *manāzil* is the only extant section that remains unedited (apart from the historical outline in the 7th *manāzil*, which merely copies al-Balīghūrī, cf. de Goeje's ed. of the *Kharadī*, xciii). It is characterised by Rosenthal as a systematic presentation of social and political science and as a *Fürstenspiegel*. De Goeje believes that the *Kutub al-Kharadī* was written between 326 and 320.

(b) There is no reason to question the authenticity of the *Kutub al-ʿAlfāz* or *Ḍawāḥir al-ʿAlfāz*, even though al-Muḥarrad is the only author to mention this work (see *Nahḍ*, introd., 7-8, 22-5, 47 note, and the above-mentioned article in *AIUON*, 328-9, 336-7 and notes 34-5, 43). Nor is there any reason to suggest that it was originally perhaps part of the *Kutub al-Kharadī*. The *Ḍawāḥir al-ʿAlfāz* lists synonyms and phrases in *sadq* for use by orators and writers of artistic prose, and offers a short introduction on the figures of speech.

(c) The *Kutub Nahḍ al-ḥiʿr* is intended, as its title says, as a guide for the literary critic. Disregarding the treatise by Ibn al-Muʿtazz and the introduction to the *Kutub al-Ḥiʿr* as ʿIḥṣānʿ of Ibn Kutayba (q.v.), Kudāma claims that no book has ever been written that would enable people to distinguish between good and bad poetry. He defines poetry as "metrical, rhymed speech expressing a meaning" (*maʿnā*). This definition in itself cannot be used to distinguish good poetry from bad, but it is possible to set standards for the use of the four constituent elements of poetry implicit in this definition, sc. the *maʿnā* (content), the *lafz* (verbal expression of this content, wording), the *wasn* (metre), and the *ḥāfiya* (rhyme) (q.v.). and the combination of these elements two by two (the combination of the *wasn* with the *ḥāfiya* need not be considered, since the *ḥāfiya* is part of the *lafz* and as such already subject to the metre). In passing, he reminds his readers that the distinction between good and bad poetry does not rest on the moral quality of the theme or on the question whether or not the poet is consistent in the sentiments he expresses, but rather on his skill in the use of the four constituent elements separately and in combination. The success of the poems thus depends on the ratio between good qualities (*nuṣūf*) and defects (*ʿuyūb*) specifically related to these elements or to combinations of these elements. Kudāma lists these *nuṣūf* and *ʿuyūb* in separate sections. In the first section he begins by discussing the four elements separately. Speaking of the *maʿnā*, he admits that there are an unlimited number of *maʿnāf*, i.e. concepts, ideas, that may come to the

poet's mind. He will therefore limit himself to the principal "aims" (*agārah*), i.e. subjects or themes which can be associated with these *ma'ānī* and to which the *ma'ānī* should correspond; panegyric, satire, elegy, simile, description, and the *masīb* (p.s.) which he sees as an erotic theme. The various figures of speech which come next are interpreted as ornaments pertaining to the *ma'ānī* or as successful combinations of the four constituent elements. In the classification of these figures Kudāma shows much ingenuity. He has to recognize, however, that there are no figures of speech that can be classified as combinations of *loft* with *even* and *ma'ānī* with *warm*: all technically good poetry that adequately expresses the poet's intentions illustrates these two combinations. Specimens of bad poetry are therefore the only illustrations of the principles involved. The section on the defects in poetry follows the arrangement of the section on the good qualities: Kudāma examines the faults resulting from a wrong use of the four constituent elements and classifies certain errors under these four elements or the combinations of these elements two by two. He also shows how the figures of speech are sometimes handled incorrectly. In both sections the discussion follows the pattern of term-definition-example found in the *Kiṣāb al-Badi'* and the *Kawā'id al-Shi'r* of Tha'lab (q.v.); but whereas the two earlier treatises usually do not comment on the examples, Kudāma often analyses his examples in detail.

There are some further points in Kudāma's presentation that deserve to be mentioned. The following are perhaps the most important. (a) his interest in Greek philosophy which appears, for instance, in his analysis of the function of the four cardinal virtues, *ʿaql*, *ghaḍāʾa*, *ʿadl*, and *ʿiḥṣā* in panegyric, elegy, and satire (he goes on to list other virtues as deriving either from these cardinal virtues themselves or from combinations of these cardinal virtues two by two), from a quotation from Galen's *Περὶ ἰσχύος* in the chapter on satire, and from arguments based on Aristotle's *Categories* (further details in Naḥd, introd., 35-44 and the recent studies cited in the *Bibliography*). There is no clear evidence, however, that he was influenced by the *Poetics* and the *Rhetorics* of Aristotle; (b) his defence of the hyperbole (*ghalawna*). Kudāma quotes an unidentified connoisseur of poetry as saying: "The best poetry is the least truthful" (*ahsanu 'l-shi'r al-ahqabuhū*). He finds that the "Greek philosophers" support this view, but does not attribute the maxim itself to the Greeks (an antecedent of this famous maxim is L. Zolondek, *Diḥṣal 'l-'Aḥ*, Lexington, Kentucky 1961, 128b, 133; cf. also al-Djāhiz, *Buḥārā*, Cairo 1958, 26-7). Kudāma does not go so far that he accepts every form of hyperbole: there must be a link with reality which can be established by using the verb *hāda*, "to be almost . . ." in a paraphrase of the statement, e.g. "You inspire the infidels with fear so that even the seed [of these infidels] fears you before it becomes a creature [in the womb]" can be paraphrased "... so that it is almost as though the seed of the enemy fears you . . .", but a prayer to grant immortality to a ruler cannot be justified, since immortality in man is inconceivable (*laysa fi ḥayāt 'l-insān*); he illustrates this rule more clearly when he points out that describing the noise of battle as being so strong that it can be heard as far as two days' journey is an exaggeration, though it is possible in principle that this should happen; (c) his lack of interest in the early 'Abbāsid poetry (*muhādḍān*). This tendency appears clearly from the above-mentioned list of the "prin-

pal aims" from which genres like the love lyric (*ghamī*), the wine poem (*ghamriyya*), and the hunting poem (*ṣarādiyya*) are conspicuously absent. Kudāma nowhere expresses a categorical judgment. One could suggest therefore that his choice reflects a belief, which was perhaps not uncommon in his days, that 'Abbāsid poetry did not represent a real break with ancient, that is classical, tradition. Consequently he may not have felt that there was a need to justify his choice. The same may be true of the examples, most of which are taken from ancient poetry, though Kudāma occasionally discusses examples by later poets (see Naḥd, text, 80-1, 83; for a list of *muhādḍān* poets quoted in the Naḥd, see p. 72 of the article by Kratochvinsky cited in the *Bibli*).

Kudāma may have been more dependent on his predecessors than is apparent at first sight (see Naḥd, introd., 22-35). He may have followed Ibn Kutayba and Ibn al-Mu'tazz respectively when he discussed the *ḥa's* and the *ma'ānī* as independent constituent elements and distinguished between the proper and the erroneous use of the figures of speech. He may have depended on Ibn al-Mu'tazz and on earlier critics for the choice of his terminology and examples. Yet the theory on which he based the framework of his thesis, as well as many aspects of the elaboration of this theory, appear to be unique. However, his system did not provide a sound basis for a theory of literature and quickly fell into oblivion: the four-element scheme was rarely taken over and never in its complete form. The same is true of the distinction between *ma'ānī* and *ḥa's* and the system of cardinal virtues. By contrast, those aspects of his work that conformed closely to the system of Ibn al-Mu'tazz and the 2nd and 3rd century scholars who preceded him were readily accepted, in particular his terminology and definitions of the figures of speech. Kudāma's figures were combined with those of Ibn al-Mu'tazz and came to be known collectively as *badi'*. The exact extent of Kudāma's influence is not, however, always easy to determine, since direct references to Kudāma are few (succeeded by instances of unacknowledged borrowing (Naḥd, introd., 44-66). In other cases it is clear that scholars used not only the Naḥd, but also the *Ḥikāṣi* (*Ibid.*, 57 and 47 note). There is a third category of borrowings where we find scholars borrowing from Kudāma without having any direct knowledge of the text they are quoting (*Ibid.*, 58; Bonebakker, *Notes*, 16-17 and the above-mentioned article in *AIUN*, 309-10). Parallel to this we find that biographers after the time of Yaḥyā copy out their predecessors or offer erroneous information on the author and his work (see, for instance, al-Sharīḥī, *Sharḥ Maḥāṣin al-Ḥarīrī*, Cairo 1372/1952, I, 20).

Kudāma's Naḥd was the subject of refutations and commentaries, none of which appear to have survived. A complex system of division into sections, chapters, and paragraphs introduced by Ḥanẓala al-Iṣfahānī (q.v.) was recently discovered in a manuscript in Tunis (see Bonebakker in a forthcoming article in *RSO*, which also offers minor corrections to the text of his ed.). A work with the title *Naḥd al-naḥḍ*, erroneously attributed to Kudāma, was identified in 1949 as the *Kiṣāb al-Burḥān fi wajīḥ al-dayān* of Abu 'l-Ḥusayn Ishāq b. Ibrāhīm b. Sulaymān b. Wabḥ al-Kātib (ed. A. Mar'ib and Kh. al-Ḥadīthī, Baghdad 1377/1967), though it is occasionally still quoted by its old title (see *IMW* *Wams* in Suppl.). The *Shi'r* bias of the last work may have prompted Aḥḥa Buturay al-Thirānī to include Kudāma in his *Taḥṣīl al-ʿilm al-ḡayy* (*al-Karā al-*

rūhī, Beirut 1390/1971, 221). The attribution to Kudāma existed as early as the 6th/12th century (see *Nakā*, introd., 15-20, 60-1; Bonebakker, *Some early definitions of the Tawriya*, The Hague 1966, 48-9 note).

(S. A. BONEBAKKER)

AL-KUDS, the most common Arabic name for Jerusalem.

A. HISTORY

1. The Islamic history of Jerusalem clearly falls into three periods. During the first six hundred years, the possession of the city was contested between Islam and Christianity and between many Islamic princes and factions. After the bloodless and poorly-recorded delivery of the town into the hands of an inconspicuous tribal commander, the history of the period was solemnly inaugurated by the erection of the marvelous Dome of the Rock, the majestic testimony

to the Islamic presence in the Holy City; it culminated in the vicissitudes of the Crusades and was concluded by the devastations of the first half of the 7th/13th century, which, with the exclusion of the buildings on the Temple area and the Holy Sepulchre, left Jerusalem a heap of ruins.

The subsequent six hundred years were comparatively uneventful. Jerusalem mostly lived the life of an out-of-the-way provincial town, delivered to the exactions of rapacious officials and notables, often also to tribulations at the hands of seditious *fellaḥs* or nomads. But, in conformity with the religious policy of the Mamlūks and Ottomans, and with the general spirit of the age, Jerusalem greatly benefited by its holy character. The many Mamlūk buildings still decorating the old city and Sultan Sulaymān's wall encircling it manifest this trend in the present-day visitor.

The modern history of Jerusalem begins with its conquest by Ibrāhīm Pasha in 1831. The reforms started by the son of Muhammad 'Alī could not be ignored by the Ottomans, to whose control the city reverted in 1840. The restrictions imposed on the non-Muslims were alleviated. Many important Christian buildings and institutions were erected both inside and outside the old city. The improved living conditions (albeit still very hard) induced many religious persons to settle in Jerusalem. By about 1880 Jews formed the majority of the population. Jerusalem became the capital of a *mutasarriflik*, whose governor was directly responsible to the government in Istanbul, but by 1920 it was the capital of mandatory Palestine. In December 1949 the State of Israel made it its capital and seat of government (a step not recognised internationally). Fortunately, the war of 1967 and the events following it have not changed the historical character of the old city, while the new city has humely expanded in every respect and direction. Jerusalem will always live no its past, but at present one feels in it the pulse of an active and vigorous community.

Muḥjir al-Dīn al-'Uṣaymī, the excellent historian of Jerusalem, who wrote his book *al-Uṣaymī bi-ta'rikh al-Kuds wa 'l-Qudṣ* in 1900/1494-5, rightly observes (p. 6) that besides material of the type of the *faḍā'il* ("Praises of the excellence of the city"), "Umar's conquest" and stories about the Dome of the Rock and scholars visiting Jerusalem, little useful about the history of the city had been written before him. He explains this deficiency partly by the interruption of the Muslim tradition by the Christian conquest (1099, 126, etc.) and mentions the symbolic fact that Abū 'l-Kāsim al-Makkī, who had compiled a book on the subject, was killed by the Crusaders before completing it (264). The intrinsic reason for the absence of coherent information was, of course, the character of Jerusalem as a holy city which lived on the care lavished on it from outside, rather than being itself of political, administrative or cultural significance. Consequently, the presentation of its history must be one of highlights rather than a continuous account.

I. The first six hundred years

a. *Names.* In early Islam the full name of Jerusalem was *Ilīyā' madīnat dawūd al-mahdīs*, "Aelia, the city of the Temple" (Ṭabarī, i, 2360, l. 13). In practice, *Ilīyā'*, or, more commonly, *Ilīyā' al-mahdīs*, were used. *Ilīyā'* (pronounced in three different ways, Bakrī, Muḥam, ed. 1945, i, 134, l. 5; 217), is the Roman Aelia, but since this origin was unknown to the Muslim scholars, they suggested various other ex-

but the treaty is very succinct and does not differ much from Balāghurī's version. Later, conditions similar to those made with the Byzantine authorities in Egypt were added and some (but not all) Christian authors added the condition "that no Jew should live with them in Jerusalem". This condition is found also in Tabarī, I, 2405, from where several later Muslim writers have copied it. But Tabarī's source here was Sayf b. ʿUmar, whose fathomless unreliability has been proved in detail long time ago (J. Wellhausen, *Skizzen und Vorarbeiten*, vi, 3-7) and who tells us, e.g. here, Tabarī, I, 2404, about the conquest of Ramla, a city founded by the crown prince Sulaymān b. ʿAbd al-Malik eighty years later. A mere look at the treaty produced by Sayf, its wrong date and fantastic witnesses, shows its worthlessness. It is natural, however, that in times of tension, as in 899/1474, when the Mamlūk sultan ordered the rebuilding of a synagogue in Jerusalem, or as from 1299, this treaty served a purpose. From the Christian point of view, it is understandable that some writers wished to preserve Jerusalem as a Christian city, as it was in Byzantine times, but this was hardly in the interests of the Muslims, and their actions proved that such a stipulation never existed.

In addition to these three comparatively old versions, a later one, represented among many others by *Uns*, 225, adds several conditions of the legendary "Covenant of ʿUmar", in which the Christians undertake, *inter alia*, not to speak Arabic. Even more fantastic is Ibn ʿAsākir, II, 523 (pseudo-Wāḥidī), where the treaty is made with twenty Jews headed by Yūsuf (a scribal error for Yūḥaʾ) b. Nūn. This is a "harmonising" legend; a Jew, bearing the same name as the Jewish conqueror of the Holy Land, delivers it into the hands of the Muslims.

3. *The beginnings of Islamisation*. Tabarī, I, 2408, ff., and many later Muslim and Christian sources, tell about a visit to Jerusalem by the caliph ʿUmar, but all we have about it are legends whose easily recognisable tendencies betray their worthlessness. According to one school, the caliph was accompanied by Jews who showed him the true site of the Temple, which was concealed by rubble purposely heaped on it by Christians. When the place was cleared and the ubiquitous Kaʿb al-Aḥḥar [p.w.] suggested to ʿUmar to pray behind the Holy Rock so that the two *ḥiḍas* should be in front of him (see § 2, above), the caliph refused, since the Muslims should turn towards the Kaʿba alone. This is, of course, one of the many traditions about the *ḥiḍa* of the overrating of the sanctity of Jerusalem (see § 11, below). According to Christian sources, the caliph visited the churches, but declined to pray in one of them in order to preclude any claims on it by later Muslim generations. This legend was a pious wish which originated at a time when the encroachments of the Muslims, which later became a reality, still were only a menace, see § 7, below. Since the conditions of the surrender safeguarded to the Christians the use of their churches, it is likely that the Temple area, which was largely or entirely unoccupied, served as a place of prayer to the Muslims from the very beginning, and there is no reason to doubt that this was done on order of the ruling caliph ʿUmar.

As far as the ancient sources go, it appears that the early Muslim settlers in Jerusalem were people from Medina, such as Aws, the nephew of the Prophet's court poet Ḥassān b. Thābit. Aws was a disciple of Kaʿb al-Aḥḥar and himself a poetist, Ibn Saʿd, vii/2, 22; his tomb was still known at the time of Muḥṣir al-Dīn, *Uns*, 233. Several other Medinese are listed

as settlers in Jerusalem by Ibn Saʿd, iii/3, 37; vii/2, 229, I, 23, etc. Among them the famous "companion" ʿUbbāda b. al-Sāmīt, the first Muslim judge in the city (al-Thahabī, *Duwal al-ʿUḡḡa*, 1364, I, 14) is to be noted. The Anṣār were accounted of Yaman; thus it was natural that the Yemeni auxiliary corps, *al-maddad min ahl al-Yaman*, also was stationed there (Ibn Saʿd, vii/2, 229, I, 24). Simeon, the father of Muḥammad's Jewish concubine Rayḥāna, settled in Jerusalem and delivered sermons in the Muslim place of worship on the Temple area. He, too, of course, was from Medina (*Uns*, 235).

The strange *ḥadīth* running *imrān bayt al-maḥḍis ḥarab yathrib*, "The building of Jerusalem is the destruction of Medina", might have been originally a *bon mot* on this exodus from the capital of the *Ḥijāz* to Jerusalem (which cannot have been more than a trickle); but soon became a standing element in the *maḥāḥib* literature. (Its continuation: *wa-ḥarab yathrib ḥarabū al-maḥāḥib*, "and the destruction of Medina is the beginning of the war of the End of the Days", *Musnad Ahmad b. Ḥanbal*, v, 232, 243; *Abū Dāwūd*, *Maḥāḥib*, 3, *Djāḥiz*, *Bayān*, ed. Sandūḥ, I, 28; Ibn Kathīr, *Nihāyat al-budāya*, I, 79; *Sanḥūdī*, *Wafāʾ*, 1955, I, 120; *al-Sirāḡ al-munir*, II, 460, where are further sources).

Mukaddasī, 171, I, 11 and others report that the caliph ʿUthmān, whose rule began only eight years after the Islamic conquest of Jerusalem, dedicated the revenue from the rich vegetable gardens of Sīlōam (which, in accordance with the peace settlement, belonged to the Muslims) to the poor of the city. Umm al-Dardāʾ, the wife of the wise *ḥāfi* of Damascus, spent every year six months in Jerusalem, where "she sat among the poor" (*Uns*, 254). These and similar reports are not necessarily spurious, but may betray early Christian influence.

The Islamic conquest threw the Christian community of the city into complete disarray. The aged patriarch Sophronius died shortly afterwards and no new one was appointed until 706. The further history of the patriarchate of Jerusalem in early Islamic times is almost as obscure as that of the Jewish spiritual leadership in the country during that period. But Jerusalem retained largely its Christian character. As al-Mukaddasī tells us (182, I, 16 ff.), the Christian holidays regulated the rhythm of the year also for the Muslim population, and through Jerusalem and the hermits populating the mountains in its environment, pious Muslims became acquainted with the ways of Christian asceticism (S. D. Goitein, *Studies in Islamic history*, 241, 246).

6. *The Umayyads (69-132/680-750)*. About two years after the fall of Jerusalem, the Umayyad Muʿāwīya was appointed commander of the army operating in Palestine and Syria. He governed these countries for forty years, first as governor, and later as caliph. Jerusalem was the scene of two decisive events in his career. In 38/658, Muʿāwīya and ʿAmmār b. al-ʿĀs, the conqueror of Egypt, concluded there a pact of co-operation, which decided the contest between ʿAlī and Muʿāwīya in the latter's favour (Ibn Saʿd, iv/2, 2, I, 22 ff.; the text of the agreement seems to be genuine). In 40/Safar 660/July 660 homage was paid to Muʿāwīya as caliph in Jerusalem. A Syrian source, giving this date, reports also that Muʿāwīya prayed on this occasion at Golgotha, Gethsemane and the Tomb of Maria (T. Nöldeke, in *ZDMG*, xlix, 95). This was hardly mere politics (*ibid.*, 85), but a manifestation of the enthusiastic state of mind of the time, so Islam entering into its inheritance of the preceding monotheistic religions.

During the long rule of Mu'awiya, the Muslim place of worship on the Temple area, approximately described by bishop Arculfus in ca. 680 (see L. Bieler, *Corpus Christianorum, Series Latina*, clxxv, *Itineraria etc.*, Turhout 1965, 177), must have taken shape. Mu'awhiar b. Tahir, iv, 87, l. 17, expressly states that Mu'awiya built the Muslim sanctuary there "after 'Umar". It stands also to reason that the plan for the erection of the Dome of the Rock, which needed immense preparations, was already made during the protracted and orderly rule of Mu'awiya. The inscription in the dome bears the year 72/691-2, but the beginning of 'Abd al-Malik's reign (69-86/688-705) was extremely turbulent. 'Abd al-Malik had good reasons to make efforts towards the completion of the building, which would show him as the great champion of Islam, but the early years of his caliphate were hardly suited for both conceiving such an enormous undertaking and carrying it out to its very end during a comparatively short period. Contrariwise, Mu'awiya is known also by his extensive buying and building activities in Mecca (in order to provide shelter for pilgrims and *mugdawrin*), in which he was not followed by later Umayyads, see M. J. Kister, *Some reports concerning Mecca*, in *JESHO*, xv (1972), 84-91.

Goldziher, *Mus. St.*, ii, 35-7, Eng. tr. ii, 44-6, expounded the theory that 'Abd al-Malik, by erecting the Dome of the Rock, tried to divert the Pilgrimage from Mecca, then the capital of his rival 'Abd Allah b. Zubayr, to Jerusalem, and that the many "traditions" in the name of the Prophet in favour or against the sanctity of Jerusalem reflect this political contest for the caliphate. This thesis was generally accepted and has found its way into the textbooks on Islamic history. It cannot be maintained, however. None of the great Muslim historians of the 3rd/9th century who describe the conflict between 'Abd al-Malik and Ibn Zubayr in utmost detail, nor any of the older geographers, including al-Muqaddasi, a native of Jerusalem, makes the slightest allusion to such an intention of the Umayyad caliph. On the contrary, for the year 68/687-8, Tabari, ii, 781-3 and others, report expressly that the soldiers of 'Abd al-Malik's expeditionary force participated in the *hajj*. They wished to do so even during the very siege of Mecca, a request which Ibn Zubayr naturally had to refuse, Baladhuri, *Ansa*, v, 360. Moreover, it is obvious that 'Abd al-Malik would not have strengthened, but endangered his position by trying to divert the *hajj* from the holy sites expressly mentioned in the Qur'an, and thus after the *hikla* had been emphatically turned away from Jerusalem. By abolishing one of the five pillars of Islam, he would have made himself a *kafir*, against whom the *dhimma* was obligatory. The two older sources that mention the allegation that 'Abd al-Malik, by constructing the Dome of the Rock, tried to attract the *hajj* to Jerusalem, so. Ya'qubi, ii, 311, and Eutychius, i, 39, invalidate their statements by others, obviously untrue, connected with them. They have the Umayyads forbid the Pilgrimage to Mecca, which is in flagrant contradiction to trustworthy reports that Umayyad caliphs made the pilgrimage themselves.

Nasir-i Khusraw, who visited Jerusalem in 439/1047, reports that people in Palestine who were unable to make the *hajj*, assembled in Jerusalem *wa-bi-manhaj bi-Island*, "and performed the *wuquf*", the standing in the presence of God which was the main ceremony at the sacred mountain of 'Arafat [q.v.]. This statement, which has sometimes been adduced as a corroboration of Goldziher's thesis,

must be understood in a wider Islamic context. Such a substitute for the pilgrimage is attested also for the main cities of other provinces, such as Bayra and Fustat; it even had a special name, *ku'if*, derived from 'Arafat, Ibn Taghribirdi, i, 207. But, like the individual sacrifices, it manifested a participation in the *hajj*, celebrated on the same day in Arabia, not its replacement by a local pilgrimage.

The real urge for the erection of the Dome of the Rock on the site where it stands and in the form which it has, was religious, in addition, of course, to the natural acculturation of the Arabs to an environment, where magnificent edifices were the eloquent witnesses of a triumphant Church and of great rulers. Itajab b. Haywa [q.v.] of Bayyin, who was in charge of the building operations (*Uas*, 241, and others; probably only the financial aspect, while the *masid* Yaqd b. Salim supervised the actual work) was the most prominent traditionist of Sha'm, a poet and ascetic, (Ibn Hajar, *Taqdib*, lii, 266), and he and people of his ilk might have been the spiritual originators of the undertaking. By choosing the site, Islam manifested itself as the exclusive heir of the older religions. The gorgeous mosaics, representing jewels and ornaments of the greatest variety, were in chiasmic fulfillment of the prophetic descriptions of the future Jerusalem (*Israh*, liv, 21, etc.), which had become known to the Muslims (Ibn al-Fakih, *BGA*, v, 97, ll. 21-23) and were incorporated by them in the legendary descriptions of Solomon's Temple (*ibid.*, 99, l. 20). The detailed inscriptions in the Dome betray a spirit of Islamic mission, specifically to the Christians, since the "prophethood" of Jesus is emphatically stressed and his sonship denied with equal fervour. Details in the articles of Göttein, Grabar and Caskel: see Bibliography.

Muslim and Jewish sources report that Jews were employed as servants of the sanctuary on the Temple area, its cleaning and illumination (including the making of the glass lamps). If true at all, these reports can refer only to an early and very short period. On the other hand, the contribution of oil for the illumination of the Temple area seems to have been regarded by both Christians and Jews as a pious deed, widely observed. Al-Khazaf (d. 268/874-5) in his book on *waqf*, 347, says: "If a Christian or Jew dedicates his land or house to the repairs of the Bayt al-masjid or for the purchase of oil for its illumination, it is permissible to accept this from him, for this is an act of piety both with regard to Muslims and to them". Previously, the author had explained that it was not permitted to accept from non-Muslims a *waqf* for specific Muslim purposes. An Italian Jew of the 10th century, who was of great veneration, also contributed oil "to the sanctuary on the Western Wall, namely to the altar (clearly an expression for a non-Jewish building) which is inside" (*Ahima's chronicle*, ed. B. Klar, Jerusalem 1944, 47).

Besides the erection of the Dome of the Rock, the Umayyad period contributed to Jerusalem other great architectural achievements, the *masjid al-akhsa* and the *al-dar al-imara*, see section B. New gates were added (Ibn Kathir, xi, 226, repeating the anecdote that the gate with the inscription of al-Hajjaj, at that time governor of Filastin, remained intact, while that bearing the name of 'Abd al-Malik collapsed) and the road to Jerusalem was repaired (mentioned also in a Jewish source), its milestones receiving Arab inscriptions (*RCEA*, no. 15). It is evident that such comprehensive building operations must have had a considerable impact on the composition of Jerusalem's population.

The extensive foundations of Umayyad buildings laid bare to the south and south west of the Aqsa mosque during the recent excavations of B. Mazur (1968-76) suggest that the Muslims planned to do in Palestine what they had done in Irfikiya, Egypt and Syria, sc. to replace the Byzantine capital situated on the seashore (Caesarea) by an inland administrative centre. In view of the lack of written sources on the subject, we cannot know why Jerusalem finally did not acquire this status. For the then available means of transportation, Jerusalem was perhaps too far away from the main lines of international traffic.

The foundation of Ramla [q.v.] as capital city of the province of Filastin by the crown prince Sulaymān was in the first place a blow for neighbouring Lod or Lydda, but in the long run was detrimental to Jerusalem. According to later traditions, Sulaymān himself received homage in Jerusalem and intended to stay there (Ibn Kāfir, ix, 174; cf. also E. Sivan, in *Israel Or. Stud.*, i, 190, n. 33), but he took Ramla as his permanent residence and the town became the administrative and economic centre of the country. The inhabitants of Jerusalem were well aware of this fact, as Mutaḥhar b. Tāhir, one of them, observes (iv, 72, ll. 2-3): *bayt al-makdis min sanad al-rasid la'la ma' idnal dār al-mulk fī ayyim Sulaymān wa-Dawūd*, "Jerusalem is a provincial town attached to Ramla after having been the seat of the government in the days of Solomon and David".

7. The 'Abbasid Period (132-358/750-969). The end of Umayyad rule was for Jerusalem, as for Palestine and Syria in general, a period of great tribulations. In the wake of a rebellion against the last Umayyad Marwān II, the walls of Jerusalem were pulled down and its inhabitants punished. Earthquakes aggravated the situation. At the beginning, the new dynasty paid special tribute to the holy character of the city. This was manifested by the first visit of al-Manṣūr, who set out for Jerusalem immediately after returning to Baghdad from the pilgrimage to Mecca of the year 140/758 (Tabari, iii, 129). He did so in order to fulfill a vow (Mas'ūdī, vi, 212, l. 9), made perhaps because a hundred lunar years had passed since Mu'āwiya had received homage in the Holy City in 19/40. A second visit of the 'Abbasid caliph, in 154/771 (Tab. iii, 372) was made in connection with a great rising in the Maghrib, al-Manṣūr accompanied as far as Jerusalem the large army assembled by him for the quelling of the revolt (Balāghūrī, *Futūḥ*, 235, ll. 4-5, Ibn al-Aṭṭar, v, 457). His son al-Mahdī also visited Jerusalem and prayed there (Tab. iii, 500), but Hārūn al-Rashīd, who made the ḥajj almost every second year and frequented Syria because of the Holy War against Byzantium, never came to Jerusalem. Nor did he son al-Ma'mūn, although he sojourned in Syria and even in Egypt, or any other later 'Abbasid caliph. This change of attitude probably reflected the new trend of Islamic piety, which abhorred the *bid'as*, the foreign elements and "innovations", in the legends about Jerusalem.

Theophanes, *Chronographia*, i, 446, reports that al-Manṣūr, on the occasion of his visit to Jerusalem, ordered the Christians and Hebrews to tattoo their names on their hands (so that they could not escape the poll tax), whereupon many Christians fled to "Romania" via the sea. Such measures had been taken earlier in Islam; their adoption with regard to Jerusalem obviously means that at that time both the Muslim and the non-Muslim population of the

city must have become quite numerous and the mutual assimilation of the various elements comparatively progressed. This increase must have been due to religious incentive, for the ancient ḥadīth assuring the Muslims that God permanently guaranteed sustenance to the inhabitants of Jerusalem (Ibn al-Fajdh, *BG*, v, 94, l. 12, and others) proves that life there never was easy. The legendary biographies of most of the early Sūfis, especially those of Iranian origin, contain the detail that they stayed in Jerusalem one time or another (JAOS, lxx, 107), and well-founded sources prove a considerable Muslim influx from Iran, see § 9, below.

The Christians of Jerusalem received a mighty split by the interest shown for the Holy City by the rulers and the pious of Western Europe. Whatever the truth about the embassies exchanged between Hārūn al-Rashīd and Charlemagne, and the delivery to the latter of the key and the standard of Jerusalem (received by him in Rome in the year 800, at the time of his coronation as Emperor), there can be no doubt that many new buildings destined for the religious and material needs of pilgrims and newcomers were erected in Jerusalem by the emperor and his successors (a list in T. Tobler, *Itinera Hierosolymitana*, i, 314). Charlemagne's son and successor Louis ordered each estate in his empire to contribute one denarius for the needs of Christian Jerusalem. It is evident that most of the money needed for the payment of the poll tax and other impositions on the Christians of the city came from abroad. The composition of the Christian population may be gauged from a list of the hermits living in cells on the Mount of Olives, of whom eleven said their psalmodes in Greek, six in Syriac, five in Latin, four in Georgian, two in Armenian, and one in Arabic (Tobler, *op. cit.*, i, 302).

Ca. 800, the Jewish High Council, the *yeshiva*, headed by the Gaon (corresponding to the Christian patriarch), moved from Tiberias to Jerusalem. His authority was soon challenged by the Karaites [q.v.], a dissident Jewish sect, which made Jerusalem its centre. The Karaite disposition, which mainly developed on Iranian soil, is to be understood in the Islamic context as a branch of the *Shu'biyya* [q.v.], emphasising the return to the Bible, the revival of Hebrew, and the settling in the Holy Land. As is natural, the movement originated preponderantly in circles near to the Arabs, Jewish governmental officials or otherwise prominent people. Consequently, the Karaite settlers in Jerusalem easily got the upper hand. Jerusalem became indeed their main spiritual centre. In the ensuing controversies, which, during the turbulent 9th/9th century, were brought before the Muslim authorities, one Gaon lost his life and two others with difficulty escaped a similar fate (J. Naan, *Jews in Egypt and Palestine under the Fātimids*, repr. 1970, l. 57). In the course of time, the two denominations learned to co-exist and to co-operate, but in Jerusalem rather less than, e.g., in Egypt. The Fātimids recognised the Gaon of Jerusalem as the head of the Rabbanite Jews in their empire (see Goitein, *A Mediterranean society*, ii, Berkeley and Los Angeles 1971, 3 ll.).

During the reign of al-Ma'mūn (198-218/813-33), Jerusalem suffered by a famine and became depleted of its Muslims, an opportunity used by the patriarch to execute repairs in the building of the Holy Sepulchre (Eutychius, ii, 55-57). More serious was a great revolt of *yellāḥim*, which broke out at the end of the reign of his successor al-Mu'taṣim (218-277/833-42). The revolt was led by one Abū Ḥarb al-

Mubārka' ("veiled one")—as former impostors had been) and soon encompassed the whole of Syria. Its leader assumed the role of the Sufyānī, or messiah of Umayyad stock, reduced the poll tax and made other promises to the population. But soon he changed his ways. When he entered Jerusalem, its entire populace, Muslims, Christians and Jews, fled and all the places of worship were pillaged. Only a large contribution by the patriarch prevented him from burning the Holy Sepulchre. It was a typical peasants' revolt, which was unable to make a stand against the regular army sent to subdue it by al-Mu'tasim's successor (Ibn al-Athīr, vi, 372-2, who does not mention Jerusalem; Michael Syrus, ii, 341).

In 256/869-70 Syria and Palestine received for the first time a Turk as governor (Amāḍijūr, Ibn al-Athīr, vii, 165, li, 3-7), but this did not change the ways of the 'Abbasid régime, which had long before assumed the character of a bureaucracy based largely on foreign hirelings. Precisely at that time, the patriarch Theodosius of Jerusalem praised the Saracens for permitting the Christians to build churches and to live in accordance with their religion without oppressing them. (J. D. Mansi, *Conciliorum collectio*, repr. 1906, xvi, 261, and Bernard the monk expressed his admiration for the safety of the roads in the country (Tobler, *Itinera*, 319).

Aḥmad b. Tulūn, who had made himself lord of Egypt in 254/868, conquered Palestine in 264/876, but in the wars between the Tulūnids and later the Ikhshīdids (q.v.), the rulers of Egypt, and their overlords, the 'Abbasid caliphs, Jerusalem played no role. But a new turn in the concepts about the holy character of Jerusalem must have taken place. The belief that it would be the scene of the Last Judgement and the gate to Paradise (Ibn al-Faḥh, *BGA*, v, 94, etc.), must have gained ground, whence people who could afford it arranged for their burial there. Tabari, i, 486, l. 22, and others report that the Jews from all countries, following the example of Moses, who carried the coffin of Joseph with him from Egypt, used to bring their dead to the Holy Land. This custom, as is proved by many Geniza documents, was indeed widespread, even among people of limited means. It went back to Roman times, when "Himyarite" Jews buried their dead in the Bēth-Sha'araym necropolis near Haifa. In the 4th/10th century it must have become popular among Muslims. 'Isa b. Mūsā al-Nūḡharī, the first 'Abbasid governor of Egypt after the overthrow of the Tulūnids, was buried in Jerusalem in 296/909; the founder of the Ikhshīdid dynasty, the Turk Muḥammad b. Tughlūq, happened to die in Damascus in 334/946, but he and several other members of his family and retinue, including the famous black eunuch Kāfir, one of the able rulers of Egypt, were interred in Jerusalem.

Tabari, lii, 2228, l. 28, and others report under the year 892 that the esoteric sect of the Karmātas (q.v.) turned towards Jerusalem in their prayers. But he notes also that they kept Monday instead of Friday as their weekly day of worship and celebrated it (in the Jewish fashion) as a day of rest. Such eddies (if they really existed) were of no general significance for Islam. In their devastating raids, the Karmātas reached also Palestine, but Jerusalem is not mentioned at that time in connection with their exploits.

The absence of a strong central government during the 3rd/10th century and perhaps also other circumstances, such as the Byzantine offensive against Islamic territories (culminating in the boasting

threat of the emperor Nicephorus II Phocas in 964 that he would take Jerusalem) caused friction between the various religious communities. Half of the outer court of the Holy Sepulchre was taken away and a mosque erected on it (later called *maḥḍid* 'Umar, probably in order to emphasise, against Christian claims (above, § 4), that the caliph had prayed there). Shortly afterwards, on Palm Sunday 938, the Christian procession was attacked and the Holy Sepulchre damaged by fire. Even worse, and characteristic for the period, were the events of 355/966. The patriarch of Jerusalem had sought the intervention of Kāfir, the black viceroy of Egypt, against the overreaching Berber governor of Jerusalem who had imposed excessive financial demands on the Christians. Kāfir sent a Turkish officer for the protection of the Christians. But the governor did not budge. When, on Pentecost, the patriarch refused to pay more than the tribute usually delivered on that holiday, the Berber incited the mob; the Holy Sepulchre and other churches were pillaged and set on fire, the patriarch was murdered and his body burnt. Yaqūb b. Sa'īd al-Anṣāḥī, 123, who tells this story, adds that the Jews outdid the Muslims in damaging the sacred buildings. This sounds strange, considering the weak position of the Jews in Jerusalem, but perhaps finds its explanation in a cryptic remark by a contemporary Karaite scholar about dangerous Christian machinations against the Jews in the city (J. Mann, *Taxs and studies*, li, 18-19) and in complaints about Jews in letters sent from Jerusalem and Venice to Henry I the Fowler in 922 (*M.G.H. Const.*, i, 4-7).

8. *Fāṭimids, Turcomans and Saljuqs* (356-492/969-1099). Shortly after the conquest of Egypt by the Fāṭimids (q.v.), Palestine with Jerusalem came under their domination, but participated only comparatively little in the economic efflorescence of the first hundred years of their rule. Palestine was incessantly harassed by Karmātas and bedouins, first as allies, but soon (as from 363/974) separately. For about seventy years the Banū Dīḡarāb chieftains tried to get a hold of the country including Jerusalem (Ibn al-Athīr, x, 308, l. 27), sometimes supported by the Byzantine emperors. The raids were particularly harrowing. The outrages perpetrated by the bedouins "were unlike anything experienced in the countries of Islam since its inception" (Geniza letter, J. Mann, *Jews in Egypt*, li, 161, l. 22). The details reported in the Geniza letters are revolting.

The unending local tribulations were temporarily overshadowed by the general persecution of Christians and Jews ordered by the caliph al-Ḥākim (386-411/996-1021). It culminated in the destruction of the Holy Sepulchre on 28 September 1009. This extraordinary measure cannot be explained by special circumstances alone, such as the abnormal state of mind of the caliph or the Muslims' anger over the pious fraud of the holy fire (M. Canard, *La destruction de l'Église de la Résurrection . . . et . . . la descente du feu sacré, in Byzantion*, xxv (1965), 16-45, where the literature on the event is surveyed). The persecution was a prolonged process; that of the Jews began only in 402/1012, at a time when the Christians of Jerusalem, with the help or connivance of the bedouin chieftain Mufarrid b. al-Dīḡarāb already tried to restore the Holy Sepulchre. Most likely, an inner time-about of the religious policy of the Jam'iyy leadership was the main cause of the persecution. Anyhow, it left Jerusalem, which had consisted largely of Christian buildings, a shambles. The earthquake of 407/1016, in which the dome of the

Seikha collapsed, made things worse (according to a Geniza letter, the collapse occurred on the 23 July, at 4 p.m., J. Mann, *Texts and studies*, 4, 313). The persecution petered out, but the Jews and Christians were much too impoverished to be able to undo the destruction. It took almost forty years until the restoration of the Holy Sepulchre was completed.

Around the middle of the 5th/11th century, Jerusalem began to take the place of Ramla as the main city of the country. Ramla had suffered by the earthquakes of 424/1033 and 460/1068 and by the endless depredations of the bedouins more extensively than had Jerusalem (cf. Yahya b. Sa'ïd al-Anṭākī, II, 201). Contrariwise, the stream of pilgrims from Europe to Jerusalem became ever stronger, the great caravan of 12,000 pilgrims from southern Germany and Holland arriving in 1065, so lively described by Lambert of Hersfeld, being one of its best known examples. It may also be that the techniques of warfare and fortifications had changed, making Jerusalem more easily defensible than a city in a flat country like Ramla. The audacity of the Banū Djarrah and other bedouin horde forced the Fātimids to strengthen the walls of Jerusalem in 424/1033 and again in 455/1065. In the last third of the 5th/11th century, Jerusalem and not Ramla was in the centre of military events.

The Saljūq invasions set into motion motley crowds of soldiers of fortune from many nations, led by ruthless condottieri. One of these was the Turkoman Atsız b. Uvāk [p.v.], whom the Fātimid government, paralysed by famine, plague and complete anarchy in Egypt, called in against the unruly bedouins in Palestine. But Atsız turned against the Fātimids and took Jerusalem in 463/1071 after a prolonged siege. Emboldened by his successes, he attacked Egypt itself, but there order had been restored by the Armenian convert Badr al-Djāmālī [p.v.], and Atsız was forced to retreat (469/1077). In a long Hebrew poem celebrating the Fātimid victory, a Jewish dignitary from Palestine describes in detail the sufferings of Jerusalem, and in particular the devastation of its environment with its vineyards and orchards by Atsız's hordes (ed. J. Greenstone, repr. from *AJSLL* [1906], 2:34). The local population rose against the barbarian conquerors and Atsız had to take Jerusalem a second time, putting the inhabitants to sword, even those who had fled into the al-Aḳṣā mosque. Only those who had taken refuge in the Dome of the Rock were spared. Atsız was soon liquidated by the brother of the Saljūq Sultan Malik Shāh, Tutuṣh, who then was governor of Damascus (470/1078). Thus Jerusalem was incorporated in the great Saljūq empire, the borders of which henceforth were given as stretching "from Kāshghar to Jerusalem" (Yāfi'ī, *Mir'at al-Djānān*, III, 133). Tutuṣh assigned Jerusalem to Artuḳ [p.v.], the founder of the Mesopotamian dynasty called after him. It is not sure when exactly Artuḳ took possession of the city, it was in his hands in 479/1086 (Ibn al-Aḏīr, x, 96), and was given by him to two of his sons in 484/1091. In Shā'ban 491/July 1098 (Ibn Muyassar, ed. Massé, 38), that is, when the Crusaders were already on their march to Jerusalem, al-Aḳṣā, the Fātimid viceroy of Egypt, laid siege on the city, "bombarding it from forty catapults during forty days" (Ibn Khaldūn, *ʿIṣar*, v, 184). The two brothers surrendered, but were released unharmed by al-Aḳṣā. How unaware the Muslims were of the magnitude of the Crusader menace can be gauged from the fact that another Saljūq, Rūḳnā, a son of Tutuṣh, set

out from Damascus via Nībulus to wrest Jerusalem from the Fātimids. But he was no match for al-Aḳṣā's army; the viceroy returned to Egypt, leaving a small garrison in Jerusalem.

9. *Life in Jerusalem in the 4th/10th and 5th/11th centuries.* Copious references in the works of Muslim authors and over a hundred Geniza letters from Jerusalem written during the 5th/11th century enable us to form a fairly substantial idea about life in Jerusalem during the two centuries preceding its capture by the Crusaders. This is particularly true with regard to the last third of the 4th/10th century, when al-Muṭahhar b. Ṭāhir and al-Muḳaddasī wrote, and the second third of the 5th/11th, when Nāṣir-i Khusrāw visited the city and when the country had a short respite of comparatively normal times, reflected in the Geniza letters, between the atrocities of the bedouins and the devastations of the Turkomans.

The Muslim geographers naturally dedicated most of their attention to the sacred buildings and the fortifications, see section B. Al-Muḳaddasī, a keen observer (see e.g. his remark about a bath near the Bāb al-Ashbāt (St. Stephen's gate), which was built half in the local tradition, and half according to the Persian fashion, 440, l. 15) again and again praises the unique beauty of Jerusalem (e.g. 35, l. 16; 166, l. 2; 167, n.m.), its clean and well-stocked markets and public bathhouses, and does not forget to mention the latrines near the mosques and in the bazaars (182, l. 9). During the 4th/10th century, it seems, Muslim religious instruction in Jerusalem was mainly concentrated in the mosques of the Haram (comparable to what happened in other Islamic cities, see also below). In the wake of al-Hākim's persecution, some Christian buildings might have become available for the *ṣāḥayya* mentioned by Muḥṣir al-Dīn, 264. The Persian religious group of the Karrāmiyya [p.v.], which had first settled in Jerusalem already around the middle of the 3rd/9th century, erected *khānaqāhs* for the needs of its members. By the middle of the 5th/11th century, the Christian quarter in the north-western part of the city, that is, around the Holy Sepulchre and other age-old churches, the Armenian quarter near St James cathedral in the south, as well as two Jewish enclaves, one near the Western Wall, where people prayed, and one near the Damascus gate, were well-established. The synagogues referred to by Muṭahhar, Nāṣir-i Khusrāw and Kalānīsī, might have been identical with the *madrāsas* or houses of learning mentioned in a Geniza letter as places where prayers were held. The Karaites lived in a separate quarter in the south of the city, called *ḥarāt al-maḥārīṣa*, the quarter of the Easterners, since most of them had come from Persia and Ḳršk.

It is difficult to form a judgment about the size of the population, Nāṣir-i Khusrāw's 20,000 betrays only the mysterious and widely-diffused predilection for the number 20. He gives 20,000 also for Tripoli in Lebanon, and for the number of people assembling in Jerusalem during the *ʿīd al-ḥarḥān*, but Ibn Aḡṣir, xi, 20, assigns that number to the membership of the Karrāmiyya settled in Jerusalem alone. Al-Muḳaddasī is more helpful when he says that Jerusalem was smaller than Mecca, but larger than Medina (167, l. 9), or more populous than many a provincial capital (165, l. 12). The repeatedly-mentioned number of 70,000 persons killed by the Crusaders in 492/1099 can by no means be used as an indication of the number of the inhabitants. Many people fled into the city before the approaching

invaders, and in general, on such occasions numbers are grossly exaggerated and worthless. If the al-Akṣā mosque was indeed reduced from fourteen to seven aisles after the earthquake of 424/1033 and others, the population must have considerably shrunk, possibly an outcome of the catastrophic tribulations by the bedouins in the 1020s.

The most characteristic trait of life in Jerusalem was, of course, that "no day passed without foreigners" (Muḥaddasī, 266, l. 6). Pilgrims from all regions filled the city (ibid., 167, n. 1e). The usage of pious Muslims to enter the state of *ihram* [q.v.] for the pilgrimage to Mecca in Jerusalem had the consequence that the city was frequented by Muslims from distant countries, in particular from the Maghrib (ibid., 243, l. 12). Similarly, many a Jew from the Maghrib and Spain, visiting Jerusalem either as *ḥajj* (i.e. on the holidays prescribed for the pilgrimage) or as the *al'ir* (on another occasion), has left letters in Geniza. The religious ceremonies of the various communities were not always confined to the houses of worship or even the walls of the city. We have detailed descriptions of these processions and assemblies. They must have conveyed to Jerusalem a festive appearance during many days of the year.

As to the government of the city, Muḥaddasī, 267, l. 7, complains that "the oppressed has no helper". But he makes similar remarks concerning other places, e.g. 443, and the Geniza letters show that the situation was not quite so hopeless. Justice was done, provided that there was someone strong and interested enough to take care of the case. Since Ramla was the capital of the province, everything had to be dealt with there, and in more serious cases appeals had to be made to Cairo. A dignitary from Jerusalem would appeal to a notable in Ramla such as "the chief physician of the dysentery department in the hospital", and ask him to bring the case of the wronged person or institution before the governor or chief *ḥakīm* there, as the matter required, whereupon the latter would instruct their subordinates in Jerusalem to settle the dispute properly. In public affairs, the system worked the same way, as the edicts of the Fātimid caliphs for and against the Karaites of Palestine and the correspondence connected with these matters prove (see S. M. Stern, *Fātimid decrees*, London 1964; *idem*, *A petition to the Fātimid caliph al-Mustansir*, in *REJ*, cxxviii [1969], 203-22).

Ramla was also the economic centre of the country, as many references prove. *Siḥḥāḡiās*, or bankers' cheques, for persons in Jerusalem were converted into cash in Ramla, which then was forwarded to Jerusalem, though we find also a banker, with a Persian name, in Jerusalem who issued *siḥḥāḡiās* on Cairo. The money mostly used in Jerusalem around the middle of the 13th/14th century was the "Rimī" (i.e. Southern Italian) and Muslim quarter *ḥudūd* of the West, presumably because the pilgrims coming from those parts and from western Europe formed the majority of the customers. Oil, cheese, cotton and fruits are mentioned by the Muslim geographers and in the Geniza letters as main exports from Jerusalem. A letter from Tyre speaks of yarn sent from Jerusalem sufficient for the weaving of a thousand robes, *ḥamē*, of the bazaar type and even more of the home-made class. Since every mediaeval traveller tried also to do some business, we find in Jerusalem transit trade too, especially with Persians, bringing the heavy *ihram* silk from *Mihraṣṣān* (to be re-exported to Egypt), and taking with them Mediterranean goods such as coral. Jerusalem, as

becoming a holy city, affected some austerity in clothing. "Here", a silk merchant writes in a letter to Fustat, "black and sky-blue silk is worn, not crimson as in Ramla and Ascalon". Wool traders, *ḡarāḡ*, clothiers and *ḥajjīs* are mentioned as the prominent types of businessmen in the city. The well developed commercial mail service connecting Jerusalem with Cairo, which was carried on by Muslims, shows that the city must have had some economic importance (Goitein, *A Mediterranean society*, I, 292-4).

Those newcomers who could afford it bought houses and stores and lived on the income from their rents. Others tried to do business, but complaints such as "there is no livelihood in Jerusalem", "when one exerts oneself here, the exertion works against him", or "many have come here rich and have been reduced to poverty", are frequent. As many letters show, the town was too far away from the main stream of international commerce. Another unfavourable factor was the crushing impositions on non-Muslims (or perhaps on foreigners in general). The Jewish community was almost permanently in debt to Muslim creditors, paying them exorbitant interest, because it had to deliver the yearly tributes to the authorities and others, e.g. the *Ḥakīm* [q.v.], whether the expected numbers of pilgrims arrived or not. To a large extent, the city was a refuge for the poor, of whom their respective religious communities abroad took care in many different ways (about which social service the Geniza is again very specific, cf. Goitein, *op. cit.*, II, 96-7 and *passim*).

Jerusalem's mostly unsatisfactory economic situation might have been responsible for another negative aspect of its life during this period: despite its holiness for the three monotheistic religions, it did not become for any of them a great spiritual centre with a characteristic contribution of its own (smaller groups, such as Armenians and Georgians on the Christian side and the Karaites among the Jews, perhaps excepted). Many Muslim scholars came there to teach or to study, cf. Yāqūt, I, 316, 359, 387, etc.; Ibn 'Asḥīr, I, 397, l. 26; II, 54, l. 3; 161, 24; IV, 153, l. 16; 154, l. 2, etc. But it is characteristic that in Yāqūt's *Dictionary of learned men* Baṣra occurs 170 times, Damascus 100, but Jerusalem only once and in passing; in the *K. al-Aghānī* it is not mentioned at all. Al-Muḥaddasī's complaint, 267: "The mosque [that is the house of study, see above] is empty, there are no scholars and no savants, no disputations and no instruction", was certainly an exaggeration, inspired by the deep love of the writer for his native city, as was his famous censure that Christians and Jews had there the upper hand, but Jerusalem certainly could not boast of excellence in the sciences of Islam or any other fields. The great al-Ḥazālī sojourned there to 488/1095 not in order to make contacts, but with the intention to locking himself up and of seeking solitude.

The city had some importance as a refuge or place of banishment for persons with unorthodox views and ways of life. This trend began already in Umayyad times (Tabarī, I, 1920, l. 10; Iba Sa'ād, vi/2, 156-7). Ṭḥaw b. Yazīd had to leave Damascus because of his Kadari [q.v.] views and died in Jerusalem ca. 153/770 (Iba 'Asḥīr, I, 68, l. 27; II, 383-84). Teldā, the Turkish governor of Egypt (who, at his request was buried in Jerusalem in 327/933) banished thither the Šāfi' Abū 'Ḥasan al-Dīnawarī (Sayūṭī, *Ḥusn al-mubāḡara*, I, 294). In Mamlūk times forced retirement in Jerusalem became almost customary, see § 12, below.

Jerusalem was a town of copyists, the occupation of the pious who were both learned and poor. Christian Arabic manuscripts written in the monastery of Mār Sībā near Jerusalem in the second half of the 5th/11th century and in Jerusalem at the beginning of the 6th/12th are still extant, and an Armenian colophon from Jerusalem from the year 870 is known (J. Slav, *A grammar of Christian Arabic*, Louvain 1966, I, 24, 25, 33; E. Stone, *The manuscript library of the Armenian Patriarchate in Jerusalem*, in *Tarbut*, xii [1972], 158). Jewish copyists active in Jerusalem during the 5th/11th century give us many details about their work.

According to Muḡīr al-Dīn, 263-5, the main local *madhhab* in the town, even before the Crusades, was Shāfiʿī, with a sprinkling of the Ḥanbalī, introduced by the Persian Abū ʿI-Faraj al-Shīrāzī, while a Ḥanbalī Turk was the *ḥāfi*, a situation similar to that of much later times.

There was a marked difference between the spirit of the late 4th/10th century and the 5th/11th one. The former was characterised by three highly interesting Jerusalemites of Persian origin and of wide humanistic interests: the great traveller al-Muḥaddasī, one of the finest personalities produced by Islamic civilisation; al-Muṭaḥhar b. Ṭāḥir, a keen and remarkably unbiased student of religions, writing in Bust, eastern Persia; and Abū Sulaymān Muḥammad b. Maʿṣūm al-Kuḍī al-Buṣṭī, who, according to Abū Sulaymān al-Manṭiqī, was the author of the *raṣāʾid* of the Iḥwān al-Safāʾ (q.v.). The subsequent century witnessed a narrowing down to the more specifically Islamic branches of knowledge. A typical representative of the age was Abū ʿI-Faḍl b. Ṭāḥir al-Khayrānī, active in Arabic language study, *ḥadīth*, and, especially, mysticism; he made his extensive travels on foot, carrying his books on his back and finally settled in Ḥamadān, continuing the long-standing connection between Jerusalem and Persia. Al-Muḥarrar b. Muḥaddīdī, the author of a book on the *Faḍl al-Kuḍ* (see § 11, below) lived in the same century. The leading scholar of Jerusalem, "the *ghayā* of the Shāfiʿīs in the whole of Syria", Abū ʿI-Faḍl Naṣr b. Ibrāhīm, left the city for Tyre [Yāḥyā, *Muʿāwī*, iii, 152-3]. The Jewish Canon did the same (ca. 1073). This, as well as many Geniza letters, shows that the situation in Jerusalem had become unbearable long before the Crusaders temporarily suspended Muslim and Jewish life in the city altogether.

30. *Crusaders and Ayyūbids*. The Crusaders laid siege on Jerusalem on June 6, 1099 and took it by assault on July 15, penetrating into the city from three different points. The behaviour of the different groups of conquerors, Frenchmen, Flemings, Provençals and Normans from Sicily, was not entirely uniform. Tancred, the leader of the Normans, granted safe-conduct to the Fāṭimid commander of the citadel (the "Tower of David") and to his men. A Geniza letter reports that the Jews in the entourage of the commander were included in the safe-conduct. Thus, no doubt, the Muslim civilians in the citadel were saved as well. The same letter says also that "the damned ones called Ashkenazim" (convincingly identified by B. Z. Kedar as Normans, "unlike others", did not rape women. The massacre of the Muslims and the Jews in the town was perpetrated out of military and religious considerations alike. The Crusaders did not run berserk, but proceeded systematically, as is shown first by the fact that they took time to collect hundreds of books, which they sold at Ascalon soon afterwards. The

Geniza naturally speaks about Hebrew books, but there is no reason to assume that Muslim books were treated differently. The fact that a number of prisoners were sold far beneath the standard price of 33 1/3 *ḥindīs* per person does not prove at all that the Crusaders were ignorant of the accepted norms; the war situation did not permit the keeping of larger numbers of captives for a protracted period. But prisoners from better families, for whom higher ransoms could be expected, were retained in Antioch for years. All in all, the letters of persons actually involved in the events somehow qualify the accepted notions about the conquest of Jerusalem by the Crusaders. There was a gruesome bloodbath, no doubt. But it was not as all-embracing as the summary reports of the chroniclers led us to believe.

Jerusalem became a Christian city, where no Muslim or Jewish cult was permitted and no non-Christian could take residence permanently. The mosques were turned into churches or used as secular buildings. The newly-founded kingdom was appropriately called the Kingdom of Jerusalem, *Regnum Hierusalem*, since the conversion of the Holy City into a Christian sanctuary had been the purpose of its erection. As a capital city, Jerusalem soon began to flourish. The court, the administration of the state, the ecclesiastical authorities, the monastic and military religious orders were all located here, and thousands of pilgrims visited the city every year, many staying on for longer periods or for good. Besides Eastern Christians, such as Syrians, Copts, Armenians and Georgians, the inhabitants were mostly Europeans, above all French. Smaller European communities, such as Spaniards, Provençals, Germans and Hungarians, lived in compact groups around their churches and public institutions. Many new buildings were erected, of which the enlarged Holy Sepulchre was the most conspicuous. The remarkably spacious and beautiful market hall, erected on the foundations of a similar Islamic building, still dominates daily life in the Old City today. Everywhere in Jerusalem the vestiges of Crusaders' activities are visible. When, after the war of 1967, the ruins of the Jewish quarter were cleared away, what is believed to be the remains of St. Mary of the Germans made their appearance.

Less than a decade after the conquest, a letter from Palestine (not from Jerusalem) reports that life in the country had returned to normal also for the non-Christian population. Jerusalem remained closed to Muslims and Jews, but, in the course of time, they were permitted to come there for business and prayer. A famous incident reported in the autobiography of Usāma b. Muḥiddīn [q.v.] shows him performing his prayers on the Temple area during a considerable stretch of time (ed. P. K. Hitti, Princeton 1930, 134-5). Jewish dyers worked for the King's wardrobe in the vicinity of the palace ca. 1170.

After the decisive victory of Ḥaṭṭīn (Rabīʿ II 583/ July 1187), Saladin advanced towards Jerusalem and laid siege on the city. After prolonged negotiations, in which the defenders threatened to kill the Muslim prisoners and all non-combatants (so that they would not be sold into slavery), to burn all the valuables and to destroy the buildings on the Haram al-Sharif, an agreement was reached in Ramaḍān 583/ November 1187, which permitted the inhabitants to ransom themselves after surrender. Only the Eastern Christians remained, and Jerusalem soon assumed the character of a predominantly Muslim city. The Muslim shrines were given back to their original destination and many Christian buildings were

dedicated to Muslim purposes. Outstanding examples were the convent of the church of St Anne, which became the famous *Ṣalāḥiyya madrasa*, so called after its founder Ṣalāḥ, and the Mitrān, a hospital, which originally had been the church at the hostel of the Knights of St. John. The Holy Sepulchre was left to the Christians, but the pilgrimage to it was temporarily suspended until 1192.

There remained the problem of repopulation. In 587/1192 the great port city of Ascalon was dismantled and destroyed at Saladin's command, in order to prevent the Crusaders from turning it into a new base for their operations. The dispossessed inhabitants must have found new homes in the empty houses of Jerusalem, for the Geniza letters from this period repeatedly speak of a community of *ʿAshūlā* in the Holy City, and Jews certainly were given no preferential treatment. Another community listed alongside with them was that of the *Maḡārība*—a trend noted already two hundred years before by al-Muḥaddisi, see § 9 above. Individuals are described in the same source as hailing from Yaman, ʿIrāk, and Egypt. The influx of learned Jews from France attested for the period ca. 1220-15 in both literary texts and Geniza letters proves that Ayyūbīd rule at that time must have had a reputation of an orderly government able to guarantee the safety of foreigners. But life in Jerusalem was hard, and before the 6th/12th century was out, we already read about newcomers who had left for the greener pastures of Egypt and the port cities of the Eastern Mediterranean.

A new and catastrophic turning point in the history of Jerusalem was the rule of Saladin's nephew al-Muʿazzam, the Sultan of Damascus. On the one hand, as his many inscriptions prove, al-Muʿazzam did much to adorn the Haram, and erected there the Maḡālī college called after him; see section B; but being afraid of a new encroachment by the Christians, he ordered in 616/1219 the destruction of the city with the exception of the Temple area, the Holy Sepulchre and the citadel. His apprehensions did not materialise, but his brother al-Kāmil, the ruler of Egypt, in order to shield himself from the Syrian Ayyūbids, concluded a treaty with the Emperor Frederick II, ceding to him the city for ten years (626/1229). The emperor, being under papal ban, crowned himself there without clerical assistance—the last time that a monarch was crowned in Jerusalem. Again Muslims (and of course, also Jews, as proved by a Geniza letter from 1236) were not permitted access to the city with the exception of the Haram al-Ṣharīf, which remained in Muslim hands, but the *ḥāḍī*, the bearer of Muslim authority, had his seal outside Jerusalem (in al-Bira, near Rāmāllāh, J. Prawer, *Reynolds Latin*, Paris 1970, II, 199). The subsequent hostilities between the Ayyūbids of Egypt and Syria resulted in an agreement between the latter and the Christians, which seemingly removed the Muslims even from the Temple area, so that the commander of the Templars could boast that the city was inhabited solely by Christians (Matthew Paris, *Historia major*, IV, 290, quoted by B. Z. Kedar, in *Turkic*, xli [1971] 88). But this lasted only a very short time. The Egyptian Ayyūbīd al-Malik al-Ṣalīb Naḍīm al-Dīn enlisted the help of the wild Kh̲w̲āzmiāns, who had been driven to the West by the Mongols. The Kh̲w̲āzmiāns overran Syria and Palestine, took Jerusalem in Rabiʿ I 642/August 1244 and plundered and murdered in the town, desecrating the Holy Sepulchre and other

churches. The combined armies of the Kh̲w̲āzmiāns and al-Malik al-Ṣalīb Naḍīm joined battle with the Syrians and their allies, the Crusaders, and vanquished them (Djuniḍī I 542/October 1244). Consequently, Jerusalem came under the domination of the rulers of Egypt, under which, after a short interval in 647/1249, when again it was returned to the Sultan of Damascus, it remained until the Ottoman conquest of 922/1516-17).

II. The second six hundred years

11 *The sanctity of Jerusalem in Islam. Faḍl al-Kuḍs*. The history of Jerusalem during this period was largely influenced by the enhanced religious halo it had acquired through the long struggle between Christians and Muslims. The position of Jerusalem in Islam had its ups and downs. It cannot be described yet in full, since important relevant texts, such as the *Taʿwīḍ* of al-Muḥṣil (d. 1507/67), the *Muḥannaf* of ʿAbd al-Razzāk (d. 212/827) and the two oldest books of *Faḍl al-Kuḍs* still await publication (see below). An excellent discussion of the literature on the subject and the present stage of research is found in E. Sivan, *Le caractère de Jérusalem dans l'Islam aux XI^e-XIII^e siècles*, in *SI*, xxvii (1967), 149-82, and *idem*, *The beginnings of the Faḍl al-Kuḍs literature*, in *Israel Or. Stud.*, I (1971), 263-71.

It was entirely in the spirit of early Islam that it incorporated the Jewish and Christian notions of the holiness of Jerusalem and made the area of the ancient Jewish Temple into a Muslim place of worship (§§ 4-6, above). The *ḥāḍī* ranking Jerusalem as the third central sanctuary of Islam after Mecca and Medina, excluding others, was formulated in the course of the first century of Islam and obtained general recognition during the second, after the status of Jerusalem had been vehemently contested as being alien to Islam, whose cradle was the Hijāz (cf. the saying attributed to ʿAbd Allāh b. Maʿād and Ḥuḡayfa: "Even if the distance between me and Jerusalem was only two parasangs, I would not go there", quoted in M. J. Kister, *You shall only set out for three mosques, a study of an early tradition*, in *Le Muséon*, lxxvii [1969], 173-96, where the material about this struggle is assembled [this quotation at 182, n. 39]).

Both aspects, the veneration for Jerusalem and the objection to it, deepened with the increasing influx of foreign ideas on the subject and their development by Islamic popular piety. The notions that Jerusalem was holy as the domicile of the ancient prophets and saints [see above] and as the scene of Muhammad's *Isrāʾ* and *Mirāj* [q.v.] (the latter was mentioned in Saladin's letter to Richard Cœur de Lion as the main proof for the Muslims' claim on Jerusalem, Sivan, *Coraire sacré*, 165) were accepted by everyone; it was the more exuberant legends woven around those notions and, above all, the belief that Jerusalem would be the scene of Resurrection and of the Last Judgment, and the crude fantasies evolving from these themes, which aroused criticism and suspicion that they were local inventions destined to attract pilgrims and visitors. As Ibn Kaḥlā, *Biddʿya*, viii, 280, l. 4 ff., formulated it: "They (the people of Jerusalem) have depicted there the spectacles of the *Ṣirāf* (the bridge suspended from the Mount of Olives to the Temple Mount, which will be thinner than a hair etc.), of the gate of the Paradise, of the footprints of the Prophet, and of the valley of Gehenna". As a result, Jerusalem during the 3rd-5th/9th-11th centuries did not com-

mand a paramount position in the religious consciousness of the Islamic world. While many Islamic cities inspired books of *faḍā'il* already by the end of the 3rd and throughout the 4th centuries, Jerusalem appears only with two, compiled during the 5th: a tract by Abū Bakr al-Wāṣilī, a *ḥaḥib* of the al-Aḥṣā mosque (recently identified by M. J. Kister in the library of the al-Djazzār Paṣha mosque of Acre; in the course of publication by Y. Haṣṣon), and another by Abū Ṭ-Ma'ūf al-Muḥarrar b. Murādjidī, a *faḥib* living in Jerusalem (to be edited by E. Sivan). The author of a third compilation, mainly of *ḥaḥib*s, Abū Ṭ-Kāsim al-Makki al-Nakdī, did not complete his work, since he was captured and killed by the Crusaders, see above. It is characteristic that these three authors were inhabitants of Jerusalem. The often-noted astounding fact that the conquest of Jerusalem by the Crusaders and its conversion into an exclusively Christian city did not arouse any strong Muslim reaction for decades also indicates that the veneration for the Holy City had not yet become a spiritual force in Islam.

The situation changed when ṬImād al-Dīn Zankī's conquest of Edessa in 539/1144 suggested to an ambitious ruler that territorial aspirations could well be underpinned by religious propaganda. The court poets and secretaries of Zankī and his son Nūr al-Dīn took up the topic of the *ghāzī* for Jerusalem. With Saladin, both before and after 583/1187, this propaganda reached its apogee. While no *Faḍā'il al-Kuds* work appeared during the first half of the 6th/12th century, they became abundant and ubiquitous in the second half and in the subsequent centuries. How much Jerusalem had become an all-Islamic concern might be gauged from the widely diffused protests against al-Mu'azzam's dismantling of the city in 616/1219 and al-Kāmil's ordering it to the Emperor Frederick II in 626/1229. Precisely after Jerusalem had ceased to be a military or political issue, i.e. during the Mamlūk period, the *Faḍā'il al-Kuds* multiplied; at least thirty are known from this period, see Sivan, *Caravane sacrée*, 181. The exceptions taken by Ibn Taymiyya (q.v.) in his treatise on the subject were directed against the *ḥaḥib*s disfiguring the cult of Jerusalem; its canonical status as third in rank of the sanctuaries of Islam was never questioned.

To modern Muslims, this position symbolises the universal character of Islam. Sayyid Kutb (d. 1966) writes this in his huge work on the Qur'ān with reference to Sūra XVII, 1: "The *Isra'* connects the great monotheistic religions from Abraham and Ishmael to the Seal of the Prophets. It combines the sites holy to the monotheistic religions with one another and it is as if Muḥammad, the last of the prophets, declares by this wondrous night voyage that his message contains those of the prophets preceding him and is connected with theirs" (*Fi ṣalāḥ al-Kur'ān*, xv, 12, ll. 5-9).

12. *Jerusalem under the Mamlūks* (648-922/1250-1517). At the beginning of this period, Jerusalem was mostly in ruins and deserted. The few Christians who remained or returned there after the sack by the Kh'wārazmians in 622/1244 and the Muslims and Jews who had settled there anew, fled in 658/1260 before the onslaught of the Mongols who had reached places as far south of Jerusalem as Hebron and Gaza (latest discussion of the sources: B. Z. Kedar, *Tarbiḥ*, xii [1972], 89-92). After the victory of the Mamlūks at 'Ayn Dīlālūt (q.v.) in Shawwāl 538/September 1260, Jerusalem was definitely incorporated in their empire and was administered first by the Mamlūk viceroys

of Damascus. In 778/1376 the Jerusalem district was made a separate administrative unit, whose governor, styled *na'ib*, or deputy of the Sultan, was directly responsible to the government in Cairo. The sanctuaries of the Haram (together with that of Hebron) were under the supervision of the "superintendent of the two holy sites", *na'ib al-ḥaramayn*, who was responsible for their upkeep and in charge of their endowments. The history of the period was mainly one of rebuilding the city, see section B, Monuments. While the sultans repaired or adorned the great sanctuaries and carried out works for providing them with water, or erected important institutions such as the Aḥṣāfiyya (see section B), so the *amirs* and princes of the Mamlūk empire, as well as of other Muslim states and private persons erected *madrasas*, *ṣunīyas*, *ḥaḥab*es, and mausoleums, many of which are still extant, or at least identifiable. Most of these buildings were small, having the appearance of ordinary townhouses, and were probably built with the use of ruins and their materials. But some of these foundations, such as the 8th/14th century Tenziziyya college, were spacious and distinguished.

Because of its relative isolation, its proximity of Egypt the absence of strong fortifications or of a garrison of any size, which might be used by a potential insurgent, Jerusalem served as a place of compulsory sojourn for discharged, dismissed, or exiled members of the Mamlūk military nobility, the so-called *ḥaḥib*es. What had been in early Islam an occasional occurrence (§ 9, above), now became a widespread practice of high socio-economic importance. As D. Ayalon, in a special study devoted to the subject, has pointed out, the Holy City was the most commonly assigned place of exile in the entire Mamlūk empire [*Discharges from service, banishment and imprisonments in Mamlūk society, in Israel Or. St.*, li [1973], 324-49]. To the many reasons for this choice adduced by the author, *ibid.*, 333, it might be added that the authorities intended with this perhaps the repopulation of the city. In any case, these *ḥaḥib*es, to whom fixed incomes were assigned by the government and who often possessed means of their own, were in a position to keep fine households and to leave behind them well-constructed mansions.

In the main, Jerusalem of the Mamlūk period must be envisaged as a city of Muslim divines living on plots foundations and salaries. The most conspicuous aspect of the members of this dominant class of Jerusalem's society was their mobility. They served, often simultaneously, in different occupations and posts, such as professors or "repetitors" in *madrasas*, as *ḥaḥib*es, *ḥaḥib*es, *ḥaḥib*es, or heads of dervish convents. They rarely stayed in Jerusalem for good, but moved no to Cairo or Damascus or other places, often returning for some time to Jerusalem, and finally concluding their lives somewhere else or back in the Holy City. Their literary output was equally diversified, comprising several or all of the fields of *ḥaḥib*, *fiqh* (ṣul and *fuṣūṣ*), *tafsir*, *ṣira*, occasionally also Arabic language and rhetorics. Arranging and classifying the knowledge they wished to impart under novel headings, or in the form of commentaries to other works, or in verifications, were favourite means of pouring old wine into new bottles.

A second characteristic of this class of scholars was the prominence of leading families which divided between themselves the most richly-endowed offices. This was, of course, nothing new in Islam. But in Jerusalem, which lived on endowments from abroad, nepotism was rife, and family rule was not always

to the benefit of scholarship or good administration (we often hear about pious foundations falling into desuetude). The most prominent family of Muslim divines during almost the entire Mamlūk period (and also in early Ottoman times), were the Banū Iḥā Ḍiḥānā'a (ḡ.c.), who originated in Ḥamā and inhabited in Jerusalem a mansion bordering on the north-west corner of the Haram. The biographies of the more prolific authors of this family show, however, that they passed most of their adult lives in the great center of Islamic scholarship, sc. Cairo and Damascus. In Jerusalem they mostly served as *ḥafīḥ* and *ḥāfiḥ*. One branch of them, the al-Khaṭīb family, is still extant. (There are other families in Jerusalem, unconnected with them, bearing this name.) An Egyptian family, the Karakaghānids, shared with them the prerogative of the office of *ḥafīḥ* in the al-Aḥṣā mosque. The Banū Ḍiḥānīm, also living on the northern edge of the Haram, mostly held the position of heads of the large al-Ṣalibiyya *ḥadīṣ*. All these were *ḥafīḥ*s. The most important Hanafī family were the Dayris, natives of Palestine. They served as Hanafī judges in Jerusalem and in other cities of Palestine, as well as in Calco, as teachers in the Hanafī al-Mu'azzamiyya *madrasa*, and one of them became *naṣir al-karamayn*. The well-known modern al-ḥafīḥ family (see §§ 13 and 14, below) derives its origin from them.

Besides the great families of divines, there were smaller ones, as well as unaffiliated scholars, local and foreign, who were appointed to teaching of juridical posts, or purchased them (or parts of them); positions were often held in partnership). Of the more distinguished scholars who passed considerable parts of their lives in Jerusalem, Ibn al-Ḥāṭim, an expert on arithmetic and the science of the division of inheritances (d. 412/1021), and Kamāl al-Dīn Ibn Abī Ḥarīf, a native of Jerusalem and great authority on Muslim law (822-905/1419-1500), both prolific authors, should be noted. Both died in Jerusalem and were buried in the Mamlūk cemetery (ʿArif al-ʿArif, *al-Mufaṣṣal fī taʾrīkh al-Ruds*, Jerusalem 1961, 306, 308).

Jerusalem, the city of the poor and the pious, was the proper domicile for Ṣūfīs. Muḥīr al-Dīn notes about twenty Ṣūfī convents representing most of the major orders and several less known ones. E. Ashtor, in his study on Jerusalem in the Mamlūk period (the most comprehensive one on the subject, see Bibliography) describes the ambivalent relations prevailing in Jerusalem, as elsewhere, between the two classes of Islamic divines, the scholars and the mystics. On the one hand, we read about members of a *ṣūfiyya* studying at a *madrasa* or about prominent scholars adopting the Ṣūfī way of life. On the other hand, the ecstatic practices of some orders, especially the whirling dances accompanied by instrumental music (prohibited in principle by Islam) were sharply condemned. A collection of *fatāwā* in this spirit, written by an Ibn Ḍiḥānā'a and copied many years later by a Dayrī, has been described by Ashtor.

The Christians, hard pressed in this intensely Islamic atmosphere of Mamlūk Jerusalem, were strengthened by the establishment of a Franciscan monastery on Mount Zion in the 1330s. Mount Zion with its many religious associations, the "Tomb of David", the Cenaculum (scene of the Last Supper) and the Dormitio (the place where Mary, the mother of Jesus, fell into eternal sleep), was the scene of endless contests between Christians and Muslims and even Jews, involving the demolition, re-erection

and renewed destruction of buildings down to the very end of the Mamlūk period, see section B. Other Christian buildings were also objects of attacks. The demolition and restoration in 879/1474 of the synagogue of the then small Jewish community is described in great detail by Muḥīr al-Dīn, 633-46, by Ibn Ḳyās, 14, 154-5, and in a book especially devoted to this matter by the Ḥafīḥ *ḥafīḥ* of Jerusalem Ibn ʿUbayya (analysed by Golein, in *Zion*, xxi-xiv [1948-9], 18-32). Against orders from Cairo, Ibn ʿUbayya three times decided that the Jewish place of worship was to be closed; it was finally demolished by mobs led by a Ṣūfī *ḥafīḥ*. Upon this, the Sultan took stern measures. Ibn ʿUbayya and others involved were summoned to the capital, flogged and imprisoned; Ibn ʿUbayya lost his post and ended his days in Damascus, consoling himself with writing poems; the synagogue was restored. These happenings were typical for their time and place. Ibn ʿUbayya was certainly right in asserting that the synagogue was "new", that is, a building erected after the advent of Islam and used as a non-Muslim house of worship, which was against the provisions of Islamic law. But the government, naturally, had to pay attention to the exigencies of life and the preservation of public order.

The impressive number of Muslim schools founded in Jerusalem in the course of this period (ʿArif al-ʿArif, *Mufaṣṣal*, 236-57, describes fifty-six) should not be taken as an indication of economic prosperity. The endowments were mostly limited in size and dwindled rapidly. The governors and other officials who had often to buy their offices for considerable sums and frequently also served for only short terms, had to indemnify themselves by heavy impositions, first on the non-Muslims, but on Muslims as well. Jerusalem's only important industry (still flourishing in the 19th century), sc. the manufacture of soap made from the oil produced in the then rich olive groves of its environment, was heavily damaged by the pernicious economic policy of the Mamlūk government, which monopolised production and forced the population to buy quantities not needed by it for exorbitant prices. The constant insecurity inside and, in particular, outside the city added to the hardships of life. Early in the 16th century no one could make the *ḥajj* from Jerusalem for ten years because bedouin anarchy prevented travel between Jerusalem and the Red Sea (L. A. Mayer, *A sequel to Muḥīr al-Dīn's chronicle*, in *JPOS*, xi [1931], 93-6, Ar. text 11-12). At that time, as travellers' reports show, there were still many unbuilt areas within the boundaries of the city. But the core of the Old City outside the Haram, as it appears today, was the creation of the Mamlūk period.

15. *The first Ottoman period (1517-1516-1831)*. The exact date of the entry of the Turks into Jerusalem during the victorious campaign of Selīm I against the Mamlūks in 1516-17 is not known. His successor Sultan Sulaymān Kānūnī left most enduring imprints on the city: the wall, constructed between 944/1537 and 948/1541, as indicated in its eleven decorative inscriptions, the renovated Dome of the Rock and the four beautiful public fountains, *sabḥ*, inside the city and the one near the Sultan's Pool, also created by him, at the foot of Mount Zion. The many *ḥaḍrs* made by him and his wife Ḳhurram (ḡ.c.) further contributed to the welfare of the city during his reign. The soup kitchen, *ḥiṣṣa*, donated by her for the feeding of the poor and of students, naturally does not operate any more, but its cau-

drons, lists of recipients, and other impressive remnants can still be seen in the Haram Museum.

The Ottoman archives for the first time provide us with exact demographic, topographic and, to a certain extent, also economic data about Jerusalem. Bernard Lewis analyses the relevant material in *Studies in the Ottoman Archives*, in *BSOAS* xlv/3 (1954), 476, and *Yerushalayim*, ii/5, Jerusalem 1955, 117-27 (see *ibid.*, 117, n. 1, further publications of his on the subject, and also his *Notes and documents from the Turkish archives*, Jerusalem 1952). The population movement during Sulaymān's reign is illustrated on p. 122 by lists of taxpayers: (H = Heads of households; B = Bachelors, E = Exempt from the duty of paying taxes, such as religious dignitaries and insane persons):

	932/1523-6	940-45/1533-9	961/1553-4
	H B E	H B E	H B E
Muslims	616 2 1	1268 75 34	1987 141 16
Christians	119 - -	136 26 42	473 25 3
Jews	199 - -	224 19 -	324 13 1
Totals	934 2 1	1528 120 76	2724 179 20

Thus at the beginning of the Ottoman period Jerusalem had a population of about 4,000 inhabitants, which tripled during Sulaymān's reign. (Lewis points out that the later lists might have been more complete than the first one). The slower increase of the Jewish population, which until the end of the thirties was more numerous than the Christians, was due to the fact that Safad and not Jerusalem, was the main Jewish centre around the mid-century. By far the most important revenue collected in Jerusalem was the toll levied from the visitors of the Holy Sepulchre, which also tripled during this period (from 40,000 *akdes* in 1525 to 120,000 in 1553). It was given by the Sultan to the readers of the Kūr'ān in the Akṣā mosque. The second largest item was the poll tax paid by Christians and Jews (one gold piece per person, the total being about one half of the income derived from the Holy Sepulchre). All taxes derived from economic activities, such as licenses (*ghisāb*), sales taxes and tolls on export of soap to Egypt, brought far smaller amounts.

Sulaymān's wall, though a lasting monument to his munificence, also revealed that the Ottoman government was not able, nor willing, to guarantee the safety of Jerusalem by administrative and military means. During almost the entire Turkish period, well into the second half of the 19th century, Jerusalem's development was impeded by this lack of security. The safety of the travellers between Ramla and Jerusalem, that is, the bulk of visitors from abroad, was entrusted already under Sulaymān to the Abu Ghosh, a rural clan after which the picturesque village Karyat al-'Anab west of Jerusalem was renamed. Complaints that bedouins murdered Muslim inhabitants, burnt copies of the Kūr'ān and taxed Muslim pilgrims on their way to Jerusalem are officially noted already in 991/1583 (U. Heyd, *Ottoman documents on Palestine 1552-1615*, Oxford 1960, no. 43). An Imperial order of 1023/1614 exempts the fiefholders in the *sandṣaq* of Jerusalem from participation in military expeditions outside the *sandṣaq*, because this was "the border of 'Arabistān, where rebellious bedouins disturb the peace" (Heyd, *ibid.*, no. 28). By the end of the 18th century Giovanni Mariti, *Voyage*, Neuwied 1791, ii, 301-3, reports that the Pasha of Jerusalem accompanied the Christian pilgrims under heavy guard to the

Jordan, but only after having paid the usual tribute to the bedouins. Shortly afterwards another traveller, W. C. Brown, *Travels in Africa, etc.*, London 1806, writes with regard to 1797 that the whole environment of Jerusalem was dominated by the bedouins (see Amnon Cohen, *Palestine in the 18th century*, Jerusalem 1973).

The root of this misery was the fact that Jerusalem was not so much administered by Istanbul as given as a source of income, albeit a very modest one, to the wāli of Damascus, or sometimes to that of Sidon, or, early in the period, to that of Egypt. The wāli was represented in the town by a *mutasallim*, but once a year he himself would appear, accompanied by a detachment of troops and collect taxes (described by 'Arif al-'Arif, *Muḥṣaṣṣat*, 309-10, for as late a date as 1208). By the 18th century the revenue from economic activities had dwindled to next to nothing (one list notes as income from the *ghisāb* only 500 *ḥurūḡ*, one-twelfth of that of Sidon, Cohen, *ibid.*) and consisted mainly in taxes and tolls on Christians and Jews. A *ferman* by Selīm III (1205/1791) reducing the toll usually imposed on a Jewish pilgrim entering Jerusalem from between 3 and 4 to the legal 1½ *ḥurūḡ* and freeing him from any payment while leaving the city, shows that arbitrary extortions were common in those matters (M. Ma'oz, *Palestine during the Ottoman period, documents from archives and collections in Israel*, Jerusalem 1970, 38).

An important source for the socio-economic history of Jerusalem under the Ottomans is contained in the *siyāsāt* of the *maḥkama shar'iyya* of the city. 'Arif al-'Arif, *Muḥṣaṣṣat*, 241 ff., provides a number of specimens: a detailed list of prices by the *hāḍi* "in the presence of the two *muftasib*" in 970/1563, the inventory of the estate of a Christian veterinary surgeon from the same year, and prices of building lots, houses, rents, salaries and *maḥrs* through three centuries. Other matters, like three letters concerning the revolt of the *maḥal* al-*asghar* in 1171/1705 and the demolition of his mansion, or notes about Jewish communal affairs, are also included. Only a systematic study of the entire material will provide historically valid results.

The governor of Jerusalem was a military man (a tentative list of Ottoman governors 1517-1917 in 'Arif al-'Arif, *Muḥṣaṣṣat*, 317-18). The governor, the holders of *fiets* in the *sandṣaq* and the garrison in the town were not normally recruited locally. The *hāḍi* was sent from Istanbul and invariably belonged to the Hanafī rite. This preponderance of a foreign ruling class with no roots in the city and often connected with it only for short periods naturally precluded healthy developments. But it had also its advantages. Since few Turks settled permanently in Jerusalem, its Arab character was preserved and germs of local autonomy developed. Popular risings, sometimes deteriorating into riots, occasionally chased a particularly oppressive (or weak) governor from the city. A more constant factor was the rise of families becoming powerful by the holding of well-paid religious offices, tax-farming, the administration of waqf and by acting as protectors of villages (in which capacity they also mostly succeeded in acquiring large holdings of land). The well-known families of the *Khayr*, *Khāḍir* (see sec. 12, above) 'Alamī, Anṣārī, Dādīkī, Husaynī, Naḥshabī, Nusayba and others, were formed or gained prominence in this period. The very considerable percentage of fair, blue-eyed, round-headed persons found in these families indicates that the local upper class, during the long centuries of Otto-

man domination, became thoroughly mixed with the many non-Arab elements passing through the city.

An interesting picture of folk life in Jerusalem is preserved in a pamphlet by Abu 'l-Faiz al-Daqlānī (d. 1660), entitled *Diwān al-balād fi fā'i al-marād*. It shows the *haram al-sharif* as the scene of popular feasts and other mundane activities (see M. Perlmann, *A seventeenth century coloration concerning al-Aqṣā, in Israel Oriental Studies*, III [1971], 267-92, reproducing the Arabic original of the *Diwān*).

The 19th century opened for Jerusalem ominously. In 1808 a fire destroyed most of the western part of the Holy Sepulchre. Sultan Mahmūd II granted the Greeks the right to restore the building, but the Janissaries in the town, who were angry that the citadel was garrisoned by other troops, incited the Muslim population to obstruct the repairs. A general revolt ensued. Finally, the *milī* of Damascus, alerted by the beleaguered *mutasallim* of Jerusalem, sent a detachment of Maghribi horsemen on a clandestine route, which succeeded in penetrating into the city and to overpower the insurgents. Thirty-eight of the leaders were hanged (*ʿArif al-ʿArif, Mafḥūḥ*, 356-8, quoting Nihāḥ'il Burayk al-Dimashqī). At the time of the Greek revolt of 1821, the Christians of Jerusalem were charged of conniving with them and were in great danger. But thanks to the quick action of the *milī* of Damascus and the firm attitude of the *hāḍi* of Jerusalem, no harm was done to the Christians. Another *milī* of Damascus was the cause of a revolt of large dimensions and long duration. Towns-men and *fellāḥin* alike refused to pay the heavy taxes imposed by him. He came to Jerusalem with a large army in 1823 and raised a fine of 500,000 *ḡurrah* from the rebellious city. But hardly had he turned his back, when the population rose again; the *mutasallim*, who had been on a punitive expedition to Bethlehem, was unable to re-enter Jerusalem; the few soldiers who had remained in the citadel were easily overpowered, and the city and the countryside alike were in full revolt. Even when the Sultan sent a special detachment which laid siege on the city, the inhabitants would not budge. Only when the balls from the cannons deployed on the Mount of Olives fell into the city and set some houses of notables on fire was the resistance broken (Neophytos of Cyprus, *Annals of Palestine, 1821-1841*, ed. S. N. Spyridon, Jerusalem 1938, 3-4). This time the revolt was terminated without bloodshed. But it showed that the spirit of resistance to tyranny, fully ablaze in Hellas, was not entirely absent from the Holy City.

III Modern times

14. 1831-1917. A time of radical changes. Before one half of this short period was over, Jerusalem had become preponderantly Christian and Jewish, while the Muslim population, too, had made visible progress. The unprecedented expansion of the Christians was caused by the increasing dependence of Ottoman Turkey on developments in Europe, with its rivaling states and churches, and by the upsurge of political, religious, humanitarian and scientific interest in the Holy Land manifest in many Christian countries. The steep increase in the number of Jews, who formed the majority of the population by the end of the seventies, was a corollary of the general improvement, they formed a modest community of devout and mostly poor people.

This development was put into motion by the conquest of Palestine by Ibrāhīm Pasha, the stepson of Muḥammad 'Alī, in 1831. His actions, of particular

significance for Jerusalem, were inspired by his endeavour to create a strong government and to win the friendship of the European powers. He started to disarm the civil population, to break the despotism of urban families and rural factions, to raise a standing army by enforced recruitment and also to enlist the co-operation of the local people by appointments to administrative posts and the formation of consultative bodies. The Christians (and Jews) of Jerusalem were freed from the many special contributions they had to pay to local notables, permitted to repair and erect religious buildings and to work in the government. All this hurt many vested interests and aroused the ire of the Muslim population in general. The *fellāḥin*, supported by the leading urban families, rose in arms and drove the Egyptian garrison from the town (1834-5). But Ibrāhīm Pasha quelled the revolt and vigorously pursued his aims. The establishment of the British consulate in Jerusalem in 1838 was a sign of the time.

When European intervention forced Ibrāhīm Pasha to give up his conquests, the Sultan, who had just promised equality to all his subjects (1839), could not turn the clock back. The trend of western penetration was strengthened by the Crimean war, in which Turkey was saved by England and France from Russian aggression. France, Austria, Prussia, Russia, Sardinia, Spain and the United States opened consulates in Jerusalem. The flags of Christian powers were now raised in the Holy City on Sundays and Holidays, the birthdays of their sovereigns were honoured by 21-cannon salvos (an honour, formerly reserved in Jerusalem for Muslim holidays and the birthday of the Prophet), and bells began to chime from the churches. At first, the Muslims in Jerusalem tried to stop these innovations by force. But such attempts were quickly suppressed and soon the immense material and spiritual advantages derived by the local population from the foreign activities became evident. Naturally, the local Christians were the first to benefit; it was in this period that certain Christian families of Jerusalem became rich and influential.

The Latin patriarchate of Jerusalem, which had been abolished in 1292 as a result of the Crusades (being represented by merely titular patriarchs who lived in Rome), was revived in 1847 and became a powerful factor in the city. The Greek Patriarch moved from Istanbul to Jerusalem. An Anglican bishopric was established in 1842 (functioning for some decades in co-operation with Prussia). In the same year the Jewish community of Jerusalem received by imperial *firman* an *Arkān* *hāḡi*, or chief rabbi, who was sent from Istanbul and had access to the central government. The gift by 'Abd al-Megid of the *Salāḡayya madrasa* (see § 20, above), the ancient convent of St. Anne, to the French emperor Napoleon III in 1856 (resulting in its restitution to its original use) and the presentation of a part of the Mürstān area (see § 20, above) to Prussia, which used it for the erection of a Protestant church, palpably illustrate the new situation.

Slowly the central government was able to assert its authority over the unruly city and the anarchic countryside. At mid-century, the bedouins still plundered travellers under the very walls of Jerusalem and inside the town. Christians and Jews were still exposed to arbitrary extortions by notables and officials. But administrative and military reforms, the interventions by the consulates and improved means of communications brought relief. By 1865 Jerusalem was connected with the outer

world by telegraph, and in 1868 the first road between Jerusalem and Jaffa usable by wheeled vehicles was completed. The railway followed only in 1892, and the French company building it had to insure its safety and that of its station-buildings (even that of Jerusalem) by arrangements with the heads of the villages adjacent to it. Postal services were provided by Austrian, French and other foreign agencies. There were many changes in the administration of the Jerusalem district (details in 'Abd al-'Aziz 'Iwād, *Muṣawwarifayyāt al-Kuds amīkhat al-sakā al-Uṭmāni*, in *Palestine Affairs*, iv [Beirut 1972], 226-41). In a letter to the German consul, dated 2 January 1872, the Pasha of Jerusalem calls himself "gouverneur de la Palestine" (M. Ma'oz, *Palestine during the Ottoman period*, 93), but the Jerusalem administrative unit never comprised more than the southern part of the country. As from 1874 (as several times before) Jerusalem was an independent *mudawarriflik* directly responsible to Istanbul and was headed by a rather ramified administration, having besides departments for general administration, finance, *kāḥi* (land register), *ṣakf*, security, agriculture, commerce and education, one for foreign affairs, a speciality necessitated by the many consulates and foreign nationals in the town. In the consultative bodies, both of the district and the city, Christians and Jews were represented, albeit less than warranted by their numbers.

The area of Jerusalem, its physical appearance and the size and composition of its population totally changed during this period. Cathedrals and churches, some new mosques, synagogues and yeshivas (rabbinical colleges), palaces of patriarchs, convents, hospices, schools (first schools for girls, Jewish 1864; Arab, a German foundation, 1868), scientific institutions, hospitals, clinics, orphanages and other charitable foundations were erected in and outside the Old City, see section B. As from 1860, the inhabitants of the Old City began to establish new quarters outside, with the Jews, who were particularly closely crammed, taking the lead. For a further twenty years, the gates remained closed during the nights, which was not conducive to the security of the suburbs. The Muslims preferred to settle in the south (Abū Tūr) and in particular north of the city, in Wādī Dīḡa and the hills west of it; the Greek Orthodox centred mostly in the vicinity of St. Simon, the summer residence of their patriarch (the Katamon quarter), and the Jews founded about sixty suburbs mostly in the west. The "German colony" of the Templars in the south-west, and the "American colony" in the north, largely inhabited by Swedes, were renowned as particularly roomy. Selma Lagerlöf's famous novel *Jerusalem* (1901-2) depicts, besides the religious and personal pights of Swedish pilgrims, also local representatives of Islamic mysticism, inspired probably by the *ṣūfī* of the *Shaykh Dīḡarī* mosque near the American colony, who was a leading *ṣūfī*.

The events of the Young Turkish revolution of 1908, the disappointment following it and of World War I, with its terrible sufferings by an oppressive military dictatorship, famine and epidemics and the subsequent shrinking of the population—all these belong to the general history of the country. An often-reproduced photograph shows the British general Allenby entering the Holy City on 12 December 1917 on foot, displaying Christian humility.

15. *After 1917.* The military government of the British occupation army was replaced by civil administration on 1 July 1920. Jerusalem, as the

seat of the Mandatory government, of the executives of the Jewish world organisations for Palestine, of the national council of the Jews of Palestine, of the Muslim Supreme Council (created in 1921), the various Christian church authorities and other local and foreign bodies, recovered, albeit slowly, from the effects of World War I. According to the census of 1931, the population comprised 90,503 souls, of whom 51,222 were Jews, 19,894 Muslims, 19,335 Christians and 52 others. It increased to about 150,000 at the beginning of World War II.

During the Mandatory period, important public buildings were erected, such as Government House (later the headquarters of the U.N. Truce Supervision Organisation), the Hebrew University campus and the Hadassah Hospital compound on Mount Scopus, the Pontifical Biblical Institute and the Rockefeller Archaeological Museum, the YMCA and several new churches, and a great number of schools. New suburbs were founded, some of which quickly developed into populous centres.

The composition of the municipal corporation council experienced many changes, but always a Muslim mayor was appointed, although the vast majority of the population, and especially of the taxpayers, was Jewish. When, after the death of a Muslim mayor in 1944, the Jewish acting mayor demanded to be appointed officially, the council was dissolved and replaced by a commission composed exclusively of British officials.

The Pro-Jerusalem Society, whose committee comprised leading religious dignitaries, prominent scholars and other outstanding Jerusalem personalities, was indicative of the hopes for co-operation prevailing in the years immediately following the arrival of the British; its subsequent dissolution manifested the change of hearts and conditions. An interconfessional meeting place of longer duration was the Palestine Oriental Society, which had its seat in Jerusalem and in which local, British, American, French and other scholars joined efforts. The newly founded Hebrew University (opened 1925), the British, French, American and Pontifical institutes for archaeological and biblical studies and the ever-increasing number of writers (e.g. S. Y. Agnon, Nobel Prize winner) and artists of all descriptions created a lively intellectual atmosphere. The Government Arab College, led by the jovial savant Aḥmad Shāḥī al-Khāḥḥ, laid the foundations for the rise of a new generation of Arab intellectuals in the country. Younger writers connected with the Government Department of Education, such as Ishāq Mūsā al-Husaynī and A. L. Ṭībawī, published the first fruits of their pens. Jerusalem authors, such as Is'āf al-Naghāshīḥ, Khālī al-Sakakīnī and Khālī Baydas, enjoyed good standing in the world of Arabic letters. Alongside with all these developments much of the traditional life of the various communities and their subsections continued almost unchanged.

The clash of the national aspirations of Arabs and Jews affected the destinies of Jerusalem more than that of any other city in Palestine. The first bloody events occurred in Jerusalem in April 1920 with several Jews and Arabs killed and many wounded. Al-Hādīdī Aḥnī al-Husaynī, who had been condemned to death by a military court as main instigator of the disturbances and exempted from the amnesty granted by the new High Commissioner Sir Herbert Samuel when he took office, was appointed by him soon afterwards as *mufti* of Jerusalem and then elected head of the Supreme Muslim Council

created by the government (1921). For the next seventeen years al-Hajjī Amin strove for unrestricted leadership of the Palestine Arabs, which brought him into conflict with other leaders, especially the mayor of Jerusalem, Rāghib al-Nashībī and the *amir* (since 1946 king) 'Abd Allāh of Transjordan. The Western Wall - Burjī (q.v.) affair, which led to the shocking events of August 1929 (when, however, Jerusalem suffered less than Safad and Hebron) greatly enhanced al-Hajjī Amin's prestige, and so did his collections in India and elsewhere for repairs on the Haram and the organisation of the Muslim Conference convened in Jerusalem in 1931. The burial in the same year of the Indian leader Muḥammad 'Alī in the western portico of the Haram was another significant step in arousing the interest of the Muslim world.

The mass immigration of Jewish refugees in 1933 and after led to a general uprising of the Arab population and ferocious fighting, internecine warfare between the followers of al-Hajjī Amin and his adversaries acerbated the situation. Among the many victims were the British archaeologist J. L. Starkey, famous as discoverer of the Lachish ostraca, and two fine Arabists, Levi Billig of the Hebrew University and Avinoam Yellin of the Government Department of Education, known to many students of Arabic as authors of a useful classical Arabic reader.

The Peel Royal Commission, sent out in 1935 to investigate the situation, for the first time recommended the creation of an Arab and a Jewish state and the conversion of Jerusalem, together with Bethlehem, into a separate unit remaining under British mandate. But neither this nor any other of the subsequent attempts of the mandatory government to find a solution led to results. On 29 November 1947, the General Assembly of the United Nations adopted Resolution 181 (II) calling for the division of Palestine into two states, but united by economic union. Jerusalem was to be 'internationalised'.

Immediately after this decision the country was in flames. Jerusalem in particular suffered great losses in lives and property even before 15 May 1948, the official end of the British mandate. An Egyptian detachment took position in the Bethlehem area, while the Transjordanian Arab Legion attacked the Jewish quarter in the Old City. It was left by its Jewish population on 27 May and subsequently demolished, including its old Sefaradi synagogues and the two large Ashkenazi synagogues, the Hurva (dedicated 1865) and Nisan Bak (1892), whose cupolas had been landmarks of Jerusalem.

The ceasefire divided Jerusalem by a line slightly west of the western wall of the Old City. This left a number of predominantly non-Jewish quarters within the Israeli sector, while Mount Scopus with its University and Hadassah Hospital compounds formed an Israeli enclave, which soon became useless, since the free access to it, envisaged in the armistice agreement with Transjordan of 3 April 1949, was never granted. East Jerusalem was cut off from its electricity and water supply and from its direct routes to the West and the South. Both parties had to work hard before a semblance of normality was restored.

On 13 December 1948 the Transjordanian parliament resolved the annexation of the areas of Palestine occupied by the Arab Legion. Israel followed suit by transferring its parliament from Tel Aviv to Jerusalem in February 1949 and proclaiming Jerusalem its capital on 13 December 1949. Both actions

were in contradiction of the U.N. resolution of November 1947, which had foreseen Jerusalem as a *corpus separatum*. The matter came up repeatedly in the U.N. until 1952, when it was left dormant, until the war of 1967 created an entirely new situation.

The history of the Israeli sector of Jerusalem during the years 1948-1967 lies outside the scope of this article. Suffice it to say that during this period it received most of the administrative and cultural edifices a modern society needs. The eastern sector had lost its status as part of a capital, but still was the main city of the West Bank and developed also as a centre of tourism. It expanded greatly towards the north, engulfing Shāfīl and other villages. Important public buildings, founded by both local and foreign authorities, were erected and stately new hotels were built to cope with the developing tourist trade. 'Arif al-'Arif, a former senior official of the Mandatory regime and meritorious author of books on Jerusalem and on the Beersheba district and its tribes, became mayor of Jerusalem. The last Jordanian mayor was Rūḥī al-Khatīb (Rouhi el Khatib) of a Hebron family, thus personifying the considerable influx of Hebronites into Jerusalem during its Jordanian period. The ups and downs of inner-Arab politics with regard to the legal status of Jerusalem and Jordan's rights on it belong to history. Jordan's rule left a permanent imprint by the restoration work carried out in the *haram al-sharif*, in particular, the golden dome and the ceramic inscriptions on the Dome of the Rock. The murder of King 'Abd Allāh while proceeding from the Aḡsa mosque on 21 July 1951 did not have the far-reaching consequences expected by his assassins. Fires broke out during this period both in the Holy Sepulchre and the Aḡsa mosque, but did not give rise to any demonstrations or diplomatic moves. The visit of Pope Paul VI in January 1964 to both sectors of Jerusalem showed his deep concern for the Holy City.

The war of 1967, which lasted in Jerusalem only three days (Monday-Wednesday 5-7 June) caused less of precious lives, but comparatively little damage. The Jordanians had occupied the U.N. headquarters and tried to encircle the new city from the south, but this attempt failed. The main fighting was in the north. After having taken the positions on the north-eastern hills, the Israeli forces entered the Old City from the St. Stephen's (Lions) Gate, *Bāb al-Ashdī*, finding but little resistance. The barriers between the two sectors of the city were removed, the eastern sector was immediately connected with the Israeli water system and received other municipal services and on 28 June 1967 the inhabitants of the two sectors were permitted to move freely throughout the town.

Naturally, this sudden turn of events at first had a stunning effect on the population of East Jerusalem. There were also great socio-economic difficulties. The middle class, especially the circles connected with the Jordanian administration and courts, was particularly affected. But the enormous expansion of the city in the subsequent years, which provided work and income for almost everyone, greatly alleviated the economic situation and brought about many contacts between the two parts of Jerusalem. But this did by no means solve the political problem. Strikes and acts of terror were not uncommon, but under the leadership of Teddy Kollek, mayor of the united city, the policy devised and implemented was one of non-intervention in the daily life and communal institutions of the Muslim population. The

most conspicuous expression of this policy was to be found in the exclusive control which the Muslim religious institutions retained on the mosques of the Temple Mount and in the continued independent activities of the Muslim Waqf and religious courts.

The declarations and actions of the Israeli authorities aiming at the "reunification" of Jerusalem were immediately followed by resolutions of the General Assembly and the Security Council of the U.N. calling for a return to the *status quo* prior to the war, as well as by protests on the aide of Muslim bodies all over the world. The creation of a huge square in front of the Western Wall and of secure approaches to the inner city involved the demolition of a considerable number of Arab dwellings. Although such measures had been envisaged already in Ottoman times and although the inhabitants were indemnified, these were, of course, grave actions. Relevant complaints were submitted by Jordan to U.N., as from June 1967 but were described by Israel as grossly exaggerated. The fire damage caused to the Aqsa mosque on 21 August 1969 by a deranged Christian tourist from Australia made great stirrings in the Muslim world and it took some time until the truth penetrated.

About a year after the fire, the Muslim Council began repairing the damage caused by the fire. The repairs took several years and are practically completed. During the process of the work many parts of the mosque were built anew, including areas which were not damaged during the fire. With the funds of the Muslim Waqf several ancient drinking fountains and the market of the cotton merchants were restored, existing mosques were repaired, and two new mosques were built.

Besides the monuments described in part B. and the vibrant folklife in the Old City, Jerusalem offers much of interest to the Islamist. The Palestine ("Rockefeller") Museum contains unique exhibits from Khirbat al-Majjar [q.v.] and other treasures of Islamic art and archaeology. The Khaldiyya library in the Old City possesses valuable manuscripts, including some not listed in the *Banmadaghi al-maktaba al-Khaldiyya*, Jerusalem 1328, and so does the library of the Hebrew University. The Oriental reading room of the University library is an exceptionally good working library for Islamic studies. The Institute of Asian and African Studies of the Hebrew University harbours, among other collections, a Concordance of Pre-Islamic and Early Islamic Poetry, comprising at present over a million-and-half index cards, while the newly created L. A. Mayer Memorial Institute of Islamic Art (officially opened on 9 October 1974) can boast of exquisite examples of Islamic art and workmanship.

B. MONUMENTS

The Islamic monuments of Jerusalem reflect at the same time the unique character of the Holy City itself with its complex memories translated into major works of architecture or into mystical and liturgical associations and the peculiarities of the Muslim rule of the city as it has been outlined in the historical section A of this article. With the Dome of the Rock, Jerusalem possesses the first consciously-created masterpiece of Islamic art, while the city remains unique among almost all Muslim cities in the manner in which its Muslim monuments are almost entirely concentrated in one part of the city,

on or near the Haram al-Sharif [q.v.]. The first feature reflects the singular position of Jerusalem in early Umayyad times, while the second one is a direct result of the city's unique character. Any understanding of Jerusalem's monumental history requires, therefore, both an awareness of the city's archaeology, i.e. of its own peculiar relationship between a complicated topography and remains from former civilisations, and a knowledge of the types of official, religious, emotional, and financial investments which Muslim culture put into it at various times. As has been shown in the historical part, the latter changed considerably over the centuries and the changes affected the growth and the meaning of monuments in a way which is totally unique in Islamic history. While the presentation which follows is primarily historical, it should be borne in mind that eventually a similar survey could and should be made quarter by quarter, or else from the point of view of the type of political or poetic associations which have surrounded the Muslim monuments of Jerusalem.

There is no complete study of Jerusalem's Islamic monuments as a whole. The most thorough investigation is that of Max van Berchem, which utilises simultaneously inscriptions, architectural remains, and written sources, especially the invaluable guide-book of Muḥḥid al-Dīn. Since his time a number of monographs have modified our understanding of the two main buildings on the Haram (we will use the term for convenience's sake, even though it did not become common until the Ottomans, see *al-Haram al-Sharif*), the Dome of the Rock and the Aḥmad mosque, while recent and still unfinished excavations to the south and southwest of the Haram have introduced a large number of new elements in any understanding of the city in early Islamic times. A survey of Jerusalem's Ayyūbid and Mamlūk remains has only recently been initiated and very little has been published so far. The bibliography which follows this essay gives an idea of the considerable amount of information we possess about Jerusalem, but this very abundance identifies the main problem faced by the investigator of the city's monuments, which is to determine what in them is typical of Islamic culture as a whole and what is unique to a unique city. We shall return to this question at the end of our survey. In the meantime, it has seemed preferable to describe the city's growth chronologically and to identify in it four major periods of development: (1) early Islamic up to the middle of the 4th/10th century; (2) from the middle of the 4th/10th century to the Crusades (492/1099); (3) Ayyūbid and Mamlūk periods, from the time of the reconquest at the end of the 6th/12th century to ca. 1500; (4) Ottoman period. No mention is made of the city's development after its awakening to the modern world in the 19th century, for by then we are no longer dealing with an Islamic city in the traditional sense but with a modern town searching for ways to accommodate its own unique spiritual and emotional values with the pressures of contemporary life. Much thought has been given to these problems in Jerusalem since the first reports sponsored by British mandatory authorities and by various ecclesiastical groups. Their investigation and discussion belongs, however, to modern urbanism rather than to the understanding of a Muslim city.

1. Early Islamic, until the middle of the 4th/10th century.

All later developments in the monumental history of Jerusalem were affected by the manner of the

city's conquest and by the circumstances surrounding its first Muslim settlements. However uncertainly known the actual events of the conquest may have been, one key archaeological point is clear: the huge Herodian setting for the Jewish Temple on the eastern side of the city was standing in ruins; many courses of its magnificent masonry, most of its gates, possible fragments of its towers could still be recognised, and its surface as well as the surrounding areas were littered with easily accessible stones from its constructions. For scriptural reasons, the Christians had left the Herodian space unused except for a small and comparatively late memorial church to St. James in the south-western corner. South of the Temple area there were Christian hostels and monasteries, but apparently no major living areas, for the Christian city was concentrated in the western side of the town, around the hills of Zion and Golgotha, with the Holy Sepulchre and its attendant constructions as focal points. Whether or not there was a Byzantine wall enclosing the whole of Zion hill and the spur of Mount Moriah which overlooks Siloam from the north (the so-called wall of Eudocia) is still a moot question, but seems likely.

Almost as soon as the formal take-over had been completed, the Muslims appropriated for themselves the Herodian Temple area for their own administrative and religious purposes. The reasons for this act were many. It was a large empty space in a city in which by treaty the conquerors were not allowed to expropriate Christian buildings; the early Muslims were under the influence of Jewish converts with presumed knowledge of the area's holy significance; the Muslims may have wanted to show their opposition to the Christian belief that the area must stay empty; and, finally, the Muslims themselves may have had a spiritual attachment to Jerusalem before conquering it, though the possibility is difficult to demonstrate. But regardless of the reasons, the key point is that a huge space became available to the new culture in a striking location overlooking most of the city. It can furthermore be deduced from a variety of later developments that the earliest settlements by Muslims took place in the sparsely populated area south and south west of the Temple.

There began then a monumental and ideological Islamisation of an ancient site, for which we possess a rather remarkable series of documents, even though all of its concrete modalities are still far from being clear. What occurred in effect is that the Muslims provided new and highly individual meanings to an existing space with different meanings. The following chronological scheme can be provided for this unused development, although, as will be seen, much in it is still hypothetical.

First a small "rudely built . . . quadrangular place of prayer" (as described by the western pilgrim Arculfus ca. 680) was erected. It was mostly in wood and set somewhere in the midst of the Herodian ruins. Nothing is known of its internal arrangements, but it was probably a typically early Islamic hypostyle mosque. Its exact location is also unknown, although it is likely but by no means certain that it was not far from the place of the present Aḥṣā mosque. This building probably remained until the first decade of the 8th century, but, as will be seen below, there is a possibility that already under 'Abd al-Malik a new building was begun. There is no textual or archaeological information as to whether any of the newly found buildings south and south-west of the Haram belong to this very first period, but the possibility cannot be excluded.

The second step in the development of the Herodian site coincided with the rule of 'Abd al-Malik. Its most remarkable monument is the Dome of the Rock completed in 71/691. Often described and often studied, it consists of two octagonal ambulatories around a dome-covered cylinder, 30.30 m. high and 20.30 m. in diameter. The dome is set over a huge rocky outcrop with an underground chamber. The building is provided with four axial gates preceded by often redone porches. The building is a remarkably thought out composition whose every detail in plan and in elevation has been most accurately measured so as to create the most impressive effect. Its conception, and almost every architectural detail in its interior arrangement (piers, columns, capitals, arches, etc.), belong to the architectural repertory of Byzantine art and more specifically to the *marlyrium* tradition of Jerusalem buildings like the Holy Sepulchre or the church of the Ascension. It is from the same tradition that derives its internal decoration of marble panelling and especially of mosaics covering almost all wall surfaces above the capitals and cornices of piers and columns. There is both literary and archaeological evidence that the early building was also covered with mosaics on the outside. The subject matter of these mosaics is also derived from earlier artistic traditions, mostly Mediterranean, but also with a few themes of Iranian origin. These mosaics are often considered as typical examples of a pre-Islamic way of decorating the interior of major buildings. This is true to the extent that a rich variety of vegetal and occasionally geometric motifs, superbly adapted to the shapes provided by the architecture, have any number of models in earlier buildings, even though rarely preserved in such spectacular fashion. But there is quite a bit of originality in these mosaics as well. Its subject matter two points are of importance. One is the presence of an imperial jewelry of Byzantine and Iranian origin on all wall faces directed toward the centre of the building. The other one is the absence of any representation of living beings several decades before we become aware of a partial Muslim prohibition of images. A long inscription, however, comprising primarily Qur'anic quotations, has been shown to fulfill an iconographic purpose by its choice of passages, as will be discussed below. Stylistically, the mosaics are perhaps less unique, although their effect as a sort of sheath over the architecture rather than as a series of independent panels emphasising each part of the building may be understood as prefiguring the later use in Islamic art of decoration overwhelming the architectonic values of a monument.

The Dome of the Rock, as it appears today, is not entirely in its original shape. Beyond numerous repairs and restorations carried out over the centuries on basically original elements (particularly under the Fatimids and after the Crusades), there are two areas where later changes have completely obliterated earlier features. Inside, all the ceilings, including the dome, appear in Mamluk or Ottoman garb and the whole exterior has been redone with superb coloured tiles in the 10th/16th and 11th/17th centuries. In the 1930s and 1960s the building was virtually taken apart by a team of Egyptian architects and engineers supported with contributions from the whole Muslim world and then put back together and restored in a particularly successful manner. Every part of the building was put back in the manner which reflects the earliest information we possess about it.

The most frequently-raised question about the

Dome of the Rock is that of its original purpose. Three explanations are available. One is that it is a building commemorating the Prophet's Night Journey and Ascension (*isrâ' and mi'raj*); the second one is that it sought to replace the Meccan Ka'ba for Muslim pilgrimage; the third one is that it was a monument celebrating the new faith's presence in the city of Judaism and Christianity and its belonging to the same monotheistic tradition. Too many arguments (see above, section A and articles by Goltzen and Grabar) exist against the second explanation to maintain its possibility. The first one has the advantage of corresponding to the eventual association which was and still is made by Muslim piety, but there is much doubt about the likelihood of its existence at the time of 'Abd al-Malik. The third explanation agrees with the political and psychological circumstances of the times and with the internal evidence of the decoration (with its royal symbols strung like trophies around the centre of the building) and especially of the inscriptions (which contain the whole Christology of the Qur'ân). For the history of art, the Dome of the Rock would then appear as an extraordinary monument which succeeded in providing new meanings to traditional forms.

But the construction of the Dome of the Rock raises a number of additional problems which pertain to the archaeological history of the city of Jerusalem. It is on an artificial platform situated eccentrically to any other part of the former Temple area. The platform was reached through a series of stairs, some of which must have been there at the time of 'Abd al-Malik. Since we know otherwise that at the time of the Muslim conquest the Temple area was in ruins, we must conclude that by 71/692 a considerable amount of work had already been accomplished on the walls and pavements of the area as well as on its gates. The nature and extent of this work cannot be determined but, if it is true, as H. Stern believes (*contra* Creswell and Hamilton) that the earliest Aqsa mosque may have been begun at the time of 'Abd al-Malik, then we must also assume that much of the south walls of the Haram and the Double and Triple gates had been rebuilt, for, as Corbett and Monneret de Villard have suggested, their plans and location may be Herodian but their construction and completion are early Islamic.

Be this as it may, the third step in the transformation of the Temple area by the Muslims can be dated to the time of al-Walid (86-96/705-13). It is to him that we owe the first clearly documented Aqsa mosque (see, however, the controversies between Stern, Hamilton and Creswell). It was a building consisting of an uncertain number of naves perpendicular to the *qibla* wall with a central nave provided with a dome (following here Stern *contra* Creswell). The plan was as unusual one for its time, and should probably be explained by the fact that the substructures of the Haram platform which had to be restored by this time consisted of north-south arcades serving as supports for the building above. The Aqsa mosque was decorated with mosaics and with marble and was also provided with remarkable carved and painted woodwork, now kept in the Palestine Archaeological Museum and in the Aqsa Museum. One last point should be made about the Aqsa mosque. Although its internal organisation was but a modification of the hypostyle tradition prevalent at the time, it was quite consciously located on the same axis as the earlier Dome of the Rock and thus was part of an architecturally thought-out

ensemble comprising a congregational and a commemorative building, just as in the complex of the Holy Sepulchre in the western part of Jerusalem. Although their exact chronology is still difficult to establish with any sort of precision, we may also assume that the group of large buildings with courts and with long rooms recently excavated to the south and to the south-west of the Haram had been completed by the time of al-Walid. Whether they were the palaces and administrative buildings (*dar al-imra*) mentioned in papyri, whether they were commercial establishments or more simply the residence of whatever Arab families and clans moved into the city in early Islamic times, they form a striking monumental ensemble of large constructions along streets and stairs (partly Herodian) leading up to the Double Gate, at the time the main entrance into the Haram al-Sharif, or, as we probably must call it, the *masjid bayt al-makdis*, the mosque of Jerusalem. It is at this time that we begin to have the first indications of specifically Muslim associations with the Haram, whether strictly new ones pertaining to the life of the Prophet or Muslim versions of the lives of earlier prophets. These developments are, however, very difficult to date properly. What can be ascertained is that by the middle Umayyad period a uniquely original architectural composition had been created: two major buildings on a partly refurbished enormous space inherited from earlier times which, unlike the Roman temple in Damascus, was too large to be transformed into a single building for new Muslim functions, but which therefore ended up by acquiring particularly original ones.

The following two centuries are the least documented in the monumental history of Jerusalem. Yet their importance is considerable, not so much by their contribution to the architecture of the city (consisting mostly of repairs and restorations, including major reconstructions of the Aqsa mosque under al-Manṣūr and al-Mahdī) as by the indications they provide of the continuing concern of the Muslim community at large for its sanctuary in Jerusalem. Part of this concern is purely practical; walls are built up or repaired after earthquakes; the area of the Haram is officially measured and apparently surveyed, as appears from inscriptions which are our main source for this aspect of Muslim activities on the Haram. Each gate was provided with a wooden porch ordered by the mother of al-Mu'tadid, who also paid for the repairs of the Dome of the Rock's cupola. A portico was built on the western and northern sides of the Haram, thus providing a formal frame to the sanctuary; some of the minarets may be of that time.

But another concern is far more interesting. It consists in the growth of pious associations. The latter were certainly translated into buildings, although none of the latter are known to have survived and our information is entirely through the testimony of geographers like Ibn al-Faith or al-Mukaddasi or through litterateurs like Ibn 'Abd Rabbih. Three themes appear in these associations which will remain constantly in the religious and architectural history of the Haram: the Night Journey of the Prophet commemorated through a score of *maḥallat* and of *ḥabsat*, ancient prophets commemorated either through gates or through *mihrābs*, and eschatology commemorated by the new interpretations given to the strange *ḡabbs al-Silsila* (Dome of the Chain, probably the Treasury of Umayyad times, see van Berchem) as the place of Judgement, by a *ḡabbs* of

the Trumpet, or by the appearance of a new name to the Golden Gate, the Gate of Mercy. The theme of eschatology should probably be related to the development of the Muslim cemetery to the east of the Haram into something more than just a local cemetery, for even the rulers of Ikhshidid Egypt wanted to be buried there. But it is also true that funerary cults grew at that time in many parts of the Muslim world, although Jerusalem, as the town of the Prophets and of Resurrection, played a unique part in this growth.

ANOTHER, then, if one takes the time of al-Mu'ad-dal (ca. 385/985) as the terminal point of the first period in the monumental history of Jerusalem, one can clearly see that its most remarkable achievement was the transformation of Herod's ruined Temple into a unique Muslim sanctuary, by then already accepted as the third most important sanctuary of the faith. Dominated by the Dome of the Rock, high above the whole city, comprising a large mosque with a cupola, full of new commemorative buildings of varying sizes, partly surrounded by a portico, with almost all of its gates underground leading to the Muslim quarters to the south and possibly also to the west, the Haram must have been a very impressive sight, a fitting tribute to the Umayyad princes who initiated the transformation of an empty space full of memories into a Muslim holy place. But beyond such conclusions as can be drawn from the buildings of Jerusalem in early Islamic times for religious and cultural history, they also lead to a number of important conclusions for the historian of art. For, on the one hand, they illustrate the ways in which pre-Islamic themes have been transformed into Islamic ones and, on the other, they are our best examples of what may be called an imperial Islamic style initiated by the Umayyad dynasty.

Little is known about Islamic constructions outside the Haram area. From an inscription analysed by van Berchem and from a passage in the Christian chronicler Eutychius (*Matériaux*, *Ville*, no. 24), it appears that in the early 4th/10th century a mosque was built within the compound of the Holy Sepulchre in contradiction to the early treaties between Muslims and Christians. Nothing is known of its shape.

2. From ca. 388/990 to the Crusaders.

In many ways, the second period is nothing but a continuation of the first one. Repairs and restorations are recorded in texts and in inscriptions as buildings deteriorated or as they were damaged by man or by nature. But two phenomena identified primarily with the Fātimid dynasty appear to indicate more significant changes.

The first of these affected the whole city of Jerusalem. It is that under the caliph al-Zāhir, probably around 421/1030-3, the walls of the city were rebuilt and, more importantly, shortened on the south side of the city to approximately their present position. What this meant is that the traditional Muslim quarter to the south of the Haram was abandoned and that the underground gates found there were blocked. The main entrances into the sanctuary were shifted to the west and possibly to the north. This involved certain changes in the names of gates (cf. Haram), but it also involved a major building-up of the western gate, the present Bāb al-Silsila, and Nāsir-i Khusrāw, who was there in 438/1047, describes the brilliance of its mosaics, apparently similar to those of the Akṣā mosque which are Fātimid (cf. below). It is also from the

Persian traveller that we can infer that the commercial centre of the city had by then shifted to the area west of the sanctuaries, probably to where it is now.

The second phenomenon is the rebuilding of the Akṣā mosque also under al-Zāhir. Probably as a reflection of a depopulation in the city, the mosque diminished in size to approximately its present dimensions, but the most remarkable feature of the Fātimid mosque consists in its mosaic decoration, studied by Henri Stern who showed, among other things, that the Fātimids used Umayyad models in their decoration. If one considers that a number of additional buildings were built on the Haram—for instance a mosque near the Golden Gate—and that the imperial mosaic inscription on the triumphal arch of the Akṣā is the first one in Jerusalem to begin with *Kur'ān*, xvii, 1, the *šarḥ* verse, one may propose the hypothesis that there had been a formal attempt by the dynasty to build up the holiness of Jerusalem's sanctuaries. This development, which was cut short in the second half of the 5th/11th century by political difficulties, must probably be connected with other Fātimid activities in Palestine, as exemplified for instance in the celebrated *miḥrab* now in Hebron (G. Wiet, *Notes d'épigraphie arabe, in Syrie*, v (1924), 217 ff.) and even with the earlier destruction of the Holy Sepulchre under al-Bīḥān. All these matters still require fuller investigation. What is important at this stage is that, even though the city had diminished in size, the Fātimids, probably for religious and political reasons of their own, sought to increase both the splendour and the meaning of the main sanctuaries of Jerusalem.

It should also be pointed out that it is under the Fātimids that we have our first evidence for the use of the citadel on the western side of the city. The evidence is primarily archaeological.

3. The Ayyūbids and Mamluks.

As is well known, the Crusaders took over the Haram area and transformed it into a palace and eventually into the military and religious centre of the Knights Templar. Since the earlier underground gates had been blocked, the Crusaders made a new gate, the so-called Single Gate leading directly into the Stables of Solomon in the north-eastern part of the sanctuary. In addition, the Crusaders modified the Holy Sepulchre and built many new churches, some of which, like the Church of St. Anne, still survive, even though in a slightly romanticised 19th century garb. Much in the city's topography during the time of the Latin Kingdom is not clear, but it does seem that they initiated many buildings in the valley immediately east of the Haram and thus began the process of partial levelling of the Haram's platform with its western surroundings which has continued from that moment onwards. Finally, it should be noted that the Crusaders were very active builders and, even though much of their work was destroyed, it provided an enormous supply of already-carved stones with the result that, in addition to remaining completed units such as the transept of the Akṣā mosque, a large number of subsequent Muslim buildings, especially in the area of the Bāb al-Silsila or in adjoining streets, contain decorative units taken from Latin constructions.

It is possible to discuss as one entity the monuments built in Jerusalem between 1200 and 1300 for two main reasons. One is that the nearly ninety original monuments which remain (not to speak of those mentioned in Muḥḥir al-Dīn's chronicle) have

not been studied with as much attention as the earlier ones, and stylistic or functional differentiations which doubtlessly occurred cannot therefore be identified as precisely. The second reason is that, partly because of their number and partly because they are functionally and even stylistically relatable to monuments found in Cairo, Damascus, or Aleppo, these monuments lend themselves more readily than the earlier ones to typological rather than to chronological definition.

One kind of architectural activity which followed the Crusades does, however, escape this general rule. It consisted in the task of re-Islamising the city. Churches were destroyed or transformed into mosques and the two main sanctuaries on the Haram were systematically cleansed of as many traces of Christian occupation as possible. This activity was particularly notable in the Akṣā mosque, where Saladin put up a new miḥrāb with a rare mosaic decoration and to which he transported Nūr al-Dīn's celebrated *miḥrāb* made especially for Jerusalem and which was tragically destroyed in 1969 (cf. the historical section, § 25, above). In addition, Saladin and his immediate followers sought to repair, rebuild, and resanctify all the holy places which had existed on the Haram. As van Berchem showed on several occasions, this task was carried out in some confusion and led to any number of misunderstandings. On the whole, however, it seems that the old sanctuary was returned quite rapidly to its former shape but not necessarily splendour, for, as will be shown presently, a totally new taste affected its western and northern sides.

One can put into the same category of refurbishing the city of Jerusalem the rebuilding of its walls. Inscriptions, texts, and masonries are for the time being quite confusing for the establishment of a coherent chronology of the fortifications from the 7th/13th century until the Ottomans. It is not even certain whether the present walls coincide with those rebuilt under the Ayyūbids, although what differences may have existed were probably minimal. The citadel on the western side of the city, whose use by the Muslims before the Crusades is still uncertainly documented either archaeologically or through literary sources, was entirely redone and remained in use as a typical late mediaeval *kaṣr* until very recent times.

Within a walled city with its restored ancient sanctuary and with a diminished Christian population, an enormous building activity took place over three centuries. Its first characteristic is that it was almost entirely concentrated on the Haram proper and on its western and northern sides, either alongside the sanctuary itself or along the streets leading to it. Only two Muslim buildings are known with certainty in the whole western half of the city. Its second characteristic is that it was a continuous activity. It is true of course that one can recognise and identify certain particularly active moments, such as the twenties and thirties of the 8th/14th century, during the times of the remarkable governor Tenzis or else the times of Kāṭibāy in the 9th/15th century. But these clusters of activity, which deserve individual monographs, should not hide the fact that buildings were erected all the time and by an extraordinary broad social spectrum of sponsors.

The functions of the buildings are typical of any place in the Mamlūk period: schools, orphanages, libraries, *madrasas*, baths, *ḥammāms*, *ribāṭs*, hospitals, commercial establishments, caravanserais, public latrines, fountains. The only apparent peculiarity of

Jerusalem when compared to Cairo or to Aleppo is the preponderance of purely charitable institutions over private mosques, *madrasas*, and mausoleums, the latter being quite scarce. This latter point obviously reflects the practicality of Muslim piety as well as the fact that, as a politically provincial city, Jerusalem did not lend itself to the conspicuous consumption inherent in the construction of mausoleums.

Few plans and elevations are available for these buildings but, when they do exist, the plans appear to be variations of the ubiquitous central plan (often covered, either because of the small size of the buildings or because of the impact of another tradition of construction than Cairo's) with one to four *iwāns*. The most visible feature of each building was always its façade, and Jerusalem is provided with an unusually wide range of Mamlūk portals. There are few variations in their plans, but many in their elevation, especially in the types of vaults used. Superb *makarāt* series coexist with simple barrel vaults and the zone of transition of the Bāb al-Silsila's domes exhibit the remarkable range of models available to local masons and architects. Of all the buildings the most remarkable ones are the Tenkiyya, the Aḡḡūniyya, and the Sūḳ al-Kalātūn for the 8th/14th century and the Aḡḡrafiyya or the jewel-like fountain of Kāṭibāy on the Haram for the 9th/15th cen. The construction is throughout of stone and all monuments exhibit the superb technique of Palestinian masonry: closely jointed courses often of stone of alternating colour, joggled voussoirs, sobriety of decoration consisting usually of mouldings around openings or of inscriptions. While it will eventually be possible to determine a number of stylistic details which will identify a Jerusalem style of architecture, the main impression given by most of these monuments is that they exemplify the consistently high standards of Mamlūk architecture all over Syria and Egypt.

The more important aspect of all these constructions lies in the manner in which they have transformed the Haram. For instead of being simply an area surrounded by a portico and reached through a number of more or less monumental gates, the northern and western sides of the Haram became a show place of façades to buildings whose function was no longer connected to the Haram but received a certain value or grace from it. Thus the most magnificent gateway on the Haram is not an entrance to it but to the bazaar of cloth merchants. The older, traditional gates with their consecrated names lost their importance. The Haram itself became cluttered with all sorts of new buildings which detract by their very multiplicity from the main sanctuaries, inasmuch as many of them were for private or restricted use as places of prayer or for public charity rather than for the formal expression of the faith's beliefs. What seems to be involved is at the same time a different, far more practical and more pluralistic piety, and also a different taste, no longer the imperial taste of the Umayyads nor probably that of the Fatimids, but the taste of a wider social order which sought individual salvation through works rather than through the monumental glorification of the faith.

4. The Ottomans.

During the first years of Ottoman rule, earlier practices continued and a *madrasa* like the Rikāsiyye (947/1540) still follows Mamlūk practice and Mamlūk ideals. A large number of fountains are even later.

But the main effort of the Ottoman dynasty in its heyday was once again an imperial one, and it is therefore not an accident that its two most spectacular achievements are still among the most impressive monuments of the city. One is the tile revetment of the Dome of the Rock and the other one is in the walls and gates of Jerusalem. Both are essentially 15th/16th century achievements attributed to Sulaymān the Magnificent, and it is important to note that neither one sought to be functionally or spiritually original. For regardless of their effectiveness, which is striking indeed, their main point is that they have managed to capture two consistent themes in the monumental history of Jerusalem: the creation of a new Muslim holy place and the symbolic as well as physical separation of the Holy City from the rest of the world.

After this century, the main activity of the Ottomans consisted in constant repairs of the main sanctuaries of the Haram. The quality of these repairs decreased with the centuries as Ottoman wealth decreased and as Jerusalem declined in population and importance, until the second half of the 19th century brought a new, European-centred, significance and architecture into the city.

In the most recent years, two different types of investigations have been carried out in Islamic Jerusalem. The first one is the continuation and partial publication of excavations to the south and southwest of the Haram. These have by now fully demonstrated that the Umayyads utilised and probably rebuilt the staircases of Herodian origin leading to the sanctuary. See N. Avigad, *Archaeological discoveries in the Jewish quarter of Jerusalem, Second Temple period*, Jerusalem 1976, and Mayer Ben-Dov, *Haširidin min haḥiḥufa haḥamslamit haḥaduma be'azar haḥayil*, in *Qadmoniot* (Jerusalem 1972).

The second group of investigations are the studies of Mamlūk monuments by A. Walls and M. Burgoyne, published in vols. ii (1972) onwards of *Levant, Journal of the British School of Archaeology in Jerusalem*, and with a checklist by Burgoyne, *The architecture of Islamic Jerusalem*, British School of Archaeology in Jerusalem, 1976. In addition to providing accurate plans and elevations of buildings to the west of the Haram, these studies have at times dealt with broader issues and a particularly original note by A. Walls in *Levant*, viii (1976), 159-61, suggests that the construction of the minarets of Aḥlā 'Alī (1465-6) and of the Ṣaḥḥayya (1471) in the western and primarily Christian part of the city served to frame symbolically the domes of the Holy Sepulchre with prototypical Muslim monuments.

Bibliography: The most complete introduction to the monuments of Islamic Jerusalem is by Max van Berchem, *Matriaux pour un Corpus inscriptionum arabicarum*, II. Syrie du Sud, Jerusalem mille, Jerusalem Haram, vols. xiii-xiv of the *Mémoires de l'Institut Français d'Archéologie Orientale* (Cairo 1920-3). The most common literary sources are available in G. Le Strange, *Palestina under the Moslems*, London 1890, and A.-S. Marmurfi, *Textes géographiques arabes sur la Palestine*, Paris 1951, in addition of course to the indispensable Muḥḥir al-Dīn. The new translation of Mukaddasī's chapters on Syria by A. Miquel, Damascus 1969, has important notes.

General considerations on the monuments of Jerusalem in early Islamic times can be found in U. Monneret de Villard, *Introduzione allo studio dell'archeologia islamica*, Venice 1966, especially

182-215; Lucien Golvin, *Essai sur l'architecture religieuse musulmane*, II, Paris 1971, and O. Grabar, *The formation of Islamic art*, New Haven 1973. For the Dome of the Rock, the most complete description is by K. A. C. Creswell and Marguerite van Berchem, *Early Muslim architecture*, Oxford 1969. For a different interpretation, see O. Grabar, *The Umayyad Dome of the Rock*, in *Ars Orientalis*, I (1957). Additional information is in C. Kessler, *About the ceiling ... of the Dome of the Rock*, in *JRAS* (1964), and 'Abd al-Mahī's inscription, in *JRAS* (1970). For the Aḥṣā mosque, the key works are R. W. Hamilton, *The structural history of the Aqsa Mosque*, Jerusalem 1949, and H. Stern, *Recherches sur la Mosquée al-Aqsa*, in *Ars Orientalis*, v (1963). For the Haram gates in Umayyad times, see S. Corbett, *Some observations, in Palestine Exploration Quarterly* (1932-3). The first publications of the new excavations are by B. Nazar and M. Ben-Dov, *The excavations in the Old City of Jerusalem*, Jerusalem 1971.

Much less work has been done on the later periods. See O. Grabar, *A new inscription*, in *Studies in honour of K. A. C. Creswell*, Cairo 1965; A. Miquel, *Jerusalem arabe*, in *B. Et. Or.*, xvi (1961); L. Golvin, *Quelques notes sur le Suq al-Qattanin*, in *B. Et. Or.*, xx (1967); M. H. Burgoyne, *Some Mamluke doorways*, in *Levant*, from 10 1971 to present; *idem*, *The architecture of Islamic Jerusalem*, British School of Archaeology in Jerusalem 1976. For the citadel, C. H. Johns, *The Citadel*, in *QDAP*, xiv (1950).

No understanding of Jerusalem in the Middle Ages can avoid a thorough awareness of pre-Islamic Jerusalem. Among the huge bibliography dealing with the latter, the most convenient works are L. H. Vincent, *Jerusalem de l'Antiquité à l'islam*, Paris 1954, summarising and revising his older work; J. Simons, *Jerusalem*, Leiden 1954, and M. Avi-Yonah, *The Madaba mosaic*, Jerusalem 1954.

Several general books have provided valuable introductions to Islamic Jerusalem, even though many of them still tend to deal primarily with pre-Islamic times. The most accurate ones are Y. Yadin, *Jerusalem revealed*, New Haven 1975 and Israel Pocket Library, *Jerusalem*, Jerusalem 1973. An exception with good photographs is A. Duncan, *The Noble Sanctuary*, London 1972. An interesting but controversial book about the future is A. Kutcher, *The new Jerusalem*, Cambridge 1973.

KUDSĪ, MUHAMMAD DJĀN, poet at the Mughal court in India. He was born and raised in Maḥḥad, from where he performed the pilgrimage to Mecca, and was then engaged in the grocery trade before he went to India. In 1041/1632 he joined the ranks of the Emperor Shāh Jihān's poets. Daghistanī, the author of the *Riyāṣ al-ghu'arā'*, states that Kudsī preceded Kalīm as poet-laureate to Shāh Jihān, but this is not confirmed by contemporary sources. He died in Lahore in 1056/1646-7 and, according to Aḥḥar's *Ataḥ-kada*, his remains were removed to Khurāsān.

Kudsī's poems are distinguished by a felicity of style. Like Kalīm, he was also engaged to compose a poetic history of Shāh Jihān's reign. Though less talented than his more famous contemporary, he seems to have been held in high esteem, and was regarded as a leading poet of his day.

KUDUMMUL, a small volcanic island in the Red Sea in 17° 52' N lat., about Koutoumbe on the English Admiralty charts and Qutanbul in *Admiralty handbook, Western Arabia and the Red Sea*, London 1946, 235. The island has a rich flora, which has been studied by the botanist Ehrenberg, and is noteworthy for its iron deposits, which are mentioned as early as the geographer Ibn al-Muḍāwir (d. 930/1233). Kudummul, which lies near Haniḳa on the Arabian coast off 'Asir [q.v.], once marked the boundary between the land of the Kināna and Yaman.

AL-KUDŪRĪ, ABU 'U-SUṢAYN/AL-HASAN AHMAD a. MUHAMMAD a. AHMAD a. DĪ'AN a. HANḌAL AL-BAGHDĀDĪ, Hanafī faḥīḥ who was born and who died at Baghdād (362-3 Raddiāb 441/977-24 April 1027). He was head of the Hanafī school in 'Irāq, and had occasion to lead several public discussions, in which he defended his own viewpoint, with his contemporary, the Shāfi'ī Abū Hāmid al-Isfahānī, whom he however especially revered. A number of pupils gathered around him, the most famous of whom was al-Khaṭīb al-Baghdādī [q.v.].

As well as various works like his *K. al-Nikāḥ* on marriage and his *K. al-Taqdīr* on the differences between the Hanafīs and Shāfi'īs, al-Kudūrī wrote a *Muḥṭaṣar*, which had a great scholarly renown and enjoyed a sanctity comparable to the *Kitāb* of al-Kayrawānī [q.v.] amongst the Mālikīs. It is a concise legal manual, but is clearer than the one of the same name by Khawāṣ b. Ishāq [q.v.]; it deals with ritual, contracts, personal status, criminal law and the law of succession, without particular care for logical order. This *Muḥṭaṣar* inspired many commentaries, including e.g. al-Dīwānī al-nayyir of Abū Bakr b. 'Abd al-'Abbādī (Istanbul 1301, 1314, 1323, Delhi 1327) and al-Lubāb fī sharḥ al-Kitāb of 'Abd al-Qasr al-Hayḍānī (in the margins of the previous work, and Cairo 1344/1927). Numerous mss. of the *Muḥṭaṣar* exist, which has been published many times, notably at Delhi in 1847, at Bombay in 1303 with trs. in Persian and Faḥṣa, at Istanbul in 1281 with a Turkish paraphrase, and in 1309 also. The chapter on the holy war was edited and translated into Latin by Rosenmüller, in *Analecta arabica*, Leipzig 1825-6, and in French by Ch. Solve, Paris 1829; that on marriage was edited and translated by G. Helmsdörfer, Frankfurt 1832; and more recently, G.-H. Boursquet and L. Bercher edited and translated extensive passages in *Le statut personnel en droit musulman hanafite*, Tunis n.d.

AL-KŪFA, one of the two cities (*mayr* [q.v.]), along with Basra [q.v.], founded in 'Irāq by early Islam. A permanent military establishment of the Arabs in Mesopotamia, Kūfa retained the whole of the 'Irāqī *Sawād* [q.v.] under its control. It participated actively in the Islamic expansion into Iranian territory, and, throughout the 1st/7th century, was a hotbed of intense political ferment. It was there also, as at Basra, that there took place for three centuries the gestation of Arabo-Islamic civilisation and culture. Then Kūfa experienced decline and ruin; today only a few traces remain, mostly of late date or restored.

Kūfa was founded in 17/638 by Sa'īd b. Abī Waḳkās [q.v.], the victor of al-Qādisiyya [q.v.], after the whole of 'Irāq had been wrested from the hands of the Sāsānids and notably after the capture of Madīnat-Diṣfah (16/637), whose climate the Arabs could not endure. But other no less important reasons must be added to this: given the existence of a willingness to settle and immigrate, 'Umayyad preferred to keep the Arabs grouped together and segregated from the peoples and territory conquered, in a relationship of spatial continuity with Arabia. This presupposes that, very swiftly, these main ideas were issued which set out to dictate the relationship of conquering people-conquered peoples: no dispersal in the *Sawād* or agricultural settlement, maintenance of the military striking force, the setting-up of a newly-originated fiscal system which would tap the revenues of the 'Irāqī territory without direct exploitation on the part of the Arabs, all this resting upon the co-existence of Arab clans very dissimilar in their origin. The role of the new state and the new religion as tutelary power and unifying principle was also implicitly taken into consideration. There is no doubt that 'Umayyad wished to make of it the experimental melting-pot of his system, given concrete form by the establishment of the *ḥisn* between 20 and 23/640-3.

I. The city of Kūfa.

Kūfa, a creation *ex nihilo*, was placed at the edge of the Arabian steppe, but on the bank of the principal branch of the middle Euphrates, guarding the passage to Bābil and, from there, Diṣfah, a few miles to the north-east of al-Hira; an excellent position of contact, astride two worlds, somewhat familiar to the Arab army due to its being situated in the region of al-Qādisiyya. Kūfa, placed on the right bank of the Euphrates, on a tongue (*ḥiṣm*) of dry, grey sand mixed with gravel, was slightly above the water level. It escaped floods, was well-supplied with water, and enjoyed a salubrious climate.

We do not know with exactitude the origin of the word Kūfa. The Arab historians and geographers, as they were accustomed, made of it a common noun designating any surface of rounded sand, but obviously, this appears to be a reconstruction *a posteriori*. Massigou derives it from the Syriac 'Aḫīla,

basing it in particular on Chinese testimony; a text of al-Tabarī situates the place *ʿAḳā* between the Euphrates and the houses of Kūfa, probably to the north of the *miṣr*. Perhaps it is nearer the truth to see its origin in the Persianised form Kūba (Sarkis, in *Sumr* [1954]). Only a text of Sayf b. ʿUmar (al-Tabarī, ed. Cairo, iv, 40 ff.) gives some detailed information on the first settlement, on the *ṭahhīf* of the mosque and the palace, and the apportioning of land to the tribes, clans and fragments of tribes, who constituted the army of Madāʾin. This has to be rectified and completed in the light of other historical and geographical texts. A public area was at first delimited; this was to include essentially the mosque and the governor's palace, and to become the focal point from which the whole encampment branched out. Fifteen *manāḥiḍ* or avenues separating the tribal foci, each forty cubits wide, radiated from this central area. Along the five *manāḥiḍ* of the north were settled the tribes Sulaym, Ṭhakil, Hamdān, Baḡilla, Taghlib and Taym al-Lāt, to the south, the Asad, Nakhaṣ, Kinda and Azd; to the east, the Anṣār, Muzayna, Tamīm and Nuḡānib, Asad and ʿAḡūr; finally, to the west, Baḡilla, Ḥudhila and Dihayna. This picture, it may be seen, contradicts a tradition of al-Ḥaḡḡāḡī cited by al-Balāḡhūrī (Futūḥ, 276) according to which all the Yemenis were placed to the east, between the mosque and the Euphrates, and the Nizaris to the west, a tradition which study of the topography of Kūfa as it appears from the narratives on the great revolts of the 1st/7th century does not corroborate. But it is beyond doubt that some alterations were effected by historical evolution in this picture of tribal geography: the Tamīm, in particular, migrated from the east to the west with the ʿAbs. The problem of the great tribes of Raḥīḥa, Bakr and ʿAbd al-Kays still remains. For the most part, the Bakr migrated to Baṣra, but a certain number of them settled at Kūfa—including the ancient family of Dhū ʿl-Djaddayn. As for ʿAbd al-Kays, initially established at Baṣra, they were possibly moved on a large scale to Kūfa at the time of the caliphate of ʿAlī, to leave it again in 40/660 for Baṣra. In any event, a certain number of characteristic features of the tribal establishment at Kūfa are to be noted: settlement of the main part—but not the whole—of the Arab *muḥallif*s who had to confront the Sāsānid armies; heterogeneity of the tribal structure, in contrast to Baṣra; presence of a majority of Muḍar and Kays elements formed either from large Bodonin clans (Tamīm, Asad), or from clans of the Ḥijāz (Ṭhakil, Sulaym, Dihayna, Muzayna), but nevertheless a concentration of a strong Yemeni minority, completely unconsolidated elsewhere. It may even be asked if early Kūfa did not contain a majority of Yemenis, who later became a weaker and weaker minority; certain modern authors have gone as far as to assert that the *ṭahhīf* of Kūfa was conceived to shelter these distant migrants, together with those of the Ḥijāz, rather than the others (M. Hinds, in *IJMES*, ii [1971], 346-67). The pure Yemeni elements are bare unassuaged present (Himyar, Hamdān, Ḥaḡramawt, Maḡhbiḡ) alongside tribes newly Yemenised (Kinda and Baḡilla in particular, Azd and Sarīḡ), but the tribe which became the most numerous of the Yemenis and without doubt of all the tribes, that of Hamdān, was not settled at Kūfa as early as the Maḡhbiḡ, Baḡilla and Kinda, and it was made up for the most part of recent immigrants (*muḥallif*), who had come under ʿUthmān, ʿAlī and perhaps Muʿāwīya. It remains a

fact that the Yemeni phenomenon was to determine the political destiny of Kūfa as well as the colour of its civilisation. According to Massignon, it is through the influence of the old Yemeni element, city dwellers for a long period, that the sedentarisation of the Arab tribes at Kūfa was effected; hence a civilising and urbanising role of the first order may be attributed to it from very early on.

Figures for the total population vary according to the sources and periods. It may be admitted that during the very first phase, there were between 20,000 and 30,000 inhabitants (al-Balāḡhūrī, Futūḥ, 276), although Yāḡūt gives the figure of 40,000 (*Buldān*, iv, 491). A text of Abū Miḡlāḡ (al-Tabarī, v, 79) speaks of the mobilisation by ʿAlī of all the 57,000 *muḥallif*s, of whom 40,000 were adults and 17,000 adolescents. Ziyād b. Abī Sufyān, having enlarged the mosque, foresaw it as accommodating 60,000 people, a figure corroborated by a reliable piece of information given by al-Balāḡhūrī (Futūḥ, 345) concerning the people registered in the *ḥudūd*. So there would have been, around the year 50/670, 60,000 men and 80,000 women and children, that is, 140,000 Arabs of whom a census had been made, to which it is reasonable to add the clandestine residents and the non-Arabs, slaves or *muḥallif*s. Certainly at the same period the figure for the population of Baṣra (200,000 registered) rather outnumbered that of Kūfa, but the demographic inflation in the space of a generation was nevertheless considerable. This may explain the transplantation by Ziyād to Khurāsān of 50,000 people, of whom 40,000 were from Baṣra and 10,000 from Kūfa. It is probable that after Ziyād and throughout the Umayyad régime, the number of Arabs drawing stipends and registered remained stable or even had a tendency to diminish from al-Ḥaḡḡāḡī (75-95/694-713) onwards, but the number of non-Arabs, uprooted from the land, new *muḥallif*s flocking to the *miṣr*, cannot be known for certain. The fact that this last governor took drastic measures to repulse them is clear proof of the existence of this disordered influx, dangerous for the equilibrium of the city. The history of the population of Kūfa, in the earliest and Umayyad period, is that of a very swift and essentially Arab expansion in a first phase (17-53/638-73), followed by a stabilisation, at times disrupted by the rural non-Arab immigration.

The topographic framework of Kūfa during the 1st/7th century evolved while remaining faithful to the original plan. The first Kūfa, that of ʿUmar (17-23/638-43) was a military camp, geometrical, airy and open, where tents quickly raised for an expedition were drawn up in lines. Soon, without doubt after the pacification of the Iranian territories, the need arose for a more permanent settlement, where tents were replaced by huts of reeds, which were abundant in the region. A third stage saw the substitution of houses (*ḥiṣr*) for huts, in *ḥab* or clay dried and cut up in large rectangular blocks, a stage inaugurated under the first governorship of al-Muḡḡira b. Ḥuṣayb (22-40/642-4). In fact, all this is information given by Yāḡūt and reproduced by Massignon. Nevertheless, it is contradicted by Sayf, who compresses the stages, stating that the building of Kūfa in *ḥab* was decided very rapidly, before the *ṭahhīf* itself, in 17/638. Finally, it is with Ziyād (50-57/670-3) that the *ḥiṣr* or Mesopotamian fired brick was introduced, at first to construct the cathedral mosque and the governor's palace which adjoined it on the south, later no doubt for the houses of the aristocracy or *ḥiṣr*. Considerable ex-

whether, at its apogee as a city, in the 3rd/9th century, Kūfa entirely lost its character of a spacious town and came to resemble those Islamic cities of a latter age where the *madīna* became an assemblage extremely crowded with houses and almost stifling. It does not seem so, because the geographers of a later period, such as al-Muqaddasī and much later Ibn Dūbayr (though the latter was writing in a period of the city's complete decadence), allow one to catch a glimpse of the existence of green or garden spaces in the heart of the town. But these same geographers, as the archaeological remains stretching as far as Najaf also indicate, testify to the expansion of Kūfa towards the west, far beyond the early boundaries. But then, Kūfa was no longer one of the centres from which early Islam, i.e. conquering Arab Islam, radiated, but an important city of 'Irāq, the simple capital of an administrative area.

The provincialisation of Kūfa, and even its decadence, became an established fact in the 4th/10th century. The old structures (the military *arḍā'*, the tribal spirit, the financial system) began to break down, because the whole edifice of the conquest, inherited from the Arab empire, and of which Kūfa was merely the concrete form, became obsolete, and it is known that at its height the caliphate submitted to the tutelage of the Būyids at the same time as the unity of the Muslim world broke up. Because of this, the decadence of Kūfa was only one of the manifestations of this profound change which intercontinental commercial activity was unable to sustain and prolong, as at Basra for one or two centuries. One may speak of a crisis of the Islamic city (Massignon), but in reality we are concerned with a general crisis of early Islam as a state and society, indeed as a civilisation; even more, one might say, with a historical situation for which a town like Kūfa should certainly pay the price. On the concrete level, there was the great Ismā'īlī outbreak at the end of the 3rd/9th century, of which Kūfa was the primordial crucible and of which the Karmatīan violence was one of the destructive elements. In 393/995, 312/924 and 315/927, Kūfa underwent the assaults and pillage of the Karmatīans. It was never to recover from these. It is this which explains the emergence in 334/945, not far from it, thanks to the protection of the Būyids, of Najaf or Maḥḥad 'Alī as a centre of Shī'ī devotion which, since the 3rd/9th century, had become the specifically distinguishing dimension of Kūfa. Shī'ī religious symbolism was concentrated there, but as it happened, the old Arab Kūfa which was far from being identified with the Shī'ī phenomenon vanished. The urbanised tribal structure also collapsed at the same time as there arose a "re-bedouinisation" or, at any rate, a growing threat from a new nomad world of the Arabo-'Irāqī steppe. Thus it was in 385/996 that Bahā' al-Dawla ceded Kūfa as an *iḥṣā'* to the chief of the 'Ukayyids (q.v.). The Banū Asad, the Tayyī, of whom a large fringe remained outside the city limits, because undoubtedly living in symbiosis with it, and also the Ḥammār, newly-come on the scene, dominated Kūfa and ruined it. Thus these same Asad (to differentiate them from the settled Asad), from whom the grammarians of Kūfa derive, by means of a real ethnological effort, all the flavour of their citations, preserving themselves with their very strong identity, came to present themselves as taking part in the ruin of Kūfa, the new incarnation of Lagash, Ur and Babylon, and which was soon dead like them. In 495/1101, with the emergence of al-Ḥilla, Kūfa lost definitively its importance and

the major part of its inhabitants. Ibn Dūbayr (339-614/1244-1277), who visited it a little later (578-81/1182-5), speaks of it as a deserted and ruined city but one where some inhabitants still survived, subjected to the regular pillages of the tribe of Khafā'ija (Rūhā, Beirut 1956, 187, 188). The whole built-up area between the mosque and the Euphrates had been destroyed and was covered now with orchards. He speaks at some length of the cathedral mosque, still standing, with its high ceilings, its columns loaded on the inside, a prayer hall with five bays, its sacred vestiges where the Shī'ī myths were neighbours to the recurring myths of old Babylonia taken over by Islam: the *muḥallā* of Ibrāhīm, the *mihrāb* of 'Alī, the *ṭumara* of Noah and the supposed tomb of Muslim b. 'Aqīl. After the Mongols had conquered 'Irāq, Muṣṭawī Kaẓwīnī wrote for the Mongol prince a treatise describing the resources of the country (*Nuḥat al-ḥulā'*, tr. Le Strange, 30, 166, 210), where he speaks of Kūfa as having ramparts with a circumference of 18,000 paces and of its important agricultural role. Finally, Ibn Battūṭa (8th/14th century) who, on the subject of Kūfa, reproduces in part Ibn Dūbayr but adds some personal elements, sees it, in a similar way to Muṣṭawī, as a town ruined for the most part, but not yet dead. According to him, of the *ḥayr al-'imāra*, nothing more than the foundations remained, but the markets, still beautiful, survived. He speaks of the *ḡāḥina* of Kūfa as if there were no more than one, where the tomb of al-Mukhtār had been repaired and over which a cupola had been erected (Rūhā, Beirut 1960, 219). In the Ottoman period, Kūfa fell to the rank of a *nāḥiya* dependent on the *kāḍī* of Najaf, which was dependent in its turn on the *ṣauḡiā* of Karbalā'. Niebuhr visited it and compiled a plan of it. Massignon went there for a first time in 1908 and for a second time in 1934. He spoke of the "now deserted site of the great city which was the most Arab of the Muslim metropolises", of which just a few traces of buildings were marked out: the *ḍiḥmā*, the tombs of Hānī' b. 'Urwā and Muslim b. 'Aqīl, the Bayt 'Alī, two guard houses, one of which was built by the English, the small oratory Ḥannāna and the *maḥḥid* al-Sahla. He noted that a new quarter had appeared between the mosque and the Euphrates. It still exists, and has even been extended; however, it is less important than the recent western quarter, towards Najaf, which is mainly residential. Some other European archaeological missions went to al-Ḥilla (Talbot Rice in 1931, in particular). Since 1938, the site of Kūfa, declared an archaeological site, has become an object of interest to the 'Irāqī academic authorities and a first season of excavations was made there at that date. The great mosque, completely and sometimes awkwardly restored, remains the central building; it seems to be raised in comparison with its earlier level and only the ramparts remain. The *ḥayr*, much larger, has just been mapped out. It is a building now in ruins, though more instructive than the mosque. Let us also note the presence of the mosque of al-Sahla to the west of the site. Various objects in glass and ceramic and some coins of the Umayyad period have been found. Nevertheless, the archaeological exploration of Kūfa may be considered as only in its early stage and, if well handled, as being capable of adding much to our knowledge of the city, still essentially one derived from books.

II. Politics, ideology and culture in Kūfa.

While in the 1st/7th century Kūfa played a political

role of the first order, as the matrix of a large number of matters of future significance for Islam, in the 2nd/8th, after the foundation of Baghdad and with the opening-up of the Islamic empire, politics and the struggle for power left Kūfa aside; but, on the other hand, cultural activities developed there and achieved a high level (between 150 to 250/approx. 760 to 860). From then there is evidence of a triple Kūfa: a political Kūfa (up to 250); a cultural Kūfa (250-250) and then a purely ideological Kūfa (250-350) which had become a focal point of doctrinal Shi'ism.

The principal episodes which punctuated the political activity of early Kūfa were: the participation in the revolt against 'Uthmān (34-3/654-5); the support given to 'Alī for the two great intestine battles of al-Djāmal (36/656) and Siffin (37/657); the emergence in its heart of the Khāridjī movement; the beginnings of political Shi'ism with the action, which was suppressed, of Ḥudjib b. 'Adī al-Kindī (31/671). After that, the pro-Shi'ī revolts succeeded one another, and were just as regularly quelled: the episode of Muslim b. 'Aqil and the massacre at Karbalā' (60-1/693-80), the march of the Tawwābīn (63/684), the uprising of al-Nuḥshīr (66-7/685-6), the preaching of al-Nuḥshīr and of Bayḍān, the revolt of Zayd b. 'Alī (122/739) and that of 'Abd Allāh b. Mu'awiyā (127/744). Finally, it was Kūfa which was the directing brain behind the 'Abbasid *dhawr*, and it was at the great mosque of Kūfa that the first caliph of the new dynasty was solemnly invested (158/779). But Kūfa equally underwent numerous rounds of Khāridjī assaults, particularly in 76/693, when it was threatened by Shabbāb, and more seriously in 127-8/744-5 by al-Dahhāk. It participated, in 82-3/701-2, alongside Basra, in the great revolt of Ibn al-Ash'ath which brought the Umayyad régime close to its collapse and which was a revolt of the *ansār* without ideological content.

This abundance of insurrections, of seditious actions and political events, earned Kūfa the reputation of a turbulent, agitated, ambitious city, and, for the later Shi'ī consciousness, of a martyr city. Thus on the majority Sunnī side, there were some solid prejudices, on the other side, a whole apocalyptic elaboration in which "accursed Baghdad will be destroyed and Kūfa will be queen of the world, after having been a dwelling of exile and waiting for true believers." According to the *adhith* of Salmān, "Kūfa is the *hubba* (= royal tent) of Islam; a time will come for the world when there will be no true believer except the one who lives there or whose heart aighs for it" (Nasirion, *Explication du plan de Kūfa*, repr. in *Opera Minora*, II, 34).

In reality, this constant political effervescence of the 1st/7th century resulted from the structure of Kūfa itself as well as in historical evolution. As a fundamental component of the system of the *ansār* at least until 30/650, the date at which Basra outstripped it in the conquest of the Iranian East, Kūfa sheltered the conquerors of Irāk from the time of the first wars onwards, that of the *Abī al-Ayyūm* until the *Abī al-Kādisiyya*. The first preannounced upon the antiquity of their conversion and their faithfulness to Islam, the second had participated in the *Ridda*, but they were of no less high Arab lineage. Kūfa, on the other hand, drained the major part of the resources of the *Sawād* and the leaders of the army managed the ancient royal domains, this becoming later a real apple of discord, while the immigration to Basra, except for that of the Bakr, was that of Isotocomers, of tribes from the Arabian south-east, newly come to the scene of conquest and arriving in

complete, homogenous tribal groups. Within the tribal structure of Kūfa, in the conditions which surrounded its genesis, by the attraction exercised over the new immigrants or *rawādif*, and the lack of any immigration control, from the very fact of its supremacy in the high period, some germs of tension took root which were ready to develop. Under the caliphate of 'Umar, the equilibrium was maintained, and the armies of Kūfa were occupied in conquering Persia. It is in the caliphate of 'Uthmān that the internal conflicts began to appear; the former Islamic élite, raised up by 'Umar, yielded ground to the traditional chiefs who shared in the *al-māli* and saw their position reinforced by the waves of *rawādif* of their own tribes (a typical case of opposition is between an Ash'ar Nakha' and an Ash'ath b. Kays). The activism of the *Abī al-Ayyūm*, disappointed by the new politics, resulted in the murder of 'Uthmān in which a number among them were involved, and this roused them necessarily on the side of 'Alī. 'Alī's coming to Kūfa highlighted the new phenomenon of the supremacy of the *ansār* over Arabia for the definition of the political destiny of the Arabs; for four years, Kūfa was to be if not the capital of the empire, seeing that the empire was divided, at least a centre of major decision and the seat of the caliphate. From this privileged episode of its existence, Kūfa was to derive its future pretensions, but also a persistent faithfulness to 'Alī and his family. Nevertheless, from its origin, this faithfulness was far from making for unanimity. The Ash'arī or traditional chiefs of the tribes, having in general participated at al-Kādisiyya, and being enrolled in the *ghara'* al-*asā'*, were lukewarm towards the cause of 'Alī and consequently also the mass of the inhabitants who, in general, followed them. The activists remained (who may be named as the *ḥarā'* [g.o.]), of whom a majority cost in its lot with 'Alī and on whom he showered benefits, but of whom a minority, harder and more intransigent, showed itself reticent and soon hostile with regard to him. After the arbitration, it appeared that 'Alī could no longer be certain of anyone except his partisans, his *ghis'* in the political sense of the term, while the intransigent members of the *ḥarā'* fell into Khāridjism and the conservative group of the Ash'arī abandoned him; whence the dislocation of the coalition which he had constituted, whence also the minority character and powerlessness of the Shi'ā for a century. The Umayyads governed indeed with the support of the Ash'arī, who did not like them, but found in them a principle of order. They were satisfied with their growing social influence, guaranteed by the Umayyad régime. It is this which explains why the Ash'arī ranged themselves on the side of the established power every time that a Shi'ī insurrection broke out, and why that power gained their collaboration in disarming the Shi'ī troops. In 61/680, they even took part in the murder of Ḥusayn; they mobilised actively against al-Nuḥshīr, who threatened their privileges; and they regrouped themselves around the governor in order to bring about the failure of Zayd b. 'Alī's action. Only the great revolt of 82-3/701-2 was a specifically Irākī revolt against the preponderance of the *Abī al-Shām*, the tyranny of the governor al-Ḥudhādī and, because of this, it was led by the Ash'arī as well as by the *ḥarā'*. But there followed a large-scale demilitarisation of the *misr*, and the foundation of Wasī, the settlement of the Syrian army in Irāk as it in occupied territory.

If, throughout the 1st/7th century, the majority of the Ash'arī showed themselves hostile to the

Shi'i movement. certain of the Ash'ari navertheless participated actively in it, such as al-Mukhtār himself, Ibrahim b. al-Aghṭar and 'Abd al-Rahmān b. Shurayb al-Shābānī. But after al-Mukhtār, it was above all popular elements which supported Shi'i activism, whether from among the Arabs, Yemenis in particular and, more precisely, Yemenis from certain clans of Hamdān (Khāṭirī, Shākir, etc.), or else recruited from among the plebeians of the new immigrant *mawālī*, a mass operation utilised by al-Mukhtār. It is probable that the rallying of the Yemenis to the Shi'i cause was due to their marginal position in the Arab city, socially as well as culturally, for there is no doubt that a number of poor were recruited from the clans of Hamdān (clans of *raṣaḍīfī*) and that the call for the rights of the *Ahl al-Bayt* found some echoes in the old Yemeni consciousness. It is this which explains the populist character of the revolt of al-Mukhtār (667/685-6), perhaps the most important Shi'i revolt of the 1st/7th century. It succeeded in assuming power at Kūfa for some time; above all, it fashioned the Shi'i consciousness by giving it a mystique, a language, slogans and some elements of a doctrine. Also, the Kayṣāniyya [q.v.], who derived from it, would be, via Abū Hāshim, at the root of the *awṣā* for the Family.

With the 'Abbāsid dynasty, there took place an intellectualisation and a deepening of Shi'ism, the political action becoming intermittent. Hence one must wait until the year 195/814 to see a resurgence of an insurrection of the old style, that of Ibn Ṭabāṭabā, and the year 250/864 for that of Yahyā b. 'Umar, far less dangerous, to break out. But Shi'ism as a faith did not cease to gain ground, so that it veritably became the quasi-unique ideology of the town at the end of the 3rd/9th century and constituted a cultural and religious tradition in the 4th/10th century. Certainly, it was at this moment that the Shi'i imagination, re-reading the history of the town, reclassified its sites according to its own standards, dividing quarters and mosques into blessed and cursed ones.

Kūfa was able to export its Shi'i consciousness to the Iranian world, and to Kumm especially. Kumm was indeed a projection of Shi'i Kūfa, as Balikh, Marw and Nisābūr were a projection of Bagra. Because of this, as a colonising centre, Kūfa showed itself less active than Bagra. Each of the two *māyās* is known to have had its *ṭaghār* and its *māh* (q.v.). The central Iranian territory was practically partitioned: Kays was the *ṭaghār* of Kūfa, and Isfahān depended on it, but the *māh* of Kūfa, so Nisāwand, showed itself less active than the *māh* of Bagra, so Dinawar, although several sources speak of Dinawar as the *māh* of Kūfa. But it is especially in the race to the peripheral Iranian territories, from 296/49 onwards, that Bagra gained the upper hand, with the conquest of Khurāsān, while Kūfa had to be content with Adharbāyḡjān, a province of little account, with Kāwān as an extreme *ṭaghār*. Nevertheless, over the centuries, the specifically Shi'i nature of Kūfa imposed itself by a process of slow penetration into the whole Shi'i consciousness of Islam by way of Baghdad and, by that of Kumm and Māhād, to the whole modern Iranian lands, while Bagra was not alone in defining the structures of later Sunnī Islam, although it had been a primordial centre bringing the idea of *ghimā'a* into action. However, the religious and cultural legacy of Kūfa should not be limited to the transmission of the Shi'i tradition. Far more important can be shown by analysis to be

the participation of Kūfa in the elaboration of the universal Arabo-Islamic culture which became rooted in the great *mīr* of the first two centuries. Baghdad was to be the heir of Kūfa and Bagra, these two fundamental matrices which defined the general lines of the culture of Islam, each with its own genius: Kūfa excelled in the recovery of the Arab poetic patrimony, in the exegesis of the Qur'ān, in law and genealogy, whereas Bagra, more rationalist and critical, invented Arabic grammar and was the great centre of Mu'azilī speculation.

There are two great cultural moments in the history of Kūfa: the one oral, of obscure gestation, where the culture, still undifferentiated, was seeking to establish its foundations (17-150/638-767); the other, brilliant, which developed a true classicism and bequeathed to us some great works (150-250/767-864). In both cases, the two fundamental poles around which the new culture expressed itself were Bedouin Arabism and the Islamic message, the influence of the conquered peoples proving negligible. Arabic writing was perfected at Kūfa, undoubtedly with the participation of the Arabs of al-Ḥira, and Kūfa, having become a monumental writing, may be considered the most ancient specimen of post-Islamic Arabic writing, although the type of writing was used on Sassanid *diwānās*. It is also in very early Kūfa that Ibn Mas'ūd lived and taught, later becoming the eponym whose name crystallised the traditionalist current and to whom some disciples were attached: 'Alqama b. Kays, al-Aswad b. Yazīd, Masrūk b. al-Adjīd, Ubayda, al-Hamādī and Shurayb. Schacht thought that the founding role of Ibn Mas'ūd was fictitious and that some forged traditions were projected on to him between 100 and 130/710-48, establishing the chain Hammād b. Abī Sulaymān-Ibrahim al-Naḡhā'ī-Ibn Mas'ūd, but that nevertheless *fiḥḥ*, which preceded *ḥadīḥ*, was created by the single centre of Kūfa. In fact, it seems clear that three key-personalities, living in the 1st/7th century, played a main role in the first glimmerings of law, *ḥadīḥ* and exegesis: Ibrahim al-Naḡhā'ī, Sa'īd b. Dīḡayr and 'Aṭm b. Shurayb al-Sha'bi. In the domain of spirituality, there was no personality here comparable to Hasan al-Baṣrī, but the currents of asceticism and mysticism found their masters in Uways al-Karānī and Rāḥī b. Khuthaym. Let us cite in the sphere of *tafsīr* and *ahādīḥ* the names of two precursors: Muḥallid b. Sa'īd and Muḥammad al-Kalbī; for the collection of poetry that of Ḥamād; and for poetic creation, the names of 'Aḥbā Hamdān and al-Kumayt.

The second phase of the cultural history of Kūfa, whose beginnings coincide with those of the 'Abbāsid dynasty, saw the differentiation of the disciplines and the emergence of the great founders and synthesisers: Abū Ḥanīfa, master of the school of *ra'y* in canon law (d. 150/772); Abū Mikhāḍ, one of the first great Arab historians (*al-ḥabāriyyān*) (d. 157/773); al-Ru'āṣ, to whom the first work of grammar is attributed, 'Aṣim b. Bahdāl (d. 137/758), and Hamra, who, together with al-Kisā'i, established three of the seven canonical readings of the Qur'ān. Later, the generation of those who died in the years between 130 and 200/756-816 assumed the burden of recording, codifying and totalising the knowledge founded in the preceding period, so that the works which survive today belong to this generation of active disciples and totalisers: Abū Yūsuf (d. 182/798) and Muḥammad b. al-Ḥasan al-Shaybānī (d. 180/804) in law; Hishām b. Muḥammad al-Kalbī (d. 206/821), highly erudite, a genealogist and *ahādīḥ*, well-versed in

knowledge of the Arab patrimony which he worked increasingly at collecting and establishing; and finally al-Kisā'ī (d. 175/795), who was the supreme master of the grammatical school of Kūfa. This school collective opinion still claims to set up as a rival of that of Basra. It is regarded as more deeply rooted in the Arab environment, with a passion for anecdotes (*ghawā'idh*) and a more acute sense of poetry. Nevertheless, on examination, it is revealed as being a particularisation of the fundamental contribution of Basra, i.e. that of al-Khulīlī, master of everyone, although the role of al-Ru'ā'is deserves to be clarified. This being granted, al-Kisā'ī, like Sibawayh at Basra, engendered a line of grammarians marked out by al-Farrā', who is comparable to al-Akhlafash, and by Ibn al-Farābī, who may be compared with al-Mubarrad, the height of activity of these two last occurring around 350/964; the two of them achieved the totalisation of the earlier knowledge of the two schools. But already Baghdad, after having gathered to itself the greatest names of Kūfa and Basra for two generations, begins to give forth an eclectic tradition in all fields, digesting, surpassing and delivering to the Islamic world the admirable work of two centuries which had been produced in the two *misḡir*.

In the intellectual consciousness of contemporary Islam, that which is willingly remembered of the historical evolution of Kūfa, that by which it is largely known, is its school of grammar and its role as cradle of *Shi'ism*, perhaps because this is what particularises it the most in the last instance, and laid the foundations for its survival in the other. But the renewal of interest in the political and cultural history of ancient Islam will allow for the growth of a further consciousness of the role it assumed as a place of Arab settlement and immigration, as a centre of great political struggles and as a specifically Arab city which, along with Basra, established the basis and true style of the cultural scheme of Islam.

Bibliography: The most ancient sources on the history of Kūfa, consisting of monographs written by the *al-Balādhurī* of the 2nd/8th century, have entirely disappeared as such, but some more or less important fragments of them are to be found in the great well-known standard works which have derived from them the main part of their information. Let us cite first al-Haytham b. 'Adī, *Kutub Khayf al-Kūfa*, K. *Bulāṭ al-Kūfa*, K. *Kudāt al-Kūfa wa 'l-Basra*, K. *Fakhr al-Kūfa 'ala 'l-Basra*; Umar b. Shabba al-Basī, *Kutub al-Kūfa*, K. *Umdat al-Kūfa*; the well-known monographs of Abū Mikhnaṭ, resumed by al-Tabarī in particular, inform us of the main events but also indirectly of the topography. A manuscript attributed to Abū Mikhnaṭ exists at Berlin under the classification Spr. 126 and bears the number 9039 in Ahlwardt's catalogue, with the title *Kutub Khayf al-Mukhtār wa-lm Ziyād*; the present author has examined it and it appears to him apocryphal. Moreover, the later monographs have themselves also disappeared: that of Muḥammad b. 'Alī al-Nadījāt al-Asadī (*Kutub al-Kūfa*) and that of Muḥammad b. Dī'āfar b. al-Nadījāt (*Ta'rikh al-Kūfa*).

Great classical works: (a) Principal sources: Balādhurī, *Futūḥ al-bulān* and *Ansāb al-ashraf*; Tabarī; Ibn Sa'd, *Tabakāt*, vi, devoted to Kūfa; Ya'qūbī, *Ta'rikh* and especially *Bulāṭ*; Ibn al-Fakhrī, *Mukhtasar Kutub al-Bulāṭ*; Yāqūt, *Mu'djam al-bulāṭ*.—(b) addi-

tional sources these comprise the greater part of the works of history, geography, *adab*, law etc. The most useful are, apart from those which have been indicated in the body of the article: Naṣr b. Muḥāmm, *Waḥ'at Sijfā*; Dīnawarī, *al-Aḥkām al-ḥusnā*; Khulīfā b. Khayyāt, *Ta'rikh*, anonymous, *Ta'rikh al-'Adab wa-walad*, ed. Dūrī, and anonymous, *Ta'rikh al-ḥulafā'*, ed. Griyazevitch; Ibn Hāzīm, *Dīam-hara*, Ibn al-Kalbī, *Nasab*; Dhahabī, *Ta'rikh* and *Masān al-ḥudūd*, Iṣṭahīlī, *Aḥḥāl* and *Mahāṭil al-Tahbiyya*, Ibn al-Nadīm, *Fihrist*; Dī'āhiz, *Bayān*; Ibn Ḥabīb, *Muḥabbar*; al-Khāṭib al-Baḥdādī, *Ta'rikh Baḥdād*; all the classical works of geography and *adab*; amongst works of *fiqh*, in particular Abū Yūsuf, *Ḥisāb*, but also Abū 'Ubayd Ibn Sallām, *Kutub al-A'meṣ* and Kūfama b. Dī'āfar; the works of *Tabakāt* and *heraldography* are equally useful.—*Shi'ī* sources: Ibn Abī Ḥadīd, *Sharḥ Nahḍ al-balāḥ*; Kulaynī, *Kutub al-Kāfi*; al-Kaḥḥānī, *Aḥkām al-ḥudūd*, Bombay 1317; anonymous, *Muḥḥās-nama*, lith. Tehran 1351; Tabarsī Nūrī, *Nafas al-Rahmān*, lith. 1368, *al-Iḥdād*, Naḥal 1966; al-Barkī, *Ta'rikh al-Kūfa*, Naḥal 1960.—Studies: Nearly all that has been written by modern scholars on early Islam, the Umayyads, the development of Islamic culture, *Shi'ism*, is relevant to Kūfa. We refer the reader only to the studies relating specifically to Kūfa: Le Strange; L. Massingood, *Mission en Mésopotamie*, I, IFAO, Cairo 1920; idem, *Expédition de plan de Kūfa*, in *Mélanges Maspero*, ii, 337-60 (fundamental); idem, *Expédition du plan de Basra*, in *Westminster Abhandlungen* R. Gschudt, Wiesbaden 1954, 154-74; P. Pelliot, *Des attentes chinoises à la capitale arabe*, in *Tsing Pao* (1928-9); R. Guest, *A tablet in Kūfa from Kūfa*, in *JRAS* (1933); P. Watt, *Shi'ism under the Umayyads*, in *JRAS* (1960), 158-72; Muḥammad 'Alī Muḥḥāsī, *Tahvīr amwal 'an al-tanḥīb* fa 'l-Kūfa, in *Sumar*, x, xii, xiii (1934, 1935, 1937), with Bog. tr. in *Sumar*, xix (1963); Sīlīlī Ahmad al-Sāli, *Dīndā Tibuḥḥadīyya li-nāhiyat al-Kūfa*, in *Sumar*, xxi (1963); Mahdī al-Makhlūfī, *Madrāsāt al-Kūfa wa-mahdīyāt fi dīndā al-luḥa wa 'l-naḥa*, Baghdad 1955; Kāzīm al-Dī'ānabī, *Taḥḥīf madīnat al-Kūfa*, Baghdad 1957; Yūsuf Khulayf, *Hayāt al-ḥīf fi 'l-Kūfa*, Cairo 1968, Haykay al-Zuhaydī, *al-Hayāt al-ḥīf madīyya wa 'l-ḥīf*, Baghdad 1959; *li-Kūfa fi 'l-hār al-awwal al-ḥīf*, Baghdad 1970; M. Hinds, *Kūfa political alignments and their background in the mid-seventh century A.D.*, in *JMES*, li (1971), 346-67; M. A. Shaban, *Islamic history A.D. 600-750 (A.H. 132)*, a new interpretation, Cambridge 1971; 'Abd al-Atth al-Kayyad, *Ta'rikh al-Imamīyya wa-adīfahūn wa al-Sā'ī*, Beirut 1975; Hichem Djalil, *Les Yamānites à Kūfa au Ier siècle de l'Hégire*, in *JESHO*, xix/2 (1976), 148-81. (HICHAM DJALIL)

KUFRA, a group of oases in the Eastern Sahara in the Libyan Desert half-way between Cyrenaica and Wadai. For a long time it was known only from Robili's account, who managed to reach it in 1879. Subsequently, Kufra has been visited by two other Europeans, Maréchal des Logis Lapiere (1918) and Mrs. Rosita Forbes (1920-1). Their descriptions have been completed and corrected that of Robili.

The name Kufra applies to a number of oases

which stretch from the south-east to the north-west in a line about 300 km. long, between 24° and 26° N, 18° 40' and 22° 40' E. The most southerly oasis lies about 7,350 km. south-east of Tripoli and 900 km. south of Benghazi. There are five in all, and they are separated from each other by *sawir*, or plains of compressed gravel. The total area of the group amounts to about 17,842 km². It occupies the bottom of a depression which rises in altitude from 250 m. in the north to 460 m. in the south. The soil is generally formed from overlapping strata of marly sand in the northern area of the dunes which join those of the Libyan desert. In the central and southern parts, the depression is crossed by calcareous mountains which rise above a base of Numidian sandstone; their summits are table-shaped and similar to that of the *gûr* of the South Algerian Sahara.

There are neither springs or running water at Kufra, but everywhere the water-table rises to between one and three metres from the surface. At various points of the landscape the water forms brackish lagoons or even permanent lakes, of which the most imposing is 10 km. long. They can be regarded as the remains of an earlier situation when the lacustrine nature of the oasis was much more marked than it is to-day. The subterranean water is sufficient to support plentiful and varied vegetation. In the dried-out basins *hād* (*cornucopia monacantha*) and *als* grow, which provide excellent food for camels. Although the green belt around the lakes and marsh depressions is often very narrow, cereal crops are grown in it—wheat, *ghera* (*sorghum vulgare*), vegetables, plantations of fruit trees (olives, figs, oranges and lemons). The main source of wealth is the date palm. Among the fauna are gazelles, many species of bird (crow, falcon and stork) and reptiles such as lizards and non-poisonous snakes.

Almost the entire population belongs to the Zāwīya tribes, Arabised Berbers who took the place of the Tūba, the previous masters of the oases. Most of them are semi-nomadic and occupy only temporary encampments. The geographical position of Kufra gives it a certain commercial importance. It was a stopping place on the caravan route leading from Cyrenaica to Wadai and has been in use as such since the beginning of the 19th century. According to Muhammad al-Baḥā'ī, there was a market at Dīfī, where business was conducted by barter. As in all Saharan markets, the chief item of trade was slaves.

There is very little information on the history of Kufra. According to Rohlfs, it could have been inhabited by the Garamantes. Buildings there are comparable with some at Fazzān [q.v.] which Duveyrier pointed out and which seem to go back a considerable period in time. When its history began, the country was occupied by the Tūba, who left many traces of their stay from this period—cemeteries, houses and fortified villages built on the summits of mountains. The population of these places was pagan, and this may explain the origin of the name Kufra (*kafra*, pl. of *kāfir*, "infidel"), given to the region when they settled there. In about 1730 they were ousted by the Zāwīya and the Hassīna, tribes from Tripolitania, who took over their position. The last of the Tūba seem to have disappeared at the beginning of the 19th century. In the middle of that century the Samūsīyya [q.v.] appeared and built the *al-istā* of al-istā not far from the village of Dīfī. They appropriated the best ground and the richest gardens. At the time of Rohlfs' journey, they already owned a quarter of the palm trees in the

oasis and had begun new plantations. The *al-istā* of al-istā was already very important at this time, and it became the residence of the Grand Master of the brotherhood from the moment in 1895 when Sīdī al-Nahdī, son and successor of Sīdī Muḥammad al-Sanūsī, the founder of the order, left Dīghābūb [q.v.] to go and take up residence there.

Journal* (1921), 81-101; eadem, *The secret of Sahara: Kufra*, London 1921.

(G. YVER)

KUFĀS, Arabised form of Persian Kūfīs, a people inhabiting south eastern Persia, more exactly the Kirmān-western Balūčīstān region, in early mediaeval Islamic times.

The name, literally "mountain dwellers", probably stems ultimately from O. Pers. *akusafāya*—(< O. Pers. *amfā*: "mountain"), the name of a people in the Dāva inscription of Xerxes, who are mentioned together with the *mafiya* "men of Maki" (= Makrān, the coastal region of Balūčīstān?), via N. Pers. *kūfījīhīf* (cf. R. G. Kent, *Old Persian grammar*, *Leis*, *Leipzig*, New Haven 1953, 151, 263). In early Islamic sources, the Kūfīs are frequently linked with the Balūčīs in the alliterative phrase *Kūf u Balūč*, although it is clear that we are dealing here with two separate peoples (for the latter, see BALŪČISTĀN).

The Arabic and Persian geographical writers of the 4th/10th century (Iṣṭakhṛī, Ibn Hawkal, the *Ḥudūd al-'Alam*, etc.), mention the region of the Kūfīs as a mountainous one, lying to the south of the Dījabal Bāzī in eastern Kirmān, where dwelt the Balūč. *Grassy* *moor*, this region corresponded with the little-known one of Baghākard/Baghākardīa [q.v. in Suppl.] in modern Persia, i.e. the mountainous area lying to the east of Mināb and between the Dīra Mūrān depression on the north and the coastal plain of Makrān on the south. Whether the present-day Baghākardīs are descendants of the mediaeval Kūfīs is unclear and probably impossible to prove or disprove, in view of the dearth of historical, demographic and linguistic information on this remote corner of Persia; one can only remark that the two groups of dialects making up Baghākardī form a distinct Iranian language of its own, to be separated from New Persian on the one hand and Balūčī on the other.

The Islamic sources agree on stigmatising the Kūfīs on the 4th-5th/10th-11th centuries as a predatory people, nominally Muslim, but behaving with inhuman cruelty to the travellers and others whom they intercepted within the Daḡhl Lūt, into which they raided from their hill fastnesses; there is a classic description of their characteristic savagery in al-Mukaddasī (wrote ca. 375/983), 488-90, cf. Schwarz, *Iran im Mittelalter*, 263-5. The Būyīd amīr Mu'izz al-Dawla and his nephew 'Aḍud al-Dawla took draconian measures against the Kūfīs as they extended their rule eastwards from Fārs to Kirmān and put an end to the independent power in Kirmān of Muḥammad b. Iyās (see ILYĀSID). In 324/936 Mu'izz al-Dawla defeated the "chief of the Kūf and Balūč", 'Alī b. al-Zandī, at Dīlārd in the *sardīr* or mountainous zone of Kirmān, but had to leave him in control of the Kūfīs' mountain haunts.

Al Kūhīn left behind a *Fahrasa* [p.v.] called *Imād al-ḥawāʾi* 'I-tiḥād il maʿālī al-rūwāya wa 'l-inād' (Ms. Rabat, 514, ff. r-20), two commentaries on al-Bukhārī, *Minaḥ idhbiyya wa-mawāḥib idhbiyya* 'alā 'l-Ḍamī' al-Ṣaḥīḥ (Ms. Rabat, 34) and *Nawāfiḥ al-ward wa 'l-anhar wa 'l-mish al-wadī li-gharḥ ḥāḥir lardhami* Ṣaḥīḥ al-Bukhārī (Ms. Rabat, 893 D), and finally, a *Mustayal al-Ṣaḥīḥ al-mutaḥarrir wa-samir al-munir al-munfarid*, a selective gloss on the *Ṣaḥīḥ al-Aḡḡurāmīyya* of Ibn al-Aḡḡiba [p.v.], printed at Istanbul in 1315: "purely grammatical explanations are set aside, and only the allusive character is kept, in which the grammar is used to illustrate the process of the manifestation of divine light" (J. L. Michon, 282, cf. 115-19, where two passages from this work are translated).

One of this mystic's descendants, Hasan b. Muḥammad b. Kāsim b. Aḥmad b. 'Abd al-Kādir (b. 1195 in Cairo) is the author of the *Kutūb Tabakāt al-Ṣāḥibīyya al-kubrā*, published at Cairo in 1347/1938-8).

Michon, *Ōn 'Aḡiba at son Miṣṣāḥ*, Paris 1973, index. (Bn.)

KŪHISTĀN (r.) or **KUHISTĀN** is the arabized form of the Persian name Kūhīstān meaning a mountainous country (derived from *kūh*, "mountain" with the suffix *-istān*) and corresponds to the Arabic designation of *Ḍībāl*. As the Iranian plateau is very mountainous, we find many more or less extensive areas in it to which the name Kūhīstān has been given, as Yāqūt has already remarked (iv, 204). Many of these names have disappeared in course of time. Thus Karwīnī (ed. Wüstenfeld, 228) says that the term Kūhīstān is used for Media, which other geographers always call al-*Ḍībāl*. In the *Shāh-nāma* of Firdawsi we even find Kūhīstān used as the old name of Mā wad' al-Nahr (ed. Vullers, 331) but this is probably a case of erroneous identification made by Firdawsi himself (cf. also Vullers, *Lexicon*, s.v. *Kūh*).

The principal districts that are or have been called Kūhīstān are as follows:

r. **Kūhīstān-i Khurāsān**. This is the mountainous and partially arable region which stretches south of Nishāpūr as far as Sistān in the south-east. It is surrounded on all sides by the great salt desert of the Central Iranian plateau and consists of scattered groups of oases; one feature of its geographical unity is the fact that no part of it belongs to one of the great centres of civilisation that surround it. These are in the north Nishāpūr, in the north-east Herāt, in the south-east Sistān, in the south-west Kirmān with Yazd, and in the west Media. Although Kūhīstān has always been connected with these by caravan routes and is therefore not absolutely cut off, its isolated position, combined with the relatively low productivity of the soil, has caused it to be little-known and neglected and its inhabitants have usually been ruled by a member of independent tribes. If it has been reckoned a district of Khurāsān, this is only because Nishāpūr and Herāt are relatively the nearest places to it. Kūhīstān has therefore never been a very clear-cut geographical term; a modern traveller like Curzon, although he describes the different districts, does not even mention its name.

The orography of Kūhīstān is still little known.

The mountain chains which in the north run more east to west, assume the direction N.W.-S.E. as one moves southwards. These chains, which have passes rising to over 5,000 feet, enclose cultivated areas of which the principal are, beginning in the north: Turshiz and Turbat-i Haydarī [p.v.], now called Turbat-i Shāyikh Isḥāq, and to the east Ḍjām; next comes the district of *Ḍjūnābūd* (formerly *Yūnābūd*) and more to the east, that of *Kūh M* [p.v.] with the old town of Zawzān; then comes Tūn, with the district of Tabas on the west of it, which later extends so far to the west that in the Middle Ages it was not included in Kūhīstān; next come to the south of these, Kā'n and Bīrdjānd, to the south of which there are no more oases of any importance until we reach Sistān by the Nih route. The rivers of the region are of little importance, irrigation is done by canals and *kanāts*; Muḥaddasī, (322, reading of the Istanbul ms.) says that the only running stream he knows in Kūhīstān is near Tabas; the latter is also the only town which he includes, with the neighbouring district of Kūfī, in the *gyrum* or warm regions.

It is probable that various places in Kūhīstān have a history going back to pre-Islamic times, but so far we have no information on this period. To realise this, it is sufficient to glance at the second map given by Herfeld in his article *Khurasan: Denkmalsgeographische Studien zur Kulturgeschichte des Islams in Iran*, in *Isl.*, xi (1921), 107-74. The journey of this writer in 1925 confirmed his first impression. Moses of Chorene does not mention this region in his *Geography*. In the period of the early Arab conquests, we find Kūhīstān under the rule of the Hephthalites. Historians say that it was first conquered in the caliphate of 'Umar: by 'Abd Allāh b. Budayl al-Khuzā'ī; the latter setting out for Kirmān took al-Tabasayn—it is by this dual (for Tabas and Kūfī, according to al-Balāḍhūrī) that the Arabs always refer to the district of Tabas—later called the "two gates of Khurāsān" (Ṭabarī, i, 2704); a deputation of the inhabitants is said to have concluded a treaty with 'Umar (Balāḍhūrī, 403). In 31/653, when Ibn 'Amīr undertook the conquest of Khurāsān, his advance guard under al-Aḥnāl passed through Kūhīstān and defeated the Hephthalites there (Ṭabarī, i, 2885, and Balāḍhūrī, 403, who give other traditions also). In the years following, Kūhīstān was the centre of a great national revolt under a chief called Kārin (a village in Kūhīstān still bears this name), a rising which was put down by Ibn Khāzim (Ṭabarī, i, 2905; Marquart, *Iranische*, 133). In 51/672 it was again necessary to reconquer it; this was done by al-Rabī' b. Zayd from "the Turks" or rather Hephthalites (Ṭabarī, ii, 256). Henceforth Kūhīstān formed from the administrative point of view a part of Khurāsān, and more particularly of the provinces which the Arab geographers still call by the old name of *Abarshehr* with its capital Nishāpūr (cf. particularly Yāqūt, *Buldan*, 278, tr. Wiet, 84, who gives a rather limited definition to Kūhīstān, for he mentions al-Tabasayn, Ḍjām and Zawzān separately). These remote districts became in the early centuries of Islam the principal refuge of Zoroastrians driven from their homes by the new religion (cf. particularly, Inostrancev's work quoted in the Bibliography). In the 3rd/9th century the province was under the rule of the Tāhīrīds (Ibn Khurādādhbih, 35) and later of the Saffarīds. The Arab geographers of the 3rd-4th/9th-10th centuries know it very well. In this period Kā'n was the capital and the commercial centre of

Kūhistan, especially for through trade between Kirmān and Khurāsān. The province was further noted for a very fine linen woven there, which Abū Nuwās mentions under the name *Kūhiyya* (cf. *Dihliz, Bayān*, Cairo 1332, I, 79, and R. R. Sergeant, *Islamic textiles, material for a history up to the Mongol conquest*, Beirut 1972, 95-6); this industry flourished at Tūn in particular. Prayer-carpets also were made there. In the year 444/1052, Nāṣir-i Khurāsī passed through Kūhistan, going from Isfahān. He went by Tabas, Tūn, Kā'in and Sarāghs and describes them as large flourishing towns. In the time of the Sāliḡids, Kūhistan, the old asylum of the Zoroastrians, became a refuge for the Ismā'īlī heretics, who for this reason were often called *al-malūḡiyya al-ḡāhiyya*. They built here strongholds on the model of the famous citadel of Alamūt; there are still many ruins of these castles which have not yet been fully examined (Herzfeld, *Reisebericht*, 273; M. G. S. Hodgson, *The order of Assassins*, The Hague 1955, index; B. Lewis, *The Assassins, a radical sect in Islam*, London 1967, 44-5; P. R. E. Willey, *The Assassins in Qūhistan*, in *Jnal. Royal Central Asiatic Soc.*, IV [1968], 180-3). The Kh'warizmshāhs had on several occasions to send military expeditions to punish the *malūḡiyya* (cf. e.g. *Djūwaynī, Ta'rikh-i Dīnār-Gushā*, II, 47, 49). The coming of the Mongols, who exterminated the Ismā'īlīs, at the same time brought about the ruin of Kūhistan. The region lost all importance and the geographers—like Abū 'l-Fidā—only quote their predecessors of several centuries before. It is improbable that this is the district referred to by Marco Polo under the name of Tunacain, which Le Strange, *Lands*, 352 proposes to identify as Tūn-u Kā'in. During the following centuries the region must have very often been in a state of anarchy (cf. Idrisi, *tr. Jaubert*, I, 430) when power was in the hands of chiefs of Arab origin. The Ṣafawids exercised some authority there, but after them, power lay in the hands of the amirs of Tabas and Kā'in. At this time, Kūhistan inclined towards Afghanistan rather than Persia, until the Kāḡjars succeeded in bringing it under their sway towards the middle of the 19th century. The chiefs of the ruling families kept their positions as governors for the Shāh and received pompous titles from the Persian court. About 1900 the amirs of Kā'in no longer lived in this town but in Bīrdjānd, they claim descent from the Arab tribe of Khuzayma. Some members of this family also ruled Sīstān. The rulers of Tabas also governed at this time the district of Dīnābād (chief town Dīnāya).

The settled population of Kūhistan is of a very ancient stock; their houses are also of a very archaic type. Their dialect seems to offer few peculiarities. Ivanov distinguishes in Kūhistan the dialect groups of Turshik and Dīnābād and that of Kā'in, Tūn and Bīrdjānd. Many villages around Kā'in and Bīrdjānd are inhabited exclusively by *sayyids*. In some places we also find descendants of the Ismā'īlīs, who recognise the authority of the Agha Khān, e.g. at Kā'in and Bīrdjānd. There are also small colonies of Bahā'īs, while the Sunnī Afghan element is relatively strong. The nomads are for the most part Arab Sunnīs, still speaking Arabic; they live along the main routes, and include the Khuzaymas, from whom came the amirs of Kā'in. A few Turkish tribes are found only in the north as far as Turbat-i Haydarī. Finally, in the south there are Balūḡīs, who move in summer towards Sīstān.

Kūhistan has never in its history contained any major urban centres comparable to those of northern

and eastern Khurāsān; when Sykes was there in 1900, Kā'in had only ca. 4,000 inhabitants. This may be one reason why the region (with the exception of the more northerly part, around Zawān, see *ḡḡ'ār*) did not in earlier times produce such an abundance of 'Islamic' and scholars as the other cities of Khurāsān. However, Storey, *Persian literature*, I, 923, mentions a modern *Taghā'ira-yi ḡḡ'ār*; *Kā'in* by one *Divā' al-Dīn Kā'in* on some poems of Kā'ināt and Bīrdjānd, and in mediaeval times we find Ṭā'ālībī mentioning poets with the asse of 'al-Kā'inī', e.g. the Abū Manṣūr Kāsim b. Ibrāhīm al-Kā'inī in *Taṣnīf al-yafīna*, ed. Eghbal, II, 45. Bīrdjānd has in recent times been the most important town, even though it lies in a less fertile situation than the smaller Kā'in. Administratively, much of Kūhistan falls today within the *shahrastān* of Bīrdjānd, in the 9th *ustān* or province of Khurāsān, and within this *shahrastān* or district there is *baghā* or sub-district of the same name (pop. in 1958, 43,4009) and a further *baghā* of Kā'in (pop. in 1950, 65,000). The products of the region include some cereals, such as wheat and barley, opium, silk and saffron, and there is carpet-weaving and camel-taming.

2. The Arab geographers appear to have known two towns of the same Kūhistan in the province of Kirmān. One of them was called Kūhistan Abi ḡhūnim and was in the district of Djūrat, between this town and the Djabal al-Kūf (Mukaddasī, 52, 461, 467; *Hudūd al-'ālam*, tr. 65, 154, *comm.* 374-5; Yāqūt, iv, 206; Le Strange, 318). The other Kūhistan was situated on the road from Sīrdjān to Bān, 6 *farasāḡ* from the former town (Ibn Kaurādā'ibih, 66; Kūdhāna, 196; Mukaddasī, 473; Le Strange, 311).

3. Kūhistan al-Kābul in Afghanistan is a district to the north-east of the town of Kābul and includes the districts of Pandjshir, Nigīran, Tāgan, etc. The population is composed of an element called Tāḡīkī,

who speak Persian and Pashto, and other elements called Kūhīstānī who speak Pashto (a Dardic dialect, see DARDIC and KĀRIM LANGUAGES) and Parāči (Iranian) (cf. *Imperial gazetteer of India*, xiv, 242).

4. The northern part of the native state of Swāt in the north-west of India is also called Kūhīstān. It is the mountainous region around the upper course of the river Swāt; it stretches eastwards as far as the Indus and westwards as far as Pandjhora so that a distinction is sometimes made between Kūhīstān of Swāt and Kūhīstān of Pandjhora. The people of the valleys (estimated to number 20,000) have suffered since the 9th/15th century from Afghan invasions. Under the rule of the Afghans they became very zealous Sunnī Muslims; the religious chiefs (*akhs*) have had an enormous influence in the country. Another consequence of the Afghan invasions has been the expansion of Pashto all over the country. This language has gained ground at the expense of the old local dialects. The latter—to which the general name of Kūhīstānī is given—are very numerous and belong to the Dardic group which, according to the researchs of Morgenstierne, seems to belong to the Indian group of dialects. The principal dialects are, Gharī (Swāt Kūh), Tōrwāl (Swāt and Pandjhora Kūh) and Mayyā (Leder Kūh).

Morgenstierne, *Report on a linguistic mission to Afghanistan*, Oslo 1926, *Institut for sammenhengende Kulturforskning*, series C, 2-2; idem, in DARDIC and KĀRIM LANGUAGES.

5. Lastly, Kūhīstān is the name of a barren and mountainous region in the eastern part of the district of Karāči. The population in 1901 was estimated at 12,877 (*Imperial gazetteer of India*, xv, 353).

(J. H. KRAMERS*)

AL-KUHL, traditionally translated as antimony sulphide (*sifnī*), is synonymous in the Arabic and Persian geographical sources with *ishmīd* and *surma*. Its primary source was Iran, where the following places were noted for its production: in Khūzistān, Tūs (*Hudūd al-'Ālam*, ed. M. Sütudā, i, 1 and comm. V. Minorsky, § 23.11—*surma*), and Gōzgan (*Hudūd al-'Ālam*, § 23.31—*sang-i surma*); in Māzandarān, Sāmān near Sarī (*Hudūd al-'Ālam*, § 32.23—*surma*) and Tābaristān (Ibn Isfandiār, *Tuḥfah-i Tābaristān*, i, E. G. Browne, 33—*surma*); and in Dīlīb province, Mt. Damāvand (Abū Dulaf, *al-Risāla al-ḥishmīya*, ed. V. Minorsky, § 32—*kuhl*) and Isfahān (Ibn Rustā, *al-A'fāq al-nafīsa*, 136—*ishmīd*; al-Iṣṭakhri, *Masālik al-mamālik*, 203; Ibn Hawqāl, *Suṭat al-ard*, ed. Kramers, 372; al-Mukaddasī, *Aḥsan al-ahkām*, 397; al-Tha'alibī, *Lad'iy al-ma'arīf*, ed. de Jong 110, i, Bosworth, *The Book of curious and entertaining information*, Edinburgh 1968, 428; al-Dīlībī, *al-Tabaṣṣur bi ṭ-ṭifāṣira*, ed. H. H. 'Abd al-Wahhāb, in *RAAD*, xli (1932), 343—*kuhl*; al-Karwīnī, *'Aghā'ib al-maḥallāt*, ed. Wüstenfeld, ii, 220—*ishmīd*). Modern geological surveys record only three sources of antimony in Iran—at Patyār (7 miles east of Anīrak), at Turkmanī (23 miles south-east of Anīrak), and at Shārah (100 miles north-west of Bīrdjān) (G. Ladame, *Les ressources métallifères de l'Iran*, in *Schweizerische mineralogische und petrographische Mitteilungen*, xiv [1945], 189-92; J. V. Harrison, in *Cambridge history of Iran*, i, Cambridge 1968, 312-13, fig. 119). None of these, it should be noted, are near the sites listed above.

A study of the words *al-kuhl*, *surma* and *ishmīd* indicates that the substance was in fact only rarely antimony sulphide. *Al-kuhl* was used in two different ways in mediaeval Arabic and Persian texts. First of all, it was used as a general term for any eye cosmetic. Such eye cosmetics were prepared from numerous different substances and would have had quite different colorations, as is made clear for example in the *Lapidary* of Pseudo-Aristotle (ed. J. Ruska, *Das Steinbuch des Aristoteles*, §§ 12, 12, 32) where turquoise, lapis lazuli and *lāḥḥā* (zinc oxide) are mentioned as ingredients of *al-kuhl*, and al-Kazwīnī and al-Dimashqī also note a variety of stones and other substances which could be included (e.g. al-Kazwīnī, ii, 229-34). The word *kuhl* was still used in this way in the last century—for example, Sanguinetti (*Quelques chapitres de médecine et de la thérapeutique arabe*, in *JA* [1866], 320-1) gives the constituents of three types of *kuhl*—*kuhl aghbar*, *kuhl asfar* and *kuhl 'azir*, the latter being composed of eleven different substances.

Al-kuhl was also used, however, to indicate a particular substance, as for example when al-Iṣṭakhri records a mine of *al-kuhl* at Isfahān, and an interesting story in this connection is related by al-Tha'alibī (*loc. cit.*). He writes that al-Ḥadḡḡī is reported to have given one of his special followers the provincial governorship of Isfahān with the words, "I make you governor of the area of which the stone is *al-kuhl*", and adds that Isfahān was called in these terms because the *kuhl* stone there was of such excellent quality. *Al-kuhl* in these instances was something more specific than eye cosmetics in general, i.e. it was a particular substance, mineral or metal.

The equating of *al-kuhl* in this latter sense with *ishmīd* and *surma* is evident from such passages as al-Kazwīnī, i, 210, and Abu Ṭ-Kāsim Kāshānī, *Arā'is al-ghawāhir wa naḥḥīs al-nahyab*, Tehran 1343/1966, 169, and the sources are unanimous in associating the substance with lead. This is the evidence of Pseudo-Aristotle, § 32 and al-Ḥamdānī, *Kutub al-ḥaykarah*, al-ṭaḥṭatayn, ed. C. Toll, fols. 212, 213, the latter identifying *ishmīd* with the ore from which silver came i.e. lead ore. Al-Ḥamdānī, it should be noted, had a great deal of first-hand experience of metallurgy. Equally confirmatory is the evidence of al-Khwarazmī, ed. E. Wiedemann, *Beiträge*, xiv, in *SPMSE* (1911), 93, and Kāshānī, 190, 344. It therefore seems reasonable to assert that the *kuhl* mined at Isfahān was a lead mineral (Ibn Rustā, 157, says that Isfahān produced lead as well as *ishmīd*), and to suggest that where *kuhl* in the literary sources indicates a naturally-occurring substance as opposed to an artificially-made compound, it almost certainly refers to a lead mineral too. In this connection it should be noted that while it had generally been assumed that eye-paint in ancient Egypt had an antimony base, A. Lucas (*Ancient Egyptian materials and industries*, revised by J. R. Harris, 1962, 195-9) showed by analysis that it in fact consisted of galena, pyrolusite, brown ochre or malachite, and only in one instance, of antimony sulphide.

As a cosmetic, *al-kuhl* was ground as fine as possible and then used by women to dye their eyebrows and eyelashes or the edges of the lids. The cosmetic was applied by means of a small probe or stick with a rounded end called a *mirwad*, and was kept in a small vessel called a *muḥḥāda* (E. W. Lane, *Manners and customs of the modern Egyptians*, 1934, 37-8); in mediaeval times, the sticks were commonly

of bronze and the vessels of glass, and a special object known in *Khurāsān* as *waswas-dīghā* was used for grinding the substance and pouring it into the narrow-necked vessels (for such an object, see G. Fehérvári, *Islamic metalwork in the Kair collection*, London 1976, no. 28, and numerous similar pieces elsewhere).

Al-kuhl also had a specifically medical function as an eye ointment, particulars of which are to be found in Ibn al-Bayṭār and other such writers. From this function comes the idea of *al-kuhlāḥ*, ophthalmitis [see 'AVN].

Al-kuhl is also the origin of our word alcohol. From a fine powder used to stain the eyelids, it came by extension to mean any fine irripalpable powder produced by trituration or sublimation, and hence was applied to fluids of the idea of sublimation—an essence, quintessence or "spirit" obtained by distillation or rectification. Sublimation and the distillation of drugs was known to *Khakīd b. 'Abbās al-Zahrāwī* (Abulcasis) in the late 4th/10th century, but the more complicated process needed for the production of alcohol was probably introduced into the Islamic world from Europe, where it was first discovered in the 12th century. [For a description of the preparation of arak in 10th/16th century Mughal India, see Abu 'l-Faḍl 'Alāmi, *Ṭarīḥ-i Akbarī*, tr. H. Blochmann and H. S. Jarrett, Calcutta 1893, I, 69].

Bibliography: the continued publication of previously unknown scientific or semi-scientific texts such as those of al-Ḥamdānī and Abu 'l-Kāsim Kāshānī means that the works cited in the article on *al-kuhl* in *ET* have become outdated, but no detailed work on *al-kuhl* has since been published. The reader is referred to E. O. Lippmann, *Entstehung und Ausbreitung der Alchemie*, Berlin 1919, and to the works of Wiedemann, *Beiträge* xxv, 93, 99; xxv, 228-9; xl, 176, 186, in *SPMSE*, 1911, 1914, and H. E. Stapleton, *Chemistry in 'Irāq and Persia in the tenth century*, in *Memoirs of the Asiatic Society in Bengal*, viii, no. 6, 352, 372; but is advisable to read them in conjunction with all the information now available in the Arabic or Persian texts cited above. Additional information is to be found in other geographical texts, in works on pharmacology, and in semi-scientific texts such as Nasir al-Dīn Tūsī, *Tanzīh-nāmā-yi 'Ilkhānā*, Tehrān 1348/1969. Much material is also to be found in *WEAS*, I, 73 f.

(E. WIEDEMANN · [J. W. ALLAN])

KUHRŪD, Arabic form of Persian *Kōhrūd* "mountain river", a village to western Persia on the summer caravan route between Kāshān and Isfahān [g.v.]. In mediaeval times it fell within the province of Dīlbal, and Hamd Allāh Mustawfī, *Nuḥṣat al-kulūd*, fr. 184, places it some 8 *farsakh*s from Kāshān, i.e. 27 miles/45 km. from the latter town; cf. also Schwarz, *Iran im Mittelalter*, 929 n. 16. Today, Kūhrūd falls administratively in the *bakhsh* of Kāmsār, in the *shahristān* of Kāshān, in the second *astān* or central province of Iran, see *Fārs-nāma-yi 'Aghshāyān*, in *Iran*, iii, 218-19. It lies in the mountains on the slopes of a cultivated valley, and the agreeableness of its climate in summer has been commented upon by numerous European travellers, from Chardin onwards, who have passed through it. E. G. Browne was there in 1898 and collected specimens of the distinctive dialect of the Kūhrūd Nāṭas district, see his *A year amongst the Persians*, Cambridge 1926, 203-8.

Kūhrūd is apparently unmentioned by the earlier Arab and Persian geographers, until Mustawfī

(8th/14th century) comments upon it and upon the fact that the river of Kūhrūd supplied Kāshān with some of its water (op. cit., tr. 72); this river was dammed in Safawid times by the Band-i Kūhrūd in order to assure a supply for Kāshān during the summer months, see Browne, op. cit., 202-3. Its monuments comprise a Safawid caravanserai and two 8th/14th century mosques, one apparently the Shi' mosque and the other possibly that of the Sunni villagers; for these, see O. Watson, *The Masjid-i 'Aḥ, Kūhrūd: an architectural and epigraphic survey*, in *Iran. Jnal. of the British Inst. of Persian Studies*, xli (1975), 59-74. The mountains of the Kūhrūd district produce lead and cobalt, and the village may accordingly have had connections with the great ceramics centre of Kāshān; see Hans Wulff, *The traditional crafts of Persia*, Cambridge, Mass. 1966, 165.

Bibliography: given in the article.

(C. E. BOSWORTH)

KÜKAWA, or **KÜKA**, capital of Bornū [g.v.] for much of the 19th century, situated at 12° 55' N. and 13° 30' E. It was founded about 1814 by al-Ḥajjī Muhammad al-Amīn b. Muhammad al-Kānīmī [see AL-KĀNĪMĪ], better known as Shaykh, or Shehu, al-Kānīmī. He was a Kanembu madām [g.v.], who had established himself at Ngala, south of Lake Chad. In 1808 or 1809 Fulani forces, linked with the *ghilāf* of Usmanu dan Fodio [g.v.], occupied and ravaged Birni Gazargamu [g.v.], then the capital of Bornū. The Bornū ruler, or *mai* [g.v.], called upon al-Kānīmī's help. The city changed hands several times but, although eventually the Fulani were conclusively expelled, Gazargamu never became the capital again. Mai Dunama wandered about, earning the derisive title "mai of the calabash" (a significant item of luggage) for his much travelling. Al-Kānīmī received the chief of Ngornu, northwest of Ngala but still far from Gazargamu, for services rendered. Dunama was deposed by his uncle, Muhammad Ngileruma, who established a new capital, Birni Kafela, very near Ngornu. About 1813 al-Kānīmī's power had so much grown that he was able to depose Muhammad, and to reinstate Dunama, keeping however Kafela as the *mai*'s official capital. With Gazargamu abandoned, Kafela very much in the shadow of al-Kānīmī, and al-Kānīmī himself somewhat at odds with local leaders in his own chief of Ngornu, there was no obvious centre of power in Bornū. About 1814 al-Kānīmī decided to leave Ngornu, and built a new town, Kūka, again somewhat to the northwest, nine miles from Lake Chad. The name comes from the Kanuri [g.v.] word for baobab (*Adansonia digitata*) tree, one of which was growing on or near the site of al-Kānīmī's own future dwelling.

For the next thirty years, an uneasy balance existed between the legitimate dynasty at Kafela, and the *shehu*'s one at Kūka. In 1827 (Barth) or 1820 (Brenner) a Bagirmi [g.v.] force invaded Bornū, intending to oust al-Kānīmī and restore to the *mai* his traditional powers; the plan failed and the *mai* was killed. Schultze (p. 257) mentions a sack of Kūka by the invaders at this time, but this is not confirmed in other sources. Al-Kānīmī struck his own seal, dated 1839-40, but still continued to preserve a figurehead *mai*. Al-Kānīmī died in 1837; the hitherto generally accepted date, 1835, seems almost certainly disproved by manuscript evidence. He was succeeded by his son 'Umar [g.v.], under whom Kūka continued to become increasingly the seat of all real power. In 1846 Wadai [g.v.] was invaded,

with the intention of removing Shehu 'Umar and re-establishing the *mar*. Kūka was partially destroyed, and for two months lay almost a desert; but again the plan miscarried. The *mai* was executed; after his son was killed in battle some months later, no new *mai* was appointed, 'Umar openly asserting that sovereignty which he and his father had long enjoyed in fact. Kūka was now the official, as well as the actual, capital of Bornu.

As, in the period after 1814, power came more and more to centre upon Kūka, the essential pattern of government—in essence, through *fiets* ruled by courtiers—did not change, although there was greater centralisation than in the old days at Gazargamu. The Kūka court was characterised by relative informality, lack of splendour, and a certain religious simplicity, in contrast to the elaborate, and increasingly hollow, ceremonial at Kafela. Yūsuf b. 'Abd al-Kādir, son of a former imam at Gazargamu, was appointed *imām* of the Kūka mosque, and presided over all religious festivals. Minor legal matters, such as divorce and inheritance, were handled by *fiets* appointed by al-Kādir; serious crimes and capital cases were referred to al-Kādir himself, and his six principal companions. After 1846, ceremonial tended to increase, and the number of courtiers and noblemen grew larger. With the challenge from Kafela removed, and with an ever-farger number of people competing for wealth and rewards which were no longer expanding sufficiently rapidly, divisive forces appeared within Kūka itself; 'Umar, a pious and aimable man, was also irresolute and weak, unable to maintain his father's firm control of the city and the state.

After the Wadai sack in 1846, Kūka was rebuilt, but a new town was added to the east, and into this quarter the political leaders moved. The *shehu's* main palace was in the east town, although that in the west town was refurbished, and the *shehu* visited it from time to time, particularly at religious festivals. The west town, i.e. the original Kūka, became the residential area of non-titled families, and foreign merchants; it had the larger population. Each town was walled separately. (Kūkawa is a plural form: there were in fact two Kūka towns). The wall of the eastern town, in 1870, was crenellated, about 20 feet high, made of clay and gravel, with terraces on the inner side; during the rains, the upper and thinner part of the wall began to disintegrate, and goats grazed on the terraces. The space between the two towns was almost as densely built up as the towns themselves, and there were in addition many huts, farms and hamlets round about. Nachtigal, who arrived on 6 July 1870, estimated the double town as about 2 1/4 miles long and 1 mile broad. A *danda*, or promenade (Barth called it "this high road of ambition"), a standard feature of Kanuri towns but here on a much extended scale, started at the west gate of the west town, and ran straight on, across the intervening space, and two-thirds of the way through the east town, until it came to the *shehu's* main palace, which was distinguished by an upper storey and some towerlike elevations. Before the palace, a little to the north, a low minaret overlocked the boundary wall of a complex of houses and huts, identifying them as a mosque. The usual dwelling consisted of a considerable area, in which were huts of thatch, and cubical earthen buildings usually of one room; as much as three-quarters of the total area might be of courtyard and unroofed enclosures, including gardens and stable yards. The general architectural appearance of the city was dispiriting;

the outer walls, at a distance, could hardly be distinguished from the surrounding ground, whilst within, the roads and paths were generally lined by the windowless walls of adjoining compounds. Some trees, and an unusually abundant bird life, refreshed the eye of the visitor.

Daily markets were held in various parts of Kūkawa, but the main market took place on Mondays, outside the westernmost gate. Although this was often very crowded, and shopping there difficult because of the press of customers, the people were generally orderly. Among the goods offered for sale were livestock (camels, horses (both riding and draft), cattle, donkeys, goats, sheep and fowls), cloth and clothing of all kinds, foodstuffs (various grains and meats, honey, milk, butter, dried fish, vegetables, fruit, nutron), cooking and eating utensils, leather goods, basketware, carpentry and metalwork, weapons, even boats, firewood, fodder, charcoal, building materials (mats, poles, etc.), rope, and other commodities. Slaves formed an important element in market transactions, with prices for a *sedasi* (a boy measuring six spans from the ankle to the top of the head, aged 12 to 15) indicating the general tone of the slave market. Special slaves, such as eunuchs, dwarfs, deaf-mutes and concubines, were generally sold privately, as were the best quality horses, and not on the open market. Major imports from Europe and North Africa about 1870 were coins (both cheap and of luxury quality), women's ornaments, rosaries, aromatics, tarbushes, paper, guns, swords and sabres (although weapons were also manufactured locally), chain mail, needles, scissors, knives and razors; principal exports northwards were slaves, ivory and ostrich leathers. Barth in 1851 was very critical of the lack of local industry in Kūkawa; there seems to have been a considerable improvement by the early 1870s, when also a greater variety of goods is reported on the market, and the use of currency (cowries, strips of cloth, Maria Theresa dollars) seems to have won a wider acceptance. Trade with North Africa was at this time being inconvenienced by the extreme unreliability, in any commercial contracts, of most of the Kūkawa nobility. Kūkawa did not profit much from modern trade patterns developing to the south. In 1891 Charles Macintosh, of the Royal Niger Company, visited the city in search of a trade treaty, but the North African community there persuaded the Shehu, Hāshim b. 'Umar, to refuse his presents and send him away.

The population of Kūkawa was probably about 60,000 during its heyday. There were a considerable number of Kur'ānic scholars and teachers, and many blind beggars; *ghura'a* came from Morocco and the *harāman*, pious men from Egypt and Tunis, Timbuktu and Senegal, pilgrims from the western Sahara and the Hausa and Fulani countries, all more or less attracted by the reputation for open-handed generosity which Shehu 'Umar in particular enjoyed.

The downfall of Kūkawa was at the hand of Rābīh [q.v.], a *mai* of eastern Sudanese origin. Probably early in 1893, although precise dating of these events is extremely difficult, Rābīh and his army, moving westwards, occupied Logone, a vassal state under Bornu. In two battles, at Amja and Legarwa, the Bornu forces vainly tried to defeat Rābīh; after the second defeat, organised Bornu resistance collapsed. Shehu Hāshim had been present at the second battle, though taking no active part, he fled to Kūkawa, and abandoned it within a few days, at Rābīh's approach. Rābīh occupied the town, sometime in 1893, without a struggle. What hap-

pened next is uncertain; some authorities report the ruthless pillaging of the capital, with several thousands of people killed or captured, while others argue that the violence was much more restrained. Certainly an immense booty was captured. Readings from the Kur'an were among the festivities celebrating the victory. Shortly after the conquest, Rābiḥ decided to move the capital to Dikwa, an older town of strategic importance, where water supplies were better and grain more accessible. Kökawa was partly demolished, and everything which could not be carried away was burnt. Only the tombs of the Shehu, where Rābiḥ himself had prayed, were respected.

In 1902, the British installed Bukar Garbai, a grandson of Umar, as Shehu, first at Mongon 17 miles south of Kökawa, but with the explicit intention of reoccupying Kökawa. Attempts to revitalise the desolate capital failed, and at the end of 1906 both the British administration and the traditional Borāḥ administration were definitively established at Nalguguri. In 1927 Kökawa was reported to be no more than a mass of ruins, and a small hamlet. By 1975 it had so far recovered as to be a thriving little town, and an administrative District Headquarters. The graves of al-Kināni, Umar, and their two immediate successors are still revered, and a baobab tree, said to replace the one from which the town first took its name, is preserved as an historical monument.

Bibliography: Denham and Clapperton, *Narrative of travels*, London 1828, reprinted in the Hakluyt series, vols. II-IV of the group entitled *Missions to the Niger*, ed. E. W. Bovill, 1966; H. Barth, *Travels and discoveries in north and central Africa*, originally published in five volumes in 1857-8, but the most accessible edition today is probably the complete, three-volume reprint done in London in 1965; G. Rohlfs, *Quer durch Afrika*, Leipzig 1874; G. Nachtigal, *Sahara und Sudan*, by far the fullest and most valuable account of Kökawa (originally published in 1879-80; reprinted in 1967); a complete, four-volume English translation, published by Christopher Hurst in London, is in progress; C. KUL, an old Turkish word which came, in Islamic times, to mean "slave boy, male slave", defined by Mahmūd Kāshgharī, *Divān lughat al-Turk*, ed. Kiliši Rifat Bilge, I, 282, tr. Atalay, I, 336-7, as *ʿabd*. However, the original meaning of *kul* in Orkhon Turkish was rather "servant, vassal, dependent" (the masculine counterpart of *kūn* "female servant, etc.", the two words being linked in the Kültegin inscription, text references in Tahit Tekin, *A grammar of Orkhon Turkish*, Bloomington, Ind. 1966, 347), since slavery in the Islamic juridical sense did not exist among the ancient Turks.

The word spread through the northern tier of the Islamic world as the Turks became Islamised and entered the Iranian lands and beyond, passing into Persian, Kurdish, Caucasian languages, etc., and used both in a religious sense "slave [of God]" and above all in military contexts, since Turks became so omnipresent as military slaves. Under the Ottomans, *kullar* became the standard designation for the

Janissaries [see *verit* ʿḥar], and under the Ottomans and the Persian Safawids alike, the latter with their Turkish, Georgian and other slave troops, we find the title *kullar agha* given to the commander-in-chief of the sovereign's slave forces [see *ghulām*, IV and *onmā*]. An extension of the religious usage of the word may also be seen in such names, common in Safavid Persia and in neighbouring states influenced by it, with *kul* as a component, e.g. 'All-kull, Shāh-kull, Yazdār-kull; see further *TAĞAS V*.

KUL MUSTAFĀ, called **KAYIKÇI**, 17th/18th century Turkish folk poet of Janissary origin. His nickname *Kayikçi* ("The Boatman") seems to have originated from his association in his youth with the corsair, later admiral, Turghud Re'is [q.v.] in Algeria. His narrative or epic poems on contemporary important events became very popular in the army and at court, and his fame lies more in these than in his less attractive lyrics. Among his famous narrative poems, the most notable concern the assassination of 'Othmān II by the Janissaries; Shāh 'Abbās's conquest of Baghdad; Murād IV's siege of Baghdad; the revolt of Abasa Hasan Paḡha, the governor of Aleppo; and particularly, the epic of Genç 'Othmān, a young hero who is drowned in the Tigris during the siege of Baghdad. *Kul Mustafā*'s style and language are in the true tradition of folk poets, and are very little influenced by *divān* poetry.

KÖLA, a town in western Anatolia, classical Opesum. It lies on the margin of a fertile plain, a few miles south of the upper course of the Gediz river and to the north of the main Manisa-Uşak road, in lat. 38°33' north and long. 28°40' east and at an altitude of 2,140 feet/652 m. it is in a volcanic area (classical Katakakoumene or Combusta), with the extinct volcano Karadavrit north-east of the town; hence many of the houses are built from dark basalt. There are numerous marble remains from classical times, but the citadel, apparently late mediaeval, is ruinous.

Köla came within the lands of the Turkmān beylik of the Germiyan-ghallārī (q.v.), and was conquered by Mehmed Germiyan (ca. 741-63/1340-61), and after his son Süleymān Shāh Celebi (ca. 765-90/1363-98) had given Kāthaya and several others of his towns to the Ottoman Bayezid I Yildirim as dowry for his daughter Dövlēt Khāṭūn, he himself went to Köla to reside and died there. In the *Taḡ māsfiyye* at Kāthaya of Ya'kūb Celebi b. Süleymān Shāh (511/1111), the name of Köla is rendered as *كولای*. In Ottoman times, Köla fell within the sanjak of Sarakḥin, whose capital was Manisa [q.v.]. Ewhya Celebi mentions there 9 quarters, 2,500 households, 24 mosques, 3 baths, 6 caravanserais and 200 shops. In recent times, carpet-weaving has been a significant local craft, and it is now a centre for vice-making. Cusnet (ca. 1890) recorded 6,200 inhabitants, of whom 5,655 were Muslims and 345 Greeks, together with 30 mosques and two Greek Orthodox churches. In 1950, Köla's population was 8,600, whilst the ham of which it was the chief-lieu had one of 38,242 and

was composed of 62 villages. It is now the chief-lieu of an *ilā* (formerly *Assa*) in the *il* (formerly *vīlayat*) of Manisa. In 1975 the population was 10,807.

(C. E. Bosworth)

KŪLAM, the name given in mediaeval Arabic geographical and travel literature to the port of Quilon at the southern extremity of the Malabar coast of southwestern peninsular South India, in ancient and modern Kerala (lat. 8° 53' N. and long. 76° 36' E.).

Quilon early became a centre of the St. Thomas Christians of South India, and is mentioned in a letter of the Nestorian Patriarch Ishūʿyāb of Adiabene (d. 660) to Simon, Metropolitan of Firs, under the name of Colon and as lacking at that time a settled ministry (Assemanus, *Bibliotheca orientalis*, 111/2, Rome 1728, 437). The first mention of the place in the Islamic sources appears to be that of the *Al-Bihar al-Sin wa'l-Hind* [q.v. in Suppl.] (237/851), which mentions "Kūlam of Malay" (this latter component being generally written in later Arabic sources, e.g. Ibn Baṭṭūṭa, as "al-Malaybār", yielding the name "Malabar", possibly meaning in the local tongue "billy coastland"). It describes Kūlam as a fortified point where Chinese junky plying towards Atabla had to pay a transit due of 1,000 *dirhams* per ship to the local ruler [J. Sauvaget, *Relation de la Chine et de l'Inde*, Paris 1946, text § 24, comm. 42-3, 69]. Zakariyyā' b. Muḥammad al-Kāẓimī, in his *Āl-kābir al-bāḥid* (Beirut 1380/1960, 55, 106), quotes Abū Dulaf al-Kharrāḡī [q.v.], so the latter's *First Risāla*, on Kūlam, and he and other sources mention such exports from it to the Islamic world as locally-produced porcelain (which was not, however, as fine and translucent as the genuine Chinese porcelain), pepper, cinnamon, ginger, teak, brazil-wood, indigo, etc. In regard to the important export of pepper, we sometimes find Arabic authors (e.g. Abū ʿIḍā) referring to the whole Malabar coast as *Bilād al-fuḥḥ* "Land of pepper". See on the Arab trade to Kūlam and beyond in general, G. P. Hourani, *Arab seafaring in the Indian Ocean in ancient and early mediaeval times*, Princeton 1951, 70-4.

The Jewish traveller Benjamin of Tudela visited Quilon, as did several western ecclesiastical envoys to the Far East in the Mongol period, such as Odoric of Pordenone (translated in Sir Henry Yule, *Cathay and the way thither*, London 1913-16, II, 129-30) and John of Monte Corvino; the latter mentions that at that time, i.e. the end of the 13th century, the Chinese, Christian and Jewish traders there were being pushed out by the Muslims. Around this time also, Marco Polo visited what he calls Conlun, describing it as an independent city-state (Book III, ch. 22 — *The book of Ser Marco Polo*, tr. Yule and Cordier, London 1903, II, 375-82; cf. P. Pelliot, *Notes on Marco Polo*, I, 399-401).

To Ibn Baṭṭūṭa (*Riḥla*, IV, 99-104, cf. Yule, *Cathay and the way thither*, IV, 79) we owe an especially valuable account of Kūlam in the first half of the 14th/15th century, with important information about its Muslim mercantile community. Whilst on his visit there, he stayed in the *Sūfi ḥaḍīra* of Shaykh Fakhr al-Dīn Kāẓarūnī, whose father was *ḥaḍīra* of another *ḥaḍīra* in nearby Calicut/Kalikāt [q.v. in Suppl.]. The whole body of Muslim merchants was called *Sūfiyyūn* (sc. Cholia, a term used in South India to

denote either Arab settlers or Muslim converts from the indigenous peoples, see Yule and Burnell, *Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases*, London 1903, 207, s.v. *Cholia*), and these seem to have been largely composed of traders of Persian *Shīʿī* origin, the head merchant being 'Alī' al-Dīn al-ʿAwajī (i.e. from Awa [q.v.] in northwestern Persia), and the *khāḍī* a man from Kāẓwīn. The Muslim community was, Ibn Baṭṭūṭa relates, prosperous and highly respected. He names the local ruler as Thiruvār, an *Tiruvati* of the indigenous Venad dynasty, and praises his impartial justice and his tolerance of the Muslims.

From the opening of the 16th century onwards, the history of Quilon is bound up with European economic and political penetration of South India, a process which soon became unfavourable to the earlier Muslim commercial supremacy along the Malabar coast. In December 1500 Pedro Álvares Cabral was at Cochin, and received friendly delegations from the ruler of Kannanūr [q.v.] and from the Queen of Quilon (Portuguese Colom), both of these potentates being anxious to secure Portuguese help against the powerful Muslim ruler in Calicut, the Zamorin. In 1502 Vasco da Gama made a treaty with the Queen of Quilon, who promised to load two Portuguese ships per year with pepper, and in the next year Albuquerque secured permission to open a factory there. Muslim opposition was strenuous; Portuguese ships were prevented from loading, and 1504 the Portuguese factor at Quilon was killed by them. In 1505 Don Francisco de Almeida was appointed the first Viceroy of All the Indies, and received instructions to erect four fortresses along the Malabar coast, including one at Quilon. In 1516 and 1520, further treaties were made between the ruler of Quilon and the Portuguese aimed at providing the latter with a monopoly of the export of pepper from there.

In 1651 the Dutch captured the fortress of Quilon from the Portuguese, and in 1659 the Dutch East India Company made a treaty with the Queen. In December 1661 the Admiral Rijklof van Goens appeared with a fleet at Quilon, since regained by the Portuguese, and occupied the fortress without opposition; he then proceeded in 1662 to reduce the fortresses of Cranganor and Cochin (see, for the whole of this period of the rise and fall of Portuguese influence at Quilon, F. C. Danvers, *The Portuguese in India, being a history of the rise and decline of their eastern empire*, London 1894, I, 88-9, 114, 118, 121, 336-7, II, 325). But during the 17th century, the Dutch fortress at Quilon decayed from lack of cash and of profit in the trading operations there, and during the period of warfare between the British and the rulers of Mysore, Haydar 'Alī and Tipu Sultān [q.v.], in the later 18th century, these two rulers having in their expansionist phase extended Muslim political control into Malabar, the Dutch fortress of Cochin, together with its dependencies, including Quilon, surrendered to British troops (October 1795). During the middle years of the 18th century, the principality of Quilon had been absorbed by Travancore, and in British India, Quilon continued to fall within the native state of Travancore. It is now (since 1956) in the component state of Kerala in the Indian Union. According to the *Census of India 1961*, vol. Kerala, Quilon district had in 1961 a total population of 1,941,228 (Hindu 64 %, Christian 25 %, Muslim 11 %), and Quilon municipality alone 91,018 (1901 figure, 15,961).

AL-KULAY'A (A.), 'little castle', the diminutive of *al-kafa* [q.v.], like this last used, in one way or another, as a place-name.

1. Muslim Spain

Students of the history and geography of Muslim Spain are familiar with *al-kulay'a* as the name of a number of small or relatively small places whose importance seems to have lain only or primarily in the military purpose they served. In Spanish Umayyad history it occurs as the name of at least three different places mentioned in connection with raids and campaigns. One was situated in the Asturian kingdom, another in the neighbourhood of Guadalejara, and yet another to the north-east of Cordova (Lévi-Provençal, *Hist. Esp. musul.*, i, 204; ii, 40, 282, 309 (map), 320). The exact location of the first two remains uncertain, but the third, which still bears its old name in Spanish guise, viz. Alcolea, is situated 20 km. or so on the main eastward road of Cordova.

As regards the Nasrid kingdom of Granada, two places called *al-Kulay'a* are listed in their appropriate administrative divisions by Ibn al-Khatib [q.v.]. Both are located in what is today Almería province. One—Alcolea—lies north of Berja on the main road to Laujar. In other parts of the Peninsula, the same hispanised name can be found in such compounds as Alcolea de Calatrava (Ciudad Real province), A. del Pinar and A. de las Peñas (Guadalajara prov.), A. de Cinca (Huesca prov.), A. del Río (Sevilla prov.), (?) *Him al-Kulay'a*, Ibn Khaldūn, *ʿIbar*, vii, 196), and A. del Tajo (Toledo prov.). Other Peninsular forms are Alcoleha (Alcántea prov.) and Alcoleite (Lerida prov.). In Spanish and other European writings the name appears in various guises (Alcoleya, Alcolya, Alcolia, Alcolitha, etc.). Finally, in Spain today there are a number of place-names which are most probably literal translations of *al-kulay'a* (Castilian diminutive: 'castillejo'), e.g. Castillejo (Cáceres and Granada provs.), C. de Iniesta (Cuenca prov.), C. de Robledo (Soria prov.), etc.

Simonet, *Descripción del reino de Granada*, new ed., Granada 1872, 226 f., 286, 303, etc.; M. Asín Palacios, *Contrib. a la toponimia árabe de España*, Madrid-Granada 1924, 25, 34; H. Lautensack, *Maurische Züge im geographischen Bild der Iberischen Halbinsel*, Bonn 1960; *Enciclopedia universal ilustrada*, Barcelona, 1905-30.

2. North Africa

1. El-Goféa (the French spelling of *al-Kulay'a*, reflecting the local pronunciation with the usual voiced *ḡ* of nomadic vernaculars) is the name of an oasis town situated at the far eastern end of the great western Erg [q.v.]; see map above, i, 363 of Saharan Algeria and lying, by road, 906 km. almost due south of Algiers on the parallel 30° 31', and 350 km. south of Ghardāya [q.v.]—air distances are noticeably shorter—at a height of 302 metres. Although the most isolated of Algeria's larger oases,

it is one of the most beautiful. In 1973 the *djūra* of El-Goféa had a population of 16,670.

The place owes its name to an old stronghold (*ḡḡar*) built on the north side of a *ḡara* (*ḡara*, pl. *ḡar*), i.e. a small, isolated flat-topped hill. This *ḡara*, from which can be seen a vast expanse of desert, sandy to the west and stony to the east, is one of three forming something of a protective semi-circle into which the huge oasis nestles beneath. Below the *ḡar* lies a town that has risen on old and new foundations: the old town, home of an original sedentary population living in mud houses similar in shape and size to the *tolas* of Mali, and the new, modern town, which owes its foundation to the French, but its felicitously harmonious architecture to the inspiration supplied by local tradition. The latter's mosque and market-place are the focal point of social, religious and economic life. From its outset this new town has accommodated administrative buildings. In 1938 it also witnessed the consecration of the first church in the Sahara.

Today the *ḡar* is deserted and in ruins. With the establishment and eventual consolidation of French rule, the need for its use as a stronghold disappeared and gradually it came merely to supply the local nomads' needs for storage. Its last inhabitants dispersed throughout the oasis to form hamlet communities alongside various plantations. The remains of the stronghold's double walls still stand, and among the ruins a small, plain mosque can be seen where it has been the custom of local women to gather for Friday prayer. The remains of rock dwellings are also in evidence. Dotted around the foot of the *ḡara* on which the *ḡar* stands, as well as about the oasis generally, are the *ḡabbas* of local holy men, amounting to between forty and fifty in all and of different shapes and sizes.

As a result of improvements in irrigation and drainage techniques first effected by the French, the oasis now covers more than 800 hectares and supports around 182,000 date-palms watered from artesian wells dug in the bed of the Wad Seggar. Fruit trees also abound, notably citrus and apricot varieties, and there are winter crops of cereals, beans and many other kinds of vegetable.

The inhabitants and frequenters of the oasis are, in the main, wholly or partly sedentarised nomads of the *Shafāna* sub-tribe *Mawāḡib*; traders from the Mزاب; negroes and *harāḡin* (sing. *harāḡī* [q.v.]) from Twāt (Tonat) and Grāra (Gourara). These last two groups account for about half the population and between them work the land in one capacity or another. Formerly there was also a Jewish element.

El-Goféa's early history is lost in legend. The old *ḡar* is said to have been founded as Tawrat (Berb. 'little castle') by the Zenata in the Middle Ages and to have then been taken by the Touareg. Its medieval origin may be well founded: Ibn Khaldūn mentions the existence of a seemingly not too dissimilar desert advance post inhabited by Maḡḡāra Berbers and frequented in intensely hot weather by veiled nomads. It too was a *ḡulay'a*, viz. *Kulay'at* Wāllā (in some European maps *Guelfa*). Be that as it may, the *Shafāna* in and around El Goféa are said, probably rightly, to have come from the region of the Naḡīl oasis, near Ghardāya, where there is still a branch of the *Shafāna*, and to have been in the carrying-trade there, to say nothing of brigandage, in the late 16th and early 17th centuries. Drifting south as population pressures grew, they made El-Goféa their centre and doubtless profited from its position on the route from the Mزاب to Twāt

and Tidikelt. In the 17th century, according to al-'Ayyashī, this evidently prosperous place was ruled, through a governor, by the sultan of Wargla. Its first contact with Europe was with Duveyrier in 1899. General de Galliéni reached it in 1873, and in 1891 a permanent garrison was installed. The local *Shā'amba* provided Laperrine with the first detachments of the famous *meharistes* with whose aid the central Sahara was brought under French control.

2. Kolēa, a small town of 35,000 inhabitants lying 46 km., by road, west of Algiers. Situated on the landward side of the Sāhl hills at a height of 130 metres, it offers a commanding view of the Mlikja plain. Dating from the Ottoman period, it is said to have been founded by Hasan Pasha, son of the corsair Khayr al-Dīn (Barbarossa) [q.v.], around 1590. What is certain is that it was peopled by Muslim refugees from Castile, Andalusia, and the kingdom of Valencia, for whom the excellent prospects offered by its fertile cultivable land were the main attraction. In the sources it is therefore referred to as "Col de Mudechares" (Mudechares being the Spanish *mudéjares* from Ar. *mudāḥḥijān*). In modern times Kolēa's attraction has been the tomb and mosque of a holy man, Sidi Mubārak, who lived in the 17th century. One of his descendants, Ibn 'Allāl b. Mubārak (Ben Allal Ben Embarak), who fell in the cause of the Algerian rebel 'Abd al-Kādir [q.v.] in 1843, is also buried there.

Bibliography: Marmol, *Descr. de Affrica*, Granada 1573, II, 214; O. Dapper, *Descr. de l'Afrique*, Amsterdam 1686; C. Trumelet, *Les saints de l'Islam... Les saints du Tell*, Paris 1881. (J. D. LATHAM)

KULAYB b. RAB'Ī'Ä a chieftain of the Banu Taghlib of the Islamic period, whose murder by his brother-in-law Djasās b. Murra al-Shaybānī was the cause of a long and bloody war between the two sister-tribes Taghlib and Bakr [q.v.] which was known as "the war of Basūs" [q.v.]. His genealogy was: Kulayb b. Rab'Ī'Ä b. al-Hārith b. Murra b. Zubayr b. Dīghām (Wūstenfeld, *General Tabellen*, c. 22; Ibn al-Kalbī-Castel, *Tab.* 164, where Murra is not mentioned). Kulayb's real name is said to have been Wāḥid, and the name of Kulayb ("little dog") to have given to him because of his habit of taking a small dog with him and making it bark by beating it in all the places which he wished to reserve as his own private property; the people who heard the barking of the dog refrained from using the place. This story, the point of which, however, eludes us, is evidently a later invention: the name Kulayb is frequently met with in Arab nomenclature and does not look like a surname.

Kulayb is represented as having all the characteristic traits of the tyrant, of which the independent and critical spirit of the Bedouins has always had a profound horror; he is said to have been proclaimed "king" (on the use of this title cf. Lammens, *Le barreau de l'Islam*, Roma 1914, 210) after the brilliant victory won at Khazāra over the united Yemeni tribes and to have ruled not only over Taghlib but

also over the Banu Shaybān, the most important section of Bakr. After a short time, he is said to have abused his power and to have usurped the rights of hunting and of pasturage at the expense of his subjects (the usurpation of the *himā* is the regular grievance of the Bedouins against "tyrants"); the same reproach was made against the caliph 'Uthmān. Indeed, it was because the she-camel Sarīb, belonging to a Tamimi woman al-Basūs or to one of her clients of the tribe of Banu Dīghām, trespassed upon the private property of Kulayb, that the latter put her to death (or killed its young ones and injured the mother), and this act of violence was the cause of his murder by Djasās, whose mother was the sister of al-Basūs.

The details of the story are given in our sources with some variations, most of which are found as early as the work of Abū 'Ubayda who is, as is well known, the source of almost all our information on the *ayyām al-'Arab* [q.v.]. Certain features, especially in the *K. al-Aghāni*, have been borrowed from Ibn al-Kalbī, and the account of al-Mufaḍḍal al-Dabbī has also been preserved. It is evident that we are no longer able to ascertain if the history of Kulayb (and in general that of the war against Taghlib and Bakr) contains a nucleus of historical truth along with a mass of features undoubtedly legendary. This is a problem which can only be solved in connection with the general question of the historical value of the whole of the traditions of the pre-Islamic period. Considered by itself, the episode of Kulayb has nothing improbable about it. We might be tempted to recognise in it a fairly clear memory of an attempt to form a political organisation among Taghlib and Bakr of a kind superior to the ordinary Bedouin tribes; the attempts, similar to that which gave the royal crown to the chiefs of the tribe of Kanda, must have been suggested by the example of the kingdom of the Lakhmids of al-Hira, not far from which Taghlib and Bakr have their houses. The story of the tyranny and the death of Kulayb must have taken form at a very remote period; this is evident from the verses of 'Abbās b. Nāḥās and of al-Nābligha al-Djā'idi (both contemporary with the beginning of Islām) given in our sources; in that of al-Nābligha in particular, the history of the killing of the camel is already told in detail. An allusion to the power of Kulayb is found as early as the *mu'allaqāt* of the Taghlibī 'Amr b. Nūhūm (v. 65). We have, moreover, contemporary documentary evidence of the accounts relating to the late of Kulayb in the numerous allusions contained in the elegies on his death, which were attributed to his brother Muḥallī (one of the earliest Arab poets; cf. Ibn Kutayba, *Shi'r*, ed. De Goeje, 164-6; Ibn Sallām, *Talabih al-ghu'arā'*, ed. Hall, 13 lines 12-16 etc.), but naturally their authenticity is more than doubtful.

The story of the murder of Kulayb is developed in a quite arbitrary fashion in the romance cycle of the Banu Hilāl (cf. Mittwoch, *Prosa arabum paganorum*, Berlin 1899, 21).

AL-KULAYNĪ (or AL-KULĪNĪ, ABŪ DJA'FAR MUHAMMAD b. Yā'qūb a. Isḥāq al-Rāzi, imāmī traditionist. He originated from a village located 38 km. southwest of Rayy in the district of

Paghāpāya whose Persian name Kolēn, with *imāla*, was Arabized as Kulayn and Kulnū. His *nisba* is thus variously given in the sources as al-Kulaynī, al-Kulnī, or, erroneously, al-Kalīnī.

Few facts are known about his life. Since his chief transmitters of Imāmī traditions were several scholars of Kūm, it is certain that he studied in that town for a prolonged time, most likely during the last decade of the 3rd century A.H. (903-13). He also transmitted from several scholars of Rayy, among them his maternal uncle Muhammad b. 'Alī al-Kulaynī al-Rūī, known as 'Alīn, and al-Nadīshī describes him as the *shaykh* of the Imāmīyya in Rayy in his time. It is uncertain if he was in Naysābūr or elsewhere that he heard Muhammad b. Ismā'īl al-Naysābūrī, his transmitter of the traditions and views of the prominent Imāmī scholar al-Faḍl b. Shādhān of Naysābūr, whom he evidently held in high esteem. At an unknown date, perhaps in the first decade of the 4th century A.H. (913-23), he moved to Baghdad where he lived and taught in the Darb al-Sūna near the Bāb al-Kūfa on the west bank of the Tigris. Here he completed his voluminous *Kullūf al-Kāfi*, on which he is said to have worked for twenty years. The book, though mostly a collection of traditions of the Imāms, was meant to be a guide to authoritative Imāmī doctrine in theology and *fiqh*. Thus it is arranged according to subject matter and tends to contain only those traditions which the author considered as reflecting orthodox teaching. Only exceptionally are the views and elaborations of Imāmī scholars quoted, such as the elaborations of al-Faḍl b. Shādhān on the law of inheritance. The work is divided into the *usūl*, dealing mainly with theology, prophecy, the imamate, and prayers; the *furū'*, dealing with *fiqh*; and a final volume, entitled *K. al-Rawda*, containing miscellaneous traditions of mostly edifying or paraenetic character. His other works, all of which are lost, included a refutation of the Karmāṭa, a book on transmitters (*rujū'*), a collection of letters of the Imāms, an anthology of poems about them, and a book on the interpretation of dreams. The date of his death is given as 328/939-40 or 329/940-1. The latter date, mentioned by al-Nadīshī, is more likely to be correct, since al-Ṭūsī, who in his earlier *K. al-Fihrist* gives the year 328, in his later *K. al-Riḍā* specifies Shā'ban 329/May 941. The funeral prayer was led by the Imāmī Hasanid Abū Kiriṣī Muhammad b. Dja'far, and he was buried near the Bāb al-Kūfa.

The reputation of al-Kulaynī and his *K. al-Kāfi* appears to have been modest during his lifetime and for a century after his death. Ibn al-Nadīm (writing in 377/987-8) does not even mention him, and Ahmad b. 'Abdūn (d. 423/1030) observed that his tomb had become obliterated. The *K. al-Kāfi* was evidently not widely used in the Imāmī communities as an authoritative source of *fiqh*. Though the *Shaykh al-Mulid* (d. 413/1022) in Baghdad referred to it as one "of the most important and useful books of the Shi'a", his student the Sharīf al-Murtadā (d. 436/1044) included al-Kulaynī in his general censure of the Imāmī traditionist school of Kūm and accused him of including numerous forged and rationally absurd traditions in his *K. al-Kāfi*. It seems to have been largely due to the influence of the *Shaykh al-Ṭūsī* (d. 460/1068), who praised al-Kulaynī and relied extensively on the *K. al-Kāfi* in his *fiqh* works, that the latter gained popularity. The favour in which the *K. al-Kāfi* was held by the pro-Mu'tazilī Imāmī school of Baghdad, in spite of the criticism of al-Murtadā, was partially based on al-Kulaynī's support

of the theology of the anti-anthropomorphist wing within the school of Kūm which was later represented by Ibn Bābawayh al-Ṣadūq, the only scholar of Kūm whose works were preserved in large number, evidently because of their author's relative closeness to Mu'tazilī theological doctrines. The *K. al-Kāfi* soon came to be considered as one of the four canonical collections of traditions on which Imāmī *fiqh* is to be based, and often as the most authoritative one among them. It reached the peak of its fame in the Salawad and post-Salawad age, when numerous commentaries, interpretations, glosses, studies of various aspects, Persian translations, and an abridgement of it were composed. A tomb of al-Kulaynī with a *shabā* was now shown on the east bank of the Tigris near the modern al-Ma'mūn bridge in Baghdad, and has continued to attract large numbers of visitors until the present.

(W. MADELUNG)

KULDJA or **QULUJA**, modern Il or I-ming, a town in the fertile and mineral-rich upper valley of the Il river (q.v.) in Central Asia. For the mediaeval history of the district in which modern Kuldja lay, see *ALMALĪKH*.

The town of Kuldja ("Old Kuldja") was probably a new foundation in 1762 by the Chinese after their victory over the Kalmyuks [see *KALMYK*] in 1759, and they named it Ning-yüan-chen. Two years later the town of Hol-yuan-chen was founded as the headquarters of the Chinese governor-general (*šan-shān*) of Chinese Turkestan; this was known as "Great" or "New" Kuldja. The imperial government recoiled in the largely depopulated region, amongst other peoples, 6,000 families of Muslim Turks from Kāchgharia, after the devastation of the latter province during the wars with the Kalmyuks; these came to be called the Tārānīs, "agriculturists". Also in the 18th century were settled there Chinese Muslims (probably, in fact, of mixed Chinese and Uyghur Turkish blood) called the Dungan or Tung-kān. In 1851 a trade treaty was made at Kuldja between the advancing Russians and the Chinese, opening the upper Ir region to Russian traders, and in 1860 the Treaty of Peking between Russia and China gave both Russia and Britain the right to establish consulates in, amongst other places, Kuldja. In 1862 W. Radlov visited both Old and New Kuldja and described them fully in his *Ass Sibirien*, Leipzig 1893, II, 305 ff., 336 ff., see also his *Das Il-Thal in Hoch Asien und seine Bewohner*, in *Petersmann's Mittheilungen* (1866), a decade or so later, the American traveller E. Schuyler visited Old Kuldja and its hinterland, see his *Turkistan, notes of a journey in Russian Turkistan, Kachkan, Bukhara, and Khuldja*, London 1876, II, 156-201.

Following a Dungan rebellion in Shen-si, which spread to Kan-su [see *KAN-SU*] and other Muslim

areas of western China proper in 1862, revolt also broke out amongst the Muslim population of northern Chinese Turkestan, i.e. in the province of Dzungaria, amongst both Tarančis and Dungsans, and in 1863 it spread to the Kul'dja area. After hard fighting between the Chinese authorities and the rebels, New Kul'dja was captured in 1863 by the rebels and completely razed; Schuyler, *op. cit.*, II, 162-4, found the site utterly deserted apart from the one or two houses of Dungan squatters. The Russian consulate in Kul'dja and a Russian factory in the area were destroyed in this strife. The Dungsans and Tarančis now began to fight amongst themselves, and after much internecine warfare, power passed in 1867 to a Taranči leader who styled himself Sul'din A'ā Khān or Abu 'A-ā (in Russian sources, often Abil-Og'ly); after savage massacres perpetrated by the Tarančis, some 5,000 Dungsans and others fled westwards into Russian territory for refuge. In 1867 also, Ya'kūb Beg (q.v.), a Khokandī by birth who had earlier fought against the Russians at the battle of Ak Mas'jid (see KHOKAND), established his power in Kāshgharia, i.e. the southern part of Chinese Turkestan. Since Ya'kūb Beg was believed to be anti-Russian and received two diplomatic missions from British India, the appearance of an ostensibly hostile power in Central Asia disturbed Russia, and was a factor in the Russian decision to annex completely in 1875-6 the Khānate of Khokand (q.v.). It further led to the Russian occupation in 1871 of Kul'dja and the upper Ili basin, this being announced as a temporary measure, till China should re-establish her authority in Kāshgharia and Dzungaria. The local ruler A'ā Khān was deported to Russia, and lived out his life there as a state pensioner.

The Russians probably assumed that Ya'kūb Beg would never be dislodged from power and that the Kul'dja district would eventually be permanently annexed. In fact, Ya'kūb Beg was defeated in 1876-7 by the Chinese forces and died in May 1877; his state collapsed totally and Chinese authority was restored in Eastern Turkestan. In 1879 negotiations began between the Chinese diplomat Ch'ang-hu and the imperial Russian government, but the Treaty of Livadia made in that year was abortive, and negotiations dragged on for a considerable time, the retrocession of Kul'dja being used as a bargaining counter for extracting concessions elsewhere, till in 1881 the Treaty of St. Petersburg was made, and in 1883 Kul'dja was finally evacuated by Russia. Russia nevertheless retained trading privileges in the upper Ili valley, received an indemnity of 9 million dollars for the expenses of the Russian occupation, and acquired consulates at Kul'dja and Kāshghar which in the ensuing decades gave her important influence in Chinese Turkestan, e.g. during the period of the Chinese Revolution 1911-22, when Chinese settlers in the Kul'dja region were massacred by the Muslims and the Russian consular defence forces of troops enlarged. Chinese Turkestan was from 1883 onwards organised as a formal province of China under the name of Sin-kiang "New dominion". The population of [Old] Kul'dja was estimated at 7,700 in 1872, of whom 4,100 were Muslims; two or three years later, Schuyler estimated the population of the town at 20,000, over half of whom were Tarančis. These estimates were made at a time when the whole region was in a devastated and depopulated condition, and by ca. 1900, the estimated population of Kul'dja had risen to 30,000.

When the authority of the Nancha Imperial government in the Sin-kiang capital of Urumchi

crumbled in 1911, a revolutionary government proclaimed its independence in the Ili region, but in 1912 the new Chinese governor of the whole province, Yang Tseng-hsin (1911-28) managed to conciliate the separatists and secure unification of the Ili and Sin-kiang regions (see R. Yang, *Sin-kiang under the administration of governor Yang Tseng-hsin, 1911-1928, in Central Asiatic Journal*, VI [1961], 270-7). Yang weathered a further potential crisis in 1916-17, when thousands of Kazakhs fled from Tsarist Russian oppression into the Ili and Kāshgharia regions (ibid., 305-8), and under his long tenure of power, the whole of Chinese Turkestan enjoyed an uneventful period of prosperity and firm government. He kept up good relations with Soviet Russia, and even after the Kuomintang's diplomatic break with Russia in 1927, the Russian consulates at Kul'dja and in other towns remained open. His successor Chen Shu-chen followed a similar policy, and in a secret treaty of 1931 conceded to the Russians rights to commercial offices in Kul'dja or Ili, Urumchi, etc.

These governors in the far west of China had been virtually autonomous, but in 1947 Chiang Kai-shek managed to extend the direct control of Chungking over Sin-kiang, with disquieting effects on the non-Chinese population elements there. Hence in November 1944 there was a rebellion of the Kazakh Turks in the Ili region, soon joined by the Uyghurs. An Eastern Turkestan Republic was proclaimed in Kul'dja, independent of the Sin-kiang Chinese provincial government in Urumchi. The Kuomintang government in distant Chungking was unable to do more than come to a compromise with Ahmad Džan's régime in Kul'dja, but by the end of 1948 its influence in Sin-kiang was in any case declining perceptibly. In September 1949 representatives both of the Kul'dja régime and the Urumchi one started negotiating with the Communists in Peking, and in December of that year a Communist Provincial People's government was established in Sin-kiang. The Communists eventually accorded to the province a certain autonomy, and in 1954 the Kul'dja region was made into the Ili Kazakh Autonomous District of what in 1955 became the Sin-kiang Uighur Autonomous Region. Now, under the Chinese name of I-ning, Kul'dja is one of the chief towns of that Region.

KULLIYYA (A. M. "completeness"; Turkish: *fakülte*; Persian: *dānishkhāde*) acquired in the 19th century the technical meaning of faculty as a unit of teaching and learning, mostly at the university level, according to branches of learning.

Islamic education in *mas'jid*, *madrasa* or *hānshāh* did not know of a division into *kulliyat*, which presupposes institutionalised specialisation. So it was only in 1930 that al-Azhar in Cairo was reorganised according to three *kulliyat* of higher studies: *waḥ al-dīn*, *ḥar'ī*, and *al-dīnīyāt al-ṣar'īyya*. Najaf in Iraq, as a centre of *ḥifẓ* *ḥikm*

'*ghari* learning, had in 1963, besides a number of independent *madaris*, a *kulliyat al-*fiqh** which was connected with the University of Baghdad. When modern institutions of higher education were established beside the traditional Muslim ones in the 19th and 20th centuries, the latter underwent a number of innovations and reforms which were mostly imposed by the state authorities. In this way, the faculty system was introduced into the traditional Islamic teaching, either by a radical transformation of an existing old-established institution (e.g. at al-Azhar); or by integrating such an institution as a *kulliyat al-*ghari** or a faculty of religious studies into a new modern state university (e.g. at al-Zaytuna in Tunis); or by establishing completely new religious institutions with a division into faculties, replacing older such institutions (e.g. the King Sa'ud Islamic University in Medina). By now, the faculty system has been introduced in nearly all Islamic institutions of higher education; sometimes such institutions have "modern" faculties side by side with those of the Islamic sciences. These institutions provide the education of religious leaders and they perform a function in the transmission and reformulation of Islamic thought. They may lead to a career in the judiciary, in institutional teaching or in less formal forms of instruction in Islam, both within and outside Muslim countries.

The non-religious modern (*state*) universities (see *Dirasat*) and other institutions of higher education (*al-*ilm al-*al***) have been organised according to the faculty system, as taken over from the West, since their establishment in the 20th and sometimes the 19th century. They come under the Ministry of Education, or in some cases the Ministry of Higher Education. These universities expanded greatly in number and size after the independence of the different countries, and they serve the modernisation and development of the societies of these countries by providing them with professional intellectuals, besides the general role of such institutions in the acquisition and transmission of knowledge. There is a direct link between the modernisation of a society and the expansion of its educational system, including higher education. The educational institutions undergo during the process the influence of those ideological forces which constitute, or at least accompany, the dynamic of the modernisation process. The planning of higher education has started in most countries according to the needs of these countries, following western models and resulting in the growth of faculties (*kulliyat*).

In Arab universities the following *kulliyat* have developed: *adab* (arts), *shuub* (law), *ulum* (sciences) and *ibb* (medicine), the first two of which are called *sawri* (theoretical), the latter two *'amali* (practical). Then there are those of *tarbiya* (education, i.e. for teacher-training at secondary schools), *isul* (commerce), *idara* (administration), *handasa* (engineering), *ard* (agriculture), *sayd* (pharmacy), *tibb al-*agnam** (dentistry) and *baytara* (veterinary medicine). In some cases there is a *kulliyat al-*ulum al-*isul*** (social sciences), but mostly these disciplines are served by an institute instead of a faculty. Some universities, e.g. al-Azhar, have a *kulliyat al-*band** (women's faculty). In a number of cases, university faculties are the continuation of previously existing educational institutions which became part of the university once it had been founded.

The faculties have been organised in different countries according to French (especially for law

faculties), British and American models, but they have developed on their own and adjusted to ministerial directives. The *kulliyat* constitute together a *diwaniya*. Within the university, the *kulliyat* enjoy a relative independence; their deans have great authority; they often have their own *daifi* (guide) besides the *islah* or *islah* (calendar) of the university. They mostly have their own library and may issue their own periodical. Generally speaking, the decision-making process is slow and the bureaucratic apparatus allows for little efficiency, apart from ever recurring financial problems. Most programmes of study show an early specialisation, and the *kulliyat* or faculties tend to function as professional schools. Certain courses on history, culture and society may be made compulsory for all students. The degrees awarded are those of bachelor, master, specialised diplomas and doctorate. The faculties (*kulliyat*) are each subdivided into sections (*shuub*, sing. *shu'*), and specialised institutes may be attached to them. Nearly all teaching is done in the national language, and English and French are not well known; most universities have insufficient funds to obtain books for their libraries in these languages.

Given the great number of students enrolled, faculties like medicine and the sciences limit the admission of students according to the number of places available, taking into account the earlier marks received by applying students. There is evidently a job-market problem in most countries for those who obtain their bachelor degree, and even for those who finish graduate studies. A certain number of students are sent abroad or admitted for foreign scholarships to continue their studies or to specialise; a certain percentage of students, varying according to country, stays abroad. Faculty teachers, on the other hand, have a high teaching load and often take supplementary jobs besides; there is not only a lack of facilities for reading and research, but also in some cases a problem of intellectual independence.

As everywhere else, the *kulliyat* in Muslim countries are in transition and undergoing permanent re-organisation. The exact, natural and applied sciences have an immediate relevance for the modernisation of these countries. The social sciences, not always developed adequately, are sensitive to ideological considerations, but are pivotal for the interpretation of the present-day situation of the societies of these countries; this holds true for the teaching of history too. The tendency at all faculties is to spread knowledge imposed from above, and this knowledge often appears to be considered as a finite quantity, to be assimilated by memorisation. Consequently, little attention is paid to promoting the awakening of the available natural intelligence.

It would be difficult to interpret the *kulliyat*, and the institutions of higher education in general, apart from their social context and the function which they fulfil in societies with pressing needs and with many uncertainties. They play an important role, in particular in the construction of a modern society and in the cultural transformation of whole countries. This takes place at a time when the ideals of culture have changed greatly, not only in relation to the religious orientation of the traditional Islamic educational institutions, but also since the political independence of the countries under consideration.

(J. D. J. WAARDENBURG)

KÜLLIYYE (r.), in Ottoman usage the complex of buildings with varying purposes centred round a mosque. The concept of a *külliy* was inherent in the earliest form of the mosque or *ḡāmī'* where one building housed the place of prayer and teaching as well as serving as a hostel [see *Ḥī'*, art. *Maḡḡī'*]. Later, other services were incorporated under one foundation document, and each was housed in its own building within an enclosure. This did not preclude the foundation of hospitals, etc., as separate institutions, as in 7th/13th century Anatolia. The early grouping of a *külliy* was often due to the contours of hillsides or the irregularities of the site donated, as with the royal foundations at Bursa in the 8th/14th centuries. In the late 9th/15th century, the great ordered *külliy*es of the Ottoman dynasty were founded, in particular those of Bāyazīd II at Amasya and Edirne, the latter devoted to all aspects of medicine including the training of students. While each element of the foundation was separate, the buildings, their courts and *partirres* were conceived as an architectural whole.

The greatest of these *külliy*es were built in Istanbul by Mehmed II Fāḡh and Sulaymān I (Kānūnī). The latter incorporated seven *madrasas*, four for each of the Sunni law schools, a preparatory college and one for studying the *Ḥadīḡ* and a medical school. Besides these with their courts, latrines and two houses for teachers or *madarrīḡīn* there was a school for boys, a chantry, a hostel with stables, a bath or *ḡammām*, the mausoleum of the sultan and that of his consort in a cemetery, rooms for mosque servants over gateways, a large kitchen and refectory with store-rooms attached, a wrestling ground, and in the vaults supporting the vast platform on which these many buildings were erected, there were ironsmiths, *caḡḡ*s, bottom shops and other workshops. The one pavilion lacking was the usual royal *ḡaḡ* with access to the *maḡḡīna* or royal lodge (*ḡāḡnāḡ* *maḡḡīn*).

Each and all of the charitable services had to be staffed, and detailed foundation documents regulated every duty, item of diet or salary. Besides the administrative officers who came under the chief eunuch in the department of the harem at *Ṭopkapı Sarayı*, there were religious officers and teachers, porters, cleaners, grave diggers, servants responsible for maintenance, including the polishing of courtyards and window grilles, cooks, scullions, plumbers, lamp-lighters, a guard against the theft of oil for lamps, carpenters, masons and tilers responsible for the lead sheets covering well over 500 domes. The kitchens coped with the feeding of this company, as well as the students and travellers and the poor; the scraps were given to the dogs. All these services required a considerable supply of water, and the cost of laying pipes and rebuilding aqueducts exceeded that of building the foundation. The initial building costs and the endowment needed to maintain so vast a foundation were raised by public subscription, including the gift of various properties, ranging from entire estates to a mill or one cottage. The donors ranged from the ruler, who might assign

the revenues of a part of the realm through office holders of greater and lesser rank, to the common people.

Bibliography: Two important early sources on the Ottoman *külliy* (*külliy*) are the *Ḥadīḡat al-ḡayḡudī'*, in von Hammer, *Histoire*, and Ewlyā Ḥelebī, *Seyḡhat-nāme*, Istanbul 1908-38. General works which refer to examples are many, and include K. A. C. Creswell, *The Muslim architecture of Egypt*, Oxford 1938; A. Gubriel, *Les monuments turcs d'Anatolie*, Paris 1937-4; idem, *Une capitale turque: Brussa (Bursa)*, Paris 1938; A. U. Pope, *A survey of Persian art*, London 1938; G. Goodwin, *A history of Ottoman architecture*, London 1971; O. Aslanapa, *Turkish art and architecture*, London 1972. See also works concerned with administrative history, such as Gibb and Bowen, *Islamic society and the West*, II-2, R. Mantran, *Istanbul dans la seconde moitié du XVII^e siècle*, Paris 1962 and idem, *La vie quotidienne à Constantinople au temps de Soliman le Magnifique et ses successeurs, XV^e et XVI^e siècles*, Paris 1963. Ahmet Refik Altınay's researches into the orders-in-council are important and are published as *Hicri emkamlar asrında İstanbul kayası*, Istanbul 1930; *Hicri emkamlar asrında İstanbul kayası*, Istanbul 1931, *Hicri XIII. asrında İstanbul kayası*, Istanbul 1932; and *16. asrda İstanbul kayası*, Istanbul 1933. Two major works of O. Ergin are *Türk şehirlerinde emkamlar sistemi*, Istanbul 1939, and *Fatih inşaatı vakfiyesi*, Istanbul 1945. The journal *Vakıflar Dergisi*, published intermittently, is a scholarly source. In the first number, Ankara 1939, appeared H. Kunter, *Türk vakıfları ve vakfiyeleri*, and A. S. Ünver, *Fatih külliyesine ait diğer mukam bir vesika*, and in No. II, Ankara 1942, F. Köprülü published *L'institution du vakouf*, and S. Yalḡkayn, *Kara Ahmed Paḡa vakfiyesi*. Akok, *Kayseri Hımd mimarı külliyesinin rolüğü*, in *Türk Arkeoloji Dergisi*, xviii, Ankara 1967. See also the article *Wakf* in *EIF*.

(G. GOODWIN)

KUL-OGHLU (r.) "son of a slave", in Ottoman usage, more specifically the son of a Janissary, admitted to the pay-roll of the corps; for further information see *YERİ*: *DERİ*.

In the period of Turkish domination in Algeria and Tunisia, the word *kulugh*/*kulughān* and, with dissimilation, *kurugh*/*kurughān* (pl. *kulughān/kurughān/kurughān/kurughān*; French *koulough* and variants) denoted those elements of the population resulting from marriages of Turks with local women. They were fairly numerous at Tons, Algiers and Tiemsen, and in the towns which had Turkish garrisons, such as Médea, Mostaganem, etc. In Algeria, they lived in special quarters, and were rather looked down upon by the urban population (*ḡader*), who would not give them willingly their daughters in marriage. The rules of the *odjaḡ* [q.v.] did not allow them to rise to higher levels, and they often endured harassment from the authorities. A considerable number of them also became mingled with the rural population and took up agriculture, especially in Tunisia. After the conquest, those who lived in Algeria were the target for hostility from the tribes, and many of them enrolled in the locally recruited bodies of troops. They subsequently be-

came merged within the general urban or rural populations, (Eo.)

KULOUGHU, Turkish folk poet of the 11th/17th century. Hardly anything is known about his life. He seems to have belonged to the Janissary corps and to have flourished during the reigns of 'Oghuz II, Mustafa I, Murad IV and Ibrahim, and to have found particular favour at the court of Murad IV. A contemporary of Kûl Mustafa and Kâmil, he was at his best in lyric and epic poems, the best known of which is his elegy for Murad IV. His poems, scattered in most of the 17th and 18th century anthologies of folk poets (*şâhîs*), have been collected and published by Sadettin Nâzhet Ergun.

KULHÛM n. **TYAD** al-KUSHAYRI, (Kays) notable [see KAYS] whom the Umayyad caliph Hisham b. 'Abd al-Malik sent to the Maghrib, in Djumada II 123/April-May 741, to avenge the bloody defeat which the Berbers, commanded by the successor of Maysara [q.v.], Khalid b. Hamid Humayd al-Zanati, had inflicted on the Arabs in the "battle of the nobles" (*ghazwat al-ashraf*). Kulhûm left at the head of an army of 30,000 men, to which there were added contingents raised along the way, and he joined up with Habib b. Abi 'Ubayda al-Fihri, the former companion of Musa b. Nusayr [q.v.], who was endeavouring to halt the progress of the Sufri Kharijites near Tlemcen. The clumsy conduct of the Syrian army and the arrogant attitude of the commander of the vanguard, Balid b. Bishr [q.v.], who was Kulhûm's nephew, towards Hisham hampered the conduct of operations. Khalid al-Zanati, after retiring before the Arabs, gave battle to them near the Wadi Sabû (Oued Sebou). Ignoring Habib's sensible advice, Kulhûm sent to the front Balid's cavalry, which succeeded after great efforts in piercing the Berber lines, but the latter reformed behind them and overwhelmed by their mass the caliphal troops which had taken up battle order too late. Habib and the other chiefs were killed.

Kulhûm fought with the greatest bravery, securing verses of the Qur'an to encourage the others, but finally he fell. One-third of the army was killed and a third taken prisoners (*Ibn 'l-Hajjida* 123/Oct.-Nov. 741). Balid's cavalry's only hope was to take refuge in Ceuta, whence after much suffering they were able to cross to Spain.

KULUMRIYA, the name given by the Arabs to the town of Coimbra, on the right bank of the

Mondego River in central Portugal. The town still has some ruins from the Roman period, and was originally called Aeminium; but it took over the name of another important Roman town, Conimbriga, which lay 18 km. to the south and had been devastated and depopulated during the barbarian invasions. The episcopal see of Conimbriga was transferred to Aeminium in ca. 580-9, and the change of name took place towards the middle of the 7th century A.D. Although the usual Arabic form was Kulumriya, Ibn al-Kutaybi (4th/10th century) has that of Kulumbiriya (*Ifrikiya*, 200). The occupying of the town is attributed to 'Abd al-'Aziz b. Musa b. Nusayr, governor of al-Andalus 95-7/714-16. His lands, like those of Santarem to the south, appear to have been omitted from the conqueror's division of the territories, probably because of a treaty (cf. Lévi-Provençal, *Hist. Esp. Mus.*, III, 201-2).

The Arab geographers give descriptions of Kulumbiriya. Al-Râzi states that it was an ancient town, well-fortified and with fertile surrounding estates where there were cornfields, olive groves and gardens. Al-Idrisi (548/1154) says that the walls had three gates (one of which still exists, with the name of *al-madana*), and menilios the mills along the Mondego vineyards and gardens and also the force of Christians living there. Al-Hamyarî repeats this information, and Yâkûbî gives a brief notice of the town.

Coimbra may have been the central town of a *aura* or territorial district during its Islamic period. This last was very disturbed, for the town was coveted by the Christians who set about the *Reconquista* [see AL-ANDALUS and PORTUGAL]. In 164/578 the town was taken by Count Hermenegildo in Alfonso III's name, but al-Mansûr recaptured it in 377/987 after having briefly occupied it two years previously. It was finally conquered by Ferdinand I in 456/1064 after a six-months' siege. He created the Mozarab Sessandus Davidis governor as a reward for his role here. The Coimbra district was one of the Mozarab' most lively centres; as well as the facts described in e.g. the works of Gomez-Morano and L. de Las Cigarras, P. da Cunha Serra (*Contribuição*, 35-6 and map II) has emphasised the role of the town's Mozarab in the peopling of northern Portugal during the *Reconquista*. The presence of the Muslims in the area has left many traces, as its toponymy shows. From the 10th century onwards, Christian documents make a very clear distinction between what was in the *almadinha* (the walled town and citadel) and what was in the *arrabalde* (< *rabad*) outside the walls at that time.

AL-KULZUM, an ancient town and seaport on the Red Sea (A. *Bahr al-Kulzum* [q.v.], *Bahr al-Hind* or *Bahr al-Falagha*), now administratively in the province (*muhâfaza*) of al-Suwayh. It appears to have been a fort as well as a town, and was,

perhaps, the spot where the troops destined to guard the sluices of the canal were stationed. It was called Castrum by Hierocles and Epiphanius; and $\kappa\lambda\upsilon\sigma\mu\alpha$ (Clystma), or $\kappa\lambda\epsilon\iota\sigma\mu\alpha$ is first mentioned by Lucian. Kulzum is a corruption of the Greek name $\kappa\lambda\upsilon\sigma\mu\alpha$ (in both Arabic and Greek almost always without the article; the Greek refers to the "Miso" at the mouth of the canal, which led from the Nile to the Red Sea). This canal, begun by Pharaoh Necho and finished by Darius of Persia, was later restored by Ptolemy II Philadelphos and by Trajan. In the Muslim period, when the construction of the canal was wrongly ascribed to Hadrian, labour was repeatedly spent on it.

ʿUmar b. al-Khaṭṭāb in 23/643-4 for example had it repaired to facilitate the transport of corn for Mecca from al-Fusṭāṭ to the Red Sea; it was called after him *Khaṭṭābī Aṣīr al-Maʿmūnīn*. According to Abū Ṣāliḥ, its mouth was at al-Kulzum, according to al-Masʿūdī and others (more accurately) at *Dhūwāb* (sic; *dhawāb*?) al-Timsā, one mile from the town, where the Meccan pilgrims from Egypt crossed the canal by a large bridge. The caliph al-Manṣūr in 158/775 had it partly tilted in, fearing an attack from his uncle Muḥammad b. ʿAbd Allāh, who had rebelled against him in Medina, so that in Abū Ṣāliḥ's time it ended at al-Sadīr at the entrance to the Wādī Tamsīṭ. New but fruitless attempts to make it navigable again were made by the caliph Hārūn al-Raḡhīb, who is said to have abandoned the attempt out of fear of the Greeks. Henceforth the bulk of its water flowed into the Birkat al-Djubb till it was completely filled in (1899) for sanitary reasons.

The town of al-Kulzum owed its importance mainly to this canal, for according to the descriptions of the Arab geographers, it was a desolate and miserable site without water and vegetation; neither trees nor fruits could flourish there. However, it was useful as a source of salt which was transported to various parts of Egypt and Syria for sale, and al-Baḡdādī reports that quarries for red flint were operated in its vicinity. In antiquity and in the early Muslim period its main importance was as a point of departure for shipping on the Red Sea, which consequently came to be most commonly known to the Arabs as *Bayr al-Kulzum*. The corn ships of al-Fusṭāṭ after they had passed the canal sailed from here to al-Djāz and Djidda. Of the Jewish merchants called al-Rāḡhāniyya, Ibn Khurrādādhbih says that they came from the lands of the Franks to al-Faramāʾ, thence they carried their wares 35 *farasāḡ* on camels to al-Kulzum, where they were loaded on ships which sailed to India and China. According to the same geographer, al-Kulzum with al-Tūr and Ayla formed a district of Egypt.

The country round al-Kulzum was inhabited at an early date by Arabs. They are already mentioned in the *Atar* of the hermit Sisoēs (Coptic. *ap̄s* *Ḥr̄iḡḡō*). Sisoēs was one of the three Coptic martyrs (the other two being ʿTānās and Piddīnīs) whose place of burial is known to have been in al-Kulzum. For seventy years the anchorite Yūḥannā al-Kaṣīr (John Kolobos, died ca. A.D. 409) lived in a cava which he had dug himself in the nearby Djabal Antwān, and was buried beside the graves of the three martyrs. Djabal Antwān was so named after St. Antony who went into retreat there from the importunities of the secular world. In the *History* of John Kolobos, Kulzum (sic) appears for the first time in the Arabic Synaxarium as the name of the ancient Clystma.

When under the last ʿAbbāsīd governor in Egypt,

ʿAnbasā b. Ishāq, the Bugḡa or Bedja [q.v.] rebelled in Nubia, invaded the Saʿīd or Upper Egypt and laid waste many towns, al-Mulawakkil sent against them an army under Muḥammad b. ʿAbd Allāh al-Kumfī which went from Kūs [q.v.] straight through the desert to the emerald mines, while seven ships with stores sailed from al-Kulzum to Šangā near ʿAydhāb and provided the victorious army from there with the necessary supplies.

In the autumn of 361/97r, the Karmāṭian leader Ḥasan b. Aḥmad on his campaign against the Fāṭimīd Djawhar took the towns of al-Kulzum, al-Faramāʾ, and Tinnīs. After his defeat before Cairo (3 Rabiʿ I 362/24 December 971), he retired under cover of night via al-Kulzum to Arabia.

Reynald de Châtillon at the beginning of his naval expedition against the holy cities in the winter of 578/1182-3 sent two ships from Aden, which were to watch the citadel of al-Kulzum and prevent the garrison from procuring water. But soon afterwards the Ḥāḡḡib Musam al-Dīn Luʿluʾ built a fleet by order of Ṣalāḥ al-Dīn's brother al-Malik al-ʿAdīl, in al-Kulzum, which sailed to ʿAydhāb and put a sudden end to the desperate enterprise. When al-Dimashqī includes al-Kulzum among the lands under al-Karak, this is perhaps a memory of these events of a century before.

In the time of al-Idrīsī, Yāḡūt and al-Dimashqī, al-Kulzum was already a deserted town. Al-Maḡrībī found among old documents in the palace of Cairo accounts of the expenditure on the civil and military administration of the town and district and concluded from them that it must once have been most flourishing. He quotes al-Kuḏāʾī as saying that the town was already ruinous in his day, and this presumably included the fortress (Kaṣʿat al-Kulzum) mentioned in several accounts. According to al-Idrīsī, the Bedouins had occupied and plundered it. The only water-supply he knew of in the vicinity was the well at al-Suways, which yielded only a scanty supply of brackish water. Al-Muḥaddasī (4th/10th century) already mentions al-Suways (i.e. Suez), which gradually took the place of al-Kulzum, a mile from it.

The name of al-Kulzum is still given to some heights to the north of Suez, Kōm al-Kulzum.

(E. HONIGSMANN [R. Y. ESTED])

KUM (Ar. Kūm, current Persian pronunciation Qhūm rather than Kūm), a city of central Iran (Media in ancient times, later Qūbā or 'Irāq-i aḡham) situated in lat. 34°38' N. and long. 50°58' E., 250 km. to the south of Tehran. It is the capital of a *shāhristān* of the Central Province (*Ustān-i markazi*) and the ninth city of Iran, with a population of 246,873 in 1976. Situated on the great north-west/south-east axis, which follows the foothills of the central Iranian range and skirts the fold of the Zagros, it lies at the junction of all the road and rail routes linking southern Iran with Tehran.

Geographical setting.

With a complex geological history (entirely post-Cretaceous terrain; late formation of mountains linked to volcanic activity; marine development of the site of Kum in the Oligo-Miocene period), the region is characterised by its uneven relief. As elsewhere in central Iran, the natural environment bears the marks of aridity and of the features associated with an inland continental setting (steppe vegetation, saline earth; see M. Bazin, *La vie rurale*, 5 ff.). To the south, the mountainous region of Kūhistan contains half-a-dozen peaks whose south-western elevation exceeds 3,000 m. Towards the north-west, other mountains separate Kūhistan from another dense range exceeding 3,000 m. in altitude in the region of Tafrīsh. The valley of the river Kūm (Anāshār in antiquity) constitutes a pass crossing the mountainous region of the south. It clears the final barrier of the mountains through a broad gap and spreads a thick deposit of sediment on the plain where the city of Kum is situated. To the north-east, the plain is barred by hill-ranges of only moderate elevation (1,000 m.), dominated to the west by the Kūh-i Namak (Mountain of Salt); distorted in shape and dangerous of access, it has given rise to a whole cycle of legends (see Bazin, *op. loc. cit.*, 8, n. 4). Further to the north, the relief rises, dominating the low-lying areas which are divided unequally between *dagh* and *kawr*. Rivers of most irregular current flow into the basin of Hawq-i Sulṭān and the vast salt lake (*daryā-i namak*) of Masīla. Although meteorological data are incomplete, the temperatures are characterised by strong daily and annual fluctuations, and a high general average (18.4° over the period 1958-68, as calculated by M. Bazin, *op. loc. cit.*, 13; the pioneering work of A. H. Adie, *Ab u haḍḍ-yi Iran*, Tehran 1330, 77, gives an average of 18.5°). The winter is not very cold, and the temperature in summer frequently exceeds 40°. Rainfall is sparse everywhere (less than 200 mm. below 3,500 m.) and very irregular. Prolonged droughts can be disastrous (there have been instances in 1869-72 and more recently in 1960-6). The strength of the river-currents is also most irregular and there are often catastrophic floods (Bazin, *op. loc. cit.*, 14 ff.; Bémont, 180). The soil is in general unfavourable to agriculture, and the natural vegetation is very poor.

Socio-economic setting.

This hostile natural environment is inhabited by a

population of great ethnic and linguistic diversity. Since the beginning of the 2nd/8th century, a number of significant Arab elements have been added to the original Persian nucleus. Among the groups of foreign origin are the Khālajī [q.v.], who speak an archaic oriental Turkish and who arrived in the area at a very early stage (between the 11th and the 14th centuries). They have given their name to the mountains of Khālajīstān, to the east of Kum, the region where they are settled. There are considerable contrasts in the demographic evolution of this rural environment, where the density of population is generally below five inhabitants per square kilometre and where, in contrast to other regions of central Iran, the larger villages are mostly situated at high altitudes (Bazin, *op. loc. cit.*, 23 ff.).

Agriculture depends primarily on irrigation by the traditional utilisation of water-courses (barrages, diversion channels) and of underground reserves (*handīs* [q.v.]) as well as on modern techniques of developing fertility through wells of varying depths. The sharing of water among those exploiting it has given rise to a system of minute division which, in contrast to the practice elsewhere in Iran, operates without any particular supervision (Bazin, *op. loc. cit.*, 39). In spite of the introduction of some modern methods of exploitation, agricultural techniques and systems are still archaic. Cereals (wheat, barley) give a rather mediocre yield. Summer crops (cotton, market-garden products including various kinds of melon and water-melon, pomegranates, figs, raisins, apricots, almonds, more recently opium, etc.) are mostly grown for sale. In general, agricultural production is inferior (Bazin, *op. loc. cit.*, 40 ff.). In contrast to the situation prevailing elsewhere in Iran, before the implementation of land reform the bulk of the land belonged to urban middle class landlords and to peasant smallholders. The crown properties (*khāṣṣa* [q.v.]) which existed in the Kāḡār period were no longer represented in the region (Bazin, *op. loc. cit.*, 55). The waqf estates gifted to the sanctuary of Fāṭma al-Ma'ūma continue to be decidedly less important than those of the sanctuary of Imām Rīḡā at Mashhad (Bazin, *op. loc. cit.*); for a comparison, see Fisher, 70, and on Mashhad, N. Hakami, *Le waqf d'un lieu saint en Iran-Mashhad*, Mémoire de l'EPHE, Section VI, Paris 1975, 22 ff.). Traditional forms of ownership, exploitation and the sharing of crops are now being modified by the gradual implementation of land reform; a number of successful co-operatives have been created (Bazin, *op. loc. cit.*, 57 ff.).

The relatively meagre agricultural yields are supplemented by ancillary activities: peasants and numerous nomadic and semi-nomadic groups practise stock-breeding (cattle, sheep, goats, camels); the crafts formerly practised (see below) have been replaced by the manufacture of carpets, introduced, at least as far as quality products are concerned, by merchants of Kāshān in the nineteen-thirties (Bazin, *op. loc. cit.*, 64 ff.; Idem, *Qom, ville de pèlerinage*, 105 ff.; Idem, *Le travail du tapis dans la région de Qom*). Numerous factors (including the religious and social conservatism of the population) have hindered the industrial development of the town and of the region, in spite of the discovery and exploitation of petroleum and natural gas in the folds of the Alburz and of Sarāḡla (for a bibliography relating to the industry of the region: textiles, building materials, ceramics, flour-mills, petroleum, natural gas, etc., see M. Bazin, *Qom, ville de pèlerinage*, 106 ff.). The influence of Kum over the region has been to some extent artificially diminished to the advantage of the surrounding

ghazis, especially those of Kāshān and Tafrīsh, the latter being a recent creation (ibid., 124 ff.). In spite of the potential richness of the soil and attempts at modernisation, crop yields and the standard of living continue to be rather poor (M. Bazin, *La vie rurale*, 79 ff.; idem, with regard to nutrition, in *Studia Iranica*, 8 [1973], 243-53).

Historical evolution.

Numerous signs testify to the occupation of the site of Kum in ancient times (M. Bazin, *La vie rurale*, 25 ff.). The remains of *cahār tāh* of the Sāsānid period are still visible in the region (A. Godard, *L'art de l'Iran*, Paris 1962, 232 ff.; M. Siroux, *Le site d'Atash-Konak près de Delūjan*, in *Syria*, xiv [1967], 53-71). Excavations on the site of one of these, the Kāf'a-yi Dukhtar, very close to Kum, have brought to light fragments of pottery of the type associated with Sialk II and III (5th and 4th millennia B.C.): see M. Siroux, *Le Kāf'a-yi Dukhtar de Kūm*, in *Athū-e Irān*, vi, (1938), 113-20; R. Ghirshman, *Fouilles de Sialk*, Paris 1938, 1, 91; L. Vanden Berghe, *Archéologie de l'Iran ancien*, Leiden 1959, 125. Similar remains have been discovered in Khalaqjūstān (see M. Bāhrāmī, in *Awrangh az pārsarāh*, x/4 [1940], 31-8). Two Selsucid columns are still to be found near Dībūjān (A. Godard, *op. laud.*, 149, 153, 164, and plate 88).

Kum is included among the *kūras* of Dībūl (Ibn Khurādādhbih, 20). Ibn al-Fakih (209 ff.) and other Arabic sources mention Sāsānid Kum in various contexts (see Fakhri, *Ta'rikh-i madhhab-i Kum*, 54 ff.). According to the *Ta'rikh-i Kum*, 24, Alexander the Great destroyed Kum, and it was the Sāsānid Kūbād I (488-531) who restored its prosperity and gave it administrative independence from Isfahān. Many of the *rustābs* of Kum mentioned in the *Ta'rikh-i Kum* bear Iranian names, some of which are still in use today. A version of a Pahlavi text draws attention to the merits of the saffron of Kum (see J. M. Unvala, *The Pahlavi text "King Husrōw and his boy"*, Paris 1924, 44, following al-Tha'alibī). In the *Shāh-nāmā* of Firdawsī, Kum is included among the towns belonging to the Pūshādīyān and Kayānid kings (Fakhri, 55, etc.).

But in spite of the archaeological remains and the literary allusions to Kum in the ancient texts, as in the case of Kāshān, with which it is often associated (Kum and Kāshān together are said to have supplied 20,000 horsemen to the Sāsānid army at al-Kādīs-iyya: see Fakhri, 56, following Ibn A'ṭham al-Kūfī), virtually nothing is known of the pre-Islamic town. According to the majority of Arabic sources (which often contain internal contradictions), the town was an Islamic foundation. According to the *Ta'rikh-i Kum*, the Ash'ari Arabs of Kūfa, persecuted for their Shī'ī beliefs, came and established themselves in the region (where they were probably received by co-religionists), in 94/712-13, protected it from attacks by the Daylamīs, and ultimately built a wall around seven of the forty villages of the plain (241 ff.; on the non-Ash'ari Arabs who established themselves at Kum, see Fakhri, 43 ff.). This conglomeration presumably took its name from that of one of these villages, Kumidān. But the author of the *Ta'rikh-i Kum* follows al-Baṣrī in preferring to derive the name Kum from *kūma*, a kind of hut, possibly the origin of *Kūmamaydān*, which could have been contracted into *Kūmaydān/Kumidān* (25; Houton-Schindler, 59). A derivation from Godman, pronounced Goman, is suggested by R. N. Frye (*The golden age of Persia*, London 1975, 11). Other fanciful

etymologies (generally based on the Arabic imperative *kum* 'rise up') have also been proposed (see for example, Houton-Schindler, 59 ff.). There are also numerous Shī'ī *hadīths* extolling the virtues of Kum as a place of refuge for believers etc. (*Ta'rikh-i Kum*, 90 ff.; Fakhri, 75, 83 ff.); this latter attribute earned it in the course of time numerous honorific titles such as Dār al-Mu'minīn, Dār al-'Ibāda, Dār al-Muwahhīdīn, Dār al-'Ilm, *Ḥaḥk Farāḡ* etc. (Fakhri, 14).

This region, with its strong undercurrent of religious feeling (including Jewish and Christian associations; see Monneret de Villard, *La légende orientale sui mugi evangelici*, Vatican 1952, 84 ff.) became one of the first bastions of Shī'ism (on the Shī'ī and non-Shī'ī groups at Kum, see Fakhri, 308 ff.). The Zoroastrian community, whose chief, Yazdānfarāgh, had in an earlier period assisted the Ash'ari Arabs to settle in the region, was ultimately eliminated (sometimes brutally) or Islamised; it has been observed, however, that Zoroastrian fire temples continued to be in use in the area until the 3rd/9th century, and perhaps even later (Monneret de Villard, 139). From the start, the inhabitants of Kum had a reputation for rebelliousness, for resistance to Sāsānī governors and to the payment of the levy (for the collection of taxes by force under Hārūn al-Rashīd; the destruction of the city's fortifications at the orders of al-Ma'mūn, who more than tripled the already excessive rate of *ḥaraḡ* exacted from the Kumīs; and a further punitive expedition ending in massacre in the reign of al-Mu'tazz, see Schwarz, 562). By contrast, a Shī'ī governor was accorded such co-operation that he was recalled by the caliph (Fisher, 56). Also to be noted are the conflicts between the people of Kum and the people of Isfahān, who were fanatical Sunnī (Fakhri, 222).

In the 3d/9th century, the principal settlement was Marāḡjān, one of the original 'seven villages' or 'seven fortresses' (Fakhri, 13, 58 ff.). In the 4th/10th century, Kum was described as a prosperous city, fortified with a rampart, with fields well-irrigated by means of canals, dams and pumping apparatus. The majority of the population was Shī'ī, ethnically Arab but Persian-speaking (Ibn Hawkal, *K. Sūrat al-aḡd*, ed. Kramers, 370). There were frequent disputes between Kum and settlements lying upstream (Taymara/Gulpāyghān and Anār/Mahallāt) regarding the distribution of the waters of the Anārāb. The flooding of this river was sometimes catastrophic (notably in 322/904-5, 1634, 1670, 1881, 1893; see Houton-Schindler, 65 ff.; M. Bazin, *La vie rurale*, 33 ff.). With its many '*ḥama*' (tradition tells of seventeen *ḥama* and of hundreds of Ash'ari *rustābs* (see Fakhri, 37 ff.; in the 3rd/9th century there were two hundred and sixty-six Shī'ī '*ḥama*' and fourteen Sunnī '*ḥama*', ibid., 309) and especially the family of the famous Shāykh Sa'dūk (Muḥammad b. 'Alī b. Bābūyā, Kum could boast of having preceded Naḡaf as a great theological centre.

The prosperity of the city seems to have begun with its administrative independence from Isfahān in 189/804-5. In 205/816-17, Fāṭima al-Ma'sūma went to visit her brother, the Eighth Imām, 'Alī b. Mūsā al-Riḍā, at Tus. She fell ill at Sāwa (a Sunnī town) and asked to be taken to Kum, where she died and was buried. Besides the town's reputation as a centre of theological education, it was this event which contributed most to its fame. The town expanded progressively from north-east to south-west in the direction of the tomb of Fāṭima, which ultimately

became its centre (Fakhlī, 94 ff.). Patronised by the Būyids (Fakhlī, 107 ff.), Kum was renewed in the Saljūq period for its *madrasas*, for the sanctuary of Fāṭima (visited by Sunnis as well as Shīʿis), for its religious foundations, and also for its administrators and visitors (see J. Calmard, in *Le monde iranien et l'Islam*, Paris-Geneva 1971, I, 38 ff.) as well as for its many 'ulama' and scholars, known by the names of Kumī, Barī, Baravastānī, Tabrīzī (from Tabriz/Tabrīz), etc. At the time of the Mongol conquest in 613/1214, its inhabitants were massacred, possibly at the instigation of the Sunnis (see Fakhlī, 223). Hamd Allāh Mustawfī described the town as being mostly in ruins in the 8th/14th century. It seems, however, that there was an attempt at reviving the region under the Ilkhāns, as evidenced by some important hydraulic constructions: the weighted dam at Sāva (end of the 13th century) and the vaulted dam at Kēbar, 25 km. to the south of Kum (see H. Goblet, *Kōbar en Iran, sans doute le plus ancien des barrages-rochers (1300 environ)*, in *Science Progrès (La Nature)*, Paris, February 1965, 50-6; the same, in *Arts et Manufactures*, Paris, June 1965, 45-9, April 1973, 15-20). Although travellers have drawn attention to the massacre perpetrated by Tīmūr, it seems that the Tīmūrids showed respect and favour to this holy city (we may note the mosque of Gawhar-Shād, wife of Shāh Rūkh, near the mausoleum of Fāṭima, and the fact that the sultan Muḥammad, son of Baysonghur, chose Kum as his capital in 846/1442: see Fakhlī, 144-7). It was in any case from the 9th/15th century onwards that the town began to enjoy definite royal patronage. The Turkoman sultans Dīrbān-Shāh, Usun Hasan, Yaʿqūb, Murād and Ak and used it as a kind of winter capital for hunting, and this tradition was continued under the earlier Ṣafawids, Ismāʿīl I and Tahmāsp I (Fisher, 56 ff.; Fakhlī, 147 ff.; on the *farmāns*, Turkomans charged with the appointment of an official (*mufaxxallī*) of the sanctuary and *naʾīb* of the *sayyids*, see Mudarris Tabātabāʾī, in *Farhang-i Irān-comin*, XIX/2-4, 116-35).

But it was above all the result of the religious policy of Shāh 'Abbās I—consisting in attracting pilgrims to the Shīʿi shrines of Iran (Mashhad and Kum) rather than to those of Iraq, then controlled by the Ottomans—which endowed Kum with an unprecedented glamour. The sanctuary was embellished, and two of its four *ṣāḥas* were transformed into a *madrasa* with a hostel for pilgrims. Many 'ulama' came to Kum to study, men such as Mullā Muḥsin Fayḍ, Mullā 'Abd al-Razzāk Lāhijī, Mullā Ṣadrā Shīrāzī, Kāqī Saʿid Kumī, etc. (Fisher, 57). Traditions extolling the sanctity of the soil of Kum became current, and to the hundreds of tombs of Imām-zādis (at the time Amīn Abnād Rāzi counted 444 of them) were added the tombs of thousands of the faithful. The descendants of Shāh 'Abbās I were buried there, as were thirty-one other princes (M. Bazin, *Qom, ville de pèlerinage*, 84). No other Iranian city has such a vast number of tombs of 'ulama', of distinguished people or of simple believers, and the cemeteries extend over an enormous area.

In the 17th century, travellers described at length the merits of the town's craft-products (rapiert and sabre blades, silks, cottons, glass, porcelain, porous white ceramics, etc.: see Bazin, *Qom*, 105). But at the same time it was a kind of land of exile for deposed aristocrats (Fakhlī, 151), and insolvent debtors took refuge in the sanctuary (Gemelli Careri, II, 74-5). Money was coined at Kum in the 3rd/9th and 4th/10th centuries, and it

appears that the Ṣafawids and the Kādjārs sought to re-establish this tradition (Houtum-Schindler, 73; Fakhlī, 39, 152 ff.).

After the terrible depression of the 18th century (pillage by the Afghāns, massacres perpetrated by Ṭarāḥīn Khān, brother of Nādir Shāh and by an Uzbek governor in the service of this sovereign: Fakhlī, 224 ff.), the practice of building royal monuments was revived by the Kādjārs. The shrine of Fāṭima built by 'Abbās I was embellished by Fath 'Alī Shāh who also built a *madrasa*. The vast "new court" (*ṣāḥa-i dīdārī*) was constructed by Amīn al-Sultān, vizier of Nāsir al-Dīn Shāh, in 1883. Around the "old court" (*ṣāḥa-i ānā*) stand an octagonal monument containing the tombs of senior Kādjār dignitaries (Fath 'Alī Shāh, Muḥammad Shāh, his wife Mahd-i Awīyā, etc.) and the sanctuary library (8,000 manuscripts and 8,800 volumes) which also contains a museum. The Masjid-i Aʿzam, constructed on the orders of the Āyat Allāh Burūjdīrī (d. 1961), stands to the west of the sanctuary which includes other monuments (for a plan of the sanctuary, see Bazin, *Qom*, 91; Fisher, 58; a history of the monuments, including a description of their contemporary state, with plans and illustrations of inscriptions, documents, etc., is supplied by Mudarris Tabātabāʾī, *Tarbihi pākān*, 2 vols., Kum 1535/1976). The city-sanctuary today (1976) comprises fourteen large traditional *madrasas*, supervised by the Āyat Allāhs, four modern schools (Fisher, 23) as well as numerous private libraries, the most important being that of the Āyat Allāh Marʿashī Najafī (70,000 volumes including 15,000 manuscripts). After 1965, the sanctuary was administered by a *mufaxxallī* nominated by the Shāh (Fisher, 66). The revenues of the sanctuary and the annual number of pilgrims (about a million in 1970) are poor in comparison with those of Mashhad (four and a half million, including tourists, in 1352/1973-4). Nevertheless the spiritual role of Kum continues to be very important. Since 1340/1920, a modern Centre for Theological Education (*Hawza-yi ʿilmi*) has been established there (Fisher, 62 ff.). Three of the most eminent *marghāʿi takhlīl* (Gulpaygānī, Marʿashī Najafī, Shāʿatī Madārī) reside there (on the religious élite and the role of the *marghāʿi takhlīl*, see Fisher, 30 ff., and A. K. S. Lambton in *Studies Islamica*, xx [1964], 115-35).

The demographic evolution of the town—which, in spite of mistakes on the part of travellers, may be more or less traced from the 9th/15th century onwards—contributes to an understanding of the vicissitudes that have affected it:

- 20,000 houses in 1474 (Barbaro)
- 3,000 hearths in 1524 (Tanselro)
- 2,000 hearths in 1565 (Mostre Alonso)
- 2,000 families in 1627 (Herbart)
- 15,000 houses in 1673 (Chardin)
- 50 houses (*ṣiḥ*) in 1796 (Olivier)

(each hearth, house or family should represent five to six persons).

After 1850, the population fluctuated between 20,000 and 25,000 inhabitants (with a drop to 14,000 in 1874-5 on account of a famine; see A. K. S. Lambton, *Landlord and peasant*, 153, n. 3) rising to 35,000 in 1886-7. Since 1913 (30,000) the population has grown continuously (55,000 in 1937-8; 87,540 in 1947-8; 96,499 in 1956; 134,298 in 1966; and 216,873 in 1976).

Under the Kādjārs, Kum was a haven of refuge (*bast-nishīnī*) for political opponents of the régime. This opposition was particularly marked during the

events of the constitutional revolution of 1905-17. Under Rūḡā Shāh (1905-17), the opposition of certain 'ulama' was also manifested in various ways (Fisher, 60). There now exists a dichotomy between technocratic and religious power, and some influential 'ulama' of Kum have encouraged their disciples to rebel: examples are Kāshānī, under Muṣaddīq, and Khumaynī, who was arrested on the 15th of Khurdād (5th of June) 1963 and exiled to Turkey, then to 'Irāq (see H. Algar, in *Scholars, saints and Sufis*, ed. N. R. Keddie, Berkeley-Los Angeles 1972, 241 ff.); and riots involving 'Muslim Marxists' on the 15th of Khurdād, 1973 (Fisher, 77 ff.). The troubles which convulsed the whole of Iran in 1978 began in Kum between the 7th and 9th of January 1978. In October 1978, Khumaynī took refuge in France, at Neauphle-le-Château, whence he led the opposition which caused the Shah's departure from Iran. He returned to Tehran (2 February 1979) and thence to Kum (1 March 1979). He still represents the most radical Islamic tendency; a steadfast though more moderate opposition had crystallised around other 'ulama', especially the marghā'ī-ī takfīd of Kum, Shā'rat Madārī.

(J. CALMARD)

AL-KUMĀ OR AL-KAWMĀ, the name of one of the seven types of post-classical poetry (see KĀW WA-KĀW). It was invented by the people of Baghdād, and is connected with the saḥr, i.e. the last part of the night when, during the month of Ramaḡān, it is still permitted to eat and drink and to take meals at that time; it derives its name from the expression *ḥumā* i.e. 'saḥr' which the singers recite after each strophe of a *maml* or *saḡal* in praise of the master of the house. Contrary to what is generally believed, it does not seem that *ḥumā* is the imperative dual, "Arise, both of you!", but the singular *ḥumā* > *ḥumā* "Arise!". This interpretation is justified by Kur'ān, XCVI, 15, *la-maṣṣā'ā bi 'n-nāṣi'ā* (for *la-maṣṣā'ā*), and better still, by a verse of 'Umar b. Abī Rabi'a (*Dīwān*, Cairo 1371/1952, 226, l. 4), where we have exactly *ḥumā* for *ḥumān* "Arise!" as the rhymeword (cf. Ibn Kutayba, *Almuḥṣṣ*, § 158, al-Maṣ'ūdī, *Murūḡī*, iii 340 = § 1317). The origin of this poetic genre is obscure, and it is probable that it existed before Ibn Nuḡṭā, who is said to have invented it to please the 'Abbāsīd caliph al-Nāṣir (575-622/1779-1225). At all events, the *ḥumā*, which is always in Arabic colloquial, has only been cultivated in 'Irāq, where it has been used to express various themes, such as those of love, of wine-drinking, of flower-description, etc.

Technically, there are two types of *ḥumā*:

Type 1 is made up of strophes of four hemistichs,

of which three (the first, second and fourth) are the same in length and rhyme with each other, whilst the third is longer and does not rhyme with the rest.

hemistiches 2, 3, 4	$\left\{ \begin{array}{l} mustaf'ildun \\ mafaf'ildun \\ mudaf'ildun \end{array} \right.$	$\left\{ \begin{array}{l} fā'ildun \\ fa'ildun \\ fa'ildun \end{array} \right.$
hemistisch 3	$\left\{ \begin{array}{l} mustaf'ildun \\ mafaf'ildun \end{array} \right.$	$\left\{ \begin{array}{l} fā'ildun \\ fa'ildun \end{array} \right.$

Type 2 is made up of three hemistiches of the same rhyme, but of increasing length—

hemistisch 1	$\left\{ \begin{array}{l} mustaf'ildun \\ mafaf'ildun \end{array} \right.$
hemistisch 2	fā'ildun, fā'ildun
hemistisch 3	$\left\{ \begin{array}{l} mustaf'ildun, mustaf'ildun, \\ mafaf'ildun mafaf'ildun \end{array} \right.$

Hoenerbach, *Die vulgäranarabische Poetik*, Wiesbaden 1956, 47-8, 72-3, Ar. text 171 ff.; H. Gies, *al-Furūq al-sab'a* ..., Leipzig 1879, 63 ff.

(M. BEN CHENEB · CH. PELLAE)

KUMĀN, a Turkish people whose origin is connected with Central Asia. In all probability their forefathers are to be found in the people indicated by Marwāzī (*Tabā'ir al-ḥayawān*, ed. Minorsky, I, § 3), as *ghārī* (ḡārī), identical with the Yellow Uyghurs, who since about 850 A.D. were living to the east of the Turan basin. This name is probably derived from their physiognomy, varying from that of the other Turkic peoples. At the beginning of the 11th century A.D. (ca. 1012-18), the Sārī left their homeland under the pressure of the Kūn (q.v.) who were migrating to the west before the Kitāy. This movement of peoples reached in the west also the regions of the Turkmen, who were driven away to new areas. In the newly-conquered regions to the north of the Sīr Daryā, close contact between the participants in this migration (the Sārī and the Kūn) and the Kīmāk and Kipčak (q.v.) tribes who were living there, led to the formation of a new tribal confederation. It is probable that about this time the Sārī (*sarī* = yellow) were given by other Turkic-speaking peoples the name *kumān*, derived from a root with similar meaning (*kā* = yellowish).

A few decades later the Kumān pressed forward to the west. Apart from their own name, various other names were mentioned in Western and Armenian sources (*polovci*, *polovcy*, *planci*, *planci*, *Valben*, *Valben*, *Falcones*, *Xartel*, etc.), but semantically these terms ("yellow, pale, sallow, bright, clear") accord with the meaning of the name Kumān. Towards the middle of the 11th century A.D., the Kumān were living in the Dnieper region. In 1062 they started launching attacks against Kiev, and in 1078, together with the Pechenegs, against Byzantium. In 1085 they took part in the rebellion of the Bulgars, but in 1092 they were allies with emperor Alexius against the Pechenegs. Their raids against Hungary started in the same period. Hungarian historical sources mention them under the name Kūn (*kun*, *chuni*), but it has not yet become clear whether these tribes can be put in direct relation with the above-mentioned Kūn, who probably were absorbed later by the Sārī

(i.e. the Kumān). In 1094 and again in 1114, the Emperor Alexius waged two quite important wars against the Kumān, who were to be pushed back to the other side of the Danube. The Mongol invasion put an end to the control of the Kumān over the Pontic steppes, and after the final defeat in 1236, a part of them sought refuge in Bulgaria. Thus they played an important rôle in the history of Hungary, in that of the second reign of the Bulgarian Tsars and in that of Byzantium. The Kumān who had remained in the Pontic area were incorporated into the western part of the Mongol empire called Kipčak [see *BAI* 7:1 Kīpčak in Suppl.].

The most important document of the Kumān language is the *Codex Cumanicus* (14th century) a collection of texts brought together in South Russia by Italian and German missionaries. Some rudimentary remnants of the language are also found in Hungarian. Important references to their language are further present in loan-words of Kumān origin in Hungarian, Bulgarian and Rumanian, as well as in place-names in various regions of these countries.

(G. HATAI)

KUMĀSH (A. pl. *šumšāh*), in general sense, "cloth", but in a more particularised sense, "a Mamlūk garment". The term *šumšāh* in the later Middle Ages commonly designated "cloth" or any "woven stuff" in general and was synonymous with the classical words *bas* and *ghiyāb*. Abū 'l-Faḍl al-Dīnaghātī (ca. 11st century) does not use the term at all in his handbook for merchants *K al-fihra lā mahāsin al-tijāra* (Cairo 1318), but the word is employed by the 4th/10th century geographer Ibn Hawkal in his *K. Šarāt al-aḥd* (BGA 14, ed. J. H. Kramers, Leiden 1938, 235). It rarely appears in the documents of the Cairo Geniza (q.v.) (for example, TS 16.298, ed. S. D. Goitein, *India book*, 190, l. 23; *al-šumšāh al-ḡarb*—"fine linen stuff"). *Šumšāh* does not seem to have come into common usage until Mamlūk times. Thereafter, it became the general word for fabric throughout the Middle East and is still current in most dialects, as well as in Persian and Turkish. It never seems to have been particularly common in the Maghrib, although the Hafsid Abū Zakariyā' (629-47/1228-49) is reported to have built a *šāh al-šumšāh* in Tunis.

Under the Mamlūks, *šumšāh* took on the specialised meaning of "dress uniform" although this sense is not found in any dictionary. A young Mamlūk was presented with his horse, a *šumšāh*, and a sword upon his manumission and induction into the corps. Sultān al-Nāṣir Muḥammad b. Kalawūn (693-741/1293-1341) is credited with introducing the *ghāb wa 'l-šumšāh*, or "turban cloth and formal coat" of a Mamlūk warrior (Ibn Yūsuf, *Badā'ī' al-nihāḥ fī wakā'if al-ahwāl*, Būlāq 1321, 4, 273, ll. 15 f.). This dress uniform was also called *šumšāh al-ḥidma* (service coat), *šumšāh al-rukāb*, and *šumšāh al-mawḥib* (parade or processional coat). The Mamlūk *šumšāh*

must have been a heavy garment. Mamlūk soldiers threw off their armour and *ḥumūsh* when fleeing the battlefield (Mayer, *Mamluk costume*, 76, citing al-Yūnīn); and the Sulṭān al-Malik al-Ashraf Kāṭibīy (1372-90/1468-96) is reported to have abolished the obligation of wearing the *ḥumūsh* for ordinary palace service (*ḥishmāt al-hajr*) as it was too hot for continual wear throughout most of the year in Egypt (Ibn Iyās, *op. cit.*, iii, ed. P. Kahle and M. Mostafa, Istanbul 1932, 322, l. 12). The less formal coat for everyday wear was called *ḥumūsh al-djūlās*.

Kumūsh (pl. *ḥumūshāt*) was also sometimes used in Mamlūk terminology as a synonym for *ḥanḥūsh* or "caparison" of a horse (Ibn al-Farāt, *Ta'rīkh al-Dumāl wa'l-mulūk*, ed. K. Zurayk and N. Izzedin, Beirut 1942, ix, 247, l. 9 ff.).

Mayer, *Mamluk costume*, Geneva 1952, 75-80.

(N. A. STILLMAN)

AL-KUMAYT b. ZAYD AL-ASADĪ, ABU 'L-MUSTAHLIL, an Arab poet of Kūfa (66-126/680-743) who is not to be confused with two earlier and lesser known Asadīs, al-Kumayt b. Ma'rūf and al-Kumayt b. Tha'āba (see Ibn al-Kalbi-Castell, *Djāmharā*, ii, 373; Ibn Sallām, *Tabaḥḥūt*; al-Āmidī, *Mu'talif*, no. 572; Ibn Ḥaǧǧar, *Iṣāba*, nos. 7498 and 7499; etc.).

Al-Kumayt applied himself in an indirect fashion to the poetry and the language of the Bedouins, and he was acquainted with poets such as al-Farazdaq, Ru'ba b. al-'Adǧīdī and the *ḫāṣṣ* al-Tirmūḫī, whose hostility towards the Umayyads he shared; in contrast to the last-mentioned, he came under the influence of the Shī'ī tendencies of his native town and these had a decisive effect on the direction that his career was to take, inspiring him with violently pro-'Alid opinions. He is reckoned to have acquired a fairly extensive intellectual training, and he also possessed a talent for oratory which shows in his poems, to the extent that some critics regard them as speeches. At first a schoolteacher in a Kūfa mosque, he was pressed by his family, so at least tradition has it, to set his poetic gifts to work and to undertake a poetic career which nowadays would be called "committed". Henceforward he acquired distinction with the composition of verses in praise of the Abī al-Bayl [g.v.] and of a series of poems, among which the best known are his long *Munḥaḥ-ha* directed against the Yemēnīs and his *Muḥams* in praise of the Kuraysh. The chronology of his work is far from clear, and the outstanding incidents of his career cannot be dated with certainty. His celebrated conflicts with the governor Ḫalīd b. 'Abd Allāh al-Kaṣī (105-20/723-38 [g.v.]) and the decision of Ḥishām b. 'Abd al-Malik (105-25/724-43) to have him put to death, have given rise to conflicting accounts which are difficult to reconcile and to romantic embellishments which are to be treated with caution. It was probably the *Munḥaḥ-ha* which earned him

the hostility of Ḫalīd, at a time when the latter needed assurance of the loyalty of the South Arabian elements. By a circuitous procedure, the governor informed the caliph of the attitude of the poet, who was imprisoned; with the help of his wife, who had come to visit him, he succeeded in escaping disguised as a woman and, after a period of wandering, he finally obtained pardon from the caliph through the mediation of the prince Maslama b. Ḥishām. On his return to Kūfa, he must have been gratified at the dismissal of Ḫalīd (120/736); although his successor, Yūsuf b. 'Umar al-Thaḡaffī [g.v.] was responsible, two years later (122/740), for the death of Zayd b. 'Alī [g.v.], who had allowed himself to become involved in a Shī'ī revolt, al-Kumayt had no scruples about flattering him, although he did not succeed in detaching the Yemēnī soldiers of his guard, who, on an occasion when he arrived to recite a poem, inflicted on him a mortal wound (126/743).

The renown of the poet, maintained by Shī'ī circles, rests fundamentally on the *Ḥāḡḡimīyyāt*, which have been the objects of a commentary by Abū Riyāḥ (d. 359/950 [g.v. in Suppl.]) and of a number of editions: of M. Ḥakīm al-Khayyāṭ (Cairo 1322, 1332), of Muḥammad Mahmūd al-Rīlī (*Shāḥ al-Ḥāḡḡimīyyāt*, Cairo n.d. [1926]), of 'Abd al-Muta'ī al-Sa'īdī, with a quite interesting commentary (*al-Kumayt b. Zayd al-Asadī, ḡhār al-'asr al-mawmānī wa-ḡhār al-Ḥāḡḡimīyyāt*, Cairo n.d.), and most of all, of J. Horowitz, with a German translation (*Die Hāḡḡimīyyāt des Kumayt*, Leiden 1904). In spite of the title, the poet's praises are not aimed at all the Banī Ḥāḡḡim, but principally at the Prophet and at 'Alī and his descendants. Some verses (i, 79, ii, 205 ff. of the Horowitz edition), in which mention is made of 'Abbās and of his sons, were no doubt added in the 'Abbāsīd period, perhaps by the son of al-Kumayt, al-Mustahlī, who was also a poet (see *Aḡḡānī*, index) and was concerned to perpetuate his father's memory. The *Ḥāḡḡimīyyāt* are composed, in the Horowitz edition, of four long *ḡazals* (203, 240, 233 and 221 verses), of two short *ḡazals* (33 and 20 verses), of one fragment of seven verses of which more than half constitutes an opening typical of the *ḡazal*, and of four short pieces of six, two, two and two verses. In the long poems, al-Kumayt follows the framework of the *ḡazal*, but with a short and not very conventional *nasīb*. In the *raḡẓī*, he follows the classical tradition, and subsequently he produces lavish eulogues of the 'Alids similar to those that were addressed to the Bedouin *sayyids*. He also borrows frequently from the Kur'ān, to such an extent that a scholar of Kūfa, Ibn Kinnās [g.v.] was able to compose, in the 2nd/8th century, a *Kaṣīb Saḡīdī al-Kumayt min al-Kur'ān*. Some philologists and poets accuse him of plagiarism and inconsequence (see for example, al-Murzuḡānī, *Munḡaḡḡah*, 291-8) and do not judge him worthy, in spite of his antiquity, of figuring among the poets who serve as a "proof", a *ḡudḡa* (cf. al-Baḡḡīdī who takes his *ḡhāḡīd* no. 16 from a poem of al-Kumayt). His compositions were on the other hand very highly regarded in Shī'ī circles, whose members probably did not hesitate to add to them verses or even whole sections of which he was not the author. For K. Blaehere, "the simplicity of the language, the platitude of the arguments makes one think of a poetry of propaganda aimed at a public (possibly urban) immune to the lexicographic beauties of the desert poets." The language of al-Kumayt nevertheless does not lack refinement, but the artifi-

cial use of a badly-understood *ḡaṣṣ* was a source of irritation to some of his contemporaries. In fact, the importance of the *Hāḡimīyyāt*, insofar as they are entirely authentic, resides in the opinions and the sentiments current in the Shīʿī circles—or rather Zaydī circles, so it seems—of Kūfa which they reflect. Al-Kumayt, it is true, regards the first calligraphers as usurpers (iv, 10), but he refrains from excommunicating them, even if they did wrong in not handing Fadaḡ [q.v.] back to Fāṭima; 'All is the master of the Prophet, who bequeathed the *malʿya* to him near the pool of Khumm (vi, 6, which seems to be the earliest evidence of this Shīʿī doctrine); it is to the 'Alids alone that power belongs and it is they who will consolidate afresh the foundations of Islam which unworthy rulers have shaken. The poet's enthusiasm does not, however, run to the extent of leading him to take up arms in support of the 'Alid cause, personated especially by Zayd b. 'Alī, and his warfare is limited to virulent verified attacks on the ruling régime, although his convictions do not prevent him from addressing compliments to it, as is shown by the eulogies of Maslama and of Hishām himself, after his tirades had been pardoned. He recognizes, besides, that in doing this, he had used *ṭaḡiyya* [q.v.], in a verse (iv, 86) where this term, according to Goldziher (in *ZDMG*, lx, 219) is used for the first time in the sense which the Shīʿīs give to it (Goldziher, in *ZA*, xxii [1909], cf. *Arabica*, viii [1960], 11, also comments on the metempsychosis referred to in it, vv. 39-40).

It is probable that Hishām would not have shown so much clemency if he had really known the content of the *Hāḡimīyyāt*; these must in fact have been circulated surreptitiously, with or without the complicity of the local authorities. It seems clear, in fact, in spite of divergences in the traditions, that al-Kumayt owed his rebuffs to the *Mudhakkaba* alone. This poem of 300 verses, of which only a part has been preserved, is a riposte to a Kāfī poet referred to by the name al-A'war, who had attacked Muḍar and, among them, the 'Alids. In the *Hāḡimīyyāt* there is no sign of any hostility towards the Yemānīs, and the poet had even lauded the Muhallabīs in the person of Maḥḥad b. Yazīd b. al-Muhallab, which seems to prove that the section in which were enumerated the disreputable characteristics of the tribes of the Yemānīs is of a mainly occasional nature. Not only was this poem the primary cause of the assassination of al-Kumayt, but in addition, al-Mas'ūdī (*Murūj*, vi, 36-45 = §§ 2267-72) comes close to seeing here both a manifestation and a cause of the conflicts between the Northern and Southern Arabs which led to the fall of the Umayyads. This *Mudhakkaba* certainly enjoyed a dangerous renown among the tribes of Muḍar, since, at the beginning of the following century, another Shīʿī poet, Dīʿbīl al-Khusāʿī [q.v.], still considered it advisable to refute it and to take up the defence of the Yemānīs in a *ḥaṣṣa*, which is said to have comprised 600 verses, of which only 25 are now extant (see 'Abd al-Karīm al-Aḥṣar, *Shi'r Dīʿbīl*, Damascus 1984/1964, 193-7; idem, *Dīʿbīl b. 'Alī al-Khusāʿī*, Damascus 1967, index).

As for the *Malhama*, preserved by Abū Zayd al-Kurashī (*Damihara*, 187 ff.), it comprises 56 verses and contains general and personal observations and the eulogy of Kureyṣh, that is, ultimately of the Umayyads.

The *Diwan* of al-Kumayt, which must have contained 5,000 verses, has been the object—proof of the interest aroused by this poet—of a number of

recensions by Ibn Kūṣā, Al-Asmaʿī, al-Sukkarī and Ibn al-Sikdī (*Fihrist*, 158; Cairo ed., 275). It has been partially reconstituted by Dāwūd Salīmī, Baghdad 1969-70 (3 vols. without the *Hāḡimīyyāt*).

In spite of the studies that have been devoted to him, the personality of this poet, who was capable of composing eulogies simultaneously to the 'Alids and the Umayyads, remains inscrutable, even enigmatic, by reason of the average credit that may be accorded to the sources, Saunī as well as Shīʿī, his venatility, even when justified by *ṭaḡiyya*, is such as to throw doubt upon his sincerity and to advise the greatest caution in the use of his work.

Bibliography. In addition to references given in the article, see *Ḍabīb*, *Bayān*, index; idem, *Hayawān*, index (giving the name of al-Kumayt's *raḍī*, Muḥammad b. Saḥl, vii, 18; the abundance of citations comes from the poet's frequent use of animal names in his verses); Ibn Saḥīm, *Tabaḥṣṣ*, 268-9; Buḥārī, *Ḥamān*, index; Ibn Kutayba, *Shi'r*, 368-72 (ed. KUMĪJIS, a people mentioned in the Arabic and Persian historical and geographical sources of the 4th/10th and 5th/11th centuries as dwelling in the Buttamen Mts. at the head of the valleys running southwards through Khūṭal and Caḡḡānīyān down to the course of the upper Oxus. The *Ḥudūd al-'Alam* (372/982) describes them as professional brigands and as linked with a smaller group, the Kāḡḡās Turkes. In fact, these two peoples must be remnants of some earlier waves of invaders from Inner Asia, left behind in the Pamir region, probably of the Hephthalites (see MAVRILA), or even of the earlier Sakas; Ptolemy mentions a Saka tribe of Kōmēdai, and it is accordingly probable that the name of our people should be read as *Kumēdai-jis. Sources like Gardīzī and Bayḡḡal mention the Kumījis as marauders called in by warring feuds during the decline of the Sāmānids (e.g. by Abū 'Alī Caḡḡānī), and during the disintegration of Ḡhaznawīd power in the west (e.g. by the incoming Karakhanids); but with the opening of the Saltūḡ period, they disappear from recorded history.

(C. E. BOSWORTH)

KUMIS, the Russian form of the Turkish *şimla* "fermented mare's milk", "koumiss", the staple drink of the steppe peoples of Eurasia from the earliest time. Herodotus refers to its manufacture by the Scythians and the Chinese sources to its use amongst the Ancient Turks and the Khitans. William of Rubruck, who calls it *cosmos*, describes in detail the production of this drink by the 13th-century Mongols; and we read in the *Secret history of the*

Mongols how the youthful Čingiz-Khān, fleeing from the Tayčičit, sought refuge in a tent "in which koumis was churned all through the night till the dawn". In this, as in other respects, the Tīmūrids continued the practice of their Čingizid predecessors; and koumis is prepared and drunk to this day by the nomads of North-Eastern Asia.

Bibliography: G. Doerfer, *Türkische und mongolische Elemente im Neupersischen*, iii, Wiesbaden 1967, 312-17 (No. 1239). (J. A. Boyle)

KUMIS, the Arabic transcription of the Latin *comes*, a title which in al-Andalus denoted the person responsible to the state for the *mu'dhān* (p.v.) or Scripturaries, or at least, for the Christian Mozarabs (p.v.). According to A. Fattal, "les représentants religieux des *gémis* sont autorisés par le pouvoir, moyennant *asayyya*, a exercer leur autorité. Il se trouve bien que les Arabes de la conquête respectèrent tant l'organisation administrative que judiciaire, que religieuse des populations soumises". Certain capitulation documents (*ahd*, *uḥḍ*) (p.v.) expressly affirm this: "They shall not be forbidden the exercise of their religious cult and shall keep their own laws". This was the case in al-Andalus, as reflected in clauses 3-9 of the "treaty of Tudmī" (p.v.).

The first known *comes* was *Arībūn b. al-Andalus wa-ḥim* *ʿAdām al-ḡimma wa-mustahḡirid* *ḡharid* (*ḡim* is *umayy*) *al-muslimin* (Ibn al-Khaṭīb, *Iḡḡa*, 109), who advised the governor Abu l-Khaṭṭāb to grant to the Syrians field of income (Chalmers, *Concepciones territoriales*, in *Cuadernos de Historia Hispánica*, vi, 1975). According to Ibn al-Kūṭīyya, *Iḡḡḡ*, 38, "he was the first to exercise *ḡimma* in Muslim Spain". We have therefore here a concentration in the person of the protector or defender of extremely wide powers, embracing administrative, judicial and probably—to a certain degree—religious ones. At least, this is what one can deduce from the treatment as *scribae* *homines catholicorum summo* which Alvaro of Cordova accords to the Count Romanus (Corpus, 211), as does Ibn Khaldūn from Aḡḡḡ b. ʿAbd Allāh. In this context, it would probably be correct to see in the confiscation of Ardoḡas's properties not only a "resumption of former crown domains" (*ḡḡḡḡ al-maḡḡḡ*), but also an extraordinary impost (not paid in cash) of the same type as we find in the East (Fattal, *Le statut ḡḡḡ*, 220-4) or as that which probably cost the Count Harnmīr his life. The *ḡimma* was equally responsible, as *mustahḡirid*—which could be translated by the Latin *exceptor*—for the collecting of taxes on his co-religionists. As such, he had to levy not only the *ḡharid* and *ḡḡḡḡ*, but also all extraordinary imposts (*mu'dhān*, *maḡḡḡḡ*). This gave him a certain expertise and "vocation" as a professional tax-collector, and it explains the fact that we find under al-Hakam I a *ḡimma* Rabi' in charge of all taxes, on *ḡḡḡḡḡ* and Muslims equally (Ibn al-Khaṭīb, *A'ḡḡḡ*, 15).

The *comes* was, then, a Christian, appointed by the state, but we do not know whether he was officially designated from above or nominated after proposal and election of his co-religionists. As an official, he had his subordinates. His powers made him the supreme judicial authority over his flock, by virtue of his rôle as *ḡim* or head of the community. He was therefore by virtue of his office also *ḡḡḡ* *al-ḡim* or *ḡḡḡ* *al-naḡḡḡ*, whether in person, or by delegating his powers. Consequently, the meagre list of our "counts" should be completed by adding the list of *censores* or *iudices* (a hypothesis put for-

ward, but not followed up, by Simonet, *Historia de los morabitos*, 212).

The names of some *ḡimma* have come down to us. After Arībūn, one should doubtless place a certain Alfonso, since the genealogy of ʿUmar b. ḡḡḡḡ given by Ibn Khaldūn (*Iḡḡḡ*, iv, 134), and Ibn ḡḡḡḡ (*Bayān*, ii, 108), quoting Ibn ḡḡḡḡ, gives him as the sixth descendant after a *ḡimma* Aḡḡḡḡ. Rabi' b. Theodulf, *muḡḡḡḡ al-mu'dhān* *ḡim* *al-naḡḡḡ*, was not only the hated chief tax collector over the Cordovans, but also commander of the foreign palace guards of al-Hakam I, and ended up by being crucified (Ibn ḡḡḡḡ, *ḡḡḡḡḡḡ*, 96). He was probably followed by the count (and physician) Romanus cited by Alvarus (Corpus, 211). St. Eulogius mentions one Isaac, a noble Cordovan who, before retiring to the monastery of Tabacoos, had been *dictus lingua arabica, exceptoris rei publicae officio fungentur* (Corpus, 402). Kumis b. Antunyan, who served in ʿAbd al-Rahmān II's administration and was *kātib* to the *ḡim* Muḡḡḡḡ, and who is stigmatised by Alvaro and St. Eulogius as a hateful persecutor, *Ecclesiae publicanus... publicae rei exceptor*, should be included amongst the *comes* (and not amongst the "Comes", as according to Simonet), because of (a) his function as *mustahḡirid*, and (b) the fact that he seems to have been the official intermediary (much more than Rocafrid, metropolitan of Seville) between the state and the Mozarabs. With this authority, he transmitted the *ḡim*'s commands, and consigned members of his flock to jail, when necessary, not as a state official, but as the leader and one responsible for the Christians under his jurisdiction. He presided over the council at Cordova in 852 which forbade the Mozarabs to seek voluntary martyrdom. The course of events shows that he had not only the backing of the whole state apparatus but also that of the majority of his community. The upper classes were unable to agree, and he reached the point of fearing for his life (ḡḡḡḡḡḡ, *Kuḡḡḡ*, 130-2; Ibn ḡḡḡḡ, *Muḡḡḡḡ*, ii, 128, 142), but things did not go as far as his assassination, as frequently happened in the East (Fattal, *op. cit.*, 220-3). He must have been followed by the *comes* Servandus, who held power in ca. 853, according to Alvaro (Corpus, 214, 553, 554, 560, 581). Ibn Antunyan's son, also the *ḡim*'s *kātib*, disappeared in 908/911 (*Bayān*, ii, 153). The Archbishop Cyprianus wrote in ca. 890 his *Epigrammas* for the *comes* Aḡḡḡḡ, and he also mentions a *comes* Guifredus (Corpus, 685-6). Ibn al-Kūṭīyya (*Iḡḡḡḡ*, 5) cites his contemporary Aḡḡḡḡ *ḡim* *al-naḡḡḡ*, as well as the *ḡḡḡ* *al-ʿAdām* ḡḡḡ b. Albar, both of them descendants of Ardoḡas. Ibn ḡḡḡḡ (*Bayān*, ii, 142) records under the year 935/936 that "ḡḡḡḡ *al-naḡḡḡ* was imprisoned; he was tortured and underwent the torture of the iron boot until he died". It is likely that the *ḡḡḡ* *al-naḡḡḡ* of Cordova in 352/962, who acted as interpreter for Ordoño IV, was also the "comes of the Mozarabs". This was doubtless also the case with Aḡḡḡḡ b. ʿAbd Allāh b. Naḡḡḡ, who was commissioned, in the name of the ʿAmirid ʿAbd al-Malik, to arbitrate in the dispute over the tutelage of Alloḡḡ V between the two counts, Sancho Garcia of Castile and Meoendo Gonzalez of León. Aḡḡḡḡ must have been the successor of Muḡḡḡḡ b. Lubh, who was *ḡim* in 361/972. According to Ibn Baḡḡḡḡḡ (*Sila*, No. 443), there was in the time of the caliphate a little market in Cordova called the *ḡḡḡḡḡḡ al-naḡḡḡ*.

The fact that, in the course of the 4th/10th century, one finds more references to judges than to counts,

in contexts where one would expect the reverse, must indicate a lowering of the latter's status, who by then had lost many of his duties. It is hard to believe that Ibn Zaydūn, appointed by Abu 'l-Walid ibn Ḍabbar to "enquire into certain affairs of the *ḡimnis*" (Ibn al-Abḡār, *Ḥab al-ḡimnis*, 112-13), can have had the title of *ḡimnis*. Indeed, if he had really fulfilled this role, it would have been indicative of a profound change, since Christians would have become subject to a Muslim and not to one of their co-religionists. It is very possible that Ibn al-Kallās, *kabīr al-muḥibbīn* of Granada in 1125-6, at the time of Alfonso the Warrior's Andalusian expedition, was *comes* of the Mozarabs (Iḡlā, 113, 116). The disorders of the period of *fitna* (s.v.), conducive to rebellions, the emigration of native Christians to the kingdoms of the north, and the severities of the Almoravids and Almohads, explain the silence of our sources for the later periods.

The term *ḡimnis* was applied not only to the head of the Mozarabs, however, but also to the counts of the Christian kingdoms. Ibn Ḥayyān (*Muḡtabas*, v) says that Ordóñez II raised for warfare all his counts at the siege of Évora in 1013/14. He gives this title to the counts of Alaba and Ḍalīkīya, to the Banū ḡimnis and Banū Anḡūr, and cites by specific name Sanḡo b. ḡharīya (Banbaldna), Farḡhānd b. ḡhūndīshalb (Kashīlīya), Barḡndīsh b. Nuḡo (Shulamanka), Abu 'l-Mundīr (Gormān), Fortūn b. ḡharīya known as *Amīr al-ḡimnis*, Ruḡhīnīr al-ḡimnis alias Ibn Māmma Tāta, the counts Manyūra and Fāllo, and above all, al-ḡimnis *ḡimnis* *ḡarīkha*. At the time of al-Muḡarrī II (*Muḡtabas*, vi), the same author gives this title to Ben Fīlco, Gundīshalb b. Munyo, Esimēno b. ḡharīya and Ashrakā b. 'Umar b. Dāwūd. Ibn Khaldūn, in his chapter in the *K. al-'Iḡar* on the Christian kings of Spain, speaks of Fernan Gonzalez and Garcīa Fernandez *ḡimnis* Alaba wa 'l-ḡimnis, Menendo Gonzalez *ḡimnis* ḡhālīya, Henry of Burgundy, and the Banū ḡimnis and Banū Farḡhānd, as well as Alvar Fañez. Ibn Bassām spoke in ca. 1010 of the *ḡimnis* Raymond, lord of Barcelona. Speaking of events from the beginning of the 6th/12th century, Ibn Khaldūn uses *ḡimnis*, *amīr* for Raymond of Burgundy, Don Nuño (Gonzalez de Lara) and Henry of Trastámara. The *Feabolistis* attributed to R. Martí gives *ḡimnis*, *ḡimnis* as the equivalent of *comes*; P. de Alcalá has *conde o condean* = *cond*, *amir*; whilst the *Fragmento . . . reyes isarabes* published by Müller and re-edited by Bustani-Quirós (Lancho 1940) translates "count" by *ḡimnis*.

KÖMIS, a small province of mediaeval Islamic Persia, lying to the south of the Alburz chain watershed and extending into the northern fringes of the Daḡst-i Kavir. Its western boundaries lay almost in the eastern rural districts of Ray, whilst on the east it marched with Khurāsān, with which it was indeed at times linked. It was bisected by the great Ray-Khurāsān highway, along which

were situated the chief towns of Kömis, from west to east Khurwār or Khawār (classical Χορϋϋρ, modern Aradān), Simnān (s.v.), Dāmḡhān (s.v.), and Bīstām (s.v.), whilst at its south-eastern extremity, out in the Great Desert, was the small town of Bīyār (s.v. in Suppl.), modern Bīyārjūmand. The administrative capital of Kömis was Dāmḡhān, which is often accordingly called in the sources *Madīnat Kömis* or *Shahr-i Kömis*, according to a well-known toponomastic process (cf. the town of Bardasīr/Kirmān). The name Kömis is obsolete today, and the lands making up the mediaeval province are included administratively in the *fārsandīrī* *kūll* or governorate of Simnān and the *ustān* or province of Māzandarān. The present-day town of Shāhrūd, just to the south-west of Bīstām, does not seem to have been in existence as such in mediaeval times.

The province was one of considerable importance in pre-Islamic times. In Greek sources it appears as Κομιστινῆ, and in Armenian writers like Sebēos and Moses of Khorene as Komsh. H. W. Bailey, in *JRAS* (1970), 61-2, has suggested that the name derives from an Old Ir. root *ka-*, *ka-*, conveying the idea of "hollowness", plus a passive or agential suffix, whence Komsh "opened up, excavated place". Seleucus Nicator seized the satrapy of Parthia between 311 and 302 B.C., and it was allegedly he who founded the "city of a hundred gates", Hecatompylos, although it almost certainly existed before then; a legend retailed in the 8th century A.D. Middle Persian catalogue of the towns of Iran says that Kömis "the five-towered" (*pañc-burg*) was built by the sorcerer Ash-i Dabāk, whilst from later Islamic times, Hamīd Allāh Mustawfī, *Nusha*, 162, tr. 137, attributes the building of Dāmḡhān to the hero Hūshang. Such classical authors as Strabo, Pliny, Ptolemy, etc. mention Hecatompylos as the royal city of the Parthians, and some of these sources give the distance of the city from the Caspian Gates (e.g. Strabo, 1260 *stadia*, and Pliny, 133 *milie passuum*); the consensus of modern opinion tends to identify the Caspian Gates with the Sar-Darrah defile through the Kūb-i Namak spur of the Alburz. But the site was never properly identified with any reasonable certainty, although it was thought that it probably lay somewhere between the towns of Dāmḡhān and Shāhrūd, until recently, however, Hantsman and Stenach have examined and excavated the site of the modern spot called Shahr-i Kömis, near Kūgha to the south-west of Dāmḡhān on the Simnān road. It seems that this very extensive site could well be the ancient Parthian capital, apparently largely abandoned around the middle of the 1st century B.C. when the Arsacids moved their winter capital to Ctesiphon. See A. D. Mordtmann, *Hecatompylos*, in *SB Bayer. Akad. der Wiss.*, Phil. Hist. Cl. (1869), 497-536; Pauly-Wissowa, *zifs*, cols. 2790-7, s.v. (Keesling); Markwart-Maslaha, *A catalogue of the provincial capitals of Brāhminān*, Rome 1931, 12, 35-6; R. N. Frye, *The heritage of Persia*, London 1962, 183-4; J. Hantsman, *The problems of Kömis*, in *JRAS* (1968), 111-39; Idem and D. Stenach, *Excavations at Shahr-i Qumis*, 1967, in *JRAS* (1970), 20-62; Idem, *A Sassanian repository at Shahr-i Qumis*, in *ibid.*, 142-55; S. Matheson, *Persia: an archaeological guide*, London 1972, 191-2.

In Sāsānid times, there seems to have been a re-founding of Kömis, perhaps by Yazdagard I (399-421) as a defensive post against the Turks and Hephthalites (see *NAVĀTIL*) who were threatening the north-eastern frontiers of his kingdom. The region

retained its old connection with the Parthians through its being the home of the noble Parthian family of Mīhrān, to whom belonged the Spahpat (Islamic form, Isābādīh, [q.v.]) Fahlav, killed by Hormizd IV (579/90); in the next reign, Kōmīsh was the residence of the Spahpat of Khurāsān, Kāren of Nihāwand (see KĀRINUS for the subsequent history of this family). There was there a highly-venerated fire-temple, described in Middle Persian sources of the early Islamic period as burning perpetually without fuel (whence, presumably, its N. Pers. name *Khurīshn* < M. Pers. *xwarīshn* "without food"), obviously a fire fed from some volcanic source or else from a natural seepage of petroleum. Towards the end of the Sāsānid period, however, the administrative centre of the province seems to have been transferred to the apparently new foundation of Dāmghān, which thereafter acquired in early Islamic times the name of [Madīnat] Kōmis. It may have been that the old Kōmīsh of middle Sāsānid times had never been more than a frontier post, since no Sāsānid coins are known to have been minted there. See Marquart, *Erānshahr*, 71 2; Markwart-Messina, *A catalogue of the provincial capitals of Erānshahr*, 56-7; Nansen, *The problems of Kōmis*, 136-9.

At the time of the Arab conquest of Persia, the men of Kōmis fought in the Sāsānid army at Nihāwand and at the defence of Ray, but the province offered no resistance to the Arabs thereafter. According to al-Balādhurī, *Futūh*, 318, Sulaymān b. 'Umar al-Dabbī sent troops into Kōmis, but according to al-Tabarī, I, 265-6, the caliph 'Umar sent an army under Suwayd b. Muḥarrir in 62/63, and Kōmis was thereafter used as a base for attacks on Gurgān and the Caspian region. As with Dīlīsh and Ray, it was Arab warriors from Kūfa who garrisoned the chief town of Dāmghān. Al-Tabarī further records, I, 283, that the more northerly highway to Khurāsān was less used in these early decades than the one via Fārs and Kirmān, since Kōmis was vulnerable to attacks by Daylamī and other mountain peoples of the Alburz; it was, so he says, the governor Kutayba b. Musir [q.v.] who first regularly used the Kōmis route to Khurāsān and Transoxania (cf. C. E. Bosworth, *Sistan under the Arabs, from the Islamic conquest to the rise of the Saffarids* (30-250/637-864), Rome 1968, 20). In fact, the governor 'Abd Allāh b. 'Āmir b. Kuraysh [q.v.] had used that route in 31/652, according to al-Ya'qūbī, *Ta'rikh*, II, 192. The region had meanwhile been disturbed by Khārījī sectaries, involving the appearance there of the Azrakī leader 'Abīd b. Hūlī al-Vaḥshī in 77/696 with the remnants of Kaṭarī b. al-Fudayl's forces fleeing before the pursuing Umayyad army (see AZARĪKA and KAṬARĪ b. al-VUḤSHĪYA). Also, soon after 127/744-5, Kōmis, together with much of northern Persia, was occupied by the 'Alid pretender 'Abd Allāh b. Mu'āwīya [q.v.] (al-Tabarī, II, 180, 1976). Reform type *dirhams* were minted under the name Kōmis from 92/710 onwards, but there do not seem to have been any Arab-Sāsānid coins minted there (cf. J. Walker, *A catalogue of the Muhammadan coins in the British Museum. I. Arab-Sassanian coins*, London 1947, pp. CXXXVII-CXXXIX).

Administratively, Kōmis was mostly linked during this period with Dāmāwand [q.v.] or Dumbāwand and with northwestern Persia in general; thus under the caliph Hishām, Kōmis and Ishāhān both formed part of the governorship of Ray (al-Ya'qūbī, II, 328), until in 164/780-1 under the early 'Abbāsids Kōmis was separated from Ray, according to al-Tabarī, II,

503. Abū Muslim's troops early occupied Kōmis in their march westwards during the 'Abbāsī revolution, and some years later, in 137/754-5, it was briefly seized by the anti-'Abbāsī Persian rebel Sunbāgh [q.v.]. In the 39/9th century, Kōmis suffered several severe bouts of plague (e.g. in 243/856-7), and in 259/873 it was occupied temporarily by the 'Alid al-Ḥasan b. Zayd b. Muḥammad [q.v.] in his expansionary wars outside his base of Tabaristān (al-Tabarī, III, 1880). By the beginning of the 4th/10th century, Kōmis had fallen away from caliphal control, and was disputed by various Daylamī and other adventurers contending, together with the major powers of the Būyids and Sāmānids, for mastery in northern Persia; at various times, Būyids, Sāmānids and Zayārids controlled it, as the evidence of coins, principally bearing the mint-name of Dāmghān, shows (cf. E. von Zambaur, *Die Münzprägungen des Islams, zeitlich und örtlich geordnet*, I, Wiesbaden 1968, 215).

The geographers of this period give descriptions of the province, usually dealing with it town-by-town. They emphasise its fertility, with exports of its fruit, such as the famed *kūmīsī* and *dīpmī* apples, as far as 'Irāq and the fame of its woollen, silk and goats' hair textiles and carpets (see e.g. al-Ya'qūbī, *Buldan*, 276, tr. Wiet, 80; Abū Dulaf, *Second Risāla*, tr. Minorsky, *Abū-Dulaf Mu'ar'ir ibn Muhāddid's travels in Iran* (circa A.D. 950), Cairo 1955, 56-8; Muḥaddasī, 367; according to al-Dīlībī's *K. al-Tabaṣṣur bi'l-ḥidjra*, Kūmīsī *jaylāns* were the best procurable after those of Rūyān, Āmul and Egypt (cf. R. B. Serjeant, *Islamic textiles, material for a history up to the Mongol conquest*, Beirut 1972, 75, 80). The *Ḥudūd al-'Ālam*, tr. Minorsky, 195, § 32, comments on the bellikosity of the people of Kōmis and Dāmghān, perhaps a reflection of their position, exposed to attacks along the Khurāsān highroad and from the Caspian region. Al-Muḥaddasī, 353, 367-8, comments on the piety of the Hanafī inhabitants of Kōmis and on the peculiarities of their Persian dialect, which he says is connected with that of Tabaristān and which seems to show archaic features. Various authorities give the tax-yield of the province, from the figures of Ibn Khurrādādhbih (mid-3rd/9th century), 34, of 2,196,000 *dirhams* to those of al-Muḥaddasī, 371 according to whom the *khārdī* of Kōmis amounted to 1,196,000 *dirhams* plus 26,000 *dirhams* from Bīyūr [q.v. in Snpp.], this before Bīyūr was transferred administratively from Kōmis by the Sāmānid amir Navr b. Aḥmad (301-31/914-43) and linked with Nishāpūr and Khurāsān.

From the beginning of the 5th/11th century, the name Kōmis gradually drops out of usage, although Mustawfī (4th/14th century) still uses it in his *Nuzha*, 462-3, tr. 157-8, to denote the province; its last appearance on a coin appears to be on a Ziyārid *dirham* of 364/974-5 (Zambaur, *op. cit.*, 199).

(C. E. BOSWORTH)

KÖMIYA, one of the most important tribes of the Maghrib in the Middle Ages; they were at one time called Saffūra and were descended through Fāṭma from Mādghīs al-Aḥtar. Tradition says that the brothers of Kōmiya, the eponymous ancestor of the tribe, were Lemāya and Maḡghara from whom were descended numerous families, some of whom still exist at the present day. The most important representatives of the Kōmiya, who live in the north-

west of Algeria between Tlemcen and Aregkhūl (Raghuṣ) are the B. 'Abd, from whom was descended the first caliph of the Almohad dynasty, 'Abd al-Mu'min (q.v.), born at Tājerra between Humaya and Nedroma; the Nedroma who gave their name to an important town; the Saḡhira, now represented by the Māṭia, the Benū Hūl, of whom a section the Masifa still exist. The Kūmīya showed themselves devoted to 'Abd al-Mu'min, who was one of them. They formed the second *qand* in the Almohad army; but they exhausted themselves in supplying the dynasty with soldiers for the wars in Spain and North Africa. Subjected to *Ḥarāḡ* by the Zenāta, some of them joined another group, the Ūbāṣa and formed the powerful confederation of Tarka in the north-west of Algeria.

(R. Basset)

KUM(M)Ī, Kādī AHMAD IBRAHĪM HUSAYNĪ, Persian chronicler and chancery clerk (*mawṣūf*), was born on 17 Rabi' I 953/15 May 1546 in Kum(m), the son of the *mawṣūf* Shāra' al-Dīn Husayn al-Husaynī. In 964/1556-7 he went with his father to Mashhad at the court of the art-loving prince Ibrāhīm Mīrzā b. Bahārū Mīrzā b. Ismā'īl I, where he was trained by well-known calligraphers. In 973/1566 he was a *mawṣūf* at the court of Shāh Tahmāsp II, together with his father. At the instigation of Shāh Ismā'īl II, he started composing in 983-1576-7 his chronicle *Kawāṣat al-tawārīkh*. From 984-8/1576-1580 he was employed at the chancery of *mustawfi al-mamūkh* Mir Shāh 'Abdī, in 985/1578 as financial supervisor with Erdoghī Khālifa Takaku and from 999/1581 onwards worked at the highest level of the financial administration by command of the highest authority. In 992/1589 he was at the residence of Shāh 'Abbās I to whom he dedicated in 995/1591 his chronicle *Kawāṣat al-tawārīkh*. About his further life nothing is known; so far his works are the only sources for his life (see Minorsky, 2-12; Müller 3-7).

Kum(m) composed at least three works: 1. *Madīyat* (or *Taḡhīrat*) *al-shu'arā-yi 'Abbāsī*. The work has not been preserved but the author refers to it several times in his later works. According to these references the work must have been an anthology of at least six volumes in which among other things information was given about the lives of great scholars, scientists and poets.

2. *Kawāṣat al-tawārīkh*, a chronicle in five volumes, of which the fifth volume only has been preserved. It describes at full length the history of the Safawids from their origin to the first years of the reign of Shāh 'Abbās I and was probably composed between 995/1587 and 1000/1592. It exists in five manuscripts. The first part of this volume, dealing with the early Safawids, has been published, translated into German and annotated by T. Glissen, and the last part, in which the first years of Shāh 'Abbās I are treated, by H. Müller. This chronicle is one of the most important sources of Safawid history. Although the first part is highly dependent upon other known and unknown sources, the sections dealing with later times, witnessed by the author himself, give truly independent information. Together with Iskandar Beg Munshī's *Ālāmār* *yi 'Abbāsī*, it may be considered as one of the two most important sources for the period of Shāh 'Abbās I.

3. *Gulistan-i kunar*, a treatise on calligraphers and painters, composed ca. 1005/1597, exists in several incomplete manuscripts; it has been edited by A. S. Khānsari, translated into Russian by B. N.

Zakhoder and into English by V. Minorsky. The contents of this work, classified according to the various kinds of writing, are mainly based on earlier sources. There are however many important observations by the author himself on contemporary calligraphers, whom he had plenty opportunity to meet at the court of Ibrāhīm Mīrzā, at that time a flourishing centre for calligraphy.

For other works, possibly written by Kum(m) (*Madīyat* *al-shu'arā'* and *Madīyat* *al-ḥayr*) see Möller, 8-10.

(H. MÜLLER)

KUMR, the Arabic name for the Comoro Is., a group of four islands in the Indian Ocean at the northern exit of the Mozambique Channel, halfway between East Africa and northern Madagascar. The largest island of the archipelago is Grande Comore (in the local language: Ngazija; in the chronicles also: Hangaizija, Langaizija, al-Angazija, Kum(u)r; with 1148 km² and ca. 128,000 inhabitants (1966); followed by Anjouan (Nawani, Hunzwani; in older Portuguese and English sources: Johanna) with 424 km² and ca. 85,000 inhabitants; Mayotte (Mayuta, Maik'ore) with 374 km² and ca. 28,000 inhabitants; and Mohéli (Mwali, in older European sources Mohaly, Mohilla etc.), with 290 km² and ca. 10,000 inhabitants. The capital of the islands is Moroni on Grande Comore. The islands are of volcanic origin (still active is the volcano Karthala, 2361 m, on Grande Comore) and consist mainly of basalt and tuff. The climate is tropical maritime with the heaviest rainfalls from November to April. The natural vegetation is a dense rain-forest with rare varieties of wood, which, however, for the most part have been rooted out and replaced by plantations and savannas. Agricultural products of importance for export are coco palms, vanilla, coffee, pepper, aromatic plants (ylang-ylang), sisal and sugar-cane. Cattle-breeding and fishery are scarcely developed.

The population, which suffers from a very high birthrate (outside the islands, in Madagascar and

East Africa, there already live about 300,000 Comorians, cf. Guy, *Islam comorien*, 149), has developed from three different ethnic elements, (a) Bantus from East Africa, (b) Malayo-Indonesians who came via Madagascar, and (c) Arabs who immigrated directly from South Arabia (especially Hadramawt) or from Arab settlements in East Africa. The Comorian language is divided into two main dialects, the Shi-Ngazija and the Shi-Nzwani, and, at least from the phonetic point of view, seems to be related more to the Venda, a Bantu language spoken on the middle Limpopo river, than to Swahili (Heepe, *Die Komoren-dialekte*, 45). Like Swahili, which is well understood by most of the Comorians, it has incorporated many Arabic loanwords. While Arabic seems to have been used as the written language still in the last century, most of the recent chronicles and correspondences are written in the local language with Arabic letters. Arabic is taught in Korān-schools but is understood only by a small minority. The Comorians are Sunni Muslims of the Shāfiʿī rite, but many African animistic conceptions and magic practices have survived in popular belief (cf. Robineau, *Société*, 31, with further references). Al-Nawawī's *Minhāǧi al-ǧālibīn* is widely used and still serves as the theoretical base for Civil Law. The Shāfiʿī law was widely respected by the French administration, but in many fields it is supplemented by the customary law (*ada*) which shows many matriarchal characteristics (e.g. law of succession). The Sufi brotherhoods of the Shādhūliyya, Tiǧāniyya, Rāhīyya, Kādiriyya and ʿAlawīyya play a very important part in religious life (see Guy, *Islam comorien*, 143 ff.).

Local legendary tradition, as well as false identifications of place-names, have led some former historians (Gevrey, Grandclercq, etc.) to fantastic speculations about the early relations between the Comoro Is. and the ancient Mediterranean world. Until now there seems to be only one hint which deserves some attention and which might establish such relations. Pliny gives as the name for an island, the location of which would fit well with one of the Comoro Is., Damua, and Von Wissmann (art. *Zangene*, in *Paukys Realencyclopädie*, Suppl.-Bd. xi [1908], 1339) may be right in identifying Damua with Domoni, an old settlement on Anjouan and formerly used as name for the whole island. Arab geographers, including the pilots of the 15th and 16th century like Ibn Maǧǧid and Sulaymān al-Maḥrī, used the name Kūmr for Madagascar exclusively and cited, if they did at all, each of the islands by its proper name (cf. Tibbets, *Arab navigation in the Indian Ocean*, London 1972, 432). Local tradition starts the history of the islands with the legendary report (unknown on the Swahili coast) of the immigration of two families from the Arabian peninsula some years after the death of Solomon. But the first traditions which deserve more interest are those that speak of the arrival of Bantu-speaking people from East Africa to Grande Comore at an unknown date but in any case before the 14th century. One chronicle (Rotter, *Muslimische Inseln*, 24) calls them Wa-Mizi and Tungu; Mizi as a place-name was already known to Pliny (Von Wissmann, *Zangene*, 1339) and corresponds with modern Kiwa Kistmani, while Tungu is identical with Tungu south of Cap Delgado. Since a group of former slaves in Anjouan bears the name Makwa (Robineau, *Islam*, 46; idem, *Société*, 34) which corresponds with the tribe Makua in the hinterland of Tungu, it is very likely that at least the greatest part of the Bantu element on the Comoro Is. came from the East African coast between Lindi and

the mouth of the Limpopo River. This fits with the above-mentioned linguistic facts. At least on Anjouan these Africans were not the first inhabitants, but merged with an older population, now generally called Antalotra, of Malayo-Indonesian race, which might have immigrated in the course of the first millennium (cf. Robineau, *Société*, 34) via Madagascar (former European sources often call them wrongly Bushmen, cf. Reiquet, *Sultanat*, 50).

The local tradition of Grande Comore and Anjouan has preserved the names of the ruling houses before the coming of the Shīrāzi (15th century). On Grande Comore the *ma-fey* (or *ma-fa* "chiefs", cf. Swahili *fa* and *fumu*) are said to have established and ruled the first eleven villages, before they were defeated by the *ma-béja* (cf. Swahili *wa-mbaja*) (Harris, *Swahili chronicle*, 12, 71). On Anjouan the *béja* are regarded as the oldest ruling class, which was replaced by chiefs who bore the title *fani* (Faurec, *L'Archipel*, 33). Although we must take for granted that at that time, i.e. in the first half of this millennium, Arab or Swahilised-Arab merchants were in contact with the islands, and some of them might have settled there, it is difficult to say, whether Islam was already widespread. It is noteworthy, however, that the last *fani*-rulers on Anjouan bore Arab names like ʿAlī and ʿIsā.

The decisive turn in Comorian history was the arrival of the Shīrāzis in the second half of the 15th or the beginning of the 16th century, who by fighting and intermarriage seized power on all four islands (the coming of the Shīrāzi clan with their ancestor Muḥammad b. ʿIsā is described through the legend of the Seven Brothers which is also well-known in East Africa, cf. among others, Chittick, *Shirazi colonization*, 276; Temmingham, *Islam in East Africa*, 10 ff.) and became the real founders of Islamic culture on the islands (the first mosques were built by them at Tsawani on Grande Comore, at Sima and Domoni on Anjouan, and at Chingoni on Mayotte, all in the middle of the 16th century).

In the following three centuries the political situation was marked by (i) very complicated internal dynastic struggles, (ii) the invasions of the Malagasy tribes, Sakalava and Betsimbaraka, and (iii) the growing political influence of the French and British in the area.

(i) Grande Comore was divided into eleven more or less independent territories (Bajini, La Dombe, Bambao, Hambu, Iwa idra, Hamamavu, Mitsamihuli, Mbude, Mbaku, Washili, Hamabane) ruled by sultans who only seldom jointly recognised the supremacy (*uḥbi*) of one of them. Sultān Aḥmad (= Mwlaye Mkuu) (1791-1875), the son of Shāykh Ngome from Pate in northern Swahili country, and of Mwana Miti, half-sister of a *sūfāna* of Grande Comore (women rulers were not unusual, and the maternal line was often accorded higher prestige on all four islands) was the last really great personality who, at least for some years, managed to unify the islands, before he was defeated by Mūsā Fumu. The rivalry between Sultān Aḥmad's grandson Sayyid ʿAlī, the favourite of the French, and Mūsā Fumu (d. 1893 in prison), who was supported by the British and the Sultan of Zanzibar, marked the last years of independence. Against the will of most of the other sultans ʿAlī signed in 1886 a treaty of protectorate with France.—On Anjouan the political situation was characterised by the bipolarisation of the two main towns Domoni, which was made the capital by the Shīrāzis after Sima, and Mutsumadu, which became the political and commercial centre from the

end of the 18th century onwards when power shifted from the clan (*habila*) of Al Nadwa to the clan of Al Mastia (both names show their Hadramawt origin, cf. B. G. Martin, *Migrations from the Hadramawt to East Africa*, in *Centre of Arabic Documentation, Research Bulletin*, Ibadan 1973). Continuous succession struggles in the first half of the 19th century were only ended by Sultan Salim (1842-55), whose son Sultan 'Abd Allah III (1855-1890) put his island under French protection. Neither was Mayotte spared from dynastic rivalries within the Shīrāt clan who ruled at Chingoni from the 16th century. In addition, the situation was complicated by the constant attempts of the sultans of Anjouan to bring Mayotte under their control. The last Shīrāt sultan ceded his island in 1831 to the Malagasy nobleman of the Hova tribe Ramanantaka who already ruled on Mohéli. In 1835 or 1836 Ramanantaka was defeated by the Sakalava Dia Ntsoli (= Andrian-Tsofily), and the island became nominally a possession of the sultan of Anjouan. The same Dia Ntsoli, without the authorisation of the sultan of Anjouan, in 1841 presented the island to France. The smallest island Mohéli apparently was always dependent on Anjouan, until in 1830 the above-mentioned Ramanantaka (d. 1841) after having become a Muslim, appointed himself sultan of the island. One of his descendants signed the treaty of protection with France in 1855.

(II) There seems to have been a more or less peaceful influx of Malagasy people to the islands throughout the centuries, but around the turn of the 19th century the nearly annual invasions of the Betimisaraka and Sakalava threatened the political and cultural integrity of the islands. The main reason for these invasions, which caused heavy losses among the population and the destruction of whole settlements, was the search for slaves, although some groups had been summoned by the quarrelling sultans themselves. Only after the Anglo-Malagasy treaty of 1817 did the invasions gradually stop. In the following decade it was the political situation on Madagascar and the extension of the Hova state that drove large groups of Sakalava (under Dia Ntsoli) and Betimisaraka (under Ramanantaka) to the islands. They finally settled down on Mayotte and Mohéli.

(III) The first contact with a European power was a short visit of the Portuguese on Grande Comore about 1505 which, however, left no permanent traces on the islands. In the first half of the 19th century when the British and the French disputed control of the Indian Ocean, the Comoro Is. also became involved. In taking possession of Mayotte in 1841, France tried to counterbalance the growing British influence on the other three islands (In 1833 the British had re-installed Sultan 'Abd Allah II on Anjouan by force). Only after the British slowly withdrew from the Malagasy region after 1880 could France bring the other islands under its protection in 1886 (a process intensively studied by B. Dubins, *Political history*).

From 1914 till 1946 the whole archipelago was placed under the Gouvernement Général de Madagascar. On 6 July 1975 the Comoro Is. declared their independence, except for Mayotte, where on 21 April 1976 a referendum saw a large majority voting to become a *département outre-mer* of France.

KUMUK (variant: Kumik) a people of the eastern Caucasus. The Kumuks belong to the Kipčak Turkic ethnic group, along with the Noghays, Karagay and Balkar. They live north of the main chain of the Great Caucasus, on the northern, north-eastern and eastern slopes of the Dagestaniian Caucasus between the foothills and the Caspian Sea, from Derbent to Adagh-Su (near the lower Terek River). Although confined to a narrow strip of land in the south, they inhabit a wider area near the Terek in the north. The Kumuks are bordered by the Noghays in the north, the Avars (q.v.) and Darghins (q.v.) in the west, and Tabasarans and Asers (q.v.) in the south. The major rivers in Kumuk territory are the Terek, Sulak, Shura, Ullu-Chi, Gamzi, Manas, Alesai and Gudben. The great majority of Kumuks are Sunni Muslims of the Hanafī school, although some Kumuks of Derbent and Makhachkala are "Twelver" Shī'īs. The 1926 Soviet census lists 94,349 ethnic Kumuks, of which some 20,000 lived outside Dagestaniian, and 94,909 Kumuk-speaking people. The 1959 Soviet census lists 134,967 ethnic Kumuks, and 132,303 Kumuk-speakers. (Due to the adoption of Russian as a primary language by Kumuk-speakers in the north, and Azeri by those in the south, the relative number of Kumuk-speaking people has declined, despite increasing numbers of

mountaineers using Kumuk as their primary language.)

The Kumuks inhabit eight districts of the Daghistan ASSR: Baba-Yurt, Khasav-Yurt and Kizil-Yurt on the northern plains, and Buynaksk and Karabudakhsent in the eastern coastal plains. The "Southern Kumuks" (Kumuks of Kaysent) live in the Kaysent district and in the villages of Mezhals, Yangkent and Tumenler in the Kaytak district. The Kumuks are also found in six settlements in the vicinity of Melkhakala, and in the cities of Melkhakala, Khasav-Yurt, Buynaksk, Icherbashi and Derbend. A number of Kumuks live outside Daghistan on the Noghay steppes in the Grozny region, north of the Terek River, as well as in North Ossetia.

The ethnic origin of the Kumuks is complex and difficult to determine. They are probably a mixture of the indigenous Ibero-Caucasian tribes and various nomadic Turkic groups (Kuman-Polovits, Khazar, Kipchak, etc.) who were pushed into the lowlands from the North Caucasian steppes in the 11th-13th centuries, imposing their language on the inhabitants.

The formation of the Kumuk people began in the 7th century when the *Shazars* [q.v.] overran the plains of southern Russia and populated them with Turkic-speaking peoples. The indigenous Ibero-Caucasian population mixed with these Turkic peoples, especially the Kipchaks [q.v.], and adopted their language. The Kumuk "nationality" appeared in the 13th century on the steppes of northern Daghistan when successive waves of the Golden Horde pushed these Turkic-speaking peoples southwards. Their Islamisation began immediately, under the influence of the Golden Horde from the north and the Laks from the south, and was completed by the 14th century when the Golden Horde annexed northern Daghistan. Prior to this, the people had been Christians, Jews and animists.

The first political organisation of the Kumuks was the feudal *Shamkhalat*, which united all the Kumuks as well as other northern and eastern Daghistani peoples. The *Shamkhal* originally resided in the mountains of the Lak (Kizil-Kumuk) region. When *Shamkhal* Coban died in 986/1578, the Laks shook off the rule of his son Suljan-Bat, and the centre of government was shifted to Buynaksk. After 1050/1640, Tarku was the capital of the *Shamkhat*. In the 16th century the *Shamkhal* ruled most of northern Daghistan. The semi-independent states of Endirey, Aksey, Kosteko, Bammatalah, Buynaksk, etc. were all headed by representatives of the *Shamkhal* of Tarku's family.

The *Shamkhals* acknowledged Persian sovereignty throughout their existence, in spite of their strong diplomatic ties with Russia in the late 16th century when Russia was attempting expansion into Daghistan. The power of the *Shamkhalat* began to decline with the wars against the Kabardines and Georgians. It lost control of the area between the Terek and Sulak Rivers first, then the Darghin and Lak regions in the 17th century. However, the Russian expeditions of 1586, 1590 and 1604 were defeated by a joint Kumuk and Ottoman effort. Although the *Shamkhals* were formally vassals to the Moscow state, they remained close allies of the Ottomans from the late 16th till the late 18th centuries. In 1725 the Russians ended independent *Shamkhat* rule and the decline of the Kumuks was completed with the creation of the Mehtulin and Bammatalah *Khānates*. By 1765 the *Shamkhalat* was reduced to a 2,500 km² strip of land along the Caspian Sea.

Imām Manjūr attempted to rally the feudal nobility of the Caucasus (especially among the Kumuks and Kabards) against the Russians in the late 18th century, but failed. The Treaty of Gülistān (1813) formally ceded Daghistan to Russia, but the Kumuks continued to be governed by the *Shamkhals*. After the Russians subdued the Murid insurrection (1834-59) led by the Imām Shandī [q.v.], the Kumuks and the other Daghistani peoples were incorporated into the Russian Empire. Native rule was supplanted by a Tsarist military administration.

A small Kumuk intelligentsia emerged in the early 20th century. They had been educated in the *Djadic* [q.v.] schools on the borders of Daghistan, and were among the first to be impregnated with socialist ideas. This small group was destined to provide the leadership for the national liberal movement (which was doomed to failure) during and after the Russian Revolution.

In 1917 the Kumuks played an important role in the North Caucasian peoples' move for independence. Motivated by their own political traditions and Turkic cultural influences, they favoured a "Turkic" consolidation of Daghistan (as opposed to the "Islamic" consolidation favoured by conservative Daghistanis), with linguistic unification based on Kumuk or Azeri. They sought to become part of the great Pan-Turkic movement centred on Bâkû, Kâzân and the Crimea. Following a power struggle between the religious and conservative elements led by *Shaykh* Uzun Hagi and Imām Gotshinski and the socialists, the Soviet régime was established in the principal cities on the plain in April 1928. By September 1928, General Bicherakhov's "White" army, equipped in Persia by the English, had crushed the Soviet forces. Soviet power was not re-established in Daghistan until 1929 when the Eleventh Red Army defeated Denikim's White Army and drove the partisans of Imām Gotshinski back into the mountains.

The Kumuks had one of the most powerful, complete and complex feudal structures in Daghistan before the Revolution. The ruling class consisted of the *Shamkhal*, *beks*, high nobility (*tanke*), middle nobles (*sala-senten*), and religious leaders. The free-men (*suden*), free serfs (*tagar*, organised into various groups (*dimis*)), serfs bound to the land (*terkeme*, living in separate *suls* and working the land), and house slaves (*kul*, a very small group) comprised the lower classes. The merchant class grew rapidly with the rise of industry and capitalism in the late 19th century, but the working class was never large, since most industry was domestically oriented.

The Kumuk language belongs to the Kipchak-Oghuz subgroup of the Kipchak group of Turkic languages, to which the Noghey and Karachay-Balkar languages also belong. Kumuk has three dialects; *Khaydak* is strongly influenced by the Ibero-Caucasian languages and is used by the Meridional Kumuks; Buynaksk, and Khasav-yurt (or Aksey), which forms the basis of the literary language, developed with the Arabic script in the late 19th century. In 1917 a Latin alphabet replaced the Arabic, and Cyrillic script was adopted in 1938. Kumuk was the *lingua franca* of the Daghistani peoples. The first Daghistani Communists accepted this rôle for Kumuk in the 1920s, but Russian was later adopted as the official language. Although Avar has replaced Kumuk as an inter-tribal language, Kumuk remains the second or third language of certain Ibero-Caucasian peoples in north and central Daghistan (Ardi-Endo-Avar, Darghin, Lak). Article 75 of the *Constitution of the ASSR of Daghistan*

names Kumuk as one of the nine official literary languages of Daghistan.

The Kumuks are the only Daghistan people having a true national literature which dates back to the early 19th century. These early works were generally local versions of heroic epics or adventure novels, and were often consigned to small pamphlets destined for public readings. Turkic-language publications from Kizán, Ağharbáyđján, the Crimea and Turkey satisfied the desire for other literature. Christian missionary publications of the early 19th century were instrumental in the development of a literary language. Written in a composite language of various Caucasian peoples, they were among the first written literature of the area.

Kumuk literature came under the influence of the Turkic modernist movement centred on Kizán and Bağhesarlı in the second half of the 19th century, resulting in the nationalistic poetry of Yásmá from Yakhay and Ayyúb from Djengutay. In 1883 the Kumuk 'Ösmánov Muhammád (b. 1843) published an anthology of Kumuk and Noghay folklore and literary texts in St. Petersburg, where he was a member of the Faculty of Oriental Languages at the Academy of Sciences. The collection includes a letter in verse, dated 1872, from the revolutionary Kumuk poet Yirli Kazak (1830-80), inviting Muhammád Efendi, then a student at St. Petersburg, to return home. This letter is one of the oldest literary vestiges of the Kumuk language, and Yirli Kazak is thus considered the founder of Kumuk literature.

Muhammád Mirzá Magarayef established a printing shop utilising Arabic script at Temir Khán-Shura at the beginning of the 20th century. By 1912 he had printed translations from Arabic and Kázar Tatar and the poetry of Abdú Suyán in Kumuk. Nokhay Batfurmazayev (1860-1919) wrote the first modern narrative works inspired by Kumuk contemporary life in 1906-7. His son Zainalabdi (1897-1919) was the first Kumuk Bolshevik writer. Together they founded the political-literary society *Taş Tolpan* ("The morning star") at Khásav-Yurt in 1916 to promote the development of modern Kumuk literature. With the assistance of poet and dramatist Temir Bulat Beybulatov and other Kumuk, Tatar and Russian writers (including S. S. Kazbekov and H. O. Bulac), this organisation sponsored a nationalist, progressive review of the same name, first published at Temir Khán-Shura in August 1917. The Khásav-Yurt dialect of Kumuk was adopted as their literary language.

Taş Tolpan was instrumental in reviving the Kumuk national consciousness. In actuality a radical nationalist organ, it professed to be apolitical and declined to choose between the socialist and nationalist positions. However, as a result of the first short-lived Soviet occupation of Daghistan beginning in April 1918, *Taş Tolpan* adopted a pro-Bolshevik position. Publication ceased in July 1918.

Taş Tolpan was not the first Kumuk journal to appear. In 1913 the liberal nationalist Mirzá Muhammád Mavaraev of Temir Khán-Shura requested authorisation for a Kumuk journal entitled *Kumuk gazeti* ("The Kumuk journal"). This demand was rejected by the authorities, and the classical Arabic publication *Diyaridol Daghistan* (published in 1915) notwithstanding, the first Kumuk publications did not appear until after the Revolution of February 1917. The journal *Musávit* ("Equality") was the first Kumuk periodical, published at Temir Khán-Shura in June 1917, under the editorship of Mavaraev.

This first period of Soviet domination witnessed the publication of a third Kumuk journal, *İghkhal* ("The working people"); it was edited by Zainalabdi Batfurmazayev and adhered to a Bolshevik position. The journal *Yoldash* also supported the development of a national Kumuk literature. The Kumuk press is currently represented by one republican organ published at Makhačkala, and several district organs (at Khásav-Yurt, Baba-Yurt, etc.).

The Kumuks possess a very rich Soviet literature. 'Abdú Alláh Muhammádovđılı Magomedov (1869-1937) is considered the national poet of Daghistan by the Soviets as a result of his pro-Communist writings in the post-Revolutionary years. The most celebrated Kumuk prose writer is Yásmá Gecayef, whose satirical style was influenced by the Ağharbáyđján poet Şábir. Other literary figures of note include poet, dramatist and author of children's books 'Alimpaşa Salavatoghlu (1901-43), poets A. Bashirov and Káiyán, poet-novelist 'Abdul-Wahab Salaymoghlu (b. 1909), playwrights Hamid Rustamov and Amir Kurbanov (b. 1909), and novelist Anvar Agiev (b. 1913). The Kumuk poetess İndü Gadieva is the most renowned female Daghistan writer. In addition, many Russian authors have been translated into Kumuk (e.g. Tolstoy, Lermontov, etc.).

The Kumuks participate actively in the political life of Daghistan. In 1924, Kumuks comprised 5.7% of the *propsoyus* of the Daghistan ASSR, and in 1927 there were 696 Kumuks in the Daghistan Communist Party.

The Kumuk educational system is less developed than that of the Avars; in 1948 there were eight Kumuk secondary schools (compared to 27 Avar); Karabudakhkhal, Kayakent, İberbatsh, Makhačkala, Buynaksk, Khásav-Yurt, Baba-Yurt and Kizán-Yurt. Islam seems to remain a strong force among the Kumuks up to the present time.

Modernisation is changing the character of the traditional Kumuk economy. Agriculture and animal husbandry remain the basis of the rural activity, but mechanisation and collectivisation have made the large-scale production of cereals and cotton possible. The fishing and canning industries, as well as oil (at Kayakent), hydroelectric plants and other factories are evidence of advanced industrialisation in certain sectors. Nonetheless, traditional crafts are still pursued: woven woollen goods and carpets (villages of Kumtorkal, Kayakent, Upper and Lower Kazanlık), gold work (İmsli, Kafir-Kumukh, Sultan-Yahı-Yurt, etc.), wrought iron work (Verkhneye, Nizhneye, Kazanlık, Andeevauli), and pottery (Verkhneye, Kazanlık).

The Kumuks, along with the Avars, Darghins, Laks and Lezgis, appear to be points of consolidation among the Daghistan peoples, destined to absorb certain small groups (although certainly not all). Of the nine official languages of Daghistan, newspapers are only published in the languages of these five groups.

(W. BARTHOLD — [DAVID K. KERMANI])

KUMŪN, "latency", a key-notion of speculative physics in early Muslim theology, especially in the system of al-Nazzām (q.v.).

The concept was derived from simple observations: wood is "hidden" in the body of man, oil in sesame, flour in wheat, butter in milk etc.; these substances can be made patent by certain procedures, such as grinding, churning etc. On the other hand, new substances can be produced by putting several ingredients together: pottery results from the "mixture" of clay, water, and fire, and these primary elements are "hidden" in it afterwards. On this empirical basis, where the term still had a rather non-technical meaning, al-Nazzām constructed a rather elaborate system which has not yet been the object of more thorough investigation. He did not follow the atomism of his teacher and uncle Abu 'l-Hudhayl, who treated qualities as accidents which may be replaced by their contraries. For him, all natural qualities (with the exception of movement, understood in a very broad sense, as "all actions depending on man's will") were "bodies" inherent in other bodies: fire is not hot and luminous, but is composed of heat and luminosity. As such, fire may itself be considered an ingredient (*ḡāḡ*) of wood where it is "latent" until the wood is burnt. When it becomes manifest, other ingredients do so too: ashes, which consist of taste, colour, and dryness; smoke, which consists of taste, colour and smell; and water, which consists of humidity and a certain sound, i.e. the crackling produced in burning. In consequence of his "corporealism", al-Nazzām thus treated the qualities of an object and its constituent parts alike. It is possible that he differentiated between them insofar as the qualities form the ingredients of the primary elements which then make up for the more complex bodies; but we are not yet able to ascertain whether his theory implied such a hierarchy.

The "elements" (fire, water, etc.) are thus not simple themselves, but composed of, as al-Nazzām said, "joint" (*muḥḍaḥḡ*). They may inhere in each other: water always contains fire, which may be activated through heating and then leaves it for the empyrean. The process can be recognised through the bubbling of the water; the particles of humidity which are dragged along the fire in its upward movement manifest themselves as vapour. Similarly, water normally contains earth which remains as a salty or limelike sediment in the kettle after evaporation. On the other hand, earth usually contains water; otherwise, it would not keep together (clay being normally given as an example). That fire and water may penetrate each other (*muḍāḡḡala*) without conflicting, is to be explained by the fact that they keep each other's balance; God has wisely calculated their proportions so that things do not explode by themselves (cf. al-Khayyāt, *K. al-Intisār*, ed. Nader, Beirut 1957, § 16). Their equilibrium may even be used as a proof for the existence of a creator (*ḡāḡ*, § 26). Only when this equilibrium of "hidden" contradictory ingredients is disturbed by external influence does disintegration ensue. When fire is brought close to wood, the fire latent in the wood gets the upper hand and destroys the coherent structure of its vessel. When somebody is bitten by a snake he dies not through the venom of the snake,

but through the venom which he has in his own body and which is now reinforced. For the same reason the snake does not die from its own venom; here the venom is balanced by the right proportion of antidotes. When water freezes, this means that not only the cold which is latent in it has been enforced from outside, but also its "hidden" dryness; for ice is not only cold, but also dry. When it melts again, this process is thus not merely produced by heat, but also by humidity which was added from outside. When something wet becomes dry, it does not only lose humidity, but also weight; this shows that humidity contains "latent" weight, whereas heat does not.

Disintegration may be slow and imperceptible, as happens, e.g. with an oil lamp which burns down during the night, although it looks alike from one moment to the other. Disintegration may sometimes also be stopped. Wood must not lose all its fire at once; it may be transformed into charcoal which still contains part of it. Different species of the same genus may contain different proportions of the proper *ḡāḡ*. Some kinds of wood are more inflammable because they contain more fire; for the same reason, some kinds of stone can be better used as a flint than other ones.

This advanced theory presupposes a rather intricate intellectual tradition and a widely-developed range of discussion. As a matter of fact, the word *kumuk* is already alluded to in a poem by Abū Nawās, one generation before al-Nazzām (cf. *Diwan*, ed. R. Wagner, I, 126, l. 6). Al-Nazzām took over his vocabulary (*kumuk* and *muḍāḡḡala*) and the basic structural assumptions of his system: his rejection of atomism and his definition of the body, from the Shī'ī theologian Hishām b. al-Hakam (q.v.), who had adopted them in his discussions with dualists, especially with Abū Ḥākim al-Dayḡanī, whom he seems to have converted to Islam. Via the Dayḡanīyya and their spiritual ancestor Bardesanes (died 216 A.D.), we may trace some basic ideas back to Stoicism: a similar definition of body (*σῶμα*) and the concept of *ἐκπεριεῖν δι' ἑλόν* (= *muḍāḡḡala*) or *μῆτρειν* (= *muḥḍaḡ*, *ḡāḡḡāl*). In the Iranian environment this tradition was perhaps amalgamated with certain Indian ideas (the example of pottery is used in the Indian *Samkhya*; cf. W. Ruben, *Geschichte der indischen Philosophie*, Berlin 1954, 193). All dualist creeds understood the world as being in a stage of "mixture" (*ḡumḡḡala*) between light and darkness. In a Syriac fragment of Bardesanes, the qualities (*ποιότητες* = *ḡaḡḡā* or *ḡāḡḡ*) are called *muḡḡḡā*, "mixtures". But al-Nazzām did not simply imitate: he refuted the Manicheans, as is shown by several passages in al-Khayyāt's *K. al-Intisār*, and he attacked the Dayḡanīyya; he did not accept their axiom that light and darkness are at the bottom of every mixture (cf. al-Dībālī, *Ḥayawān*, v, 46, ll. 6 ff. etc.). He used the advantage of meeting them on common ground, but he seems to have developed quite individual ideas.

In pre-Islam, there were certain affinities with the—rather vaguely definable—*ashḡ al-ḡāḡḡ* who believed that all things have a nature of their own which, once being created, no longer depends on God's will (and may as well be "hidden" in them; the *ḡāḡḡ* in al-Nazzām's terminology), and with the Mu'tazilī al-Mu'annab b. 'Abdā (cf. H. Dalber, *Das theologisch-philosophische System des Mu'annab ibn 'Abdā as-Sulamī*, Beirut 1975, 130 ff.). Opposition came from the *ashḡ al-ḡāḡḡ*, the "accidentalists" or atomists whose ideas had been first expounded by

Dīrār b. 'Amar (q.v. in Suppl.), but also from apparently al-Aḡaṣan (q.v. in Suppl.), who, in spite of denying the accidents, did not think of qualities as "bodies". The critique used mainly three arguments: (a) nothing can take place in something smaller than itself (and fire is bigger than wood); (b) several things cannot be simultaneously in the same place (which would be the case if several qualities were "hidden" in one substance); and (c) if fire were hidden in wood, we should feel it when we touch the wood, or we should find it when we cleave it. Arguments (a) and (b) were already brought forth against the Stoics (e.g. by Alexander of Aphrodisias in his *Ἠπεὶ πλεονεχία*, ch. 5 ff.); (c) is found in Indian philosophy (cf. W. Ruben in *AO*, xlii (1935), 247). The discussion turned especially around (c); al-Nazzām objected that coldness balances the fire hidden in the wood; when the fire comes forth in burning, the coldness also leaves the wood immediately and enters the cold substances in its environments, i.e. water and earth, in a leap (*ḥafra*), without getting into contact with the things in between. This is why the ashes are not cold, in spite of the fact that the fire has left, the warmth found in it is not the warmth of the fire, but the warmth which was "hidden" in it and was activated by the fire. As the "accidentalists" returned to Aristotelian tradition (visible in (a) and (b)), al-Nazzām also criticised Aristotle's model of physics.

The theory was eagerly defended by Nazzām's disciples. But already al-Dīshīrī did not conceal his scepticism (cf. the quotations in van Ess, *Das K. an-Nazzām des Nazzām*, Göttingen 1970, 120). In the second half of the 3rd/9th century, it was apparently given up completely within the Mu'tazilī. The future belonged to atomism.

Bibliography: The main source for Nazzām's ideas about *ḥumūn* is Dīshīrī, *Ḥayawān*, v, 6 ff. (partly tr. into Turkish by Nalif Damsnān, *Kaldm ilimne gırs*, Ankara 1935, 125 ff.). An explanatory translation of Kutab al-Tawḥīd from al-Mughnī ... by Qādī 'Abd al-Jabbār*, diss. Berkeley 1975, index s.v. "intensity." (J. van Ess)

KUN, Arabic orthography *Kūn*, a Turkish tribe of Inner Asia known in the pre-Mongol period, but only in a shadowy fashion.

The earliest mention of the Kun is in Bīrūnī's *K. al-Taḥṣīn* (420/1029), ed. R. K. Wright, London 1934, 245, and he places them in the Sixth Climate, in the territory of the eastern Turks between the *Khy* and the *Khirkis* [see *ḡavl* and *ḡwāl*]. The tribe is not, however, mentioned in Bīrūnī's *al-Kūn al-Ma'ādī* (pace Pelliot, *A propos des Comans*, in *JA*, Ser. II, Vol. xv (1920), 134-5). Nor are the Kun given in Kāshgharī (who does however deal with the other two tribes mentioned in the *Taḥṣīn* as their

neighbours), but there is an important section on them in Marwazī's *Tahṣīn al-Ḥayawān* (early 6th/12th century), see Minorsky, *Shāraf al-Dīn Tāhīr Marwazī on China, the Turks and India*, London 1942, text B, tr. 29-30, comm. 95-102. This was adapted a century later by 'Awfī in his *Dīwānī al-ḥikāyāt*, section on the Turks, printed and tr. by Marquart in his *Über das Volkstum der Komänen*, in Bang and Marquart, *Osttürkische Dialektstudien*, in *Abh. G. W. Götz*, Phil.-Hist. Kl., N.F. xliii (Berlin 1914), 40-2, and used by him as the basis of a complex and convoluted commentary on the *Kun*, *ibid.*, 42-77.

It seems that the Kun were amongst the easternmost of the Turkish peoples, with their original homeland in eastern Mongolia and the fringes of Manchuria. It may be that the Kun were the eponym of the *T'u-yü-hun* to the north of the great northwards bend of the Huang-Ho or Yellow River; the resemblance of the name Kun to that of the proto-Huns, the Hsiang-nu, etc., had already been noted by Marquart, *op. cit.*, 54-5, cf. also Sir Gerard Clauson, *Turkish and Mongolian studies*, London 1962, 12. According to Marwazī, the tribe had been converted in their homeland to Nestorian Christianity (by missionaries from the Ordos region?), but had been impelled to migrate far westwards by pressure on their pasture grounds from the *Kayī*. The Kun then moved into the land of the *Shārī/Sārī* (whose name Barthold, in Marquart, *Wohrstedt und Arang*, Leiden 1936, 34*, connected with the Turkish word *sarf* "yellow" and the *Kipčak/Comans*, the Russian *Polovtsy* "pallid, yellowish ones"; possibly, however, they should be linked rather with the *Sarī* Uyghur of Kansu [q.v.]), and eventually ended up in the Aral Sea-Kipčak Steppe area. This chain of migrations must have been set off after Bīrūnī's time, i.e. in the middle or later years of the 11th century. Minorsky was at first inclined to identify the Kun with the *Kürī/Fürī* (mentioned in the *Ḥudūd al-'Alam*, § 14, tr. 97, cf. comm. 283-6, 311-12, a savage and bestial tribe living to the east of the *Kigīs* (i.e. apparently to the east and south of Lake Baikal, their name surviving in the present-day *Khori* tribe of the *Buryats*), but subsequently abandoned this equation when he found the clear orthography *Kūn* in Marwazī. Earlier, Marquart had attempted to connect the Kun with the later *Comans* (in Magyar, *Kun*) of the South Russian-Western Siberian steppes [see *ḡīrčak*], and this was later affirmed by J. Németh: that Kun and Kuman/Koman both stem from a Turkish adjective *ḡū<ḡub* "yellowish, pale" (*Die Völkernamen quman und qūn*, in *KČdA*, li (1942-3), 95-109).

At all events, the Kun have left very little mark on the Islamic history of Central Asia; we do not know whether they were substantially Islamised before losing their identity in some larger steppe confederation, such as that of the *Kipčak* or the later Golden Horde. The only member of the Kun to achieve mention in Islamic sources is the slave commander of the *Salḡūqs* Ekdālī b. Koṭkar (q.v. in Suppl.), who was appointed governor of *Kh. Yārazm* by Berk-Yaruḡ in 490/1097; Minorsky plausibly surmised that he may have been Marwazī's informant for his section on the Kun.

KUNĀ, Qenā, a town in Upper Egypt, on the east bank of the Nile (population 40,000). It is the

capital of the province (*muḍīriyya*) of the same name, which is divided into seven districts (*markas*), namely: 1. *Dīḡḡā*; 2. *Iṣnā*; 3. *Kunā*; 4. *Ḥuṣayr*; 5. *Ḳūṣ*; 6. *Lūḡṣur*; 7. *Naḡī Ḥamādī*. In 1897 the population of the province was 711,457, but by 1936 it was more than 1,100,000. In 1940 the town of *Kunā* and the village of *al-Humaydāt* and their dependencies were detached from the district of *Kunā* and made into a separate *ma'mūriyya*. The region produces cotton and cereals; in the town, cloth and sweet-stuffs are manufactured. But *Kunā* is especially noted for its porous pottery; the jars (*kuḏā*) which are made there are called *baḡḡ* from the name of a place a few miles to the south.

The Arabic name, written *Krā* by some geographers and *Kūnā* in the Copto-Arab *scatulae*, comes from the Coptic *ΚΩΝΗ* which gives rise to a play on the Greek *κωνή πάλι* "new town", a name which did not last long as it is never found in the Byzantine period. The identity of this town with the Neapolis of Herodotus has been seriously urged; it is rather the modern *Mīngīa's*, the ancient *Ptolemis*. On the other hand, it has been conjectured with much probability that at the end of the 3rd century it received the name *Maximianopolis*.

In the first Arab period, the *kara* of *Kunā* extended to the east of the Nile between that of *Fāw* on the north and *Ḳift* in the south, in front of that of *Dandara* from which it was separated by the river. The first author to mention it, *al-Ya'qūbī*, gives a very unflattering description of the district: he says it is a little town rapidly going to ruin, deserted by its inhabitants who feared the raids of the Bedouin robbers and brigands. Therefore, when the new provincial divisions were made under *al-Mustanṣir*, it was *Ḳūṣ* which gave its name to the district (*'amal*) and became its capital. *Kunā* remained unimportant for some time, as *Yāqūt* only gives it a brief note and *Abu 'l-Fidā* does not mention it.

Its prosperity was not long in beginning, owing to the tomb of the saint 'Abd al-Raḥīm, which became an object of pilgrimage, while pious Muslims settled in its vicinity. Some years previously, *Ibn Dīnabūr* had mentioned *Kunā* as a pretty little town with houses of a dazzling whiteness; he makes special mention of the virtue of the women, who never appeared in the streets. After *Ibn Baṭṭūṭa*, *al-Adīwī* gives us an account of the merits of 'Abd al-Raḥīm; he describes the houses of the town as spacious and very high and mentions two *madrasas* in *Kunā* and a number of hospices (*rubāḡ*), *Ibn Duḡmāḡ* only copies *al-Adīwī*. In the Turkish period, *Kunā* was the residence of a *Kāghī*, but it is only in modern times that it has assumed the administrative position which it owes to its present steadily-increasing prosperity.

The town, situated at the point where the Nile comes nearest to the Red Sea, had become the point of departure for caravans in the direction of *Ḳuṣayr*. This route took the place of the one used in the Middle Ages between *Ḳūṣ* and 'Aydūb, which in turn succeeded the ancient Copto-Berenice road. The continual intercourse between Egypt and Arabia and India gave these roads great value; it is by this route that many of the Muslims of North Africa go to Mecca, and even during the Crusades, it was the only pilgrim road. In 1831:3 Muḥammad 'Alī had the wells inspected on the *Kunā-Ḳuṣayr* road; some were deepened so that they would provide water at all seasons (cf. *L'Égypte moderne*, collection *L'Univ. vers.*, 164:6; Barron and Hume, *Topography and*

geology of the East Desert of Egypt, Central Portion, Cairo 1902).

The saint who is the object of Muslim veneration, 'Abd al-Raḥīm b. Ahmad b. Ḥaḡḡidjūn, twelfth descendant of *Dī'afar al-Šāḡīḡ*, was born in the environs of Ceuta in Morocco. After a journey to Mecca where he spent seven years, he settled in *Kunā* and died there on 9 Šafar 591/13 January 1196. Honoured during his life for his reputation for sanctity and asceticism, he has become one of the principal saints of Egypt, along with Ahmad Badawī, Ibrāhīm Daḡḡī and Abu 'l-Ḥaḡḡidjī Aḡsurī. At one time a pious formula used to be handed down which, if recited beside the tomb, hastened the realisation of a desire or brought about cures. According to some travellers, the pilgrims who came to *Kunā* made circuits (*ḡawf*) of the tomb of 'Abd al-Raḥīm similar to those made by the pilgrims at the Ka'ba (*Adlawī*, *Tāh' sa'id*, no. 231; Goldziher, *Zeits. Studien*, II, 313, Eng. tr. II, 287; *RHR*, II, 264; Gaudelroy Demombynes, *Le pèlerinage à la Mekke*, 214). There were descendants of 'Abd al-Raḥīm living in Egypt for two centuries; they were, in particular, jurists and professors (*Adlawī*, nos. 29, 117, 129, 308, 402, 476, 533; *al-Makrīṣī*, *Kaṭaib*, II, 423).

KUNAYTRA [see *KANṬARA*].

KUNBI ŠĀLIḤ, an important cluster of ruins of mediaeval date, situated in lat. 15° 45' N and long 7° 59' W in Hoch (southern Mauritania), 330 km. N of Bamako, 95 km. WNW of Nara and 70 km. SSE of Timbédra. Most modern writers agree that it was the capital of the Sarakoli kingdom of Ḡhāna [g.v.] which dominated the southern part of the Western Sahara and the North Sudan from around the 6th century until ca. 1076.

The ruins are situated on a schistose plateau which is covered with thorn-bushes, and they stand between two seasonal pools. They extend for about 1,200 m. north to south and 800 m. east to west, but this does not include the scattered outbuildings and two extensive burial grounds. The one in the north-west covers an area 1,600 m. by 600 m. and contains a columned tomb with six chambers. The other in the south-east at Sokobi measures 700 m. by 400 m.

There are many mediaeval references in Arabic to Ḡhāna, from *al-Fazārī* (before 184/800) to *Ibn Ḳhal-dūn*, but local oral traditions do not mention this place name. In fact, it is not until the 17th century that the name *Kunbi* appears in the *Ta'riḡ al-Faṭīḡ*, which says: "The name [of the empire of Kayamaga] was *Kunbi*, and this *Kunbi* was a great city." The *Ta'riḡ al-Sūdān* specifically states that the capital of Kayamaga was Ḡhāna, but all the Sarakoli traditions about the Wagadu speak of *Kunbi* (Ch. Monteil, *Mélanges ethnologiques*, 390; A. Bathily, *B. IFAN* B [1975], 73; Wa Kamissoko, 1976, unpublished) as the residence of the serpent Bida. The persistence of the Sarakoli and Moorish tradition is best illustrated by the fact that in 1914

Bonnel de Mézières was driven directly from Walata to Kunbi when he expressed a desire to the marabouts to see the site of the capital of Ghāna.

Although the ruins of Kunbi were well known to Africans, Bonnel de Mézières in 1914 was the first European to see them. He then undertook some excavations there, and the results were published in 1920, but unfortunately none of the material which was brought back from the expedition can now be located; it cannot be found in the Musée de l'Homme, the Académie des Inscriptions et Belles Lettres or anywhere else. Later excavations have been made by M. Lazzarigues (1939), P. Thomassey (1949-50) and R. Mauny and G. Szumowski (1951); the most recent excavations have been by J. Devise, D. and S. Robert and their team (1972, 1975, 1976), but as yet these are not published. These excavations have revealed many schist-built houses with beautiful Arab-Berber architecture, which predates the Hispano-Moorish style. They contain carefully-made paving stones, wall-niches, stairways and stone beds. An imposing columned mosque is slowly being revealed on the Main Avenue which crosses the ruins from east to west. It has superimposed *mihrābs* showing that at least two sanctuaries have stood on the same site. Material remains include stones with painted inscriptions of the *ghāna*, countless pieces of coarse pottery with some slip-decorated ware and even some glazed (Mediterranean) ware, tools and weapons in iron, objects in copper and glass and beads in stone and glass.

The north-east necropolis comprises a series of chambers for multiple Muslim burials; they are collective tombs for families or for people from the same Maghribi town or the same tribe. The most elaborate "columned tomb" is surrounded by six successive chambers, the last of which has a perimeter of 800 m.

The ruins show that this was an urban settlement with a high population density. The estimated population for the town at its peak is 15,000 to 20,000, which is an enormous figure for a Saharan town with a limited water supply (R. Mauny, *Tableau géogr.*, 462). Walls have been found at depths of up to 8 m, showing occupation levels over several centuries after the 8th century. The dates provided by carbon 14 analysis are: 828 ± 125 A.D.; 933 ± 7 A.D.; 963 ± 114 A.D.; 1210 ± 121 A.D. This confirms what is already known of the history of the capital of Ghāna with which these ruins are to be identified, in the present writer's opinion, despite the hesitations of Ch. and V. Monteil (1951, 441-52; 1964, 58-62; 1966, 109-12), who are more inclined to follow al-Iḍrīṣī (I, 2) in situating Ghāna "on the two banks of the river [Senegal]". However, their identification must be challenged, for al-Iḍrīṣī made enormous errors in his work and, furthermore, no ruin of this importance has ever been found on the banks of the middle Senegal river. The evidence of oral traditions and what is written in the *To'riḡḡ* all points to Kunbi as the correct site.

The trifling question remains to be resolved about the two places called Ghāna which al-Bakrī (460/1067-8) describes. The one was populated by Muslim merchants and had twelve mosques; the other was six miles away and was reserved for the king and his court. The present writer holds that Kunbi Sālih should be identified with the town of the rich Arab-Berber merchants described by al-Bakrī. If this is so, where was the royal capital? New ideas about this problem have been suggested at a recent conference on the history of Mali, held at Bamako in

February 1976. Traditions show that the royal residence was apparently at Kalaka (Kaska, 23 km. south of Kunbi) and the royal stockyard at Kunbi Dyufi, a modern village 20 km. SSE of Kunbi Sālih, which was in fact the merchants' town. The existence of a double or triple town can be understood because of the natural desire of the animistic kings to live apart from the Muslims and also because of the scarcity of water in the area. This is a potentially new field for archaeological investigation. Kunbi Sālih is the most important ruined site in West Africa—with Tegadaoust (Awghadost?) running it a close second—and because of this, fresh excavations ought to be undertaken there.

AL-KUNDURI, 'AMĪD AL-MULK AĀD NAḠR MUHAMMAD B. MAḠḠŌ, vizier of the first Great Saḡḡŷ, Tuḡḡil Beg (447-55/1055-63). The *nisba* Kunduri may refer to one of two villages by the name of Kundur, one located in Tuḡaythīḡ in Rōḡḡiān, the other near Kārwin; the reference may also be to the sailing of *kundur* (Frankincense).

The Great Saḡḡŷ, Tuḡḡil Beg, Alp Arslān and Malikshāh, were served by two *wasirs*: Kunduri, *wasir* of Tuḡḡil Beg, and the more famous Niẓām al-Mulk, *wasir* of Alp Arslān and Malikshāh. The main ambition of these two *wasirs* was to manipulate power and influence through the sultans whom they served. Niẓām al-Mulk did this with consummate skill for three full decades, outmanoeuvring his

rivals, and always keeping a step ahead of them in their plots and intrigues against him. Kunderi was not as successful. In comparison with the ministerial politics of Niẓām al-Mulk, he appears as a bungling fool.

Kunderi's first ill-advised deed is recorded early in his career as Tughril Beg's minister. Sent by Tughril on a mission to contract a marriage for him, Kunderi contracted the marriage for himself instead; as punishment for this, Tughril had him castrated.

Kunderi's next ill-advised deed was to scheme against Tughril Beg in an effort to replace him with Anūshirwān, son of Khātūn, Tughril's wife. This plot against Tughril appears to have been mounted when Tughril was setting out to fight one of his rivals in Mawṣil, the Turkish general Arslān Basāsiri (q.v.). At his departure, noticing that he had a following of only 2,000 men, he reproached Kunderi, saying: "Why did you not inform me so that I could wait until all the men were assembled?" Again at Hamadān, faced by the superior forces of Ibrāhīm Ināf, his half-brother, Tughril asked his wife Khātūn and Kunderi to come to his aid. Khātūn wanted to do so, but was convinced by Kunderi that their troops would fall into the hands of Ināf and that this would only serve to strengthen Ināf's forces and weaken hers as well as Tughril's. Kunderi then began to arrange for Anūshirwān to make a bid for the sultanate, and money was distributed among the troops for their effluence (hay'a). Kunderi, Khātūn and Anūshirwān contributed, as well as the caliph, the merchants and the high functionaries of Baghdad. But Kunderi's plan met with opposition from two of Tughril's generals, Umar and Inānqīl, who refused to recognise Anūshirwān. Then when Kunderi asked the caliph to proclaim Anūshirwān as sultan, he was told to defer the matter, and to see that the city was not deprived of troops to defend it against the menace of Basāsiri. Khātūn also changed her mind and went to rejoin her husband. The sources are not expansive in their reports regarding this plot, but we later see both Kunderi and Anūshirwān in the service of Tughril Beg. They later fought against Basāsiri and negotiated the latter's delivery at the hands of the Masyādid Dubays b. Ṣadāha, and their success here regained for them the confidence of the sultan.

After Tughril's death in 455/1063, Kunderi once again saw his opportunity to serve under a sultan whom he could manipulate. Tughril, before his death, had designated Sulaymān, son of his brother, Çağrı Beg and brother of Alp Arslān. This choice may have been suggested by Kunderi. In any case, the succession to the sultanate had to be secured by eliminating all other pretenders. Alp Arslān was ready to oppose the choice of Tughril, and here he had to deal with Kunderi. From the beginning, Kunderi had the *ḥay'a* in Rayy made in the name of Sulaymān. He then wrote a letter to Alp Arslān and, in threatening tones, told him to be content with the possession of Khurāsān. Alp Arslān marched on Rayy. Kunderi being now to face both Alp Arslān and Kutlumush, called on Alp Arslān to help him against Kutlumush, and made the *ḥay'a* in Rayy in the name of Alp Arslān. Arriving at the palace of the sultanate in Rayy, Alp Arslān did not make known his true feelings towards Kunderi, and insisted on Kunderi remaining with him in the palace when the latter wanted to move, saying "My joy consists in having you beside me, how can you entertain the thought of going away from us?" This was the beginning of a cat-and-mouse game played with relish by Alp

Arslān, who kept Kunderi until he had recovered all the wealth amassed by the *marṭa*, before finally putting him to death, having taxed him with crass ignorance for imagining that he could stand against three Saljūq pretenders to the sultanate, meaning himself, Kāwurd (q.v.) and Kutlumush.

Kunderi's ambition had been to hold *de facto* power under a docile and malleable sultan, but his plans failed disastrously. He did, however, succeed in arranging the marriage between Tughril Beg and the daughter of the caliph al-Kā'im, the negotiations for which lasted for a period of three years (450-3/1060-3). Tughril had hoped to see a Saljūq descendant assuming the 'Abbāsīd caliphate, but the marriage ended with his death and without issue. Kunderi's success in arranging the marriage, against the caliph's will, earned for him the enmity of al-Kā'im who, on making the *ḥay'a* in Alp Arslān's name in Baghdad (Rabī' II 456/March-April 1064) asked Alp Arslān to eliminate Kunderi.

Where Kunderi had failed, Niẓām al-Mulk succeeded. The difference between these two *marṭas* consisted in the political acumen and consummate administrative skill of the latter as compared with the former's lack of perception and discrimination. Kunderi supported the Mu'tasill movement, and was instrumental in having al-Ash'ari cursed from the pulpits of Khurāsān by the order of Tughril Beg. In Baghdad, he earned the hatred of the Sunnis by supporting the Shī'is. By contrast, Niẓām al-Mulk supported the Ash'aris, but was not averse to supporting '*alimā*' of other movements wherever these last had a strong following. Also, his establishing *awḍāf* for the '*alimā*', in the form of *madrasas*, *masājid* and *ribāḥs*, secured the support of the masses among their followers. Not the least among al-Kunderi's mistakes was his personal engagement in battle, whereas Niẓām al-Mulk remained a man who manipulated the pen, leaving the sword for those better suited to the battle field.

(G. MAKDISI)

KUNDUZ, the name of a river, a town and a modern province of Afghanistan.

a. The river is one of the two main left bank affluents in Afghanistan of the Oxus. It rises in the central region of the Hindu Kush (q.v.), with Bāmīyān in its catchment area, and flows for some 300 miles/480 km. until it reaches the Oxus just below where it receives its right-bank affluent the Wakchsh River. The different stretches of the river have varying names; thus the middle course, within which are situated the towns of Baghlān and Pul-i Khumrī, is called the Surghāb or 'Red River'.

3. The town is situated in lat. 36°45' N. and long 68°30' E. at an altitude of 2,300 feet/400 m. in a region which has the general name of Kataghān. The surrounding countryside, centred on ancient Kunduz and the nearby modern town of Khānābād, is now fertile agricultural land (rice, fruits, etc.) and pastures, but was until very recently notoriously malarial and unhealthy. The town of Kunduz (presumably Pers. *kūnān-dā* 'fortress') is not mentioned under this name by the mediaeval Islamic geographers, but it

names *duḍuḍ/duḍḍūl*, *ḡayḡam/ḡayḡam* and *nayḡ* (this last preserved as *nayḡ* in the Near East). This careful observer adds, in good faith, that the porcupine is to the hedgehog as the ox is to the buffalo [see *ḡayḡam* in Suppl.] or the rat to the mouse. The long, bony, erectile and widely-spaced needles (*ḡāḡ al-maḡāḡ*), which are its only defence, are at the base of the legend that it defends itself by hurling at the enemy these sharp-pointed darts although it only leaves them behind in the wounds caused by their immediate contact; without grudging it the by-name of *abū ḡāḡ*, that of *kaḡḡab* is in no way justified, though it is given it in Syria, because it never in fact goes into a spiny "ball" and never curls up like the hedgehog. On the other hand, the motherly care with which the female porcupine surrounds her young, usually from two to four, is well-recognised, a touching and very ancient fable (see al-Damiri, *ḡayḡ al-ḡayḡān al-ḡabḡ*, i, 337-8, ii, 37, 265-7, and in the same edition, al-Karwīnī, *ʿAḡḡāḡ al-maḡḡāḡ al-ḡāḡ*, ii, 337-67) relates that the porcupine, when it has young, climbs up the vine-stems by night, pulls off the bunches of grapes and lets them fall, then comes down and rolls among its harvest and carries it off transfixed on its spines to its home territory, thus providing an ample diet of succulent grapes for its children.

3. Whether it is a case of the hedgehog or of the porcupine considered as a large hedgehog—and both of these are taken by the medieval Arab narrators, together with the thorn-tail lizard [see *paḡa*] and the jerboa (*ḡarḡā* [see *ḡarḡā* in Suppl.]), as "creeping beasts" (*ḡaḡḡ al-ḡarḡ*, *ḡaḡḡ al-ḡarḡ* [*ḡayḡam*, v, 283]) the *ḡunḡudh*, through its nocturnal life and its innate distrustfulness, has given rise to such comparisons as *arḡ min ḡunḡudh* "travelling more often by night than a hedgehog" and *asma' min ḡunḡudh*... *min duḍuḍ* "having sharper ears than a hedgehog... porcupine"; whence a night racked by insomnia may be described as *layl al-ḡunḡudh*, *layl al-anḡad* "hedgehog's night". The mysteriousness of the gloom enveloping its journeyings summoned up in the fertile imagination of the Bedouin the image of dissimulation and calumny and, by a simple inversion of the construction of the two preceding expressions, an "undercover" spy was called *ḡunḡudh layḡ*, *anḡad layḡ* "night hedgehog" (*ḡayḡam*, iv, 266).

Like the Greeks, the Arabs, despite all this, well recognised the great value of the hedgehog as a destroyer of vermin and especially, against the venom of serpents, which they were considered to be immune from after having nibbled thyme bushes (*sa'ḡar*); for this reason, experienced men from certain tribes recommended that this valuable helper should not be killed, if the land abounded in vipers, and in particular, this was the order given to Ibn al-ʿAḡḡāḡ's army at the time of the expedition of *ḡayḡam* into *Sijḡīḡān*, a region infested with these dangerous reptiles and a great producer of snake-charmers as well as the compounders of snake-bite antidote. The ancients had likewise observed in regard to the *ḡunḡudh* an innate faculty for detecting the direction of winds (Aristotle, *ḡayḡ am*, ii, 602, and *ḡayḡam*, iv, 222) prevalent at the orientation of the two entries of its burrow.

The flesh of the *ḡunḡudh* (of both kinds) is succulent according to those who eat it, such as, in Europe, the gypsies. The Bedouins have always been fond of it, and in our time, the Touareg appreciate it in a stew or braised within the glowing embers after having wrapped it in a covering of clay. Although it formed a kind of game easily captured, in ancient Arabia the

risk was never taken of killing it in the early hours of the night, because it could serve as the mount for some benevolent genie, and people preferred to pound it with a cudgel, by day, in chance encounters rather than mounting a regular hunt for it. At beginning of this present century, in the Maghrib and especially in Morocco, the capture of these two spiny creatures was one of the nocturnal activities of slimy-built adolescents of the equivocal class of kiff smokers; slipping into the haunts of these animals, they would empty them of their occupants either with gloved hands in the case of the hedgehog, or with a spear in the case of the porcupines, and groups of vagrants would have a feast of the *ḡunḡudh* of these victims (see L. Mercier, *La chasse et les sports chez les Arabes*, Paris 1927, 55-6). The long spines of the porcupine were used for the making of pretty, darkened cages for nightingales.

This ancient custom of eating the flesh of the *ḡunḡudh* posed a question, as with the hyena (see *paḡu* in Suppl.), in early Islam, about the lawfulness of this practice. When the Prophet was asked about this, he is said merely to have replied laconically that such an animal was "ignoble" (*ḡaḡḡ*), but he did not make a formal prohibition. Basing themselves on this vagueness, the *ḡaḡḡ* considered the *ḡunḡudh* to be perfectly legal eating, whilst the *ḡaḡḡ* and *ḡaḡḡ* formally excluded it from the category of permitted types of meat. As for the *ḡaḡḡ*, they remained undecided on the question and depended on the decisions of local authorities, basing themselves on the customs and usages of the region; thus amongst the Berbers in the Maghrib, no objection is met with against making the *ḡunḡudh* an article of diet.

The various anatomical parts of the *ḡunḡudh* possessed, in the ancient therapeutic inventory, numerous specific qualities, notably that of the right eye, which, boiled in sesame oil and mixed with collyrium, caused nyctalopia or day-blindness; this formula was, it seems, used by rogues and nocturnal prowlers in order to facilitate their nefarious activities. Salted hedgehog flesh was beneficial for children suffering from urinary incontinence. At the present day, according to what the Touareg say, a porcupine-needle stuck in a camel's saddle prevents fatigue in the loins for the camelriders of the Sahara. Of a more practical kind is usage of a hedgehog skin, with its spines, as a puzzle for kids too inclined inconsiderately to suck their mothers' milk. The porcupine's quills are also used, moreover, for making little instruments and tools like needles for sewing, sticks for applying kohl, etc.

For some time past, the hedgehog, which is very easily domesticated, has been the domestic pet in numerous dwellings of the Saharan oases in order to rid them of cockroaches and other undesirable infestations; here we have a modest rehabilitation of the *ḡunḡudh ḡarḡ*, "hedgehog of the stony ground", a byname given metaphorically to an individual with unattractive features but where there is still a possibility of finding someone even less attractive.

From a similarity of appearance, the terms *ḡunḡudh al-ḡarḡ* or *ḡayḡam ḡarḡ* "sea hedgehog" denote the edible sea-urchin (*Echinus aculeatus*), whilst in al-Damiri and al-Karwīnī, *op. cit.*, the term *ḡunḡudh ḡarḡ* is applied to the beaver.

AL-KUNFUDHA, a port on the Red Sea coast of the Tihama or lowland of the southern Ḥijāz, situated in lat. 19°9' N. and long. 41°04' E. and at the mouth of the Wādī Kanawna. It lies 210 miles south of Djidda or Djudda (q.v.) and 45 miles north of Haly.

The town is in the form of a large rectangle enclosed by a wall, strengthened at several points by towers and pierced by three gates. Practically the only stone buildings are at the harbour, where is the bazaar with its one-storey warehouses in an irregular line, and the chief mosque and smaller mosques with low minarets. On a little island about a quarter of a mile away is a small castle which used to be the residence of the representative of the Sharif of Mecca. The town was estimated in ca. 1900 to have a population of 10,000, but S. Langer in 1882 put it at only 2,000. The harbour, which is enclosed by a number of sandy islets and is only accessible to Arab vessels of medium size, has great disadvantages, notably that the boats cannot land there; until recent times, however, a certain number of pilgrims on the ḥajj had landed there and at al-Liḥ to the north by sailing craft. Trade and commerce are moderate: it exports the myrrh collected in 'Asir (q.v.) and also hides and honey; the harbour used to be frequented by slave-dealers who brought their Abyssinian slaves for sale here, but Britain's sharp control made slave smuggling practically impossible by the early 20th century. Trade with the interior is limited to the exchange of provisions and everyday necessities and is confined to modest bounds. The much more important harbour of Ḥudayda further south has long since attracted almost all the trade. The poverty of the inhabitants is revealed by the primitive huts, built of poles and thatch with gable roofs, which are typical of the whole coast plain. Of agricultural products, cotton and millet are grown in the district.

Al-Kunfudha is perhaps a very old settlement; in any case it is a district of great interest to classical students, the land of the Debae. Pliny's *regio Canana* has been identified by A. Sprenger and B. Moritz with the Kanawna mentioned by al-Ḥamdānī, but this town lies at the mouth of the Wādī of the same name Gold, for which this region was celebrated in antiquity, is still found here; the Al-Ḥaṭṭāriyya still get gold from the streams. Al-Kunfudha, however, seems to have been the northern limit of this ancient gold area. The name appears to be comparatively modern. The Portuguese know it in the form *Canfuti*. Niebuhr calls al-Kunfudha a large but badly-built town. In his day (1761) it derived a certain importance from the trade in coffee, because all the ships carrying coffee from Yemen to Djidda had to pay toll here to the Sharif of Mecca, although the town was within the sphere of suzerainty of the Imām of Sa'ūd. It passed to the Sharif, together with the whole strip of coast from Djidda to Haly which the Sharif of Mecca won in ca. 1722, and even had a certain revival of prosperity when Muḥammad 'Alī conquered the Sharifs and made al-Kunfudha his base of operations for the campaign against Central Arabia and 'Asir. Soon after this, al-Kunfudha figured in the rebellion of the Georgian commander Məhmed Agha Türkbe Bilmez against Muḥammad 'Alī's governor in the Ḥijāz, Ahmad Pasha (1832-3); Türkbe Bilmez penetrated to al-Kunfudha, Abū 'Arif, Ḥudayda, and even to Mocha by 1833, before his revolt was quelled. It was only in 1890 that the

Ottomans were able to revive Muḥammad 'Alī's plans and al-Kunfudha became the base of operations against the tribes of the hill country of 'Asir, after the conquest of which in 1872, al-Kunfudha with its hinterland became a *ḥaṣā* of the *sandjak* of 'Asir. A certain degree of Ottoman control was now implanted, and al-Kunfudha was linked by telegraph with Djidda to the north and Lubayya, Ḥudayda and Sa'ūd to the south. However, the district soon fell to the Sharif Husayn of Mecca's son 'Abd Allāh at the time of the Arab Revolt, and in September 1916 both al-Tā'if and al-Kunfudha were lost by the Turks; already in the previous year, the local ruler of adjacent 'Asir, Sayyid Muḥammad al-Idrīs, had adhered to the Allied cause [see 'Asir]. In 1923-5 the whole of the Ḥijāz was occupied by 'Abd al-'Azīz b. Sa'ūd, and al-Kunfudha henceforth has formed part of the Sa'ūdī kingdom.

(A. GROHMANN-C. E. BOSWORTH)

KUNGRAT, the name of first a Mongol and then a Türkmen tribe of Central Asia, and deriving its name from these last, a settlement on the lower Amu Daryā or Oxus, modern Kimgrad.

The Mongol tribe of *Konkrat*/*Konkrat* or *Ongghat* (spelt *Kun-khāt* in *Djawayni*, *Ungat* in Marco Polo) seems to have lived in the extreme east of Mongolia, towards the Khyangsan Mts. in a district called *Abghiya*-*Kutgen*. The tribe gave its allegiance to Čingiz in his struggle against Ong Khān [see *čingiz khān*], and had the privilege of supplying the Khāns with wives; thus Čingiz's wife Börte Fujūn, mother of his first principal sons, was from the *Konkrat*, as were wives of Djöti and Orda. Cf. P. Pelliot and L. Hambis, trs., *Histoire des campagnes de Gengis Khan*; *Čeng-wu ts'in-tcheng lou*, 1, Leiden 1931, 402-9; Pelliot, *Notes on Marco Polo*, Paris 1959-63, II, 869-70, No. 375; *Djawayni*: Boyle, I, 38, II, 585; J. A. Boyle, *The successors of Genghis Khan*, New York/London 1972, 17, 97.

The tribal name was carried westwards in the mass movement of peoples during the Mongol invasions, and elements of the Mongol *Konkrat* doubtless mingled with and were eventually absorbed into Turkish tribes of the Turkestan steppes. Hence in recent times *Kungrat* has been noted as a tribal name amongst both the Özbeks and the Kara Kalpaks of the

region to the south of the Aral Sea (M. A. Czaplitska, *The Turks of Central Asia in history and at the present day*, London 1928, 38, 40). In the 18th century the Orkeng Kungrat played a dominant role in the Khānate of Khīwa. When the 'Arabshāhid line of Khāns of Khīwa became extinct at the end of the 17th century, real power was exercised in the Khānate by Kungrat military chiefs who held the title of Inak [q.v. in Suppl.]. In the early 19th century, these Inaks came themselves to assume the title of Khān and ruled in Khīwa until the period of the Russian protectorate [see *ghāraam*]. The tribal name was given to a settlement in the delta or "island" area of the Oxus mouth, on the road between Khodja-ili and the Aral Sea shores, during the later 18th century, until 1226/1812 and the time of Muhammad Rakhim Khān of Khīwa (1221-47/1806-26), this district centred on Kungrat in its effect as an independent principality [see Barthold, *Turkistan down to the Mongol invasion*], 131, and Idem, *Histoire des Turcs d'Asie Centrale*, 1923).

In 1858 a Russian military steamer sailed up the Oxus delta, alarming the inhabitants of Kungrat, and the town was an important strategic point in the Russian expeditions of 1873 under General Kaufmann and directed against Khīwa; it formed the concentration-point for the naval force from the Aral Sea and the land forces from Orenburg and from Mangghlak (see E. Schuyter, *Turkistan, notes of a journey in Russian Turkistan, Khokand, Bukhara, and Kuldja*, London 1876, i, 107, ii, 337, 336, 346-8). Kungrat is now a town in the Kara Kalpak ASSR; see on it BSE², xxiv, 53.

KUNKA, variant forms KŪKA, KŪKA, KŪKA, KŪKA, KUNKA, the Arabic name for the modern town of Cuenca, administrative centre of the province of the same name in Castile, Spain, situated near the confluence of the Júcar and Huécar Rivers at an altitude of 922 m. at the point where the Mancha becomes a mountain chain. According to al-Idrisi, Kūnka was "a small, ancient town, surrounded by a wall, and lacking a suburb". Al-Udhri mentions it among the 20 stages of the route connecting Cordova and Saragossa. Al-Idrisi mentions Cuenca in his division of al-Andalus into 26 khīwas, but gives it the title of a *āra*. Al-Umarī makes it the eleventh province of Spain, comprising the towns of "Orluola, Cuenca, Elche and Denia, as well as numerous strongholds". Yāqūt makes it part of the *al-māl* of Santaver, and Ibn Ṣābiḥ al-Salāt, who was there in 567/1172, has left a description of it.

During the period of the *muḥāk al-farāḥ*, various political and economic factors reinforced the strategic importance of Cuenca. Previously, from 157/768 to 160/777, it had been part of the region shaken by the rebellion of Shākyā al-Fāṭimī. It had then passed to the *ḥu* ʿNūmīds [q.v.], and in 295/908 had been divided among the three sons of Mūsā, who in these strongholds of the frontier zone, were virtually independent of the central government. At the beginning of the 5th/11th century, Cuenca belonged to Ismāʿīl b. Ḥūt ʿNūn, who proclaimed his independence in the *al-ʿāra* of Toledo. Later, we find Ibn al-Faragī, who distinguished himself in military campaigns, as *raʾī* of Cuenca for the *ḥu* ʿNūmīds. Whilst al-Mutawakkil b. al-Aḥṣa temporarily occupied Toledo (472/1079), al-Kādir took refuge in Cuenca. In the following year, Sancho Ramirez and Ahmad b. Hūd besieged the town, which bought them off with a sum of money. After Alfonso VI's

capture of Toledo (478/1083), Cuenca passed under Castilian rule and was included in the famous "*dot de la mora Zaida*". Alfonso probably kept the Muslim structure of the town, requiring a tribute, according to the homilies of the Mozarab Count Sisnando. In 490/1097, whilst Cuenca was being protected by Alvar Fañes's army, the Almoravids led by Muḥammad b. ʿAḥṣa raided the district, and after the victory of Uclés (501/1108) occupied the town; but in 531/1137 the populace rose against the Almoravid garrison and felt the sting of Tāshfin b. ʿAlī's sword. Ibn Mardānīsh [q.v.] made over to the Christians lands near Cuenca, but the latter retreated before the Almoravid caliph Abū Yaʿqūb, who in 567/1172 found the town sunk in decay, with only 700 inhabitants. It was besieged by Alfonso VIII, helped by Alfonso II of Aragon, and surrendered on 21 September 1177 after a seven months' siege, without the Almohads being able to protect it. Abū Yaʿqūb tried to regain it in 1194 and burnt its standing crops in 1197. After the conquest of Cuenca, the Castilian king made grants to the military orders of Santiago and Calatrava, and the town was soon organised as a *Concejo*, whilst retaining some of its older organisations and structures, such as the office of *almocenas* (*muḥtazib* [see *ghusā*]). The *Fuero* offered commercial concessions to the Mudjafares. The second bishop of Cuenca was a Mozarab from Toledo, Saint Julian. There remained a mosque, "*indante con el monasterio de Ntra. Sra. de la Contemplacion*" until the 15th century. During the period of the harrying of the Moriscos, Cuenca was the seat of a tribunal of the Inquisition.

The local economy of Cuenca flourished greatly during the 14th/15th century, with textile and ivory-carving crafts, and there were salt pans and silver and iron ore mines in the vicinity. Also, wood cut in the Serranía was sent down the Júcar to the Mediterranean shores.

KUNŠUL [see COMEN].

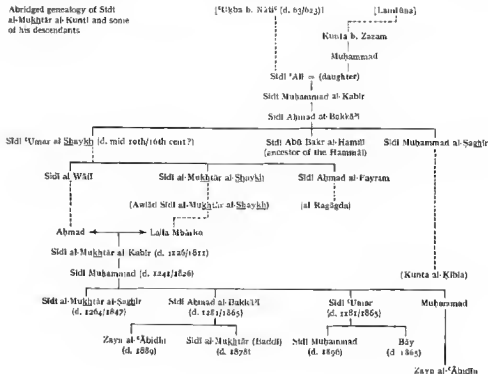

KUNTA (sometimes pluralised as Kanāta), a highly ramified Arabic-speaking tribe widely dispersed over the southern Sahara from Taghilt in Mauritania to the Adrar-n-Hoghas in eastern Mali and beyond. Their own genealogies claim descent from 'Ukba b. Nāfi' al-Fihri (q.v.), to whom they attribute a series of exploits in and beyond ancient Ghāna as far as Takrūr. According to the so-called *Ta'rikh Kunta* (tr. in I. Hamet, *Notice sur les Kounta*), Sidi 'Alī, a descendant of 'Ukba, married the daughter of Muḥammad b. Kunta b. Zuzam (or Zam), chief of the Id Oukal (Ibdūkal/Abdūkal) fraction of the Lamtūna Berbers, allegedly in the early 9th/15th century. Their son, Muḥammad, married into another Lamtūna group, the Tadjakānt, as did also his son Ahmad al-Bakkī. It is from the latter's three sons that all the branches of the Kunta derive. Thus, even by their own accounts, the Arab element in Kunta stock would appear small, and, significantly, their eponym is Berber. Their *zawiyā* (non-warrior) status, too, is indicative of Berber origin and, like most such groups in the western Sahara, they probably acquired an Arab pedigree along with the Arabic language during the period of Hassāniyya ascendancy in the 9th-10th/15th-16th centuries.

The period from the mid 10th/16th century, when Ahmad al-Bakkī's son Sidi 'Umar al-Shaykh is said to have died, until the early 12th/18th century seems to mark the emergence of the Kunta as a distinct and relatively large tribe, their numbers no doubt being augmented by the acquisition and eventual integration of tributaries and slaves. They appear to have roamed over a wide area from the Hach (al-Hawd) in the south to al-Sākiya al-Hamra' in the north and Tuwat in the east. Some members settled in Watita and in a village in Tuwat known as Zāwiyat Kunta where Sidi 'Umar's son, Sidi al-Mukhtār al-Shaykh, is said to have been buried.

In the early 12th/18th century a rift occurred. The clans descended from Sidi Muḥammad al-Saghūr b. Ahmad al-Bakkī hived off to roam the western Sahara from the banks of the River Senegal to al-Sākiya al-Hamra' (the Kunta al-Kibla), while those descended from Sidi 'Umar al-Shaykh combined pastoralism with commerce, establishing a network of camps and trading posts from the Wādī Darfa through Tuwat and the Azawād region north of the Middle Niger to Timbuktu in the west and Katsina in the east.

Among the latter, the Aḥlād Sidi al-Wafī established a position of preeminence in the second half of the 12th/18th century, due to the role of their leader Sidi al-Mukhtār al-Kabīr b. Ahmad b. Abī Bakr (1242-1226/1729-1811), who combined qualities of sanctity with political astuteness and commercial acumen. In ca. 1167/1753-4 he established his camp at al-Kūla in Azawād, which rapidly became a centre of study and of the propagation of the Kādīriyya Order. It is from the sub-order which he established, the Mukhtāriyya, that most of the Kādīriyya

Abridged genealogy of Sidi al-Mukhtār al-Kuntī and some of his descendants

groups in West Africa derive their affiliation. Sidi al-Mukhtār's role as a Sufi leader and his prestige as a scholar enabled him to mediate between warring Arab and Tuareg tribes in the area and to heal the rift between the eastern and western Kunta. His far-ranging missionary tours (ṣiyāḥa) in the Sahara, and his ṣuṭūṣ at al-Hilla, which received disciples from distant areas, were supported by income from participation in the salt trade from Taoudeni to the Niger and the trade in tobacco from Turāt to Timbuktu.

His teachings, born of his Sufi outlook as well as the position of his clan as a *ṭawāyif* group, emphasised leniency, the overlooking of faults and the winning of hearts through "ḡhāḥā of the tongue" rather than "ḡhāḥā of the sword", though when 'Uḥmān b. Fūdī (q.v.) initiated a militant ḡhāḥā in 1218/1804-5, he expressed his approval of it. He proclaimed himself the sole "regenerator" (*muḡiddaddī*) of the 13th century of the *hijra* (1200 = 1286), though for earlier centuries he named a multiplicity of regenerators in different spheres of endeavour such as *ḡhāḥ*, *ḡhāḥ*, *ṣiyāḥ*, *ṣuṭūṣ* etc. (cf. the view of Ibn Kaṭhīr reported by al-Suyūṭī, *Risāla fī man yab'afā Allāh li-hāḡhāḥ* 'i-ṭawāyif *alā ra'is ḡhāḥ* mī'a, ms. Leiden, 2409, f. 6). Over sixty works are attributed to him, including several series of *adwiba*, as well as a great deal of poetry. None has so far been published and manuscript copies are scattered over private libraries in Timbuktu and the southern Sahara and in such public collections as the Bibliothèque Générale of Archives, Rebat, and the Bibliothèque Nationale, Paris.

His son, Sidi Muḥammad (ca. 1178-1241/1765-1826), inherited his position as leader of the Kādīriyya-Mukhtāriyya and was himself a prolific author. His *Taṣṣīḥ Kunta* (properly called *al-Risāla al-Qadīriyya*) has already been mentioned, and his *Kitāb al-Taṣṣīḥ wa 'l-taḡhāḥ*, ostensibly a biographical work on his father and mother, has been abstracted by Ismael Hamet in his *Littérature arabe saharienne*, in *RMM*, xii (1900), 196-231, 380-405. It contains an annotated *ṣiḡḡa* for the Kādīriyya-Mukhtāriyya, in which the names of al-Suyūṭī, 'Abd al-Rahmān al-Tijānī and Ibn 'Arabī appear as successive links, thus invalidating it as an historical document, but no doubt enhancing the spiritual prestige of the order in the eyes of its members. The *ṣiḡḡa* of the Mukhtāriyya was widely propagated in southern Mauritania by an outstanding pupil of Sidi Muḥammad, Shaykh Sīdīyya (1190-1284/1776-1868) of the Aḡlād Abyayrī from his *adwiba* in Būtilimī.

On Sidi Muḥammad's death, leadership of the Aḡlād Sidi al-Wālī and direction of the Mukhtāriyya passed to his eldest son Shaykh Sidi al-Mukhtār al-Ṣaḡhīr (1204-64/1790-1847). He was instrumental in saving Timbuktu from the worst excesses of the Fulbe forces of Ahmadu Lobbo (q.v.) and eventually driving them from the city. His brother, and successor to both his political and spiritual role, Ahmad al-Bakkāḥ (ca. 1217-81/1803-63) negotiated a pact with the Fulbe in 1846 at Muḥammad's request and himself came to settle in Timbuktu, gaining sufficient moral authority there to be able to act as protector for the explorer Heinrich Barth, an open Christian, in 1853. Al-Bakkāḥ wrote numerous poems and *ṣaḡhīl*, some addressed to the Fulbe rulers of Māsina, others attacking the claims of the Tijāniyya order.

In the closing years of the 19th century, two grandsons of Sidi Muḥammad distinguished themselves by their attitudes to French penetration of the central southern Sahara: Zayn al-'Abīdīn b. Muḥammad al-Kuntī (b. 1848), who declared a ḡhāḥā against the

French after their occupation of Timbuktu in 1894 and whose continued challenge to French authority remained a menace in the first two decades of the 20th century; and Sidi Bāy b. Sidi 'Umar (b. 1865), a scholar and man of saintly repute who took up residence in the Adrar-n-Niḡhas and encouraged both the Niḡhas and Aboggar Tuareg to avoid conflict with the French. Several copies of his *Nawāḥī*, as yet unstudied, are preserved in the Institut des Sciences Humaines, Namey, Rép. du Niger.

The spiritual influence of the Kunta in the 12th-13th/18th-19th centuries was far-reaching. The two major Fulbe leaders, Shaykh 'Uḥmān b. Fūdī and Shaykh Ahmadu Lobbo, both received and propagated the *ṣiḡḡa* of the Mukhtāriyya, though in both Hausaland and Māsina the Tijāniyya gained ground rapidly from the mid-19th century. A list of the main groups of West African Muslims attached to the Order or branching from it may be found in P. Marty, *Études*, I, 140-2 (see Bibl.).

[J. O. HENNING]

KUNŪT (A.), a technical term of Islamic religion, with various meanings, regarding the fundamental signification of which there is no unanimity among the lexicographers. "Refraining from speaking", "prayer during the *ṣalāt*", "humility and recognition that one's relation to Allāh is that of a creature to his creator", "standing"—these are the usual dictionary definitions which are also found in the commentaries on different verses of the *Kur'ān* where *kunūt* or derivatives from the root *k-n-t* occur. There is hardly one of these for which the context provides a rigid definition of the meaning (see II, 170, 239; III, 15, 38; IV, 38; VI, 121; XXX, 25; XXXIII, 33, 35; XXXIX, 13; LXVI, 5, 12).

The *ḥadīth* gives more definite contexts. "The best *ṣalāt* is a long *kunūt*" (e.g. Muslim, *ṣalāt al-muḥaddithin*, trad. 164, 165, *bāb al-ṣalāt al-ṣalāt al-kunūt*; al-Tirmidhī, *Ṣalāt*, *bāb* 168). Here, in the unanimous opinion of all the commentators (see al-Nawawī on the passage), *kunūt* means "standing". In the well-known *ḥadīth*: "as like to the fighter on the path of Allāh is he who fasts, who stands, who *kunūt bi-ḥayāt Allāh*" (Muslim, *Imāra*, trad. 120), *kunūt* has obviously the meaning of "to recite standing" (cf. Abu Dāwūd, *Shahīd Ramaḍān*, *bāb* 9: "And he who recites 100 verses of the *Kur'ān* standing is enrolled among the *kunūtiyyūn*"). *Kunūt*, however, usually seems to be connected in meaning with *du'ā'*, e.g. in the oft-quoted tradition which tells how Muḥammad in the *ṣalāt al-ṣubḥ* appealed to Allāh for a month against the tribe of Rī' and Dhakwān, as they had slain the *kurra'* at Bi'r Na'ḥna (*Witr*, *bāb* 7); in this case the meaning is certain from the explanation *yad'u 'alā* (al-Bukhārī, *Witr*, *bāb* 7; *Ḍiḥād*, *ib* 164). In the parallel tradition, *idem*, *Maḥḥāzī*, *bāb* 28, trad. 3, there is added "and till then we were wont to perform the *ḥusūf*". Some sources (see Goldziher, *Zaubererzählungen*, 323) add that this was in the month of Ramaḍān.

The rite also appears in parallel traditions in a more precise form; it is said that the *kunūt* took place in the *ṣalāt al-faḍr* (al-Bukhārī, *Da'awā*, *bāb* 59) after the *rukū'* (*idem*, *Witr*, *bāb* 7). It is still more precisely defined in a *ḥadīth* in al-Nasā'ī, *Taḥḥīṭ*, *bāb* 31: "... that he heard how the Prophet when he raised his head after the first *rukū'* at the *ṣalāt al-ṣubḥ*, said: "O Allāh, curse this and that man (i.e. some of the *munāfiqīn*); thereupon Allāh revealed: "It does not concern thee whether He turns to them with favour or punishes them" (III, 123). The following is another example of *kunūt*: "When the messenger of Allāh lifted his head after the second *rukū'* at the *ṣalāt al-ṣubḥ*, he said: "O Allāh, save Walīd b. Abi Walīd and Salma b. Ḥishām and 'Ayyāḡ b. Abi Rabi'a and the weak ones in Mecca. O Allāh, tread heavily on Muḍar and send them

years of famine, like the years of Joseph" (al-Nasā'ī, *Taḥḥīṭ*, *bāb* 26). According to another tradition, which also goes back to Abū Hurayra (al-Bukhārī, *Aḥḍāḥ*, *bāb* 226), the *kunūt* consisted of prayers and blessings for the Muslims and curses upon the unbelievers.

We are also told that the *kunūt* was regularly performed at the morning and evening *ṣalāt* (*ṣubḥ* and *maghrib*; al-Tirmidhī, *Ṣalāt*, *bāb* 177; al-Nasā'ī, *Taḥḥīṭ*, *bāb* 30). Al-Tirmidhī gives the following note on this tradition: "The learned differ in their views about the *kunūt* at the *ṣalāt al-faḍr*. Some of the scholars of the *Ṣaḥīḥa* and later generations advocate this *kunūt*, such as Mālik and al-Ḥafḥāfī". Ahmad [b. Ḥanbal] and Iḥāk say: "There is no *kunūt* uttered at the *ṣalāt al-faḍr* except in case of a calamity, which affects the Muslims as a body". In such a case the *imām* has to pray for the Muslim armies. *Zuhr* and 'Iḥāḥ' are also mentioned as *ṣalāt*s into which the *kunūt* was inserted (al-Bukhārī, *Aḥḍāḥ*, *bāb* 126; al-Nasā'ī, *Taḥḥīṭ*, *bāb* 29).

There is further a difference of opinion as to where, in the *ṣalāt*, the *kunūt* should be inserted. 'Āṣina is said to have asked Anas b. Mālik about the *kunūt*. Anas replied: "The *kunūt* took place ...". I asked: "Before or after the *rukū'*?" He replied: "Before the *rukū'*". I said: "But I have been told on your authority, after the *rukū'*". Anas replied: "Then they lied. The apostle of Allāh only uttered the *kunūt* prayer after the *rukū'* for a month. I think, after he ...". (here follows the story of Bi'r Na'ḥna, see above, *Bukhārī*, *Witr*, *bāb* 7). It is even said that the *kunūt* is a *bid'a*. Abū Mālik al-Aḥḍāḍī records a tradition on the authority of his father, that the latter had performed the *ṣalāt* under the direction of Muḥammad, Abū Bakr, 'Umar, 'Uthmān and 'Alī and that none of these uttered the *kunūt* prayer. He adds "it is therefore also a *bid'a*, my son" (al-Nasā'ī, *Taḥḥīṭ*, *bāb* 33).

Nevertheless, it continued to be known as the name of the prayer (*du'ā'*) at the *ṣalāt*. In the books of tradition a formula is given for the *kunūt al-witr* (it occurs often and in different forms, though it is not always called *kunūt* but is given names like *du'ā'*, etc.): "O Allāh, lead me amongst those whom Thou guidest, and pardon me among those whom Thou pardonest, and care for me among those for whom Thou carest and bless me with what Thou distributest, and protect me from the evil that Thou has decided upon; for Thou decidest and none decides about Thee. Disgrace will never come upon him for whom Thou carest. Thou art blessed and exalted, O our Lord" (al-Tirmidhī, *Witr*, *bāb* 20). The same formula is found as an element in the *ṣalāt* in al-Nawawī, *Minḥaj*, ed. van den Berg, I, 83, 455-6; cf. Lane, *Lexicon*, s.v. *k-n-t*, who gives another formula.

Bibliography: I. Goldziher, *Zaubererzählungen im islamischen Gebiet*, in *Oriental Studien*, Theod. Noldeke ... gewidmet, Giessen 1906, 4, 323-29 (= *Gesammelte Schriften*, v, 52-8) and the references given there.

(A. J. WARMINK)

KUNYA (A.), patronymic, an onomastic element composed of Abū (m.) "father" or Umm (f.) "mother" plus a name. We have here a metonymic designation corresponding to a general tendency among primitive peoples to consider an individual's name as taboo and not to pronounce it unless exceptionally (see J. G. Frazer, *The golden bough*, ch. xxi). The *kunya* was therefore accordingly the name which should be used, but in historical times, the original intention here was forgotten, and al-*Lihāz* (see JA [1967], 70, 82), far from seeing here any

connection with sympathetic magic, counts the kunya amongst the claims to glory of the Arabs and, seeing only one aspect of the reality, stresses the honour attaching to it. Nevertheless, it is certain that the use of the kunya was not wholly honorific, since it gave the possibility of citing a person whose name, for various reasons, including certain rather humiliating ones (e.g. in regard to an enemy), one did not wish to pronounce. In any case, usage was such that the kunya sometimes came to predominate over the *ism* [q.v.] or name proper, to such an extent that the *ism* of certain personalities cannot be established with certainty, has been forgotten or may even never have existed (see e.g. Abū Tālib, Abū Lahab, etc.).

In principle, Abū or Umm is followed by the eldest son's name, and this usage is based on the value which Semitic peoples placed upon their children, and above all their sons. This again points to the importance placed on the punctilious performance of funeral rites, a duty that was incumbent upon the eldest son in particular. There is negative evidence of the connection between the kunya and funeral rites from the facts that slaves, as a rule, had no patronymic and that, unless they had been received into the *family*, they were buried without ceremonies.

However, the kunya can be composed of the name of a younger son or even of a daughter, but again, this does not necessarily correspond to reality, and since it is given to a child, the latter might well have no issue of its own throughout his life. The giving of a kunya can in effect act as an expression of the hope that its bearer will have a son and will give him a determined name. Several kunyas are traditionally attached to certain names (the *ism* [q.v.]) by custom or in order to show respect for a precedent; an *thrāḥīm* is often called Abū Ishāq or Abū Ya'qūb, and a 'Umar, Abū Ḥafṣ. Contrariwise, in principle it is forbidden to take Muḥammad's kunya, Abū 'l-Kāsim, in conformity with the *ḥadīth*, *istammanā bi-smi wa-lā taḥtanā bi-kunya* ("take my name [sc. Muḥammad], but not my kunya"); however, this prohibition was considered null and void at the Prophet's death, and it became regarded as sufficient to avoid the coupling of Abū 'l-Kāsim Muḥammad. The one and the same person might have more than one kunya (e.g. 'Uḥmān b. 'Affān had three, Abū 'Amr, Abū 'Abd Allāh and Abū Laylā), and cases are cited of warriors who had one for use in times of peace and one for times of war (e.g. 'Amīr b. al-Ṭufayl and Katarī [q.v.]; see al-Dīḥlī, *Bayān*, I, 342). On the other hand, the kunya may be purely metaphorical and allude to some desired quality, like Abū 'l-Faḍl "father of merit" or Abū 'l-Khayr "father of goodness", etc. In certain cases, it may be a sobriquet based on some personal feature or characteristic, e.g. Abū 'l-Dawānīk "father of farthings", given to the 'Abbāsid caliph al-Manṣūr, renowned for his meanness, or Abū Hurayra "father of the little cat, kitten", allegedly given this kunya because of his love of cats. The kunya not infrequently may have a pejorative sense, as in Abū Dāḥl "father of ignorance", or point to some physical peculiarity, as in Abū Shāma "the man with a birthmark". In this way, Abū loses its original sense completely and becomes a synonym for *ḥu* "the man with ...".

The kunya is also applied, from an early period, to certain animals, e.g. Abū Fāris "lion", Umm 'Amīr "hyena", Abū Sulaymān "cock", and to all sorts of things which are in some degree personified, e.g. monuments like Abū 'l-Hawī "the Sphinx", and toponyms, e.g. Abū Kubays, a mountain. Furthermore, the ancient usage of the words *abū* or *umm*

with the sense of *ḥu*/*ḥat* called forth a proliferation, especially obvious in the dialects, of expressive appellations including some term which usually marks out a peculiarity of the person or animal or thing in question, either in a humorous way (abū ḥiḡyaḥā lakya "bearded person"; *ḥi ḥāmsa*, in North Africa, "colonel" with five rank stripes, etc.) or in an euphemistic one (abū 'l-baḡīr "blind person", etc.). Some compound expressions of this kind are particularly applied to some plants and their fruit (abū sa'ba "nut vomica" because of its bitterness (sa'ba); abū faras "chestnut", from the husk which resembles a fur, etc.), but mainly to certain animals (abū misalla or abū minḡār or *umm minḡār* "woodcock", with its long beak; *umm arba' wa-arba'in* "centipede"; abū 'l-maḡḡab "flea", from its habit of jumping; etc.).

The kunya became very early an onomastic element charged with expressiveness, in such a way that it had a caritative value and could be employed in special circumstances outside the sphere of private life. The warrior who advanced against enemy armies to challenge an enemy to single combat would call himself by his kunya, and it was by this name that the tribe would appeal to its champion for help (see Keys b. al-Khaṭīm, *Dīwān*, ed. Kowaleki, fragment 4, v. 38). In official relationships, the caliph sometimes marked out one of his courtiers for special favour by publicly addressing him by his kunya and not by his name or *ism*, but after the 3th/11th century, protocol forbade such familiarity (Mez, *The renaissance of Islam*, Eng. tr. 136-7). Similarly, in correspondence emanating from the chancery, the kunya of the addressee was used when the sender wished to honour him (see al-Kaḡḡhandī, *Ṣubḥ*, v. 430-7).

At the present day, the usage of the kunya has disappeared, and the term is sometimes used, in official contexts, together with the *laḡab* [q.v.], to denote a family name; but one should remark that a number of patronymics adopted after the setting-up of a civil government in Arabic-speaking countries stem from former kunyas and that the non-degreet of several Palestinian fighters is precisely a kunya.

Wensinck, *Some Semitic rules of mourning and weisgion*, in *Vorb. Ak. Wet. Amsterdam*, n.s. xviii/1, 26 ff.; A. Spitaler, *Beiträge zur Kenntnis der Kunya-Namengebung*, in *Festschr. Werner Caskel*, ed. E. Gräf, Leiden 1968, 336-50.

(A. J. WENSINCK)

KUR, the largest river in the Caucasus (according to Hamd Allāh Mustawfī Kazwīnī, 200 *farṣakh* = nearly 800 miles in length). The Kur, known as Cyrus to the Greeks; Nahr al-Karr to the Arabs; Kura to the Russians (said to be derived from *o-kuan*, "river", in the Abkhāz tongue); and Mtkvari to the Georgians (said to be derived from *mtkvar*, "river" in the Kartlian dialect), rises in Georgia south of Ardahan (west of Kāz, in the Psoo district), and flows northwards to Akhaltskhé, where it turns east (see map in V. Minorsky, *A History of Shirvān and Darband in the 10th-11th centuries*, Cambridge 1938, 174). For the rest of its course it maintains a generally west-east alignment, bisecting the city of Tiflis [q.v.]. The Kur, 240 feet wide in places, is navigable only by rafts in its upper course, "but lower, 150 miles before the Caspian, large sailing boats may ply, drawing up to 3 ft. of water" (W. E. D. Allen, *A history of the Georgian people*,

London 1971, 8). The navigation of the Kur has only once played a part in political history, at the time of the destruction of the town of Bardha'a [q.v.] by the Rûs in 332/943-4. Some 100 miles west of the Caspian Sea (see *ASIR AL-KHAZAN*), the Kur is joined by the river Aras [q.v.], and the "united waters find a double mouth along the sandy foreshore of the Caspian" (Allen, *loc. cit.*) in the Gushâst district. Just east of the confluence with the Aras, the Kur is crossed by a bridge at Djawid. In Islamic times, the Kur formed the boundary between the province of Karabagh or Arrân [q.v.], and the regions of Shirwân [q.v.] and Georgia (see *AL-KUR*).

Bibliography: Given in the article.

(W. BASTROLD - [R. M. SAVORY])

AL-KURA, the sphere.

1. The sphere itself. The Arabs studied the properties of the sphere, following Euclid, Archimedes and Theodosius. They also dealt with certain principles of spherical trigonometry, which form the foundations for astronomical theory, the principle of the transversal (*shakl al-kafâf*), the principle of the four magnitudes (*al-shakl al-mughni*) and the principle of the shadow, i.e. of the tangent (*al-shakl al-silti*) following Menelaus and Ptolemy. (On the translations of M. Steinschneider in *ZDMG*, I [1896], 264 ff.; the mathematical principles are discussed by H. Bürger and K. Kohl, *Axel Bjerrnbo Thibets Werk über den Transversalsatz*, in *Abhandl. zur Gesch. der Naturwissenschaften und Medizin* [1924], part 7, pp. 1-91; references are given there to the earlier literature also).

2. *al-Kura dhâ al-kursi* (the globe mounted on a stand) is used in two senses:

(a) The globe of the heavens (instead of *al-kura* we also find *al-bayda*, the egg, in this sense, e.g. in *Mafâhîh al-'ulûm*, 235, in al-Battânî, *Opus astronomicum*, ed. C. A. Nallino, 1913, I, 138; cf. E. Wiedemann, *Beitr. z. d. SBPMS Erg.*, xxvii, [1905], 239 ff.). The constellations are painted on a globe. It is placed in a ring which stands on 3 or 4 legs. Such globes have been prepared and described, perhaps as early as by Hipparchus, at any rate by Ptolemy. Ptolemy's description is given in the Arabic translations of the *Almagest* and in separate treatises. One such globe, erroneously ascribed to Ptolemy, was seen in Cairo in 435/1043-4 by Ibn al-Sandbadh (cf. Ibn al-Kittâb, 440). The globes were made of wood covered with paper or with different metals. Hollow globes could also be made of metal, which were then fastened to wooden spheres. 'Alam al-Dîn Kayyâr al-Ta'âfî used a gilt wooden globe (*Abu 'l-Fidâ*, *Annales*, ed. Reiske, iv, 457; H. Süßner, *Mathematiker*, no. 358). The making of such globes and the errors that occur in them were fully discussed by al-Bîrûnî (*Beiträge zur Gesch. der Mathematik*, etc., in *Abhandl. zur Gesch. der Naturwiss. und Medizin*, part 4 [1922], 79-93; cf. also H. Schnell, *ibid.*, in a later part).

The astronomical instrument prepared by al-Idrîsî for King Roger of Sicily was apparently an armillary sphere.

(b) *al-Kura dhâ al-kursi* is also an arrangement by which one follows the movements of the heavens. The horizontal ring is directed to the horizon; it is notched at right angles in two opposite points, a meridian ring is placed in the notches and allowed to go to its lowest position in a groove. The globe itself turns round an axis which is placed in round holes at two opposite points on the meridian ring. Divisions are marked on the horizon and on the meridian ring. By turning the meridian ring in its grooves, the axis of the globe can be inclined at will to the horizon and

the instrument can thus be used for all latitudes. A quadrant with divisions which can be placed on the globe enables many kinds of measurements to be taken. With this globe, the magnitudes of importance in astronomy, *al-fâsi*, *al-mafâsi*, the props of the earth etc., can be obtained.

The oldest Arabic work on the subject is by Kustâ b. Lûkâ [q.v.] and exists in Arabic in several editions, e.g. that of al-Marrîkûshî; it may go back to classical originals, as is probable in view of the author's relation to the Greeks. It was also translated into Latin, and into Spanish by Alfonso of Castile (*Livros del Saber*, i).

If the globe is left out and a series of other rings is added to the horizon and meridian rings, which correspond to circles in the heavens, we get the armillary sphere (*âlat dhâ al-kalâh*), the instrument with the rings with which the ancients, the Arabs and notably Alfonso of Castile, occupied themselves a great deal.

Bibliography: B. Dorn, *Drei astronomische Instrumente*, in *Mém. de l'Acad. impériale des Sciences de St. Pétersbourg*, series 7, vol. 18, no. 131; L. Ann. Sedillot, *Mém. sur les instruments astronomiques des Arabes*, in *Mémoires présentés par divers savants à l'Acad. R. des Inscriptions*, etc., Paris 1844, series 1, vol. 1, 7-229; F. Nolte, *Über die Armillarsphäre*, in *Abhandl. zur Gesch. der Naturwissenschaften*, etc., part 2, 1-50. Nolte also gives the earlier literature.

3. *al-Kura al-mukarrra*, the burning-glass (lit. the strongly-burning globe). Even the ancients knew the property possessed by rock crystal and glass globes of concentrating sunlight falling upon them on one point and setting alight on inflammable material there. But we find no indications that any scholar of antiquity studied the theory of this phenomenon. Ibn al-Haytham and Kamâl al-Dîn al-Fârîsî [q.v.] investigated this theory very brilliantly. Ibn al-Haytham starts from the values, given in a table of Ptolemy's and collected by himself also, of the angle of incidence, angle of divergence and angle of refraction of a ray of light falling on a smooth surface of glass, and investigates the path of the rays when they strike the surface of the globe at different distances from the axis drawn between the sun and the centre of the ball. It is proved that after refraction they all meet on the opposite surface of the globe in a little section from which they emerge with their direction altered. They cut the axis at different distances from the ball: the majority, however, meet at a point distant less than half the radius of the ball, and this is the burning point. If drawings are placed in the cone of rays formed by the rays coming from it, for example a red circular surface with a black ring upon it, and this is looked at through the front of the ball, remarkable figures are seen; these were also studied very fully by Ibn al-Haytham and Kamâl al-Dîn; they were able even then to reach the same results as Scheibach at a later date.

(E. WIEDEMANN)

KÖRA, a term designating, in the geographers and in official documents, an administrative unit within a province. It was felt as being a loan

word, certain authors giving it an Iranian origin, although a Greek origin (from *κύρα*) seems more likely. The exact definition of a *kūra* varies according to authors. Thus Ibn Khuradādhbih enumerates, in the same region, that of Hims in Syria, *kūras* and *shims* at the same time, so that in this case, the two terms seem to be equivalent (see 1913a). But most of the geographers reserve the term *shim* for a region or province, call the districts *kūras*, and distinguish within these districts cantons called *rasā'id* or *rustā'id*; this is distinguished in particular by Ibn al-Fakih (*passim*, and tr. Massé, *Abregé*, index) and al-Mukaddasī (*passim* and tr. Miquel, index). Usually, the *kūra* has a chief-town which is often called a *ḥajaba*.

According to Yāqūt, the *kūra* is the equivalent of the Persian *ishm*, with the *ishm* comprising several *rustā'id*, the *rustā'id* several *rasā'id*, and the *rasā'id* several villages; thus Nā'in is a *rasā'id* belonging to the *rustā'id* of Yazd, which comes within the *ishm* of Istakhr, in the province of Fārs (W. Juwaldeh, *The introductory chapter of Yāqūt's Mu'jam al-Buldān*, Leiden 1950, 56-8).

In mediaeval documents relating to Syria, acts of sale or *wa'fs*, the following classification is found: a *kūra* like that forming the Ghōṭa of Damascus comprises cantons (*ishm*) which themselves contain villages (*karys*) (see J. Sourdel-Thomine and D. Sourdel, *Trois actes de vente damascènes du début du IV^e siècle*, in *JESHO*, viii [1965], esp. 269 and n. 4, and also *Deux fontiers constitués wa'f en Syrie fatimide*, in *JESHO*, xv [1972], 289-91). This usage of the term *ishm* is apparently peculiar to Syria and Upper Mesopotamia, according to Hamza al-Isfahānī and Yāqūt (Juwaldeh, *op. cit.*, 39-40). It is further used thus in al-Andalus, which is explicable by the influence of Syrian practices in that country.

In al-Andalus, a simple province of the original Islamic empire, there existed, as elsewhere, administrative divisions called *kūras*, of which certain ones were, in origin, "militarized zones", i.e. they held contingents of soldiers who were maintained on the revenues of land grants; these divisions were therefore termed *kūra muḡannada* (Lévi-Provençal, *Hist. Esp. Mus.*, iii, 47-53).

(D. Sourdel)

KUR'Ā (أ), in a technical sense designates rhapsodomancy. It is an Islamic divinatory procedure, analogous to bibliomancy; but in current usage the term refers to the drawing of lots, whatever form this may take, and this has been used following the Kur'ānic prohibition of *ishrā'aw* [q.v.] and of *mayār* [q.v.], the two principal cleromantic techniques of pagan Arabs.

I. In the usual sense of "the drawing of lots", the term *kur'ā*, originally applied to "a wineskin with broad base and narrow neck" (TA, v, 453, f. 2) which probably served as a receptacle for the shaking of the lots, is still used in the present day in the sense of choosing and electing by lot or by vote. Monks choose among the novices those to whom they propose to give the habit, by *kur'ā* (the lots used being grains of wheat for "yes" and grains of barley for "no"). The polling station for legislative elections (*intikhāfāt*) is called *maktab al-ikhtār*. In Ottoman Turkish circles, *kur'ā* was practised in the recruitment of conscripts, whence comes the expression *kur'aya girmek* signifying "to reach the age of military service". A. Mulla notes that in Arabia Petraea, the term *kur'ā* refers to a ball serving the function of a lottery ticket, made out of strips of paper bearing

the names of the parties which are rolled in a ball of clay or wax and which are drawn out by persons who were not present during the inscription of the names or the rolling of the balls (*Arabia Petraea*, iii, 294).

The permanence of this usage is attested by the fact that the Prophet used to "draw lots" (*kur'ā*) in order to decide which of his wives could accompany him in his travels (al-Tabarī, i, 1519), a procedure that he also used for the distribution of loot taken in raids (Ibn Sa'd, ii/1, 78, 82, 83), and also by the fact that a chief-tan chosen by the drawing of lots was called *maḥrā'* (TA, loc. cit., i, 8).

The legitimacy of recourse to *kur'ā* was acknowledged at a very early stage through imitation of the Prophet. *Hadith* describes a number of cases where the latter resorted to *kur'ā* for a solution to questions of distribution (cf. al-Bukhārī, *Shahādāt*; al-Kaṣṣalānī, iv, 416 ff.).

In certain cases, where any decision is liable to appear unjust to one party or the other, the judge may resort to *kur'ā* (cf. al-Marghīnānī, *Hidāya*, Calcutta 1818, 813-14; tr. Hamilton, 2nd ed. London 1870, 565-6). Of the eleven cases of *kur'ā* listed in the *Minhāj al-ṭālibin* (ed. Van den Berg, i, 119-20, 324; ii, 328, 404-5; iii, 99-100, 461-2) only two are considered impermissible.

II. In this list there is confusion between the drawing of lots and rhapsodomancy. On the latter, opinions vary as to its legitimacy. While al-Kaṣṣalānī, in his commentary on al-Bukhārī, concedes its legitimacy, following the Hanbali Ibn Baṭṭā (d. 387/997), other authors like Abū Bakr Muḥammad b. al-'Arabi (d. 543/1148), in *Aḥkām al-Kur'ān*, Abū Bakr Muḥammad al-Turṭūshī (d. 550-5/1156-31) and Shihāb al-Dīn Abū Ṭ-Abbās al-Karālī (d. 684/1205), quoted by al-Damiri, *Hayāt al-ḥayawān* (ed. Böllig 1884/1867), ii, 119, oppose the use of the *Kur'ān* for *ja'* [q.v.]. Ibn al-Hādīdī (d. 737/1356) expands on this prohibition in a chapter entitled *Karāḥi al-ḥādīd al-ja' min al-muḥaḥ* (cf. *Madhḥai*, i, 878).

Of what does Islamic rhapsodomancy consist? Like bibliomancy, it is a divinatory procedure involving the interpretation of verses or parts of verses or prophetic words encountered by chance on opening the *Kur'ān* or the *Saḥīḥ* of al-Bukhārī. This practice is attested as early as the Umayyad period and the beginning of the 'Abbāsid period (cf. accounts relating to the end of the Umayyad caliph al-Walīd II, d. 86/744, and to that of Abū Dja'far al-Manṣūr, d. 158/775, in al-Damiri, ii, 119; Fahd, *Divination*, 215).

This consulting of the two most venerated books in Islam takes place in various forms, as the rhapsodomantic writings that are available to us bear witness:

(1) *al-Kur'ā al-Imām Dja'far b. Abi Ṭālib* or *Dja'far-133a* (ms. Aya Sofya 1959, fols. 2-88b, 21.3 x 16 cm., a fine illuminated *nashī* text dating from 907/1501), containing rhapsodomantic interpretations of Kur'ānic verses. Patronage of this art, propagated by the Shī'a, is attributed to Dja'far, the Prophet's cousin, killed at the battle of Mu'ta, in 619, because at the time of departure, one of his companions, 'Abd Allāh b. Rawāba, drew a rhapsodomantic conclusion from a Kur'ānic verse relating to Hell (*Kur'ān*, XIX, 71) enunciated by the Prophet, and had a premonition of the death of Dja'far.

(2) *al-Kur'ā al-ḥāṣṣa*, attributed to Ya'qūb b. Ishāq al-Kindī (d. after 256/870), containing, in the form of tables, 144 questions, followed by 144 chapters, each comprising 12 answers; cf. ms. Aya Sofya 1959, 3, fols. 59-138a: *al-Kur'ā al-mubāraka*

ethnographers put the Kurama in a class by themselves as descendants of nomads (Kirgiz, i.e. Kazak) who have become agriculturists (Sarts, *q.v.*). In spite of the adoption of the Sart mode of life, the Kurama never quite lost their particular characteristics inherited from their nomadic ancestors.

This could still be seen in the early 20th century. Unlike the Sarts, the Kurama lived, like the Kazak, in yurts; their wives, as with the Kazak, were unveiled. In other respects, however, the Kurama had advanced further from their nomadic ancestors than they had at the beginning of Russian rule. At that time, Radloff and other observers could still distinguish among them the division into families. According to Radloff there were five of these Djulayr, Tetlau (this name is still borne by a village inhabited by the Kurama), Tama, Djugaibeyli and Tarakli. This division is now quite lost; where traces of it still exist, marriages between members of one family are no longer—as among the Kazak—considered illegal. The fact that the Kurama are a mixed people can still be recognised; besides the mixture of different stocks among them there has been, according to Zarubin, a mixture of different social ranks. The Kurama themselves do not use this name, although they do with the addition of another ethnic (Kirgiz Kurama, Sart-Kurama). The number of the Kurama in the district of Tashkent (formerly Kurama) was in 1917 32,335; in 1920 49,697. There were further some 9,330 Kurama in the district of Khokand. The word with the meaning of "mixed people" is also found in the area where Turkoman languages are spoken, but these Kurama have no connection with those on the Angren.

1. ETYMOLOGY AND SYNONYMS

a. Derivation and Kur'ānic usage. The earliest attested usage of the term *kur'ān* is in the Kur'ān itself, where it occurs about 70 times with a variety of meanings. Most Western scholars have now accepted the view developed by F. Schwally (*Gesch. des Qur.*, I, 33 f.) and others that *kur'ān* is derived from the Syriac *ḥerynā*, "scripture reading, lesson", as used in Christian liturgy (see for example the 6th century Syriac mss., Brit. Museum, Add. 14, 432, e.g. *ḥerynā d-yēm d-maddā*, "lection for the Day of Supplications", fol. 43b). See also J. Wellhausen, *ZDMG*, LVIII (1913), 634; J. Horowitz, *Isl.*, XLII (1923), 67; *Foreign words*, 233 f.; Bell-Watt, 136 f. (for works abbreviated in this article, see *Bibl.*). The majority view among Muslim authorities has been that *kur'ān* is simply the verbal noun from *ḥara'a*, "he read" or "he recited". Both views find some support in the Kur'ān, where the verb *ḥara'a* does occur, but not as frequently as the usual term for reading or reciting, *talā*. In early Kūfic manuscripts we find *ḥurān* without the *hamza*, causing some authorities such as Ḥatāda and Abū 'Ubayda to derive it from *ḥarana*, "he put together" or "he bound together" (see *Gesch. des Qur.*, I, 31 f.). Against this view it should be noted that the omission of the *hamza* was a characteristic of Meccan speech and early Kūfic Kur'ānic script, and that the term *kur'ān* is closely related to the verb *ḥara'a* in Kur'ānic usage. The soundest conclusion seems to be that the term *kur'ān* originated in the Kur'ān itself to represent the Syriac *ḥerynā*, but was based on an Arabic *masdar* form (*ḥur'ān*) from *ḥara'a*.

The verb *ḥara'a* occurs in the Kur'ān 17 times, usually meaning "recite", but occasionally "read (aloud?)". Where it clearly means "recite", it is always the Kur'ān that is recited, usually by Muhammad (XVI, 98, XVII, 45, 106, etc.). But in one of the earliest contexts it is God who recited the revelation to Muhammad: "When we recite it, follow its recitation" (LXXV, 28), and in one of the latest contexts (LXXIII, 20) it is the believers (see below). *Ḥara'a* means "read" in four or five verses, always with "book" (*kitāb*). In XVII, 93, Muhammad is challenged by some unbelievers to ascend to heaven and bring down a book they can read for themselves. Three passages (XVII, 24, 71, and LXIX, 19) refer to the record books to be read at the Last Judgment, and one (X, 94) refers to some of Muhammad's contemporaries—probably Jews and Christians—as "those who have been reciting [or reading] the Book" before him. Rudi Paret (*Übersetzung, ad loc.*) is no doubt correct in seeing in the Kur'ān different nuances in the meaning of *ḥara'a*, which he translates as *lesen, vorlesen, recitieren, and vortragen*. But there may not be as much variation in the Kur'ānic usage of this verb as these terms suggest, since where it

means 'recite' it could be interpreted "recite (the Kur'ān) from written notes", and where it means "read" it could be interpreted "read aloud".

Most occurrences of the term *ḥur'ān* in the Muslim scripture date from a period of about ten years beginning when Muḥammad began to perform the *ḥajāt* publicly and ending around the time of the battle of Badr in 624. It is impossible to date the contexts precisely or determine their exact chronological order, but the general development of the Qur'ānic usage of *ḥur'ān* is fairly clear. (Unless otherwise indicated, all statements on dating in this article are the present writer's own conclusions. In most cases these analyses tend to support the conclusions reached by Richard Bell, who also dated individual pericopes rather than entire *sūras*—see section 5 below.)

(1) Among the earliest meanings of *ḥur'ān* is "act of reciting", seen in two passages where God addresses Muḥammad: "Ours is it to put it together and [Ours is] its *ḥur'ān*. When We recite it follow its *ḥur'ān*" (LXXV, 27 f.), and "Observe the *ḥajāt* at the sinking of the sun until the darkening of the night, and [observe] the *ḥur'ān* at the dawn; surely the *ḥur'ān* at the dawn is well attested" (XVII, 78). This last verse provides useful insight into the relationship between the *ḥajāt* and the *ḥur'ān* at the time when both were just being instituted. (2) In some verses *ḥur'ān* means "an individual passage recited [by Muḥammad]". In LXXII, 2 f. the Prophet is informed that "a number of the *ḥajāt* listened, and said: 'Verily, we have heard a *ḥur'ān*, a wonder, which guides to rectitude, so we have believed in it.'" See also X, 61, XIII, 31, and cf. X, 15. (3) In a large majority of contexts, dating mostly from the late Meccan and very early Medinan years, *ḥur'ān*, usually with the definite article, has a complex meaning involving several elements. It is the "revelation" (*waḥy*) sent down by God upon Muḥammad (XX, 2 f., LXXVI, 23, etc.); it is sent down at intervals (XVII, 206, XXV, 32), and in some contexts it appears to be something in God's possession that is larger than what has so far been "sent down": "What We send down of *al-ḥur'ān* is a healing and mercy to the believers" (XVII, 82). In other contexts *al-ḥur'ān* refers to a collection of revelations in Muḥammad's possession, which he is commanded to recite (XXVII, 92 f.; cf. XVI, 98, XVII, 45). Its liturgical setting is seen in a number of passages, such as VII, 204: "So when *al-ḥur'ān* is recited [by Muḥammad], listen to it and keep silent" and LXXXIV, 20 f.: "Then what ails them, that they believe not, and when *al-ḥur'ān* is recited to them they do not bow?" Specific references to other Muslims reciting parts of *al-ḥur'ān* occur only in one or two Medinan passages, such as LXXIII, 20, where the believers are told to recite during the night vigil only as much of *al-ḥur'ān* as is convenient or easy (*maḥḥab*) for them. (4) In a number of contexts that appear to be early Medinan, dating from before LXXIII, 20, the *ḥur'ān* (sometimes without the definite article) is said to be an Arabic version of "the Book" (*al-kitāb*): "By the clear Book, Behold We have made it an Arabic *ḥur'ān*" (XLIII, 2 f.; see also XII, 2 f., XLI, 2 f., and other verses quoted below). The closest the Qur'ān comes to using the term *al-ḥur'ān* with its present meaning as the name of the Muslim scripture is where it is mentioned with the Torah and the Gospel in IX, 111, in a construction that suggests three parallel scriptures. But it must be remembered that the revelation was not yet complete, and the final scripture was not compiled until after Muḥammad's death.

b. Synonyms in the Qur'ān. The meaning of the term *ḥur'ān* and the origin of the Muslim scripture cannot be understood fully without taking into consideration the Qur'ānic usage of several other closely related terms, especially *āya*, *kitāb*, and *sūra*, but also *dhikr*, *maḥḥab*, *hikma*, and others. Each of these terms has its own distinct, basic meaning in the Qur'ān, but in some contexts their usages converge with that of *ḥur'ān*.

The basic meaning of *āya*, like the related Hebrew *ot* and the Syriac *dthā*, is "sign", in the sense of a token of some unseen reality or truth. Its derivation is uncertain. It would most naturally come from *ʾ-ā-ā*, corresponding with the Hebrew *ʾāzāk*, but such a root does not exist in Arabic, and the Arabic form would be difficult to explain as a borrowing from Hebrew or Syriac (see *Foreign Words*, 72 f.). *āya* and its plural *āyāt* occur in the Qur'ān almost 400 times, most frequently in reference to natural phenomena that confirm God's power and bounty and call for gratitude from man. These are the so-called "sign-passages", discussed below in 7.b. In other contexts *āya* refers to some extraordinary event or miracle that confirms the truth of the message of a prophet. Then in late Meccan or possibly very early Medinan passages, probably in response to the continuing demands for a miracle from Muḥammad, *āya* takes on a new meaning—"revealed message". And finally in a number of Medinan passages *āya* comes to be used for the basic unit of revelation. Later Muslim scholars interpreted *āya* in these passages to mean "verse", but the Qur'ān gives no indication as to the length of these units of revelation, except that in some contexts they are said to be parts of the *ḥur'ān*, the *kitāb*, and possibly of a *sūra*.

Kitāb, literally "book, writing", occurring 255 times in the singular and six times in the plural (*kitābāt*), is among the most difficult terms in the Qur'ān to interpret. Only rarely does it refer to some everyday type of writing, e.g. a letter sent by Solomon to the Queen of Sheba (XXVII, 28 f.), and a document of manumission (XXIV, 33). Sometimes it refers to a record of men's deeds (XVII, 72, XVIII, 49, XXXIX, 69, etc.), events that have been prescribed (XVII, 38, XXXV, 12, etc.), or God's knowledge (VI, 59, X, 61, XI, 6, etc.). The commentators tend to interpret these passages as referring to actual celestial books, a view also adopted by most Western writers on the topic. A. Jeffery (*The Qur'ān as scripture*, in *MW*, XL [1950], 47-50) saw references to the ancient Near Eastern Record Book, Book of Decrees, and Inventory Book, while G. Widengren (*Muḥammad, the apostle of God, and his mission*, 1955, 115-22) argued that these passages referred to a single "Heavenly Book". There is no conclusive evidence in the Qur'ān for either view, and there are serious problems with any literal interpretation of these verses, all of which could just as well be taken as metaphorical references to God's knowledge and decrees. A similar interpretation is possible for those verses usually regarded as referring to the heavenly original of the Qur'ān, e.g., "Indeed it is a noble *ḥur'ān* in a treasured *kitāb* touched only by the purified" (LVI, 77-79), "Nay, it is a glorious *ḥur'ān* in a preserved tablet" (LXXXV, 21 f.), and "By the clear *kitāb*. Behold We have made it an Arabic *ḥur'ān* . . . It is in the *umam al-kitāb* with Us" (XLIII, 1-4; cf. III, 7, and XIII, 39, which are even more ambiguous). There is in fact no clear indication in these verses or anywhere in the Qur'ān of a heavenly original or archetype of the Muslim scripture. This concept has been read into the text by the

later commentators. By far the most frequent usage of *kitāb* in the Qur'ān is in reference to God's revelation to Muḥammad and to certain religious communities that existed before and during his time, especially the Jews and Christians, who are called "the people of the Book" (*ahl al-kitāb*). This complex series of ideas involving the Qur'ān, the Book, Muḥammad, and the People of the Book is discussed in more detail in section 2 below.

The term *sūra*, occurring in the Qur'ān nine times in the singular and once in the plural (*suwar*), seems to be derived from the Syriac *surā*, *surāthā*, "scripture, scripture reading" (*Gesch. des Qur.*, I, 31; *Foreign vocab.*, 280-2). In the Qur'ān *sūra* refers to a unit of revelation and could be translated "scripture" or "revelation". Several verses mention a *sūra* being "sent down" (IX, 64, 86, 124, 127, XLVII, 20, etc.), in contexts that are similar to some Qur'ānic usages of *āya*, *ḥurūf*, and *kitāb*. And Muḥammad's opponents, who are dissatisfied with what he has been reciting, are challenged to "produce a *sūra* like it" (II, 23, X, 38) or "ten *suwar* like it" (XI, 13). Cf. XXVIII, 49, where the challenge is to produce a *kitāb* from God. The Qur'ān gives no indication as to how long these units of revelation were. They were most likely only parts of the present *sūras*.

The Qur'ānic usages of *ḥurūf*, *āya*, *kitāb*, and *sūra* converge at the following points: (1) *ḥurūf*, *āya*, and *sūra* are each used sometimes for the basic unit of revelation, a pericope consisting most likely of several verses (e.g. X, 61, II, 106, and X, 38, respectively), and *kitāb* may have the same meaning in XXVIII, 49, and a few other places. (2) *ḥurūf* (e.g. XXXIV, 31) and *kitāb* (e.g. II, 89, VI, 92, 135, VII, 2) sometimes mean "a scripture" and *sūra* may have this meaning in XXIV, 1. (3) Occasionally *ḥurūf* and *kitāb* are used for the revelation of God as a whole, only part of which has been sent down, e.g. XVII, 82, quoted above, and XXXV, 31: "And what We have revealed to you [Muḥammad] of the *kitāb* is the truth, confirming what was before it". (4) Usually, however, there is a distinction. *Kitāb*, when referring to the revelation, usually means the "Book of God", the revelation as a whole, while *ḥurūf* usually means that part of the revelation that has been sent down to Muḥammad, e.g. X, 37: "This *ḥurūf* is . . . a distinct setting forth of the *kitāb* in which there is no doubt" and XII, 1: "These are the *āyāt* of the clear *kitāb*. Verily We have sent it down as an Arabic *ḥurūf*".

Other technical terms used in the Qur'ān for the revelation being sent down to Muḥammad include the following. (1) Three nouns from the verb *dhakara*, "to remember, to mention", are used for the revelation in the sense of a reminder or warning: *al-dhikr* in LXXIII, 79, LXXVI, 29, etc.; *dhikr* in VI, 90, XI, 120, etc.; and *dhikr* is the formula, "It is nothing but a *dhikr* to the worlds", at the end of the *sūras* XXXVIII, LXVIII, LXXXI, etc., in the introductory formula to XXXVIII where it is connected with *al-ḥurūf*, and in VII, 63, 69, etc. (2) The term *maḥḥab* has puzzled Muslim commentators and given rise to several theories among Western interpreters of the Qur'ān. Even if it is a derivative of the Hebrew *maḥḥab* (*Koran. Untersuchungen*, 26-8) or the Syriac or Aramaic *maḥḥabā* (*Gesch. des Qur.*, I, 114-16), the term *maḥḥab* must have been influenced by the Arabic *thana*, "to double, repeat"; cf. *maḥḥab*, "by twos", in IV, 3, XXXIV, 46, and XXXV, 1. Thus it is probably best translated as "repetitions" (Bell, *Trans.*, 247; Blachère, *Trad.*, 290). But it refers to the revelation sent down to Muḥammad: "We have given thee seven

of the *maḥḥab* and the wondrous *ḥurūf*" (XV, 87), and "God has sent down the best of accounts, in agreement with itself, *maḥḥab* at which the skins of those who fear their Lord do creep" (XXXIX, 23). The commentators usually take the "seven *maḥḥab*" to be the seven verses of the Fātiḥa (s.a.). A more likely interpretation is that this term refers to the punishment-stories (see 6.d and 7.d below), which Bell suggested may have once formed a collection separate from the Qur'ān (Bell-Watt, 234f., 143f.). For the literature, see *Foreign vocab.*, 257 f., and Paret, *Kommentar*, 279f. (3) *ḥikma*, "wisdom", probably from the Aramaic *ḥikmā*, is used in several Medinan passages for the revelation or part of it. God sends down the *kitāb* and the *ḥikma* to Muḥammad (II, 231, IV, 113, etc.). Muḥammad recites the *āyāt*, and teaches the *kitāb* and the *ḥikma* (LXI, 2). And the *āyāt* and the *ḥikma* are recited in the Muslims' homes (XXXIII, 34). These verses should probably be interpreted in the light of IV, 105, where it is said that Muḥammad is to judge (*inḥakum*) mankind on the basis of the Book sent down to him. For the literature, see *Foreign vocab.*, 111, and Paret, *Kommentar*, 68. The term *ḥurūf* as the name of the Muslim scripture acquired connotations of these terms and others used for the revelation "sent down" to Muḥammad; see also Bell-Watt, 245-7, and Paret, *Kommentar*, 19, on *furḥān*.

2. MUHAMMAD AND THE QUR'ĀN

The Muslim scripture and Muḥammad's prophetic experience are so closely linked that one cannot be fully understood without the other. The orthodox view of the dramatic form of the Qur'ān is that God is the speaker throughout, Muḥammad is the recipient, and Gabriel is the intermediary agent of revelation—regardless of who may appear to be the speaker and addressee. An analysis of the text shows that the situation is considerably more complex than this. In what appear to be the oldest parts of the Qur'ān, the speaker and the source of the revelation are not indicated. In some passages (XCI, 1-10, CI, CII, CIII, etc.) there is not even any indication that the message is from a deity (on this, cf. Muir, *Moḥammed*, 39 ff.), and in some (LXX XI, 13-22, LXXXIV, 16-19, XCII, 14-21, etc.) Muḥammad seems to be the speaker. In the earliest passages that mention Muḥammad's God, he is not named but is spoken of in the third person, usually as "my Lord", "your Lord", etc. (II, 1-23, LII, 1-16, LXXIV, 1-10, LXXX, 1-32, LXXXIV, 1-29, LXXXVIII, 1-22, XCVI, 1-8, etc.). From LIII, 10, LXXXI, 23, and other verses it is clear that Muḥammad had visions of God, and at least in the Meccan years it was the voice of God himself, and not some intermediary, that Muḥammad heard. In the earliest passages to indicate the source of the revelation, God is the speaker and the direct source, e.g., "We shall cast upon thee [Muḥammad] a mighty word" (LXXIII, 5) and "We shall cause thee to recite without forgetting" (LXXXVII, 6). And a number of late Meccan and early Medinan passages speak of God reciting the *āyāt*, the *ḥurūf*, and the *kitāb* to Muḥammad (II, 252, III, 103, XLV, 6, etc.).

But during the same period a series of passages have the effect of elevating God from direct revelation. This is done in two ways: the message is said to be brought down by certain intermediaries, and it is connected in some way with "the Book" (*al-kitāb*). Both of these concepts occur in XLII, 51 ff., where it is explicitly denied that God speaks directly to Muḥammad: "It is not fitting that God should

speak to any mortal except by inspiration (*waḥy*), or from behind a veil, or by sending a messenger to inspire whomever He wills. . . . Thus have We inspired you [Muhammad] with a spirit of Our bidding (*ruh-min amrinnā*); you did not know [before] what the Book and faith were". The role of this spirit as the agent of revelation is seen more clearly in XXVI, 192 f.: "Surely it is the revelation of the Lord of all beings, brought down by the faithful spirit (*al-ruh al-amin*)" and XVI, 102: "The spirit of holiness (*ruh al-hadith*) has brought it down from your Lord in truth". Then in the fairly early Medinan passage, II, 97, the agent of revelation for the first and only time in the Kur'ân is said to be Gabriel. On the basis of this verse and a number of *ḥadīth* accounts, the commentators have identified the "spirit" in the earlier passages as Gabriel, and have placed Gabriel at the very beginning of Muhammad's ministry as the agent of revelation. Also, contrary to popular belief, Gabriel is never identified in the Kur'ân as one of the angels, and the angels are never said to be agents of revelation (XVI, 2, comes the closest). The angels may be the speakers in a few passages such as XIX, 64 ff. and XXXVII, 161-6, just as Muhammad or Abraham is sometimes the speaker, but there is no need to interpret the plural "we" as referring to the angels in the numerous passages that also refer to God in the third person. On the "say" passages, in which Muhammad is sometimes the speaker, see 7.0 below.

The Kur'ân also speaks of Muhammad's human informants, at first in contexts involving accusations made against the Prophet by his opponents: "The unbelievers say: 'This is nothing but a fraud [Muhammad] has devised, and others have helped him with it' . . . 'Tales of the ancients he has written down; they are recited to him morning and evening'" (XXV, 44). Except for the element of fraud, the Kur'ân does not deny what is reported in this passage. The response given in XVI, 103, to a similar charge seems to concede that Muhammad had a foreign informant: "We know very well that they are saying: 'It is only a mortal who is teaching him'. But the language of him whom they suggest is foreign, and this is clear Arabic speech". Here again the accusation is not denied; there is simply insistence that the actual wording of the Kur'ân did not come from the informant. Several Medinan passages give the impression that Muhammad actively sought information from the scriptures of the Jews, since they are condemned for concealing their Book from him. Some mention written copies that were shown to Muhammad or his followers, e.g. VI, 91: "the Book Moses brought . . . you have put on parchment you show, but you hide much of it". Others such as II, 79, accuse the Jews of writing out passages of their own and then saying "This is from God". See also II, 77, 140, 174, III, 71, and V, 15. In these passages it is not difficult to see Muhammad receiving stories and other information from various informants, including Jews and Christians, and then in moments of inspiration reworking the material into its Kur'ânic form. Such a view, although considered unorthodox today, is not inconsistent with some reports found in the *ḥadīth* collections and other early Muslim sources.

This raises the question of the relationship between the Kur'ân and the scriptures of the Jews and Christians. Meccan and very early Medinan parts of the Kur'ân speak of a single revelation or Book, sometimes called the Book of God (*Kitâb al-Hakk*), and specify those to whom it had been "given" previously: the prophets (II, 133), the seed of Abraham (XXIX, 27, LVII, 23 f., etc.), the Children of Israel (XII, 33,

XLV, 26), Moses (II, 53, 87, VI, 154, etc.), John the Baptist (XIX, 12) and Jesus (XIX, 30, etc.). In II, 101 and III, 23 (cf. III, 93) the *Kitâb al-Hakk* is specifically identified with the scriptures of the *ahl al-kitâb*, "people of the Book". This expression, which occurs over thirty times (II, 103, 109, III, 64 f., IV, 123, 153, etc.—all Medinan), is often interpreted as "the people who have a scripture". But it more likely means "the people who have (previously) been given the Book of God", since it is synonymous with the Kur'ânic expressions *alladhina ūhî 'l-hadith*, "those who have been given the Book", in II, 101, 144, 145, III, 19 f., IV, 132, etc., and *alladhina ūhiyyunna 'l-hadith*, "those to whom We have given the Book", in II, 121, VI, 20, 114, XIII, 36, etc. The often-discussed term *ummiyyûn* (II, 78, III, 20, 75, LXII, 2) seems to be the antithesis of these three expressions, thus meaning "those who have not been given the Book previously". And this is almost certainly the sense of the singular, *ummi*, which is applied to Muhammad in VII, 157 f. That is, instead of sending to the Arabs and the world a missionary from among those who had already been given the Book (the *ahl al-kitâb*), God chose to send a prophet, Muhammad, from among those who previously had not been given the Book (*al-naḥl al-ummi*). There is no basis in the Kur'ân for the traditional view that *ummi* means "illiterate" (see *UMMI*; *Gesch. des Qur.*, I, 14-17; Bell-Watt, 33 f.; and Blackens, *Introd.*, 6-12). After the so-called "break with the Jews" in Medina around the time of the battle of Badr, the Book came to be distinguished from the Torah and the Gospel (III, 48, V, 110, etc.) and identified more closely with the revelation being sent down to Muhammad (see, e.g., the Medinan formulas, XII, 1 f., XII, 3, XLII, 2 f., etc.). And the expression "those who have been given the Book" became "those who have been given a portion (*naḥl*) of the Book" (III, 23, IV, 44, 51, etc.). About the same time the plural "scriptures" (*kutub*) was introduced in two credal statements in II, 285 and IV, 136 (cf. LXVI, 12, NCVIII, 3).

In late Meccan and early Medinan passages Muhammad is said to have been challenged to produce a book the people could read for themselves (e.g. XVII, 93), and his followers complained that they did not have a scripture like those of the Jews and Christians (VI, 155 f.). The establishment of an independent Muslim community in Medina, distinct from the *ahl al-kitâb*, was marked by the granting of a separate Islamic scripture that was to serve as a criterion (cf. *fuḥṣān*) for confirming the truth of previous scriptures (III, 3, IV, 105, V, 48, etc.). The evidence seems to indicate that Muhammad began to compile a written scripture some time in the early Medinan years, but that the responsibilities of leading the rapidly growing Muslim community forced him to leave the task unfinished (see Bell-Watt, 140-4). That Muhammad participated in and directed the task of preparing a written scripture seems certain. This is to some extent supported by the *ḥadīth*, where we are told that he dictated to scribes and instructed them on how to arrange the revelations, sometimes inserting a new passage into an older one (al-Bukhārī, *Faḥṣān al-Kur'ân*, bāb 2 f., Abū Dawūd, *Saḥīḥ*, bāb 2, Ibn Sa'd, *ḥizb*, 59). The Prophet most likely did not do the actual writing and editing himself, especially in Medina where he had scribes to perform these manual tasks (*Gesch. des Qur.*, I, 46 f.). But it is not unlikely that Muhammad did occasionally write out the revelations himself (see e.g. XXV, 4-6, quoted in *pari* above, and Bell-Watt, 36, on this passage). The task

of preparing the written scripture included some revision and alteration of earlier revelations (see Bell, Watt, 69-107). The Kur'ān itself acknowledges that changes were made in the revelation: "For whatever *āya* We abrogate or cause [you, i.e. Muhammad] to forget, We bring [another that is] better or like it" (II, 106), and "When We substitute one *āya* for another—and God knows best what He is sending down—they say: 'You [Muhammad] are a mere forger'" (XVI, 101). A similar verse, XXII, 52, gives another explanation for changes in the revelation: "We have never sent any messenger or prophet before you [Muhammad], but Satan cast [something] into his thoughts when he was yearning [for a message from God]. But God abrogates what Satan casts in, and then God adjusts his *āyāt*". These verses seem to be responses to complaints or accusations about changes in the revelation. The Kur'ān gives three explanations: that Muhammad sometimes forgot parts, that Satan inserted something into the revelation, and that God simply replaced some parts with others as good or better. The term *āya* in these passages came to be interpreted as "verse", but the Kur'ān gives no indication as to the length of these units of revelation that were withdrawn and replaced by others.

In his commentary on XXII, 52, and in his *Annals* (I, 1192 f.), al-Tabarī records several versions of a curious story in which Muhammad is said to have recited the two short verses, "These are the exalted ones (*al-ghorānif* = cranes), Whose intercession is to be hoped for", just after LIII, 19 f., which mention the Arabian goddesses, al-Lāt, al-'Uzzā, and Manāt (q.v.). The Quraysh (q.v.), who were in the mosque listening to Muhammad, then prostrated with the Muslims at the *saḡda* at the end of the *sūra*, and some of Muhammad's followers who immigrated to Abyssinia to avoid persecution returned to Mecca. But before they arrived, Gabriel informed Muhammad that these two verses had been inserted into the revelation by Satan. God then revealed XXII, 52, to comfort Muhammad, and then LIII, 21-7, to abrogate the two *ghorānif* verses. Hostility between Muhammad and the Quraysh resumed, and the immigrants had to arrange for protection before re-entering Mecca. This story of the "Satanic verses" has been accepted as historical by most Western writers who mention it, since they find it unthinkable that it could have been invented (e.g. *Gesch. des Qur.*, I, 101-3; Watt, *Mecca*, 203; A. Guillaume, *Islam*, 189 f.). Although there could be some historical basis for the story, in its present form it is certainly a later, exegetical fabrication. *Sūra* LIII, 1-20 and the end of the *sūra* are not a unity, as is claimed by the story; XXII, 52, is later than LIII, 21-7, and is almost certainly Medinan (see Bell, *Trans.*, 316, 322); and several details of the story—the mosque, the *saḡda*, and others not mentioned in the short summary above—do not belong to a Meccan setting. Cantani (*Annals*, I, 279-82) and J. Burton ("Those are the high-flying cranes", in *JSS*, xv [1970], 246-65) have argued against the historicity of the story on other grounds. Cantani on the basis of weak *isnāds*. Burton concluded that the story was invented by jurists so that XXII, 52, could serve as a Kur'ānic proof-text for their abrogation theories.

3. HISTORY OF THE KUR'ĀN AFTER 632

The history of the text and the recitation of the Kur'ān after the death of Muhammad in 632 is still far from clear. The development of the canon involved three main stages, each of which is difficult to reconstruct and date: the collection and arrangement

of the text from oral and written sources, the establishment of the final consonantal text, and the process by which several readings, i.e., different ways of vocalising the text, came to be accepted as canonical or "revealed". According to the orthodox view, the Kur'ān was perfectly preserved in oral form from the beginning and was written down during Muhammad's lifetime or shortly thereafter when it was "collected" and arranged for the first time by his Companions. The complete consonantal text is believed to have been established during the reign of the third caliph, 'Uthmān (644-56), and the final vocalised text in the early 4th/10th century. Most Western scholars have accepted the main points of this traditional view. But there are problems here. In addition to the usual difficulties of evaluating Muslim sources that were regulated by the science of *hadīth*, the task of reconstructing the history of the Kur'ān is further complicated by the fact that the classical literature records thousands of textual variants, which, however, are not found in any extant manuscripts known to Western scholars. Several valuable works on the history of the Kur'ān were written during the 4th/10th century (see below), but later Muslim scholars, with just a few exceptions, have shown little interest in the problem of reconstructing the history of the canon. The basic European works continue to be the second edition of Th. Nöldeke's *Geschichte des Qurāns*, especially Part II, *Die Sammlung des Qurāns* (1879), ed. and revised by F. Schwally, and Part III, *Die Geschichte des Koran-Texts* (1938), by G. Bergsträsser and O. Pretzl, and A. Jeffery's *Materials for the history of the text of the Qur'ān* (1937).

a. The "Collection" of the Kur'ān. The most widely accepted story of the "first collection" of the Kur'ān places an official, written copy of the entire text in the reign of the first caliph, Abū Bakr (632-4), thus within two years of the Prophet's death. According to the dominant version of this story (al-Bukhārī, *Faḡḡīṣ al-Kur'ān*, 33; Ibn Ḥajar, *Faḡḡīṣ al-Bārī*, ix, 9), 'Umar b. al-Khaṭṭāb (q.v.) became concerned that so many Qur'ān reciters (*ḥuffāz* (q.v.)) had been killed at the battle of al-Yamāma. So he suggested to the caliph that a complete, written text of the Kur'ān be prepared so none of the revelation would be lost. Abū Bakr hesitated, saying "How dare I do something the Prophet did not do?", but 'Umar convinced him of the need. Abū Bakr then sent for Zayd b. Ṭāhīb (q.v.), one of the Prophet's secretaries, and said: "You are a wise young man, and we trust you. And you used to write down the revelations for the Prophet, so go and find [all the fragments of] the Kur'ān and assemble it together". Zayd also hesitated, saying "How dare I do something the Prophet did not do?" But Abū Bakr convinced him of the need, and Zayd collected all the fragments of the Kur'ān "whether written on palm branches or thin stones or preserved in the hearts of men", and he wrote it out on "sheets" (*ṣuḥuf*) of equal size and gave them to Abū Bakr. When 'Umar became caliph in 634 he acquired the "sheets", and on his death they passed to his daughter, Ḥāṭiṣa, a widow of the Prophet.

This story makes several key points, either explicitly or by implication, that would be of considerable significance for our understanding of the history of the Kur'ān if they could be accepted: that Muhammad did not leave a complete written text, that nothing of the Kur'ān was lost, that it was preserved primarily in oral form and that any written fragments were on crude materials, that the first

official recension, authorised by the first caliph, was also the first complete collection, etc. Muslim tradition came to accept this story as a historical account, and these points as facts. But there are serious problems with this account. For one thing, most of the key points in this story are contradicted by alternative accounts in the canonical *ḥadīth* collections and other early Muslim sources (see Wensinck, *Handbook*, 131; *Gesch. des Qur.*, II, 15-18; Burton, *Collection*, 120-8). According to one *ḥadīth*, 'Umar once asked about a verse and was told that it had been in the possession of someone who was killed at Yamāma, so he gave the command and the Kur'ān was collected, and "'Umar was the first to collect the Kur'ān" (*Maṣāḥif*, 10; *Iḥṣān*, I, 58). Other accounts say that Abū Bakr began the collection and 'Umar completed it, or that Abū Bakr was the first to collect the Kur'ān on sheets (*ṣuḥuf*), while 'Umar was the first to collect the Kur'ān into a single volume (*maṣḥaf*). Others say 'Umar ordered the compilation, but died before it was completed (Ibn Sa'd, III/2, 212). In fact, each of the first four caliphs is reported to have been the first person to collect the Kur'ān (*Maṣāḥif*, 20; *Iḥṣān*, I, 57-9). And several alternative accounts state explicitly that no official collection of the Kur'ān existed prior to 'Uthmān's. Caetani (*Annali*, II/2, 713) and Schwally (*Gesch. des Qur.*, II, 20) have questioned the significance of the al-Yamāma battles as an occasion for an official collection of the Kur'ān, pointing out that very few men distinguished for their knowledge of the Kur'ān are mentioned in the lists of those who died there (Schwally found two). Even more significant is the fact that there is no evidence that the alleged collection under Abū Bakr was ever accepted as authoritative. Finally, this story fails to acknowledge the role of written copies of parts of the Kur'ān left by Muḥammad. These important documents for the history of the Kur'ān, alluded to in the statement that Zayd "used to write down the revelations for the Prophet", must have played a significant role in the preparation of an official text. There are thus sufficient grounds for rejecting the historicity of this story, the most likely purposes of which were to obscure Muḥammad's role in the preparation of a written Kur'ān, to reduce 'Uthmān's role in establishing an official text, and to attempt to establish the priority of the 'Uthmānic text over those of the (pre-'Uthmānic) Companion codices. All three purposes would be accomplished by establishing the belief that the first official collection of the Kur'ān was prepared during the short reign of Abū Bakr and served as the basis for 'Uthmān's recension. See *Gesch. des Qur.*, II, 11-27; Bell-Watt, 40-2; Blachère, *Introd.*, 27-34; also Burton, *Collection*, 117-37 (on Burton's view, see below).

The accounts of the collection of the Kur'ān under 'Uthmān assert that the final consonantal text was established during the last half of his reign, or about twenty years after Muḥammad's death. According to the dominant version (al-Bukhārī, loc. cit.; *Maṣāḥif*, 181; *Iḥṣān*, I, 58 f.; *Faṭḥ al-bārī*, IX, 14 f.; *Gesch. des Qur.*, II, 47-52), the occasion for the final collection of the Kur'ān was a dispute between Muslim forces from Iraq and Syria over the correct way of reciting it during communal prayers while on an expedition to Armenia and Ḍḡharbīyḡdān. The general, Muḡḡayfa b. al-Yamān, reported this problem to the caliph and asked him to establish a unified text. 'Uthmān obtained the "sheets" from Hafsā and appointed a commission consisting of Zayd b. Thābit and three prominent Meccans, and instructed them to copy the sheets into several volumes following the dialect of

Kursyḡh, the main tribe of Mecca. When the task was finished 'Uthmān kept one copy in Medina and sent others to Kūfa, Baṡra, Damascus, and, according to some accounts, Mecca (*Gesch. des Qur.*, II, 112 f.), with an order that all other copies of the Kur'ān were to be destroyed. This was done everywhere except in Kūfa, where Ibn Ma'sūd and his followers refused. The details differ in various versions of this story (ibid., 50-4), mainly on the number and identity of the commissioners and the cities that received official copies.

This second collection story stands up to critical analysis no better than the first. Western scholars now accept the view argued by Schwally (ibid., 57-62) and others that the Kur'ān is not in the dialect of the Kursyḡh (see 6.2 below). If this is so, one of the two main points of the story is discredited, and it is difficult to see what role the commission might have played. Schwally also showed (54-7) that those named in the various accounts are unlikely candidates for such a commission appointed by 'Uthmān, and he gave good reasons for doubting that the caliph would have ordered all extant copies of the Kur'ān to be destroyed. It also seems unlikely that differences in the way the Kur'ān was recited during the daily prayers would have caused serious dissension among Muslim forces involved in the initial conquests. These parts of the story all hint of a later historical setting. The Hafsā element seems to be simply a device for tying the two collection stories together, while establishing an authoritative chain of custody for an official text going back almost to the time of the death of the Prophet, and explaining why this official text was not generally known (see Bell-Watt, 43 f.). For several alternative accounts that give completely different reasons and circumstances for 'Uthmān's order for an authorised text, see Burton, *Collection*, 138-59.

We thus have before us another story whose particulars cannot be accepted. But this does not mean necessarily that the story has no historical basis at all. The unanimity with which an official text is attributed to 'Uthmān, in the face of a lack of convincing evidence to the contrary, leads most Western scholars to accept one central point of this story: that the Kur'ān we have today, at least in terms of the number and arrangement of the *sūras* and the basic structure of the consonantal text, goes back to the time of 'Uthmān, under whose authority the official text was produced. This was, however, certainly not a *textus receptus* *in variis*, even in terms of its consonantal form (see below). Most Western scholars also accept one other element of the story: that Zayd played some role in establishing the 'Uthmānic text. Just what that role might have been is difficult to say; alternative accounts give several possibilities (see Burton, *Collection*, 117-26, 141-6, 150, 165 f., etc.). Burton contends that both collection stories are completely fictitious and that Zayd's prominence in the various accounts is due solely to the fact that he had been a young secretary to the Prophet and an early Kur'ān specialist who happened also to be one of the latest surviving Companions, dying ca. 43/665 (*Collection*, 120-4, 228, etc.). Burton has raised serious doubts about the role of Zayd in establishing the official text, and he has shown that the sciences of *ḥadīth* and *fiqh* influenced the proliferation of Kur'ān collection stories; but he has not demonstrated the likelihood of his main contention, that the collection stories were fabricated by later jurists to provide support for their abrogation theories by hiding the fact that the final text of the

Kur'ān was produced, not by 'Uthmān, but by the Prophet himself.

b. Variant readings and Companion codices. The 'Uthmānic text tradition was only one of several that existed during the first four centuries A.H. The general view is that 'Uthmān canonized the Medinan text tradition and that this one was most likely the closest to the original revelation. Other text traditions, attributed to several Companions of the Prophet, are said to have flourished in Kūfa, Baṣra and Syria. The sources speak sometimes of various "readings" (*qirā'āt*, sing. *qir'ā'a*), i.e. different ways of reading or reciting the text, sometimes of "codices" (*maṣāḥif*, sing. *maṣḥaf*). On the usage of these two terms, see *Kāṭib* and *Materials*, 23 f. A number of works on the "disagreement of the codices" (*ikhtilāf al-maṣāḥif*) are said to have been written by Muslim scholars of the first four centuries. Ibn al-Nadīm lists eleven such works (*Fihrist*, 28; tr. Dodge, 79, which is incomplete), including the *K. Ikhtilāf maṣāḥif al-Ṣūm* wa-'l-*Ḥijāz* wa-'l-*Irāq* by Ibn 'Amr al-Yaṣuḥbī (d. 228/736), *K. Ikhtilāf maṣāḥif al-Madīna wa-ahī al-Kūfa wa-ahī al-Baṣra* by al-Kisā'ī (d. 289/803), *K. Ikhtilāf al-Kūfa wa-'l-Baṣra wa-'l-Ṣūm fī 'l-maṣāḥif* by Abū Zakariyā al-Farrā'ī (d. 207/822), *K. Ikhtilāf al-maṣāḥif wa-dīqāt al-qirā'āt* by al-Medā'īnī (d. ca. 232/845), and three works each called simply *K. al-Maṣāḥif* by Ibn Abī Dāwūd (d. 346/958), Ibn al-Anbārī (d. 328/939), and Ibn Aḡṣṭe al-Isfahānī (d. 360/970). Of these works, most of which have not survived, the last two seem to have been the most complete and the most highly regarded by later scholars. The shorter and somewhat earlier work by Ibn Abī Dāwūd, son of the famous traditionist, was edited by A. Jeffery and published with his *Materials*, which lists several thousand variants taken from over thirty "main sources" (see 17 f.), including the classical commentaries by al-Tabarī, al-Zamakhsharī, al-Bayḍawī, and al-Rāzī, and various works on *qirā'āt*, *as-sādādāt*, *gharīb al-Kur'ān*, grammar, etc., including the *Maṣāḥif* by al-Farrā'ī (d. 207/822), the *Muḥṭasab* by Ibn Jinnah (d. 392/1002) (see *Diḥl*). The comments made by al-Tabarī (d. 312/923) on variants (e.g. on XXIII, 206) show that the text of the Kur'ān was not fixed so *varietur* in his day.

Most often mentioned in the sources are the "readings" or "codices" of Ibn Maṣ'ūd, Ubayy, and Abū Mūsā, said to have been dominant in Kūfa, Syria and Baṣra respectively. All three codices are said to have been begun during Muḥammad's lifetime. 'Abd Allāh b. Maṣ'ūd [see *raṣ* Maṣ'ūd] (d. ca. 33/653), an early convert who became a personal servant to Muḥammad and accompanied him on many major occasions, is reported to have learned some seventy *sūras* directly from the Prophet, who appointed him as one of the first teachers of Kur'ān recitation (Ibn Sa'd, 247, 207). Later he was appointed to an administrative post in Kūfa by the caliph 'Umar, and there he became a leading authority on the Kur'ān and *ḥadīth*. Ibn Maṣ'ūd is consistently reported to have refused to destroy his copy of the Kur'ān or stop teaching it when the 'Uthmānic recension was made official. Also, there are reports that many Muslims in Kūfa continued to follow his reading for some time after his death, thus dividing the community there. Ubayy b. Ka'b [q.v.] (d. 22/633 or 29/649 or later), a Medinan Muslim who served as a secretary for the Prophet, seems to have been even more prominent as a Kur'ān specialist than Ibn Maṣ'ūd during Muḥammad's lifetime. There are reports that he was res-

pensible for retaining verbatim certain important revelations, apparently on legal matters, which from time to time the Prophet asked him to recite. Ubayy appears frequently and in a variety of roles in the various collection stories. For instance, the "sheets" of Ubayy are sometimes mentioned instead of those of Hāfa, and he sometimes appears in place of Zayd, dictating the Kur'ān to a corps of scribes (see *Materials*, 214; Burton, *Collection*, 224 ff.). The accounts saying that when the 'Uthmānic text was made official, Ubayy destroyed his codex while Ibn Maṣ'ūd refused to do so may be examples of historical telescoping, meaning that the people of Syria (possibly over a period of many years) gave up their distinctive reading (i.e. that of Ubayy), while the people of Kūfa refused to give up theirs (i.e. that of Ibn Maṣ'ūd). This would explain the later dates sometimes given for Ubayy's death and the conflicting reports regarding his role in compiling the official text. Abū Mūsā 'Abd Allāh al-Ash'arī [q.v.] (d. 42/662 or later) was a Yemenite famed for his eloquent recitation of the Kur'ān. His codex is said to have been accepted in Baṣra, where he served as governor under 'Umar, and there are reports that his reading continued to be remembered and studied there for some time after 'Uthmān's text was made official. According to one account, when the messenger from 'Uthmān delivered the Baṣra copy of the new standard text, Abū Mūsā said to his followers: "Whatever you find in my codex that is not in his, do not remove it; but whatever you find missing [in mine], write it in" (*Maṣāḥif*, 73). This is consistent with other reports saying Abū Mūsā's codex was large and that it contained the two extra *sūras* of Ubayy's codex (see below) and other verses not found in other codices (*Materials*, 209-11).

In addition to these three codices, two of which are discussed in more detail below, Jeffery classified as "primary" the codices attributed to twelve other Companions of the Prophet: the second and fourth caliphs, 'Umar and 'Alī; three of Muḥammad's widows, Hāfa bint 'Umar, 'Ā'isha bint Abī Bakr, and Umm Salama, four whose readings seem to have been variations of the Medinan text tradition, Zayd b. Thābit, 'Abd Allāh b. 'Abbās, Anas b. Mālīk, and 'Abd Allāh b. al-Zubayr; and three others, Sālim the Client of Abū Ḥuḡayfa, 'Ubayd b. 'Umayr, and Ibn 'Amr b. al-'Ās. 'Alī b. Abī Ṭālib [q.v.] (d. 40/662), cousin and son-in-law of Muḥammad, is often said to have been the first to collect the Kur'ān after the Prophet's death (e.g. *Fihrist*, 28; tr. Dodge, 82 f.). He is reported to have arranged the *sūras* in some sort of chronological order, e.g. XCVI, LXXIV, LXVIII, LXXIII, etc., and to have given up his codex to be burned when 'Uthmān's text was made official. 'Abd Allāh b. 'Abbās [q.v.] (d. ca. 68/688), also a cousin of Muḥammad, later gained fame as the doyen of early Kur'ān exegetes. He is said to have included in his codex the two extra *sūras* of Ubayy's text (see below), and several later scholars are said to have taken their readings from him. Sālim b. Muḡāb (d. 22/633), sometimes called Sālim b. Ma'kīl (*Gench. des Qur.*, II, 22, 20, etc.), one of the Kur'ān reciters killed in the battle of Yamāma, was one of four to whom Muḥammad is reported to have advised his followers to turn for guidance concerning the Kur'ān. 'Ubayd b. 'Umayr (d. 74/663) was an early Kur'ān reciter in Mecca; his codex may have been the basis for the Meccan text tradition, which seems not to have been as strong as those of Kūfa, Baṣra and Damascus (or Syria). Compared with the large number of variants attributed to Ibn Maṣ'ūd

and Ubayy, relatively few are mentioned in the literature for these other codices. Jeffery also collected variants attributed to a number of Muslims of the second generation: al-Aswad b. Yazid, 'Alkama, Harṭan, Sa'īd b. Jubayr, Talba, 'Durims, Muḍlabid, 'Aṭā b. Rabāh, al-Raḥī b. al-Khuthaym, al-A'mash, Ḍa'far al-Saḍī, Sālib b. Kaysan, and al-Hārith b. Suwayd. More variants are attributed to some of these "secondary codices" than to most of the "primary" ones. In some cases, Jeffery was able to determine the primary codex from which a secondary one was derived.

Ibn Ma'sūd's codex is said to have differed from the 'Uthmānic text in several important respects. The sources are fairly consistent in saying it did not contain the *Fātiḥa* and the two charms that became *sūras* I, CXIII, and CXIV of the 'Uthmānic text (see 4.2 below). Variants in the *Fātiḥa* are, however, attributed to Ibn Ma'sūd (*Materials*, 25), and Ibn al-Nadīm reported in 379/387 that he saw a number of Ibn Ma'sūd Kur'ān manuscripts and that one that was about 200 years old included the *Fātiḥa* (*Fihrist*, 26; Dodge tr., 57 f.). Of the many variants attributed to Ibn Ma'sūd (see *Gesch. des Qur.*, III, 80-83; *Materials*, 25-113), some involve only different vowels with the same consonantal text, and some are purely orthographic; e.g. Ibn Ma'sūd is said to have written *kullā* and as two words rather than one in a number of places. But the vast majority of variants listed by Bergsträsser and Jeffery for Ibn Ma'sūd involve differences in the consonantal text that would also show up in recitation. Of these, many may be regarded as explanatory glosses on the 'Uthmānic text; but in some cases it is the 'Uthmānic text that seems to contain an "expansion" or "improvement", sometimes apparently for theological reasons (see *Materials*, 17). Among the most questionable of the variants attributed to Ibn Ma'sūd are the "Shī'a readings", e.g. in V, 67, XXIV, 35, XXVI, 215, XXXIII, 29, 31, 36, XLII, 23, XLVII, 20, LVI, 10, LIX, 7, LX, 3, LXXV, 17-19 (see *ibid.*, 40, 65, 68, etc.). More difficult to evaluate are the numerous "synonym variants", as for example the following found in Sūra XXV, where, instead of the 'Uthmānic terms given in parentheses, Ibn Ma'sūd is reported to have read *ḡa'ala*, "makes, brings about", in verse 40: "And He it is Who sends (asasala) the winds"; *li-munghira*, "give life", in 49: "that We may give life (li-muhyiyam) thereby to a dead land"; *ḡasār*, "castles", in 61: "Blessed is He Who has placed in the heavens constellations (ḡurafān)"; *yafāḡhara*, "ponder, consider", in 62: "for him who desires to remember (yafāḡhaka)"; and *al-ḡanna*, "the Garden, Paradise", in 75: "They will be awarded the high place (al-ḡurfa) inasmuch as they were steadfast". Just as frequent are cases where an entire phrase is different, e.g. Ibn Ma'sūd's reading in III, 39: "Then Gabriel called to him, 'O Zachariah!', instead of the 'Uthmānic reading, "Then the angels called to him as he stood praying in the sanctuary". Some variants may have significance for the early history of Islam or the history of the Kur'ān, e.g. Ibn Ma'sūd's well-known reading *al-haṡṡiyā*, "the way of the Hanāliṡ" (i.e.) instead of *al-islām* in III, 19: "Behold, the [true] religion (*dīn*) of God is Islam", and the fact that he is said to have included the *Basmala* at the beginning of Sūra IX (see 4.2 below). Also, the order of the *sūras* in Ibn Ma'sūd's codex is said to have differed considerably from that of the 'Uthmānic text. Two slightly different, incomplete lists are recorded, the earlier one by Ibn al-Nadīm (*Fihrist*, 26; Dodge tr., 53-7) and a later one by

al-Suyūṡi (*Iḥṡān*, I, 64). The missing *sūras* in each list are included in the other, and it is possible to reconstruct a single list. The principle of arranging the *sūras* in order of descending length is followed most closely than in the 'Uthmānic text, but there is still considerable variation from this criterion (see Bauer, *Anordnung der Suren*, Table IV). Following the assumption that the longer *sūras* were not put together until the 'Uthmānic text was compiled, some scholars have concluded that the Ibn Ma'sūd lists are "post-'Uthmānic" and have little validity (e.g. *Materials*, 23 f.). But if most of the *sūras* were written down and put into approximately their final form during Muḥammad's lifetime, then there would be no strong reason for rejecting the validity of these reports outright.

Ubayy's codex seems according to the extant evidence to have been less important than Ibn Ma'sūd's. It appears not to have been the source of any secondary codices, and very few unique variants are attributed to it. Most variants attributed to Ubayy are attributed also to either Ibn Ma'sūd or Ibn 'Abbās. Probably the best known feature of Ubayy's codex is that it is said to have included two short *sūras* not in the 'Uthmānic and Ibn Ma'sūd texts, *Sūrat al-Khaṡf*, with three verses, and *Sūrat al-Hafd*, with six (see *Materials*, 180 f.). The order of *sūras* in Ubayy's codex is said to have differed from that of 'Uthmān's and Ibn Ma'sūd's, and again we have two slightly different lists (*Fihrist*, 27; Dodge tr., 58-61; and *Iḥṡān*, I, 64). These lists are, however, less complete and less reliable than those given for Ibn Ma'sūd, and some *sūras* are difficult to identify. Dodge (60) is probably correct in identifying *al-nabi* as Sūra LXVI, and Jeffery (*Materials*, 115) is no doubt mistaken in saying it is Sūra LXXV. But Dodge is certainly wrong in reading *al-dū* (one of the titles for Sūra CVII—see Paret, *Kommentar*, 554) as *al-dū* (the title of Sūra XCV), and in failing to recognize Ubayy's two famous extra *sūras* mentioned above. Ibn al-Nadīm states at the end of his list in the *Fihrist* that Ubayy's codex contained 116 *sūras*, and he reports that his source of information, al-Ḥaḍī b. Shaddān, saw a copy of an Ubayy codex in a village near Basra in the middle of the 3rd century A.H.

Western scholarship has not reached a consensus on what value this mass of allegedly pre-'Uthmānic variants has for our knowledge of the history of the Kur'ān. Confidence in the variants declined during the 1930s as they were being collected and analysed. Bergsträsser (*Gesch. des Qur.*, II, 77-83, 92-6) still gave a fairly positive appraisal, but Jeffery (*Materials*, 16) wrote: "With the increase of material one feels less inclined to venture on such a judgment of value", a view that came to be shared by G. Prestel. Then after the project to prepare a critical edition of the Kur'ān came to a halt, A. Fischer (*Isl.*, xxviii [1948], 5) concluded that most of the allegedly pre-'Uthmānic variants were later attempts by philologists to emend the 'Uthmānic text. Recently J. Burton (*Collection*, 199-202, etc.) and J. Wansbrough (*Quranic studies*, 44-6, 202-7, etc.) have concluded that, not just some, but all of the accounts about Companion codices, metropolitan codices, and individual variants were fabricated by later Muslim jurists and philologists; but they reach opposite conclusions on the reason for this hoax. Burton argues that the Companion codices were invented in order to provide a setting for the 'Uthmān collection story, which in turn was invented to hide the fact that Muḥammad himself had already collected and edited the final edition of the Kur'ān (211 f., 239 f.). Wansbrough, on the other

hand, asserts that the collection stories and the accounts of the Companion codices arose in order to give ancient authority for a text that was not even compiled until the 3rd/9th century or later. He claims, without providing any convincing evidence, that the text of the Kur'ān was so fluid that the multiple accounts (e.g. of the punishment-stories) represent "variant traditions" of different metropolitan centres (Kūfa, Baṣra, Medina, etc.). Each writer has stressed a valid point, i.e., that Muḥammad played a larger role in compiling and editing the Kur'ān than is admitted by the traditional accounts (Burton), and that as late as the 3rd/9th century a consonantal *textus receptus* *ne variatur* still had not been achieved (Wansbrough). But both writers seem to have overstated their cases. Neither has given convincing reasons for his own hypothesis, or for the shared assertion that the Muslim accounts should be rejected altogether.

c. Establishment of the canonical text and readings. Historically, it is better to speak of the 'Uṣmānī text and the oral tradition that accompanied it as evolving gradually over a period of about three centuries. The process by which this text came to prevail over its rivals and then became the foundation for several sets of accepted or "canonical" readings is far from clear, and the issues involved are complex. They include the difficult task of reconstructing the stages in the development of Kur'ānic orthography, the relationship between the written text and the oral tradition, and the tension between a critical evaluation of the historical evidence and the orthodox views on the Kur'ān.

From the beginning there were variations in the copies of the 'Uṣmānī text. Even the official copies of the Medina standard codex (*al-imām*) sent to the main centres are said not to have been identical. Bergsträsser (*Gesch. des Qur.*, iii, 6-8) lists and discusses a number of variations in the Medina, Damascus, Baṣra, Kūfa and Mecca copies of the 'Uṣmānī text, reported in the *Muḥṣi* of Abū 'Amr al-Dīnī (d. 444/1032) and in other works. E.g. the Damascus copy is said to have had *wa-hi* 'i-ṣuḥr and *wa-hi* 'i-ḥiḥ instead of *wa* 'i-ṣuḥr and *wa* 'i-ḥiḥ in III, 284, and *minakum* instead of *minakum* in XL, 21; and the Kūfa copy is said to have had *'amlat* instead of *'amlat-hi* in XXXVI, 35, and *aw an* (which occurs in the Egyptian standard edition) instead of *wa 'as* in XL, 26. These differences are of course minor, but they do involve changes in the consonantal forms. Such variations can best be explained as resulting from carelessness on the part of the scribes or lack of concern for exact uniformity among the authorities.

Deficiencies in the Arabic script used in the earliest copies of the Kur'ān led to further differences, in the oral tradition as well as the text tradition. During the first Islamic century, Arabic was written in a so-called *scriptio defectiva* in which only the consonants were given, and in several instances the same form was used for two or more consonants, e.g. *ā* and *gh*, *ḥ* and *kh*, and even very different phonemes such as *r* and *z*, and in some positions *ḍ*, *ṭ*, *ḏ*, *n*, and *y*. Since no diacritical points or vowel signs were included, the vocalisation was moreover left to the reader. This meant that even when there was agreement on the consonants, some verbs could be read as active or passive, some nouns could be read with different case endings, and some forms could be read as either nouns or verbs. The lists compiled by Jeffery in his *Materials* contain many examples of canonical and non-canonical variants based on forms that are

indistinguishable in the *scriptio defectiva* of early Kur'ān manuscripts. In most cases the meaning is affected very little, as for example whether *ḥaḍir* or *ḥaḍīr* is read in II, 219 (the latter was read by Ibn Mas'ūd and two of the Seven, Hamza and al-Kaḍī—see below), or *ḥaḍir*, "mound", or *ḥaḍīr*, "tomb", is read in XXI, 96 (the latter was read by Ibn Mas'ūd and others). In some instances the alteration of a case ending or some other slight change in the vowelings does significantly affect the meaning (see KHATT and Zwettler, *Oral tradition*, 222 ff.).

During the Umayyad period (41-132/661-750) the 'Uṣmānī text tradition became more and more diverse, and new readings arose combining elements of the 'Uṣmānī and Companion oral and text traditions, especially those of Ibn Mas'ūd and Ubayy. By early 'Abbāsid times there was such a confusion of readings that it became impossible to distinguish 'Uṣmānī from non-'Uṣmānī ones, or to recover with confidence the "original" 'Uṣmānī text. Some order was brought to this confusion by the establishment of a *scriptio plena*, a fully vowelized and pointed text. Muslim accounts of the introduction of this improved script are unreliable because they vary so much and are not consistent with palaeographical evidence (Böcherer, *Introd.*, 78-90). A popular view is that al-Ḥaḍḍīdī was responsible for introducing vowel signs and dots for the consonants when he was governor of 'Irāk (74-93/694-744). But Kur'ān manuscripts from the first three or four Islamic centuries show that a *scriptio plena* came to be accepted very slowly. Dots of different colours or in different positions (above, below, and beside the consonants) were used to indicate the three short vowels in some fairly early manuscripts, and in some, but not all, later ones. Strokes or dots for doubling consonants, as well as other signs for doubled consonants, pauses, and even the finer points of recitation, were introduced later (see KHATT, *Gesch. des Qur.*, iii, 29-37 and N. Abbott, *Rise of the North Arabic script*, 17-44; on the difficulty of dating these early manuscripts, see A. Grohmann, *The problem of dating early Qur'ān*, in *Zsl.*, xxxiii [1938], 213-31).

By the early 4th/10th century the improved Arabic script was widely, although not universally, accepted by Kur'ān scholars. One result of the general use of the more precise script was that the differences in the texts became more pronounced, and this caused heated disputes as to which reading was the correct one. Another result was that it became possible for the authorities to enforce a greater measure of uniformity. The central figure in what became the most important Kur'ān reform since the time of 'Uṣmān was Abū Bakr b. Muḥāhid (d. 324/936). His aim was to restrict the number of acceptable readings, except only those based on a fairly uniform consonantal text, renounce the attempts of some scholars to achieve absolute uniformity (something which he realised was impossible), and at least ameliorate if not bring to an end the rivalry among scholars, each of whom claimed to possess the one correct reading. With a stroke of genius he chose seven well-known Kur'ān teachers of the 2nd/8th century and declared that their readings all had divine authority, which the others lacked. He based this on the popular *ḥadīth* in which the Prophet says the Kur'ān was revealed to him in "seven aḥruf" (al-Bukhārī, *Faḍl al-Kur'ān*, 204; Muslim, *Saḥīḥ al-muṣaḥḥif*, trads. 270-4, etc.). The meaning of this expression in the *ḥadīth* is uncertain, the term *aḥruf* being the plural of *ḥarf*, "letter" (see *Gesch. des Qur.*, I, 48-51, 20, 206 f.). Ibn Muḥāhid interpreted the ex-

pression to mean "seven readings". His view, worked out in a book called *al-Kur'ān al-sabʿ*, "The Seven Readings", came at just the right time. It was adopted by the readers Ibn Muḥla and 'Alī b. 'Isā (q.v.) and made official in the year 322/934 when the scholar Ibn Miskān was forced to retract his view that the consonantal text could be read in any manner that was grammatically correct. The following year another Kur'ān scholar, Ibn Ṣanābūth (q.v.), was similarly condemned and forced to renounce his view that it was permissible to use the readings of Ibn Mas'ūd and Ubayy.

Selecting several rival systems and declaring them equally authoritative was of course the same method used elsewhere by Muslims to avert endless disputes, e.g. the four Sunnī legal schools. But Ibn Muḍāhhid's system of seven readings was not completely arbitrary. Strong Kur'ān traditions existed in Kūfa, Baṣra, Medina and Damascus; and Mecca also had its own tradition. Kūfa stood out above the others as the leading centre for Kur'ān studies and the seat of several rival traditions. So Ibn Muḍāhhid selected one reading each for Medina, Mecca, Baṣra and Damascus—those of Nāfi' (d. 169/785), Ibn Kaḥlāb (d. 120/737), Abū 'Amr (d. 134/770), and Ibn 'Amr (d. 118/736), respectively—and three for Kūfa, those of 'Āsim (d. 127/744), Ḥanzala (d. 156/772), and al-Kisā'i (d. 189/804). His attempt to limit the number of canonical readings to seven was not acceptable to all, and there was strong support for alternative readings in most of the five cities. Eventually scholars began to speak of the Ten readings, and even the Fourteen. The most widely accepted of these, the so-called "three after the seven" are the readings of Abū Ja'far (d. 130/749), Ya'qub al-Hadrami (d. 205/820), and Khalfāf (d. 229/843). Among the "four after the ten", two deserve special notice, the readings of the famous al-Ḥasan al-Baṣrī (d. 120/728) and al-'A'mash (d. 143/765), of Baṣra and Kūfa respectively. For each of the Ten, two slightly different "versions" (sing. *riwāya*) came to be accepted according to scholars of a generation or two later, e.g. the "versions" of Warḥ (d. 197/822) and Kāfīm (d. 220/835) for the reading (*ḥirā'a*) of Nāfi', those of Ḥafṣ (d. 200/805) and Shu'ba (d. 294/909) for 'Āsim, and those of Khalfāf (mentioned above) and Khallīd (d. 220/835) for Ḥanzala. For complete lists and discussion of this development, see *Gesch. des Qur.*, iii, 169-90, and Blachère, *Introd.*, 116-35.

During the 5th/11th century the exclusive authority of the Seven began to prevail, and several works were written on them, e.g. the *K. al-Taḥṣīl* by al-Dūnī (d. 444/1053) (see *Bibli.*), which replaced Ibn Muḍāhhid's work. The seven came to be followed exclusively in public readings, while the others continued to be used in Kur'ān commentaries and works on philology, grammar, etc. The Kur'ān readers (*qurrān*), who maintained a lively tradition, continued at least a scholarly interest in the "three after the seven", and further refinements were made in all of the Ten readings. Two "ways" (*ṭarīq*, sing. *ṭarīq*) of reciting each "version" (*riwāya*) came to be accepted, and then two more "ways" for each *ṭarīq*, making altogether eighty "ways" of reciting ten "readings". See Labib as-Said, *The recited Koran*, Princeton 1975, including a complete list of the eighty, 127-30; on the readings, see *KṬA*, a, and on methods of reciting, *TAQWID*.

At the present, only two "versions" are in general use, that of Ḥafṣ 'an 'Āsim, which for centuries has been followed in most regions and in 1924 was given a kind of official sanction by being adopted in the

Egyptian standard edition of the Kur'ān, and that of Warḥ 'an Nāfi', followed in parts of Africa other than Egypt. The latter was used by the Yamanite scholar al-Shawkānī (d. 1250/1834), in the manuscript of his Kur'ān commentary (see *Bibli.*), but in the printed edition the Ḥafṣ 'an 'Āsim reading was substituted. The Egyptian standard edition is now regarded as the best of the Kur'ān so far available, although it was based on oral tradition and late *ḥirā'a* literature and is not always consistent with the oldest and best sources (see G. Bergsträsser, *Koranslesung in Kairo*, in *Isk.*, 22 (1932), and O. Pretzl, "Anmerkungen" to *Orthographie und Punktierung des Korans*, 1932).

The history of the text of the Kur'ān is yet to be written. One aspect of this task is a thorough analysis of the relationship between the Seven or the Ten and all the other readings, including the Companion codices. Until such an analysis is undertaken it will not be possible to give a final evaluation of the sources. The variants found in the "four after the ten" often involve a consonantal text that differs from that of the majority among the Ten (i.e., the "Uthmānic text"), and they sometimes have completely different words—see, e.g., the references to the readings of al-Ḥasan al-Baṣrī and al-'A'mash in *Materials*, especially in the lists for Ibn Mas'ūd and Ubayy. A rough survey of Jeffery's lists shows that Ibn Mas'ūd's variants agree fairly frequently with those of two of the Seven from Kūfa, Ḥanzala and al-Kisā'i, as is to be expected, and even more frequently with those of al-Ḥasan and al-'A'mash (the latter was also a Kūfan reader). Ubayy's variants agree fairly frequently with those of two from among the Seven, Ibn Kaḥlāb and Abū 'Amr (from Mecca and Baṣra), and also with those of al-Ḥasan and al-'A'mash, but somewhat surprisingly not with those of Ibn 'Amr, the only reader from Damascus among the Fourteen. This important aspect of the history of the Kur'ān deserves a thorough scientific study, preferably with the use of a computer. On the question of the completeness and authenticity of the Kur'ān, see Bell-Wall, 30-6; for a clear statement and defence of the modern orthodox position, Labib as-Said, *op. cit.*, 19-41.

4. STRUCTURE

a. The *sūras* and their names. The Kur'ān consists of 114 sections of widely varying length and form called *sūras*, which are divided into a number of verses (*āyāt*), ranging from three to 286 or 287. As shown above, the terms *sūra* and *āya* both occur within the text of the Kur'ān, but it is not certain that either has its present meaning there, i.e., refers to the present *sūras* and verses. *Sūra* is sometimes translated "chapter", but this is misleading. The first *sūra*, *al-Fātiḥa*, "The Opening" (q.v.), is a prayer, and the last two, known as *al-mu'awwidhatān*, "the two (*sūras*) of taking refuge", are charms or incantations. These three serve as a kind of introduction and two-part conclusion to the Kur'ān. Except for a few other very short *sūras* near the end (e.g. CIX, CXI, CXII), very few treat a single topic (XII, on the story of Joseph, and LXXI, on Noah, are notable exceptions) or otherwise appear to be structured entities (e.g. XXVI and LV). Most of the *sūras* consist of several segments or pericopes that are only loosely connected, often with little or no apparent connection of thought. Some short *sūras* (e.g. CIII, CVIII) seem to be isolated fragments; and it is not unlikely that some of the present *sūras* or parts of them were once joined with others. For instance,

Ubayy b. Ka'b and other early authorities are reported to have regarded CV and CVI as a single *sūra* (see *Iḥṣān*, I, 186 f.; *Materials*, 179; Bickeland, *The Lord guideth*, 100-30).

After the *Fāṭiḥa*, the *sūras* are arranged roughly in order of descending length, beginning with "The Cow" (II), with over 700 lines (60 pages) in a modern printed copy of the Egyptian standard edition, and ending with several *sūras* with just two or three lines. Actually, the *sūra* called "Abundance" (CVIII), mentioned above as a possible fragment, has the distinction of being the shortest, having only ten words. The length of the *sūras* was only one of several factors affecting the arrangement of the Kur'ān. If the *sūras* were exactly in order of length, the first thirty would be: II, IV, III, VII, VI, V, IX, XI, XVI, X, XII, XVII, XVIII, XXVI, XXVIII, XX, XXIV, XXXIII, XXII, VIII, XXI, XL, XXXIX, XXVII, XXIII, XXXVII, XIX, XXV, XLIII, and XXXIV. Note that *Sūra VIII* (which is 20th in order of length) and XIII, XIV, and XV (not in this list) are much too short for their positions, while XXXIX, XL, and XLIII are too long. The explanation for these last two groups is clear: XIII, XIV, and XV begin with the "mysterious letters" *alḥayr* and were kept with the other *alḥayr* *sūras*, X-XII, while XL and XLIII begin with *ḥm* and were kept with the other *ḥm* *sūras*, a group to which XXXIX also belongs (see 4.4 below). Other factors that influenced the order of the *sūras* include their dates, main topics, and introductions. For instance, LVII-LXVI are a group of Medinan *sūras* kept together in spite of varying lengths (see also their introductory formulas); X-XV, besides being *alḥayr* *sūras*, all feature prophet stories and are named after prophets, except for XIII, which has *alḥayr*; and XXXIV and XXXV begin with the same formula, as do LXV and LXVI, and several groups of *sūras* with the same mysterious letters (see below); cf. also LXXXIII and LXXXIV, LXXXV and LXXXVI, and others that begin with oaths. For complete lists of the *sūras* and their relative lengths, see Bell-Watt, 206-22, and Bauer, *Anordnung der Suran* (see *Bibl.*).

Muslim writers normally refer to the *sūras* by their names rather than their numbers. Since the names were not established during Muhammad's lifetime and did not come to be regarded as parts of the text, most *sūras* came to be known by more than one name. The Egyptian standard edition has had a considerable impact in establishing uniform names, and most of the alternative ones are no longer used. Notable exceptions are the continued use by Indo-Pakistani writers (and also Pickthall's translation of the names *Bani Isrā'īl* for *Sūra XVII*, *al-mal'ika* for XXXV, *al-mu'min* for XL, *al-taḥqīq* for LXXXIII, *al-ḥijr* for XCIV, *al-sāḥ* for XCIX, and most also use *ḥamim* for XLI, *al-dahr* for LXXXVI, and *al-taḥqīq* for CXI. Flügel and thus Bell and other European writers use *al-mal'ika* for XXXV, *al-mu'min* for XL, *al-nazh* for LXXXVI, and *al-taḥqīq* for CXI. A complete list of the *sūra* names and abbreviations found most often in the literature on the Kur'ān is given in Paret, *Kommentar*, 351-9. Most of the *sūra* names do not indicate the subject-matter, as would normally be expected of a title. Instead they are taken from a key term or catchword that would identify the *sūra* for those who had them memorised, showing that the names arose within the oral rather than the written tradition.

The *sūra* names used in the Egyptian standard edition can be classified as follows: (1) Just over half of the *sūras* take their names from key words at

or near the beginning of the *sūra*. The method most often used is to name the *sūra* for the first rhyme-word, i.e., the last word of the first verse. This is done in 30 *sūras*: XX*, XXIII, XXX, XXXVI*, LII*, LIV, LVI, LXIX*, LXXIII-V, LXXXIII, LXXXV-VIII, LXXXIX*, XC, XCIII*, XCVII-VIII, CI*, CII, CIII*, CV-VI, CVIII-IX and CXIII-XIV. In the eight marked with asterisks, the first rhyme-word is also the first word of the *sūra*, a method used in 14 other *sūras*: XXXVII, XXXVIII*, L*, LI, LIII, LV, LXVIII, LXXVII, LXXXIX, LXXX, XCII, XCV and C. The four marked with two asterisks are named for their mysterious letters. A further 28 are named for other key words in the first or second verse: VIII, XXV, XXXV, XLI, XLVII-VIII, LIX, LXIII, LXVII, LXX-LXXII, LXXVI, LXXVIII, XCVI, XCIX, CIX and CX. (2) In about one-third of the *sūras* the name is a key term or catchword that occurs elsewhere in the *sūra*. In 16 of these this is the only occurrence of the term in the Kur'ān (given here without the definite article): Cow in II, 67-77; Table, V, 22-24; Heights, VII, 46-8; Hidge, XV, 80; Bee, XVI, 68; Cave, XVIII, 9 ff.; Poets, XXVI, 224; Ant, XXVII, 28; Spider, XXIX, 41; Lukman, XXXI, 12 f.; Troops, XXXIX, 77-3; Counsel, XLII, 38; Hopping, XLV, 28; Sand-dunes, XLVI, 27; Apartments, XLIX, 4; and Mutual Frate, LNV, 9 (some first-word and first rhyme-word names listed above are also only occurrences). Only two of the narrative *sūras* are named for a key term in the *sūra* that designates the allegia theme: Joseph (XII) and Noah (LXXI). Twelve are named for a key term that designates one of several themes or stories: Family of Imrān (III), Women (IV), Jonah (X), Hād (XI), Abraham (XIV), Mary (XIX), Pilgrimage (XXII), Confederates (XXXIII), Sheba (XXXIV), and three listed above—Hidge, Cave, and Lukman. Seven are named for other striking terms that occur also in other *sūras*: Cattle (VI), Thunder (XIII), Light (XXIV), Ornaments (XLIII), Smoke (XLIV), Iron (LVII) and Ranks (LXI). (3) The names of 14 *sūras* do not occur in these *sūras*, and most do not occur anywhere in the Kur'ān. Most of these names are based on verbs that do occur, usually near the beginning of the *sūra*: Night Journey (XVII), Prostration (XXXII), Dispute (LVIII), Woman Tested (LX), Congregation (LXII), Divorce* (LXV), Prohibition (LXVI), Veiling (LXXXI), Splitting (LXXXII), Rending (LXXXIV), and Expanding (XCIV). The names of the other three were chosen to indicate the function of the *sūra*, The Opening (I), or the main theme, Prophets* (XXI) and Unity (of God) (CXII). Only the two terms with asterisks occur elsewhere in the Kur'ān. On the names and abbreviations used for the *sūras*, see Paret, *Kommentar*, 345-50.

b. The verses. Like the *sūras*, the verses vary considerably in length and style. In some *sūras*, which tend to be short and early, the verses are short and often rhythmic. Sometimes there even seems to be an element of metre (LXXXIV, 1-7, XCI, 1-20; cf. XCIX, CIV), but this is caused by the repetition of certain grammatical forms and not by an effort to carry through a strict metre of either syllables or stresses. These short, rhythmic verses are often also difficult to translate or interpret because of their use of rare terms, symbolism, metaphor, and other "poetic" features. Most longer *sūras*, and some short Medinan ones (e.g. LX, LXV), have longer, more prosaic verses, often with short statements or formulas attached to the ends in order to provide the rhyme. The one feature that all the verses have in

common is that they end in an irregular rhyme or assonance (discussed in 6.c below). Because of the rhyme the verses form the most natural divisions of the text, and yet we cannot be certain where some verses originally ended. Verse divisions are not indicated in the oldest manuscripts, and they vary somewhat when they are marked, possibly reflecting differences in the early oral tradition that go back to revisions made in the text during the Prophet's lifetime. There is clear evidence that the rhyme and the verse divisions were altered in some *sūras*, where passages originally in one rhyme were inserted into passages in another rhyme (see Bell-Watt, 80 ff.). But the main reason for the variation in the verse divisions is that the rhyme or assonance is usually formed by certain grammatical forms and endings that occur frequently in Arabic, and thus within many of the longer verses.

Several different systems of verse division and numbering arose within the Muslim community. In his English translation M. Pickthall followed an Indian text tradition in which VI, 73 of the Egyptian standard text is divided into two verses, so that 74-165 become 75-166, XVIII, 18 is divided so that 19-110 become 20-111, and XXXVI, 34 and 35 are combined so that 36-83 become 35-82. The editors of the 1979 Festival edition (see B&M) adopted the Egyptian verse divisions and numbering throughout. Even where the verse divisions are the same, there are variations in the numbering in various Muslim editions of the Arabic text and translations, depending on whether or not the *basmala* and the mysterious letters are counted. The Egyptian standard edition counts the *basmala* (see below) as verse 1 only in the *Fāṭḥa*, and is inconsistent in counting the mysterious letters, counting them as a separate verse (verse 1) in *sūras* II, III, VII, XIX, XX, XXVI, XXVIII, XXX, XXXI, XXXII, XXXVI and XL-XLVI, except that in XLII *ḥa* and *ṣā* are counted as two verses. In all other cases the mysterious letters are regarded as the beginning of verse 1. Pickthall counted these letters as a separate verse in the same *sūras* as in the Egyptian edition and also in X and XXXVIII. Some Indo-Pakistani Arabic texts and translations of the Kur'ān, e.g., those of Pir Salāhaddīn, M. Zafrulla Khan and M. G. Farid, always count the *basmala* as verse 1.

The Arabic text of the Kur'ān most widely used to the West until recently is that of Gustav Flügel (1834), which does not follow any one Oriental text tradition, in an effort to establish an improved text, Flügel made many changes in the verse divisions, altering the numbering in slightly over half the *sūras*. The verse divisions and numbering are the same in the Egyptian and Flügel editions only in *sūras* XV, XLVIII-IX, LI-II, LIV, LIX-LXX, LXXIII, LXXV-VII, LXXIX, LXXXI-VIII, XC-XCVII, XCIX, C, CII-V and CVII-XIV. The Flügel text never counts the *basmala* as a verse, and never counts the mysterious letters as a separate verse, but always as the beginning of verse 1. The English translations by R. Bell and A. J. Arberry follow the Flügel numbering. The Italian translation by A. Bausani and the English by A. H. Siddiqi follow the Egyptian numbering, as does Yusuf Ali, usually but not always. The German translation by R. Paret and the French by R. Blachère give both numberings, Paret giving the Egyptian first, Blachère the Flügel first. For a complete list of the differences in these two numbering systems and a table for converting the Flügel numbers to Egyptian, see Bell-Watt, 102 f. The standard work on the various Islamic numbering

systems is A. Spitaler, *Die Verszählung des Koran nach islamischer Überlieferung*, Munich 1935.

e. The *basmala*. At the beginning of each *sūra* except IX stands the *basmala*, the formula, *bismi 'Alāh 'Ar-Raḥmān 'Ar-Raḥīm*, which can be interpreted or translated at least three ways: "In the name of God, the Merciful, the Compassionate" (e.g., Bell, Arberry); "In the name of God, the compassionate Merciful (One)" (cf. Blachère); or "In the name of the merciful and compassionate God" (cf. Paret). This formula occurs one other time in the Kur'ān, in XXVII, 30, as the opening of Solomon's letter to the queen of Sheba. The elements of the *basmala* also occur separately: *bismi 'Alāh* (without the *ahf* in *bismi*, as in the *basmala*) occurs once, in XI, 42, and the twin attributes, *al-raḥmān al-raḥīm*, occur together four more times, in I, 3, II, 163, XLI, 2 and LIX, 22. It may be significant that whenever these attributes appear together, including in I, 1 and XXVII, 30, *al-raḥīm* always serves as a rhymeword. *Al-raḥmān*, always with the definite article, occurs within the text 57 times altogether—i.e. counting I, 1, but not the other occurrences of the *basmala* at the head of the *sūras*. *Al-raḥīm* occurs 33 times with the definite article, and frequently without. The fact that the last two terms of the *basmala* occur together elsewhere in the Kur'ān following the same pattern as many other pairs of divine attributes (see 6.c below) suggests that the first of the three interpretations given above is the best (cf. Jomier, *Le nom divin "al-Raḥmān" dans le Coran* (see B&M)).

On the origin of the *basmala* and its placement at the head of the *sūras* there is difference of opinion. Some Muslims believe that this formula was part of the revelation and was included at the head of the *sūras* from the beginning. Textual evidence within the Kur'ān, supported by other early historical evidence, suggests that this is not the case. "Alāh" in the *basmala* is clearly the preferred name for God, and *al-raḥmān* and *al-raḥīm*, according to their Kur'ānic usage, are either names or epithets for God. Yet these names are conspicuously absent in earlier parts of the Kur'ān, where Muḥammad's Lord is referred to as *rahb*, "Lord", and the Kur'ānic formula that occurs during this early period is *bi 'amī rabbihis*, "In the name of thy Lord", occurring in LVI, 74, 96, LXIX, 52, and XCVI, 1 (in this formula *bi 'amī* has the *ahf*). Then, possibly as much as two years or even more after the beginning of Muḥammad's public ministry, the names *al-Raḥmān* and *Alāh* were introduced into the revelation. For a while the name *al-Raḥmān* was preferred; see, e.g., XIII, 30, XXV, 60 and sixteen times in XIX. Kur'ānic evidence supports the testimony of early Muslim scholars who report that the Meccans refused to accept *al-Raḥmān* as the name of God, while they did know *Alāh* as a type of "High God" (see W. M. Watt, *Belief in a "High God"*, in JSS, xvi [1971], 35-40). The next stage in this development is seen in XVII, 110, a key verse that says Muslims may use either name, *Alāh* or *al-Raḥīm*; but the effect of this verse was to replace *al-Raḥmān* with *Alāh* as the primary or preferred name for God, as is seen in XIII, 16, XXXIV, 24 and many other verses that parallel the earlier *al-Raḥmān* contexts. After the revelation of XVII, 110 the term *al-raḥīm* seldom if ever occurs in the Kur'ān alone, and it loses its significance as a proper name for God, partly by being connected with *al-raḥīm* and the Arabic root *r-ḥ-m*. Further evidence for the conclusions stated here are given in Welch, *Alāh and other supernatural beings* (see B&M); on the foreign origin of *al-raḥmān* and its

use in Arabia as a proper name for God before and during the time of Muhammad, see *Gesch. des Qur.*, I, 122f.; Moravcsik, *Jewish proper names*, 57-9; *Foreign words*, 140 f.; and *Basmala*.

The evidence seems to indicate that the *basmala* came into use as a result of this controversy over divine names, probably a short time after the revelation of XVII, 120, it is possible that the *basmala* was formed from existing Kur'anic expressions, i.e. *Bismī lillāh* in XI, 41 and *al-raḥmān al-raḥīm* in what is now I, 3; but it seems much more likely that the *Fātiḥa* and all Kur'anic occurrences of these two attributes date from after XVII, 120. It also seems likely that the *basmala* was not originally part of the *Fātiḥa*; note that the Kur'anic scholars of Medina, Baṣra, and Syria did not count it as a verse in the *Fātiḥa*, and that this *sūra* without the *basmala* is often referred to as *al-ḥamd*, which may have been its original title [see *Basmala*]. As soon as the *basmala* came into use, Muhammad no doubt used it to introduce each recitation of a portion of the Kur'ān. Since many *sūras* contain passages from different periods (see 5.0 below), Muhammad must have recited the *basmala* before many segments that are now in the middle of the *sūras*. Only when the *sūras* reached their final, written form, in some cases after Muhammad's death, was the *basmala* placed at the beginning of each *sūra* as we have it today.

d. The mysterious letters. At the beginning of 99 *sūras* just after the *basmala* stands a letter or group of letters called in Arabic *fawā'id al-sūras*, "the openers of the *sūras*", *awā'id al-sūras*, "the beginnings of the *sūras*", *al-burūf al-muḥaḥḥaḥ*, "the disconnected letters", etc., but generally referred to in European languages as "the mysterious letters". They are recited as letters of the alphabet, and for 14 centuries they have intrigued and baffled Muslim scholars. Some saw them as abbreviations, e.g. *alr* for *al-raḥmān*, *alm* for *al-raḥīm*, *hm* for *al-raḥmān al-raḥīm*, *s* for *sādi ya muḥammad*, *ya* for *ya sayyid al-murādīn*, etc. (Ikrima and others relate from Ibn 'Abbās the view that *alr*, *hm*, and *n* together stand for *al-raḥmān* [Iṭḥān, II, 9]. Others concluded that the letters are not abbreviations, but offered a variety of alternative explanations, that they are sounds meant to arouse the attention of the Prophet or to captivate his audience so they would be more attentive, mythical signs with symbolic meaning based on the numerical value of the Arabic letters, (written) signs of separation (*fawā'id*) between the *sūras*, simply Arabic letters stating that the revelation is in the familiar language of the people, etc. Al-Suyūṭī (*ibid.*, 10) mentions, for instance, a tradition related by Ibn Ishāq on the authority of Ibn 'Abbās in which a group of Jews tell Muhammad that the numerical value of the letters would indicate the number of years his community would last. At first they heard him recite *alm* ($1 + 30 + 40 = 71$), and said it would last 71 years. Then they heard *alms* ($1 + 30 + 40 + 60$) suggesting 131 years, then *alr* ($1 + 30 + 200$) or 231 years, and then *almr* or 271 years. In this end they concluded that the matter was ambiguous. Al-Suyūṭī discusses these and many other possibilities (*ibid.*, 8-13) and concludes that the *fawā'id* are simply mysterious letters or symbols known fully only to God. Later Muslim scholars have tended to accept this view, although the abbreviation theory has remained popular. A few modern Muslims have put forward new variations of mediaeval suggestions, e.g. Hashim Amir Ali (see *Bibl.*) argues that all of the groups of letters, not just some of them, are vocatives addressed to the Prophet, and 'Alī

Nāṣib al-Tāhir (see *Bibl.*) proposes that the numerical value of the letters represents the number of verses in the "original" (in most cases, Meccan) versions of the *sūras* or groups of *sūras* concerned. Citing the same examples as al-Suyūṭī (but not always the same values), al-Tāhir says, for instance, that *Sūra VII*, which has 205 verses and begins with *almr* ($1 + 30 + 40 + 90 = 161$), originally consisted of only 161 verses. In other cases he has to combine various groups of *sūras* in order to obtain the required number of verses. Thus, adding the 122 verses of XII and the "120 Meccan verses" of XI gives him 221, the value of the letters *alr* which occur at the beginning of these two *sūras* (and also X, XIV, and XV, which he does not mention). *Sūra XIII*, with *almr* ($1 + 30 + 40 + 200 = 271$), he argues has 40 Meccan verses which when added to the 231 of XI and XII gives the required 271. In response, it is sufficient to note that no *sūra* with the letters now has the same number of verses as the value of the letters, and in no case does al-Tāhir's suggested number of original or Meccan verses agree with the view given in the Egyptian standard edition, much less a critical view of the chronology of the *sūras* involved. This theory is a prime example of the way arbitrary speculation has been applied to these letters.

A number of Western scholars have taken up the challenge to explain these letters since the publication of Th. Nöldeke's *Geschichte des Qur'ān* in 1860. Nöldeke suggested (215 f.) that they are the initials or monograms of the owners of the manuscripts used by Zayd when he first compiled the Kur'ān, e.g. *alr*(s) for al-Zubayr, *almr* for al-Mughira and *hm* for 'Abd al-Rahmān. These monograms, he said, got into the text by accident when later Muslims no longer knew their meaning. This view was widely accepted for a while in Europe and was taken up again and defended in 1901 by H. Hirschfeld (*New researches*, 242-3) who however regarded each letter as the initial of a different owner, *r*(s) for al-Zubayr, *m* for al-Mughira, *h* for Hudhayfa, etc. Hirschfeld's reason for rejecting the view that the letters went back to Muhammad was that if they did "he must have had an important share in the arrangement of the *sūras*, and this would contradict all we know of the compilation of the Qur'ān" (141). But by the time Hirschfeld's book was published, Nöldeke had reversed his position, on the basis of a brief but insightful discussion on the subject by O. Loth (*Tabari's Korancommentar*, in *ZNMG*, xxxv [1881], 603 f.). According to Loth, the letters occur only in "late Meccan and early Medinan *sūras*" when Muhammad was "drawing near to Judaism", and in some cases the beginning verses contain an allusion to the letters (i.e. "these are the signs (*āyāt*) of the Book"). He concluded that the letters are Cabalistic symbols standing for certain key words and phrases in the *sūras* before which they stand. Loth's arguments were sufficient to cause Nöldeke to abandon his earlier view and conclude that the letters are part of the revelation, having however no special meaning other than as mystical allusions to the heavenly Book (*Orientalische Skizzen*, 1892, 50 f., also stated in *Encyc. Brit.*, 9th ed., xvi, 597 f.). F. Schwally, in a perceptive survey of the literature up to 1919 (*Gesch. des Qur.*, II, 68-78), wisely rejected Loth's abbreviation suggestions as being too arbitrary (73), while commending him on his main argument (73-5). Schwally could not, however, accept Nöldeke's later view, calling it "doubtful" and insisting that "the symbols are still somehow connected with the redaction of the *sūras*" (76). Leaving open the

possibility that the letters are part of the revelation, Schwally made the following important statement: "If Muhammad was indeed the originator of the symbols, then he must also have been the editor of the ciphered *sūras*. This would indeed contradict earlier prevailing views, but would agree with our earlier statements that the Prophet relied on secretaries to whom he dictated his revelations, that already his object was to produce a special book of revelation, and that the manner in which pieces from various periods but of similar content are strung together in certain *sūras* produces the impression that this editing originates from the Prophet himself" (77). Schwally was thus a harbinger of the work of Bell in the 1930s.

In the meanwhile, two more attempts were made to follow up on Loth's version of the abbreviation theory. In 1921 Hans Bauer (*Anordnung der Saven*) provided statistical evidence for Schwally's first point, that the letters are connected with the redaction of the *sūras*, but failed to follow up on the second. Instead, he offered an unconvincing list of catchwords for which the letters are said to be old abbreviations: *ys* for *yāsā*, "he who runs", in XXXVI, 20; *z* for *zāhirāt*, "chargers", in XXXVIII, 31; *h* for *hānūsh*, "he who is at his side", in I, 23 and 27, etc. For the groups of *sūras* with the same letters he sought some "inner or outer connection among the *sūras*", and suggested that *fs(m)* in XXVI-VIII stood for *fsr shān*, "Mount Sinai", and Moses, and that *alm* stood for *al-ma'ālīm* (see 2.1.2 above). Independently E. Goossens proposed a similar view in a 1923 *Jsl* article (see *Bibl.*), that the letters are abbreviations for discarded *sūra* titles: *h* for *hūr'ān*, *n* for *al-nūn*, "the fish", or *āhū 'l-nūn*, one of Jonah's titles, etc. The *air sūras*, now named after individual messengers, he said once formed a *sūra*-group called *al-rusūl*, "the messengers", and the *alm sūras* formed a similar group called *al-maḥāḥil*, "the parable". His most innovative suggestion was that some letters are remnants of titles that were discarded or abbreviated when some *sūras* were rearranged, e.g. *ys* (XXXVI) is the remnant of *al-yūs* or *al-yūsif* (two names for Elias in XXXVII, 123, 126), the title of an earlier *sūra* consisting of XXXVI + XXXVII, 12-122, and *z* (XXXVIII) is the remnant of *al-zāfirāt* (the first word and title of what is now XXXVII), the title of an earlier *sūra* consisting of XXXVII, 3-11 + XXXVIII. Bauer and Goossens inspired another abbreviation theory, that of Morris Seale (see *Bibl.*) who suggested that the letters served as mnemonics of the contents of the *sūras* involved. Seale accepted Bauer's Mount Sinai and Moses for *fs(m)* and Goossens' *al-rusūl* for *air*, but preferred *al-mawḥiḥ*, "admonition", for *alm* and Yōnās (Jonah) for *ys*. The diversity of these proposals and the fact that several alternative suggestions are often equally plausible demonstrate the futility of this approach, which also fails to respond to some of the textual evidence, to the end, what Schwally said of Loth's abbreviation suggestions applies also to those of Bauer, Goossens, and Seale.

James A. Bellamy in a 1973 *JAOs* article (see *Bibl.*) has proposed an abbreviation theory that attempts to avoid the arbitrariness of the others. Starting with the views recorded by the classical commentators that *air*, *alm*, *alm*, *hm*, and *n* (letters that occur at the beginning of all but ten of the affected *sūras*) are abbreviations for *al-raḥīm* or *al-raḥīm* or both, Bellamy proposes that these letters stand for these terms in the *basma*, and that all the other mysterious letters are also abbreviations for this formula. In order to accomplish this he suggests

a number of emendations, so that *f* and *h* > *h*, *z* and *h* > *m*, *y* > *h*, and *z* > *bs* or *z*. Thus with the change of only one letter, *fs(m)*, *fs*, *fh*, *ys*, *almz*, *z*, and *h*, become *hams*, *haz*, *hah*, *hz*, *almz*, *m*, and *m*, all suitable abbreviations for the *basma*. This leaves only *hmz* and *hmz*, which with two and four changes respectively become *hm* *hm* and *hah* *hm*. Bellamy suggests that when the *basma* was first introduced (in the "middle and late Meccan" *sūras*) it was abbreviated variously by the Prophet's scribes at the beginning of these *29 sūras*, and that the later compilers, failing to recognize these abbreviations, gave them a permanent place in the text by writing the *basma* out in full just before them. Most of Bellamy's suggested emendations are indeed plausible, but his theory as a whole is not consistent with some of the textual evidence (e.g. the letters are almost certainly not Meccan, but Medinan), does not answer some crucial questions (e.g. the relationship of the letters to their immediate contexts), and is based on several very unlikely assumptions (e.g. that a new formula was abbreviated a dozen different ways by unknown scribes in Mecca who died without revealing their meaning, that the well-known scribes in Medina knew nothing about the abbreviations, etc.).

Any solution to the puzzle of the mysterious letters must provide a reasonable theory that is consistent with all of the textual evidence, and the place to begin is the immediate contexts of the letters, which provide some important clues. The following list gives the *sūra* number, the position the *sūra* would have if all the *sūras* (except the Fātiḥa) were arranged exactly according to length (based on Bauer, *op. cit.*, Table II; see also Bell-Watt, 206-12, for the length of each *sūra*), the letters, and the opening formula or phrase:

2 (2) <i>alm</i>	That is the Book, wherein is no doubt
3 (4) <i>alm</i>	... He has sent down on thee the Book
7 (5) <i>almz</i>	A Book sent down to thee
10 (11) <i>air</i>	Those are the signs of the Wise Book
11 (10) <i>air</i>	A Book whose signs are made clear
12 (12) <i>air</i>	Those are the signs of the clear Book;
	We have sent it down as an Arabic Kur'ān
13 (34) <i>almz</i>	Those are the signs of the Book
14 (33) <i>air</i>	A Book We have sent down to thee
15 (41) <i>air</i>	Those are the signs of the Book and a clear Kur'ān
19 (29) <i>hmz</i>	Mention of thy Lord's mercy to His servant Zechariah
20 (17) <i>h</i>	We have sent down the Kur'ān upon thee

41 (37) <i>hm</i>	A sending down from the Merciful, the Compassionate. A Book whose signs

Western scholars, who have not however been able to reach a consensus on a dating system, or even on the possibility of establishing one.

a. Historical references and allusions in the Kur'ān. The Kur'ān mentions specifically or alludes to a number of historical events in the life of Muḥammad and his contemporaries, but it gives no dates or other indications as to exactly when these events occurred. In most cases, the specific occasions alluded to and the dates of the passages involved cannot be determined. This is especially true for the period before the Hijra in 622, for which there are only a few references to dateable historical events, and even if the events could be identified with certainty this would be of little help in dating the passages that refer to them, e.g. XXX, 2-5, mentions a military defeat of the Byzantines, presumably their loss of Jerusalem to the Persians in 614 (cf. also CV, believed to refer to a military expedition against Mecca in the middle years of the 6th century). There are many allusions to Muḥammad's personal situation in Mecca (e.g. the persecution he suffered, accusations made by his opponents, his early life and orphanhood) and to specific practices of the Meccans, but the passages that contain these allusions cannot be dated with any precision. It is only in the Medinan period that we have a number of passages that can be dated fairly precisely on the basis of references or allusions to specific historical events that can be dated from other sources. For instance, the battle of Badr (spring 624) and the battle of Hunayn (early 630) are mentioned by name in III, 123, and IX, 25, respectively. The change of the *qibla* (q.r.) (direction one faces when performing the ritual prayer) from Jerusalem to Mecca in late 623 or early 624 is discussed in II, 162-30. The adoption of the ancient pilgrimage rituals about the time of the battle of Badr is discussed in II, 158, 198, V, 95 ff., etc., where the Ka'ba, al-Ṣafā and al-Marwa (two ancient holy places in Mecca), Mount 'Arafāt, and al-Mash'ar al-Raḥīm (the sanctuary in Mecca) are all mentioned by name. Muḥammad's adopted son, Zayd (b. Hāriṣa), is mentioned by name in XXXIII, 37 in connection with an episode that occurred in the spring of 627. And many other events are alluded to, although not by name: the battle of Uhud (625) in III, 155-74; the expulsion of the Jewish tribe of al-Nadīr (625) in LIX, 2-5; the Day of the Trench (627) in XXXIII, 9-25; the expedition to Khaybar (628) in XLVIII, 15; the expedition to Tabūk (630) in IX, 29-35, etc. All Kur'ānic datings systems, Muslim and non-Muslim, take these historical references and allusions in Medinan contexts as their starting-point.

b. Traditional Muslim dating. During the early Islamic centuries a number of passages in the Kur'ān came to be connected with stories that arose in the attempts to reconstruct the life of the Prophet, especially for the period in Mecca before the Hijra: LIII, 1-18, and LXXX, 15-29, came to be interpreted as Muḥammad's call visions, while XCIV came to be associated with a story about the miraculous opening of his breast and purification of his heart, XCVI and LXXIV with his call to public prophethood, XVII, 1, with his Night Journey, etc. (see, e.g., al-Tabarī and al-Zamakhsharī, *ad loc.*; for the European literature, Parcy, *Commentary*, 460 f., 513-15, 493 and 295 f.). Other passages came to be connected with certain events in the life of the Muslim community: XIX is said to have been recited to the Negus of Abyssinia by Muḥammad's followers who were forced to emigrate from Mecca to escape

persecution around 613; and a written copy of XX is said to have been involved in the conversion of 'Umar at about the same time. Early Kur'ān scholars also attempted to identify and explain vague allusions in the Kur'ān, e.g. they explained that the blind man alluded to in LXXX was a certain 'Abd Allāh b. Umm Maktūm, and that the man involved in a divorce dispute in LVIII was Aws b. al-Sāmit. And episodes related to IX, 40, XXIV, 21-20, XXXIII, 57-40, LXVI, 3-5, CXI, 1-5, and many others were similarly explained. From these stories and explanations there arose a separate genre of Islamic literature called *asbāb al-nuṣūṣ*, 'the occasions of the revelation', the prime example being a work of the same title by al-Wāḥidī (d. 468/1075-6). This literature does not attempt to provide a complete system for dating the various parts of the Kur'ān, and only a small proportion of the text is treated. Also, there are a number of inconsistencies, e.g. whether XCVI or LXXIV was the 'first revelation' (see *Ithāq*, I, 23 f.). Some of the stories and other explanations found in this literature and in the Kur'ān commentaries are obviously legendary, and in some cases the process by which these accounts came to be attached to Kur'ānic passages can be reconstructed (see, e.g., H. Birkeland, *The legend of the opening of Muḥammad's breast*, Oslo 1955, and *The Lord guideth*, Oslo 1956, 38-55). Others probably have some historical validity, but there is often good reason to suspect elaborate embellishment. These accounts—historical, semi-historical, and legendary—came to be accepted, often without discrimination, as the basis for the traditional Muslim dating of the Kur'ān.

The adoption of the Kur'ān as a primary source for Islamic law played an important role in the establishment of a chronological order for the text. Rather than attempting to explain away the inconsistencies in passages giving regulations for the Muslim community, Kur'ān scholars and jurists came to acknowledge the differences, while arguing that the latest verse on any subject 'abrogated' all earlier verses that contradicted it. A classic example involves the Kur'ānic teaching or regulation on drinking wine, where V, 90, which has a strong statement against the practice, came to be interpreted as a prohibition, abrogating II, 219, and IV, 43, which appear to allow it. This theory or doctrine of abrogation (*nash*) has only limited support in the Kur'ān itself, since the verses on which it is based, especially II, 106, involve passages that are no longer in the Kur'ān. But a number of treatises on the subject influenced the development of the traditional dating of the Kur'ān by establishing a widespread belief in the chronological order of certain groups of isolated verses. Eventually, long lists of 'abrogating and abrogated (verses)' (*al-nāsikh wa'l-mansūkh*) were drawn up, as jurists and others, in efforts to support their own views, sought out all possible inconsistencies and claimed that the 'earlier' verses involved had been abrogated. See NASH and TAFSIR; *Ithāq*, II, 20-7; Bell-Watt, 86-9; Burton, *Collection*, 46-104.

The task of dating parts of the Kur'ān and determining its chronological order was further complicated by the assumption that the present *sūras* were the original units of revelation, i.e. that except for a few verses in some *sūras*, each *sūra* was revealed all at once or during a short period of time before the next *sūra* was begun. This assumption led to the practice of designating each *sūra* as 'Meccan' or 'Medinan' (i.e. revealed before or after the Hijra) and to attempts to determine the exact chronological order of all the *sūras* as wholes—rather than dealing with

separate parts as in the *asbāb al-nuzūl* and *al-nuṣṣaḥ* wa *'l-maṣṣūḥ* literature. But al-Suyūṭī's lists of sūras attributed to Ibn 'Abbās (d. ca. 68/688), Kaṭāde b. Dī'āma (d. ca. 112/730), and others show that the schools of these early Kur'ān scholars could not agree even on whether some sūras were "Meccan" or "Medinan", much less on their exact chronological order (*Itkān*, I, 101). Al-Bayḍāwī (d. 716/1316) classified the sūras as "Meccan", "Medinan", or "disputed", and included 17 in this last category: XIII, XLVII, LV, LVII, LXI, LXIV, LXXXIII, XCV, XCVII-C, CII, CVII and CXII-CXIV. The lists given by al-Suyūṭī show that there was also difference of opinion on six others: LXIX, LXII-LXIII, LXXXVII, LXXXIX and XCII. The chronological order attributed to Ibn 'Abbās (*asbāb*) came to be widely accepted, and with a few changes was adopted by the editors of the Egyptian standard edition of the Kur'ān (8322/1924), who indicated in the heading to each sūra the sūra revealed just before it and any verses that belong to a different period. Thus the heading for XIV reads "Sūra of Abraham, Meccan, except verses 28 and 29 which are Medinan; it has 52 verses; it was revealed after Sūra of Noah".

The Egyptian standard edition gives the following chronological order of the sūras, with the verses said to date from a different period given in parentheses: XCVI, LXVIII (17-33, 48-50 Med.), LXXIII (10 f., 20 Med.), LXXIV, I, CXI, LXXXI, LXXXVII, XCII, LXXXIX, XCIII, XCIV, CIII, C, CVII, CII, CVI, CIX, CV, CXIII, CXIV, CXII, LIII, LXXX, XCVII, XCI, LXXXV, CVI, CI, LXXXV, CIV, LXXXVII (48 Med.), L (38 Med.), XC, LXXXVI, LIV (54 f. Med.), XXXVIII, VII (163-70 Med.), LXXII, XXXVI (45 Med.), XXV (58-70 Med.), XXXV, XIX (52, 71 Med.), XX (130 f. Med.), LVI (71 f. Med.), XXVI (197, 224-7 Med.), XXVII, XXVIII (52-5 Med., 85 during Hīǧra), XVII (26, 32 f., 57, 73 f. Med.), X (40, 94-6 Med.), XI (12, 17, 114 Med.), XII (1-3, 7 Med.), XV, VI (20, 23, 91, 114, 141, 151-3 Med.), XXXVII, XXXI (27-9 Med.), XXXIV (6 Med.), XXXIX (52-4 Med.), XL (56 f. Med.), XLI, XLII (23-5, 27 Med.), XLIII (54 Med.), XLIV, XLV (14 Med.), XLVI (10, 15, 35 Med.), LI, LXXXVIII, XVIII (28, 83-101 Med.), XVI (126-8 Med.), LXXI, XIV (28 f. Med.), XXI, XLXIII, XXXII (16-20 Med.), LII, LXVII, LXX, LXXXVIII, LXXXIX, LXXXII, LXXXIV, XXX (17 Med.), XXIX (1-11 Med.), LXXXIII-Hīǧra-II (28 f. later), VIII (30-6 Med.), IHI, XXXIII, IX, IV, XCIX, LVII, XLVII (13 during Hīǧra), XIII, LV, LXXVI, LXV, XCVIII, LIX, XXIV, XXII, LXVIII, XLIX, LXVI, LXIV, LXI, LXII, XLVIII, V, IX (128 f. Med.), CX. Sūra II is the only one said to have an addition later in the same period. Sūras VIII, XLVII, and IX, all Medinan, are the only ones said to have earlier verses inserted into later sūras. Of the 86 Meccan sūras, 55 are said to have some Medinan verses. The traditional dating seen here is based on three assumptions: (1) that the present sūras were the original units of revelation, (2) that it is possible to determine their chronological order, and (3) that Tradition (including the *asbāb*, *sūra*, *asbāb al-nuzūl*, *al-nuṣṣaḥ* wa *'l-maṣṣūḥ*, and *asbāb* bi *'l-maṣṣūḥ* literature) provides a valid basis for dating the sūras.

e. Modern Western dating. Since the mid-19th century, Western scholars have been applying critical methods to the Kur'ān in varying degrees, and have proposed a variety of dating systems. The one that has gained the most acceptance is that of what might be called the Four-period School,

founded by Gustav Weil in his *Historisch-kritische Einleitung in der Koran* (1844, 1876). Weil reassessed the dating of the Kur'ān and offered his own chronological order of the sūras using three criteria: (1) references to historical events known from other sources, (2) the character of the revelation as reflecting Muhammad's changing situation and roles, and (3) the outward appearance or form of the revelation (1st ed., 54 f.). His most notable contribution was his division of the "Meccan sūras" into three groups, thus establishing altogether four periods of revelation, with the dividing points at about the time of the emigration to Abyssinia (ca. 615), Muhammad's return from al-Ṭā'if (ca. 620), and the Hīǧra (September 622). Weil's four-period dating system and his three criteria were then adopted, with some changes in the order of the sūras, by Th. Noldeke in 1860 and F. Schwally in 1909 in their monumental *Gesch. des Qur.*, and then by R. Blachère in his *Introd.* (1947, 1959) and translation, *Le Coran* (1949-50, 1966). In the 1st ed. of his translation, Blachère arranged the sūras in what he took to be their chronological order; in the 2nd ed. the sūras were put in the traditional order (this 2nd ed. was meant for a wider public; but Blachère may also have felt, after deeper acquaintance with Bell's work, that it was not possible to arrange the sūras in an exact chronological order). In order to show the similarities and differences among the three versions of this four-period system, and to facilitate a comparison of this system with the traditional dating, the three European versions are all given below. The few verses in some sūras that are said to date from a different period are not indicated here, except where Blachère divided two sūras in the first edition of his translation.

The sūras of the First or Early Meccan Period tend to be short, with short, rhythmic verses. They often begin with a series of *ḥikām*-style oaths, and the language is said to be full of "poetic imagery and power". Assuming a progressive deterioration of style, Weil placed in the First Period the sūras he felt have the most exalted poetic style, along with others that share the same themes and general style. The chronological order of the sūras of the First Period according to the three versions is as follows: Weil: 96, 74, 73, 106, 111, 53, 81, 68, 87, 92, 89, 93, 94, 103, 100, 108, 102, 107, 109, 105, 113, 114, 112, 80, 97, 91, 85, 105, 95, 101, 75, 104, 77, 86, 78, 79, 82, 84, 56, 88, 52, 89, 83, 99. Noldeke: 96, 74, 111, 106, 108, 104, 107, 102, 105, 92, 90, 94, 93, 97, 86, 91, 80, 68, 87, 95, 103, 85, 73, 101, 99, 82, 81, 53, 84, 100, 79, 77, 78, 88, 89, 75, 83, 89, 51, 52, 56, 70, 55, 112, 109, 113, 114, f. Blachère: 96⁷⁴, 74⁷⁷, 106, 93, 94, 103, 91, 107, 86, 95, 99, 101, 100, 92, 82, 87, 80, 81, 84, 79, 88, 52, 56, 69, 77, 78, 75, 55, 97, 53, 102, 96⁷⁴, 70, 73, 76, 83, 74⁷⁴, 111, 108, 104, 90, 105, 89, 112, 109, 1, 113, 114.

The sūras of the Second or Middle Meccan Period are longer and "more prosaic", but still with "poetic" qualities. In style they are said to form a transition between the sūras of the First and Third periods. The signs of God in nature and the divine attributes such as mercy (*rahma*) are emphasized, and God is often called the Merciful One (*al-rahmān*). There are vivid descriptions of paradise and the hellfire, and here too the punishment-stories are introduced. The sūras of the Second Period are (italics = Noldeke only; parentheses = Blachère only): Weil: 1, 51, 36, 50, 54, 44, 19, 20, 21, 23, 25, 26, 67, 37, 38, 43, 71, 55, 15, 76.

Nöldeke and Blachère: (52), 54, (68), 37, 71, 76, 44, 50, 20, 26, 15, 19, 38, 36, 43, 72, 67, 23, 27, 25, 17, 27, 13.

The *sûras* of the Third or Late Meccan Period are even longer and "more prosaic", and Weil says the "poetic power" has been lost altogether. The revelation often takes the form of sermons or speeches, and the prophet stories and punishment-stories are retold in more and more detail. Nöldeke emphasises changes in vocabulary, but similarity of form, in Late Meccan and Medinan *sûras*. The *sûras* of the Third Period are:

Weil: 7, 72, 35, 27, 28, 17, 10, 11, 12, 6, 31, 34, 39, 42, 32, 42, 45, 46, 58, 46, 24, 41, 30, 39, 13, 64.

Nöldeke and Blachère: 32, 47, 45, (71), 16, 30, 11, 14, 15, 40, 18, 39, 29, 31, 42, 10, 34, 35, 7, 46, 6, 13.

The Medinan *sûras* and their chronological order are determined by the subject matter of these revelations that reflect Muhammad's growing political power and the general development of events in Medina after the Hijra. New themes and key terms are said to help distinguish these *sûras* from certain Late Meccan ones. The Medinan *sûras* are:

Weil: 2, 98, 62, 65, 22, 4, 8, 47, 57, 3, 59, 24, 63, 33, 45, 110, 61, 60, 58, 49, 66, 9, 5.

Nöldeke and Blachère: 2, 98, 64, 62, 8, 47, 3, 61, 57, 4, 65, 59, 33, 63, 24, 58, 22, 48, 66, 60, 110, 49, 9, 5.

Here we see a combination of excessive dependence on traditional Muslim dating and on matters of form and style, e.g. in Weil's First Period the first 34 *sûras*, with just a few exceptions, are in almost exactly the same order as in the traditional Muslim dating (cf. the Egyptian list above). Weil then closed this period with eleven *sûras* that have the same "poetic style", but are dated considerably later by Muslims (note the exact order of LXX-LXXXIV). Nöldeke then accepted all of Weil's First Period *sûras*, and added three more (I, II, LV); and Blachère accepted all of Nöldeke's except for two (LI, LXXVIII), and added one (LXXVI)—these differences involve mainly the dividing points between the periods. Also, the traditional stories involving certain *sûras*—Muhammad's call (XCVI, LXXIV), an incident involving Muhammad's uncle, 'Abd al-'Uzzâ (CXI), the emigration to Abyssinia (XIX, XX), etc.—seem to have been accepted as historical. But the Tradition, especially on the Meccan period, is not this trustworthy. Weil, Nöldeke, and Blachère have accepted the three assumptions of the traditional Muslim dating stated above; their four period system is essentially little more than a European variation of the traditional dating. On the question of style, it is true that there were changes through the years; but there is no reason to assume that all *sûras* with the same style belong to the same period. The Four-period School have not demonstrated the validity of the historical framework or the development of ideas and key terms assumed by their system, which has been widely accepted in the West with much more confidence than is justified. It should be emphasised, however, that this system is often used by others in a rigid way not intended by its founders (Weil and Nöldeke), e.g. giving the exact chronological order of several verses, or the exact number of occurrences of a term in each period. Schwally in particular emphasised that the order proposed by Nöldeke was only approximate.

Three other dating systems were proposed by Europeans within a span of ten years around the turn of the 20th century. That of H. Grimme, presented in his *Mohammed* (1892-3), ii, 25 ff., was basically a variation of Nöldeke's, with more emphasis on

stages in the development of doctrinal themes. Grimme's analysis of groups of ideas that occur together in the Kur'ân was useful, but his view of the overall sequence of ideas (monotheism, resurrection, the Last Day, etc.) was not widely accepted, and has since been discredited. Sir William Muir, in his *The Koran: its composition and teaching* (1896), 43-7, offered an arrangement of the *sûras* in six periods (five Meccan and one Medinan). His most significant and innovative suggestion was that the first period in the composition of the Kur'ân comprised eighteen short *sûras*, which he called "rhapsodies", dating from before Muhammad's call: CIII, C, XCIX, XCI, CVI, I, CI, XCV, CII, CIV, LXXXII, XCII, CV, LXXXIX, XC, XCIII, XCIV and CVIII. Muir pointed out that none of these is in the form of a message from a deity. His second period has four *sûras* (XCVI, CXIII, LXXIV, CXI) treating "the opening of Muhammad's ministry", presumably ca. 610. The other dividing points are the beginning of Muhammad's public ministry (ca. 613), the Abyssinian emigration (ca. 615), the Year of Sorrow (ca. 619), and the Hijra. Muir is no doubt correct in dating some *sûras* before XCVI and LXXIV, but 1 and others he lists are almost certainly later. In general, the criticisms stated above of the four-period system apply also to Muir's. In 1902 H. Hirschfeld, in his *New researches* (see *Bibl.*), proposed a chronological arrangement of the Kur'ân based on the character or function of individual passages. After the "first proclamation", XCVI, 1-5, Hirschfeld's arrangement also has six periods, in which the revelations are classified as "confessionary" (LXXXVII, LXVIII, 1-33, XCII, LXIX, 40-52, etc.), "declamatory" (LXXXI, LXXXII, LXXXIV, etc.), "narrative" (LXVIII, 34-52, LI, XXVI, 1-20, LIV, etc.), "descriptive" (LXXIX, 57-66, LXXI, LV, etc.), "legislative" (VI, 1-73, XCIII, 9-17, XXV, 63-72, etc.), and Medinan, grouped together but discussed separately as those up to the battle of Badr, political speeches, revelations on Muhammad's domestic affairs, and preparations for the Pilgrimage to Mecca. This system has a number of obvious flaws, but Hirschfeld's work was valuable for its preliminary analysis of Kur'anic literary types and its recognition of the fact that in dating parts of the Kur'ân we must deal with individual pericopes rather than entire *sûras*.

This insight became a guiding principle in the most elaborate attempt so far to identify and date the original units of revelation, Richard Bell's *The Qur'ân*, translated, with a critical re-arrangement of the *sûras*, 2 vols. (1937-9). Over a decade earlier he became convinced that Nöldeke's dating was inadequate (*ibid.*, 689 f.). Bell's verse by verse analysis of the entire Kur'ân led him to conclude that the *sûras* are far more complex than is assumed by the traditional Muslim and European dating, that the revelations underwent considerable revision, including expansion, replacement of older passages with new material, changes in the rhyme, etc., that this revision involved written documents and was done during Muhammad's lifetime under his supervision, and that the material for most of the *sûras* was compiled, but not put into its final form, under Muhammad's supervision. Bell did not present a rigid dating system, but concluded "provisionally" (vi f.) that the composition of the Kur'ân fell into three main periods: an early one from which only some sign-passages and exhortations to worship God survive; a "Kur'ân period", covering the latter part of the Meccan period and the first year or two in

Medina, during which Muḥammad's task was to produce a *ḥur'ân*, a collection of lessons for liturgical use; and a "Book period", beginning about the end of the year 2 A.H., during which Muḥammad began to produce a written scripture. According to Bell, the present Kur'ân is not to be divided into these three periods, since a number of sign-passages were incorporated into the liturgical *ḥur'ân*, and in Medina this collection of oral materials was revised to form part of the Book. Bell attempted to date some Medinan passages fairly precisely—"early Medinan, revised after Badr", "shortly after Uḡud", "year VII", etc. But for most passages he gave very general and often tentative suggestions, especially for the Meccan material, e.g. "early, revised in Mecca (?)", "Meccan, with Medinan additions", and very often "Meccan" and "late Meccan or early Medinan". A survey of Bell's provisional dating of the individual passages shows that he regarded fewer than twenty *sūras* as being probably completely Meccan: I, LIII, LV, LXIX, LXXV, LXXXIX, LXXX, LXXXII, LXXXVI, LXXXVIII-LXXXIX, XCJ-XCIII, XCV-XCVI, XCIX, CIV and CXIII, all of which are said to have material from different dates. Of the other short *sūras*, some of which he regarded as possible unities, Bell said CII, CV, CXII and CXIV seem to be Medinan; I, XCIV, CIII and CVI-CVIII could be either Meccan or Medinan; and on C, CI, CIX and CXI he gave no opinion. He regarded as completely Medinan the same 24 *sūras* said to be Medinan by Nöldeke, but saw them as having significant amounts of material from several different dates, thus making it impossible to put the *sūras* as wholes in chronological order. This leaves exactly half of the *sūras* (57) which Bell regarded as having significant amounts of material from both before and after the Hīǧra; 33 said to be mostly Meccan, with Medinan revisions and additions—VI, VII, XII, XIII, XV, XVII, XVIII, XXI, XXV-XXVI, XXXIV, XXXVI-XXXVIII, XL, XLIV, LI-LII, LIV, LVI, LXVIII, LXX-LXXIV, LXXVI-LXXVIII, LXXXI, LXXXIV, LXXXVII and XC; and 24 said to be mostly Medinan, with some Meccan passages, or based on Meccan material—X, XI, XIV, XVI, XIX, XX, XXIII, XXVI-XXXII, XXXV, XXXIX, XL, XLII-XLIII, XLV-XLVII, LXVII, LXXXIII, LXXXV and XCVII. He thus distinguished between dates of original revelation (or earliest recitation) and dates of later editing and composition during Muḥammad's lifetime. The fact that he indicated breaks in the text and identified older components, e.g. Meccan passages in *sūras* that were completed in Medina, does not mean he failed to recognise that some longer *sūras* (e.g. XII, XIX, XXVI) and many shorter ones (e.g. LXXXVII, CIV) are carefully composed, unified works in their final form.

Bell's analysis of the Kur'ân has often been misunderstood or ignored by later writers, partly because the extensive notes to his translation, giving the arguments for his reconstructions, were never published. Nor has any thorough study and critique of Bell's work yet appeared. The review articles by J. E. Merrill and W. M. Watt (see *Bibl.*) and Watt's remarks in Bell-Watt (1934, 103-7, 327-47, etc.) are useful introductions. Watt has expressed reservations about Bell's hypothesis on the disjointedness of the Kur'ân. Bell suggested that when some passages were being revised Muḥammad instructed the scribes to write the new versions on the backs of the sheets on which the verses being replaced were written, and that the later editors, not wanting to discard

any of the revelation, inserted the old verses just before or after the new ones. E.g. II, 185, was written on the back of 184, 186 (on fasting), II, 196, on the back of 197-9 (on the Pilgrimage), XXIV, 2-9, on the back of 10-18 (on fornication), and XVIII, 6-9 (a new introduction to the story of the Seven Sleepers), on the back of 10-12, which was replaced by a longer version of the story in 13-21. In other cases the scribes simply used the backs of sheets on which older, discarded material was written, e.g. IV, 21-24, on the back of 1-10, IV, 19-21, on the back of 15-18, and VII, 3-5, on the back of 6-9. This hypothesis provides a feasible explanation and solution to textual problems in some cases, but not in others. It now seems that Bell was sometimes too quick to designate a passage as "discarded" material or a "scrap" that got into the Kur'ân by mistake; and he seems to have failed to recognise some literary forms, e.g. the *ra-mā adriḡa* formula (see 7.a below). But it must be remembered that Bell was a pioneer in this field, and that he attempted to locate all possible breaks in the text, acknowledging that many of his suggestions were uncertain or tentative and that some would be proved untenable by later research. Or the whole, his dating and reconstructions have been supported by later studies, e.g. K. Wagten-donk, *Fasting in the Koran* (Leiden 1968), 47-81, on II, 185 ff.; see also Welch, *Allah and other supernatural beings* (see *Bibl.*) on the emergence of the doctrine of *jinn*, and Idem, in W. M. Watt and A. T. Welch, *Der Islam*, I (Stuttgart 1980), 204-71, 300-3, on the origin and early development of the *ḥadīth* and *soḥāb*. Careful studies of a number of passages and topics are needed before a final judgment of Bell's work can be made.

There is room for disagreement on specifics, but there can now be little doubt that Schwatzy was correct in concluding that passages from different dates were put together to form the present *sūras*, that written documents were involved, and that this revision was done under Muḥammad's supervision (*Gešā des Qur.*, I, 45 ff., II, 1 f., 77, etc.). Furthermore, Bell seems to have been right in his main conclusions, which went beyond Schwatzy's position. Most *sūras* have significant amounts of material from different dates, and nearly all of the longer *sūras* with Meccan material were revised or expanded in Medina, so that we can no longer speak of "middle Meccan" or "late Meccan" *sūras*. We can speak with more confidence of "early Meccan" *sūras*, although we cannot be certain as to which ones belong to this group. And we can speak of "Medinan *sūras*", i.e. those that are made up completely of Medinan material (of various dates). It is not possible to put the *sūras* as wholes in chronological order, or to determine the exact order of the passages on any major teaching—the creation, God and other supernatural beings, the nature and destiny of man, etc. This does not mean that nothing can be said on the development of ideas in the Kur'ân. On the major teachings and other subjects on which the Kur'ân has much to say, it is possible to reconstruct the sequence of the main stages of development, and sometimes the approximate dates of these stages. It now seems certain that the most important single turning point in the development of the Muslim scripture was not the Hīǧra, dividing the Kur'ân into "Meccan" and "Medinan" *sūras*, but a series of events surrounding the battle of Badr and Muḥammad's so-called "break with the Jews". Late Meccan and very early Medinan material is difficult to distinguish; there are many passages that could just as well date from Muḥam-

mad's last year in Mecca or his first in Medina.

6. LANGUAGE AND STYLE

a. Language of the Kur'ān. Most mediaeval Muslim scholars believed that the Kur'ān was in the spoken language of the Prophet, the dialect of the Quraysh, which was also the language of the "Classical Arabic" poetry of Muhammad's day. It was assumed that the Quraysh and the classical poets retained the pure language of the Bedouins (al-ʿarāb). Support for this view, more a theological doctrine than a linguistic theory, was found in the Kur'ān in the statements that the revelation was in "clear Arabic speech" (liġayn ʿarabi muḥim) (XVI, 103, XXVI, 195; cf. XII, 44), which came to be interpreted as "pure Arabic". This Quraysh dialect theory was attacked by Karl Vollers in a series of well-documented articles beginning in 1894 and culminating in his classic *Vollersprache und Schriftsprache im alten Arabien* (1906), in which he argues that the Kur'ān was first recited by Muhammad in a colloquial Arabic without case-endings (*ʿarab*) (thus distinguishing it from the Classical Arabic of the poets), that the language of the Kur'ān as we now have it was a fabrication of later philologists who attempted to put the revelations into Classical Arabic, and that the original language of the Kur'ān survives only in a few orthographic peculiarities (e.g. the omission of the *alif* in some words) and in the non-canonical readings. Vollers' theory gave rise to much discussion of the language of the Kur'ān, but it found little support outside of Germany, except for several articles by Paul Kahle (e.g. *The Arabic readers of the Koran*, in *JNES*, vii [1949], 65-71), who presented evidence to show that at least during the 2nd century the Kur'ān was indeed recited without *ʿarab*, a characteristic of colloquial Arabic. Kahle's arguments also failed to convince others, and the earlier refutations of Vollers' thesis given in a lengthy review by R. Geiger (*Göttinger gelehrte Anzeigen*, cxxix [1899], 10-16) and by Noldeke (*Neue Beiträge*, 1-3) have been generally accepted (on the views of Vollers, Kahle, Geiger, and Noldeke, see Zwettler, *Oral tradition*, 112-30). Noldeke (*loc. cit.*) and Schwally (*Gesch. des Cor.*, ii, 59) argued that the language of the Kur'ān was not the spoken language of any tribe, but was a somewhat artificial *Hochsprache* that was understood throughout the Hijāz. On the other side, it has come to be generally agreed that the Classical Arabic of the poetry of Muhammad's time was not the spoken language of the poets or the dialect of any one tribe, but a literary language that was understood by all the tribes. This language has come to be called the "poetic *koine*" or the "ʿarabiyya". In the late 1940s three European writers, H. Fleisch, R. Blachère, and C. Rabin, reached the conclusion, apparently independently, that the language of the Kur'ān, far from being the spoken dialect of the Quraysh or a *Hochsprache* of the entire Hijāz, was simply the "poetic *koine*" of the Classical Arabic poetry, with some adaptation to the Meccan speech, e.g. the omission of the *kasra* (for references and discussion, see C. Rabin, *The beginnings of Classical Arabic*, in *Stud. Isl.*, iv [1955], 19-37, and Zwettler, *Oral tradition*, 130-72). This view has been accepted by most Western Arabists. One notable exception is J. Wansbrough (*Qurʾānic studies*, 85-118) who rejects the *koine* or "ʿarabiyya" concept, without offering any clear alternative. He asserts that very little can be known about the text of the Kur'ān or about Classical Arabic prior to the "literary stabilisation" of both in the 3rd/9th century. There is nothing

in the Kur'ānic usage of ʿarabi and its cognate forms to support the suggestion of J. Fück (*Arabica*, Berlin 1950, 1-5) that ʿarabi in the expression "clear Arabic speech" refers to the "ʿarabiyya", the literary language of the Bedouins.

b. Foreign vocabulary. The earliest exegetes recognised and discussed freely a large number of non-Arabic words in the Kur'ān, and Tradition credits Ibn ʿAbbās and his school with having a special interest in seeking their origin and meaning. Then when the dogma of the eternity and perfection of the Kur'ān was elaborated (see 8. below) some jurists and theologians, such as al-Shāhīd (d. 205/820), came to believe that it was in pure Arabic and thus denied that any of its vocabulary was borrowed from other languages. But prominent philologists such as Abū ʿUbayd (d. 224/838) continued to argue that the Kur'ān contained foreign words. Al-Ṭabarī (d. 311/923) and others, attempting to reconcile the two views, asserted that the alleged foreign elements in the Kur'ān were simply words that Arabic and other languages had in common. ʿAbd al-Rahmān al-Ḥaṣībī (d. 873/1468) explained in his *Kunh al-Duʿūdīr* (Algiers 1905, I, 87) that these words came into Arabic through the ancient Arabs' contacts with other languages in foreign travel and commercial affairs, but that they had been thoroughly Arabised by the time of the Prophet. Other writers seem to have faced themselves altogether from religious considerations, e.g. al-Suyūṭī (d. 911/1505), who gave special attention to foreign loan words in the Kur'ān. In his *Ḥiṣn* he has a chapter on words that are not in the language of the Hijāz (I, 133-5) and another on words that are not in the language of the Arabs (135-41). In a separate treatise, the *Matawakkil* (ed. and tr. Wm. Y. Bell, Cairo 1924), he classifies a large number of terms as words borrowed from Ethiopic, Persian, Greek, Indian, Syriac, Hebrew, Nabataean, Coptic, Turkish, Negro, and Berber (for a discussion of these, see *Foreign vocab.*, 12-32). Jeffery indicates surprise that al-Suyūṭī was able to gather from the older authorities so many words "whose Arabic origin to us is obvious, but which they regarded as foreign", and he says that some of these are simply rare Arabic words, while others are variant forms used in the Kur'ān to establish the rhyme. He then concludes that the foreign elements in the Kur'ānic vocabulary are of three distinct types: (1) words that are entirely non-Arabic and cannot possibly be traced to Arabic roots, e.g. *istabraq* (silk brocade), *ṣanḡabīl* (ginger), *farāḡ* (paradise); (2) Semitic words that, although their triliteral root is found in Arabic, occur in the Kur'ān in a sense used in another language but not in Arabic, e.g. *ṣāfir* (creator), *ṣawāḡ* (colours), *ḍarasa* (to study [the scriptures] earnestly); and (3) words that are genuinely Arabic and commonly used, but are used in the Kur'ān with technical or theological meanings influenced by other languages, e.g. *nūr*, "light", used in the sense of "religion"; *ruh*, "spirit", and especially *ruh al-qudus*, "the spirit of holiness"; and *kalima*, "a word", when used of Jesus (*ibid.*, 39 f.). Jeffery then discusses about 275 words, other than proper names, that have been regarded as foreign, and he summarises the views of earlier European scholars as to their origin, and sometimes gives his own views. For the Arabic and European literature on this topic, see *ibid.*, xi-xix, to which should be added two studies by L. Kopf, *Religious influences on medieval Arabic philology*, in *Stud. Isl.*, v (1956), esp. 40-5, and *The treatment of foreign words in medieval Arabic lexicology*, in *Scripta Hierosolymitana*, ix (1961), 191-203 (both reprinted

in Kopf, *Studies in Arabic and Hebrew lexicography*, Jerusalem 1976) and other works cited by him.

c. Rhymes and refrains. A distinctive feature of Kur'ānic style, closely related to its oral nature and liturgical function, is that it is all rhymed or assonanced prose. There is no attempt to produce the strict rhyme of Arabic poetry (see Zwettler, *Oral tradition*, 103-10). Some short *sūras*, and segments of longer *sūras*, do have a fairly consistent rhyme if the short inflectional vowels at the ends of the verses are disregarded. For instance, the three verses of CVIII end in -ar, the four verses of CXII end in -ad, CV has -il except for the last verse with -il, CXI has -ab except for the last verse with -ad, and the 55 verses of LIV end in r (or rr) preceded by a short vowel. But in most *sūras* there is a loose rhyme or assonance formed by common grammatical endings and word forms. By far the most frequent assonance in the Kur'ān is -ūn/-in (considered interchangeable), which is formed by the plural endings of nouns and verbs. And even this form, which occurs frequently in Arabic, is often varied with words ending with one of these vowels but a different consonant. The feminine singular endings -at and -ad occur in CIX, XLVII, XCI and XCIX; the dual ending -in occurs in LV; the accusative ending -an occurs in XVIII, LXXII, and C; and the form -āfi), a long ā followed by a variable consonant, occurs in parts of longer *sūras* such as II, III, XIV, XXXVIII and XL. On the various rhyme forms in the Kur'ān (technically known as *fi'āl*, *fi'āl*, *fi'āl*, *fi'āl*, *fi'āl*, *fi'āl*, etc.), see Iḥṣān, ii, 96-105, and F. R. Müller, *Untersuchungen zur Reimweise im Koran* (Bonn 1969), who presents a systematic compilation of the evidence that peculiarities in Kur'ānic style and vocabulary were brought about by the imposition of rhyme.

The whole of the Kur'ān is often said to be in *saḍīf*, the rhythmic, rhymed utterance of the *Aḥlīn* (soothsayer) (q.v.), which, like the Kur'ān, does not have a fixed metre or proper rhyme and is thus distinct from both poetry and prose. But those who have insisted that the Kur'ān is not in *saḍīf* seem on the whole to be on sounder ground (see Göschl, *des Qur.*, i, 36 ff.; Blachère, *Lit.*, 212; Zwettler, *Oral tradition*, 137 ff.). Some of the shorter *sūras* do have short, rhythmic, rhymed verses of the *saḍīf* type, often beginning with oaths, e.g. XC to XCIII (see 7.a below); and parts of a few somewhat longer *sūras*, e.g. the beginning of LXXV and LXXXII. LXXXV can be described as being "saḍīf-like". But most *sūras* have longer, prosaic verses that are simply made to fit a loose rhyme or assonance pattern. In some a distinctive, fairly consistent rhyme is formed by words that are integral to a context and its meaning, giving the impression of being carefully constructed compositions, e.g. XVIII-XX. But in others, especially some of the *sūras* that are completely Meṣṣan, the rhyme is formed by set formulas that are attached loosely to the ends of the verses, often with little or no connection of thought with the contexts. For instance, in II, the longest *sūra* in the Kur'ān, the rhyme in about three-fourths of the 286 verses is formed by divine epithets, aphorisms, and other formulas that often have little relevance for the meaning of the narrative. In verses 127-268 double divine epithets occur over 30 times, e.g. God is *ẓālim* (Hearer, Knower) occurs seven times; *ʿazīz* ḥakīm (Mighty, Wise), six times; *ghaḥūr* raḥīm (Forgiving, Compassionate), six times, etc. Theological aphorisms occur even more often, and some are repeated several times: "God is not heedless of the things you do", in verses 74, 140, 144, 149,

etc.; "God sees the things you do", in 110, 933, 237, 205, etc.; "God has knowledge of everything", in 29, 231, 282; and "God is powerful over everything", in 20, 106, 259 and 284, etc.

A special type of rhyme-formula that occurs in a number of *sūras* is the refrain, i.e. an entire verse or more repeated verbatim at more or less regular intervals. The most striking example is the rhetorical question, "Then which of the benefits of your Lord will you two deny?", which occurs as LV, 13, 16, 18 and 21 and then almost every other verse to the end of the *sūra* in verse 78. A similar refrain, "Woe is that day to those who deny it!", occurs in LXXVII, 15, 19, 24, 28, 34, 37, 40, 45, 47 and 49. In both of these cases the refrain has little connection with the meaning of the other verses, and it is difficult to tell whether the latter should be read as an introduction (see Bell, *Trans.*, 627 f.) or a conclusion (e.g., Arberry trans., i, 328 f.) to the ten segments ranging in length from two to five verses. Each of the seven punishment-stories in XXVI ends with the two verses, "Lo, la that is a sign, but most of them have not believed" and "But, lo, thy Lord is the Sublime, the Compassionate", which appear to be separate refrains, the latter being later. Four punishment-stories in LIV end with "We have made the Kur'ān as the Reminder (*dhikr*), but is there anyone who takes heed?", and the last three also have what appears to be an earlier refrain, "Of what nature, then, was My punishment and My warning?" Similar formulas occur frequently in the Kur'ān, but usually not as refrains. On internal rhymes and the possibility that there are strophes within the Kur'ān, see Bell-Watt, 70-5.

d. Schematic form and multiple accounts. The last two examples of refrains occur in stories that also share another characteristic of Kur'ānic style, schematic form, i.e. the repetition of certain verses, or formulas that are woven into the narrative in a regular pattern in different stories presented together as a group. A good example of one type of schematic form occurs in XXVI, where five punishment-stories have the same five-verse introduction, as well as the refrains mentioned above and other repeated verses. The introduction of the first story reads: "The people of Noah denied the envoys. / When their brother Noah said to them: 'Will you not show piety? / Lo, I am to you a faithful messenger. / So show piety towards God, and obey me. / I ask you for no reward for it; my reward rests only upon the Lord of the worlds' ". The only difference in the five-verse introductions of the other four accounts is the name of the people (the tribes of 'Ad, Thāmad, etc.) and the prophet (Hūd, Ṣāliḥ, Lot, etc.). Another type of schematic form occurs in the *Sūra VII* versions of the same five punishment-stories, where about two-thirds of the Noah story is repeated in the Hūd story (a smaller percentage is repeated in the others), but the repeated parts are interspersed with statements, phrases, and individual words that are distinctive to each story. To show the first stage in the development of this group of schematic accounts, the Noah story is given here with the elements that also occur in the Hūd story put in italics: "We sent Noah to his people, and he said 'O my people, serve God. *There is no god for you other than He. Verily I fear for you the punishment of a mighty day. Said the nobility of his people: 'Verily we think you are in manifest error'. He said 'O my people, there is no error in me; I am but a messenger from the Lord of the worlds. I deliver to you the messages of my Lord, and give you sincere advice; I have knowledge from*

God which you have not. Does it astonish you that a reminder from your Lord should come to you upon a man from among yourselves, in order that he may warn you and that you may show piety? Perhaps mercy will be shown you'. But they denied him; so We rescued him and those with him in the ark, and We drowned those who denied Our signs. Verily they were a billed people." Part of the Noah story and other parts of the Hūd story are then repeated in the Šālih, Lot, and Šu'ayb stories. Other groups of parallel accounts in the Qur'ān have one of these two types of schematic form. The extent of the repetition in these parallel accounts has important implications for understanding their nature and purpose, e.g. they are not intended as historical accounts.

These groups of punishment-stories also illustrate another feature of the Qur'ān: the complex development of its multiple accounts and their changing relationships with other accounts. Many stories are repeated in different versions in two or more *sūras*, and these multiple accounts of the same story differ not only in length and details, but also in their purpose and their relationship to other stories. For instance, different versions of the punishment-stories or brief references to them occur in 16 different *sūras*. Longer versions of the Noah, Hūd, Šālih, and Lot stories occur in LIV, XXVI, VII and XI; the first three also occur in XXV, LI and LIII; they are referred to in IX, XIV and XXIX; and they occur separately in still other *sūras*. There are two different Lot punishment-stories: the first occurs in LIV, XXVI and VII (mentioned above) and also in XXVII and XXXVII; the second, involving the visit of celestial messengers, occurs in XI and XV. Then in XXXIX both appear together separated by a brief version of an Abraham story, which also occurs in earlier, longer versions in LI, XV and XI. On the punishment-stories, see 2.d below. Bell-Watt, 127-35, and bibliography given there. A similar development can be seen in the creation stories: the story of the fallen angel? Iblīs occurs as a complete, independent story in XV and XXXVIII and is repeated in shorter versions in XVII and XVIII; then it occurs with an account of the temptation and fall of Adam in VII, XX, and finally II. In the last two the Iblīs story is reduced to a single verse, and in II these two story segments are preceded by the only Qur'ānic version of a third creation story, about God consulting the angels before creating man. A third example, of a somewhat different type, involves the two parallel accounts of the miraculous births and childhood of John (the Baptist) and Jesus in XIX, 2-34 and III, 38-51. In XIX the stories of John and Jesus are the first two in a series of separate accounts; in III they are woven together as part of a longer account that begins with the birth and early life of Mary. Among the significant patterns seen in the development of these and other multiple accounts in the Qur'ān is that the earlier groups of stories tend to be ahistorical in their arrangement, e.g. in XXVI we have Moses, Abraham, Noah, Hūd, Šālih, Lot, and then Šu'ayb (who came to be identified with Jethro, the father-in-law of Moses), while the later versions are put in "historical order", e.g. in XI we have Noah, Hūd, Šālih, Abraham, Lot, Šu'ayb, and Moses. The ahistorical groups are typical of what Bell calls the Qur'ān period, while the "historical" ones reflect the Book period, where we see stories combined to form longer multi-episodic narratives that constitute the beginning of a Muslim sacred history going back to the creation.

7 LITERARY FORMS AND MAJOR THEMES

The nature and arrangement of the Qur'ān make it difficult to classify its literary forms or systematise its main themes. Any attempt to classify the parts of the Qur'ān according to the standard literary types—myth, legend, saga, short story, parable, etc.—very soon founders. A few examples can be given for each of these types, but altogether they comprise a very small percentage of the text. Also, they have been adapted so much to conform to the style and message of the Qur'ān that they have little significance as distinct types. Bell has argued that since the Qur'ān disclaims that Muhammad was a poet and since his function as a prophet was to convey messages from God to his contemporaries, we should seek "didactic rather than poetic or artistic forms" (Bell-Watt, 75). This is true, except that only parts of the Qur'ān can be described as "didactic" in purpose. Other parts are hortatory, rhetorical, legislative, etc., and some parts addressed to Muhammad and his family can only be described as personal (Bell questioned whether some of these, e.g. CXI and parts of LXVI, were "intended for publication"). Thus it seems best to discuss the literary forms of the Qur'ān in terms of its own distinctive types of material. What follows is not a complete, systematic classification, but brief descriptions of the main literary forms found in the Qur'ān, which at the same time provide summaries of some of its major themes.

a. Oaths and related forms. An interesting variety of oaths and related forms occur in the shorter *sūras*, usually at the beginning. The assumption that most (but certainly not all) of these oaths are among the earliest parts of the Qur'ān seems to be justified. Some oaths that are cryptic and difficult to interpret or translate are generally thought to be typical of the ancient Arabian soothsayer utterances. In other cases, the oath form has simply been used to convey Qur'ānic (and sometimes Biblical) themes. The oath form that occurs most often consists of one or more verses beginning with *wa*, "By", followed by a noun in the genitive case, and ending with one or more verses beginning with an asseverative particle, usually *inna* but sometimes *qad*, both meaning "verily, surely". A fairly typical example occurs at the beginning of XCII: "By the night when it veils, / By the day when it shines out in splendour, / By what created the male and the female, / Verily your course is diverse" (Bell tr.). Here the first three verses begin with *wa*, and the assertion closing the oath begins with *inna*. Sometimes the intervening verses between the opening *wa* verse and the closing *inna* begin with *fa* instead of *wa*, as in XXXVII, 2-4: "By those who dress the ranks, / By those who scare by shouting, / By those who recite the warning, / Verily your God is One" (Bell). The *wa* and the *fa* in the intervening verses can be interpreted as conjunctions (see, e.g. Arberry's tr. of these two passages), but this seems to weaken the impact of the oath. Some *wa*-*inna* oaths have only two elements (e.g. XXXVI, 2 ff., CII, 2 ff.), while others have several, including additional *inna* assertions, e.g. LI begins with a six-verse oath, the verses beginning with *wa*, *fa*, *fa*, *fa*, *inna* *wa*, *wa* *inna*; and C has *wa*, *fa*, *fa*, *fa*, *inna*, *wa*-*inna*, *wa*-*inna* (other variations occur in XLIII, XLIV, LI, LIII, etc.). A fairly typical example of a *wa*/*fa* oath occurs at the beginning of XCV: "By the fig and the olive, / By Mount Sinai, / By this land secure, / Surely We have created man most beautifully erect" (Bell)—with *wa*, *wa*, *wa*, *la*-*ḥad*. The ten-verse oath at the beginning

of XC1, the longest in the Kur'ān is also of this type, with *wa, wa, wa, wa, wa, wa, wa, wa, fa, had, wa-had* (the *wa* before the asseverative particles in these examples is the conjunction 'and'). Other types of oaths also occur in the Kur'ān, e.g. the stronger *la ašharu bi*, "Not I swear by", oath, at the beginning of LXXV; "Not I swear by the Day of Resurrection", also in LXXV, 2, XC, 1, and within other oaths.

Related to the Kur'ānic oaths are several other formulaic usages that are typical of soothsayer or prophetic utterances. One is the *ifhā*, "When", passage, which has the same force, if not the same meaning, as an oath. A good example occurs at the beginning of LXXXII: "When the heaven shall be rent, / When the stars shall be scattered, / When the seas shall be made to boil up, / When the graves shall be ransacked, / A soul shall know what it has sent forward, and what kept back" (Bell). The longest "when" passage is LXXXI, 1-14, culminating in "A soul shall know what it has presented". See also LVI, 1 ff., LXXXIV, 1 ff., XCIX, etc. Other passages, especially at the beginning of some of the other shorter *sūras*, feature rhetorical questions, such as "Have you seen him who denies the Judgment?" (CVII, 1 ff.; cf. XCIV, CV), or a modified type of curse or threat, such as "Woe to every maligner, scoffer, / Who gathers wealth and counts it over..." (CIV, 1 ff.; cf. LXXXIII, 1 ff., 10 ff., CVII, 4 ff., etc. and a different type in CXI). This last example of a "Woe" (*wayi*) passage continues with another distinctive Kur'ānic form, consisting of at least three verses the second of which is the rhetorical question *wa-mā adbaha ma' —?*, "And what has let you know what — is?"; see XCVII, 1 ff., CI, 1 ff., CIV, 4 ff., and LXXXVI, 1 ff., which begins with an oath.

The fact that the Kur'ān itself affirms that Muḥammad was accused of being a soothsayer (*ādhib*) suggests that his contemporaries saw a similarity between what he recited and what they heard from the soothsayers. Bell identified five passages in the Kur'ān as having "ādhib-form": XXXVII, 1-4, LI, 1-6, and C, 1-6, mentioned above, and also LXXVII, 1-7, and LXXIX, 1-14. But most of the Kur'ānic oaths and related forms are more in the nature of prophetic than soothsayer utterances.

b. Sign-passages. Meccan and early Medinan parts of the Kur'ān often speak of certain phenomena of nature and human life as "signs" (*āyāt*) of God's omnipotence and benevolence towards man, calling for gratitude and worship of Him alone. Most often mentioned are the creation of the heavens and the earth, the creation or procreation of man, the shining of the sun, moon, and stars, the alteration of day and night, the sending of the rain, and the permanence and stability of nature. Thunder, lightning, fire, and other natural phenomena are also mentioned, as are human understanding and relationships, the variety of languages and colours, hearing, sight, etc. The "sign-passages" treating these themes have no distinctive form, but are recognised by their content. An example of an early sign-passages is seen in LXXX, 24-32: "Let man look at his food; / Lo, We have poured out water in showers, / Then have broken up the earth in cracks, / And have caused to sprout up in it grain, / And grapes and green shoots, / And olives and palms, / And orchards luxuriant, / And fruits and herbage — / A provision for you and for your flocks" (Bell). See also XXIII, 17-27, 78-80, LXXVII, 6-16. An example of a late, more structured sign-passages is XXX, 20-5, which begins:

"And of His signs is that He created you of dust; then lo, you are mortals, all scattered abroad. / And of His signs is that He created for you of your own species spouses that you may dwell with them, and has set love and mercy between you. Surely in that are signs (*āyāt*) for those who consider. / And of His signs is the creation of the heavens and the earth and the variety of your tongues and hues. Surely in that are signs for all living beings". The next three verses also begin with "And of His signs is...", and the first two of these end with "Surely in that are signs for those who —" ("hear" in verse 23, "understand" in 24). A similar sign-passages in XVI, 10-18, begins: "It is He who sends down to you out of heaven water of which you have to drink, ... / And thereby He brings forth for you crops, and olives, and palms, and vines, and all manner of fruit. Surely in that is a sign (*āya*) for those who reflect". And a similar formula closes the next two verses. These last two examples are typical of most sign-passages in consisting of separate sign-verses grouped together in no particular order; but they are somewhat unusual in having set introductory phrases and concluding formulas (cf. VI, 97-9, XIII, 2-4, XVI, 65, 67, 69, 79, XXXVI, 33, 37, 41, XLII, 37, 39, XLV, 3-5). The singular, *āya*, is used occasionally in sign-passages, either with one verse treating one sign (as in XVI, 11, quoted above; also XVI, 15, 65, 67, etc.), or with two or more verses treating a single sign (XVI, 10 f., 68 f., etc.). The plural, *āyāt*, occurs much more often, usually with two or more signs mentioned in a single verse (as in XXX, 20-4, quoted above; also X, 6, 67, XIII, 3 f., XXX, 43 f., etc.). This analysis provides no clue as to how *āya* came to mean "verse". In many sign-passages that are otherwise like those cited above the term "sign" does not occur (e.g. VI, 141 f., XIII, 22-15, XVI, 3-8, 80 f., XXX, 48-51, XXXII, 4-9). On the other hand, the term "sign" occurs many times in contexts that are not "sign-passages". See 1.b above and Bell-Watt, 121-2.

c. Say-passages. Scattered throughout the Kur'ān are a number of passages in which the main element is a short statement or question introduced by the imperative verb, "Say", usually the singular, *qul*, but occasionally the plural, *qulū*. Most say-passages, i.e. the immediate contexts in which the say statements occur, have two main parts: (1) a statement or question indicating the setting, and (2) the say-statement, which is sometimes followed by a comment or two on 1 or 2. The setting statement occasionally involves Muḥammad's followers, but usually is a report of something said or done by the unbelievers. One frequently occurring form is "They say: ... Say: ...", e.g. X, 20: "They say: 'If only a sign had been sent down to him from his Lord.' Say: 'The unseen belongs to God'" (see also II, 60, 92, 93, 211, 235, etc.). Sometimes the setting statement has two or more parts, and the say-statement either has two or more parts or is followed by one or more comments. A good example of this more complex form is seen in X, 18: "They serve apart from God what neither injures them nor profits them, and they say: 'These are our intercessors with God'. Say: 'Will you inform God of what He knows not either in the heavens or in the earth?' Glory be to Him, and exalted be He far from what they associate with Him!" Here the setting statement has two parts, involving something the unbelievers do and something they say; and the say-statement, a rhetorical question, is followed by a praise formula (cf. II, 80-2). In X, 68 f. a praise formula, "Glory be to Him", and

a comment on the setting statement come between the "They say" and "Say" elements. Another common form is "They will ask you [Muhammad] . . . Say: . . .", e.g. II, 220: "They will ask you about the orphans. Say: 'To set right their affairs is good.'" Sometimes one *huj* introduces a question, and a second one gives an answer, e.g. VI, 12: "Say: 'To whom belongs what is in the heavens and the earth?' Say: 'To God. . .'" (also VI, 63 f., 72, etc.). Some say-statements are formulas that can be classified as maxims or slogans, e.g. "To God belongs the East and the West" (II, 142), "The guidance of God is the guidance" (II, 250, III, 23, VI, 71), "God guides to the truth" (X, 35), "Those who invent falsehood about God will not prosper" (X, 69), and "Intercession belongs to God alone" (XXXIX, 44), and some of these (e.g. the first two mentioned here) occur elsewhere in the Kur'ān. On maxims and slogans, see Bell-Watt, 75-7. Others are credal statements, e.g. II, 236: "Say (huj): 'We believe in God and what has been revealed to us and what was revealed to Abraham . . . and what Moses and Jesus received . . . and to Him we have surrendered'" (cf. XXXIX, 46). Still others are prayers, e.g. III, 261: "Say (huj): 'O God, owner of sovereignty, Thou givest sovereignty to whom Thou wilt, and seizest sovereignty from whom Thou wilt . . . Thou bringest forth the living from the dead, and the dead from the living; Thou providest for whom Thou wilt without reckoning.'" This last example is unlike the say-passages described above, since it is not preceded by a setting statement. Thus it is best classified with a second group of say-statements, some of which are in the first person singular and seem to be spoken by Muhammad, e.g. a group of four in LXXII, 30-8, beginning: "Say: 'I call only upon my Lord, and I do not associate with Him anyone' / Say: 'Surely I possess no power over you, either for hurt or for rectitude'" (Arberry); see also XXXIV, 36, 39, 46-50, CIX, etc. Other isolated say-statements occur in LXVII, 231, 28-30, CXII XIV, etc., the first of these being two short say-statements in the form of the sign-passages. Say-passages and separate say-statements are often grouped together, e.g. VI, 11-19, 56-8, 63-6, 161-4, and the groups mentioned above.

d. Narratives. If the term "narrative" is taken in the broader sense to include any story or description of actual or fictional events, then many parts of the Kur'ān can be classified as narratives. There is virtually no historical narrative, even though as mentioned above (see 3.a) there are many references and allusions to historical events. Most Kur'ānic narratives are versions of traditional stories found in other Near Eastern cultures, which have been adapted to conform to the world-view and teachings of the Kur'ān. Several versions of ancient Near Eastern myths and many mythic motifs occur. The creation of the world in six days and the Throne from which the universe is controlled are mentioned several times, as in VII, 54: "Verily your Lord is God, who created the heavens and the earth in six days, then seated Himself upon the Throne causing the night to cover the day" and the well-known "Throne verse", II, 255: "God, there is no god but He, the Living, the Eternal. Slumber overtakes Him not nor sleep . . . His Throne extends over the heavens and the earth, and He is never weary of preserving them" (cf. X, 3, XXV, 59, XXXII, 4, and on the Throne, IX, 129, XIII, 2, XX, 5, XXXI, 22, etc.). But there is no six-day creation story, and no account of what was created on each day (a partial explanation is given in XLI, 9-14; see Paré, *Kommentar*, 433). The seven

heavens are mentioned (XVII, 44, XXIII, 86, etc.), as is the Trumpet that signals the Last Day (VI, 73, XVIII, 92, XX, 102, etc.), but there are no stories or complete descriptions. Brief accounts of the fall of Iblīs (Lucifer?), the fall of man, and the naming of the animals (not so specified) do occur (II, 30-9, VII, 11-25, XV, 28-44, XVII, 64-5, XX, 115-26, etc.). There are several versions of the ancient Near Eastern shooting-star myth (XV, 16-18, XXXVII, 6-10, etc.), and several accounts of Noah and the Flood (XI, 36-48, XXV, 37, XXXIX, 14 f., LIV, 9-17) which however is not a world-wide deluge.

The prophet stories, some of which are also punishment-stories, make up the largest category of Kur'ānic narratives. The longest single story, which could be classified as a "short story", is that of Joseph, taking up nearly all 111 verses of Sūra XII. It follows the Biblical account more closely than do most Kur'ānic stories, and it shows evidence of revision, including what appear to be two introductions. There are two parallel accounts of the births of John (the Baptist) and Jesus, III, 33-51 and XIX, 1-36, which have some significant differences in details, reflecting the development of ideas in the Kur'ān. Both accounts have elements from apocryphal Christian writings and oral tradition, e.g. Mary's stay in a convent or temple until the time of the conception of Jesus, and his miracles of speaking from the cradle and forming a bird out of clay that became alive when he breathed on it. Abraham, Moses, and Solomon have major roles in Kur'ānic narrative in that there are several different stories about each, as well as several versions of some stories. Also, there are non-Biblical stories about each of these three: Abraham destroying the idols of his people (XXI, 51-72, etc.) and building the Ka'ba in Mecca (II, 122-9, etc.), Moses and his servant on a journey (XVIII, 60-82), and Solomon building the Temple with the jinn and demons (XXXIV, 12-14, XXXVIII, 35-40) and dealing with his army of jinn, men, and birds (XXVII, 15-21). There are also stories about Adam and Noah (mentioned above) and Lot, Ishmael, David, Elijah, Jonah, and Job; and several others are mentioned, including Isaac, Jacob, Elisha, Aaron (in some Moses stories), Saul, Ezra, and Hannan, who however is an associate of the Pharaoh. The heroes of these stories are generally referred to as "messengers" (*rusul*, sing. *rasul*), but sometimes as "envoys" (*mursalin*, sing. *mursal*) or "prophets" (*nabiyyin*, sing. *nabī*). The latter seems to occur only in Medinan passages and is applied specifically only to Muhammad and certain "messengers" mentioned above from the Hebrew and Christian traditions, while the other two terms occur earlier and have broader usages. But in later parts of the Kur'ān *rasul* and *nabī* are synonymous, although not exactly interchangeable. Note, for instance, the consistent usage, "God and His Messenger", but "the Prophet", for Muhammad throughout XXXIII. This no doubt explains why *rasul* occurs in the credal statements in II, 285 and IV, 236, which require belief in "His angels, His books, and His messengers (*rusulihī*)", while *al-nabiyyin* occurs in II, 177, which requires belief in "the angels, the Book, and the prophets". Among the non-Biblical characters, the most prominent are Hūd, Šalih, and Šu'ayb (see below), but there are also stories about Luqmān, an Arabian sage (XXXI, 12-19), and Dhū T-Karayn, generally regarded as Alexander the Great (XVIII, 83-98), and brief references to Dhu l-Kifl and Idrīs (XIX, 56, XXI, 85, XXXVIII, 48), sometimes said to be Elijah and Enoch. The story of the Men of the Cave (XVIII,

10-26) is usually identified with the legend of the Seven Sleepers of Ephesus. On these stories, see the commentaries and Paret, *Kommentar*, ad loc.

Several forms are used indiscriminately for introducing prophet stories and some of the stories about non-Biblical characters, e.g. "Recite to them the story (*ḥikāya*) of ..." (V, 27, VII, 175, X, 71, XXVI, 69; cf. XVIII, 27, XXIX, 45); "We recite to you [Muhammad] part of the story (*ḥikāya*) of ..." (XXVIII, 3; cf. III, 58); "Has there come to you the story (*ḥikāya*) of ...?" (IX, 9, Lf, 28, LXXIX, 15, etc.); "Has there come to you the story (*ḥikāya*) of ...?" (IX, 70, XIV, 9, XXXVIII, 22, etc.), and "Mention in the Book ..." (XIX, 26, 42, 51, 54, 56). All of these are addressed to Muhammad. Far more frequent are two simple forms, *qāla ḥikāya*, "(Recall) when ——— said", said of Moses (V, 20, XIV, 6, XVIII, 60, XXVII, 7, etc.), Abraham (VI, 74, XIV, 35, etc.), Joseph (XII, 4), God (V, 110, 116, XV, 28, XVII, 61, XVIII, 50, etc.), and others, and *wa-lāhād aḥadāna*, "And We sent", said of Noah (XI, 25, XXIII, 23, XXIX, 14, etc.; cf. VII, 59), Moses (XI, 95, XIV, 5, etc.; cf. XXIII, 45), and others. Cf. *wa-lāhād āḥadāna*, "And We gave" (e.g. "And We gave Moses the Book") in XVII, 101, XXI, 48, 51, XXXI, 22, XXXIV, 10, etc.

One special type of Kur'ānic narrative that made up a major part of the revelation during the Meccan years is the punishment story, discussed above for its use of refrains and schematic form in some versions. Five punishment stories stand out from the others, those of Noah, Hūd and the tribe of 'Ād, Šālīḥ and the tribe of Thamūd, Lot, and Šu'ayb and the people of Midian. And two others are prominent in some *sūras*, the story of Moses and the drowning of Pharaoh's army, and the story of Arābham rejecting the idols of his people. These seven occur together in XXVI, 10-191, and are mentioned together in XXII, 42-4. Fairly complete versions of some of these stories also occur in VII, 59-93 (all but Abraham and Moses), XI, 25-95 (all but Moses), XXXVII, 75-145 (only the Biblical ones), and LIV, 9-43 (all but Abraham and Šu'ayb). Shorter versions of some of these seven and references to these and some others (Jonah, the people of Sheba, the men of al-Rass, and the people of Tubba') occur in IX, 70, XIV, 9, XXI, 48-77, XXIII, 23-48, XXV, 35-40, XXVII, 7-28, L, 12-14, LI, 24-46, LIII, 50-5, LXIX, 4-10, and LXXXIX, 6-14. The "men of al-Hijr" in XV, 50-4, are probably the tribe of Thamūd; the "men of the Grove" (XV, 78 f., XXVI, 176-97, etc.) seem to be identical with the people of Midian (see MADYAN *مَدْيَن*); and "the subverted (cities)" (*al-muḥḥaḥāt*) are most likely Sodom and Gomorrah, the cities of Lot. Thus these three are apparently variations of three of the seven. Most Western scholars have accepted the view of A. Sprenger (*Leben*, I, 462) and J. Horowitz (*Koranische Untersuchungen*, 26-8; that the term *maḥḥad* in XV, 87 and XXXIX, 23 (see Lb above) refers to the seven most prominent punishment stories, since the first verse says "seven of the *maḥḥad* and the mighty Kur'ān" have been sent down to Muhammad by God, and the second describes the Book sent down to Muhammad as having *maḥḥad* "at which the skulls of those who fear their Lord do creep". See Paret, *Kommentar*, 279 f., and Bell-Watt, 134 f.

The Kur'ān also contains some parables, the longest and clearest one being the parable of the Blighted Garden in LXVIII, 17-33. Others include the parable of the man with two gardens (XVIII, 32-44), the good and corrupt trees (XIV, 24-7), and the

unbelieving town (XXXVI, 13-32). Several other brief parables are little more than expanded similes, e.g. the fire at night in II, 17, the downpour in II, 19, the slave in XVI, 73, the dumb man in XVI, 76, the water and vegetation in XVIII, 45, the light of God in XXIV, 35, the master and his slaves in XXX, 28, and the slave with several masters in XXXIX, 29 (see Bell-Watt, 81). These parables have no standard form, some are introduced by the statement addressed to Muhammad: "And coin for them a parable" (*wa 'arḥū lahum maḥālan*), e.g. XVIII, 32, 45, XXXVI, 13, others by the statement: "God has coined a parable" (*duraba 'lāhuk maḥālan*), e.g. XIV, 24, XVI, 75, 76, 112, XXXIX, 29, LXVI, 10.

e. Regulations. The Kur'ān provides detailed regulations on some aspects of the conduct of the Muslim community, and general instructions on others. No complete code of conduct or list of required duties is presented; each issue is treated separately, usually in several different places. The main religious duties are introduced in stages, and there are inconsistencies in some of the requirements. What follows are some examples that illustrate the nature and form of the various Kur'ānic regulations, beginning with four that later became Pillars of Islam.

On the prayer ritual (*ṣalāt*): "Observe thou [Muhammad] the Prayer (*ṣalīḥi 'l-ṣalāt*) at the two ends of the day and the neighbouring parts of the night" (XI, 114, cf. XVII, 78 L); "Remember the Prayers (*ṣalawāt*), including the middle Prayer, and stand [in worship] to God reverently" (II, 236); "so recite what is convenient of it [the Kur'ān], and observe the Prayer (*ṣalīḥi 'l-ṣalāt*), and pay the Zakāt, and lead to God a good loan" (LXXXIII, 20), "verily the Prayer has become for the believers a thing prescribed for stated times" (IV, 203). On almsgiving (*ṣaḥāt*, *ṣadaḥa*): "If you give alms (*ṣadaḥāt*) publicly it is well, but if you conceal it and give to the poor it is better for you" (II, 271); "Observe the Prayer, pay the *ṣaḥāt* (*ḥikāya 'l-ṣaḥāt*), and obey the Messenger" (XXIV, 56); "The alms (*ṣadaḥāt*) are for the poor and the destitute, for the agents employed therein, for those whose hearts are to be won over, for the ransom of slaves, for the relief of debtors, for expenditure in the way of God, and for the follower of the way—an ordinance (*farīḥa*) from God" (IX, 60). On fasting (*ṣiyām*, *ṣaum*): "O believers, fasting is prescribed for you (*kuḥḥa 'l-ṣaym*) as it was for those before you ... [during] the month of Ramaḍān ... It is allowable for you on the night of the last to go in to your wives ... and eat and drink until so much of the dawn appears that a white thread may be distinguished from a black; then keep the fast completely until night" (II, 235-7). On the Pilgrimage (*ḥajj*, *ḥajra*): "Fulfill the pilgrimage (*ḥajj*) and the visitation (*umra*) unto God. ... If anyone of you is sick or suffering from an injury to the head, then a compensation (*ḥadya*) by way of fasting or almsgiving (*ṣadaḥa*) or pious observance" (II, 196); "Ṣafā and Marwa are among the manifestations of God. ... It is no fault (*ḡuḥḥa*) if anyone makes the circuit of them" (II, 158).

These four religious duties are required of all Muslims only in Meccan passages dating from around the time of the battle of Badr or later. The *ṣalāt* is mentioned in Meccan or early Medinan passages, but is required only of Muhammad, with the imperative verb in the singular, *ṣalīḥi 'l-ṣalāt* (XI, 114, XVII, 78, XXIX, 45, XXX, 31, etc.). The term *ṣaḥāt* in Meccan passages (XVIII, 81, XIX, 13) means "purity". Passages that are late Meccan or early Medinan say that earlier prophets instituted the

salāt and the *ṣalāt* (X, 87, XIV, 40, XIX, 30.1, 34.1, XX, 14, XXI, 73, etc.), or recommend them to the Muslims as signs of piety (II, 177, XXVII, 2.4, etc.). Then in passages dating from the year x A.H. and later these two practices are required of Muslims, with the imperative verbs in the plural, *asā'idū 'l-ṣalāt* and *asā'idū 'l-ṣalāt* (II, 43, IV, 77, 103, LX, 12, XXII, 78, XXIV, 56, LVIII, 23, LXXXII, 20, etc.). The Muslim fast was introduced in two or probably three stages in the Kur'ān (see Wagendoonk, *Fasting in the Koran*, 41-127), and the pilgrimage was adopted as a Muslim ritual probably before Badr, but was not practised as such until the last years of Muhammad's life.

The form used most frequently for introducing and stressing regulations for the Muslim community is the plural imperative verb, seen several times in the examples given above and often elsewhere involving a variety of practices, e.g.: "O believers, when you stand up for the Prayer, wash your faces and your hands up to the elbows, and wipe your heads and your feet up to the ankles" (V, 6); "O believers, show piety towards God and abandon the usury that remains if you are believers" (II, 278); "O believers, when you contract a debt with another for a stated term, write it down" (II, 282); "Fight in the way of God those who fight you, but do not provoke hostility" (II, 190); "Contribute in the way of God, hand not yourselves over to destruction, but do well" (II, 195). Sometimes negative commands are given, as in VI, 151: "Come, let me repeat what your Lord has forbidden you: do not asssociate anything with Him... do not kill your children because of poverty—do not draw near indecencies... do not kill the person whom God has made forbidden except with justification"; cf. XVII, 22-35. The expression *ḥukma* 'alaykum, "prescribed for you is", seen in II, 183, above on fasting, also occurs elsewhere, e.g. "O believers, retaliation in the matter of the slain is prescribed for you, the free for the free, the slave for the slave, the female for the female; so if anyone is forgiven anything by his [injured] brother, let him follow it with what is reputable, and pay with kindness" (II, 178), and "Prescribed for you, when death draws nigh to one of you, and he has goods to leave, is the making of a testament in favour of parent and relatives reputable—a duty resting upon those who show piety" (II, 180). And an expression having the opposite meaning, *ḥurmat* 'alaykum, "forbidden to you is", also occurs, e.g. in IV, 23, and V, 3. Other forms and many other regulations occur, especially in the *sūras* that are completely Medinan. Some of these passages can be classified as commandments or divine legislation; others are more in the nature of religious instruction or exhortation.

1. Liturgical forms. While all of the Kur'ān is recited in liturgical settings, only some parts are distinctly liturgical in form. By far the most important part of the Kur'ān for use in worship is the opening *sūra*, the *Fātiḥa*, a seven-verse prayer recited at least twice in each performance of the *ṣalāt*. Whether or not the *Fātiḥa* (q.v.) was considered to be part of the Kur'ān during Muhammad's lifetime is uncertain. Prayers might seem out of place in a text in which God is the speaker, but others also occur, the best example being the prayer at the end of *Sūra* II: "O our Lord, take us not to task if we forget, or make a mistake; O our Lord, lay not upon us a task such as Thou didst lay on those before us... Pardon us and forgive us, and have mercy upon us; Thou art our patron; so help us against the people of unbelief" (Bell). Some prayers are also included within narratives, e.g. Abraham's prayer in XIV,

35-41. Exaltations, in which God is praised in the third person, occur more frequently; the best known of these is the "Throne verse", II, 255, mentioned in 7.d above for its rhythmic motif. The divine epithets mentioned in 6.c above as rhyme phrases are also a type of praise formula, which however do not give the impression of being liturgical. Praise forms that do seem to have a liturgical purpose occur at the beginning of several Medinan *sūras*. A *ṣabbāḥu 'l-ʾilāh* formula, "Magnifies God (*ṣabbāḥu 'l-ʾilāh*) all that is in the heavens and the earth", occurs at the beginning of LVIII, LIX, LXI, LXII and LXIV, three of which continue with "He is the Almighty, the All-wise". These five *sūras* date mainly from the middle Medinan years, after the completion of the *sūras* that begin with revelation formulas and the mysterious letters (see 4.d above). The liturgical setting of the *ṣabbāḥu 'l-ʾilāh* *sūras* is suggested by their introductions and conclusions. One might conjecture that the Friday prayer service was the occasion for the first recitation of these *sūras* (see LXII, q.21), and possibly also those with the revelation formulas. Other praise formulas, which may or may not have specifically liturgical functions within the Kur'ān, include: the *ḥamd*, i.e. *al-ḥamdu li 'l-ʾilāh*, "Praise be to God", at the beginning of I, VI, XVIII, XXXIV and XXXV, and in VII, 43, X, 20, XVII, 21, etc.; the *ḥudūd*, i.e. *ṣabbāḥu 'l-ʾilāh*, "Glory be to God", occurring with variations in XVII, 1, 93, 108, XXVIII, 68, XXXVI, 36, XXXVII, 180-2, XLIII, 82, etc.; and *ṭabāraka 'l-ʾilāh*, "Blessed be God", occurring with variations in VII, 54, XXIII, 24, XXV, 1, 10, 62, XI, 64, XLIII, 85, LV, 78 and LXVII, 1.

Others: The Kur'ān contains other distinctive literary forms and themes that can be mentioned only briefly here. Especially important in Meccan parts of the Kur'ān are a large number of dramatic scenes, usually involving death, the Last Judgment, the pleasures of paradise (*al-ḡanna* = the garden), and the tortures of the hellfire (see the O'Shaughnessy arts. in *Bibl.*). Dramatic scenes constitute the main Kur'anic form for treating these subjects, which are nowhere fully or systematically explained, and they also occur frequently in narratives, reflecting the oral qualities of these Meccan parts of the Kur'ān (see Bell-Watt, 80.1). There are also many addresses on a variety of topics. Most Meccan ones treat theological topics—the signs of God, messages of earlier prophets, etc.—and thus can be classified as sermons. Early Medinan ones are often addressed to the Jews, either as the Children of Israel or the People of the Book. Later Medinan ones, usually addressed "O believers", but sometimes "O children of Adam" or "O people", treat specific legal, political, and military matters as well as general religious, moral, and social themes. Another special type of material found in both Meccan and Medinan parts of the Kur'ān involves Muhammad's personal situation. Many Meccan passages addressed to Muhammad bring comfort and encouragement in times of persecution, instructions on religious practices, etc. Some Medinan ones, addressed "O Prophet", give special marriage and divorce regulations. Others are addressed to Muhammad's wives or otherwise treat his family problems (see *sūras* XXIV, XXXIII, LXVI).

6. THE KUR'ĀN IN MUSLIM LIFE AND THOUGHT

For Muslims the Kur'ān is much more than scripture or sacred literature as the usual Western sense. Its primary significance for the vast majority through the centuries has been in its oral form, the form in

which it first appeared, as the "recitation" (*Qur'ān*) chanted by Muhammad to his followers over a period of about twenty years (on its liturgical function during Muhammad's lifetime, see VII, 203-6, LXXIII, 20, LXXXIV, 20 f., etc.). The revelations were memorised by some of Muhammad's followers during his lifetime, and the oral tradition that was thus established has had a continuous history ever since, in some ways independent of, and superior to, the written Qur'ān. During the early centuries when the written Qur'ān was limited to the *scriptio defectiva* of the period (see 3.c above), the oral tradition established itself as the standard by which the written text was to be judged. Even when the Egyptian "standard edition" was prepared in the early 1920s, it was the oral tradition and its supporting *ḥadīth* literature (rather than early Qur'ān mss.) that served as the authority for determining the written text. Through the centuries the oral tradition of the entire Qur'ān has been maintained by the professional reciters (*ḥafīẓ*) (on Qur'ān reciters in Egypt, see M. Berger, *Islam in Egypt today*, Cambridge 1970, II, 13, 37-43, and for the oral tradition in general, Labib al-Said, *The recited Koran*, see Bibl.), while all Muslims memorise parts of the Qur'ān for use in the daily prayers. Until recently, the significance of the recited Qur'ān has seldom been fully appreciated in the West.

The Qur'ān also had a central role in the theological debates of the early centuries, and it has continued to be one of the most controversial issues in Islamic theology. Since the Qur'ān was held to consist of messages brought from God to Muhammad by Gabriel, and since God is the "speaker" in these messages, it was natural for Muslims to think of it as God's speech (*kalām*). About the time of Ḥarūn al-Rāshid, theologians began to discuss whether or not the Qur'ān was created. Among those who maintained that it was were the Mu'tazila, including some who had positions at the court of al-Ma'mūn. Convinced by their arguments, and also thinking that adoption of the doctrine would be politically beneficial, al-Ma'mūn in 218/833 established the *miḥna* (q.v.) or "inquisition", in which most leading officials were obliged to profess publicly that the Qur'ān was created. Nearly all submitted but a few refused, notably Ahmad b. Hanbal (d. 241/855) (q.v.). In 234/848, shortly after the accession of al-Mutawakkil, the *miḥna* was abandoned, probably because its political results were disappointing. Up through the time of the *miḥna* the issue seems to have been whether the Qur'ān was the actual speech of God or was created. Those who accepted the latter view, arguing that God "has never spoken and does not speak", were called by their opponents the *Djāh-miyya* (q.v.—see also Watt, *Formative period*, 243-8). Then Ibn Hanbal argued that the Qur'ān is part of God's knowledge (*ʿilm*), and after the *miḥna* he accepted the expression "uncreated" (*ghayr maḥḍūḥ*) as a description of the Qur'ān. This led to the formulation of the doctrine that it is eternal (*ʿadīm*), argued for by al-Ashʿarī (d. 323/935) (q.v.) and others. Although this became the standard Sunnī view (see, e.g. the 4th/10th century Hanafī creed called by Wensinck *Fuḥḥ Akḥar II*, art. 3), it has not been accepted by all. The Hanbalī theologian Ibn Tay-miyya (d. 728/1328) (q.v.), for instance, disavowed this view, arguing that the question of the eternity or temporality of the Qur'ān was not an issue before the time of Ibn Hanbal, and that in affirming the uncreatedness of the Qur'ān the "pious ancestors", including Ibn Hanbal, never meant to assert its

eternity. It should also be noted that even the expression *ghayr maḥḍūḥ* does not occur in Muslim creeds until after the *miḥna* (see, e.g. Wensinck, *Muslim Creed*, 103 f., 127, 189) and that the early discussions and creeds do not mention the Qur'ānic expression "preserved tablet" (*lawḥ maḥḍūḥ*) (see LAWḤ) in LXXXV, 22, and "mother of the Book" (*umm al-ḥudūd*) in III, 7, which only later came to be interpreted as referring to a heavenly archetype of the Qur'ān in support of the doctrine of its eternity. See W. Madelung, *The origins of the controversy concerning the creation of the Koran*, in *Orientalia Hispanica*, Leiden 1974, I, 504-25. W. M. Watt, *Early discussions about the Qur'ān*, in *MW*, XI (1950), 27-40, 96-105; idem, *Formative period*, 278 f., 282-5, 280-5, 293; J. Bouman, *The doctrine of 'Abd al-Djabbār on the Qur'ān as the created word of Allāh*, in *Verbum*, the H. W. Obbink Festschrift, Utrecht 1964, 67-86; H. Stieglecker, *Die Glaubenslehren des Islam*, Munich 1962, 75-82. For an outline of the views of the various schools on the Qur'ān as the *kalām Allāh*, see KALĀM.

Parallel to the development of the doctrine of the eternity of the Qur'ān there also arose the dogma of its inimitability (*ʿiʿjāz*) (q.v.). From the beginning, the Qur'ān had been seen as a "sign" (*āya*) or "proof" (*burhān*) of Muhammad's prophethood. This belief took a more precise form in the teaching that each prophet was given a verifying miracle (*muʿjiza*), and that the Qur'ān was Muhammad's; the term *ʿiʿjāz*, it should be noted, still had not received its technical meaning as late as the time of Ahmad b. Hanbal (see Tor Andrae, *Die Person Muhammads in Lehre und Glaube*, Uppsala 1917, 101). Early discussion of the *ʿiʿjāz* of the Qur'ān centred around the concept of *taḥaddī* or "challenge", based largely on several verses of the Qur'ān (II, 23, X, 38, XI, 13, XVII, 88, etc.). The failure of Muhammad's contemporaries to take up the challenges to produce even one *sūra* like those he recited was taken as proof that it was impossible. This argument was then supplemented by the concept of *saʿa* (lit. "turning away"), meaning that God prevented the competent from taking up the challenge. In one of the earliest treatises devoted solely to *ʿiʿjāz*, ʿAlī b. ʿIsā al-Rumīnī (d. 384/944) mentioned both of these arguments along with several others, involving the eloquence of the Qur'ān, its prophecies of future events, its establishment of new literary forms and style that surpass all others, etc. Hamid b. Muhammad al-Khāṭibī (d. 388/998) in his *al-Bayān fī ʿiʿjāz al-Kurʾān* (see Bibl.) stressed the rhetorical eloquence of the Qur'ān, and al-Bāqillānī (d. 403/1013) in the most famous work on the subject (see Bibl.) rejected the *saʿa* argument and compiled what he regarded as empirical evidence of the Qur'ān's superior style. He also argued that since Muhammad was illiterate, he could not have read other scriptures or written down stories told by human informants, and thus Qur'ānic reports of past events and prophecies of future events are further proof of the miracle of the Qur'ān and its divine source. For summaries of the development of these views see *Idān*, II, 216-25; Abdul Aleem, *Iʿjāz al-Qurʾān*, in *IC*, VII (1933), 64-82, 215-33; J. Bouman, *Le conflit au sujet du Coran et la solution d'al-Bāqillānī*, Amsterdam 1959; H. Stieglecker, *op. cit.*, 371-408; and art. *ʿiʿjāz*. The standard modern work on the subject is that of Muḥammad Ṣādiq al-Rāḥī (see Bibl.).

The doctrines of the eternity and perfection or inimitability of the Qur'ān contributed to its extensive influence throughout Islamic life and culture.

It became the first 'source' (aṣl) of Islamic law, the *Ḥaṣṣa*, which also came to be regarded as eternal (cf. the Torah in Jewish belief). Its grammar became standard for later Arabic, which replaced other languages across the Near East and North Africa (among Christians and Jews as well as Muslims), and its script came to be adopted in Persian, Turkish, Urdu, and other languages. Verses of the *Kur'ān* became the main subject of Islamic calligraphy and one of the main decorative motifs of Islamic religious art and architecture, as a substitute for statues and pictorial representation. At the same time, these two doctrines have been the strongest factor working against the acceptance of critical studies of the *Kur'ān* within the modern Muslim community. In the early centuries, Muslim scholars studied the *Kur'ān* as literature and as a historical source, analysing its grammar, style, poetic imagery, etc., and attempting to determine its chronology, development of ideas, and historical settings. But the widespread acceptance of belief in the eternity and *ʿijāz* of the *Kur'ān* has made modern Muslims loath to accept methods of historical and literary criticism that have proved so fruitful in the study of other scriptures. To a certain extent this is understandable to Christians, since the development of the doctrines of the eternity and *ʿijāz* of the *Kur'ān* is parallel to the development of the doctrine of the Trinity, and the closest analogue in Christian belief to the role of the *Kur'ān* in Muslim belief is not the Bible, but Christ. Thus the difficulty Muslims have in adopting a critical approach to the *Kur'ān* is comparable to the difficulty many Christians have in accepting a critical view of the life of Jesus (e.g. regarding his virgin birth and resurrection). But this should not prevent critical analyses of the *Kur'ān*, which is after all still a literary work of supreme importance and an invaluable historical document.

Bibliography. (Besides works cited in full in the text and those in the list of standard abbreviations): *al-Muḥaṣṣaf al-ḡharīf*, or *al-Kur'ān al-karīm*, Cairo 1344/1924, the 'Egyptian standard edition' of the *Kur'ān*; 'Abd al-Bāḳī, *al-Muḥḍam al-muḥaṣṣaf li-ʿalif al-Kur'ān al-karīm*, Cairo 1364/1943, new ed. 1388/1968, concordance to the Egyptian standard ed.; *Corani textus arabicus et Concordantiae corani arabicae*, ed. G. Flügel, Leipzig 1834 and 1842, often reprinted, e.g. Ridgwood, N.J., 1965.

Commentaries in Arabic: 'Abdūh and Rida, *Tafsīr al-Kur'ān al-karīm*, 11 vols., Cairo 1305-53/1907-34, reprinted as *Tafsīr al-manāṣir*, 10 vols., Cairo 1267-73/1948-56; al-ʿAlūl, *Rikāʾ al-maʿānī fī tafsīr al-Kur'ān al-ʿazīm*, 9 vols., Būlāḳ 1301-10/1883-92, al-Bayḍāwī, *Anwār al-taʿwīl wa-n-nasḥ* al-ḥaṣṣa, 1 vols., ed. 9. TRANSLATION OF THE KUR'ĀN

a. The orthodox doctrine concerning translation. In the time of Muḥammad it is certain that nobody had considered the possibility that the Qur'ān might be translated either as a whole or in part into a foreign language. It was revealed expressly at "Arabic Qur'ān" (Sūra XII, 2; XX, 1; XXXIX, 28; XLI, 3; XLII, 7; XLIII, 3), in "clear Arabic language" (XVI, 103; XXVI, 195; cf. XLVI, 12), that the Prophet through it might "warn the capital (i.e., Mecca) and the people in its surroundings" (VI, 92; XLII, 7). It was not originally intended for non-Arabs. It was only as a result of the spread of the Arabic-Islamic conquests that the sphere of influence of the Qur'ān was extended to territories outside the Arabic-speaking world. The Persians and other non-Arabs who embraced Islam were obliged, in the same way as their genuinely Arab fellow-believers, to recite in the ritual prayer the Fātiḥa and several other texts from the Qur'ān. The question thus arose whether they should be permitted to recite the texts in question in their native language instead of in Arabic. In so far as Muslims from the non-Arabic-speaking territories were interested in getting to know not only the texts used in the prayers, but also other parts of the Qur'ān, or the whole of the Qur'ān, there arose the further question whether this might be achieved with the help of a translation.

The theologians and jurists who had to decide on this matter in general adopted a rigorous attitude. With regard to the recitation of the Fātiḥa in the ritual prayer, the Mālikis, Shāfi'is and Ḥanbalis insisted that the text must be spoken in Arabic. In a case where the person praying could not recite the Fātiḥa in Arabic, he must substitute for it another passage from the Qur'ān, or observe a silent pause, or repeat the name of God for the same length of time. On the other hand it is reported that Abū Ḥanifa had originally declared that the recital of the Fātiḥa in Persian was permitted without reservation; he later restricted this concession to those worshippers who were unable to speak Arabic. This then became the general rule for the Ḥanafī school. In similar circumstances other non-Arabic

languages besides Persian might be employed.

As for the production and use of translations of the whole of the Qur'ān, the attitude of the scholars was that a "translation" of the Qur'ān in the true sense of the word was not possible. They based their attitude mainly on the argument that the wording of the Qur'ān is a miracle (*mu'jiza*) incapable of imitation by man. This characteristic would be invalidated in a translation into a foreign language, since this would be made by man. Furthermore, the scholars maintained that a translation of the Qur'ān which was both literal and at the same time true to the meaning was not possible. They conceded, however, that a so-called translation (*taǧmīl*) in the sense of a commentary (*tafsīr*) might be used, on the assumption that the text of the original was not superseded by this. Thus manuscripts of the Qur'ān might be provided with an interlinear (quasi-)translation. In more recent times this was extended to the printing of the translation (as a commentary) beside the Arabic text. This is the practice which remains usual for translations made by Muslims.

The question whether in the ritual prayer texts from the Qur'ān may be recited in a non-Arabic language and whether the production and use of translations of the Qur'ān should be permitted became once again acute when in Turkey in the nineteen-twenties the authorities proceeded to "nationalise" the ritual prayers and to publish Turkish translations of the Qur'ān not accompanied by the Arabic original. Authoritative theologians found themselves induced once again to explain and to justify the orthodox standpoint by reference to earlier authorities.

The first statements were mainly of a polemical and negative nature. In the course of time, however, there prevailed a more clerical judgement on the matter. Thus the Ḥanafī scholar of al-Azhar, Muḥammad Mustafā al-Marāḡhi, in a thorough investigation first published in 1939, adopted the attitude that for a Muslim without a knowledge of Arabic the recital of the Qur'ānic texts prescribed for the prayer in an appropriate translation was absolutely obligatory (*wājib*). The important thing in the prayer is the meaning of the text, not the character of the *ḥiḡḡa*. The true sense is, however, transmitted through a translation. Furthermore, it is not realistic to require the great mass of Muslims from the non-Arabic-speaking territories to learn Arabic on account of the Qur'ān. It is much more desirable and indispensable (according to Mahmūd Ṣāliḥ, even obligatory) for them to use translations, quite apart from their use in the prayer. The thesis that the Qur'ān in translation ceases to be the Word of God (*kalām Allāh*) is, according to Marāḡhi, valid only with reservations. The translation does not simply repress human speech (*kalām al-nās*), for although it does not contain the Word of God literally, yet its content consists of the meaning of God's Word.

b. Translations into specific languages. The Kur'ān has been translated into most of the languages of Asia and Europe, and into some African ones. A Persian translation is said to have been made during the time of the Orthodox Caliph by Salmān al-Fārisī, a Companion of the Prophet; one into Beber in 127/744-5; and a Sindhi one in 270/883-4; but none of these survives.

Bibliography: *Index translationum*, passim; the catalogues of the British Library, India Office Library, Cambridge University Library and others; J. C. Leubbers, *Dissertatione historico-philologica theologia de Alcorani versionebus...*, Nuremberg 1704; C. F. Schnurrer, *Bibliotheca arabica*, Halle 1811; V. Chauvin, *Bibliographie des ouvrages arabes ou relatifs aux arabes*. x. *Le Coran et la tradition*, Liège and Leipzig 1910; M. Hamidullah, *Qur'an in every language*, Hyderabad Deccan 1939 (continued in *Pennet chide*, iii-xii, 1960-2, revised ed. *France-Islam*, ii, 1967); S. N. Zwemer, *Translations of the Koran*, in *MW*, v (1915), 244-61; W. S. Woolworth, *A bibliography of Koran texts and translations*, in *MW*, xvii (1927), 279-89.

1. Persian and Turkish. One of the oldest surviving works in the Persian language is the translation of the large Arabic *tafsīr* of Tabarī (d. Baghdād 320/93), which was made for Abū Sāliḥ Mansūr b. Nūḥ, Sāmānīd ruler of Transoxania and Khurāsān (350-66/960-76). The precise date is not recorded, but the Persian preface explains how it came to be made. Abū Sāliḥ, after questioning his 'uṣulā' about the legality of translation of the Holy Book into Persian, decreed that this should be done by learned men from the cities of this realm. Several MSS. are mentioned by Storey, the earliest, at Rimpūr, being dated ca. 600/1203-4. There is a Persian translation in Roman characters in the Vatican.

Possibly not much later is the Persian text, translation and commentary, copied (and perhaps composed) by one Muḥammad b. Abī 'l-Faṭṭ in 628/1231, which is preserved at Cambridge and described by E. G. Browne.

Storey lists 48 dated translations and commentaries,

and in an appendix, 74 titled or quasi-titled commentaries, as well as a selection of 8 miscellaneous unidentified commentaries and specimens of the numerous anonymous translations to be found in Persian, Indian and other MS. collections, and some lithographs.

The Bregel-Borghševsky Russian translation of Storey (*Persidskaya literatura*, Moscow 1972) records earlier MSS. of the Tabarī translation (Basma 562/1166-7 and end of 6th/12th century), as well as some 230 other translations and commentaries.

The Persian translation of Tabarī's commentary was the basis for the first Turkish version, which Togar regards as its contemporary, but which Iran places in the first half of the 5th/11th century.

There are said to be over 70 translations into Turkish made from at least the 4th/11th century onwards, existing in many hundreds of MSS. in public and private collections, and these have frequently been printed. These are in various forms of the Turkish languages, Eastern and Western, and in the Uyghur and Arabic scripts and in Roman characters, with at least four transliterations into Modern Turkish of the Arabic text.

Bibliography: E. G. Browne, *Description of an old Persian commentary on the Kur'ān*, in *JRAS* (1894), 417-52; A. Bodrogligeti, *The Persian translation of the Koran in Latin letters*, in *Acta Or. Hung.*, xiii (1961), 261-76; Zeki Velidi Toğan, *The earliest translation of the Qur'an into Turkish, in Islam Tetkikleri Enst. Dergisi*, iv (1964), 1-19; Abdülkadir İnan, *Kur'ān-ı Kerīm'in türkçe tercümeleleri üzerinde bir inceleme*, Ankara 1964; J. K. Birge, *Turkish translations of the Koran*, in *MW*, xxviii (1938), 394-9; J. Eckmann, *Eastern Turkic translations of the Koran*, in *Studia Turcica*, ed. L. Ligeti, 1971, 149-59; idem, *Middle Turkic glosses of the Rylands interlinear Koran translation*, Budapest 1976; Yassaroglu, in M. Hamidullah, *Kur'ān-ı Kerīm tefsiri ve türkçe tercümeleleri bibliyografyası*, İstanbul 1965.

2. Indo-Pakistani languages. Of the many Urdu versions, the earliest are said to have been made by Shāh 'Abd al-Kādir (q.v.) and Shāh Rafī' al-Dīn, each of them an uncle of the celebrated preacher and scholar Muḥammad Ismā'īl Shāhid (see Ismā'īl Shāhid). The British Museum Hindustani catalogue lists innumerable examples, including versions made by Christians and printed in Roman characters. Details may also be found in the bibliographies of the Angūman-i tarakkī-yi Urdū Pakistān (i, Karachi 1961) and of 'Abd al-Sattār Chaudhārī (1974).

In the other Indo-Aryan and Dravidian languages, there are versions in Assamese, Bengali (innumerable); a 1908 version by Rev. Wm. Goldsack of 1908 is illustrated in *MW*, v (1915), 254-5; Gujarati, Hindi, Kashmiri, Marathi, Oriya, Panjabi (often combined with a Persian version and the Arabic text), Pashto, Sanskrit (Chauvin, x), Sindhi (surveyed by A. M. Schimmel in *Oriens*, xvi (1963), 274-83), Sinhalese; and in the Dravidian languages, Malayalam, Tamil and Telegu.

3. South-East Asian. There are many translations into Malay and Indonesian mentioned in the catalogues and bibliographies, and into other Indonesian languages (Sundanese, Javanese, Maccassarese and Buginese). A Burmese version with the Arabic text, by one Hādīdīl Nūr al-Dīn known as Hādīdīl Lū, published in 1936, may be found in the British Library (*BM. Arab. cat.*, and suppl.), while Tinker mentions that a project to translate the Kur'ān into

that language was initiated by U Nu while Prime Minister in 1955. Two translations into Thai (one with Arabic text) of 1968 and 1971 are in the Watson Library at Cornell University.

Bibliography: *Catalogue van de Bibl. v. het Kon. Inst. v. Taal, Land en Folkten*, and suppl.; Ockeloen, *Catalogue van boeken en tijdschriften uitgegeven in Ned. Oost-Indië, 1870-1933*; H. Tinker, art. *AVANA*.

4. Far Eastern (Chinese and Japanese). Several 19th and 20th century works contain selections in Chinese, sometimes with commentary. A MS. believed to date from about 1800 in the School of Oriental and African Studies, London University, gives "pieces from the Koran and prayers transcribed from the Arabic original in Chinese sounds". Translation into Chinese was recommended by Sakuma, a Japanese businessman and convert to Islam who, in 1925, founded the progressive but short-lived newspaper *Mu Kiang*. Another source says that in that same year a complete translation was under consideration by the International Muslim Association. The British Museum has a *Kuo-yü ku-lan ching*, with commentary translated from English versions by Sâih Tzu-chou and others (Taipei 1958).

Japanese versions by Toshihiko Izutsu and Tanaka Shiro were published in several editions in the nineteen-fifties, sixties and seventies.

Bibliography: *Un commentaire chinois du Coran*, in *RMF*, iv (1968), 540-7; I. Mason, *Notes on Chinese Mohammedan literature*, in *J. North China Branch RAS*, lvi (1929), 172-175; R. A. Syrdal, *Christ in the Chinese Koran*, in *AFW*, xxvii (1937), 72-83.

5. Non-Islamic Near Eastern Languages. Three manuscripts of Hebrew translations exist (in Oxford, Cambridge and the Library of Congress), the first two made from the Italian of Arrivabene, the third from the Dutch of Glazemaker. All of these pre-date the translation of Hermann (Hayyim) Reckendorf, Leipzig 1857, made direct from the Arabic. Two further translations have since appeared: by Joseph Joel Rivlin (Tel Aviv 1936 43, 1963) and by Aharon Ben Shemesh (Ramath Gan 1972).

Quotations from the Kur'ân, in Syriac, appear in a polemical work against Jews, Nestorians and Muslims by the West Syrian writer Barsalibi (d. 1171), which exists in a manuscript now in the John Rylands University Library in Manchester, and in another in the Harvard University Semitic Museum. It is doubtful if a complete Syriac translation ever existed.

In the Bhopal State Library is to be found a Kur'ân in classical Armenian, translated from the Latin by Stephanos of Ilov, a monk of Echmiadzin. This MS., in a "simply perfect calligraphy", lacks title-page and date but is thought to be of the first half of the 17th century. A printed translation, with a life of Muhammad, by Leron Larcin¹, made from the French versions of Savary and Kasimirci, was published in Istanbul (pt. 3 in 1912).

A Georgian version (Tiflis 1906) is in the Wardrop Collection in the Bodleian Library.

Bibliography: M. M. Weinstein, *A Hebrew Qur'ân manuscript, in Studies in bibliography and booklore* (Cincinnati), x (1971-2), 19-43; A. Mingano, *An ancient Syriac translation of the Qur'ân*, in *Bull. John Rylands Libr.*, ix (1925), 288-295, and 1926; J. Rendel Harris, *The new text of the Qur'ân*, *ibid.*, x (1926), 219-22; Mesrob J. Seth, *A manuscript Koran in Classical Armenian*, in *JASB*, N.S. xix (1919), 291-4.

6. African languages. There are three trans-

lations of the Kur'ân into Swahili: Christian, Ahmadi and Sunnî Shîitî. The earliest, made by Godfrey Dala, a missionary with the Universities Mission for Central Africa, was published by the S.P.C.K. in London in 1923. It contains over 700 *maslaha* (explanatory comments or notes) by Dale or his colleague, G. W. Broomfield.

The Ahmadi version (Nairobi 1953, 1971) was made by Shaykh Mubarak Ahmadi, chief missionary of the Ahmadiyya Muslim Mission in East Africa, while the Sunnî Shîitî version, by Shaykh 'Abd Allah Şâib al-Fârîs, was published in fascicles between 1956 and 1962 at Zanzibar, in a one-volume edition in Bangalore (1949), and by the Islamic Foundation at Nairobi in 1956.

Other African-language versions exist in Yoruba (Rev. M. S. Cote, Lagos 1924), Ganda (Uganda Ahmadiyya Muslim Mission, 1965) and Amharic (Artistic Press, Addis Ababa, 1961). Possible versions in Berber are discussed by Henri Basset, see *Bibl.*

Bibliography: H. Basset, *Essai sur la littérature des Berbères*, Algiers 1920, 63-4; G. Dale, *A Swahili translation of the Koran*, in *MW*, xiv (1924), 5-9; V. Noutell, *Un Coran ahmadi en Swahili*, in *Bull. IFAN*, xxix, B (1967), 479-95; J. D. Holway, *The Qur'ân in Swahili: three translations*, in *MW*, lxi (1971), 202-20.

7. European languages. The Latin paraphrase made by Robert of Ketton at the behest of Peter the Venerable, abbot of Cluny, and completed in 1143, exists in the autograph of the translator in the Bibliothèque de l'Arsenal in Paris. Robert is said to have been "always liable to heighten or exaggerate a harmless text to give it a nasty or incipient sting, or to prefer an improbable but unpleasant interpretation of the meaning to a likely but normal and decent one" (N. Daniel, *Islam and the West, the making of an image*, Edinburgh 1960, see Index, s.v. Ketton). The work of Robert formed the basis for several mediaeval versions, but was apparently unknown to another early translator, Marc of Toledo. It was recopied in the 17th century by Dominicus Garmanus, whose work exists in Montpellier, the Escorial and elsewhere, and was published in the Cluniae corpus, together with various other works of Christian propaganda, by Theodor Bibliander (Buchmann) in three editions at Basel in 1543, and one at Zürich in 1550 containing a preface by Martin Luther.

The first translation in a modern European language was the Italian version of Andrea Arrivabene, published in 1547. Though its author claims that it is made directly from the Arabic, it is clearly a translation or paraphrase of Robert of Ketton's text as published by Bibliander. Arrivabene's version was used for the first German translation made by Solomon Schweigger, preacher at the Frauenkirche in Nürnberg, which in turn formed the basis of the first Dutch translation, made anonymously and issued in 1641.

The first French version by André du Ryer, "Seigneur de la Garde Mazarin", came out in a great many editions between 1647 and 1775. All editions contain a "summary of the religion of the Turks" and other documents. This gave rise to the first Koran in English by Alexander Ross, and also fathered versions in Dutch (by Glazemaker), German (Lange) and Russian (Postnikov and Vervovkin).

The second Latin version was made directly from the Arabic text by Ludovico Marracci (or Marracco), published first in 1696 and secondly, with additions and annotations, by Reineccius in 1721. It was translated into German by Nerretzer.

The 18th century brought translations made directly from an Arabic original by Sale into English (first published in 1734), Savary (French, 1751) and Boysen (German, 1773). Sale's version was in vogue in the English-speaking world for nearly two centuries. His renowned preliminary discourse, based, according to Nallino, on Marracci and Edward Pococke senior, was translated into several European languages. It was even translated into Arabic by Protestant missionaries in Egypt.

Savary's version was, according to Chauvin, evidently made from the Latin of Marracci; it bears the distinction of having been published in Mecca in A.H. 1265 (or so the title-page of one edition states), Kasimireki, whose translation has also had a long run, and indeed like that of Savary, is still being republished in our own time, was requested by Pauthier to revise Savary. He preferred, however, to make a new translation directly from the Arabic while consulting the works of Marracci and Sale.

Throughout the 19th century, the translations were normally made without remove from the Arabic. In the 20th century, the first English versions made by Muslims appear, and the Ahmadiyya movement began to issue the Kur'ān text with translations into European and even African languages. In recent times translations have been made by many of the most prominent Arabists and Islamic scholars into all the main languages of Europe, undeterred by the dictum of A. Fischer that only second or third-grade scholars dared to undertake this task.

Conspectus of European Language Versions:

- Afrikaans. Anon. 1950. M. A. Baker, 1962.

AL-KURĀNĪ, ISRĀHĪM B. AL-SHAHRĀZŪKĪ AL-HASAN SHAHRĀNĪ, AL-MADANĪ (1023-1101/1015-90), scholar and mystic, born in Shahrāzūr in the mountains of Kurdistan on the frontiers of Persia. He studied first in Turkey, then in Persia, 'Irak, Syria and Egypt before settling in Medina. In one of his works, *Masālik al-abrār ilā ḥadīth al-nabī al-muḥḥid* (Ms. Dār al-Kutub, Cairo, Ta'rif li. 35-6), he refers to a period of 3 months at the Ashar in 1061/1050, where he studied with Shaykh Nūr al-Dīn 'Alī b. 'Alī al-Shahrāmānī, *Imām* of the Ashar until 1087/1077, the whole *Taysir fi 'l-birār al-sāb'*

attributed to al-Kurtubī, and with Ṣayyidh 'Abd al-Rahmān Shihābī al-Yamānī the *Tayyibāt al-nuṣṣ* fi 'l-karāfāt al-ṣaḡīr al-Djazārī up to Sūra IV, 21, *fa-hayfa idhā dūnd min hālli ummatin bi-ṣṣāhidin*, after which he travelled to Baghdād where he spent a year and a half. He was a member of several *ṣuḥūf*, the most important among them being the *Nakṣḥ bandiyya*. In Medina, he was a student of al-Rushdī and succeeded him as head of his *ṣuḥūf* on the former's death in 1071/1661.

He was a prolific author in various of the Islamic disciplines, and wrote on *fiqh*, *taḥfīd* and *taḥawwuf*. He was one of the last great exponents of the school of Ibn 'Arabī, and is of particular interest because of his use of the techniques of scholastic theology in his *Idhāf al-ghābi bi-ḡarīb al-ṭibā'a al-murāsala idhā 'l-nabī* (edition in preparation) in order to explain and defend the monistic tradition of Ibn 'Arabī. Yet despite his commitment to the Ibn 'Arabī tradition, he was by nature a conciliator, arguing that it was preferable to reconcile two opposing points of view than to choose one of them or the other. This did not save him from condemnation by the followers of al-Sanūsī in Fās for his Kadariyya leanings on the question of *kaṣb*, and for Mu'tazilī influence in his views on the material character of non-being as well as for his views on the faith of Pharaoh, and his assertion of the historicity of and explanation of the so-called "Satanic verses" allegedly interpolated into *Kur'ān*, LIII, 21.

Other Moroccans, however, thought highly of him and of his humility and learning. He was esteemed by foreign students in the Ḥajjās and was well-known among Indian scholars. He had an important influence on the development of Islam in the region now known as Indonesia because of his special relationship with the Achehnese 'Abd al-Ra'ūf of Singkel [q.v.] and with succeeding generations of Javan students referred to in the *Fawā'id al-ṣābiḥ wa-nāṣiḥ al-saḥar* of Muṣṭafā al-Hamwī (Ms. Dār al-Kutub, Ta'riḫ 1093, ff. 166-7). His association with 'Abd al-Ra'ūf was particularly close. They were friends in Medina, they corresponded across the Indian Ocean for thirty years after 'Abd al-Ra'ūf returned to Aceh in 1071/1661, and 'Abd al-Ra'ūf made renderings of some of his works in Malay.

The number of works attributed to him ranges from forty-two (Broekelmann, s.v.) to over a hundred, only two of which have been published, sc. *al-Lum'a al-saniya* and *al-Amam li-ḥāṣ al-himam* (see *Bibl.*). The former is a brief treatise on the "Satanic verses", for which some of the Moroccans condemned him; the latter is a most interesting and important work, setting out in detail his intellectual credentials as a teacher.

KURĀNĪ, KURĀNĪ, SHAMS AL-DĪN [see GURĀNĪ]. **KURAYBIYYA** or, more commonly, **KARIMBIYYA** is the name of a subset of the *Kaysāniyya* [q.v.] derived from its otherwise unknown leader Abū, more rarely Ibn Karīb (or Kurayb, Karnab) al-Daurī.

The hagiographical sources are agreed that Abū Karīb denied the death of Muḡammad b. al-Ḥanafiyya, the *Imām* and *Mahdī* of the *Kaysāniyya*. It is thus evident that he was active immediately after the death of Ibn al-Ḥanafiyya in 81/700 and probably played a major rôle in promoting Messianic ideas about him among the *Kaysāniyya*. The sources disagree, however, in regard to other points of his teaching. The Mu'tazilī and Sunnī sources attribute to him the belief that Muḡammad b. al-Ḥanafiyya was alive hidden in the mountains of Raḡwā near Medina, guarded by a lion on his right and a leopard on his left and provided with food in the morning and the evening, until the time of his reappearance. Some of Abū Karīb's followers held that Ibn al-Ḥanafiyya was punished by God with confinement in the ḡabal Raḡwā because of his voluntary submission to the caliph 'Abd al-Malik. In the account of these sources, Abū Karīb appears as the founder of what became the mainstream of the *Kaysāniyya* expecting the return of Muḡammad b. al-Ḥanafiyya, and whose views were later expressed in the poetry of *Kuḡhayyur* [q.v.] and al-Sayyid al-Ḥimyarī [q.v.].

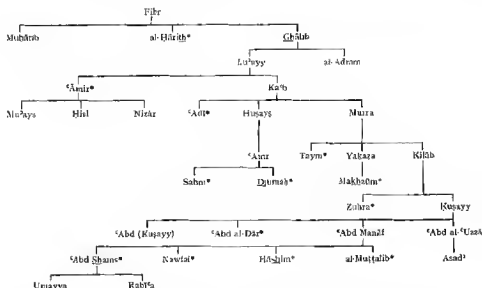

According to the *Shī'ī* sources, on the other hand, Abū Karīb and his followers asserted that the place where Muḡammad b. al-Ḥanafiyya was concealed could not be known and they were distinct from those who believed that he was hiding in the mountains of Raḡwā. They maintained that 'Alī had named him the *Mahdī*. Abū Ḥātim al-Rāzī adds to this that Abū Karīb considered Ibn al-Ḥanafiyya the immediate successor of 'Alī in the imāmate and opposed those who upheld the imāmate of al-Ḥasan and al-Ḥusayn before him. This view was in conflict with the position of the majority of the *Kaysāniyya*, expressed in verses by *Kuḡhayyur*, that the three sons of 'Alī were consecutively *Imāms* and al-Mahdī, representing the Mu'tazilī account, expressly states that Abū Karīb (Ibn Karnab) considered al-Ḥasan as the *Imām* after 'Alī. According to al-Nawbakḡhī, the extremist *Shī'ī* Ḥamza b. 'Umāra al-Barbādī of Medina was originally a follower of Abū (Ibn) Karīb, and among Ḥamza's early supporters in Kūfa were Bayān b. Sam'ān [q.v.] and Sā'id al-Mahdī. The *Karibiyya* and all its extremist offshoots claimed that they would return to life at the time of the reappearance of Muḡammad b. al-Ḥanafiyya. According to the account of the Mu'tazilī Abū 'l-Kāsim al-Balkḡhī, on the other hand, the doctrine of return (*raḡ'ā*) was first taught by Ḥayyān al-Sarrāḡī when, in contrast to Abū Karīb, believed that Muḡammad b. al-Ḥanafiyya had died and would return to life. While there is no external evidence supporting either of the two groups of sources, the *Shī'ī* sources, providing more specific details, appear to be generally better informed.

KURAYSH, the tribe inhabiting Mecca in the time of Muhammad and to which he belonged; the name, which may be a nickname, is mostly (e.g. Ibn Hisham, 6r) said to come from *tabarrugh*, "a coming together, association"; but it is also possible (cf. Tabari, i, 1104) that it is the diminutive of *kurah*, "shark", and it could then be a totemic name like Kalb, etc. (A man called Kuraysh, other than Fihir, is mentioned in *Nasab Kuraysh*, 127-9.) The tribe is taken to consist of the descendants of Fihir, and he himself is sometimes spoken of as Kuraysh; but the name is mostly used only of the tribe, which is reckoned among the "northern Arabs" (cf. *Annals* and *al-'Arab*, *Djazarat*, vi, p. 544b). The ancestry of Fihir is given as: b. Malik b. al-Nadr b. Kinana b. Khuzayma b. Mudrik b. Ilyas b. Mudar b. Nizar b. Ma'add b. 'Adnan. The following table shows the main subdivisions of Kuraysh (for a fuller version, cf. Watt, *Muhammad at Mecca*, 71; an asterisk indicates those commonly spoken of as "clans" in Muhammad's time).

noted with it remained in the hands of the tribe of Khuzā'a. There was probably little, if any, permanent settlement at Mecca at this period. The descendants of Fihir lived in scattered groups among their relatives of Kinana. A change came about through Kinqayy (q.v.), in the sixth generation from Fihir. He collected together the scattered groups of his kinsmen of Kuraysh (and this may be the occasion of their receiving the name), and, with help from certain men of Kinana and Qudā'a (normally resident in Syria), he wrested the possession of the sanctuary from Khuzā'a and became virtual ruler of Mecca. He is also said to have assigned quarters of Mecca to the various groups of Kuraysh; those in the area round the Ka'ba were known as the Kuraysh of the Bityāb, and included all the descendants of Ka'ba b. Lu'ayy, and perhaps some others, while those on the outskirts were the Kuraysh of al-Zawahir. In so far as this assignment of quarters implied permanent settlement, it must have been made possible by the development of trade. Certainly by 600 A.D. the leading men of Kuraysh were prosperous merchants who had obtained something like a monopoly of the trade between the Indian Ocean and East Africa on the one hand and the Mediterranean on the other. They organised caravans which went to the Yaman in winter and to Gaza and Damascus in summer, and they were involved in trading and other activities along these routes. Victory in the war of the Fijār (q.v.) against Hawāzin and Thak'if brought the routes of the Najd under Kuraysh. In particular, they gained control of the trade of the town of al-Ta'if,

Fihir is said to have been the leader of men of Kinana, Khuzayma and other tribes in fighting to defend the Ka'ba against an attack by Yamanī tribes, but the sanctuary and various privileges con-

which for a time had been a rival. Since al-Ta'if (q.v.) was much higher and cooler than Mecca, many Kuraysh acquired estates there. They had also stations in other parts of Arabia. The Kuraysh

became renowned for their *ḥilm* (p.v.) 'steadiness' or 'absence of botheadiness', and in practice this meant that they placed business interests first and maintained a measure of unity despite their rivalries.

On the death of Kurayy (probably in the first half of the 6th century A.D.), his powers and rights passed to 'Abd al-Dār, but after a time he was challenged by 'Abd Manāf, and this led to a division of Kuraysh into two rival groups. 'Abd al-Dār was supported by Muḥrīm, Sahm, ʿUjmāh and 'Adī, and these were known as the Aḥlāf or Confederates. The opposing party, known as the Muṭayyahūn, the Perfumed, consisted of 'Abd Manāf, Asad, Zuhra, Taym and al-Ḥārith b. Fihir. It is impossible to know how long these groups remained effective. There is a reference to Muṭayyahūn in a letter from Muḥammad to some men of Khuzāfa written in 8 A.H. (al-Wāḥidī, ed. Marsden Jones, ii, 750). Long before this, however, about 605 A.D. (Muḥammad, 46), the Muṭayyahūn had been replaced by a new confederacy, the Ḥill al-Fuḍūl (p.v.) (exact meaning uncertain), which consisted of Ḥāshim, al-Muṭṭalib, Asad, Zuhra, Taym and perhaps al-Ḥārith b. Fihir. The essential change here is that 'Abd Manāf has split into four parts, of whom two, Ḥāshim and al-Muṭṭalib, have remained with their former allies, while the other two, 'Abd Shams and Nawfal, have abandoned them. This may mean that 'Abd Shams and Nawfal had become strong through commercial success. It is clear that 'Abd Shams, though not fully identified with the Aḥlāf, had developed close business relations with them. In all the stories of the pre-Islamic period there is admittedly a legendary element, but the main outline of events appears to be roughly correct, even if most of the dating is uncertain.

A man did not cease to belong to his clan when he became a Muslim, and in many of the events of Muḥammad's career, and of the period up to 132/750, the influence of old rivalries or alliances can be seen. As late as the reign of Nuʿmān I, an appeal against injustice was made by al-Ḥusayn b. 'Alī (of Ḥāshim) to the Ḥill al-Fuḍūl, and was given a whole-hearted response from men of Taym, Zuhra and Asad (Ibn Ḥishām, 36 f.). The leaders of the revolt defeated at the Battle of the Camel in 656 were from Taym and Asad. Of course, there were changes in the relative power and wealth of the clans. The clan of 'Abd Shams rose to pre-eminence through the Umayyad dynasty, since Umayya was a son of 'Abd Shams; and the early Shi'ites too then the 'Abbasids represented their old rivals, Ḥāshim. Under the first four caliphs and the Umayyads, men of Kuraysh played a very important role in the organisation and administration of the empire, and without their skills in these fields the empire would probably not have endured.

On the death of Muḥammad, the Anṣār wanted one of them to be head of the community of Muslims, but they were persuaded by 'Umar to accept Abū Bakr as *khālifā*, on the grounds that only a Kurayshī could hold together the federation. There are indications that the Anṣār continued to feel strongly about this point for some decades (cf. Watt in *MW*, xiii (1952), 161, 164). A *ḥadīth* came to be generally accepted, however, that 'the *imāms* are from Kuraysh' (e.g. Ibn Ḥanbal, *Musnad*, iii, 129, 183; iv, 422; cf. I. W. Arnold, *The caliphate*, Oxford 1924, 47). The Qur'ānic verse IX, 100/101 was also quoted in support. When the Sunnī theory of the caliphate was formulated, it was generally insisted that the caliph or *imām* should be from Kuraysh (e.g. Ibn Abi Ya'īṣ, *Tabaṭṭāl al-Imānīn*, Cairo 1952, i, 26, 34 f. ii, 21; al-

Mawardi, *Akhḥaw*, 5; Ibn Khaldūn, *Muqaddima*, i, 350-4; Eng. tr., i, 396-401). A few scholars, however (e.g. Dīr b. 'Amr), held otherwise, and most of the Ḥawārī considered that a pious and upright man of any origin could be *imām* (al-Aḥḥārī, *Makāṭib*, 461 f.; al-Bīḥārī, *Uṣūl al-dīn*, Istanbul 1908, 275-7; etc.). This matter caused a little difficulty in more recent times when the caliphate was claimed by Mughal emperors and Ottoman sultans, but most 'ulama' found a way of circumventing this difficulty (Arnold, *Caliphate*, 156, 175).

The geographer al-Ḥamḍālī (d. 334/945) mentions small groups of Kuraysh in various parts of Arabia, possibly remnants of trading stations (ed. D. H. Müller, 119, 122, 165, 194, 235 f.); while al-Ya'qūbī (d. 844/897) reports a group of Kuraysh near Ṣayda³ in the Lebanon (*Bulāḥin*, Leiden 1892, 327). At the present day there are many Kuraysh living as Bedouin in the neighbourhood of Mecca, while in Mecca itself the key of the Ka'ba is held by a clan of Kuraysh called *Shayba*.

The *nisba* is Kurayshī, but this was not much used in the heartlands of the caliphate in the early centuries; if any *nisba* was used it was mostly that from a clan. After a time, some men seem to have prided themselves in descent from Kuraysh. The following are some examples: one in 'Irāq, 7/13th century; six in Egypt and Syria, 8/14th, 9/15th, 12/17th, 12/18th centuries; two in North Africa, 7/13th and 9/15th centuries (*GAZ*, ii, 110, 111, 112, 449; *GAZ* S, i, 298 foot, 537, No. 20, 609; ii, 58; Ibn Khaldūn, Eng. tr., iii, 126n). In Pakistan, etc. it is common at the present time in the form *Qureshī*.

KURAYSH a. **BADRĀN** [see 'UḤAYY, Banū —] **KURAYYĀT AL-MILĪH**, a group of villages in the extreme northwest of Sa'ūdī Arabia, in the northern section of the NW-SE depression of Wādī al-Sirhān (approx. long. 37° 40' E. and lat. 31° 25' N.). The largest settlements, (though none are larger than 2,000 inhabitants) are Iṭhra, al-Karkar, Nawb, Ḥaṭṭī, Kāf, and an-Nabk, which is the administrative centre and residence of the local *Amīr*, who now reports to Mecca, but at the time of Euting's visit (1302/1885) reported to the *Amīr* of Ḥā'il. Until the consolidation of the House of Ibn Sa'ūd's power, the villages were frequently under dispute between the Shammār and Ruwālā Bedouins, to whose leaders the inhabitants of Kurayyāt al-Milḥ had to pay tribute. Aside from some meagre oasis agriculture (chiefly dates, alfalfa, and a little grain in good years), the principal income was derived from the caravan trade, particularly during the pilgrimage season, but most importantly from the area's extensive salt pans, which have been intensively mined for several centuries; hence its collective name of 'Salt Villages'. The salt was traded south-eastwards to al-Jawf, Sakāka, and Ḥā'il, and northwards to Jordan and Syria. By the mid-20th century the drilling of deep water wells and the spread of industrialisation had allowed a greater diversification of agriculture and employment for

cash wages, so that the villages were much less dependent on trade and salt production.

Reputedly Nabataean, but certainly pre-Islamic ruins, pottery, and inscriptions attest to the antiquity of settled life in this area.

Euting, *Tagbuch einer Reise in Inner-Arabien*, I, Leipzig 1896; Department of Antiquities and Museums, Ministry of Education, Kingdom of Saudi Arabia, *An introduction to Saudi Arabian antiquities*, al-Riyāḍ 1395/1975. (F. S. VINAT)

KURAYYA, BANU, one of the three main Jewish tribes of Yathrib (Medina), with lands towards the south-east of the oasis. As in the case of the other Jewish groups, it is not known whether they were descended from refugees of Hebrew stock or from Arabs who had adopted Judaism. They adhered firmly to the Jewish religion, but at the same time had adopted many Arab practices and had intermarried with Arabs. According to a genealogy given by al-Sambhūlī, Kurayya, Hādī and 'Amr were sons of al-Khazraj b. al-Ṣaḥbī, who was descended from Aaron (though only eight intermediate names are given). The related tribe of al-Naḍir was said to be al-Naḍir b. al-Nabbāḥ b. al-Khazraj b. al-Ṣaḥbī. Kurayya and al-Naḍir, with the related groups, after their settlement in Yathrib developed agriculture (palms and cereals) and dominated politically the previous Arab inhabitants. The Jews lost their dominant position, however, after the coming of al-Aws and al-Khazraj, though they appear to have retained a measure of independence. Both Kurayya and al-Naḍir supported al-Aws at the battle of Bu'āth [q.v.]. At the time of the Hijra, the two most important men of Kurayya appear to have been al-Zabir b. Bāṭib b. Waḥb and Ka'b b. Asad; each of these had an *sham* or fort. These and fifteen others are named as hostile to Muhammad (Ibn Hishām, 33a). Kurayya are said to have had two assemblies (*magālis*), those of Banū Ka'b b. Kurayya and Banū 'Amr b. Kurayya (*ibid.*, 691 foot, 711).

It is reported that at the Hijra, Ka'b b. Asad, acting on behalf of Kurayya, made an agreement [*waḥd*] with Muhammad, and that later during the siege of Medina (the *ḥandaq*) he was persuaded by Huyayy b. Akhṭab of al-Naḍir to break it, and the actual document was torn up by Huyayy (Ibn Hishām, 33a, 624; al-Wakīdī, 436). This report is open to grave doubt, however. Ibn Ishāq does not name his sources. Al-Wakīdī has two: one is a grandson of Ka'b b. Mālik of Salāma, a clan hostile to the Jews; and the other is Muhammad b. Ka'b (d. 117-20/735-8), the son of a boy of Kurayya, who was sold as a slave when they surrendered and later became a Muslim. Both these sources may be suspected of bias against Kurayya; and it is therefore probable that there was no special agreement between Muhammad and Kurayya. It is virtually certain, however, that Muhammad had a general agreement with the Jews that they were not to support an enemy against him (al-Wakīdī, 126); and something like this was probably implicit in his alliance with the Arab clans of Medina, since the Jewish clans were allied to one or other of the Arab clans. The Constitution of Medina as given by Ibn Hishām (34-4) does not mention Kurayya or al-Naḍir or *Kaynukā'* by name; but its present form almost certainly dates from after the execution of the men of Kurayya, and these Jewish groups were probably mentioned in an earlier version.

The question of an agreement affects the moral judgment on Muhammad's treatment of Kurayya. During the siege of Medina (Dhu 'l-Ka'da 5/April 627), Muhammad became anxious about their conduct and sent some of the leading Muslims to talk to them; the result was disquieting. Though Kurayya does not appear to have committed any overt hostile act, they had probably been involved in negotiations with the enemy. On this ground, as soon as the besiegers withdrew, Muhammad attacked Kurayya and besieged them in their forts (*ḥiṣn*) for twenty-five nights. After negotiations they agreed to surrender unconditionally. Sa'd b. Mu'adh, chief of the clan of 'Abd al-Aghhal, with whom they had an alliance, was brought to give judgement on them. He decreed that all the men (who numbered between 600 and 900) were to be put to death and all the women and children sold as slaves. This decree was carried out (recently, W. N. Arafat in *JRAS* [1976], 100-7, has maintained that by no means all the adult males were killed, but his argument is not entirely convincing). Three young men of the clan of Hādī, who had been with Kurayya in the strongholds, slipped out before the surrender and professed Islam. One or two other also escaped. As part of his share of the booty, Muhammad received one of the women, Rayḥāna, and married her as a concubine, though she is said to have become a Muslim. Muhammad b. Ka'b al-Kurayī (mentioned above) gained distinction as a scholar.

KURBA [see KARĀMA]

KURBĀN, sacrifice, sacrificial victim. The word goes back to the Hebrew *korban*, perhaps through the intermediary of the Aramaic (cf. Nungesser, *Syriac influence on the style of the Kurān*, in *Bulletin of the John Rylands Library*, xi [1927], 85; S. Fränkel, *De vocabulis in ... corano peraginis*, 20). The language of the Kurān, as is well known, shows a preference for religious technical terms ending in *-ān* and some of them are not always used with their original significations. This is true of *korban*, which occurs three times in the Kurān. In *sūra* III, 179 and V, 30 it obviously means sacrifice. In *sūra* XLVI, 27, however, we read: "Did these help them, whom they had taken for *kurbān* as gods to the exclusion of Allāh?" Here the word must be more or less synonymous with "gods". Probably it has a meaning which is connected with the Arabic *k-r-b* (see below); the commentators take the same view and the word is explained as "mediators" [see SHAFI'Ā].

The word hardly seems to occur in classical *ḥadīth*. The *Lisān* mentions two traditions which are striking enough: "The characteristic of the community (i.e. the Muslims) lies in the fact that their *kurbān* is their blood", i.e. that instead of sacrifice they have offered the blood of their martyrs. And the other: "The *ḥiṣn* is the sacrifice of every pious man". We may suppose there are apologetic tendencies in both traditions.

The term also came to be applied in Muslim ritual

to the killing of an animal on the 10th *Dhu 'l-Hijja* and the whole celebration on this and the following nights is called '*Id al-Kurbān*' (cf. '*Id al-ayyā*') in Turkish-speaking countries *Kurbān-bayram* (cf. *BOYRAM*).

In Christian-Arabic the word means the eucharist; cf. G. Graf, *Verzeichnis arabischer kirchlicher Termini* (= CSCO, 147), Louvain 1934: the consecrated elements, especially the host; '*Id al-Kurbān*' = feast of Corpus Christi.

In conclusion it should be pointed out that there seems to be a genuine Arabic word *kurbān*, plur. *kurābīn*, which means the courtiers and councillors in immediate attendance on a king, the word probably comes directly from *k-r-b* 'to be near'.

Bibliography: Given in the article.

(A. J. WENSINK)

KURBUKA, properly KOR-BUGKA (T. "stout-hearted bull, stallion") ARD SA'UD KIRWĀ AL-DAWLĀ, Turkish commander of the Seljuks period and lord of al-Mawṣil.

In the war waged by Tuluḡ b. Alp Arslan, Berk-yaruḡ's uncle [q.v.], against the two rebellious governors Aḡ Sonḡor and Būzān, which ended with the capture and execution of these two, the *amir* Kurbuka, who had been sent to their help by Berk-yaruḡ, was also taken prisoner. After Tutuḡ had fallen in *Ṣafar* 433/February 1093 (cf. *BARUKĀRŪḲ*), Kurbuka was released by his son Rūdāwīn, and with his brother Aitūntaḡh collected a band of adventurers and occupied Harra. Muḥammad b. Muslim b. Kūwayḡ lord of Nāṣibīn then applied to him for help against his brother 'Alī, who had been appointed governor of al-Mawṣil by Tutuḡ; Kurbuka made an alliance with Muḥammad, but had him murdered after he had seized Nisibīn and set out against al-Mawṣil, which 'Alī had to surrender after a long siege (*Dhu 'l-Ka'da* 489/Oct.-Nov. 1096). After the capture of al-Mawṣil he disposed of his troublesome brother Aitūntaḡh and occupied al-Rābā. In 491/1098 Berk-yaruḡ sent him with a large army to retake Antākiya [q.v.], which had just been conquered by the Christians. Edessa, which had also just been taken from the Muslims, was besieged by Kurbuka on the way, but he had to give up the siege and soon afterwards appeared before Antākiya. When the Christians made a bold sortie against the besiegers, he inflicted a disastrous defeat on them in spite of their superior numbers; Kurbuka's own conduct is said to have contributed towards the disaster, as his arrogance irritated his commanders so that they only awaited a favourable opportunity to abandon him. In the battle between Berk-yaruḡ and his brother Muḥammad in *Rajab* 492/May-June 1100, which ended in the defeat of the former, Kurbuka commanded Berk-yaruḡ's left wing. In the following year he was sent to *Āḡharbāyḡdān*. Here he conquered the greater part of the country, but when he was nearing the town of *Kūḡay* or *Kūḡol* [q.v.], he fell ill and could not continue the campaign. He died in *Dhu 'l-Ka'da* 492/Aug.-Sept. 1102, after appointing Sonḡorḡa his successor.

(K. V. ZETTERSTERN)

KURCĪ (from the Mongolian *kurci*, "an archer", from *kor*, "quiver"; *Tadhkirat al-mulūk*, translated and explained by V. Minorsky, London 1943, 32,

n. 2), a military term with a variety of different meanings: 'he who bears arms, the sword, chief huntsman' (Pavet de Courteille, *Desl. pers. or.*, 425; 'armourer, sword-cutter, troop of cavalry, captain of the watch; leader of a patrol, commandant of a fort, gendarmerie in charge of a city's security' (Sulaymān Bulḡārī, *Lughat-i Caghātibī* u *Turki 'Oḡmānī*, Istanbul 1295/1880-1, 233), 'sentry, sentinel, guard, inspector' (Vambery, *Caghātibīche Sprachstudien*, 316).

In Safawid usage, *kūrḡi* denoted a member of the Turcoman tribal cavalry which formed the basis of Safawid military power, and in this sense was therefore synonymous with *kūll-bāḡh* [q.v.]. The *kūrḡi* were clearly distinguished from non-*kūll-bāḡh* units, which were termed *laghar-i umarā'*; *sipāhīyān*; etc. *Kūrḡi* with special functions were denoted by special titles (see index to Minorsky, *op. cit.*, under *qūrḡi*; for additional titles see index to Iskandar Beg Munshī, *Tārīkh-i 'Ālam-ārā-yi 'Abbāsī*, ii, Tehran 1335/1956, 1219-20); some of these titles [e.g. *kūrḡi-yi tarkaḡh*, '*kūrḡi* of the quiver'; *kūrḡi-yi ḡamḡir*, '*kūrḡi* of the sword'; *kūrḡi-yi ār-u-hamān*, '*kūrḡi* of the bow and arrow'], appear to denote ranks, but their relative importance is not certain. *Kūrḡi* constituted the royal bodyguard, in this capacity sometimes being specially designated *kūrḡiyān-i ḡhāḡa-yi ḡhāḡi* (*Tārīkh-i 'Ālam-ārā-yi 'Abbāsī*, i, 99), or *kūrḡiyān-i ḡpām-i ḡhāḡi* (*ibid.*, i, 47).

The commander of the *kūrḡi* was called *kūrḡibāḡh*. This office is first mentioned in the Safawid chronicles in 912/1505-6, and seems from the first to have been distinct from the office of the *amir al-umamā'* (R. M. Savory, *The principal offices of the Safawid state during the reign of Ismā'īl I* [1907-30] 1301-24, in *BSOAS*, xliii [1960], 101). At first overshadowed by the *amir al-umamā'*, the *kūrḡibāḡh* became one of the most important officers of state under Tahmāsp, Ismā'īl II and Sultān Muḥammad Shāh [q.v.], wielding great authority in both military and political affairs. It is noteworthy that for a period of forty years (ca. 955-957/1548-87), nearly all the *kūrḡibāḡh* were drawn from the Aḡḡr tribe. With the accession of 'Abbās I [q.v.], the importance of the *kūrḡibāḡh* declined *pari passu* with that of the *kūrḡi* themselves, but he still 'carried great weight in public affairs' (Minorsky, *op. cit.*, 127).

Bibliography: In addition to the references in the text, see R. M. Savory, *The principal offices of the Safawid state during the reign of Tahmāsp I* (1930-34/1544-76), in *BSOAS*, xxiv (1961), 79; G. Doerrier, *Türkische und Mongolische Elemente im Neupersischen. I. Mongolische Elemente im Neupersischen*, Wiesbaden 1943, 427-32, contains an excellent discussion of the various meanings of *kūr* and *kūrḡi*, with full textual references.

(R. M. SAVORY)

KURD 'ALĪ, MUHAMMAD FARID, Syrian journalist, scholar and man of letters, was born in Damascus in 1876, of a father of Kurdish origin and a Cerkess mother. From an early age, he showed an interest in nature and in books, and it was reading which, combined with his innate curiosity and gifts of observation, made the greatest contribution to his intellectual development. Already bilingual in Turkish and Arabic, he learnt French from the Lazarist Fathers of Damascus, and this enabled him to acquire, thanks to assiduous reading of books and periodicals a knowledge, extensive for his time, of Western civilisation, and in particular, of French literature. He perfected his Arabic-Islamic education as a pupil of some distinguished masters: Tāḡir aḡ

Dhazîrî, Muḥammad Mubārak and Salīm al-Bukhārî. In 1897 he joined the staff of the first Arabic newspaper of Damascus, *al-Shām*, and at the same time collaborated in the Egyptian review *al-Muḥtaṣaf*. He also attempted to translate some French novels into Arabic. Four years later he decided to visit Paris, but while passing through Cairo he was detained there by the friends whom he had made by his collaboration in *al-Muḥtaṣaf* and he thus had the opportunity of becoming acquainted with the celebrities of the age, most notably with Muḥammad 'Abduh (q.v.), whose lectures at al-Azhar he attended. Obligated to leave Egypt because of an epidemic, Kurd 'All returned to Damascus, but the atmosphere there seemed to him so oppressive that he soon returned to Cairo, where he stayed until 1908; during this second stay, he collaborated in editing *al-Zākir*, *al-Musawwar*, and *al-Mu'ayyad*, and founded the review *al-Muḥtaṣaf*, a periodical which was always very close to his heart; after three years of publication in Cairo, *al-Muḥtaṣaf* was transferred in 1908 to Damascus and continued to appear for a further six years, until the time when the Ottoman authorities, irritated by Kurd 'All's frankness, forbade its publication.

At the end of 1908, Kurd 'All succeeded in realising the dream which he had first cherished eight years before and, passing this time through Lebanon, went to France and spent a year there; in the course of this visit, for which he had been preparing himself for a long time, he observed the people of the country and their way of life, visited the principal libraries, attended, theatrical performances and took a special interest in the Académie Française. Returning to Damascus via Istanbul, he continued to edit his review and then, at the end of the year 1913, undertook a second journey to Europe; he went first to Italy, where he had the good fortune to install himself in the library of prince Leone Caetani, whose *Annali dell'Islam* had revealed to him a method of working to which the Orient was not yet accustomed; it was here that he assembled much of the documentation which he required for the composition of a definitive history of Syria, the *Khiṭaṭ al-Shām*, a monumental work which is still the most complete study of this vast subject. In 1911, a third journey took him to the countries of western Europe, and it was on his return that he wrote the *Qasr al-Qasr*, a *zihā* (q.v.), published in 1923, based on notes taken in the course of his three journeys and reflections inspired by his observations. Immediately after the Great War, he had been appointed general secretary of the Committee for Public Education and it was in this capacity that he considered the creation of an organisation responsible for purifying and enriching the Arabic language, publishing texts and encouraging the literary and intellectual activity of his country. On 5 June 1919, he obtained authorisation to transform the *Dhazîr al-Ma'arif*, which had been founded a few months earlier, into an Arab Academy (see *MADAMA* 'ULM. 1, Arab countries); he was thus able to put into effect the project of which he had been inspired, ten years previously, by his visit to the Académie Française. The career of Kurd 'All was henceforward inseparable from the activity of his Academy, to which he devoted the greater part of his time and over which he presided until his death, on 2 April 1953; the only intervals in his work with the Academy were his two terms of office as Minister of Public Education and his third journey to Europe.

Kurd 'All was of a witty and playful nature; a

great conversationalist, he loved to joke and play with words, and his style is an accurate reflection of his personality. He left an abundant corpus which included, apart from the thousands of pages of articles published in the review in which he collaborated at the start of his career, in *al-Muḥtaṣaf* and in the *Maḥallat al-Madīna* *al-'Ilm al-'Arabi* (*MMIA*), editions of texts and original works of a historical or literary nature. He was largely responsible for making known the "epistles" of Ibn al-Muḥaffa, of 'Abd al-Hamid, of Ibn al-Mudabbir (q.v.), etc. in his *Rasā'id al-bulagh*, Cairo 1908, 1913, 1946, and he enriched the Arab Academy Publications with the *Strat Ibn Tūlūn* of al-Balawī (1939), the *al-Mustafid min fa'ā'id al-ahqad* of al-Tanūkhī (1946), the *Ta'riḥ al-ḥukamā' al-Islām* of al-Bayhaqī (1946), the *Kiṭāb al-Adab* of Ibn Kutayba (1947), and the *al-Bayyara* of Khayyāṭ (1953).

Among his original works, mention should be made of his contribution to literary history and criticism: *Uṣul al-bayān*, Cairo 1937, and *Kunūṣ al-ahqad*, Damascus 1950. Apart from the *Qasr al-Qasr* of 1923 and the *Khiṭaṭ al-Shām*, Damascus 1925 (6 vols.), his major work, Kurd 'All collected in *al-Kadīm wa 'l-ḥadīṭh*, Cairo 1925, a large number of the articles published in *al-Zākir*, *al-Mu'ayyad* and *al-Muḥtaṣaf* and added an account of his travels in the Hijāz and Palestine. In addition, he pleaded the cause of Arab-Islamic culture in *al-Islām wa 'l-ḥadīṭh al-'arabiyya*, Cairo 1934 (3 vols.), published a critical study of the morals and customs of the Orient in *Aḥkām al-ḥadīṭh*, in Cairo 1946, devoted a monograph to the oasis of Damascus, *Qasr al-Dimashq*, Cairo 1949, and finally published four volumes of memoirs, *Muḥabbat*, Damascus 1948-51.

Bibliography: Apart from the biographical data given at the end of the *Khiṭaṭ al-Shām* and of his *Memoirs*, see Brockelmann, S III, 430-4; S. Dahhān, in *MMIA*, xiv/2, 211-32; Idem, in *Mélanges Vassignou*, I, 379-94; Klem and H. Laoust, *L'œuvre de l'Académie arabe de Damas, 1921-1951*, in *BEO*, xiii (1949-51), 161-219. (CM. PELLAT)

1. — GENERAL INTRODUCTION

The Kurds, an Iranian people of the Near East, live at the junction of more or less isolated Turkey, Shîrî Iran, Arab and Sunnî Iraq and North Syria, and Soviet Transcaucasia. The economic and strategic importance of this land, Kurdistan, is undeniable. Since the end of the First World War, the Kurdish people, like all the rest of their neighbours, have undergone considerable transformations as much in the political order as in the economic, social and cultural domain. Many works have been published, a few in every country, on these different problems. Some excellent general bibliographies exist: F. B. Rostopchin, *Bibliografiya po kurdskoye probleme, in Revol. Postok*, 1933/3-4 (19-20), 292-326, 5 (21), 159-73; O. Vd'kovskiy, *Bibliograficheskii obzor zarubezhnykh kurdskikh pechatnykh izdaniy v XX stolyetii, in Iranskii Yastki*, 1, Moscow-Leningrad 1945, 147-51; M. B. Rudenko, *Opisaniye Kurdsikh rukopisey Leningradskikh sobraniy, in Izdat. Post. Lit.*, Moscow 1962; N. A. Aleksanian, *Bibliografiya k'urdsk' i'ord'skiye Soutie*, Erevan 1962, in Kurdish and Russian; J. S. Muanlian, *Bibliografiya po kurdevdeniyu, in Izdat. Post. Lit.* 1963; C. J. Edmunds, *A bibliography of Southern Kurdish, 1920-1956, in JRCAS*, xxiv (1957), 487-97; Idem, *A bibliography of Southern Kurdish, 1937-1964, in JRCAS*, xxxi (1965), 185-97; D. N. MacKenzie, *A bibliography of Southern Kurdish, 1945-1955, in JRCAS*, xlv (1957), 31-7; E. R. McCaus, *Kurdish language studies, in MEJ* (Summer 1960), 325-35; P. Rondot, *Les Kurdes, le Kurdistan, la question kurde, Essai de bibliographie, in En Terre d'Islam*, 1947/2; A. Benning, *Les Kurdes et la Kurologie en Union soviétique, in Cahiers du Monde russe et soviétique*, ii (April-June 1960), 513-30; M. Mokri, *Kurologie et enseignement de la langue kurde en U.R.S.S., in L'Éthnographie*, 1963, 71-106; Th. Bois, *Bulletin raisonné d'études kurdes, in Machrek*, liv (1964), 527-70; *ISK's Kurdish bibliography*, ed. Silvio van Rooy and Kees Tamboer, Amsterdam 1968, 1, 658 pp. (19350 nos.). cf. review by Th. Bois, in *BIOU*, 1969/3-4, 184-87; Mustafa Ehsed Neriman, *Kufileane kurdî*, Kirkûk 1960.

ii. — THE KURDS AND THEIR COUNTRY: KURDISTÂN

A. The territorial extent of Kurdistan. If the ethnic term "Kurd" is of ancient usage, for it is known since the Arab conquest if one does not wish to go further back (cf. below, *Origines*), it seems that, historically, the name Kurdistan or "land of the Kurds" dates from the time of Sultan Sanjar (d. 552/1157), the last great Seljuqid, who created a province with its capital called Bahâr, to the north-east of Hamadân. This province, situated between Âharbâyyân and Luristân, included the regions of Hamadân, Dinewar, Kirmânshâh and Senna, to the east of the Zagros and to the west of Shahrazûr and

Khurîstân, on the Zab. The whole numbered 16 cantons, enumerated by Hamd Allâh Mustawî (d. 750/1349), in his *Nusbat al-ghulab* (ed. Le Strange, 1908; ed. Tehran 1957, 127). The nominal extent of Kurdistan varied however throughout the centuries. Sharaf al-Dîn, in his *Sharaf-nâme* (1596), does not hesitate to include the Lurs in Kurdistan, in ch. 3 and 4 of his 1st Book, as do all the Arab historians, who include everything in the province they call al-Diyâl [g.n.], cf. V. Barthold, *Isiorko-geograficheskii obzor Irana*, St Petersburg 1903, 138. For his part, the Turkish traveller Evliya Çelebi (d. ca. 1093/1683), in his *Seyûhat-nâme*, iv, 74-5, enumerates the 9 wilâyet which formed Kurdistan in his time: Erzurum, Van, Hakkârî, Diyarbakr, Djézîra, 'Amûdiya, Mawsil, Shahrazûr and Ardâlân, and which required 17 days to traverse.

But the rivalries between the Ottoman sultans and the Shâhs of Persia broke up this unity. In the 17th century the Turkish administration gave no more than 3 limits to the *vilâyet* of Kurdistan: Darsin, Muş and Diyarbakr. In the same way, in Iran in the 16th century, Hamadân and Luristân were detached from Kurdistan and the name was reserved for the region of Ardâlân with Sinne as its capital. Today, Iran is the only country to recognize a province by the name of Kurdistan. Everywhere else, Kurdistan has been banished from the language of the administration and the geographical atlas. In Turkey one speaks of Eastern Anatolia; in Iraq, of the provinces of the north; in Syria, of the province of Djézîra (Ghassemou, 14).

B. The ethnic and geographical extent of Kurdistan. From the above, it is clear that the historical and then political extent of Kurdistan does not coincide with its actual ethnic extent. So the frontiers within each of the countries concerned must be defined more or less approximately.

In Turkey, the Kurds inhabit the whole of the eastern region of the country. According to Trotter (1878), the limit of their extent to the north was the line Divriği—Erzurum—Kars. In the region of Erzurum they are found especially to the east and the south-east. The Kurds also occupy the western slopes of Ararat, the districts of Kağızman and Tuzluca. On the west they extend in a wide belt beyond the course of the Euphrates (Ritter, xi, 144), and, in the region of Sivas, in the districts of Kangîlî and Divriği. Equally, the whole region includes areas to the east and south-east of these limits. Some quite important colonies of Kurds are even found in Cilicia, to the south of Ankara, in Heymana and in the large towns of Istanbul, Ankara and Samsir. In brief, it may be said that if Turkey is at present divided administratively into 67 *il*s or provinces, Turkish Kurdistan numbers at least 17 of them almost totally: in the north-east, the provinces of Erzurum, Erzurum and Kars; in the centre, going from west to east and from north to south, the provinces of Malatya, Tunceli, Elazığ, Bingöl, Muş, Karaköse (Ağrı), then Adıyaman, Diyarbakir, Sirt, Bitlis and Van; finally, the southern provinces of Urfa, Mardin and Çolamerik (Hakkârî). The Kurds of Turkey are also found on the east with their brothers from Iran.

The latter inhabit the north-west of Iran. Firstly in the provinces of Western Âharbâyyân, to the east of Lake Râqâ'îyya (Urmîya), the districts of Maku, Kotor, Shahpur, and to the south of the lake, Mahâbâd (ex-Sabla); in the province of Ardâlân, called the province of Kurdistan, whose capital is Senna or Sanandêj, the districts of Bikan, Saqqiz, Sardasht, Bana, Bâğlar (Garrusi), Meriwan and

Hawramân; in the province of Kirmânshâh, Kasrî Shîrîn. There are furthermore isolated groups of Kurds in Khurân, at Bugnurd and in Fârs and Kirmân, not to mention the numerous Kurds who live in the cities such as Tabriz and the outskirts of Tehran (Brugsch, *Reise*, ii, 496). Much further to the east and outside Iran, an important Kurdish tribe is to be found in Balûcistân.

In 'Irâk, the Kurds occupy the north and north-east of the country in the *lîwâ's* or provinces of Duhoik, recently detached from the province of Mawsil, the *nâhiyyas* or districts of Zêgho, Masuri Dîr, 'Amrîdiyye and 'Akra. Left outside their administration are Singâr and Shaykhân, peopled by the Vazids [q.v.]; the *lîwâ's* of Kirêk, Arbil and Sulaymânî (entirely Kurdish) and, in the *lîwâ'* of Dîr, the *nâhiyyas* of Khânakîn and Mandalî, where they are neighbours of the Kurds of Iran to the west of the Zagros. The Kurds are equally numerous in Baghdâd and Mawsil.

In Syria, they constitute three distinct belts, in the north of the country and to the south of the highway which forms a frontier and where they are in direct contact with their compatriots in Turkey. A belt of 40 km. width, in the Kurd Dâgh; a group (60 x 40 km.), to the east of the Euphrates where the river enters Syria near Dîr; and finally, a belt of 250 km. in length by 30 km. in depth in the *Qadisiya*, between the Khâbûr, a tributary of the Euphrates and the Tigris, with Re's al-'Ayn, Darbîsiyya, 'Amûda, Kamîshlî, Andîvî and Dîr. In this 'duck's beak', the Kurds of 'Irâk and those of Turkey are juxtaposed (Rondot, 80). The Syrian towns of Damascus, Hamât and Aleppo count many thousands of Kurds.

Some still exist in Soviet Transcaucasia. In the Republic of Armenia, 35 villages in the *rayons* of Aparan, Basargoch, Huktemberli, Talin and Esmîrân; in the Republic of Aghârbaïdjân, 25 villages in the *rayons* of Kelbadjân, Latchin and Kubatli (Aristova, 47-8, 64). There are numbers of Kurds living in Erevan, Baku and, in the Republic of Georgia, Tbilisi or Tiflis.

The imprecise limits of the frontiers of Kurdistan hardly allow an exact appreciation of the area. The *Encyclopædia Britannica* estimates the length of Kurdistan at 600 miles and its breadth at 150 miles. The *Kiâsûs al-'Alâm*, Istanbul 1896, which naturally is only concerned with the Kurdish *sulayds* of the Ottoman Empire, sets its length at 900 km. and its breadth between 100 and 200 km. At present, the different provinces of Kurdistan cover around 290,000 km² in Turkey, 125,000 km² in Iran, 65,000 km² in 'Irâk, and 12,000 km² in Syria. The total area of Kurdistan can then be estimated at approximately 392,000 km².

While there are many Kurds who live outside ethnic Kurdistan, there are numerous non-Kurds who live in Kurdistan. In Turkey, there are some Turks everywhere, but also, in the north, some Ossetes and some Tcherkesses, and in the south some predominantly Syrian or Jacobite Christians (Cl. Dauphin, *Situation actuelle des communautés chrétiennes du Tûr 'Abdîn* [Turquie orientale], in *Proche Orient Chrétien*, Jerusalem, xxi/2-3 (1972), 323-7). The Armenians have in fact completely disappeared. In Iran to the west of Lake Rîghîyya and in 'Irâk in the region of Duhoik-Zêgho and Kirêk, some Nestorians and Chaldeans are to be encountered, together with, in the towns, a few rare Armenians. The Jews, at one time relatively numerous, have all emigrated since 1945 (W. J. Fischel, *The Jews of*

Kurdistan a hundred years ago, a traveler's record, in *Jewish Social Studies*, vi [1944], 193-226; I. Ben Zvi, *The exiled and the redeemed host in Assyria*, in *The Jewish Publication Society of America*, Philadelphia 1937). In Kirêk one finds some Turcomans (I. C. Vanly, *Le Kurdistan irakien*, 342-3).

C. Numerical extent of the Kurds. As the Kurds are not ordinarily registered as such in the censuses of the population carried out by the different states where the Kurds are resident, it is impossible to have exact statistics of the total population of Kurdistan. Besides, statistics require delicate handling, and they risk being manipulated for political motives. Cf. for 'Irâk, M. Durra, 1st ed. 1963, 210 and 2nd ed. 1966, 295; for Turkey, E. Esenkova, 1967, 29. Here are a few examples, whose divergences, which show the complexity of the question, may undoubtedly be explained by the fact that their authors do not apply the same criteria of ethnic adherence, religion and language. Hence the elimination of the Lurs. Account must also be taken of demographic progression, which works in favour of the Kurds, a fact which is at times equally forgotten. Here are a few figures, in thousands, supplied by: (1) B. Nikitine, *Les Kurdes*, 1956, 42; (2) S. L. Brouk, *L'éthnographie*, 1958, 30; (3) A. Ghassenlou, *Kurdistan*, 1965, 23; (4) I. C. Vanly, *Le Kurdistan irakien*, 1970, 30; (5) C. J. Edmonds, *Kurdish nationalism*, in *Journal Cont. Hist.* vi/1 (1971), 92:

	1	2	3	4	5
Turkey	4,500	2,500	4,900	6,600	3,200
Iran	1,500	1,800	3,300	4,250	1,800
'Irâk	500	900	1,550	2,000	1,530
Syria	500	300	250	500	350
Transcaucasia	250	—	160	150	80
Total	7,250	5,500	10,160	13,500	6,930

(cf. Edmonds, 92 n. 1).

D. The geography of Kurdistan

1. Physical aspect

Kurdistan is in its entirety a country of high mountains. Its skeleton, in its Turkish part, is constituted by the different chains of the Eastern Taurus. These chains begin to take shape from the shores of the Mediterranean at the latitude of the Gulf of Alexandretta, and radiate at first towards the north-east. To the north of Marâş, they form a fork whose northern line pivots away from the Engirik Dağ and Nûrûhak Dağ (3,090 m.), continues by the Akra Dağ, joins the chains of Mounts Mansur (3,088 m.), Mercan and Kargapara (3,388 m.), then curves in and crosses the mountainous chain of the Araxes and finally ends in the Ararat system.

From our point of departure a second chain, very clearly a crescent in shape, begins to the south of Malatya, continues by the mountains of Maden, the ridges of Hâçes (2,689 m.) and Sasun (2,590 m.) to the south of Muş, pursues its curve to the south of Lake Van, via Mounts Bîtlîs and Hekârî (3,630 m.), with the Cilo Dağ which culminates in Mount Reşko (4,170 m.).

Between these two lines is situated what is called the Armenian plateau, whose altitude comes down no lower than 1,500 to 2,000 m. Furthermore, some parallel chains on the northern border maintain quite a high level, such as the Çakmak Mountains and, to the south of Erzurum, the volcanic system of Palendiken Dağ (3,124 m.), to the south of which the combination of Mounts Bingöl, Serafetin and,

further to the west, the heights of Tuncel, constitute this natural fortress of Derdin. In this mass of crystalline rocks the Euphrates has hollowed out deep canyons, and the mountains with steep slopes clothe these inaccessible sites in fantastic shapes. But beautiful fertile plains extend to the north of Malatya (915 m.) to the south-east of Elazığ (1,020 m.) and to the north of Muş (1,500 m.). All along this Anatolian scar frequent tremors shake the region and claim numerous victims. We may recall the earthquakes of Erzinca in 1939 which killed 25,000 and those, less murderous meanwhile, of Van in 1966 and Bingöl and Genc in 1971.

To the south of the curve of the Taurus spread the vast flat regions of Adiyaman, Urfa (550 m.) and Diyarbakır (650 m.) which descend abruptly towards Mesopotamia with contours of 3,000 metres, always allowing for certain land movements, such as the volcanic cone of Karacadağ (1,915 m.) and the chain of Tır 'Abidin, which extends from Mardin (1,130 m.) and meets on the east with the much higher masses of Herakol (2,943 m.) and Mount Cudi (2,080 m.) (see p.60ff).

To the extreme east and more to the north is the supporting point for the Great Ararat or Agn Dag (5,165 m.) and the Small Ararat (3,925 m.) perhaps considered as the pivot of a new system of mountains. Indeed, from this centre seem to radiate several points which, on one side, encircle Lake Van, with to the north the chain of the immense sulphur-spring which is the Tendürek (3,313 m.) and that of the Ala Dag (3,255 m.); to the east, the Kuh Dag (2,850 m.), the Mesogene (3,610 m.) and the İspiriz Dag (3,337 m.) and to the south the Vavran Dag (3,550 m.) and the chain of Satak. Let us note, apart from the two Ararats whose structure is due to very ancient volcanic eruptions, two famous volcanoes on the shores of Lake Van: to the north, the Sipan (about 4,434 m.) and especially Mount Nemrut (Nimrûd), whose highest peak has an altitude of 3,140 m. and whose crater has a diameter of 6,400 m. with an interior lake of fresh water at a height of 2,551 m. All this region to the south of Lake Van, which is itself at an altitude of 1,720 m., is in its entirety the highest part of the Kurdish-inhabited area of Turkey.

Elsewhere, other chains of mountains are connected with Ararat; these are clearly oriented north-south, lying between Lake Van and that of Urmia and also separating Turkish Kurdistan from its Iranian part. After having rejoined the almost inaccessible node of the Hakkî-Ozamar country, they slant towards the south-west and also form this *chaîne magistrale* of the Zagros which, in a set of parallel lines, makes up for a good part, the portions of Kurdistan, the eastern faces being situated in Iran and the western faces in 'Irâk. As C. J. Edmunds remarks, it is not always easy to give a name known by all to designate the different chains, for their names vary with the informants, according to whom they are situated on such or such a slope, or close to a better-known peak, pass, village or the tomb of a famous saint.

We have, in Iran, some chains which lie, oriented north-west to south-east, with multiple ramifications and parallel series. Let us note in passing some of the highest summits: the Dalerpar (3,748 m.) at the intersection of the three frontiers: Turkish, 'Irâkî and Iranian; the Spiraz, the Kandîr or Kogz (3,782 m.) the Galala (3,304 m.), further to the east the Çebel Ceyhan ('at the forty springs') (3,416 m.) a real rampart of water of Iranian Kurdistan, and further to the south, the chain of Hawamâr. (3,216

m.) and that of Cilo, whose average height is 3,500 m., up to the mountains of Luristân and the Puşht-i Kôh.

On the 'Irâkî side, to the south of the Turkish frontier, in the extension of the chains of the Cudi Dag, Semañ Dag and Cilo Dag, but at the same time in a graduated descent towards the Mesopotamian plains, between the Tigris and the Great Zab, are the Bêhlayr, Metina and Gara chains and, approaching the Iranian frontier, beyond the Zab, Mount Ser-i Korawa (3,603 m.), Dolareh (3,449 m.), and Kîhu-warabê (3,168 m.). In this region of Bradost, if the frontier chains are still high, e.g. Mount Halgurd (4,013 m.), they tend to become lower as they approach the plains. Also, Mount Handrin to the south-east of Rawandîz (920 m.) is no more than 2,795 metres. As soon as one crosses the Little Zab, the chains stretch out in parallels from the dorsal column of the Zagros. The line Kurakdajaw-Godjâr-Kurkur-Asis includes further numerous peaks between 1,950 and 1,960 metres high. A second line Azmir-Karair is yet lower, between 1,870 and 1,668 m. high, with however, to the north-west of Sulaymâniyya, the remarkable ridged upthrust of the Fîha Magran (3,783 m.). A last parallel chain Bingird-Beran is still several hundreds of metres lower (between 1,739 and 1,477 m.). Further to the west, the long chain of the Kara Dag, from 1,378 to 2,017 metres, with multiple passes, henceforth separates the high country from the plains which now extend without an obstacle towards Altun Köprü, Kîrkîk and Tawî, to be bordered and limited further to the west by the Hamûn Mts. (1,640 m.) which, oriented transversely south-east to north-west, traverse the Diyala, the Sirwan and finally the Tigris, quite near to where the Little Zab flows out.

Let us further note, although the new administrative division of 'Irâk leaves it outside Kurdistan, the Djabal Sangîr, where the Yazîdis, who are themselves really Kurds, live. This chain, 60 km. in length and 25 km. in width and lying at an altitude of approximately 1,600 m., is situated in Mesopotamia to the west of Mosul and at the same latitude.

If Kurdistan is a country of very uneven relief, it is no less generously watered by numbers of clear springs and many watercourses and actual rivers.

Let us first note the Araxes or Aras whose source is clearly in Kurdistan in the plateau of Bingöl, with a thousand lakes, between the Tigris and Euphrates, but in contrast to these two rivers which are directed towards the south-west, it flows first towards the north, bends towards the east and passes into Soviet Armenia.

The two great Biblical rivers traverse Kurdistan in particular. The Euphrates (see A. RUAËT) is formed by two principal branches which enclose a vast Kurdish region. The northern branch, the Kara Su (450 km. long) is made up at its source of numerous springs which come from the Dîmlî Dag; then it flows in the plain of Erzurum where it receives the springs which rise in the Çoruh Dag, directs itself westward in narrow gorges, waters Erzinca, slants towards the south and follows a capricious course which snakes in every sense. It waters Kemah, passes by Kemaliye, and runs into mountains on all sides which block its passage, to rejoin a little to the south of the Eğıl the southern branch or Murat Su (659 km. long). This last has its source to the north of Lake Van, at the foot of the volcanic Mounts Ala Dag and Tendürek; the Murat Su climbs up again a little to the north, passes by Diyadîa and Karaköç, turns off again to the south and waters Tutak and Malazgirt.

Then, always following its sinuous course, it passes to the north of Muş, waters Genc, Palu and Pertek, finally joining the northern branch to the north of Koban. Thereafter the two branches form the Euphrates properly so-called. Although the only important tributary on the right bank of the Kara Su is the Tobna Su (194 km. long), which flows into it to the north of Malatya and then runs outside Kurdistan, the Murat Su has numerous tributaries which, like the Perç Su (235 km. long), with their sub-tributaries, literally criss-cross Kurdistan; no area is very far from a watercourse.

The Tigris (see *map 1A*), the other great river of the region (1,778 km. long), waters Kurdistan in its upper course. It has its source in the region of Lake Hazar to the north of the Maden Mts., waters for 300 km. of Turkish Kurdistan the towns famous in Kurdish history, *sc.* Erzurum, Diyarbakir, Hasankeyf and Cizre/Dižira. There are numerous tributaries, all on the left bank: Anbar, Batman, Gura and especially Botan (226 km.), fertile the land. It passes the 'Irakī frontier at Pêch Khābūr, where its tributary the Khābūr (*q.v.*) joins it, and whose sub-tributary the Haili waters Zāgho. There then develops a complete network of beautiful streams, all tributaries of the Tigris and which are actual rivers. First of all the Great Zāb (392 km. long), which rises in Turkey in Mergene Dağı between Lakes Van and Rîdā'yya. Its waters Cullamerik/Diulamarg, then in 'Irak the regions of Zibar and Bazran and by one of its offshoots, the highly picturesque town of Rawandiz. It joins the Tigris 45 km. south of Mawşil. The Little Zāb (400 km. long) has its source in Iran, near Lāhījān, a land of lakes. Its tributaries are numerous in Persia as well as in 'Irak. After having watered Taklak and Alton Köprü, it joins the Tigris. On its lower course, at Dulcan, an enormous dam was completed in 1958 with a capacity of 7 billion m³ of water, which stretches over 50 km.³ Its aim is firstly to regulate the flow of the Tigris, subject to catastrophic floods, but also to irrigate about 250,000 hectares. A hydro-electric plant with a capacity of 200,000 kilowatts is of importance in the region of Çamçamal and will give the Kurdish provinces of 'Irak self-sufficiency in energy. The 'Adhays (230 km. long) rising in the locality of Bazyan, with its various ramifications, waters Kirkūk, Dağūk, Tus and Khurmatu, and traverses the Hamrin Mts., hurling itself into the Tigris 30 km. south of Baghdad. Finally, there is the Diyālā (386 km. long) which rises in the mountains of the 'Irakī-Iranian frontier; its principal source in 'Irak is the Tandjār which waters the plain of Şahrazūr, and in Iran the Sirwān rising in Luristān. After Derbend-i Khān, where a great dam has been constructed which is intended to serve for irrigation in 'Irak, these two branches constitute the Diyālā, which flows into the Tigris south of Baghdad.

Iranian Kurdistan is also traversed by numerous streams of which several rise in the Çihil Çeshme, a great massif of 2,085 m. height in the Mukri country. Let us note only the Kizil Uzun, whose various ramifications water all the Ardālān country, not to mention the Dīsestū (240 km.) and the Tātāhu which both flow into Lake Rîdā'yya.

At with the mountains, the streams which run through Kurdistan may change their names according to the region traversed. Many watercourses, moreover, take their name very simply from the principal locality that they traverse.

There are also several lakes in Kurdistan, of which the largest is Lake Van. Situated at an altitude of

1,700 m., it has an area of 3,700 km.² Its salt waters are due to a volcanic barrier which deposits on its banks carbonate and soda sulphate. Only one kind of fish is caught there, a sort of large bleak with changing colours. To the north of Lake Van is Lake Nāzic and to the north-east of Van is Lake Ercek. Further to the north is Lake Balik lying to the east of Karaköse. At the sources of the Tigris to the north-west of Maden is the Hazar Gölü, quite deep and with an area of about 50 km.² Its waters are salt and eels are caught there. In Iran one may cite Lake Urmia with a Kurdish population bordering it. It is larger than Lake Van (5,700 km.²), 130 km. long and 40 km. wide in places; it is more salt than the Dead Sea, and no fish can live there. Not far from there and to the south are two small lakes, the Şor Göl and the Daryā'el Kopl. At the 'Irakī frontier to the west of Mari Van and south-east of Pêdijwān is Lake Zēbar. In 'Irakī Kurdistan there are no lakes at all.

Because of its altitude, the climate of Kurdistan is harsh. Snow covers the high summits for many months of the year. Precipitation is variable according to the regions. In the plains, rainfall varies between 200 and 400 mm. a year, although it may reach between 700 and 2,000 and even 3,000 mm. on the plateaux between the different chains of mountains. But in the valleys of central Kurdistan, the climate is continental and even arid, and there are sometimes several months without a drop of water.

The temperature also undergoes quite large variations. At Karaköse in the north it may fall to -30°/35°C. in winter and rise in the south in summer to +35°/40°C. at Kirmānshāh (Ghassemloo, 15). In Iranian Kurdistan, where a dry continental climate rules, the range may vary between -32°C. and +32°C. In general, the eastern slopes of the Zagros are more favoured than the western slopes. At Senna we have -15° in January and +35° in July, at Khānīkīn, +2° in January and +42° in July; at Kirkūk, +14.5° and +43°C. Further to the west, we find, in January and July respectively, at Malatya -8°, 5° and +26.5°; at Urfa, +4.5° and +35°; at Diyarbakir +2.5° and +32°; and at Van, -3.5° and +22.5°.

2. The living landscape and habitat

Harsh as Kurdistan may be, it is far from being a desert; its mountains are covered with pasture and vegetation, and its valleys with forests and meadows which, in spring, are dotted with multicoloured flowers. There are also 10 million hectares of forests in Turkish Kurdistan, 4 million in Iran and 1,740,000 in 'Irakī Kurdistan, of which 50 km.² are firs. The oak, of which more than 15 kinds can be counted, is the most widespread species up to an altitude of 2,700 m.; then there are the firs and other conifers. Moreover, the forests are not always very dense and often have the appearance of scrub with many stands of junipers. The plane tree, willow and especially the poplar, flourish by the waters.

In the mountains, high mountain-pastures stretch over many kilometres and provide pasture for herds of goats and sheep. In places, edible wild plants grow, sought after by shepherds and simple folk for their medicinal properties and carefully collected by old women. In spring, flowers cover in abundance the smallest corner of earth, whose richness of colours literally stupefies and whose perfumes intoxicate the passerby. All this flora is familiar to us, for the species of Europe are found there and travellers do not fail to record the names (see *e.g.* C. J. Rich, I, 284; Bishop, I, 290-1, 343, II, 12, 14, 115;

Lynch, 1, 181, 190-1, 21, 208, 248, 253, 268, 269, 303, 362, 369, 239, 241, 242, 382; Fryer Stark, 257, 273, 330; Hamilton, 141-3; Balsan, *passim*, etc.).

Only a part of the arabia Kurdistan is covered by cultivation and crops. If, in Turkey, there are 75 million hectares of cultivable lands, only 30% are cultivated, of which one-third lies fallow each year (Esenkova, 108). In Iranian Kurdistan, out of 5 million hectares of cultivable lands, 24% are cultivated and 16% lie fallow (Ghassemloo, 90). In the various districts of 'Irâkî Kurdistan, of an arabia area of about 8 million hectares, one quarter is cultivated (Khosbak, 43). Despite this, the cultivation of cereals in Kurdistan plays a good part in the economy of the respective countries: 15% in Turkey; 35% in Iran; in 'Irâk, 30% for corn and 13% for barley (Ghassemloo, 89, n. 6). Let us add here the cultivation of rice, which supplies 'Irâk with one-third of its production. Apart from this cultivation of foodstuffs, cotton and the newly-introduced sugar-beet give a good yield. The best tobacco of Turkey and 'Irâk is cultivated in Kurdistan which, for 'Irâk, supplies almost all of its needs (Khosbak, 45; Durra, 1963, 226, 1966, 245). If the vine grows a little everywhere in Turkey, 'Irâk and Iran, it only flourishes in Kurdistan on sunny slopes; there are 12 million stands in 'Irâk (Vernier, 468) and the kinds of grapes are numerous and varied (see the names in Hauser, no. 34, 8; Wahby, *Dichomaira*, 148). Some are reserved for the preparation of raisins used so much for food. Fruit trees also abound in Kurdistan: pomegranates, peaches, apples, figs, apricots and centenarian walnuts. Market-gardens are developed around the villages and even in the mountains where the Kurd, an ingenious gardener, constructs terraces supported by small walls in order not to lose any parcel of arable land. Of the vegetables in general use in the west, the onion, for example, so much appreciated by all the Kurds, is especially cultivated, and certain vegetables such as watermelons, cucumbers, melons, aubergines, corn on the cob, capsicums, etc., without forgetting the lettuce, held in abhorrence by the Yazidis.

Wild animals are far from having disappeared in Kurdistan. There were still lions at the beginning of the 19th century; if they no longer exist, the *puma*, a kind of leopard, survives. Bears are plentiful in Nebiruzo to the south of Van, where they have "a table served from June to September" (Balsan, 229); the wild bear also abounds at Bingöl (1,200 shot in 3 months in 1939 (*ibid.*, 90-1), and 55 killed in a single round-up in 1963 at Barzan. Wolves, jackals, foxes and hyenas often approach the villages. But there are other animals called wild which are neither carnivores nor predators, but which are hunted either for their meat, such as the ibexes, or for pleasure, such as hares and rabbits. One also finds porcupines, which are edible according to the Christians of the region, agile squirrels, and martens and sables sought for their fur. So it is not surprising that the Kurd is a born hunter. Birds are also plentiful. The high mountains shelter the majestic eagles; streams and watering places attract ducks, teal and snipe. In 1972, 500,000 spent the winter on Lake Rîdâ'îyya, nourishing themselves there on the small crustaceans which abound there, and at the same time Lake Van housed numerous colonies of pelicans (J. Vaillard, in *Le Monde*, 13 January 1973). Night-ingales, storks and cranes are also found in the Kurdish countryside, as much as in the songs of Kurdistan. Doves and pigeons frequent in thousands

the innumerable grottoes and caves of the mountains. Partridges and quails are choice game. Fish abound in the streams of fresh and crystalline waters. But it is not always easy to identify them and give them a name. A large fish is caught in the Zab, called by the Christians "Tobias's fish", which is two metres long and whose flesh is excellent. One may see a photograph of it in Hamilton (between pp. 32-3). Apart from these pleasurable creatures, one must beware of the snakes, small but venomous, such as vipers, and of the yellow or black scorpions whose sting can be deadly, especially for the very young, although the numerous lizards, geckos or varans and the chameleons are harmless, as are the tortoises. But in spring, flies, mosquitos and fleas are dreadful and constitute a real plague. The bee also stings, but produces a very tasty wild honey.

Apart from these creatures, who live wild, there are in Kurdistan many animals which have been domesticated and have been raised for profit since the earliest antiquity (cf. Ch. A. Reed, *Animal domestication in the Prehistoric Near East*, in R. J. Braidwood, B. Howe, etc. *Prehistoric investigations in Iraq Kurdistan*, Chicago 1960, 179-45). Indeed, Kurdistan is a land of stock breeding: sheep, goats, cows and buffaloes supply milk, butter, cheese and meat, skins, fleeces, guts, horns etc. of which the leather and wool serve to make clothes, shoes, felts, etc. and provide an obvious economic yield. In 1957, in the Kurdish regions of Turkey, there were 7,662,332 sheep; 4,176,016 goats, one-quarter of all Turkish stock-breeding, and 2,440,825 cows, one-sixth. There are also many buffaloes (Balsan, 128). In the Kurdish provinces of 'Irâk there are 1,674,912 sheep or two-thirds of the 'Irâkî breeding stock, 1,434,438 goats (two-thirds), 226,838 cows (one-third) and 4,287 buffaloes (one tenth). Apart from the large-scale breeding of the nomads (half the production in Iran; Stauffer, 291), each household has its small herd of a few animals, sheep or goats, four to eight (*ibid.*, 290). The Kurdish villages of 'Irâk studied by Barth (19) are richer. Each house also possesses a few chickens. There are different breeds of sheep with fat tails and goats with long hair, carefully watched by shepherds expert in their craft. Other animals indispensable in everyday life are also reared. Among the Kurds of 'Irâk are found 22,289 horses (one-seventh), 52,336 mules, almost the whole production, 130,804 donkeys (one-third; Khosbak, 52). Also, let us not forget the Kurdish shepherds, a strong, imposing and redoubtable breed (Balsan, 236). Naturally, no pigs or rabbits [see ARNAB in Suppl.] are reared in Kurdistan.

The interior of the soil in Kurdistan is no less rich in minerals than its surface in vegetation and animals. But until now, its resources have been very little exploited. Quite abundant supplies of coal have been discovered in the region of Maden, Kîlî, Kemah and Harput, where it has been exploited (several thousand metric tons in 1970), but not at Zalkho in 'Irâkî Kurdistan. Near Suleymânî limestone is extracted and, at Sar Çinar, a cement works has been producing since 1958, 350 metric tons of cement a day. Deposits of rock-salt can be exploited at Sînjâr, Şeyşîghân and Tîm-Şîrmatî. Sulphur is found in the province of Senna, at 'Amâdiyya, and a Polish group plan to extract 250,000 metric tons of it a year at Mîghrak in the north of 'Irâkî Kurdistan. Iron is not lacking in Kurdistan and is mined 12,600,000 tonnes in 1960 at Maden). But very rich, easily exploitable deposits of iron ore are found in the region of Rawândîz and Sulaymânî. Copper exploited (32,000 t.) at Ergani,

Diyaibakir and Palu, is also to be encountered in the region of 'Akra. Chromium is found in the region of Barzan and at Diyaibakir, where it is extracted (290,000 t. annually). There is lead at Keban, Elazığ and Naku, gold at Yergü and to the south of Kirmâşgâh, and also silver at Kemah. At Kirkûk, the reserves of salts allow the manufacture of caustic soda and chloride. But it is petrol which is the chief riches of Kurdistan. The petrol of Kirkûk gushes forth in the midst of Kurdish territory and represents a good part of the 'Irâkî production (83 million t. in 1970). The same applies to the petrol of Batman in the Sîrt region and the oil-fields of Karapük in northern Syria. Natural gas is abundant and sulphureous in the region of Çanakkâl.

3. The human aspect

This region which the Kurds occupy today has been inhabited since the most ancient antiquity, e.g. Berda Bulka, the cave of Hazer Merd of the Mousterian period, not far from Sulaymânîf or that of Şandîr, near Rawândîz, where the first Palaeolithic human skeleton in 'Irâk was discovered. *Djarmo*, in the valley of Çanakkâl, may be the most ancient village in the Near East, for it was probably one of the centres where man cultivated for the first time various species of barley and corn, according to excavations of a team of researchers of the University of Chicago (cf. Braidwood, Hove etc., *Prehistoric investigations in Iraqi Kurdistan*). Today, the Kurd is settled throughout the land and has established numbers of villages there.

Originally, he was content to occupy the innumerable refuges, shelters under rocks and numerous caves, some of which are difficult of access and very picturesque with stalagmites and stalactites (Edmonds, 235), and which sometimes extend deep under the mountain. These caves always serve, on occasion, to shelter the herds, but sometimes peasants are still to be encountered living in them. Numerous legends circulate about some of these caves where treasures are said to be hidden and where the passing of djinn and ifrits is mentioned (Edmonds, 206-7, 246, 332, 368-9; Hamilton, chs. xiv-xv). Certainly, the nomadic Kurds, on the verge of extinction, and the semanomads live under their black tent, which should not be confused with the tent of the Bedouin Arab, the *kibika* of the Mongols, the *yurt* of the Samoyeds and the *kole* of the Lapps (cf. C. G. Yéiberg, *La tente noire*, Copenhagen 1944, 81-6; Bishop, i, 373; Lescot, 141-5; and KRAYMA). It is formed from a great awning made of woven strips of goats' hair 50 x 60 cm. wide. The poles which hold it up are 2.50 by 3 m. in height, their number varies according to the size of the tent, i.e. according to the importance of its owner. There are no ridge poles. Reed partitions separate the corner of the women and provisions from the part of the tent where the men and visitors stay. All the furniture consists of a few mats, cushions and some carpets in the chiefs' tents. But the Kurdish peasant lives in rough houses. The construction materials are ordinarily unfired bricks in the plains, but fired ones at Sulaymânîf, for example, or rough stones, in the mountains joined together with mud. The walls are 2 by 2.50 m. high. In the rough stone walls are sometimes inserted poorly-hewn beams to make them stronger. Inside, niches are arranged in the walls to serve as cupboards.

The walls are roughcast with mud and sometimes whitened with lime. The door is of massive wood. There is no window on the exterior, but these exist looking out on the courtyard, with protective bars.

Simple little lanterns light the place, when the door cannot be left open. The floor is of beaten earth. In the centre the hearth (*lendur*) is covered in winter by the *hursi*, a kind of wooden bench with a covering on which all the family warm themselves in the coldest regions. A hole in the roof serves as a chimney. Along the walls runs a broad bank of earth where people sit during the day and where they sleep at night on mats, felts or mattresses. The terrace is made of poplar trunks spaced 50 cm. apart and covered with branches, leaves and dried grass and a thick bed of hard-pressed earth. If the room is too wide (more than 3 m.), poles hold up the beams and roof battens. For the water to run off, the terrace extends beyond the retaining walls or gutters for a metre, e.g. at Sulaymânîf, facilitating the running off of rainwater. In any case, a roller is always to be found on the terrace in order to press it down after downpours. One climbs up by a ladder or outside staircase. The house of the plain, where there is space, has a courtyard and a building principally composed of a rectangular living room, lengthened by a corner reserved for the animals. A solid annex building serves as a kitchen and store for household utensils, tools and work implements. There is no cellar or attic, often not even latrines. In the mountain houses the stable is often in the courtyard, as are the annexes. The living room is situated above with, at the bottom, a small corner for the provisions. Often there is also a small veranda or loggia facing south. The terrace is the favourite place for the women, who perform their many daily occupations there. (For descriptions, plans, photos or drawings of different Kurdish dwellings, see: in *Djazira*, R. Montagne, 53-66; at *Sindjar*, R. Lescot, 146-7; at Sulaymânîf, Edmonds, 90-3; again at Sulaymânîf and at the village of Topraya and Belkha, H. H. Hansen, 21-43; and in *Iranian Kurdistan*, Bishop, i, 82, ii, 191, M. Mokri, 89-91. See also Lescot, 49; T. F. Atkova, 95, 97, 99 for Transcaucasia.) Naturally, man does not live isolated in his house, but in a group. Villages have grown up, and the Kurd, a man of the earth, lives more in the village than in the towns. Like all villages in the world, and especially those in mountainous countries, the position is chosen in relation to the sun and to water, a stream or spring. So it must be oriented to be at once well-exposed to the sun and sheltered from the wind, following the axis of the mountain chains. Exposure to the north is avoided. The south, the direction of Mecca (Mokri, 82), is preferred to the east. The importance of the village depends on their proximity to places of passage (mountain passes and bridges) and also on sufficient cultivable lands and pasturages. Many villages are built on a slope, the roof of the higher houses forming a terrace for the houses below, and this occurs in all the regions of Kurdistan, e.g. at 'Akra, Bazindja and Şahr-i Hawramân. It is not rare to sight on a neighbouring peak some ruins of an old castle, a trace of the past glory of a local magnate vanished for centuries. Such as it is, the Kurdish village has a rather pleasing and sympathetic appearance, precisely because of the water, garden and trees.

The Kurdish villages are closer to one another or more dispersed, according to whether the region is more or less exposed to hazards. In the whole of the 17 provinces of Turkey with all or a high proportion of Kurdish population, according to the official census of 1964, 8,817 villages were counted, of which 393 had less than 100 inhabitants, 513 from 101 to 500, 1891 from 501 to 1000, 372 from 1,001 to 2,000 and only 39 with more than 2,000 inhabitants.

Three provinces of Muş, Hakkâri and Van can be taken as criteria for appreciation:

	Area in km ²	Inhab- itants	Density in km	Number of cantons	Number of villages
Muş	8,195	167,638	20	15	368
Hakkâri	9,532	67,766	7	12	133
Van	18,619	212,034	11	21	557

Thus the villages are more or less dispersed. They are also unequally populated, as the table below shows:

Inhab- itants	less than 100	101- 500	500- 1000	1000- 2000	+ 2000
Muş	9	280	64	14	1
Hakkâri	5	84	40	5	0
Van	39	456	51	11	0

This average of small villages from 500 to 300 inhabitants is found in 'Irâkî Kurdistan, in the region of Rawandîs (Barth, U) and in other regions; 300 inhabitants is also the average of the Kurdish villages of Iran.

Altitude is also a very important factor in the establishment of the Kurdish village. By examining the snow contours on Hütteroth's map, e.g. to the south of Lake Van in the region of Hakkâri: precisely, it may be ascertained that the villages are relatively very numerous between 1,000 m. and 1,500 m., quite numerous between 1,500 and 2,000 m., rare between 2,000 and 2,500 m. and that they disappear altogether above 2,500 m., apart from pasturing camps or *zâman*. Some agreeable summer dwellings are found in the middle altitudes. Thus in 'Irâkî Kurdistan, in the province of Duhok, we have Zawîha, at 1,422 m. in the midst of vast fir woods, Suware-tuka, at 1,675 m. among cypresses and maples, Sersing, at 1,046 m. with gushing springs, Sulav, at 1,150 m. and its waterfalls, Ser 'Amâdiyya, at 2,905 m.; in the province of Sulaymânî: Ser Çinar, with great plane trees, as its name indicates; in the province of Arbîl, Salâh al-Dîn, at 1,090 m., Şikâlawa, at 565 m. with luxuriant orchards at the foot of Saffin, Gali 'Ali Bag, at the same altitude with a great waterfall, and especially Hâjjişî 'Umran, at 1,780 m., very fresh in summer and a ski resort in winter. In the province of Hakkâri, the high peaks of Cilo Dağ, which are between 3,500 and 4,000 m., have for some time attracted foreign mountaineers (cf. B. Amy, *La montagne des alpes. Alpinisme en pays kurde*, 1971, with maps, photos and bibliographies of the last expeditions).

The smaller the village, the more its comfort is reduced. This is the case also in Turkish Kurdistan, where more than half of the villages do not have drinking water, a mill, a school, a *çayhana* (or cafe) or a special house for guests. The lighting there is primitive, the hygiene deficient. The wells are near the latrines when these last exist. In winter, in view of the lack of means of communication, hundreds of villages are isolated from the rest of the world (E. Esenkova, 55-7). It is the same in the Kurdish villages of 'Irâk, where electricity and running water only exist in 22 of them among the hundreds that are to be counted in the provinces of Sulaymânî, Arbîl, Kîrkûk (Khoshak, 56-7). For a population estimated at 8,266,000 in 1962, in 1970 for the whole

of 'Irâk there were only 150 hospitals, 987 dispensaries and 18,236 beds with 2,890 doctors and 2,771 nurses (Ministry of Information, *L'Irak vs de l'avenir*). The same situation applies in Turkish Kurdistan. In 1967, there were 12,275 doctors in Turkey, but only 2,500 for the whole of Anatolia, with a total of 60,296 beds, of which nearly half were for the towns of İstanbul, Ankara and İzmir alone. Malaria affects especially the Kurdish provinces of Diyarbakir, Sîrt, and Hakkâri (E. Esenkova, 87-8). In 'Irâkî Kurdistan, malaria, which was the cause of a quarter of the mortality in 'Irâk (Dr. A. Ghalib, *Malaria and malaria in Iraq*, Baghdad 1944) has been practically eliminated since the campaign of the WHO in 1954-6 (cf. J. Manevy, *Il est quatre heures. Docteur Malaria*, in *Réalités*, no. 122, March 1956, 48-55). In Iranian Kurdistan, there are only 250 to 300 hospital beds = 1 for 10,000 persons (Chassenioui, 32).

To move from one village to another, to enter into more or less intimate social relations of family, friendship, tribe or commerce, the Kurd follows either the paths or tracks which link the villages or else the larger motor roads of commercial or strategic value which have been constructed by the interested governments. In the mountains, the mule tracks of tenfold either the stream which runs at the bottom of the valley, passing from one side to the other or the flank of the mountain, often precipitous and hazardous. They rise steeply to reach the mountain passes, at times quite high, e.g. in 'Irâkî Kurdistan, Paykuli, 2,000 m. and Sagirna, 2,700 m. To cross the streams, one fords them or uses trail-bridges or *akeks* (g.u.) at a fixed point, where the river is wider and the current less swift, or bridges. The Kurdish bridges are still rudimentary today and sometimes dangerous, being made of ropes and lanas (Lasyard, 1970, 156; Bishop, II, 214) or else of tree trunks (Wigram, 288; Hamilton, 96). On the more important roads, the ancient bridges are of stone, hump-backed with one or several arches. Today, some modern iron bridges replace at many points these primitive bridges which are often, in any case, no more than foot bridges (Hamilton, 192). Many legends are attached to these ancient bridges (Edmonds, 201, 212, 247). In the plains, especially in Turkish Kurdistan, there are still many simple earth tracks only usable in the good season. But some modern metalled, tarred and macadamised roads have also been built. The roads through the mountains are often real works of art.

'Irâkî Kurdistan is now furrowed with numbers of new roads which facilitate human relations. In 'Irâk, some roads or good tracks link Mawsil to Zakho, 'Amâdiyya, Arbîl and 'Akra. From Arbîl one goes to Harir and Rawandîs and also to Kîrkûk and then Sulaymânî. In Turkey, one road goes from Malatya to Elazığ, Tunceli, Erzurum, Askala, Erzurum, and Kars. From Elazığ a branch goes off for Bingöl, Muş and Tatvan, and another towards Diyarbakir, Mardin and Nusaybin. From Diyarbakir, one may branch off for Silvan and Sîrt, or Silvan in the direction of Erbil, Tatvan and Van, by the road or by steamer on the lake.

Few railways cross Kurdistan. In Turkey one may pick out the line Erzurum-Erzurum-Kars, towards Armenia; the line Malatya-Elazığ-Gem-Muş-Tatvan-Van by ferry in the direction of Tabriz; and the line Malatya-Sivrice-Maden-Ergani-Diyarbakir-Batman, towards Sîrt. The Orient Express from İstanbul goes to Aleppo, skirts the Kurdish populations of the Turko-Syrian frontier, and reaches Mawsil and Baghdad. In 'Irâkî Kurdistan, a single narrow-

gauge railway goes from Baghdad to Kirkûk (320 km.).

Several military routes fan out from the airports situated in Kurdistan. The most important are in Turkey: Erzurum, Kars, Karaköe (Ağrı), Elazığ, Malatya, Van and Diyarbakir; in Iraq: Mawşl, Kirkûk, Samel, Ser 'Amâdiyya and Bamerî, in north Syria: Kamishli; in Iran, Sanandaj, Kirmânshâh and Ridâ'îyya.

E. An anthropological profile of Kurdistan. Situated as it is at the crossroads of populations as different as the Turkish, Persian, Caucasian and Arab peoples and in very intimate relations with most of them, does the Kurdish people possess characteristics such that it may be distinguished very clearly from the others? The question can legitimately be posed, and many scholars have tried to distinguish the anthropological aspects which would allow this process of discrimination. It is evidently not a matter of searching for a Kurdish race, since this notion of race can scarcely be applied to humans, although some important genetic differences are ascertainable between more or less homogeneous populations possessing such or such characteristic blood-group (Ruffié, 1972). Anthropological researches on the Kurds began more than a century ago with E. Duhoussat (1863) and N. V. Khamkoff (1866). They have been carried out in all the regions of Kurdistan.

In Iran, first of all by the authors cited, then by M. Houssay (1887); in Transcaucasia by E. Chantre (1880, 1890) and Pantukhoff (1891); in Turkey in the valleys between the Euphrates and the Tigris (G. Pissou, 1892), to the south of the Black Sea at Karakus, at Nesrut Dağ, to the west of Lake Van, and at Zencirli (von Luschan, 1922); in Syria, at Damascus (Arènes Kappers, 1937). The Yazidis of the Caucasus were studied by Elseyev in 1887 and in 1900 by Ivanovski; those of Sûnjîn and Şayikhân by Field (1934), as well as the Kurds of Iraq, of Zakho, Rawândiz, Akra, Kirkûk and Sulaymânî; these latter studies were not published until 1951 and 1952. All these researches are only in fact sample surveys, given the relatively restricted number of individuals examined (some hundreds or more out of several thousands of inhabitants) and of the really scientific measures obtained. Some travellers have in their turn made certain records and added some typical photographs. Despite all this, and because the observations concerning the Kurds are of different regions, the results obtained do not always coincide perfectly. There has been an attempt to make an anthropological classification of them (A. Bashmakoff). The Western Kurds (von Luschan) have been distinguished from the Eastern and Southern Kurds. The former are of a blond, blue-eyed, dolichocephalic type. The others are of a brown, black-eyed, brachycephalic type. The one group consider themselves of the same race as the Turks (Selkhan, Inan) or the Iranians (Modi), the others regard themselves as close to the Arabs or Armenians. Certain photographs of Mark Sykes (321, 342, 373, 424-5, 427, 429) of Lynch (ii, 4-5) or of Soubrier (112, 113, 144, 160, 172) reveal at first sight types among the Kurds: Arab, Jew, Biblical, Nestorian and Turkoman. It is this which H. Field confirms and expresses in a more scientific fashion in the photographs of 162 individuals out of 598 examined, where he personally discovers Armenian types (48), Balkan (22), Modified Mediterranean (26), Eur-Anatolian (38), pure or mixed Iranian (4), Alpidoid (12), Mongoloid (1) and Negroid (2). The proportions are not exactly the same

among the 235 Yazidis examined, and the comparison with the Assyrians, the Şammar and Şulubba Arabs or the Turkomans also studied by the author is interesting. The resemblances encountered are no doubt to be explained by intermarriage. But this does not prevent E. Duhoussat (1863) from recognising in the Kurdish people a rare homogeneity with respect to its type and, for his part, Arènes Kappers (1937) admits that the Kurds, despite their anthropological differences, constitute a truly distinct race. Thus we can, in summarising the studies of H. Field, present as follows the portrait of the Kurd of Iraq. "The Kurd is of medium height (1.66 m.) with a relatively long body and short limbs. The forehead is wide and the head wide and round. The brachycephalics predominate. The height of the face is medium. The nose is quite often convex. The Kurd is more hirsute than the Arab. His hair, rather wavy and plant, is normally dark brown and the eyes black. But blond hair and blue eyes are also to be encountered, especially in the western regions. The colour of the skin is more clear than that of the Arabs, but less fine than that of the Assyrians. The teeth are normal and well-placed. The musculature is good, as is the health, in general, of those who have been observed" (Th. Bois, 18).

Despite everything, these anthropological researches on the Kurds are too fragmentary and uncertain for us to be able to conclude from them what may be the origin of this people. It is indispensable here to combine the study of the language with that of the history.

Bibliography: Maps. No complete scientific map of Kurdistan exists. The *Carte du Kurdistan* 1/4,000,000, Cairo 1943, aims especially "to give a graphic representation of that which the Kurds occupy in the Middle East"; a *Note* of 22 pp. which accompanies it is intended to explain it and to justify the different data. *Die Kurden, Volke ohne Staat*, 1/1,500,000, ed. Das Aktuelle Landkarte, no. 224, Munich 1966, clear and simplified, does not indicate the relief at all. For Turkey, the old maps of H. Kiepert, 1892, or better *Türkiye*, 1/2,000,000 of Faik Sebrî, Istanbul 1948, *La carte de l'Asie orientale* 1/2,000,000 of the Troupes du Levant, Beirut 1939, or that of the War Office and Air Ministry, London 1952-2, 1/1,000,000, sheets Nj37 Erzurum, Nj38 Tabriz and Nj38 Baghdad, of series 1501, GSGS, cover the whole of Kurdistan. More or less elaborate maps are often to be found in the different accounts of journeys. So much the more to be appreciated are the precise and detailed maps in the book and many articles of C. J. Edmonds.

III. — HISTORY

A. Origins and Pre-Islamic history.

The classification of the Kurds among the Iranian nations is based mainly on linguistic and historical data and does not prejudice the fact there is a complexity of ethnical elements incorporated in them. The type of the latter varies visibly from place to place. It is probable that the expansion of the Kurd element took place from east (Western Persia) to west (Central Kurdistan) but there is nothing to have prevented the existence in Central Kurdistan, before the coming of the Kurds, of a nationality of different origin but bearing a similar name (Kardû) which later amalgamated with the Iranian Kurds.

On two Sumerian inscriptions dating from about 2,000 B.C., Thureau-Dangin (*Revue d'Assyriologie*, v, 99; vi, 67) found a country *Kar-da-ka* mentioned (in which word the initial *k* is 4 and not *k* and the function of the element *ka* is uncertain). This country was beside the 'people of Su' (cf. *ZA*, xxxv, 130 n. 3), which G. R. Driver located south of Lake Van; there is an old fortress Sûy in the region of Biddis (*Silvas-nama*, I, 146). A thousand years later Tiglath Pileser waged war on the people called *Kur-ti-e* in the mountains of Arzu, which Driver (in *JRAS* [1923], 400) identifies with the modern *Hasû* (Sâsûn). The reading *Kur-ti-e* is not certain, however.

Herodotus in the 5th century B.C. mentions no name like this, but, according to him (III, 93), the thirteenth name of the Achaemenid empire included next to the Armenians a Περδική which Nöldeke (*Gramm. d. neuassyrischen Spr.*, Leipzig 1868, p. xviii) and Kiepert (*Alt. Geogr.*, § 81) have connected with the name of Bohtân (= Bohtan).

The retreat of the Ten Thousand described by Xenophon (401-400 B.C.) made famous the name of the Karduehol (Καρδοχολα) whose country lay to the east of the Kentrites (Bohtân). From this time onwards we continually find the name on the left bank of the Tigris near Mount *Khûdi* [g.n.]. In classical authors, the country became Corduene (on the numerous forms of this name, probably produced by the difficulty of reproducing the Semitic *k*, cf. Driver, *op. cit.*). In Aramaic the district was called Beth-Kardû and the present town of Qazirat Ibn 'Umar, Gazarta of Kardû. The Armenians had the name Korduchî, the Arabs (Balâdhûrî, 176, Tabari, III, 610) Bakardâ (Kardai). According to Yâkût (iv, 56), who relies on the authority of Ibn al-Aghîr, the canton of Bakardâ formed part of Qazirat Ibn 'Umar, contained two hundred villages (al-Thamânî,

Djūdī, *Firds Šāhūr*) and was situated on the left bank of the Tigris opposite Bāzāhdā on the right bank (cf. the full analysis of the texts in M. Hartmann, *Bohtan*, 33-5). Later, the name, which was only applied to the district, disappears from Muslim terminology and is replaced by *Djāzra* Ibn 'Umar, *Bohtān*, etc. To the Armenians and Arabs the territory of Kārdū in the strict sense had a very limited application. We do not know the exact frontiers of the province of Corduene; its three towns, Sereisa, Satalaka and Pinaka (= Firdk) lay on the Tigris, but the statement of Strabo (ix, 12, 4) is remarkable, according to this, the term *Γορδουαῖνα ὄρη* was sometimes applied to the mountains between the modern Diyarbakr and Mōsh.

Now, who were the *Kapdeyoxes* whose name undoubtedly survived in the later names (the termination *-yox* must represent the Armenian plural *-ēh*, which is perhaps explained by the fact that the Greeks learned this name from an Armenian)? According to Xenophon (iv, 3, 1), the Karduchoi recognised neither the authority of King Artaxerxes nor that of Armenia. When in the 1st century B.C. Corduene was conquered by Tigranes II, he had its king Zarbius executed. In 115 A.D. the king of Corduene was called Mamisaras. According to Hübschmann, *Die altarmenische Ortsnamen*, 239, and *Armenische Grammatik*, 1/2, 318-20, the province of Corduene was only superficially Armenicised.

There is nothing really surprising in finding at the time of Xenophon an Iranian tribe settled to the north of the Tigris, but we have nothing but the evidence of the name from which to judge the ethnology of the Karduchoi. The name has Semitic analogies (Akkad., Assyr. *šardu*, "strong", "hero", *šardū* "to be strong"); on the other hand, there is a certain consonantal resemblance with the name of a people *Khaldi*, better known under the Assyrian form *Urartu/Urartu*, in Hebrew *Ararat*, among the Greeks *Αρπάρδοι*, *Χαλδαῖοι* and sometimes *Χαλδαῖοι*. This people appeared in Armenia towards the end of the 9th century B.C. and afterwards established a powerful kingdom in the region of Lake Van which lasted until the beginning of the 6th century. C. F. Lehmann-Haupt, *Matr. z. Alter. Gesch. Armeniens*, Göttingen 1907, 123, sees in them *Khaldi* immigrants from the west; E. Meyer, *Gesch. des Altertums*, 1/2, Stuttgart 1913, § 474, seeks their original home on the central Araxes. As a result of the arrival of the Armenians, towards the 7th century, the *Khaldi* were dispersed and driven towards the mountains (*Cyropædia*, iii, 1-3). But their name survived in the toponymy of the region north of Lake Van (the Byzantine theme *Χαλδία* near Trebizond, the town of *Khaldā* = *Akhaldā*, etc.; cf. Beck and Lehmann, in *ZA*, ix [1894], 84; de Goeje, in *ibid.*, x [1895], 120; Streck, in *ibid.*, xiv [1899], 112). Parallels for the name *Khaldi* have been sought on the other side of the Caucasus: the Georgians are called *Kharxvols* or *Kharxvli-i* (in Svanian *Akhard*; in Mingrelian, *Akord*); cf. N. Adontz, *Arménie et épigraphe Justinienne*, St. Petersburg 1908, 398.

Whether we identify the Kārdū as Semites or as an indigenous people, it is certain that the land of the ancient Karduchoi is at the present day one of the principle centres of the Kurds. It has therefore been concluded that the Karduchoi were identical with the Kurds, and this view was still considered axiomatic at the beginning of the 20th century; cf. *Grundriss d. Iran. Phil.*, ii, 464. Going a step further, the Kurds were directly connected with the *Χαλδαῖοι*; Reiske in his commentary on Constantine Porphyrogenitus,

De ceremoniis, B. 13 (713, 11) said "Chaldi at Kordi vef Curi, Gordiyae idem". A similar opinion is expressed in the title of P. Lerch's work, *Recherches sur les Kurdes iraniens et sur leurs ancêtres, les Chaldæens septentrionaux* (St. Petersburg 1896).

A new turn was given to the problem by the researches of M. Hartmann, Nöldeke and Weissbach, who showed the philological necessity of distinguishing between the stems *Kurd* and *Kardā*. These scholars at the same time proposed to recognise the Kurds in the *Κόρυς*, *Cyrtli*, mentioned by classical writers in Media and Persia (Strabo, xi, 13, 3, and xv, 3, 1). This hypothesis is confirmed by the presence in Firs of numerous Kurdish tribes in the Sāsānid period (cf. *Kārdmāh-i Arānshāh-i Pāpakān*, tr. Nöldeke, Göttingen 1879, 37, 48, and the testimony of Arab writers).

The justifiable distinction between the names *Kurd* and *Kardā* does not, however, decide the important question, how the *Cyrtli* (= Iranian Kurds) came to colonise lands west of the Zagros, the country of the ancient Kārdā, and the mountains of the Anti Taurus as far as northern Syria. The problem still requires careful research. In the first place, the Median and Persian conquests must have brought about considerable displacements of the Iranian peoples. We have an example in the migrations of a part of the *Asagartiya* whose original home was in Sistān. In the Assyrian period we find these *Sagartians* in Media (*Zikaria* or *Zakaria*, cf. Streck, in *ZA*, xiv [1899], 146) and in the time of Darius (Behistūn inscr. 2, 90) their capital was already in the Assyrian plain at Arbela, where Darius had their chief *Šitratakhma* executed, whose portrait on the rock of Behistūn suggests a Kurdish type (L. W. King, *The sculptures of Behistūn*, London 1907). Between 220 and 171 B.C. we find *Cyrtli* mercenaries taking part in the wars between Rome, the Seleucids and the kings of Pergamon (Livy, xli, 58, 13; xxxvii, 40, 9; Polybius, v, 52, 5; cf. Weissbach in Pauly-Wissowa, s.v. *Cyrti*, and A. J. Reinach, *Les mercenaires de Pergame*, in *Revue Archéologique* [1909], 115-19). A very interesting state of transition is seen from the Armenian Geography of the 7th century, in the case of the province of *Kordēkh* (according to Adontz, *Arménie*, 418, *Kordēkh* is from **kordē aēh* where *kordē* means "Kard", an *airpāhē* means "inhabitant of Atropatene"). In the time of Faustus Byzantinus (4th century) *Kordēkh* was only a canton near Salmās (s.n.). As a province, *Kordēkh* stretched from *Dhālān* to *Djāzra* Ibn 'Umar and included the following cantons: *Kordūkh*, the three *Kordēkh* (*Kordēkh*), *Aitūnkh*, *Algarēkh*, *Motholaukh* (*Otholaukh*), *Orsraukh* (*Orisanēkh*), *Karathunikh* (*Sarapōnkh*), *Čabuk* and *Little Albuk* (Hartmann, *Bohtan*, 93; Hübschmann, *Die altarmenische Ortsnamen*, 255-9).

We see the changes that were gradually brought about. Of the three districts, *Kordūkh*, *Kordēkh* and *Tmorēkh*, which Faustus mentions in place of the ancient Corduene, *Kordūkh* had become a mere canton of *Kordēkh* and *Tmorēkh* disappeared altogether to the advantage of *Kordēkh* (*Kordēkh*), of which simply upper, middle and lower cantons were distinguished.

Hübschmann op. cit., 383, confines himself to distinguishing between the *Kordēkh* (*Kordēkh*) of the *Κόρυς*, but in general the linguistic distinction established by M. Hartmann and Nöldeke does not preclude the existence of hybrid and corrupt forms (M. Hartmann, *Bohtan*, 92: "es gingen wohl schon früh die Namen durcheinander"), Nöldeke even

distinguishes a third group of names; Aramaic Kartîwâyê (Arabic Kartîwîya?), meaning the true Kurds; cf. G. Hoffmann, *Ausstieg aus syrischen Akten persischer Martyren*, Leipzig 1880, 207, n. 1639.

We thus find that about the period of the Arab conquest a single ethnic term *Kurd* (plur. *Akrād*) was beginning to be applied to an amalgamation of Iranian or Iranised tribes. Among the latter, some were autochthonous (the *Kardû*, the *Tumrîkîh*/Tumrîyê in the district of which Aklî = Elk was the capital; the *Xoşîfraw* [= *ak-Khuwâ*]yîya in the canon of Khoyt of Sîsîn, the *Ortâyê* [= *ak-Artân*] in the bend of the Euphrates); some were Semites (cf. the popular genealogies of the Kurd tribes) and some probably Armenians (it is said that the Namasîkân tribe is of Hlamitlan origin).

In the 20th century, the existence of an Iranian non-Kurdish element among the Kurds has been definitely established (the *Gûrtî-Zîzâ* groups). In several districts a social stratification based on the political domination of newcomers has been established (cf. Sulaymânîyîya [q.v.], at Sâwêjî-Bulîk [q.v.] and at Kofûr, where we find remnants of the *Kîrê-sînî* (?) in subjection to the *Şîkîkî*). Systematic investigation may discover traces of ancient peoples overlaid by a Kurdish element giving an appearance of unity.

Genealogies and popular etymologies. The Muslim sources and Kurdish traditions do not help us to solve the problem of the origin of the Kurds. Mas'ûdî (*Murûdî*, iii, 251) already speaks of their descent from those Persians who escaped from the tyrant Dabîkê. This legend is best known from the version of the *Şîkî-nîma* (Macan, i, 27-8; Mohl, i, 71; Vusîfî, i, 36, verses 29-38). In 1812 Modier (*Second journey*, 357) mentions the celebration at Damîwand (on 31 August) of a festival commemorating the delivery of Persia from the tyranny of Dabîkê, known as the 'Ayd-i Kurdî, "The Kurd festival". On the other hand, the Kurds sought Arab genealogies for themselves. Some (*Murûdî*, iii, 251) claimed as their ancestor Rabîfâ b. Nîzâr b. Ma'add, others Muğar b. Nîzâr, both eponyms of the districts of Dîyâr Rabîfê (Newrîl) and Dîyâr Muğar (Rabîkî). They said that the Kurds had separated from the Arab stock as a result of feuds with the Ghassânids, and, having retired to the mountains, intermingled with strangers and forgot their mother tongue. Of more interest is a series of eponyms among whom we find Kurd b. Mard (cf. al-Muṣṣṣaf, the neighbours of the Kurds) b. Şe'q'a b. Harb b. Hawâzin (Mas'ûdî, *ibid.*, and Tanbîk, 88-91: Kurd b. Isfendiyâh b. Manûghahr; Ibn Hawkal, 285-7; Kurd b. Mard b. 'Amr). All these genealogies may contain a few grains of historical fact (Iranisation of Semites, intermingling of the tribes of the Zagros and of Fârs).

Nor is there any lack of popular etymologies. The attempt has been made (*Murûdî*, iii, 249) to connect the name with the Arabic root *akradâ*; the Kurds would thus be the children of young slaves and the demon Qasas ("driven out" by Solomon). Very frequently (cf. Driver, in *JRAS* [1923], 403) the name *Kurd* is connected with the Persian word *gurd* ("hero"), although this root really had a *g* in Pahlavi and goes back to the root *ur* "to protest" (Horn, *Newper*, *Etymol.*, 200).

In later times, the names of tribes were often explained by those of their eponyms. The *Şîraf-nîma*, i, 258, makes all the Kurds (the *Badînawî* and *Bokhtî* tribes) come from Badîan and Bokhtî; the former of these names may be connected with that of Basa-îw, a tributary of the Tigris (Andreas, in Hartmann, 131),

while the second recalls the Πάκρυος of Herodotus, or the "dragon-king" (Kurd?) Hattin-Bolgh killed by Artakshîhrî Pâpakî; cf. Nîdeke, *Gesch. der Perser und Araber*, 11. According to another legend, especially popular in the north and west, the Kurds were at one time divided into two branches, Mîlîn and Zîlîn, the former coming from Arabia and the latter from the east; the Zîlîn were regarded as an inferior race (cf. P. M. Sykes, in *Jnal. R. Anthropological Inst.*, xxviii [1908], 470).

B. The Islamic period up to 1920.

We have detailed notices of the Kurds from the time of the Arab conquest onwards. During the five first centuries of the Hijra, the Kurds frequently played a considerable part in events and often took the initiative in them. Several Kurd dynasties arose at this time. Waves of Turk and Mongol invaders seem to have submerged the Kurds from the 6th to the 10th century A.D. But the period of the wars between the Ottoman Sultans and the Şafawîd Şahs produced a state of affairs in Kurdistan favourable for the growth of a feudal system, of which a talchav

picture is given in the *Sharaf-nāma* (1003/1596). The Turco-Persian frontier became gradually stabilised and the Persians fell back behind the wall of the Zagros and its northern extension. Then Turkey began the work of strengthening the authority of the central power within her eastern provinces. Towards the end of the 19th century the last Kurdish principalities disappeared in Turkish territory (Hakkārī, Bidlīs, Sulaymāniyya) and in Persia (Ardalān). But the great tribes still exist, and their cadres assure the preservation of the Kurdish element with its social and ethical peculiarities. Kājār Persia hardly ever interfered in the domestic affairs of her Kurdish tribes, while in the late Ottoman period Turkey tried to use the Kurds as a political support for the central authority. Sometimes the Kurds were overwhelmed with favours, and sometimes they had to resist attempts to abolish the remnants of their ancient autonomy. Several risings of the Kurds took place in the 19th century, and towards the beginning of the 20th century a Kurd movement added one more element to the nationalist agitations within the Turkish empire. The revolution of 1908 drew the Kurds into politics; newspapers, magazines and Kurd societies began to multiply. During the First World War of 1914-18 the idea of an autonomous Kurdistan was first mooted by the Western Powers, but the plan was only partially and temporarily realised in so far as the part of the old wilāyat of Mawṣil attached to the new state of ʿIrāq was concerned.

The Kurds after the Arab conquest. We shall find it useful to begin by collecting the information given by Arab authors regarding the distribution of the Kurd tribes.

The term Kurdistan being unknown before the time of the Saʿūdīs, information regarding the Kurds is usually to be found in the Arab authors under such heads as Zawzān, Khabāt, Arminiya, Agharbiyān, Dībāl, Fārs, etc. (cf. Driver, *The dispersion of the Kurds in ancient times*, in *JRAS* [1926], 563-72).

Masʿūdī (about 332/943) and Isṭakhṛī (340/952) are the first to give systematic information about the Kurds. In the *Murūgh al-ṭahab* (ii, 253) Masʿūdī enumerates the following tribes: at Dīnawar and Hamaghān: Shubḥān; at Kangawar: Mārdjān; in Agharbiyān (so the text should be emended): Haḥḥān and Sarūt (probably Sarūt = Khirīdīs [g.u.]; cf. the story of Dayram below); in Dībāl-Shādandjān, Larba (Lurī?) , Mādanjān, Masdānān, Bārmān, Khālī (Djālālī), Dībārka, Dīwānī and Nustakān; in Syria: Dabābiya etc.; at Mawṣil and Dūdī the Christian Kurds al-Yaʿqūbiyya ("Jacobites") and the Dūrjān (Dūrughān). To this list, the *Tanbih* of the same author (83-92) only adds Bāziḥjān (cf. Isṭakhṛī, 115), Naḥawira, Būghjīkīn and Kūkān (at the present day found near Marʿash), but he gives a list of the places where there were Kurds: the *rumān* (rumān?) of Fārs, Kirmān, Sijistān, Khurāsān (Isṭakhṛī, 282: a Kurd village in the canton of Asadābād), Isfahān (a section of the Bāzandjān tribe and a flourishing town described as Kurd, Yaʿqūbī, 275; Isṭakhṛī, 225), Dībāl, notably Māh Kūfa, Māh Bāḡ, Māh Sabaghān (Māsabaghān) and the two Isḥūr (i.e. Karādī Abī Dulaf and Burdī), Hamaghān, Shahinur, with its dependences Darābid and ʿamaghān (Zimkān), Agharbiyān, Armenia (at Dvin on the Araxes the Kurds lived in houses built of clay and of stone; Muḥaddas, 277), Arvān (one of the gates of Barḡha's was called Bāb al-Akrād and Ibn Miskawayh says that at the invasion of the Rūs in 332/942 the local governor had

Kurds under his command), Baylāḡān, Bāb al-Aḥwāb (Darband), al-Dharira, Syria and al-Thughūr (i.e. the line of fortresses along the Cilician frontier).

Isṭakhṛī, 98, particularly mentions five *rumān* in Fārs, this term being applied to districts over which the Kurds were distributed (in spite of de Goeje, *SCA*, iv, 250, it is preferable to keep the reading *rumān rumān* [from Persian *ramm*, "flock", "crowd"] for it is improbable that *rumān* could have given a plural *rumān*). Each *rumān* had its town, its Kurd chief in charge of the *ḥisār* and responsible for public safety. These *rumān* were: 1. Dīlāya, or Rāmdjān, bordered by Isfahān and Kāzistān; 2. Lawālījān, between Shīrāz and the Persian Gulf; Diwān, in the *ḥara* of Sābūr; 4. Kariyān in the direction of Kirmān; 5. Shahriyār, alongside of Isfahān also called Bāzandjān after the principal tribe, a part of which had been transferred to the province of Isfahān. As a supplement to the list of *rumān*, Isṭakhṛī, 114, gives a list of 33 nomad tribes (*ʿayy*, plur. *ʿayyā*) of Fārs, based on the records of the diwān al-*ṣafādāt* and reproduced by Ibn Hawḡal, 285-7 and Muḥaddas, 446. Kirmān, Rūmāl, Mudabḥīr, Muḥammad b. Baḡhar, Bakhl (Muḥaddas: Tāʿabī), Bundāghmahri, Muḥammad b. Isḥāq, Sabāḡ, Isḥāq, Adharkāt, Shahrakī, Tahmādah, Zabādī, Shahrakī, Bundāḡakī, Khurawī, Zangī, Šafārī, Šahyārī, Mihrakī, Muhārakī, Ishtāmaharī, Šahānī, Furātī, Salmānī, Šrī, Azādmoḡhī, Barāzmoḡhī, Mutallābī, Mamālī, Šāḥkhalī, Kadīlī, Dīlālī, in all 500,000 families living in tents.

The *Fārs-nāma* (ca. 500/1107) says (168) that the Kurds of the old large *rumm* of Dīlāya, Dīwān, Lawālījān, Kariyān and Bāzandjān, who formed the most brilliant element in the old army of Fārs, all perished in the wars at the time of the introduction of Islam, with the exception of a single 'Alak, who became a Muslim and left descendants. Other Kurds were transferred from Isfahān to Fārs by 'Aḡad al-Dawla. It is difficult to admit that 500,000 (?) families of Kurds were exterminated, but we must recognise the possibility of regrouping among the tribes of Fārs and of their denationalisation. The old *rumm* of Dīlāya (Kuh-Gilā) is now inhabited by Lurs; we do not know how long they have been there. For the rest, Isṭakhṛī's list mentions a tribe al-Lurīya (variant: Larba?) among the Kurds of Fārs. On the other hand the *Fārs-nāma* distinguishes from the Kurds the Šabānkāra (g.u.) clans, who had become very powerful in Fārs at the time of the last Buyids. The *Masālik al-aḥḡār* of al-'Umarī speaks of the Šabānkāra under a separate heading, and the *Sharaf-nāma* does not mention them among the Kurd dynasties. One of their clans, however (Rāmālī), bears the name of one of the "Kurd" tribes of Isṭakhṛī. Everything then suggests that the Kurds of Fārs differed considerably from the tribes of Kurdistan (cf. 980f and 100f).

The term al-Zawzān, which corresponds broadly to central Kurdistan (*zawān* in Kurdish "summer pastures"), is not well defined. According to Ibn Hawḡal, 250, the king of al-Zawzān was called al-Dayrānī (= Derankī, Armenian king of Vaspurakān). Muḥaddas, 237, regards Zawzān as a *nahiya* of Dīlārat Ibn 'Umar. Later this region, which had a mixed Kurd and Christian population, became extended in area. According to Ibn al-Aḡīr (in Yaḡūt, ii, 257), al-Zawzān began at two *ḡayr* journey from Mawṣil and stretched to the borders of Khāzī; on the Agharbiyān side it extended to Salmān. Many strong places belonged to the Baḡhawī and Bokhlī Kurds; the former held Barḡā, Baḡhīr (and Fanak);

to the latter belonged: *Djurdjâkî* (Gurgî), the residence of their *mulik* Aîl [*Sharaf-nâme*, I, 117: *Nash Atîl* ?], 'Allûs, Bîz al-hamrâ. To the lords of Mawşî (the Zangids) belonged Aîl (= Elki), Arwâkî, Bakhawîha (= Bekûst in Barwâri), Barhîho, Kingawar (?), Nirwa (east of Akrt?) and Khawzhab. The text of Yâkût is not very certain; in any case, the reference here may be to Kurd strongholds gradually annexed by the Hamdânids and the Zangids (see below).

The Kurds under the caliphs and Bâuids. Mas'ûdî (*Musadî*, III, 249) has preserved traditions from the pre-Islamic period of feuds between the Arab princes of *Chasân* (g.w.) and the Kurds. The Muslim Arabs came into contact with the Kurds after the occupation of Takrit and Hulwân in 16/637. Sa'îd b. Abî Wahsh marched on Mawşî, where the districts with a Kurd population were occupied (al-Mardî Bâ-Nuhadhâ, Bâ-'Adhîr, Hîbân, Dâsîn etc.); cf. Ibn al-Athîr, *al-Kâmil*, II, 408. The conquest of the region was completed by 'Uyâd b. Ghannam and 'Utha (Balidhûrî, *Futûh al-Buldan*, 331). The Battle of al-Zawzân in 19/640 obtained confirmation of his authority on payment of *khawâjî* (*Futûh* 176). In Susiana in 18/639 the Arabs fought against the Kurds, who had taken up the cause of al-Hurmuzân, Persian governor of Ahwâz (*Kâmil*, II, 425). In Fîrs, likewise, the Kurds supported the Persians in 23/642 at the defence of Fâsî and Darâbâdîrd (*ibid.*, III, 32). 'Umar had to send several expeditions against the Kurds of Ahwâz (*Futûh*, 382, 389; *Kâmil*, III, 37). On the other hand, in the reign of 'Umar the Kurds invaded the region of the central Karkhâ (Savûra, Mâsabadhân), the language of which was still Persian in the time of Ya'qûbî (*Buldan*, 256). The Arabs had reached Shahrîzûr before Islam (Ibn al-Fakîh, 130), but the final occupation of Shahrîzûr, Darâbâdîrd and Samghîn in 23/643 was only achieved after bloody fighting (*Futûh*, 334; *Kâmil*, III, 29). In the south, Abû Mûsâ al-Ash'arî (g.w.), governor of Basra, had to put down risings of the Kurds at Bêrûqî and Balasdjân in 25/645, but the Kurds, forcibly converted to Islam, apostatised en masse (*Kâmil*, II, 66, 76). Under the caliph 'Alî, the Kurds, along with the Persians and Christians, took part in the rebellion of al-Khîrîrî (g.w.) near Ahwâz and in Fîrs, but the chief was defeated at Rûm-Hurmuz (*ibid.*, III, 309).

Al-Mughîr, who had seized Armenia and Âdharbâydzân in the reign of the Umayyad caliph 'Abd al-Malik, appointed in 66/685 a governor at Hulwân whose task was to fight the Kurds (*Kâmil*, IV, 187), but the death of al-Mughîr prevented the plan from being carried out. Under the same caliph the rebel 'Abd al-Rabî'ah b. al-Ash'ash (see Ibn al-Ash'ash) made an alliance in 83/702 with the Kurds of Sâbûr in Fîrs (*ibid.*, IV, 352). In 90/708 the Kurds ravaged Fîrs and were punished by al-Hadhdhânî. In 129/746 the Kurds of Sâbûr resisted the ally of the Khazars, Sulaymân, who had rebelled against the caliph Marwân II and had besieged Sâbûr (*ibid.*, IV, 387, 341; V, 283). The caliph Marwân himself was the son of a Kurdish slave-girl (Tabarî, III, 51) whose blue eyes and fair complexion he had inherited (Sir William Muir, *The caliphate, its rise, decline and fall*, London 1895, 429).

Under the 'Abbâsîd caliph al-Manşûr, the invasion of Armenia by the Khazars in 147/764 resulted in numerous risings. A few years later the Kurds (*imrîghâr al-Ahrâd*) are again mentioned in connection with the rising at Mawşî and its repercussions in Hamadân (*Kâmil*, V, 446; VI, 9). Dja'far, son of al-Manşûr, was the son of a Kurdish slave-girl (Tabarî, III, 442).

In the reign of al-Mu'tasim, a Kurd rebellion is mentioned under 225/839; it broke out in the district of Mawşî, led by Dja'far b. Fahardîs, a scion of a noble Kurd family. Defeated at Bâkaghîsh, Dja'far took refuge in the mountains of Dâsîn, where he defeated the troops of the caliph. A new army commanded by the Turk Aytâkh (g.w. in Suppl.) put an end to the rebellion (*Kâmil*, VI, 350-2). A Kurd rising broke out in 231/845 in the regions of Isfahân, Dîbâl and Fîrs; it was speedily suppressed by the Turk general Wağîf.

The Kurds of Mawşî in 252/866 joined the Khazridjî Musâwir, who had seized Mawşî. In 262/875 they played a considerable part in the Zangid slave-revolt (cf. Nûldeke, *A servile war in the East, in Sketches from eastern history*, Edinburgh London 1892, 146-75) led by an 'Aîd Khazridjî (?) 'Alî Muhammad, called al-Khâbîh, and in the rising of Ya'qûb al-Saffâr, founder of the Saffârid dynasty (g.w.). At Ahwâz, Ya'qûb appointed a Kurd lieutenant, Muhammad 'Ubayd Allâh b. Husnârnâd, who, cherishing ambitious plans, engaged in secret negotiations with al-Khâbîh. With reinforcements sent by the latter, Muhammad marched on Sûs, but was defeated by Ahmad b. Laythûya; the latter, also a Kurd and commander of the Kurd levies, had been sent by the caliph to put down Ya'qûb's rising (Ibn Khalkîdân, *Wafayât*, ed. de Slane, IV, 304-8). When Ahmad had departed, Muhammad, after securing from al-Khâbîh further reinforcements consisting partly of Kurds, seized Shûstar where, according to the arrangement he was to have had the *ghûbb* read in the name of al-Khâbîh, but instead he did it in the names of the caliph al-Mu'tasim and his adversary Ya'qûb al-Saffâr. His Zangid allies deserted Muhammad, and Shûstar was reoccupied by Ibn Laythûya. Muhammad retired to Rûm-Hurmuz, but he was dislodged from it by al-Khâbîh's generals. As a result of difficulties with the Dîrânî Kurds, Muhammad again sought the help of al-Khâbîh. The latter sent him troops, which Muhammad sent into battle but suddenly left them in the lurch and attacked them. To avoid a breach with al-Khâbîh, Muhammad agreed to proclaim him caliph. The death of Ya'qûb (265/879) and of al-Khâbîh (270/883) put an end to these exploits (*Kâmil*, VII, 264).

About 281/894 the Kurds were among the participants of the Arab Hamdân b. Hamdân (cf. HAMDÂNIDS) when he established himself in Mawşî. The Kurd rebellion raised in 284/897 by Abû Layth did not last long (*ibid.*, VII, 325, 337). In 293/906 the Hadhdhânî Kurds led by their chief Muhammad b. Bîlâl laid waste the region of Niniveh. 'Abd Allâh b. Hamdân, the new governor of Mawşî, pursued them, but suffered a reverse at Ma'fûha. With reinforcements sent by the caliph he resumed next year the pursuit of 5,000 Hadhdhânî families. The Kurds began negotiations to gain time and retired to Âdharbâydzân. 'Abd Allâh returned to Mawşî and with new troops set out once more against the Hadhdhânîs, who had entrenched themselves at Dîshâl al-Salak (probably Lâhidjân, cf. *al-Waḡḡi-salak*). The Hadhdhânîs were forced to surrender, and their pacification was followed by that of the Hamaydî tribe and of the people of Dîshâl Dâsîn (*ibid.*, VII, 371). In the reign of the caliph al-Mu'tadîr, the Kurds plundered the environs of Mawşî but were punished by the Hamdânîd government; the Dîshâlî tribe put up a particularly stubborn resistance (*ibid.*, VIII, 116). Under the year 337/943 Ibn Miskawayh, *Taḡḡarîr al-nuḡm*, GMS, VI, 105, speaks of the expedition of the Hamdânîd Husayn against Âdharbâydzân; on this occasion he

had as an ally *Djō'ār* b. *Shahkōya*, chief of the *Haḡhbanīs* who were settled at *Salmās*.

About this time, *Dayṣam* b. *Ibrāhīm* appeared on the scene, and his adventurous life is closely associated with the Kurds. He himself was the son of an Arab by a Kurd woman. His followers were Kurds with the exception of a small body of *Daylamīs*. *Dayṣam* was a *Khānīdīl*. He seized *Āḡharbāyḡjān* after *Yūsuf* b. *Abī Ṭ-Ṣāḡī* and in 327/938 used his Kurds to drive out *Laḡhlekī* b. *Mardī*, one of the lieutenants of the *Ziyārid* *Wuḡhamīr*. But the *Musāfirid* *Marrubān*, a noted *Shī'ī*, succeeded in taking *Āḡharbāyḡjān* from *Dayṣam* and the latter took refuge with his friend *Hāḡḡīk* b. al-*Dayrānī* (the Armenian king of *Vaspurakan* *Khachik* or *Gaghik*, son of *Derank*). Then the people of *Tābris* appealed to *Dayṣam*, but again he suffered a reverse and with the consent of the *Musāfirids* fell back to *Tārum*. In 337/948-9, *Marrubān* was made prisoner by the *Būyid* *Rukn al-Dawla*, who sent a representative to *Āḡharbāyḡjān*. *Marrubān*'s brother *Wahsūdān* then thought of *Dayṣam*, to whom his Kurds had remained faithful, and sent him against *Rukn al-Dawla*'s representative. *Dayṣam* was defeated, but held out in *Ardabīl* and *Bardha'a*. When *Marrubān* returned from his captivity, *Dayṣam* had to take refuge first in *Armenia* and then in *Baghdād*, where the *Būyid* *Mu'izz al-Dawla* treated him generously. As his friends were urging him to return to *Āḡharbāyḡjān*, he went to the *Hamdanids* of *Mawālī* and *Syria* to ask for assistance. In the absence of *Marrubān*, *Dayṣam* returned to *Salmās* in 344/956, where he had the *khutba* read in the name of *Sayf al-Dawla* of *Syria*. Once more driven out by *Marrubān*, *Dayṣam* sought refuge with his Armenian friends, *Ibn al-Dayrānī* (*Derank* b. *Khachik*) had to hand him over to *Marrubān*, much against his will. *Dayṣam* was blinded and died in prison in 345/956-7 (*Taghrib*, ed. Amedrez, i, 343; ii, 148-51; *Kāmil*, viii, 289, 362, 375-7).

During *Marrubān*'s captivity, in Rayy, several independent governors set themselves up in the north-west of *Perсія*. One of them (about 340/952) was *Muḥammad Shaddād* b. *Karḡū* of the *Rawwādī* tribe, out of which later sprang the great dynasty of the *Ayyūbids*. The principal fiefs of the *Shaddāds* were *Dabīl* and *Gandja*. The *Shaddāds* were allies of the *Byzantines* and of the *Sajghāts*. In 465/1072 *Abū Suwār* bought *Ānī* for his young son *Manūche*. From this time onwards, the dynasty was divided into two branches: that of *Gandja* and that of *Ānī*. In 1104, *Ānī* was taken by the *Georgians* but between 1207/1216 and 1257/1261 and again from 1165 to 1174, *Ānī* was again held by the *Shaddāds*. The *Shaddāds* were enlightened princes and left a number of remarkable buildings. Cf. the articles *ARRAN*, *DWIK*, *GANDJA* and *SHADDAD* in the Armenian bibliography in *Lynch, Armenia*, i, 363-7; cf. also *Barthold* in the appendix to his Russian translation of *Lane Poole's Muhammadan dynasties*, St. Petersburg 1899, 294; *Barthold, Pers. nadpis' na ... mīlets Manūche*, *Aniyskaya Seriya*, No. 5; N. V. Marr, *Ezhde o slove "elch"*, in *ZVOIRAO*, 98 (1911), 120; E. D. Ross, *On three Muhammadan dynasties*, in *Asia Major*, ii (1925), 215.

In 349/960 a pretender appeared in *Āḡharbāyḡjān*. He was called *Ishāk* b. 'Isā, and was supported by *Faḡlī*, chief of the *Kahānī* (?) Kurds, while his adversary, the *Musāfirid* *Djastān* b. *Marrubān* relied on *Haḡhbanī* support. *Ishāk* was soon disposed of (*Taghrib*, ii, 179). The Kurds and the *Daylamīs* also played a considerable part in the quarrels between *Djastān* and his brother *Nāḡīr al-Dawla* and between

Ibrāhīm b. *Marrubān* and his cousin *Ismā'īl* b. *Wahsūdān* (*Taghrib*, ii, 219, 219; *Kāmil*, viii, 420-3).

About 348/959, the second *Kurd* dynasty arose in al-*Dijlāl* (*Zambeer*, *Munul*, 211) founded by *Hasanwayh* (*Hasanwayh*) b. *Hasan* [g.w.] cf. also the *Sharaf-nāma*, i, 20-3], chief of the *Barḡhānī* (*Barḡhānī*) tribe, who had assisted the *Būyid* *Rukn al-Dawla* on his expedition to *Khuzestān*. *Rukn al-Dawla* showed great tolerance to the Kurds, and when someone complained to him of their excesses he used to say: "Even the Kurds must live" (*Taghrib*, ii, 281). *Ibn al-Aḡhīr* (viii, 519) praises the noble character of *Hasanwayh*, his prudent policy and the purity of his morals. When *Hasanwayh* died in 369/979, in his capital *Sarmāḡī* (south of *Blutān*), 'Aḡḡd al-Dawla overran his possessions (*Hamadān*, *Dinawar*, *Nihāwand*) to bring them under his authority, but in the end he granted investiture to *Badr* b. *Hasanwayh* (369-405/979-1014), who remained loyal to 'Aḡḡd al-Dawla and even fought against his own brothers who had taken the side of the rebel *Faḡhī* al-Dawla. The caliph gave *Badr* the title of *Nāḡīr al-Dīn wa'l-Dawla*. The historians give an extremely favourable verdict on *Badr*; he had his tribe educated, distributed taxation fairly and protected the peasants (*Rūḡhkrwār*, in *Eclipse*, iii, 287-99, 327; *Hāḡī* b. *Muḥassin*, in *ibid.*, iii, 429, 449-54; 'Uṭbī, *Kāḡh-i Yāminī*, tr. Reynolds, 424). *Badr*'s successor *Zākīr* (*Zākīr*?) only reigned a year and in 406/1013 was driven out by the *Būyid* *Shams al-Dawla*. *Hasanwayh*'s uncle *Wandād*, chief of the 'Ayyāhiyya section, died in 349/960, his brother *Abū Ṭ-ḡhānā'īn* died in 350/961, and a little later his son *Abū Sāllān* *Dayṣam*, the last of this collateral branch, was dispossessed of his castles (*Kasān* or *Kasnūn* [*Kaslūn*? near *Bābā Yūdīgar* on the *Zohābī*], *ḡhāmū-ābād*, etc.).

'Aḡḡd al-Dawla had to deal with the Kurds on several occasions, but he was much more severe with them than his father *Rukn al-Dawla*. In 368/978 the *Kurd* *Ibn Bādāya* with the help of the *Hamdanid* *Abū Taghlib* [g.w. in Suppl.] became an independent ruler at *Ardamūḡh* (= *Kawāḡh* near *Djabul-Jūdī*, *Yakūt*, i, 199), but soon allowed himself to be seduced by the promises of 'Aḡḡd al-Dawla (*Taghrib*, ii, 362). In 369/979 the latter sent an expedition against the Kurds of *Shahrīzūr* whom he wished to separate from the *Band* *Shaybān* *Bedouins*, who had business and matrimonial ties with them. The town of *Shahrīzūr* was occupied, and the Arabs went back to the desert (*Taghrib*, ii, 398; *Kāmil*, viii, 516).

Another expedition was sent in 370/980 against the *Hakkāri* Kurds, who were besieged and surrendered, relying on a promise that their lives would be spared. But the leader of the expedition crucified them along the side of the road for five *farsāḡs* between *Ma'al-ḡhāyā* and *Mawḡd* (*Kāmil*, viii, 521).

Even in the lifetime of 'Aḡḡd al-Dawla, the *Humayyīd* *chālī*, *Abū 'Abd Allāh Ḥumayy* b. *Dushandī* (or *Abū Ṣhūḡḡā* b. *Dustāk*), known as *Bāḡh*, had attained considerable notoriety. At first a shepherd, he gradually rose to be lord of *Arḡlūḡh*, *Āmid* and *Mayyāfārīn*. A rising in *Niḡbān* brought him into conflict with *Samṣām* al-Dawla. *Bāḡh* defeated the latter's forces at *Bā-Dūlā'īya* (on the *Khābūr* al-*ḡhūmayyīya* in the canton of *Kawāḡh* = *Ardamūḡh*), seized *Mawḡd* and was planning a march on *Baghdād* to end *Būyid* rule when he was defeated by *Samṣām* al-Dawla. He fell back on *Mayyāfārīn* and, by an arrangement with the captain of the army sent against him, secured possession of *Diyārbakr* and the western part of *Tūr*

'Abidin (374/984). Bāgh did not relinquish his designs on Mawṣil and in 379/990, having collected a large number of Baghnawī Kurds, encamped under the walls of this town and engaged in negotiations with its inhabitants. But the Hamdānid prince, who had just regained possession of his hereditary fief, secured the help of the Banū 'Ukayl Arabs and attacked the invader. An accident put Bāgh hors de combat and he was slain. His body was crucified, but the people of Mawṣil obtained his burial with the usual rites because he had fought against the unbelievers (*Kāmil*, ix, 23, 27, 38, 49; *Rūdhrawārī*, iii, 83-4, 276-8; *Abu Ḥ-Farajī, Muḥḥafaz al-Dawla*, ed. Pococke, 321-3).

In 380-90/990-1000, Saṣām al-Dawla made an attempt to improve his position and with this object, made an alliance with Fūlād b. Munghir, who was supported by the Kurd cavalry robbing in Shīrāz. After the failure of the enterprise he sought refuge with the Kurds, but the latter betrayed him and he took refuge with Fakhr al-Dawla, who was notorious for his hatred of the Kurds (*Rūdhrawārī*, iii, 184; on Ibn Fūlād, see *Uṭbi*, op. cit., 424-5).

The Kurd dynasty of the Marwānids (Zambara, 196; Bosworth, *The Islamic Dynasties*, 53-4) is closely connected with Bāgh. After the defeat at Mawṣil, Abū 'Alī b. Marwān b. Duṣṭak, the son of Bāgh's sister and his ally, withdrew to Hīn Kayā (p.u.) where Bāgh's Daylamī wife lived. He married her and took one of the strongholds that had belonged to Bāgh. He twice took prisoner Abū 'Abd Allāh al-Hamdānī who had defeated Bāgh, but treated him generously. Ibn Marwān established himself in Diyārbaḥr and by his conciliatory attitude won the sympathy of the inhabitants. The Marwānids reigned from 380/990 to 489/1096. Their power extended not only over Diyārbaḥr (Āmid, Arzin, Mayyāfāriḳin, Hīn Kayā) but also to Khilāt, Malazgirt, Arḍīḥ and the canton to the northeast of Lake Van. In the west they held Urfa for a time. Abū 'Alī Ḥasan in 387/992 invaded Syria and took it from the Byzantine Emperor Basil II. He was killed in 387/997 by the people of Diyārbaḥr, who had rebelled. His brother Abū Manṣūr Muḥammad al-Dawla, who after the death of Bāgh had seized Mayyāfāriḳin, reigned there till 402/1012 (Abu Ḥ-Fidā, *Annales musulmanes*, ed. Reiske, ii, 569). His brother Abū Naṣr Ahmad (Ibn Khallikān, i, 157-8) succeeded him and reigned from 402/1012-22 to 453/1062. In 416/1025 he seized Urfa, but the Byzantines re-established their power in 423/1032 (Abu Ḥ-Farajī, 342). He earned the reputation of being a just and enlightened ruler, and able, though given to pleasure. In 441/1050 Abū Naṣr had to pay homage to the Salḡūq Tughril Beg. His son and successor Abū Ḥ-Kāsim Naṣr, called Niḡm al-Dawla (453-72/1062-79), shared the power with his brother Sa'īd (d. in 457/1065). He added to his possessions Ḥarrān, Suwayḍā, etc. His successor was Manṣūr b. Sa'īd, who nominally reigned from 472-89/1079-96, but by 478/1085 the Salḡūq general Fakhr al-Dawla b. Dīnār (see *ḡazā*, 220f) had taken almost the whole of his lands, which were placed under the authority of the Atābeg of Mawṣil (Abu Ḥ-Fidā, iii, 77-9, 87, 227, 225, 249). On the Marwānids, cf. the special study by H. F. Amedroz, in *JRAS* (1903), 123-54.

On the eve of the Turkish invasions, we find frequent reference to exploits and expeditions of the Kurds. In the reign of the caliph al-Kāḍir (382-422/992-1032), the historians record the exploit of the Kurd Ahmad b. al-Dabbāk, who killed the Emperor Basil II's general and thus stopped the Byzantine

advance (*Rūdhrawārī*, iii, 247). Between 386/996-7 and 388/998 the Kurds took part in the struggle between the Būyids and the Ziyārids for the possession of Ḥurḡān ('Uṭbi, tr. Reynolds, 298-302; Ibn Isḥāqīyār, abridged tr. E. G. Brown, 226-8). A few years later we find Mubīn of Ḥazna using Kurds against the Karakhānids ('Uṭbi, 336).

The Kurds took part in the civil wars of the Būyids, in the struggle of the Banū 'Ukayl for the possession of Mawṣil, etc. In 412/1020 they fought against the Turkish troops who mutinied in Hamadān. In 452-20/1062-9 we find them fighting in Fārs and Khuziṣtān against the last Būyid, Abū Kāḥḡār (*Kāmil*, ix, 200, 234, 226, 232, 239, 247, 249, 265; Hīlī b. Muḥammad, iii, 348, 376, 387). Thus the Kurdish element was exhausting itself in continual fighting when the Turkish hordes arrived who were destined to modify radically the ethnical aspect of the Near East.

The Turkish conquest. When in 420/1029 the Ḥuzz precursors of the Salḡūqs reached Rayy, Tāḡ Farrāḥ, the Turkish general of the Ḥasanawids, went to meet them with 3,000 horsemen including a number of Kurds. The leader of the Kurds, being captured by the Ḥuzz, sent a message to his men to cease fighting. This caused a tumult and Tāḡ was killed (*Kāmil*, ix, 268). In the same year the Ḥuzz reached Marāḡhe and executed many Ḥadḡbānī Kurds. The Kurds made an alliance with the ruler of Adḡar-bāyḡḡān (Wahṣūdān II) and the Ḥuzz had to retreat. Another body of Ḥuzz, after a raid into Armenia, returned to Urmia and the lands of Abū Ḥ-Hayḡḡān² Ḥadḡbānī; the Kurds attacked the Ḥuzz but suffered a defeat. In 432/1041 the Muṣṣafid Wahṣūdān II b. Mamūn massacred a large number of Ḥuzz at Tabriz; the Ḥuzz of Urmia went into Hakkāri, a dependency of Mawṣil, and ravaged the country, but while they were involved in the mountains the Kurds attacked them, killed 5,500 men and took many prisoners and much booty (*Kāmil*, ix, 270-2).

On the approach of Tughril Beg's troops, the Ḥuzz took fright and pushed onwards. Kurdish guides led them through al-Zawra to the Dīḡra. One section of the Ḥuzz under Manṣūr b. Ḥuzzḡḡḡ remained to the east of the Dīḡra, while the other under Bakā marched on Diyārbaḥr, and going on pillaged the districts of Kārdā, Barabāḡ, Huṣṣayniyya (Yāḡḡḡ, ii, 270: a town between Mawṣil and Dīḡra) and Fāḡḡābūr. The Marwānid Salaymān b. Naṣr al-Dawla, ruler of Dīḡra, persuaded the Ḥuzz to wait till the spring before traversing his lands to join the other Ḥuzz who had settled in Syria. Then by a ruse he seized Manṣūr, and with the help of the Baghnawī Kurds of Finik, pursued the Ḥuzz. But the latter did not cease their depredations; they ravaged the district of Diyārbaḥr and seized Mawṣil (*Kāmil*, ix, 272-3).

Meanwhile, the dynasty of the Hasanawayhids had perished and the power in Dīḡbā had passed to a new family the Banū 'Annāz (see Zambara, 212, and 'ANNĀZIDS. The *Sharafnāma*, i, 22, has 'Ayyār), which is often called that of Abū Ḥ-Shawk. Previously in 340/952 during a Turkish rising in Hamadān, the Būyid Mu'izz al-Dawla had had recourse to the services of Ibn Abī Ḥ-Shawk, chief of Hulwān (Taḡḡārī, ii, 2). The real founder of the dynasty seems to have been Abū Ḥ-Faṡḡ Muḥammad b. 'Annāz (*Kāmil*, ix, 258) who ruled 380-407/990-1017. His son Abū Ḥ-Shawk slew the last of the Hasanawayhids, Zāḡḡr (Thāḡir) in 406/1015-16. The possessions of the Banū 'Annāz included Shahrīfūr, Kirmānḡḡāḡ (occupied to 437/1039-40; *Kāmil*, ix, 300, 316),

Bilawār, Samghān, Dabūka and Khwēstīdihākān. In 437, Tughril sent his brother Ibrāhīm Yīnāl to pacify Dībāl. Ibrāhīm drove the Kākūyid Garshasp out of Hamadān and he sought refuge with the Dīwānī Kurds. At Kirmānshāh there was a garrison of Abū 'l-Shawk's composed of Daylamis and Shādhānjān Kurds. Kirmānshāh was occupied and Abū 'l-Shawk died in 438/1046 at Sirwān. Ibrāhīm took Samirān (Shamirān? Šaymara?) and subjugated the Dīwānī. Sa'dī, son of Abū 'l-Shawk submitted to the Saljuqs. The dynasty lasted till 520/1126 (Mūnedsjīdm-bāshī).

The defeat of the Emperor Romanus IV at Malāz-gird (463/1071) delivered all Armenia into the hands of Alp Arslān. Under the Great Saljuqs there arose in Fārs the turbulent dynasty of the Shābānkāra (g.v.), but it is very doubtful if this dynasty, the fortunes of which can be traced from 421/1030 to 756/1355, was strictly Kurdish (cf. above). On the other hand, the small Kurd dynasties were ruthlessly wiped out in favour of Turks. In 493/1100 the last Narwīnīd disappeared in the region of Khilāt, where the Turk Sulmān Kuṣlī founded the dynasty of the Shāh Armanis which lasted a century until the coming of the Ayyubids. Under the date 495/1101 Ibn al-Aṭhīr (x, 238) mentions the killing of two thousand Kurds of Surkhāb h. Badr, a scion of the Banū 'Annāz, by the Turkomans of Salghūr Kharabūl. Other Turkomans later took all the lands of Surkhāb except Shahrizūr, Dabūka and Khwēstīdihākān. In spite of these crushing blows, the Kurds are often mentioned in the 5th/11th and 6th/12th centuries. In his struggle with Kāwurd of Kirmān, Malik Shāh employed Kurdish and Arab forces, whom he later rewarded with fiefs at Kirmān (Kāmil, x, 53), where there were already colonies of Kurds (cf. Mas'ūdī, *Tamhīd*, 88; Ibn Khallikān, I, 516). Rāids of Kurds took place at Dūdāyī, Mārdīn etc. in 496/1103, 498/1105 and 503/1109-10. In Muḥammad b. Malik Shāh's campaign against Syria (504/1110) there took part the lord of Marāḡha, Ahmādī b. Wahrūdān, a Kurd of the tribe of Rawwādī (cf. Kāmil, x, 391) and the "Shāh of Armenia" Sulmān. The campaign was a fiasco, and the Kurds left to lay siege to the Turk Sulmān (*Revue des hist. des Croisades, docum. orientaux*, III, 542, 599).

During this period we often find the Kurds mentioned in Syria, where they came into contact with the Franks (cf. Dorenboung, *Quinies b. Munkidh*). Under Sanjar the province of Kurdistan was formed out of the western part of Dībāl. Salaymān, the nephew of Sanjar, became its ruler with Bahār (to the north-east of Hamadān) as its capital. The province was in a flourishing state. In the reign of Sanjar also the Kurds took part in the troubles of 513/1119. In 516/1122 a punitive expedition passed through the Hakkārī, Zawān and Baghnawī districts (Kāmil, x, 374, 377, 426), but shortly afterwards the Kurds seized the stronghold of the Christian patriarch at Tūr 'Abādīn (Assemani, *Bibl. or.*, II, 221).

The Atābaks of Mawṣil. The Atābaks, the immediate neighbours of central Kurdistan, played an important part there. 'Imād al-Dīn al-Zangī several times invaded Kurd territory. In 528/1134 he took Tanza (on the left bank of the Bōkhtān) and to punish the Humaydīs, who had supported the caliph Mustashīd when he was besieging Mawṣil, seized their fortresses, al-'Akr, Shūsh, etc. (Shams al-Dīn, in *Revue*, III, 666-7; Ibn al-Aṭhīr, *at-Atābakiyya*, in *Ibid.*, II, 87). Abū 'l-Haydī, lord of Arbīl, Āshīb, etc., submitted to Zangī (was he perhaps a Hakkārī? At this period this tribe lived south of the territory which now bears its name; cf. Hoffmann, *Auszüge*, 203).

After the death of Abū 'l-Haydī, Zangī intervened in the quarrels among his successors, seized Āshīb and dismantled its defences; the fort of Dībālāb received the name of 'Amādiya (= 'Imādiya, in honour of 'Imād al-Dīn). In 534/1139 Zangī took Shahrizūr from Kifdāy b. Arslān Tāsh the Turkoman. In 537/1142 he sent a new expedition against the Hakkārī and took the fortress of al-Sha'bānī (= Āshīb?), which he rebuilt. In 538/1143-4 Irūn and Rihān were taken (Shams al-Dīn, in *Revue*, III, 685). 'Alī, lord of al-Rābiya (cf. *Sharaf-nāma*, I, 284, Rābiya-bulak?), Farab and Alka (Elk?) joined Zangī of his own accord. The last expedition of Zangī was against the Baghnawī of Fanak (Finik), but the siege of this town was raised on the death of the Atābak in 541/1146 (Ibn al-Aṭhīr, *at-Atābakiyya*, in *Revue*, II, 86, 114, 129, 188). Karādiya Tādina, muḥāsī' (?) of Hakkārī, who was sent in 547/1152-3 by the Atābak of Mawṣil against the Atābak of Adharbāydjān, seems to have been a Turk foreign to the tribe.

Later, after the death of Salāh al-Dīn (589/1193), the Zangids consolidated their position in central Kurdistan. In 607/1211 'Imād al-Dīn, a younger son of Arslān Shāh Zangī, received as a fief the strongholds of the Humaydīs ('Akr and Shūsh). In 615/1218 the same prince seized 'Amādiya and "the remainder of the fortresses of the Hakkārī and Zawān" which were ceded to him by Muẓaffar al-Dīn Kōkbūrī of Arbīl (Abū 'l-Farajī, 433, 438). It must have been these events that caused the Hakkārī to be driven back towards the lands at the sources of the Great Zab.

The Artukids (g.v.). Atābaks of Diyarbakur, several times came into conflict with the Kurds (Abū 'l-Fidā', III, 563; Usūma, I, 322). The 'Abbāsid caliphs, freeing themselves from the tutelage of their protectors, negotiated with the Kurds (cf. the case of 'Alī Humaydī in 528/1134, and Kāmil, x, 7, 188) and sought to weaken the Turks. In 531/1135 under the caliph al-Nāṣir, a minor incident resulted in a war between the Kurds and the Turkomans (Kāmil, II, 342) which extended over a vast area (Syria, Diyarbakur, Dīazira, Mawṣil, Shahrizūr, Khilāt and Adharbāydjān). Two years later the rivals stopped fighting in order to join against the Christians of Armenia, Assyria, Mesopotamia, Syria and Cappadocia, but new feuds soon broke out between the Kurds and Turkomans. After many fierce battles, the Kurds fought their way back into Cilicia. The Turks practically exterminated the Kurds of Cilicia and Syria. As the Kurds on leaving their old homes had entrusted their goods to their Christian neighbours, and as the Christians concealed some Kurds, the Turks finally fell upon the Christians at Thelmuza (?) and Arabīl (= Arushā?) (Michael the Syrian, in *Revue des hist. des Croisades, docum. orientaux*, 395).

The Ayyubids. The Kurdish origins of this remarkable dynasty are well-established (*Sharaf-nāma*, I, 35-82). The Armenian historian Hayton (Hethum) says on this point: "Postea vero Sarraceni amirantur dominum Egypti et Medi, qui Cordus vulgariter dicebatur, regni Egypti dominum occupaverunt", *Revue des hist. des Croisades, docum. orientaux*, II, 223, 343). The grandfather of Salāh al-Dīn Shādhī b. Marwān was a Rawādī Kurd (Rawādī, Rawanda, a clan of the Haḡhībānī) of Dwīn (g.v.); see Minorsky, *Prehistory of Saladin, in Studies in Caucasian History*, London 1933, 107-57.

The important fact is that it was from Dwīn that the Shādhīdī dynasty had come, the memories of which must have been still alive in the time of Shādhī Ayyūb [see AYYŪBIDS] and Shādhī (g.v.), son

of Shāhī, were born in the old home (the village of Adjanakān). Salāh al-Dīn [p. 1] was born at Takrit, but Kurd traditions were certainly familiar to him through his father and uncle. The persistence of Iranian names in the Ayyūbīd family is significant. Nevertheless, the scene of the main activities of the dynasty was Egypt and Syria. The families of the old Saljūq Atābaks, even when they became vassals of the Ayyūbids, continued to rule in Diyarbakr (Artukids), Mawṣil (Zangids) and Arbīl (the Begtiginids, at first deputies of the Zangids). By the treaty of 585/1187 with 'Izz al-Dīn Zangī, Salāh al-Dīn annexed only Aleppo and Shāhrīnīr (Ibn al-Aghīr, *al-Aḥḥākiyya*, in *Revue*, II, 334; *Kāmil*, XI, 340; Bahā' al-Dīn, in *Revue*, III, 85). In 585/1189 Salāh al-Dīn gave Shāhrīnīr to his *nasab* Keshītoḡdī (?), a relative of Ya'qūb b. Kifīdān. The only independent way by which the Ayyūbids penetrated into Kurdistan was that of Khilāt. This district was at first conquered by Takī al-Dīn in 587/1191 (*Kāmil*, XII, 40), but it was only after the death of Salāh al-Dīn that his nephew al-Malik al-Awḥad Naḡm al-Dīn Ayyūb installed himself there in 604/1209. Later, Khilāt passed to his brother Ashraf, who assumed the title 'Shāh Arman', and finally to the third brother Muḡaffar who ruled there till 642/1244. The peace of this fief was several times broken by invasions of Georgians, of the Kh'arazm-Shāh and of the Mongols. The Georgian troops who were operating round Khilāt at this time were commanded by the Armenian princes Zakarē and Iwanē, whose genealogies make them descendants of the *Kelē Babirān*, i.e. of the Kurd tribe of Bāpīrakān; cf. Marr in *ZVORGO*, XX (1911), 120.

The Ayyūbīd forces were composed mainly of Turks, but the Kurdish element was by no means negligible. In 583/1187 Salāh al-Dīn addressed an appeal for a holy war to the Kurds on the upper Tigris. The Diyarba forces were disbanded in 584/1188, but the Diyarbakr detachments and particular tribes are often mentioned. These Kurds were sometimes on bad terms with the Turkomans (Bahā' al-Dīn, in *Revue*, III, 86, 313, 381).

Kurds were numerous in the civil and military service of the Ayyūbids, but very often they acted against the dynasty's interests. When Shīkūb died, there were Kurds who opposed the appointment of Salāh al-Dīn as his successor (Ibn Khallikān, IV, 494).

An important part was played by the family of Abu 'I-Hayḡā' (Hadhānī), hereditary chief of Arbīl (?). He directed the defence of 'Akka against the Crusaders and was appointed *isḥāḡīr* of the army and governor of Jerusalem. In 592/1196 he was transferred to Baghdad: he conducted an expedition against Hamadān and died at Dākka. His nephew Kūṭb al-Dīn built the *Kūṭbiyya madrasa* in Cairo. Another Kurd, of the tribe of Hakkānī, Sayf al-Dīn b. Ahmad al-Maḡḡīb, succeeded Abu 'I-Hayḡā' at 'Akka. His descendants had exciting careers; his son Ahmad ended his days in the prison of Hārān, his grandson, the *Kādī* 'Imād al-Dīn plotted against al-Kāmil and had to go into exile.

The Kh'arazm-Shāh Djalāl al-Dīn. In 614/1217 the Kurds of Zagros inflicted a defeat on the troops of the Kh'arazm-Shāh sent from Hamadān to Baghdad. Djalāl al-Dīn's operation against Khilāt (623-6/1226-9) disorganised the life of the country, and the Kurds were decimated by famine (*Kāmil*, XII, 207, 308). Defeated and pursued by the Mongols, Djalāl al-Dīn took refuge among the Kurds of Diyarbakr and in 643/1231 was killed, probably by one of them (Dhuwaynī, ed. Muḡammad Kazwīnī, II,

190; *Kāmil*, XII, 325; d'Osson, *Histoire des Mongols*, III, 62). In 634/1237 again the remnants of the Kh'arazm hordes traversed and plundered the region of Kharpūt (Abu 'I-Farādī, 477). After the death of Djalāl al-Dīn, the Mongols laid waste the region of Diyarbakr and Khilāt. Another horde had descended from Marāgha on Arbīl; this latter region was three times invaded. In 643/1241, Shāhrīnīr was laid waste and in 650/1252 Diyarbakr.

The Mongol *Ilkhāna*. The Kurds are rarely mentioned under the *Ilkhāns*. As these rulers—at first pagans and later Muslims—were on good terms with the Christians, and the latter had sufficient causes of complaint against their Muslim neighbours, the Kurds so recently involved in the wars of the Ayyūbids had to remain confined to their mountains and to hope for success for the enemies of the Mongols.

The province of 'Kurdistān' formed in the time of the Saljūqs, the capital of which was Bahār (near Hamadān), was conquered by Malik b. Tūdān, father of the celebrated Amir Cöban. Leaving Hamadān in 655/1257, Hülāgū marched on Baghdad. At Kirmānshāh the Mongols began to murder and plunder (Rashīd al-Dīn, ed. Quatremère, 225, 255, 267). Before the capture of Baghdad, Hülāgū sent troops to take Arbīl. The governor of this stronghold, Tādī al-Dīn Shāḡba (cf. Rashīd al-Dīn, ed. Blochet, 281), submitted to the Mongols, but the Kurd garrison refused to follow his example. Arbīl was taken with the help of the Atābak of Navsān, Badr al-Dīn Luṭī' (d'Osson, III, 256). The taking of Baghdad resulted in the depopulation of Shāhrīnīr (p. 1), and its Kurd inhabitants, according to Shāḡba al-Dīn al-'Umārī, left for Syria and Egypt (cf. d'Osson, *op. cit.*, III, 300, 330, 337). An echo of these events is found in the appearance in Algeria of two Kurd tribes: Lawēn and Babin (Ibn Khaldūn, *Hist. des Berbères*, tr. de Slane, II, 461, III, 413).

Returning to Āgharbiyūdjān, Hülāgū set out for Syria in 657/1259. In the Hakkāri country, the Mongols put all the Kurds they found to the sword (Rashīd al-Dīn, ed. Quatremère, 328). Diyarba, Diyarbakr, Mayyāfārḡīn (held by the Ayyūbīd al-Malik al-Kāmil Nāsir al-Dīn) and Mārdīn were taken in succession. After the death of the Atābak Badr al-Dīn Luṭī', who had remained faithful to Hülāgū, his son Šālīb went over to the side of Baybars, Sultan of Egypt, and received confirmation of his investiture from him. The Kurds around Mawṣil at once fell upon the Christians. The garrison of Mawṣil consisting of Kurds, Turkomans and Shāḡba, courageously resisted the Mongols.

In Syria also the Kurds threw in their lot with the Mamlūks. In his letter to the Khān Berke, Baybars boasts of the number of his troops, who were Turks, Kurds and Arabs (d'Osson, III, 385). In the time of Abaka, the Armenian Hayton tells how after an invasion of Egyptian troops (before 677/1278) the Kurds took 5,000 houses of Kurds (Gordians) living in northern Syria (*Revue*, *docs. armén.*, II, 179). But after the defeat of the Mongols in 680/1281, a body of Muslim troops, made up of Turkomans and Kurds, laid waste Cilicia. The rare cases in which Kurds are found allied to the Mongols were generally in distant Fars. Under Öldjeitü there were Kurds in the troops that invaded Gilān in 706/1306-7. A little later a Kurd, Mūsā, who had proclaimed himself the *mawḡī* of the Shī'īs, was executed by Öldjeitü. In 720/1312-13 Badr al-Dīn, the Kurd lord of Raḡḡa, resisted the Mongols.

The Kurd provinces were governed by the Mongol *amirs*. The fighting in Arbīl never ceased. The

"Kayaf", Christian highlanders, forming part of the Mongol army and stationed in Arbīl, brought a charge against their chief Zayn al-Dīn Bāhū and came into conflict with the Kurds, whom the Arabs supported. Incidents began in 696/1297 but the situation came to a height in 720/1320. With great difficulty, the Mongols drove the Christians out of the citadel. The Mongols had summoned the Kurds to help them in the siege, but their *amirs*, who were friendly with the Christians, wanted to use the Kurds to prevent the massacre of the Christians by the Arabs. The massacre took place, but the Kurds had no share in it (*Histoire de Mar Jabalaha III*, tr. J. B. Chabot, Paris 1895, 152-77).

The country between Marāgha and Arbīl was a kind of high road for the Mongol armies; at this time the country south of Lake Urmia was still for the most part occupied by Turks and Mongols (*al-Sawāq* - *bulāq*).

The capital of the province of "Kurdistan" under Öljeytū was moved from Bahār to Sulṭānkhān (of Camfāmāl). The extent to which the province had suffered may be judged from the statement of the Rāmī Allāh Mustawfī's *Nuṣṣat al-ḥuḥūḍ* (ed. Le Strange, 107), according to which its revenues were reduced to one-tenth of what they were under the Saljuqs.

When the Ilkhāns had disappeared, two families of Mongol chiefs of the tribes of Sulduz (q.v.) and Dīlāyir (q.v.) became rivals for power. By virtue of the division of the fiefs between "the two Ilkhāns" (in 738/1338), (Persian) Kurdistan and Khuristan returned to the children of the *amir* Akramdīr or Akragh (?). In 764-5/1362-3 the Dīlāyir Bāyazid carved a fief for himself out of Persian Kurdistan and 'Irāq 'Ajamī (Zambaur, *Manuel*, 253, and d'Ohsson, iv, 747).

Table of the Kurd tribes in the time of the Mamūk Sultāns. The Mongol conquest had completely eclipsed the political part played by the Kurd tribes, but in Egypt, where the Mamūk Sultāns were cherishing secret plans against the Ilkhāns, much interest was taken in the fate of this Muslim element. The *Masālik al-ahyār* of Shihāb al-Dīn al-'Umari (d. 749/1348) shows how exactly the chancelleries of the Mamūk Sultāns were informed about Kurd affairs. According to al-'Umari, there were Kurds near al-'Irāq and al-Diyār al-'Arab and in Syria and Yemen. The mountain country (al-Djibāl) inhabited by the Kurds began near Hamadān and ended in Cilicia (*bilād al-Takfir*); to the west of the Tigris the Kurds of al-Diyār and Mardin were at the mercy of their neighbours. At Mardin, however, a certain Ibrāhīm al-'Arī Bāhū (?) had shortly before then proclaimed himself independent and had attained considerable power. The author then gives a list of twenty tribes living between Hamadān and the part of al-Diyār that lies between Mawṣil and Kawr (cf. Kéran in the *Sharaf-nāma*):

1. The Gūrān, who were warriors and agriculturists (*djind wa-ra'iyya*).

2. The Gālān (cf. the mountain called Gālān among the Sohrān; *Sharaf-nāma*, i, 286, and Rich, *Narratives*, i, 123; *Gheilāl*). A portion of this tribe migrated to Syria. Their prince Sharaf al-Dīn was governor of Arbīl under the Mongols, but was killed by a Mongol.

3. The Zangālī (Zangana?).

4. The Kūsa and the Nabir (?) of Shahrizūr (q.v.) migrated to Syria and Egypt.

5. The Sabūlī (Sutūn?), lived in Shahrizūr and Uḥṭ. Near them lived the Kartāwī (?) cf. Hoffmann, *Austrage*, 207).

6. The Hēsānī (Khushnāwī?), several thousand in number, divided into three branches, one of which living at Karkār alongside of the Kartāwī (?) levied tolls on the pass Dauband i Karaboll (the defile of the Little Zab; cf. Hoffmann, *op. cit.*, 263).

7. Near Karkār (= Kirkūk?) and Dabūk lived a tribe of 700 men.

8. A tribe living "between two mountains" (*bayn al-dūdālayn*) on the territory of Arbīl in winter sought the good places of the Mongols, and in summer assisted the invasions of Egyptian troops.

9. The Māzandjān (?) to the number of 500 lived near Arbīl and Māzandjān, Nērwa and Bēghma (these two latter cantons are situated on the Great Zab east of 'Akī). The chiefs of Māzandjān also ruled the related tribe of the Humaydī (of which there were 1,000 men). The chief of the Māzandjān called Kak had received the title Mubārīz al-Dīn from the 'Abbāsids. The Mongols divided his lands into two and Kak remained *amir* of Arbīl. He was dispossessed for a time under Arghūn, but according to the *Ṣubḥ al-a'ṣḥā* of al-Kalkashandī, his sons and his grandsons retained their fief ('Akī and Shāsh).

10. Near Tell Hattīn was the land of the numerous Sohrī tribe (Sohrāo).

11. Their neighbours were the Zazzārī ("children of gold"). They also possessed Malārgird (= Rūbā-i Barāzgird) and Rustāk (the southern part of Shāmdīnān).

12. The Dīlāmarg, of Umayyad origin, numbered 3,000 men.

13. The Kurds of the district of Markawān (read Margawar) were allies of their Dīlāmargi and Zazzārī neighbours.

14. Near Dīlāmarg was the canton of Gawār.

15. Near Dīlāmarg beside 'Akī and 'Amādiya was the canton of Zibārī inhabited by 500 men.

16. The Hakkārī lived at 'Amādiya and numbered 4,000 men.

17. Near the Hakkārī beside Margī were the Djabāl al-'Amrāt and the cave of Kaht Dāwūd where lived the Bedlī (?) ?).

18. Near Dīlāmarg towards Mawṣil lived the Bokhtī, rivals of the Humaydī.

19. The Dāsīnī had been very numerous, but their chief Badr al-Dīn came down to more accessible country and there were no more than 1,000 Dāsīnī in the province of Mawṣil; 500 Dāsīnī lived at 'Akī.

20. The Dumbūlī (?) inhabited the high mountains.

To this information given by the *Masālik*, the *Ṣubḥ al-a'ṣḥā*, basing itself on al-Taḥṣīf composed by Taḥī al-Dīn Ibn Nāzīr al-Djāwḥ added 748/1347, adds a list of 25 Kurd chiefs with whom the chancelleries of Cairo were in correspondence.

Timūr and the Turkomen dynasties. After the Mongols, the rival Turkomen dynasties extended their power over Kurdistan. This period, of which little is yet accurately known, was of considerable importance for the Kurds. The Kara Koyunlu dynasties penetrated into the heart of Kurdistan, involved the Kurd tribes in political and religious quarrels (cf. the extremist Shī'a of the Kara Koyunlu) and provoked considerable movements of the population: it was at this period that the Mukri Kurds seized the country south of the Lake of Urmia (cf. *al-Sawāq* - *bulāq*). In contrast to this, the conquest by Timūr which temporarily swept aside the Kara Koyunlu had only a transitory character.

Many incidents in the history of Hish Kayfā and Djabla between 796-897/1393-1491 are recorded in the *Syriac Chronicle* (written at Hattayn) published

by Behnisch, *Rezum seculo XV in Mesopotamia gestarum liber*, Breslau 1838.

Timūr had to deal with the Kurds in his campaigns of 796/1394 and 803/1400-1. After overrunning Baghdad and Diyarbakr, Timūr attacked Diyarra, which was destroyed. The dependencies of Diyarra were likewise conquered. Timūr next crossed the mountains separating Diyarbakr from Mugh and gave a favourable reception to Shams al-Din of Bidlis "renowned for his kindness and justness throughout all Kurdistan". In 803/1400-1 Timūr returned from Baghdad to Aḡharbāyḡdān and on the way was attacked by the Kurds.

After the death of Timūr, Kara Yūsuf Kara Koyunlu [see KARA KOYUNLU] returned to Kurdistan and sought refuge at first with Shams al-Din of Bidlis. He gave him his daughter and with his assistance re-established his power. In 820/1417 Kara Yūsuf by a *sighān* confirmed the princes of Bidlis in their possessions. When in 824/1421, Shāhrukh, son of Timūr, arrived in Armenia, homage was done to him by Shams al-Din of Bidlis, Malik Muḥammad Hakkārī, Malik Khallī of Hīn Kayfā, the amirs of Khān, etc. The Kurds of Khoy also remained loyal to Shāhrukh's governor (Majlis al-sa'dayn, in, *Notices of extracts*, xiv, 153).

The Ak Koyunlu (g.u.) (the Bayandur dynasty) whose principal centre was in Diyarbakr, conducted a systematic policy of exterminating the great Kurd families (Sharaf-nāma, i, 164; *istfāl-i āḡan-saddāh-yi Kurdistan*), and in general they persecuted tribes who had compromised themselves by their attachment to the Kara Koyunlu, like the great tribe of Čamışgēzek. Uzun Hasan's generals Süfi Khallī and 'Arab Shāh conquered Hakkārī, which was later taken for a brief period by the Dumbul tribe from Bolṭān. In 875/1470 (cf. Behnisch, *op. cit.*, 14) Diyarra passed entirely into the power of the Ak Koyunlu, who appointed their own governor Calāh Beg, whose merits are recognised even by the Sharaf-nāma, i, 123. The Ak Koyunlu general Sulaymān b. Bīzān drove out of Bidlis the Ibrahim Khān who was later put to death by Ya'qūb b. Uzun Hasan.

The Safawid Shāhs and the Ottoman Sultāns. Shāh Ismā'īl had invaded Armenia at the beginning of his war with the Ak Koyunlu. After the battle of Sharūr (907/1502) he won all the country between Baghdad and Mas'agh. Ismā'īl's policy with regard to the Kurds did not differ from that of the Ak Koyunlu. Like the latter, the Shāh relied on the Turkoman tribes, but being a zealous extreme Shi'i (cf. KHATĀ' in EP) he was still more predisposed against the Sunnī Kurds. When eleven Kurd chiefs presented themselves at Khoy to pay homage, Ismā'īl imprisoned most of them and appointed in their stead governors chosen from the Kīlī-bagh tribes.

Henceforth, for about three centuries Kurdistan became the arena for the struggle between the Ottoman Sultāns and the Shāhs of Persia. The defeat of Čāldīrān (g.u.) (920/1514) was a terrible blow to the prestige of the new Persian dynasty. In spite of the temporary successes of the successors of Shāh Ismā'īl, their conquests never attained the importance of his early victories and Persian territory west of the Zagros melted away. Ismā'īl's attempt to thrust Persian governors upon the Kurds was a marked contrast to the Ottoman policy instituted by the able Hakkārī Idrīs, himself a Kurd, which aimed at giving Kurdistan a feudal organisation securing the predominance of the Kurd nobility.

The battle of Čāldīrān deeply affected Kurdistan.

Malik Khallī (Sharaf-nāma, i, 155), the dispossessed prince of Hīn Kayfā, had regained possession of Sīrd and was trying to regain his hereditary fief. Muḥammad Bag of Sīnān was fighting against the Persians. Ahmad Beg of Mayyāfārkīn, Rāsm Beg of Aḡl, Dīnāghī Beg of Pālo, had declared in favour of the Ottomans. The governor of Diyarra had succeeded in repulsing the Persians from Mawjīl. Sa'īd Beg Sohrān had taken Arḡl and Kīrkūk. Some twenty other chiefs were wavering in their loyalty to the Persians. A personal visit by Idrīs to all these chiefs won 25 of them over to the Sultān.

When Selīm had left Tabriz, Ismā'īl sent reinforcements to Diyarbakr and Hīn Kayfā. Idrīs summoned to his flag the Kurd levies and defeated Kurd Beg, a former Persian governor of Kurdistan. The Kurds of Diyarbakr resisted the Persian attack until help arrived from Bīyikī Mehmed Pasha. Bīyikī and Idrīs met at Hīn Kayfā and defeated the Persians. Then, reinforced by 5,000 Kurds (from 'Amādiya n, the Turks relieved Diyarbakr and took Mārdīn, except for the citadel which remained in Persian hands. The Persian commander then executed a successful diversion from Baghdad and Kīrkūk and the people of Mārdīn drove out the Kurds and invited the Persians to re-occupy the town. The two armies met on the Nīḡībīn-Urfa road. The Persians were defeated, and Bīyikī forced Sulaymān Khān, who was still at Mārdīn, to surrender. The occupation of Nīḡībīn, Dīrā, Mayyāfārkīn, Diyarbakr and Sīnḡār followed and Idrīs completed the administrative organisation of the *sandḡs*. In the province of Diyarbakr eleven *sandḡs* were put under Turkish officials and eight under Kurds (*Aḡrāḡ baylīḡi*). The *emāls* confirmed the investitures of the new begs, but the latter were always chosen from the same family. Five hereditary *hukamārs* (*Kurā hukamārs*) retained their dynasties with the transmission of power direct from father to son (cf. Tischendorf, *Das Lebewesen in d. muslim. Staaten*, Leipzig 1872, chs. ii and iv, quoting 'Aynī 'All Mīrīnḡhūm-zāde who wrote at the beginning of the 11th/17th century). A similar system was later applied throughout Kurdistan from Malāṡīya to Bāyazīd and Shahrīzūr (cf. below the Sharaf-nāma, and the very interesting remarks of Ewḡyl Celālī, iv, 176-80, 271-316, on the 37 *sandḡs* joined to Vān by the law of Sulaymān I and the order of march of the local army). Only the province of Kīrmānshāh remained to the Persians. Idrīs was liberally rewarded and the *firmāns* of investiture were sent him with the spaces left blank for him to fill in the names of the recipients (von Hammer, *GOR*, i, 749).

In 936/1530 Shāh Tahmāsp recovered Baghdad from Ḳhū 'l-Fakr, a Kurd of the tribe of Māḡlū (Mojallū?). A long series of wars began again. Sultān Sulaymān led armies against Persia in 1533, 1534, 1535, 1548, 1553 and 1554. In this last year the Baghdad troops conquered the Kurds of Bēlḡās and Shahrīzūr while the Persians were occupied in Georgia (von Hammer, *op. cit.*, ii, 326).

By the peace of 999/1590 'Abbās I had to cede to the Turks the western provinces, including Aḡharbāyḡdān, Shahrīzūr and Luristān (*ibid.*, ii, 359) but in 1010/1601 fighting was resumed and by the peace of 1021/1612 Persia regained possession of the lost provinces, except Shahrīzūr (*ibid.*, ii, 745). Shāh 'Abbās transported 15,000 Kurds to the frontier of Khurāsān to serve as a bulwark against the Turkomans.

Towards the end of the reign of Shāh 'Abbās, Turkish efforts were concentrated on Baghdad.

During Hâfiz Paşa's first campaign (1022/1623) his army included the Kurdistan troops. The Kurds fought bravely. The Persians, having defeated the attackers, sent punitive columns to Mardin. After the death of Shâh 'Abbâs, the grand vizier Khosrow Paşa [q.v.] advanced on Baghdad in 1039/1629. Sayyid Khân of 'Amâdiya, Mirza Beg Sohrân and the mixed Kurd-Arab tribes of Bağdillân took the side of Khosrow Paşa, while Ahmad Khân Ardalan threatened the Turkish flank. Khosrow Paşa advanced as far as Sinna [q.v.] and Hamadân. On their way back, the Turks defeated at Camcamîl and Dartas a Persian force. Baghdad still held out, and when Khosrow Paşa had retired, Ahmad Khân Ardalan reoccupied Şahrîzûr (von Hammer, *op. cit.*, II, 17, 23, 49, 86, 93). Not till 1048/1638 did Murâd IV finally take Baghdad, and in the next year the treaty was signed with Persia which grosso modo fixed the Turco-Persian frontier down to the 19th century (Ta'rikh-i Na'înd, I, 666). Persia was now completely behind the Zagros chain.

The great struggle between the Safawîs and Ottomans made the Kurds conscious of their political importance. The *Sharaf-nâme* has preserved for us an accurate picture of the feudal life of the Kurd tribes and principalities at the height of its development about 1005/1596.

Sharaf-nâme. This book by the chief of Bidlis, Sharaf al-Dîn [see below], finished in 1005/1596, occupies an exceptional place among the sources for Kurdish history. The history of the Kurds in the strict sense (vol. I in Velliamouf-Zernoff's edition) is divided into four parts (*sâ'ifa*): the first of these deals with those Kurd dynasties which have actually enjoyed the privilege of royalty (*shahânî*); the second with those whose members have sometimes had coins struck and the *khujba* recited in their name; the third enumerates the families of hereditary governors (*kakhsân*) and the fourth is devoted to a detailed history of the chiefs of Bidlis. Part I. gives five dynasties, the Marwânîds [q.v.] of Diyarbakir and Dîzîra, the Hasanwayhidîs [q.v.] of Dinawar and Şahrîzûr; the Faglâyîds of the Great Lur (see 120-1 suzûr), the princes of Little Lur (see 120-1 rûkân) and the Ayyûbîds [q.v.].

As the distinction between the second and third class of princes is rather subtle and the order in which Sharaf al-Dîn enumerates the dynasties is quite arbitrary, it is better to arrange these dynasties according to the geographical position of the fiefs, taking Dîzîrat Ibn 'Umar as the centre. This list will be followed by that of the Kurd tribes in Persia. The fiefs of the second class (including Bidlis) will be marked with an asterisk (*).

Sharaf al-Dîn distinguished as far as possible between the tribes and the families of their chiefs, and it is necessary always to bear in mind the bases of feudal organisation in Kurdistan. Cases of varied origins rule the Kurdish, Kurdicised and Christian tribes, with the help of warlike Kurd tribes (*sâ'irat*), which are sometimes settled, sometimes nomad or rather semi-nomad.

Group A. Between Dîzîra and Darsîn:

1. The chiefs of Dîzîra* claimed Umayyad origin, but gave as their ancestor Khilîd b. al-Walîd. In such confused genealogies we have a combination of memories of the Kurd alliances of the Umayyads with the local cult of the descendants of the famous general Khilîd b. al-Walîd [q.v.], whose tomba is shown near Sîrd (Hartmann, *Bohân*, 29, 124). These chiefs were at first Yazîdîs and only later became

converted to be orthodox Sunnîs. After the death of Sulaymân b. Khilîd his three sons divided his possessions: Dîzîra fell to Mir 'Abd al-'Azîz, Gurgîl to Mir Hâdîjî Beg and Fûlk to Mir Abdâl. These three branches each kept their own fiefs in later times.

The *Sharaf-nâme* refers to the possessions of this family as *wak'fat-i Bôkhtî* (I, 320), and enumerates in detail but without system the 24 *mâhiyas* forming this important fief: Gurgîl, Arwa'kh, Pîrûs, Bâdân and Tanaz (Kakhk) occupied by the tribe Kîrîsî; Fînk; Tûr, Haytam (Hetham) and Shâkh inhabited by the Christians; Nîzh Atîl; Aramshât the tribe of which (Brâspî) is the chief among those of Bôkht; Kêwar or Kamîs (?); Dayr-dîh which belongs to Tanaz.

In spite of the careful study by M. Hartmann, *Bohân*, in *Mitteil. d. Vorderasiat. Gesell.* (1896), No. 2, and (1897), No. 1, 1-163, the localisation of some of these places is not quite certain.

The fief of Dîzîrat Ibn 'Umar lay between the right bank of the Bôhtân and the Tigris. It did not include the sources of the Bôhtân. Towards the east, the neighbours of the Bôkhtî were the Sadiyân (cf. under 'Amâdiya) settled on the Khâbûr.

2. The ancestors of the rulers of Khîzân, Iş-bâyêr (Spartak, Isperit; in Ewliya Celebi: Işbâ'îrd) and Muks (Mukus) were three brothers who came from Bağdillân (Khân) in the time of the Sâdîkûs *Sharaf-nâme*, I, 177). The tribe of the principal fief was Namîran; this fief lay along the right bank tributaries of the Bôhtân and stretched as far as Marwânân.

3. Shîrwân (on the right bank of the Bôhtân below Khîzân and north-east of Sîrd). The ancestors of the "Shîrawî" chiefs were in the services of the Ayyûbîds and came to Shîrwân at the same time as the "Malikân" to Hup Kayîk. The Shîrawî played even the rôle of viziers by the Malikân (*op. cit.*, I, 155). The capital of Shîrwân was Kûrî. The other dependences were Awîl, Shabîstân (also called, Garmî = Kîrîk?) and Irûn.

Bidlîs. The Rûzâgî (Rûzâgî) tribe is said to have taken its name from the fact that 24 clans, assembled one day (*rûs*) in the village of Tâb in the canton of Khoyt (now the *bagâ'* of Modîd west of Bidlis), and formed a confederation which later became divided into two sections: Bîlbâl and Kâwâllîs. Sharaf al-Dîn (I, 361) enumerates the 24 (read 25) clans of Rûzâgî, of which five were old settlers and the others newcomers: Bîlbâl (10 clans) and Kâwâllîs (10 clans).

The Rûzâgî took Bidlis and Hîzo (Şâşûn) from the Georgian king Davîd (David the Czaropaltus, 984-1001?). Later they brought from Akhîlât two brothers of Sâsânîd origin. One became chief at Bidlis and the other at Şâşûn, 18 chiefs of the line of Dîyâ' al-Dîn had ruled at Bidlis before 1005/1596. The only interruptions took place under the Sâdîkûs (534-762/1139-86) under the Ak Koyunlu (871-900/1467-95), under Shâh Ismâ'îl (913-807/1507-14?) and between 947/1534-5 and 986/1578. In this last year Sulţân Sulaymân wanted to exchange the hereditary fief of Amîr Shams al-Dîn for that of Malîkiya. Shams al-Dîn had to leave Bidlis, but fearing new intrigues, went to the court of Shâh Tahmîsp, who treated him with generosity. Shams al-Dîn died in Persia in 965/1558. His son Sharaf al-Dîn, born in exile in 940/1533-4, was carefully educated at the court (the Shâh even had him taught painting). He ruled several Persian provinces in succession, and was appointed chief of all the Persian Kurds. After the accession to the throne of Ismâ'îl II, Sharaf al-Dîn fell under suspicion

and was sent to Nakhchivân. From there he succeeded in reaching Van and received from Murâd I investiture for Bidlis, to which Mûsh was added in 991/1583. For the year 1065/1655 Ewliyâ Celâli (iv, 81-101) gives us a detailed description of Bidlis. The last prince of Bidlis, Şharaf Beg, was dispossessed by the Turks in 1849 (Lynch, *Armenia*, ii, 149).

The rulers of Şaşân (Hâzo) were called 'âzîn from their ancestor 'îzz al-Dîn, brother of Dayîz al-Dîn of Bidlis. The 'âzîns of Şaşân were at first Şihrawî, Bâbüsî, Sôsîf and Tâmkîl. The Rûzâkî (see above) arrived afterwards; later, after the annexation of Arzan the clans of that district Khâldî, Dayr Mughâsîl, 'Arîzân, who had at first belonged to Hîşn Kayîâ, came to join those of Şaşân.

6. The Suwaydî chiefs claimed a Barmakî origin. Their ancestors were adopted by the Suwaydî tribe. The hereditary liege of the Suwaydî was Gandî (this should be read for Kîkî in Velliaminov-Zernov, i, 260).

7. The Pâzûkî tribe, which Şharaf al-Dîn places among the tribes of Persia (i, 328), is said to have been of Suwaydî origin. According to the *Şharaf-nâme*, i, 328, it had no definite religion and showed signs of heresy (*rajd wa-ikâd*). The tribe was divided into two branches, Khâldî-beglu and Şheker-beglu, and one was under the Amirs of Bidlis. Khâldî received as liege Khânis, Malâşegird and the canton of Uşkân (?) of Mûsh. They grew so proud that they thought of proclaiming their independence. After the battle of Çaldîrân, the Suwaydî dispossessed the Pâzûkî from many of their fiefs (ibid., i, 257). In the time of Shâh Tahmîsp, Kîldî Beg, appointed chief of the Pâzûkî, received Zagan (near Tiflis). Later, Pâzûkî were transferred to Aleshkert, where the tribe increased.

8. The Mirdâsî chiefs (*Mirdasî* in the *Selâm-nâme*) claimed to be descended from the 'Abbâsids. Their ancestor was a religious leader who came from Hakkârî to Agîl and whose disciples the Mirdâsî became. The tribe themselves said they were of Arab origin, being Banû Kîlâb from around Aleppo, who migrated about 420/1029 as a result of troubles with the Fâtîmids (see KILÂB S. RABÎ'A and MIRDÂSÎS). The main one of the three branches, the Bîddükînt, lived at Agîl; it maintained good relations with the Ak Koyunlu, but under Shâh Ismâ'îl, Agîl was occupied by the Persians. Of the two other branches of the Mirdâsî, one ruled at Pâto, at Bâghîn (below Kîlîh) and at Kharpûz, and the other first at Bardandî and later at Dîrmak (south of Arghana-mâ'dân).

9. The rulers of Çamîşgezек claimed to be of 'Abbâsîd descent, but their names rather show a Turkish origin (Seljûkî). Their 'âzînat was called Malkîkî (Malikî-Shâhî?). There were about 2,000 households of Malkîkî in the Persian service (in Persia?). The lords of the Malkîkî were so numerous that the name *Kurdîstân* had become synonymous with Çamîşgezек (*Şharaf-nâme*, i, 163). They kept them in the Mongol period, under Timûr and Kâra Yûsuf, but the Ak Koyunlu did all they could to weaken the tribes faithful to the Kâra Koyunlu and sent the Turkish tribe to Kharcbandulu against Çamîşgezек. Şhaykh Hasan drove out the Kharcbandulu and submitted to Shâh Ismâ'îl. The latter put a Persian governor in his place. Selîm I restored the hereditary amîr Pir Husayn.

Group B. Between Dîzira and Kîlis:

10. Hasan-kayî* [cf. Hîşn Kayîâ]. The local chiefs (*malikân*) claimed to be of Ayyûbîd descent, which seems very probable. Their ancestor was al-

leged to have received the liege of Hîşn Kayîâ from the ruler of Mardin. The first chief mentioned by the *Şharaf-nâme* is Malik Sulaymân who died in 736/1335. The Ak Koyunlu seized Hîşn Kayîâ, but Malik Khâlî, who had taken refuge in Hamâ, later regained possession of his fief. At a later date the Ottomans dispossessed the sons of Malik Khâlî. Among the dependencies of Hîşn Kayîâ, the *Şharaf-nâme* mentions Sîfîr, Bîşîrî, Tûr (which sometimes figures among the possessions of Dîzira, cf. *ibid.*, 127, 127, 157) and Azzân.

11. Sulaymânî, rulers of Marwânîd origin (i.e. from the later branch of the Umayyads) established themselves at first at Khûkh in the canton of Şharâfî (between the Kulp and the Batmân Şa before they join) and gradually captured many strongholds and territory as far as the Tigris. They ruled a powerful confederation of tribes, the majority of which were nomads and in summer moved to the Ala Yagh (Niphates). The chief of these tribes was Banûkî, but the more enterprising was Bâsîyân, 2,000 families of which migrated to Bîyâzd under their chief Şihâwâr. A number of these tribes professed Yazdî doctrines. The Sulaymânî lived on bad terms with their neighbours of Şaşân. They were divided into two branches, that of Kulp and Batmân and that of Mayyafâriktî.

12. Zrakî (the modern pronunciation attested by Adâdî Seher, in *JA* [1910], 129-39); according to Şharaf al-Dîn, Zrakî is a contraction of the Arabic Azrakî. The ancestor of the family, who was an Arab holy man from Syria of 'Alid origin, arrived in Mardin in the time of Artûk [d. 516/1122; Abu 'l-Faraj, *Muhtasar*, 379]. The family formed connections by marriage with the Artûkîds and later with the Ak Koyunlu. There were four branches of Zrakî, the principal branches being those of Tarjîlî (west of the Batmân Şa) and 'Atâk. The two other branches were that of Dîrâzî (an old Christian convent Dayr Zîr?) and that of Kurdîkân (between Dîyârbekû and Mayyafâriktî), the latter descendants of the marriage of a Zrakî chief and a gipsy woman (*dukkâr-î âbûlî*).

13. Kîlîs. The ruling dynasty believed it was related to those of Hakkârî and 'Amâdiya. Their ancestor Mand (Mantashâh) had rendered services to the Ayyûbîds, who gave him the canton of Kusayr (near Antioch). He united under his rule the Yazîdîs of Husayr and those living between Hamâ and Ma'ash, as well as the Kurds of Dîm and Kîlîs. Under the Nâmlîk Sultâns and under Selîm I, disputes broke out between the Yazîdîs (Şhaykh 'îzz al-Dîn) and the family of Mand, which ended in favour of the latter; but the hereditary rights of this north Syrian fief do not seem to have been on a very solid basis.

Group C. Between Dîzira and Khoy:

14. Hakkârî* [see HAKKÂRÎ and HAKKÂRÎÂN]. Şharaf al-Dîn does not seem to know the old quarters of the tribe around 'Amâdiya from which the Zangîd Atâbegs had driven them northwards. The *amîrs* claimed to be of 'Abbâsîd descent.

The first *amîr* mentioned in the *Şharaf-nâme* is 'îzz al-Dîn Şîrî (probably simply an arabisation of the name Yazdân-Shîr) who held out against Timûr in 769/1387 in the fortress of Vân. Under the Ak Koyunlu, the tribe of Dambull (of Dîzira) took possession of Hakkârî, but the Christians of Dîz (Azzî = Nestorians) went to Egypt to bring back the scion of the ancient family Asad al-Dîn Zarrîn Çang ("Golden arm"). The restored dynasty received the name of Şumbûd (M. Carzoni, *Grammatica della*

lingua kurda, Rome 1787, 4: *Sciambâ*). In the time of Ismâ'îl I, the Shambo chiefs lived in the castle of Bâi (in *Shamdinân*); a member of the family ruled at Vostân (southwest of Vân), but the possession of the *nahiya* of Kawâsh west of Vostân was disputed with the Hakkârî by the Ruzakî. Hakkârî rule extended to Alâk in the north. The last representative of the Hakkârî house, Nûr Allâh Beg, was dispossessed by the Ottomans after the rebellion of Badr Khân Beg of Bokhtân, and in 1843, Hâfîme Khânûm surrendered Bagh-kal'a to the Hakkârî. The tribe of Pinyânîsh (*ibid.*, i, 97, 100) which still exists is mentioned as living near the Hakkârî.

15. The Mahmûdî fief lies north of Hakkârî on the rivers which feed the lakes of Vân and Artâk. The rulers (Marwânîds or 'Abbâsîds of Bokhtân), who originally professed the Yazîdî faith (*Sharaf-nâme*, i, 307) settled there in the Kara Koyunlu period and soon came into conflict with the Hakkârî and Dumbulî.

16. The Dumbulî are a tribe of Bokhtân (*Sharaf-nâme*, i, 118, 310: *Dumbulî-i Bôghî*, which for long remained Yazîdî). The Dumbulî later came into Aghharbâyîdân where they received as a fief Sukmanâbâd (Sogmanâbâd) north-west of Khoy (now Zhusvâ). Under the Ak Koyunlu, the Dumbulî had seized the castle of Bâi (in *Shamdinân*) and a part of, Hakkârî (*ibid.*, i, 193). To their *etghâs* of Sukmanâbâd Shâh Tahmâsp added Khoy. Under Sultân Sulaymân, the Dumbulî received Kêtur and Bârgîrî later they annexed Ahaghâ, Sulaymân-Sarây (the modern Sarây) and Çaldîrân. Zeyn al-'Âbidîn Shîrwânî in his *Basîtu al-siyâha* (beginning of the 19th century) says that all the Dumbulî are Shîfîs (cf. the allusion in the *Sharaf-nâme*, i, 312) and speak Turkish (1).

17. Brîdost. The ruling family was of Gûrân (q.v.) or Hasanwayhid descent. Its lands lay west of Urmia. One branch ruled at Somây (q.v.); another at Tergower and at Kal'a Dâwûd. The remnants of the Brîdost tribe now live south of *Shamdinân* on the Rûbârî Brîdost (a tributary of the Great Zâb, the sources of which lie west of Ushnû).

18. Ustûnî. The chapter, which is wanting in the manuscripts, must certainly refer to the first dynasty of *Shamdinân*, whose headquarters were Sutûnî in the *nahiya* of Hakkârî (see *SHAMDINÂN*).

19. The history of the Zorâs (cf. the Zarzart of Shîshâb al-Dîn al-'Umarî) announced in the preface to the *Sharaf-nâme* is lacking in the text.

20. Tarzâ. The paragraph is lacking in the manuscripts and we know nothing of the tribe.

Group D. Sons of Hakkârî

21. 'Amâdiya' (q.v.). We have seen that the town of 'Amâdiya was built on the site of an ancient castle under 'Imâd al-Dîn Zangî (527-42/1127-46). The local dynasty of Bahdinân mentioned in the *Sharaf-nâme* seems to have settled in the country after the end of the Zangids (7th-8th/13th-14th centuries). The chiefs of 'Amâdiya were known for their fervor in religious studies. The *Sharaf-nâme* gives their names for the Timurid period. Later (under Ismâ'îl I), the Bahdinân annexed the Zakho district inhabited by the Sîndî and Sulaymânî which had at one time formed a separate fief (*nahiyat-i Sîndîyân*). In this way the fief of Bahdinân incorporated the greater part of the mountainous country north of Mewlî (Mount Gâza, etc.).

22. Tâsinî (Dâsinî). The chapter dealing with this important Yazîdî tribe is lacking in the manuscripts, but in the text we find a reference which shows that the *amirs* of 'Amâdiya took Dohûk from the *sangîsh-i*

Tâsinî (i, 109) and that in 941/1534 Sultân Selim I gave the *sangîsh* of Artîl and the whole *nahiyat* of Sohrân to Husayn Beg Dâsenî, a Yazîdî chief which provoked a bloody war with the Sohrân (i, 274-7). The latter ended by regaining their patrimony and Husayn Beg was executed at Istanbul. On the region called Dâsen, cf. Hoffmann, *Asiatische*, 208-7.

23. Sohrân ("the red ones"), descendants of Kalûs, an Arab shepherd of Baghdâd who had fled to the village of Hûdiya of Awan in the Sohrân territory). His son was proclaimed Amîr of Balakân (east of Rawandûk) and seized the castle of Awan. The capital of Sohrân, which was embellished by their buildings (Rich, *Narrative*, i, 157) was Harîr (on a tributary of the Great Zâb below Rawandûk). The Sohrân were still a powerful tribe about 1005/1596-7, but later succumbed to attacks of neighbours and the Bâbân (*Narrative*, i, 157) benefited by their decline.

24. Bâbân. This name is really applied to several successive dynasties. Their principal fief lay south of the little Zâb and had as its capital Shîrî-Bâzîr, but in 1199/1784 the Bâbân built a new capital Sulaymâniyya (q.v. for details).

25. Nukrî, who now occupy the region south of Lake Urmia (for details see *SAWYR-MULÂK*) had broken off from the tribe of Bâbân.

26. Bâna. The Ikhtiyâr al-Dîn chiefs bore this name because they had adopted Islam of their own free will (*Ikhtiyâr*) (for details see *SAWYR-MULÂK*).

27. Ardâlân: see the articles, ARDALÂN, *SHAM-DINÂN*, *HINNA*, *SĖSAR*.

28. Gâl-Bâghî (*Sharaf-nâme*, ii, suppl. 36-45; the addition is dated 1029/1681. Their chief 'Abbâs Agha of the Turkish tribe of Ustûghlân received a 'spring of water' in Marîwân (cf. *SINNA*) from Elgebeg Ardâlân (900-42/1495-1535). 'Abbâs Agha later settled at Bîlâwar, a former fief of the Kalhur. His followers were recruited from different tribes. Shâh Tahmâsp confirmed him in his rule over Bîlâwar and the "Twelve Oymâk".

Later, the Porte gave 'Alî Khân Gâl-Bâghî the *sangîsh* consisting of Kirind, Shaykhân, Çakarîr (?), Khorkhara, Zend, etc., while Yûr Allâh received the *timar* of Erekle (?), Rangrazân and Sabhânân (?).

29. Kalhur (Kalkurî). The chiefs claimed to be descended from Gûdara, son of Glw, in the Persian epic. The *'ashraf* of the Kalhur is called Gûrân (i, 371) but some manuscripts talk of "Kalhur and Gûrân" (*Sharaf-nâme*, ii, suppl. 6). There were three branches of the Kalhur; those of Palengân (cf. *SINNA*), Dertang and Mân-daght (cf. *KIRMÂNSHÂH*).

The possessions of the chiefs of Darna and Dartang (now Rîdjâb in the district of Zohâb) according to *Sharaf al-Dîn*, i, 319, corresponded to the older Hûlwân (q.v.). About 1005/1596-7, the power of Kubâd Beg stretched from Dinawar and Bîlâwar to Baghdâd. Mâhidaght and Bîlâwar (south of the Murwârî pass) formed the patrimony (*adghâh*) of the third branch of the Kalhurs. The Mâhidaght branch was nomadic. All this perhaps explains the scantiness of the information given by Raghd al-Dîn. The Gûrân now keep their old patrimony, but the Kalhur tribe occupies the region south of the great Baghdâd-Kirmânshâh road.

Group E. The Persian Kurds

The plan of the section (*fiqhâ*) of the *Sharaf-nâme* devoted to the *Akkârî-i Irân* is not very clear. The author was writing at a time when the Perso-Turkish frontier was not settled.

The principal tribes of Persia were three in number: Siyâh Manşûr, Çigani and Zangana. Their sponyms were three brothers who came from Luristân or 'Çârîn and Ardâîn'. Besides those tribes and the lesser ones mentioned by Şharaf al-Dîn, there were 24 tribes (*yirmi dîrî*) of Karâbîgh [g.u.] (in Transcaucasia), about 3,000 men under one ruler, and the Gûl tribe in Khurâsân without counting tribes of minor importance.

The tribe of Siyâh Manşûr. In the time of Şâh Tahmîsp its chief had become *Âmir al-umara'* of all the Kurds in Persia (over 24 tribes).

A part of the Çigani emigrated to Şharistân.

The tribe of Zangana (Zengene) distinguished itself in al-'Irâk and Khurâsân.

From 1630 to 1730. "Great Kurdistan", as it has been described by Şharaf al-Dîn, and in so far as it consisted of a series of autonomous Kurd chiefdoms, had been already reduced in size by the introduction of Turkish rule in the *sandaks* of Diyarbakr and Van. Not only did the treaty of 1604/1609 put an end to the Persian expansion westwards, but Turkey during the reign of the Safawid epigoni succeeded in re-occupying the western provinces of Persia as well as Transcaucasia (von Hammer, *GOR*, iv, 235). Practically all the Kurds in this way were reunited under Ottoman rule. Having no longer cause to fear the Persians, the Turks systematically undertook the task of centralisation.

As early as the reign of Murâd IV, we find Malik Ahmâd Pâsha, appointed governor-general of Diyarbakr in 1048/1638, making an expedition against the Yârâkîs of Sındîâr. Later (1065/1655), the same Pâsha after his transfer to Van subdued all the Kurds in this region.

In 1076/1666 a Kurd, the son of a *çaykâh*, declared himself the *Mahdî*, but was captured by the rulers of Mawrîl and 'Anakdiya. The affair ended harmlessly by Sulân Mehemmed IV taking the *soldani Mahdî* into his personal service (von Hammer, *ibid.*, 589).

In the reign of the feeble Şâh Husayn, the Kurds of al-'Irâk in 1134/1719 besieged Hamadîn and carried their depredations up to the capital itself. In 1134/1722 by order of Şâh Tahmîsp II an attempt to retake Isfahân, which had been occupied by the Afghans, was made by the Kurd chief Fandua (Feridân?), but it was confined to an attack on the Armenian quarter. The Afghans drove off Fandua who went back to his lauds and submitted to the Turks (J. Hanway, *A Historical account of the British trade*, London 1753, III). Fortune deserted the Salawids. Even 'Abbâs Kâfi Khân Ardâîn submitted to Hasan Pâgha (von Hammer, iv, 221; cf. however, *RAM*, xix, 87). His example was followed by the chiefs of Dîwânîrîd, Daria, Dîjî, Harîn and finally by the *sipahsâldâr* 'Alî Mardân Bakhtiyârî (Faylî) (von Hammer, iv, 227).

The Afghans. During the bloody and transitory period of Afghân rule in Isfahân, Ashraf defeated the Turks (battle of Anjîdân in 1138/1726), who had in their ranks 20,000 Kurds under Bebek Sulaymân-oghlu (Sulaymân Bâbî?). The Turks attributed their defeat to the conduct of the Kurds, upon whom Ashraf had lavished promises; indeed, shortly before some of the Kurds had gone over to the Afghans. In spite of his initial success, in the next year 1140/1727 Ashraf had to repurchase his sovereign rights by ceding to the Turks the whole of western Persia, including the Kurd and Lur cantons.

Nâdir Shâh. Towards the end of the reign of Sulân Ahmâd III, affairs began to change. By the

treaty of 1144/1733 the Persians regained their western provinces, and soon Nadir invaded Ottoman territory and advanced up to the gates of Baghdad. The Turks tried in vain to check his advance with Kurdish troops until in 1145/1733 Topal 'Othmân Pâgha appeared on the scene with Kurd reinforcements which he had raised in Mawrîl. Nadir was defeated. In 1147/1734, he operated with success in the Caucasus and took Triflis, which had a garrison of 5,000 Kurds. By the peace of 1149/1736 the old frontiers of 1049/1639 were restored. In 1743, Nadir again invaded Turkish territory, but in spite of Kurd and Arab help was driven back to Sinna where he was finally defeated (von Hammer, iv, 327, 328-9).

Nâdir was not popular with the Kurds, although there is an epic poem in the Gârânî dialect on his struggle with Topal 'Othmân Pâgha. Among the Ardâîn, Nâdir replaced Subhân Verdi Khân by his brother, which provoked a popular rising (*RAM*, xix, 88). In 1157/1747 during a revolt of the Turkomans, the Kurds of Khurâsân (Çamîlgerek and Karaforû) refused their help to Nâdir, who punished them and transported them to Mashhad. Nâdir was assassinated in 1160/1749, while on his way to punish once more the Kurd rebels of Khurâsân (Jones, *Histoire de Nâdir*, London 1770, 118-20). The Kurds (Dumbuk, etc.) played their part in the anarchy which followed the death of Nâdir, but the Porte refrained from intervention.

The Zand dynasty. After the death of Nâdir Shâh, Karim Khân Zand (g.u.), one of the best rulers Persia has ever had, ruled the greater part of the country. The Zands were a Kurdish tribe of secondary importance (*Sharaf-nâme*, i, 323) living between Hamadân and Maliyîk in the district formerly called Iğhâr. Under Nâdir they had been transported to Khurâsân, but after his death they went back to their old homes (*Ta'rikh-i Zandiyya*, ed. Beer, pp. xi, xvii). With the death of Lutf 'Alî Khân in 1209/1794, the dynasty came to an end. The Zand tribe was certainly too weak to be a serious support to the dynasty, but Karim Khân, like his predecessors, had brought several Kurd tribes from Kurdistan to Shîrâz (Ahmadâwand, *RAM*, xxxviii; Körûn, who live in a particular quarter in Shîrâz, O. Mann, *Die Tâkîsh Mundarten d. Provinz Fars*, Berlin 1909, p. cxix).

The Kâdjârs. On the death of Agha Mubammad Shâh Kâdjâr (1211/1797), Sadîk Khân Şahakî seized the crown jewels and for some time tried to gain the throne (*The dynasty of the Kadjars*, tr. Sir Harford Jones Brydget, London 1833, 20, 27, 32, 37, 50, 78, 106; R. G. Watson, *A history of Persia*, London 1866, 107, 115, 125). In 1211/1805 the Persians had intervened on behalf of 'Abd al-Rahmân Pâgha of Sulaymâniyya (cf. Rich, *Narrative*, i, 384; Watson, *op. cit.*, 135, and the Mukri Kurd song in the collection made by O. Mann, No. xvi). In 1236/1821, as a result of troubles caused by the Kurd tribes of Haydarâbâd and Sîpân, the Persians invaded Turkish territory as far as Bidlis and Mûş; at the same time they advanced as far as Şerâbân near Baghdad by the Kirmîshûsh road. The peace of 1238/1823 signed at Erzerûm restored the frontier of 1049/1639, but the Persians refused to evacuate the district of Zohâb peopled by Kurds. The fate of Sulaymâniyya remained in suspense. A new war was about to break out in 1842 when Great Britain and Russia intervened to mediate, and in 1246/1847 a new treaty was signed at Erzerûm by which Zohâb was to be divided into two parts, while Persia gave up all claim to Sulaymâ-

niyya in favour of Turkey. During 1848-52, a mixed commission composed of representatives of four powers went over the frontier, but the attitude of the Ottoman delegate Darwish Paşa prevented an agreement being reached. Darwish Paşa not only had the canton of Kotür occupied by soldiers, but in a secret memoir (published at Istanbul in 1866/1869 and 1321/1303) developed the thesis that all the Kurd cantons south and west of Lake Urmia belonged to Turkey.

Turkey in the 19th century. In 1826, the governor of Sivas, Rashid Mehmed Paşa, was given the task of pacifying the Kurds and installing Turkish governors in Kurdistan. About 1830 a great Kurd rising broke out in several places. Its leaders were Badr Khān and Sa'īd Beg, Ismā'īl Beg and Muḥammad Paşa of Rawāndiz. About 1820 (1830?) he had declared himself independent and attacked the tribes of Khushnaw; in 1831 he seized Arbil, Altun Köprü, Koy-Sanglak and Rāniya. The following year he extended his power towards Mawşil; at Alqosh 172 Christians were put to death. 'Akra, Zibar and 'Amādiya were next taken. In 1833 the troops of Rawāndiz penetrated as far as Zakho and Diyarla to re-establish Badr Khān in power there. The Yazidis were severely punished on several occasions. Their chief 'Alī, who refused to become a convert to Islam, was executed (cf. the popular ballad commemorating this event, *JA* [1910] 134-6), and a whole body of Yazidis were massacred on the hill of Koyundilî. In 1835 Ottoman troops were sent against Rashid Mehmed Paşa from Baghdad, Mawşil and Sivas, and in 1836 the Mir of Rawāndiz was captured by a ruse. Risings and their suppressions continued for several years longer (cf. Potjoulet, *Voyages*, I, 373; Melike, *Briefe*, Berlin 1842, 259-84).

The defeat at Nizib (1839) inflicted on the Ottomans by the Egyptians released new troubles in Kurdistan. In 1843 began the rising of Nūr Allāh Beg of Hakkārî and of Badr Khān of Diyarla. The Nestorians of Hakkārî had lodged a complaint in Mawşil against the oppressions of Nūr Allāh Beg. In reply, the latter laid waste the Nestorian canton of Barwari. The massacres went on for several years and the number of victims is said to have reached 10,000. The powers made representations at Constantinople, and in 1847 a large army under 'Oghmān Paşa attacked the Kurds. Badr Khān and Nūr Allāh, defeated in several battles, surrendered and were deported from Kurdistan (cf. Sir H. Layard, *Nineveh*, vii; *Revue de l'Orient chrétien* [1900] v, 649-53; Adal Scher, in *JA* [1910], loc. cit.; on Kurd-Nestorian affairs in general see: A. Grant, *The Nestorians*, New York 1841; G. P. Badger, *The Nestorians*, London 1852; J. Perkins, *A residence of 8 years in Persia among the Nestorian Christians*, New York 1852; C. Sandrock, *Reise nach Mosul und durch Kurdistan und Urmia*, Stuttgart 1857; Riley, *Christians and Kurds*, in *The Contemporary Review* [Sept. 1889]. F. N. Hezrell and J. Margoliouth, *Kurds and Christians*, London 1913; W. A. and E. T. A. W. Wigram, *The cradle of mankind*, London 1924; W. W. Rockwell, *The pitiful plight of the Assyrian Christians in Persia and Kurdistan*, New York 1926; H. C. Luke, *Mosul and its memories*, London 1925).

The Russo-Turkish wars. In 1804-5, the Russians came into contact with the Kurds and this new influence soon made itself felt. The Russo-Turkish wars of 1828-9, 1853-8, 1877-8, each had far-reaching effects in Kurdistan (the question has been specially studied by Averbach, *Kurdi v soimakh Renii*, Tiflis 1900). As early as 1829 the Russians had

raised a Kurd regiment. As a result of the expatriation of Christians, the Kurds after the war began to spread considerably farther north and west. During the Crimean campaign, the Russians raised two Kurd regiments. On the other hand, when the Turkish troops had left for the north, a considerable rising was stirred up in Bohtān by the popular Vassān Shīr, nephew and a former rival of Badr Khān.

The war of 1877-8 was at once followed by a rising among the Hakkārî Kurds of Bahdīnān and Bohtān directed by the sons of Badr Khān and later by the rebellion under Shaykh 'Ubayd Allāh of the Nakshbandi order. The Kurd invaders in 1880 ravaged the Persian districts of Urmia, Sawdī-Bulāk, Miyāndosh and Marāgha and threatened Tabriz itself. The chief victims were Shī'is. Russia sent a detachment of troops to protect the Araxes frontier. Persia mobilised considerable forces including the Mākh [p.s.] cavalry. Turkey, which had barely finished the war with Russia, endeavoured to avoid complications. Finally, the Shaykh returned to Şamūdīnān, whence he was sent to Istanbul. He soon escaped from the capital, and via the Caucasus returned to Şamūdīnān, but he was again captured and in 1883 died in Mecca.

The *Hamidiyya* troops. The weakening of Turkey after 1878, art. 61 of the treaty of Berlin securing for the Armenians reforms and security against the Kurds and Circassians, the stubborn reaction of the Ottoman government against reforms, and from 1883 the development of the Armenian revolutionary movement with branches in Russia, Switzerland and London, brought complications into the hitherto quite peaceable relations of Kurds and Armenians, in as much as the latter had hitherto submitted to the authority of the Kurd feudal chiefs. About 1891 Şhākir Paşa, later appointed to bring into operation the reforms in Anatolia, conceived the idea of creating irregular Kurd regiments, like those of Russian Cossacks. The object of the reform was to train the Kurds and attach them to the Ottoman government. The attempt was not considered satisfactory, for later the *Hamidiyya* levies were transformed into regulars (*Khāff suvarî*). The creation of the *Hamidiyya* in any case, by the part given to the Kurds and the ambitions aroused, made a considerable stir. There was even bloodshed between the tribes.

Armenian-Kurd relations. At the same time, relations between the Armenians and the Kurds (these "brothers of land and water" according to a phrase recorded by the European consuls) were marking for the worse. The summer of 1894 was marked by bloody encounters at Şāşūn which ended by the devastation of five villages and the whole of the canton of Talorî (Dalyordî) inhabited by Armenians. The events at Şāşūn were the first of a long series of Armenian demonstrations and their sanguinary suppressions, in which the Kurds took an active part. In 1895 an attempt at a rising had been made among the Hakkārî Kurds, but was speedily suppressed; it was not directed against the Christians. From the beginning of the 20th century to the World War, the relations between Armenians and Kurds seem to have been fairly peaceful. On the question in general, see Abovian, *Kurdi*, in the *Koukas* newspaper, Tiflis 1848, Nos. 46, 47, 49, 50, 51 (where the "father of Armenian literature" gives a very sympathetic picture of the Kurd character); Creagh, *Armenians, Kurds and Turks*, London 1880; A. S. Zelenoy, *Zapiska k haru rasprostraneniya armenish*.

nascenim, in *Zapisk. Kavkaz. Otd. Geogr. Obšč.* (Tiflis 1893), xviii; A. Vambéry, *Armenian u. Kurden*, in *Deutsche Rundschau* (1890), lxxvii, 116-31; Rohrbach, *Armenien u. Kurden*, in *Verhandl. d. Geogr. Erdkunde* (Berlin 1900), 128-33; Baron L. de Compton, *Chrétiens et musulmans, voyageurs et études*, Paris 1901, li. B. Lynch, *Armenia, past and present*; Mayevski, *Opisanie Vanskago i Bula vilayetov*, Tiflis 1904 (the authoritative work); M. Y. Marx, *Yezhke o slovo "lebeli"*, in *ZVOIRAO*, xx (1910); Zaretski (consul of France at Van), *La question kurdo-arménienne*, in *La Revue de Paris*, 15 April 1914, and the diplomatic correspondence, publ. in the "Livres jaunes", the "Blue books" and the Russian "Orange book" of 1914.

The 20th century. At the beginning of the 20th century a new figure appeared on the Kurd horizon outside of the usual centres of Kurd movements: Ibrahim Paşa b. Mahmûd b. İsmâil b. Ayvân, chief of the Mîlî (Mîlîm) tribe in the canton of Şarîwân (between Diyarbakr and Aleppo). Ibrahim Paşa had made himself an almost independent position. When the constitution of 1901 was proclaimed, he openly rebelled and retired to the mountains of 'Abd al-'Azîz where he was killed (M. Wisdemann, *Ibrahim Pascha's Glück und Ende*, in *Asien*, viii, 1909, 34-7, 32-4, and Sir Mark Sykes, *The caliph's lost heritage*, 317-27).

A considerable agitation was aroused among the Kurds when the question of the Turco-Persian frontier was re-opened. After the check to the Russians in the Far East (Russo-Japanese War), Turkey in 1905 occupied the disputed cantons of Urmia and Sâwdî-Bulûk inhabited by the Kurds. The latter were drawn into the very complicated political game. Turkish occupation only ceased at the beginning of the Balkan War (in October 1912), but only to make room for Russian troops sent into the districts of Khoy and Urmia. Scions of noble Kurd families travelled in Russia. On 17 November 1913 a protocol of delimitation was signed at Istanbul and just before the World War, a Four-Power Commission (Turkey, Persia, Britain and Russia) succeeded in settling the frontier of the disputed regions by re-establishing generally the status quo of the beginning of the 19th century (cf. Minorsky, *Turkeko-irânsak. rasgraničeniye*, in *Izvestia Russ. Geogr. Obšč.*, Petrograd, li (1916), 331-92).

The War of 1914-18. In the course of the war from 1914 to 1918, the Kurds were between two fires. On the activities of Isrâ'îlî Agha Simko, see ŞİHÂN. On the inter-allied plans (March 1916) regarding Kurdistan, cf. the documents in *Rassemblement des Turcs*, Moscow 1914, 185-7, 223.

After 1917-18, the situation was radically changed. Kurd committees were formed everywhere (cf. Driver, *Report on Kurdistan*, Mount Carmel, Palestine 1919; this publication is in the British Museum). Şarîf Paşa assumed the role of Kurd representative in Paris and on 22 March 1919 and 1 March 1920 presented to the Peace Conference two memoranda on Kurd claims with a map of "Kurdistan intégral" (cf. *L'Asie française*, No. 175, 1919, 192-3). At the same time, on 30 December 1919, an arrangement was reached between Şarîf Paşa and the Armenian representatives, and the two parties made conjointly declarations to the conference (cf. the text of the agreement in the newspaper *Peyman-i Sebâh*, Istanbul, 24 Feb. 1920; cf. also *La Temps*, Paris, 20 March 1920). The Treaty of Sévres of 10 August 1920 having created Armenia (Arts. 88-93) out of the four vilâyet

(of Trebizond, Erzerûm, Van and Bidlis), provided in articles 62-4 for "a local autonomy for the land where the Kurd element predominates, lying east of the Euphrates, to the south of the frontier of Armenia and to the north of the frontier of Turkey with Syria and Mesopotamia". If the Kurd population within the limits mentioned showed to the Council of the League of Nations "that a majority of the population of these regions desires to be independent of Turkey and if the Council then thinks that this population is fit for independence", Turkey agreed to conform to the recommendation, and in this case the Allied Powers would raise no objection to the voluntary adhesion to this "independent Kurd state" of the Kurds living in the vilâyet of Mawşîl. As a result of later events, the Kurd question reduced itself to the fate of the Kurds in the vilâyet of Mawşîl. The Turkish representatives held that "the Kurds differed in nothing from the Turks and that although speaking different languages, these two peoples formed a single bloc as regards race, faith and customs" (Conference at Lausanne, speech of İsmet Paşa at the meeting of 23 Jan. 1923). By the decision of the Council of the League of Nations on 16 December 1923, the vilâyet of Mawşîl was allotted to 'Irâk, both with a stipulation reserving to the Kurds the fulfilment of their desires, notably that "officials of Kurd race should be appointed for the government of their country, for the administration of justice and for teaching in the schools and that the Kurd language should be the official language of all these services".

During the long negotiations concerning Mawşîl, serious troubles broke out in the region of Kharpût and Diyarbakr as a result of the inscription of Shaykh Sa'îd Nakşibandî. Shaykh Sa'îd was captured on 16 April 1923 and executed at Diyarbakr. After the settlement of the Mawşîl question, the Turkish government in Ankara enforced a policy, the tendency of which was to eliminate from Kurdistan feudal and tribal influences; cf. Gentizon, *L'insurrection kurde*, in *La Revue de Paris*, 15 Oct. 1925.

Bibliography: A history of the Kurds, the preliminaries of which have been outlined above would necessitate a great deal of preparatory work and research in Arabic, Persian, Armenian, Aramaic and Georgian sources. A systematic ransacking of sources like the *Sefir-nâme* of Hâkim İdrîs and his son Abu 'l-Fadl and the *Ta'rikh-i 'Akavîr-i-yi 'Abbâsî* would yield a rich reward. The basis of our knowledge of Kurd history is certainly the *Şarîf-nâme* (down to 1005/1596). The text was published (mainly from a manuscript collated by the editor himself) by Yellamunof-Zernof, *Şarîf-nâmeh, i* (history of the Kurds), St. Petersburg 1860; ii (variants of volume I, and general history of Turkey and Persia from the beginning of the Ottoman dynasty to 1005/1596), St. Petersburg 1882. New editions of it exist by M. 'A. 'Awad, Cairo 1937, and by M. A. 'Abbâsî, Tehran 1343/1965; Arabic translations by M. J. Bendi Rojbayani, with copious notes and comments, Baghadd 1377/1953; M. A. 'Awad and Yahyâ al-Khaghghâb, Cairo 1958-62, 2 vols.; a Russian translation by E. I. Vasil'eva, i, Moscow 1967; the French translation by F.-B. Charmoy, *Charîf-nâmeh ou l'histoire de la nation kurde*, in 2 volumes and four parts, St. Petersburg 1868-75, includes commentaries (including a translation of the relevant chapters in the *Dîvân-nâmâ* of Hâdîdî Khalfî), but is now in many respects out-of-date and lacks an index. Cf. also the works of H. Barb, *Über die Kurden-*

Chronik von Scherif; Geschichtliche Skizze d. 33 verschiedenen kurdischen Fürstengeschlechtern; *Geschichte v. 3 kurd. Dynastien; Gesch. u. weiteren kurd. Dynastien; Geschichte d. kurd. Fürstentümer* in *Bildic*, which appeared respectively in *SB Ak.* (Vienna, x (1853), 258-76; xxii (1859), 3-28; xxviii (1858), 3-54; xxxi (1859); xxxii (1859), 145-50. The last history of Kurdistan by Muhammad Elendi Shahrastâni (d. 1093/1662 at Medina, cf. *Tâ'îk al-'arâz*, s.v. Kurd), had not come to light by 1927. For the histories of the house of Ardâlân, cf. *Sienna*, where should be added the history (to 1254/1834) of Khusrâw b. Muhammad b. Minûchîr, cf. E. Blochet, *Catalogue des manuscrits persans de la Bibl. Nationale*, i, 305, No. 498. On the *Risâlat Anshâb al-Akrâd*, belonging to the Asiatic Museum of Petrograd, cf. Romaskevich in *Mélanges Asiatique*, new ser., Petrograd 1918, 392. The newspaper *Zür-i Kurmândî* (of Rawândîz) published in Kurdish a short history *Ghamû-yi Badîstân* (1926) and announced the early publication of the *Ta'rih-i Kurdistan* of Zayn al-'Abidin Beg. General information on Kurd history will be found in G. Campanile, *Storia della regione di Kurdistan e delle sette di religione vi cristiane*, Naples 1818; E. Quatremère, *Notice sur le Mâdîh al-abîdî*, in *Notices et extraits*, xii, 1838; C. Rich, *Narrative of a residence in Kurdistan*, London 1836 (cf. *bulav-mâniyya*); Charmony, in the preface to his translation of the *Shawar-nâm*; P. (V. MINORSKY)

C. From 1920 to the present day.

The First World War (1914-18) led to many political upheavals in the Near and Middle East. The Arab countries (Syria, Lebanon, Palestine, Jordan and Iraq) were detached from the Ottoman Empire. The sultanate was abolished in 1922, the republic proclaimed in Turkey on 23 October and the caliphate suppressed on 3 March 1924. Finally, the Council of the League of Nations assigned to Iraq the wilâyat of Mawsil on 26 December 1923. For his part, General Rîdî Khân overthrew in Persia the Kâdjâr dynasty and founded the Pahlavi dynasty on 23 October 1925. These rectifications of frontier resulted in rendering still more complicated the situation of the Kurds who, instead of living under only two governments, the Ottoman Empire and the Persian Empire, were henceforth to find themselves divided between five different countries: Turkey, Iran, Iraq, with some quite important minorities in Syria and several colonies in the lands of Soviet Transcaucasia, sc. Armenia, Georgia and Adjara Baydân. From now on, their destiny would evolve differently, according to the different states which sheltered them.

General bibliography: F. de Richemont, *Minorités du Proche-Orient, le problème des Kurdes*, in *Rev. polit. et parlementaire*, cliii (1938); L. Rambout, *Les Kurdes et le droit. Des textes. Des faits*, Paris 1947; *Memorandum sur la situation des Kurdes et leurs revendications présenté à l'ONU*, Paris 1948; W. G. Elphinstone, *The Kurdish question*, in *JRAS*, xxxi/1 (1948), 38-51; B. Arfa, *The Kurds, an historical and political study*, London 1966; I. C. Vanly, *Le Kurdistan italien, étude de la révolution de 1961*, Neuchâtel 1970 (Bibl., 390-414).

In Turkey, from after the First World War and during the long negotiations concerning Mawsil, some Kurdish nationalists, disillusioned at seeing their hopes of an independent Kurdistan vanish, a Kurdistan foreseen by the Treaty of Sévres (10 August 1920) but suppressed by the Treaty of Lausanne (24 June 1923), provoked troubles. Shaykh Sa'îd Nakîhbândî of Piran led a rebellion in the regions of Urfa, Sivas and Diyarbakir, either through religious fanaticism and respect for the caliphate (Gentile) or at the alleged instigation of Britain (Mustafâ Kemâl). The Shaykh was soon made a prisoner, judged by the Tribunal of Independence (April-June 1925) and hanged at Diyarbakir with 53 other insurgents. The whole trial was followed by the Turkish newspaper *Vakîf*, from 20 April 1342/1925 to the 28 June, insisting upon the nationalist character of the movement. The failure of the attempt forced the leaders who had escaped to seek refuge abroad.

On 3 October 1927, the Kurdish National League

Hoybown ("Independence") was constituted by the fusion of all the old committees or associations. İhsân Nûrî Paşa of Bitlis was nominated commander-in-chief and a civil administration was established. Some conversations even took place with the representatives of the Turkish government in September 1928 at Şayyidî Köprü with the promise of a general amnesty for those who had been compromised. The few Kurds who came forward were massacred. After that, the revolt of Ağrı Dağ (Ararat) (1930-4) broke out in the spring. Well organised militarily, the Kurdish troops, who were supported by the tribes in the region of Diyarbakir, achieved some spectacular successes, but ended by succumbing under the blows of a Turkish army, 45,000 men strong and supplied with modern equipment in artillery and aircraft. The Second International, in its session at Zurich, published a resolution of its executive in favour of the Kurdish people (Vol. vii, no. 60, 30 August 1930). The attitude of the Soviets at the time has been interpreted differently by Agabekoff, in his *Mémoires*, published in French in 1930, and by M. A. Kondakian in the Russian newspaper of Paris, *Dni*, of 31 August 1930, the former speaking of a Soviet activity among the Kurds themselves and led from Tauris by a certain Minossian who represented the G.P.U. there, and the latter asserting to the contrary that the Turks found an aid and complete assistance from the Russian Bolsheviks outside. From 1931 to 1934, some periodic convulsions were felt at Menemes, Erzurum, Diyarbakir, and, in a series of articles of the *Hakimiyet-i Milliye*, Bîrhan Asaf Bey denounces Armenian-Kurdish intrigues. Soon a Turkish law was promulgated on 5 May 1932 which established a plan destined to organise an actual deportation of Kurds to the interior of Turkey. This law, however, was only to be applied after the visit of the Shah of Iran to Ankara in the summer of 1934. But henceforth, officially there were no longer Kurds in Turkey. All the inhabitants of the eastern provinces were from now on regarded as "mountain Turks".

This psychological error and the assimilation of the Kurds by force were to trigger off in 1937-8 a new revolt, as its centre, the mountainous region of Darsim, inhabited by the Zaza Kurds. It was Sayyid Ridâ, şayyîd of the Nakşibandî brotherhood, who headed it. This revolt was the most terrible for the Kurds, for it was suppressed with the utmost harshness by the Turks. After having hanged the şayyîd and ten of his companions at al-'Aziz on 15 November 1937, the Turks erased Darsim from the map and replaced this ill-fated name with that of Tunceli. The Kurds disappeared from the official vocabulary, and the region remained under martial law until 1946.

After this, there was no more armed uprising in Turkey. Kurdistan stayed calm throughout the Second World War, during which Turkey moreover remained neutral. There followed a certain softening of the régime for the Kurdish regions. Meanwhile, intellectuals were always strictly watched; 49 of them were even arrested in December 1959 and accused of separatism. The military coup d'état of the 27 May 1960 was followed by a new more liberal constitution. Despite some declarations by official personages (cited in the Swedish journal *Dagens Nyheter*, 16 November 1960; cf. C.E.K. Paris, no. 12, 8), some articles on Kurdistan and the Kurds were able to appear in the Turkish press and, between 1965 and 1968, some bilingual, Turko-Kurdish journals: *Dicle Feral* and *Deng*, a Kurdish grammar, a Kurdo-Turkish dictionary, a play *Birîna res* "The black wound", and the long classical poem *Mem-o-Zin* saw

the light of day. But soon everywhere the journals were forbidden, published works confiscated and their authors prosecuted. In addition, to avoid all possible contamination by events in 'Irâkî Kurdistan, which had been in revolt for several years, a presidential decree of 25 January 1967 and published in the official journal no. 22,527 of 14 February 1967 declared: "It is illegal and forbidden to introduce the country and to distribute, under whatsoever form, every publication, record or tape registered of foreign origin and in the Kurdish language". Some virulent articles against the Kurds appeared in the Turkish nationalist review *Ötügen* (no. 40, April 1967, no. 42, June 1967; cited in Vanly, *Kurdistan înkîmâr*, 298-300). It was this which led to a rebuff by the associations of Kurdish students at 19 Kurdish towns, protesting that such an attitude was contrary to art. 12 of the Constitution and art. 37 and 44 of the Treaty of Lausanne (1923). In April 1970, brutal police operations in the town of Silvan, in the province of Diyarbakir, provoked the condemnation of the Kurdish students and of liberal Turks (cf. *Milliyet*, June-July 1970), as well as the question, on 24 July 1970, in the House, of a Kurdish deputy, Mehmet Ali Aybar, an old president of the Labour Party of Turkey (TİP). The Fourth Congress of the TİP (29-31 October 1970), in a resolution, recognised the right of existence of the Kurdish people in Turkey (Vanly, *Sûrvey*, 51-4). More than the ethnic and political side, it seems that from now on the economic and social question must play a role in the solution of the Kurdish problem in Turkey (Rambout, 23-44; Nûrkîne, 196-8; J. Elau, 35-40; Ghassemlou, 50-62; Arfa, 33-46).

In IRAN, the situation of the Kurds has always been different from that which they experienced in Turkey. Indeed, the Iranian government often insists on the affinities, as much racial as historic, which unite the two peoples. But this does not prevent political and social malaises appearing from time to time, and conflicts, often latent, sometimes bloody, must be recorded. Already during the Great War, the province of Ādharbāyghān in northern Persia had been troubled by the movements of the Turkish or Russian armies on this territory. The chief of the Shāhādi, Ismā'īl Agha Simko, profited from it to attempt to carve out for himself a small Kurdish state of which he intended to assume the leadership. He also succeeded in uniting under his command the Kurdish tribes of the north of the country, achieving several victories over the Turks, the Assyrians and the Iranian troops, changing camp according to the circumstances. He also became the only authority of the region, to the west of Lake Urmia, finally to be assassinated at Ushnu by the Iranians on the 22 June 1930 (Arla, 43-54). In the same manner in which he had murdered the Assyrian Patriarch, Mar Shimun Benjamin, on the 3 March 1918 (Joseph, 140-1).

For his part, further to the south, in the province of Kurdistan, Sākir al-Dawīa Kādjār, related by marriage to the great Kurdish families of Sanandaj, rose in revolt, but was defeated. Some Kurdish chiefs refused to be disarmed, and it was not until 1930 that Dī'fār Sultān surrendered (Arla, 64-7; Chassemlou, 73-5).

But the Second World War was also bound to have a great influence on Kurdish nationalism in Iran. Indeed, the occupation of the provinces of the north and west of the country by the Soviet and British troops (15 August 1941), followed by the abdication of Rūḡ Shāh (26 September 1941) favoured, by the enfeeblement of the central power, the movements of emancipation, and, for several months, the Iranian army had to confront harshly Hama Rashīd Khān of Bānsh who, aided by numerous neighbouring tribes, had made himself master of the Sardaght-Bānsh-Marivan region in the summer of 1942 (Arla, 67-70). But this was only the prelude to a real independence movement. First of all, the Kurds profited from the situation to form (September 1942) in the no-man's-land where central authority had disappeared an organisation *Komelā yejant Kurdistan* "Committee for the Life (Resurrection) of Kurdistan" (Eagleton, 34). This nationalist but quite conservative committee was composed of city intellectuals and of petty bourgeois from Mahābād, the ancient Sāwāj-Balāk [g.oe.], but to which the religious *gāyghān* and chiefs of tribes soon rallied. Soon Kādi (Kazī) Muḥammad, from a family of rich notables and a jurist himself, adhered to it in his turn (October 1944) and after the end of the war, all these judged the occasion favourable and proclaimed on the 22 January 1946 the Kurdish Republic of Mahābād, in the heart of the autonomous Republic of Ādharbāyghān, which had been established at Tabriz. In fact, Kādi Muḥammad wished rather for internal autonomy within the framework of the Iranian empire. This small state, with its limited area, to the west and south of Lake Urmia, was well-organised; schools and hospitals were opened, classical books and reviews in the Kurdish language were published, attempts were made to promote the development of agriculture, commerce, industry and hygiene. A small army was constituted of tribal elements with four generals, among them Molā Muḥammad Barsāni, who came from 'Irāk with his well-equipped contingent of armed men. But on the

departure from the Iranian territories of the Russian army (May 1946), who had helped the autonomous republic of Ādharbāyghān, the government of Tehran was to recover the dissident provinces of the north of the country. ʿĪqāl Muḥammad surrendered, but was hanged at dawn on 31 March 1947 together with several other chiefs. The Kurdish Republic of Mahābād had lasted eleven months. But this event had a great repercussion among all the Kurds (Arla, 70-102; Chassemlou, 76-82; Rambout, 94-108 and especially Eagleton, *passim*). Then, in September 1950 and February 1956, for economic reasons, the tribe of Dī'vān-rūdī was taken to task by the troops of the Shāh and harshly repressed, on the pretext that it refused to pay its taxes, give up its arms and devote itself to the cultivation of *ḡajgh*. According to Rondot (*Vie int.*, 1956, 107-9), the efficacy of the intervention of the Iranian troops was the first positive result of the Baghdad Pact (1955). Since those last backlashes, the Iranian government, by constructive social reforms, attempted to gain the sympathy and even the help of its numerous Kurdish population. It published at Tehran, from May 1959 to May 1963, the weekly *Kurdistan*, in which literature, religion, sciences, history and even politics were competently treated. Later on the 'Irāki government accused that of Tehran of having aided, materially and morally, the insurrection movement of the Kurds in 'Irāk. But this political attitude has in no way changed the distrustful position of the Iranian authorities with regard to its own Kurds.

In 'Irāk, the period from the end of the First World War to the revolution of 1958 saw the foundation of the new 'Irāki state and the establishment of the Hashimite monarchy. The British who, at San Remo (1 May 1920) were to receive from the League of Nations a mandate over 'Irāk and Palestine, were charged with organising the land which they had already occupied militarily. Few among them knew the Kurds and their problems, which rendered their task difficult. In December 1918, Major Noel installed at Sulaymānī Muḥmūd Barzandī (1880-1956) as governor, *ḡāḡmādr*, with authority over the Kurdish tribes situated between the Great Zab and the Diyālā. At the end of six months, Shāykh Muḥmūd proclaimed the independence of Kurdistan (end of May 1919), and the British army had to intervene to

overcome him. Wounded at the battle of Bazyan (17 June 1919), Mahmūd was taken prisoner and condemned to death, but, with his sentence commuted, was sent into exile to India. Meanwhile, several British officers had been assassinated at Zāhō, Amādiyya and Akra. Major Soane governed instead of the *ghayyā*, and calm soon returned. Difficulties arose with the installation as king in Baghdad (23 August 1921) of the Amir Fayṣal of Arabia, who had been chased from Damascus by the French, and the intention of attaching to the 'Irāqī crown the *anlāyet* of Mawṣil, which the Turks continued to claim and which the Kurds wanted to organise for their own profit. The recent Treaty of Sévres (10 August 1920) recognised in effect the right of the Kurds to independence. Since agitation did not cease to spread over the whole of Kurdistan, Shaykh Mahmūd was recalled to Sulaymāniyya (September 1922) and was no longer content with the title of *shukmār*, but proclaimed himself king of the whole of Kurdistan (November). He set up a government of eight members, issued postage and fiscal stamps, levied taxes on tobacco and published a newspaper *Roj-i Kurdistan* "The sun of Kurdistan" which gives many details of all these events (Edmonds, *A Kurdish newspaper: Roj-i Kurdistan*, in *JRCAS*, xli [1925]). On 24 December 1922, His Britannic Majesty's government and the government of 'Irāq recognised "the right of the Kurds living within the frontiers of Iraq to establish a Kurdish government within these frontiers, in the hope that the different Kurdish elements would reach agreement as soon as possible on the form to give to this government and the extent of its frontiers, and that they would send to Baghdad some responsible delegates to discuss their economic and political relations with His Britannic Majesty's government and the government of Iraq" (Edmonds, *Kurds, Turks and Arabs*, 312; Rambout, 58-9). But there were soon frictions between King Mahmūd and his British protectors, as well as with some Kurds who envied his authority. His intrigues with the Turks also triggered off raids by the R.A.F., who forced him to take refuge at Sardash (3 March 1923), where he published a newspaper, *Bang haqq* "The call of truth". He stayed there until 1930, the year which saw the end of the British mandate.

This new political régime did not help the situation of the Kurds of 'Irāq much, for the 'Irāqī government wanted immediately to withdraw from the Kurdish regions the local Kurdish officials in order to install Arabs and to suppress the teaching of the Kurdish language in the administrations of the north. Whence a malaise which degenerated into open revolt when 'Irāqī soldiers opened fire on the civil population of Sulaymāniyya (6 September 1930). Shaykh Mahmūd once more headed the movement. The 'Irāqī army was incapable of bringing it to an end (September 1930-April 1931), and asked for the intervention of the R.A.F. This was very severely criticised by a number of Britons, and especially in a Note of General H. C. Dobbs, former High Commissioner at Baghdad; Mahmūd was sent into house arrest in Baghdad. In 1932, Shaykh Ahmad of Barzan, a less balanced personage, as Longrigg says (86, 203), quarrelled with a neighbouring Kurdish chief. In order to restore calm, the government undertook a winter campaign which also necessitated the intervention of the R.A.F. (cf. Mumford and Wilson, *The Crisis...*). There was a new uprising in 1933-4, and Shaykh Ahmad and his young brother Mollā Mustafā, who had helped him militarily, were forced

to reside at Kirkūk and then at Sulaymāniyya. In 1941, during the abortive insurrectional adventure of Raghid 'Alī Gaylāni and the "Golden cadre", Shaykh Mahmūd, who had profited from it to escape from Baghdad, had tried to raise a levy of Kurdish troops to help the British (Longrigg, 193). In 1943, Mollā Mustafā Barzanī, in residence at Sulaymāniyya, unhappy with the food supplies and the social conditions of his supporters, succeeded in escaping as far as his territory of Barzan, accompanied by Shaykh Latif, son of Shaykh Nahrūd, and raised the standard of the revolt. A Kurd, Mollā Mustafā, named as Minister of State, intervened to settle the affair. Barzanī surrendered on condition that the Kurdish districts would be better provisioned, that Kurdish and non-Arab officials would be sent there, and finally that schools and hospitals would be opened in Kurdistan. These conditions, accepted by Nūrī Sa'īd, the Prime Minister, who even foresaw the establishment of an entirely Kurdish *šad* (Longrigg, 325), were not agreed by the regent 'Abd al-Ilāh and, in the spring of 1945, the revolt broke out more fiercely. This time it was more serious. The Kurds achieved several spectacular victories, while the army underwent heavy losses. Once again the R.A.F. came to play its role of saviour of 'Irāq and the Hashimite monarchy. At the end of August, the operation was completed. Mollā Mustafā withdrew to Iran with a party of his troops and his plunder (Rambout, 74-80). Four of his officers who had had faith in governmental promises of amnesty, Mustafā Khushnavā, 'Isa 'Abd al-'Aziz, Muḥammad Mahmūd and Shayr Allāh 'Abd al-Kāmil, were tried and executed on 19 June 1947.

After these events determined by force, all that remained for the Kurdish nationalists of 'Irāq was to go underground, and this is what they did. They founded the Democratic Party of Kurdistan (D.P.K.) with leftist tendencies, and published two bulletins *Azad* "Liberty" and *Rizgar* "Liberation". In its second issue (October 1946), the latter extolled an Armeno-Kurdish Union. At the same period, Colonel Elphinstone, chief of the Intelligence Service in the Levant, asked himself if these efforts were not going to lead to the constituting of a Republic of the Soviet Union with an Armeno-Kurdish character. In any case, the calm returned, the Kurds profited from the liberty which had been left them to work with more ardour in the cultural domain. Literary reviews saw the light of day. Collections of poetry and articles on the history of Kurdistan and famous Kurds of the past were published. Sulaymāniyya became a very active cultural centre and a lively seat of Kurdish nationalism.

‘Irāqī Kurdistan since the proclamation of the ‘Irāqī Republic (14 July 1958) until 1970 underwent many vicissitudes. This Republic aroused the enthusiasm of the Kurds who, with the other political parties, had participated in the overthrow of the Hashimite monarchy. For the first time in history, the (provisional) Constitution of the state proclaimed in effect, “The Arabs and Kurds are associated in this nation”. The Constitution guaranteed their national rights within the heart of the ‘Irāqī entity (art. 3) (cf. *Orient*, no. 7 (3rd quarter 1958), 191-9). For his part, General ‘Abd al-Kārim Qāsim [q.v.] reinstated the Kurdish officials suspended in 1947 and authorised (2 September 1958) Mollā Mustafā, who had taken refuge in the Soviet Union since this date, to return to ‘Irāq. He received him there with joy on the 7 October 1958, while his companions in exile returned in April 1959. Qāsim gave him a personal guard and a house in Baghdād and, for some time, made him his counsellor to whom he paid attention. The Kurdish Democratic Party, which had prepared itself in secret for the great day and, from April 1959 published its weekly newspaper *Nabā* “Struggle”, was authorised to appear. The Kurdish reviews and newspapers prospered, and from now on had a political aspect no longer simply a literary one. But this state of euphoria was not to last much longer, and the struggle of the Kurds for liberty broke out again and lasted ten years, interrupted by arrests and by more and more terrible reprisals. Four periods may be distinguished here:

Difficulties—as much external as internal—were not lacking for the “Faithful Leader”. His see-saw politics ended by his setting everyone against him. The Kurds themselves, impatient to see him fulfil the promises which were late in coming, ended up by taking up arms against his dictatorial régime. Naturally, Mollā Mustafā headed the movement (9 September 1961). This uprising was in no way tribal, for it was truly all the ‘Irāqī Kurds, peasants and townsfolk, intellectuals and feudists, who formed a bloc against Qāsim. The siposte was terrible: a strict economic blockade to starve the north of the country; massive bombardments with napalm, burning villages and harvests and shooting women, old men and children as well as combatants, but which only electrified the courage of the Kurds who, in March 1962, were the uncontested masters of all the ‘Irāqī north, with the exception of the cities where the government troops were garrisoned. The losses of the army quickly rendered this war in the latest colonialist style unpopular. The soldiers deserted or went over to the enemy; business and commerce were reduced to nothing. A coup d’état was afoot, and the Kurds—without whom nothing could be done—were kept well-informed. At dawn of 8 February 1963, Qāsim disappeared tragically from the political scene and, from the next day, the Kurds declared the ceasefire. The Ba’th (Ba’ḥ) took power in Baghdād. But when the Kurds reminded the new

government of their neutrality, they were met with excuses. However, negotiations were embarked on and, on the 24 April 1963, the Kurds even presented a detailed *Memorandum* in which they expressed their desiderata (*Orient*, no. 26 (2nd quarter 1963), 207-11). Meanwhile, once it considered itself quite strong, the Ba’ḥist government imprisoned the Kurdish deputies, issued an ultimatum (10 June 1963) and the same day resumed hostilities with an increased violence. As in the interval, the Ba’ḥ had also assumed power in Damascus, the Syrians lent assistance to their ‘Irāqī friends by sending aircraft and the Yarmūk Brigade. The Kurds had soon eliminated the latter. They multiplied their ambushes, seized military posts and convoys of munitions and took prisoners by hundreds. The ‘Irāqī army, beaten and humiliated, then brought in the “National Guard”, aid of the Ba’ḥist government, whose atrocities against the communists and all the opponents of the régime aroused universal reprobation. By a new coup d’état, aided by the army, General ‘Abd al-Salām ‘Arif ousted the Ba’ḥ and took all power into his own hands (18 November 1963). Military actions did not continue any the less. Barzānī launched an appeal to the International Red Cross (September 1963; *Vanly*, 319-21), and the Kurds addressed themselves to the Pope on the occasion of his journey to the Holy Land (3 January 1964; *L’Orient*, Beirut, no. 5240 (4 January 1964); complete text in *C.E.K.* no. 30, 82-8; cf. Mauness, 95, 96).

With a view to finally settling the Kurdish problem, Field-Marshal ‘Arif negotiated a ceasefire (10 February 1964) which Mollā Mustafā accepted without even consulting the political bureau of the D.P.K. The Kurds who, as much as the ‘Irāqīs, needed a breathing space, profited from it to make known to the outside world the true situation, thanks to foreign journalists who came to visit them; they renewed their provisions in livestock and munitions. The ‘Irāqī government, occupied with still-born projects of Arab unity, left things to settle down, persuaded that in the end everything would be settled through weariness. Nothing came of it and the Kurds, disillusioned at seeing that no-one was seriously occupied with their demands, after October 1964 resolved to organise in effect their internal autonomy. They nominated administrative officials at all levels, levied dues and taxes, meted out justice in their tribunals. Naturally too, their troops were better-and-better equipped and trained. For the Sixth Congress of the D.P.K. (1-7 July 1964), the general etete of the revolution (9-10 October 1964) as well as the new organisation of the Party and Constitution (17 October), cf. *Vanly*, 227-44 and texts: Constitution, 375-6, Administrative Law, 376-7. On the military organisation, *ibid.*, 244-8; Pradier, 210-23.

But the ceasefire of February was bound to provoke a serious crisis in the heart of the Kurdish insurrectional movement between Barzānī and the political bureau of the D.P.K., which in a brochure published on the 19 April, *L'accord ‘Arif-Barzānī, une paix ou une capitulation?* accused him of having by this accord betrayed the objectives of the revolution. There was even a bloody engagement at Mawet, on 17 July, between antagonistic groups. At the Sixth Congress, 24 out of the 17 members of the political bureau were excluded from the party, among them Ibrāhīm Abmad and Djalāl Talabānī, and took refuge in Iran. This crisis due to differences of view between theoreticians and realists, despite its miseries, did not have any repercussions on the later military

events (cf. Vanly, 226-25; Pradier, 203-9; Viennot, 95-121; Arif, 140-52).

But the ambiguity of the situation between Kurds and 'Irâkîs was bound soon to be dissipated. On 10 May 1964, the 'Irâkî government promulgated a new provisional Constitution which passed over in silence the rights of the Kurds explicitly recognised in the 3rd art. of the Constitution of 1958. This would not do for the Kurds who, for their part, had not disbanded their troops. The spring offensive was launched on the 4th March 1965 by almost the entire 'Irâkî army (infantry, armour, aircraft) with at its head General 'Abd al-Rahmân 'Arîf, brother of the President. It began by achieving some local successes (March-May), but in summer (June-September) some murderous combats developed in the chain of Salim. The small town of Fendjwin, which had been destroyed, was occupied by the 'Irâkîs. Throughout this period, while the Kurds used artillery for the first time, the 'Irâkîs used toxic gases, but suffered heavy losses (4,194 killed, 2,207 wounded, 22 tanks destroyed and 5 aircraft shot down). Egypt helped 'Irâkî (*Le Monde*, 23 October). The winter campaign (22 December 1965-end February 1966) was resumed with intensity. On 21 January 1966, Barzânî sent a Memorandum to the U.N.O. (text in Vanly, 378-9). On 13 April 1966, Marshal 'Abd al-Salîm 'Arîf was killed in a helicopter accident. His brother, the general, was chosen to replace him as head of state. The same day as this death a new offensive began to liquidate definitively the rebellion. This campaign, which lasted from 12 April to 15 June, was particularly notable in May for the battle of Rawandîz or Hendrin, the "Kurdish Verdun", as an eye-witness called it, R. Maurès (171-213), and was transformed into a rout for the 'Irâkîs who, despite intensive use of napalm, lost 1,056 killed, 479 wounded, 600 mercenaries, the "cavaliers of Saladin" were put out of action and an enormous booty taken. The Kurds for their part only had to lament 38 killed and 85 wounded. Despite proclamations of victory, after a new ceasefire demanded from the 15 June by the government, an accord negotiated by the Prime Minister Barzânî (d. 28/5/73) was signed on 29 June 1966 (Vanly, 379; Viennot, thesis, II, 189-92). Some secret clauses recognised in effect a certain autonomy for the Kurds of 'Irâk; 'Arîf made a visit to Barzânî (28 October) to try to reach agreement with him, for the 'Irâkî General Staff, unhappy with the "Barzânî plan" did everything to torpedo it. Again, things dragged on for a long time. But the war of 5-11 June 1967 was bound to have its counter-effect in several Arab lands, as also in 'Irâk, where a new coup d'état (17 July 1967) saw General Ahmad Hasan al-Bakr install himself as President of the Republic, followed by a second coup d'état (30 July 1968) in which al-Bakr took over all power and re-established the Ba'hist dictatorship, whose "National Guard" in 1963 had hardly left behind good memories. While the Kurds maintained their material and moral potential and made a great effort in the field of primary instruction by opening 300 schools in 1968, the government flinched with the Kurdish dissidents, created an (Arabic language) University at Sulaymâniyya and the new administrative division (*liwâ*) of Dihuk among the Kurds, but nevertheless prepared to resume hostilities. These, preceded by several skirmishes, began in April around Koy-Sangjak. The 'Irâkî troops had to abandon the towns of Kala-Diza, Fendjwin and Cwarta, and then attacked in June the peasant population of Arbîl, Halabja and Badînân, spraying the harvests with napalm and sulphuric acid.

In July, cholera broke out at Kala-Diza. In August there was the massacre of Dakan, at Shaykhân. In January (5 January 1970, *L'Express* mentioned that between September and December 1969, the Kurds had stopped the 'Irâkî offensive outright; 151 aircraft had been shot down during the last six months. Also in January 1970, the Ba'hist regime opened negotiations with Barzânî and the executive bureau. A Kurdish delegation, headed by Dr. Mahmûd 'Ughmuk, went to Baghdad and, on the 11 March, an accord on 15 points was signed at Nawpêrdan, in Kurdistan, between the two parties, which put an end to a war of nine years (text in *Kurdish facts*, February-March 1970). The Kurds obtained their internal autonomy and the Vice-Presidency of the Republic. The Kurdish language became the second official language of 'Irâk (Arabic text in *al-Djunbûdiyya*, Baghdad no. 704, of 12 March 1970; English text in *Kurdish facts*, February-March 1970; German text, *Nebez, Kurdistan*, 332-3). Five Kurds were named as ministers, the amnesty was declared on both sides. Great festivities celebrated the event. However, all the problems were not solved. There was an attempt against Mulla Mustafâ (29 September 1971), troubles at Sinjâr (summer 1972) and controversies over the attribution of the territories of Kirkûk after the nationalisation of the I.P.C. (20 June 1972), in June 1973, an *Appel en faveur du Kurdistan irakien* for the application of the accord of 21 March 1970, emanated from combined groups and from Black Africa (*Le Monde*, 15 June 1973).

The Kurds of SYRIA and LEBANON, apart from some great families and their entirely arabised dependants, such as the Baraz of Hamât, the boys of 'Akkâr, the *Djunblî* Druze chiefs (*Djîn Bulûd* "soul of steel"), have preserved their original characters, although some may often have been settled for several centuries and, in every case, well before the establishment of the French mandate. They posed practically no political problem to the mandatory

power and were able to develop freely a very lively cultural movement. They had a large share in the economic prosperity of the *Djazira* (Rondet, *Les Kurdes de Syrie*, 94, 99 and passim; A. Mu'awwad, *al-Ahrad fi Lubnân wa-Sûriyâ*, Beirut 1945). But difficulties of a political order arose under the various régimes after 1937 and the plan for the "Arab Belt" (1963). Then, on the pretext of agrarian reform, the lands of the peasants were confiscated, and 120,000 Kurds forfeited their Syrian nationality, also losing the right to become civil servants, to send their children to state schools and to be admitted to the public hospitals. All Kurdish books and music were forbidden. The names of villages were changed to give them Arab names and to settle Arabs there instead and expel Kurds (I. C. Vanly, *Le problème kurde en Syrie*, 1968 (cf. Muhammad Talib Hidi, *Dirdisa 'un mshafafay al-Djazira min al-naqdât al-hamiyya al-ighniyya al-siyâsiyya*, 1963, ed. I. C. Vanly, and 1968); idem, *La persécution du peuple kurde par la dictature du Baas en Syrie*, Amsterdam, October 1968. (Tr. Bos)

IV. — KURDISH SOCIETY

The social and economic life of Kurdistan is strongly structured. If a small part of the Kurdish people still leads a nomadic life, its great majority is now sedentarised in numerous villages, but "it survives as well today, and in the countryside Kurdish society is essentially tribal" (Edmonds, 12), as always among nomads. But in the desolated villages the organisation of the group comes under the influence of the government administration, landlords and religious leaders. This leads to a certain number of transformations of fundamental structures at present clearly evolving in Kurdish society, family, tribe and landlord, which we are going to examine first before considering the religious impact, then drawing attention to the social customs which are attached to them.

A. The fundamental structures of Kurdish society.

1. The Kurdish family.

The normal Kurdish family consists of a cell or household composed of the father, mother and children. This household, founded on marriage, is ordinarily monogamous and not patriarchal. Marriage is essential. In Kurdistan there are no old bachelors or spinsters, and also no celibacy nor free love at all. Prostitution does not exist in the small Kurdish villages of Irak or Iran. Adultery is practically unknown because too dangerous. People marry young, the boys at 20, the girls at 12. But in the towns, and since the young Kurds prolong their studies, marriage is delayed. Cousins frequently marry one another. The agnate cousin is preferred and has rights over his cousin. This way of doing things has many advantages, for the father of the bride knows his nephew better; who, himself, is more in a position to protect the girl. Moreover, in the case of tribal conflicts, especially in the past, this would make one rifle more. At the same time, the marriage portion is diminished. To renounce his cousin, the agnate cousin will exact the price of his renunciation. If not, he will be able to abduct the girl or even to shoot her as well as her parents (Daghestani, 22-3). So abduction is not therefore unknown, with all its risks ('Alkawî, 130; Daghestani, 37). Marriage can also be conducted by the exchange of sisters, *berdîlî* (Avdal, 222; Daghestani, 3). In this case, the marriage portion

is not exacted and only the costs of the wedding feast remain. Marriage can also be conducted between people who are not related, but there is a preference for the same village or the same tribe, more than for a stranger, so that marriage is always endogamous in the broad sense. Barth (61) was able to ascertain a much greater frequency of marriage between cousins in the tribal populations (57%) than in the non-tribal populations (17%). Hence the importance of knowing lineage and names well (cf. genealogical table: Leach, 63; Barth, 31; Hansen, 116). Among the Yazidis and the Ahl-i Hakik strict endogamy is obligatory between some families (Avdal; Molri, 44). The marriage portion, except in the cases cited, is exacted everywhere (Daghestani, 28; Leach, 44-5; Hansen, 123-4) and is not necessarily considered by the interested parties as being a sale, as it is often seen in the West. On the contrary, they like it as an appreciation of their value. This marriage portion, which varies according to the regions and especially the social situation of the family, is paid in kind, livestock, lands, a mill, etc., or in cash, of which the sum varies enormously, and its high sum may at times cause the aspirant to despair. Despite the critics, even among the Soviet Kurds, it has not completely disappeared. Cf. on this subject some poems translated in *Machriq*, 1958. The virginity of the girl before marriage must not be in doubt and proof must be given on the night of the wedding and kept for a year at least (Nikutine, 109, 115; Hansen, 13-4; Molri, 68).

Polygamy exists legally as much among the Muslim Kurds as among the Yazidis. Horizontal or simultaneous polygamy was very frequent in the past, and was still so in the 19th century. The chiefs of tribes did not always keep to the four legitimate wives authorised by the Kur'an. Ibrahim Pasha, founder of Sulaymâniyya, had 40 wives (Campanile, 197); the great Dedir Khan had 14 and 99 children. At his death, 21 boys and 21 girls remained to him. These customs are now ended. In the past, polygamy was a luxury and a sign of power; today it is sometimes an economic need. It can still be encountered in the urban poorly-educated milieu (Hansen, 136), but also in the peasant milieu (Barth, 25). In any case, where it is found, it does not exceed 2% in the Kurd Dagh (Daghestani, 79), 4% in Irak (Barth, 24), and there are never more than two wives. Among themselves, they are called *awê*. In Turkey and among the Soviet Kurds, polygamy is forbidden by the civil law. But vertical or successive polygamy always exists, thanks to divorce or repudiation, for three *talâk* suffice for a husband to be able to repudiate a wife who no longer pleases him in order to marry another. Also, the *shaykh* of Shadala at 70 had been married 19 times (Hansen, 136), and similarly old Ibrahim, *agâ* of the Dîzîl (Hay, 43). The wife can also be repudiated because of sterility or the impossibility of bringing male infants into the world. In this case, she may remain with her husband. If she is repudiated for other reasons, she returns to her father and has few chances of remarrying. A woman guilty or even simply suspected of adultery will not only be repudiated, but will run a high risk of death, which her own father or brother or one of his parents will be entitled to inflict on her. The children of the repudiated wife remain with their father. The widow remains in the house of the father or brother of her husband (Barth, 29). The levirate is practised at times, and a little everywhere (Daghestani, 99; Avdal, 221; Barth, 29; Edmonds, 348; Hansen, 136), not as a rule of law, but for convenience. In the Kurdish family, the husband has great authority,

but the wife also has her word to say. Speaking of the situation of the two spouses, Mrs. Hansen (127) finds that of the woman inferior to that of the man in the humble villages, equal in the village aristocracy and the educated urban milieu, but superior in the uneducated urban milieu.

The birth of a child is always desired, even if a son is not necessarily preferred to a daughter. Also, the children are numerous but decimated by a fairly severe infant mortality. The children are always well-treated, but without excessive refinement, for life is harsh. The name is given at birth and ordinarily by the women (Nikitine, 106), but at times by the mollah (Barth, 222; Hansen, 108). This name is often that of an Islamic personage or a hero of history or national legend, or it may well be one of the virtues which one wishes to see possessed by the newborn, or the name of a flower, fruit, animal with qualities appreciated by everyone. Hypocoristic forms of the name are very widespread. Some names possess at the same time the denotation of the masculine and the designation of the feminine. But curiously, the masculine forms are used to address individuals who are not noble, while the feminine forms are reserved for personages of distinguished birth (Celadet Bedir Khan, *Grammaire* 98). On names, diminutives, surnames, see Edmonds, 42.

Circumcision, *sünnet*, is practised a few days after the birth, either by a specialist *sünnetçi* or by a simple barber (Barth, 222; Nikitine, 106). In some places, the ceremony may be carried out later, when the child is 5 or 7 years old and often with several children at the same time. The chief or notable whose son has to be circumcised organises a small festivity, and offers a meal to the families concerned (Barth, 120).

a. Tribal organisation.

(a) Listings of the Kurdish tribes.

A fundamental element of Kurdish society is without dispute the tribe. We possess at present the nomenclature of all the Kurdish tribes. In 1826 Lerch already made a good summary of the Kurds of Turkey (63-87), the Russian territories (88-9) and the Persian territories (92-121). Jaba (1860) specified some numbers of them (28 of the Kurdish text). A map of their habitat in Transcaucasia was published at Tiflis by E. Komratenko (1896) and Col. Kartsov (1897). In 1908 Sir Mark Sykes recorded 303 names of Kurdish tribes of the Ottoman Empire, and G. R. Driver (1929) drew up Sykes' list differently and added the Kurdish tribes of southern Kurdistan (Iraq) and those which remain outside the Kurdistan foreseen after the Great War (1974). But the different political events which have occurred since then have led to many changes in the distribution and situation of the Kurdish tribes. In the Kurdish edition of his *History of Kurdistan* (1932), M. A. Zakî draws up a complete table of all the tribes (329-98, Arabic tr. [1939], 373-468 with map). The Kurdish tribes of Syria were counted by the French services of the Levant in 1930 (5th part, 237-90), and with more care and exactitude by P. Rondot in 1939. The lists published in Kurdish in *Roja nû* of the Kurdish tribes of Iraq (No. 66, 14—January 1946) and those of Iran (No. 68, 4 of February 1946) are not of much use, given the few precise figures. In particular, M. Mokri in Persian gives information on the Sanjâbî tribes of Iran (1946), and A. 'Azadî presented in Arabic (1947) an excellent study on the Kurdish tribes of Iraq (27-222). A good account of the tribes and sub-tribes of Iraq, northern Kurdistan (18-27),

and southern Kurdistan (43-51), is supplied for us by H. Field in his *Anthropology of Iraq* (1953), with their numerical importance, the names of the chiefs and the habitat. But in fact, his information is earlier than that supplied by 'Azadî. In Persian, the name of 490 tribes are to be found in Mardûkh (1953), 1, 75-119, and a long study on the tribes of Sanandâq, II, 20-48. Finally, in B. Karabudat there are eight sketches of the position of the Kurdish tribes and clans of Turkey in the vilâyet of Urfa, Mardin, Diyarbakir, Siirt, Bitlis, Mus, Van and Hakkâri, and similarly in the border districts of Syria, Iraq and Iran. As for the Yazidi tribes, they were in their turn enumerated and placed by A. 'Azadî in 1935 (90-110), and those of Singjar and Djabal Akrad especially by R. Lesoot (1938), 251-61. The interest of this vast table and listing is particularly to show the universality of the tribal phenomenon in the history and life of the Kurdish people. Clearly, it is not our concern to write at length on these different tribes. The fundamental work remains the *Sâzav-nûma* (1956). Much historical and ethnographical information is to be found in the different works of Soane (1912-26) Longrigg (1935), Leach (1940), Nikitine (1950), Barth (1953) and Edmonds (1957). An exhaustive study of the Yazidi tribes, clans and villages with statistics is given us by S. Damûdî (1949) in his work on the Yazidis in Arabic (224-60).

(b) The Kurdish tribe and its components.

"The Kurdish tribe is a community or a collection of communities which exists for the protection of its members against an external aggression and for the maintenance of the old racial customs and way of life" (Hay, 65). It is evident that a land of mountains, such as Kurdistan, favours the birth and development of groups more or less closed and shut in on themselves, as perhaps was the tribe in its origin. Although constituted like every human grouping which is formed from a kernel like the family, it would be wrong to believe that the Kurdish tribe is an enlarged family, a little in the manner of which the Bible speaks of the Twelve Tribes of Israel (F. Millingen, 284). Indeed, some contemporary Kurdish sociologists are opposed to this way of seeing things. If the vertebral column of the Arab tribe (*qabila*) is a kinship line (*nasab*), among the Kurds it is the soil (*erd*), i.e. the region inhabited by all and submissive to the chief of the group (Khesbak, 68; 'Akrawî, 28).

However, the western sociologists who have studied tribal organisation among the Kurds (Leach, 1946; Barth, 1953; W. L. E., 1956) seem to have remarked some differences among the nomads on the one hand and the sedentaries on the other. Barth also examined the political organisation of the Djabî, a powerful federation of tribes, almost entirely nomadic until very recently (39-44 and diagr. no. 3), political organisation among the Hamawend (43-9 and diagr. no. 4 and 5), where the economy is based on agricultural exploitation and where non-tribal elements are mixed with the population; and finally, the organisation and political structure of the Baban, a princely family (60-6 and diagr. no. 6). For his part, the anonymous W.L.E. (432) was able to distinguish in the rural population various types of social and economic organisation, e.g. the classical tribe under an *agha* claiming a common origin and divided into *tiya* or fractions, such as the Girdî and the tribe under a "factual" chief of different lineage, such as the Dîzai and Djabî. The influence and the social role of the landlords and religious *shaykh*s, who are not chiefs of a tribe, are another aspect of the problem (cf. Rondot, *Les tribus montagnardes*, 39-47).

Furthermore, real social classes are recognisable in Kurdish society. The most evident distinction exists between the villagers of tribal origin, *qşîr* ('*qashîra*) and those who are not and are named after the regions and dialects, either *Awramânî* (Kurdmanjî), *goran* or *mîskîn*, some of them being sometimes almost the serfs of the landlords of the village (Nikitine, 124). The last name *mîskîn* should be preferred, says Edmonds (123), for the two others denote different meanings (dialect or tribe). Perhaps they are to be seen as the descendants of the autochthonous populations conquered by the warlike tribes? But even within the same tribe, there is no uniformity of rights and duties. There are the noble families, one might say, *forîs*, such as the *Begzâda*; and the commoners who comprise firstly a military caste, the *sulam* (*ghadâm*) (Nikitine, 125) or *qîsmala* (Barth, 40), a kind of praetorian guard of the chiefs who are recruited in all the *hîra* of the tribe (Barth, 46) and who, in the past, had almost the status of slave (Nikitine, 125), and finally the class of peasants.

Perhaps one may now give the classical scheme of the organisation of a Kurdish tribe according to Rendot (*Tribus*, 18 ff.) with regard to the Omerza. At the base is the house or household or family in the strict sense of father, mother and children. A group of houses form a *hawîk* or *mal*, an extended family. The union of many *hawîks* constitutes the clan or *ber*. The collection of all these clans gives us the tribe or *qşîr* ('*qashîra*). The terminology is different in Barth, who divided e.g. the *Dîlî* '*qashîra* into a certain number of tribes or *hîra*, a political group not to be confused with the *hîra*, a group of the same lineage. The *hîra* is subdivided into many *hêl*, each *hêl* composed of 20 to 30 tents or households united by economic links as well as by family links. At the head of the '*qashîra* there is, or used to be, a *paşîa* of the family of *Begzâda*; each *hîra* has at its head a *raîs* ('*raîs*); and at the head of each *hêl* an elected chief of a village, the *hîşîa*. Among the *Hamavend*, the chief of a *hîra* is called *agîa*. For his part, Leach (13-14), distinguished the '*qashîra* whose "name describes at the same time the people and the territory which occupies it". It is essentially descriptive of a political grouping. It is formed of one or several clans or *hîra*, descriptive of a kinship grouping and divided into several subsections or *hîra*. He also finds, he says, the normal anthropological classification: '*qashîra*, *hîra* and *hîra*, i.e. tribe, clan and lineage. This divergence in vocabulary where Arabic and Kurdish words of different dialects are mixed together hardly favours clarity of exposition.

Let us draw attention to the system of the *oba* (cf. the *hêl*), which is particular to the semi-nomadic tribes and which makes its appearance towards the end of the 19th and the beginning of the 20th century. It is a temporary association of stock-breeders from different villages, formed in the spring to lead the herds to the pastures and to return at the end of the autumn. Neither kinship nor tribal relations are necessary to be a member of the *oba*. The *ser oba* or *oba bayî* organises the transhumance on condition that he has dues appropriated in kind. There are still to be remarked the differentiations in the groups: the chief *ser-oba* and his family, the different more or less important landlords and the simple shepherds. On this organisation of the *oba*, see Ereb Şeno, *Şîrîndî kard* (ed. Beirut 1947, 29), Nikitine, 149-52; Ghassemlou, 158-60. According to O. L. Vil'evskiy, *Economie de la communauté agricole chez les Kurdes*, 1936, it is around the *oba* that the "class struggle" is concentrated in Kurdistan.

(c) *The chief of the tribe, his obligations, his responsibilities and his compensations.*

The chief of the tribe, whatever its importance, is ordinarily called *agîa*, a relatively recent title, at the earliest after the conquest of Baghdad by Sultan Murâd IV in 1637 (Edmonds, 223). He always comes from the family of the chiefs. He normally acquires this rank by heredity, but not always. The eldest son generally takes the place of his deceased father, but not necessarily, for a younger brother, judged more able, because more competent or better-liked, can supplant his elder brother. But the choice can also be made after the election of other chiefs or clans, or even, if necessary, by violence. In some cases even, the central government can intervene and nominate the chief directly.

In the feudal age, the chief, almost autonomous in his tribe, had to supply the sultan, or *agîa*, with levies in the form of troops or tributes which, naturally, he levied on his dependants, whom he had besides to aid protect in time of war and danger. But this is ancient history. Today the chief has other obligations, and especially it is to him or his representative, the chief of the village, that there falls the duty of sheltering guest travellers, Kurds or foreigners, more or less numerous according to the seasons or circumstances. To collect his expenses, the chief imposes on the people of his tribe certain dues, which bear the general name of the *agîa*'s right, *azîf*, either taxes on all the revenues of the shepherd or peasant, or *corvées*, *Arrema*, days of obligatory work, not to mention some obligatory presents, *mand*, in certain circumstances (marriages, feasts) and the rights of justice or fines in cash which he can exact for theft, abduction or murder, if recourse is had to his good offices and to his intervention to regulate the litigation (details of all levies due to the chief will be found in Th. Bois, *Connaissance...*, 36-8 or *La vie sociale*, 610-11 and notes 46 and 47 with the references). These tribal rights should not be confused with the other rights to which the Kurdish shepherds or peasants are obligated by the landlords.

3. The economic structures.

(a) Kurdish nomadism.

The nomads are essentially organised around the tribe and are devoted almost exclusively to stock-breeding in a fairly closed economy. The life of a nomad is harsh and is submissive to the heavy authority of the chief. But this way of life, both for social and economic reasons, is tending to be transformed and to disappear. On nomadism and its repercussions on the economy of Kurdistan, see J. Frölin, *Les formes de la vie pastorale en Turquie*, in *Geografiska Stockholm Annalen* (1944), 219-72; H. Christoff, *Kurden und Armenier*, Hamburg 1935; O. L. Vil'evskiy, *Economie de la communauté agricole nomade kurde de la Transcaucasie et des districts environnants dans la 2^e moitié du XIX^e s.*, in *SE* (1936), No. 4-5, 135-61; N. Bogdanova, *L'exploitation féodale des nomades*, in *Arch. Hist. Acad. Sc. URSS*, II (1939); I. P. Petrushevskiy, *Essai sur l'histoire des relations féodales en Azerbaïdjan et en Arménie, du XII^e au début du XIX^e s.*, Leningrad 1949, 389; W. D. Rütters, *Bergnomaden und Viehzüchter in mittleren kurdischen Tälern*, Marburg 1959, 190; T. R. Stauffer, *The economics of nomadism in Iran*, in *MEJ* (Summer 1965), 284-302; V. Montell, *Les tribus du Fars et la sédentarisation des nomades*, Paris-The Hague 1966. Also, X. de Planhol, *Les fondements géographiques de l'histoire de l'Islam*, Paris 1968, 447; H. Carrère d'Encausse, *Aperçu sur le problème du*

nomadisme au Moyen-Orient, in *Documentation française, Notes et Études*, doc. No. 2095 (3 November 1955).

Some efforts at sedentarisation were undertaken between the two World Wars, in the different states where nomadic tribes, Kurds or others, were living; but both in Turkey as well as in Iran, with Mustafa Kemal or Rūḡā Shāh Pahlavī, the methods used were not always well received by the interested parties. This is the reverse of Russian policy with the tribes of the Caucasus, according to R. J. M. Good-Adams (*Middle East journey*, London 1947, 95), who says that the Russians succeeded better than anywhere else in the Middle East. "In fact, their way of approaching the problem was economic as much as political and military ... For they offered the nomads lands, water and the advice of agricultural experts to make them capable of augmenting the harvests necessary for their subsistence." Elsewhere, sedentarisation has been effected without violence and in stages, as for the Djaff, for example (Edmonds, 126).

(b) *The Kurdish peasantry.*

The Kurdish population is essentially rural. The Kurd is thus a peasant in a rough proportion of 65 to 80%, although industrialisation is beginning to take place. If such are the facts, it is understandable that the land must play a fundamental role in the life of the peasant. The land system in force among the Kurds poses more of a problem. Until the First World War, the major part of Kurdistan was contained in the Ottoman Empire, and the land system came under the Ottoman Land Code (1858), for military fields had been abolished in 1839. This system existed until around 1930, in the lands (Syria, 'Irāk) which were inheritors of the Ottoman Empire (Warner, 66). This Code recognised various kinds of properties: *malik* property, in the absolute form *vakāf*, recognised by a title deed or *senet taḥqīq*, or in the form of usufruct, *tasarruf*; property of the state, *mīl*, absolute for the state, with usufruct possible for some private individuals; properties of *maḥf* or manumote, either *ḥayrī* if the beneficiaries are works of charity, such as mosques, schools or students, hospitals, or *akīf* if the beneficiaries are manors; public properties for the use of all, *malakā*, e.g. roads, rivers, village commons etc.; and finally dead properties, *maḥf*, desert and empty lands which all belong to the state. In Iran the *ḥakīq* crown properties must be added here (Lambton, 238-38).

The extent of these different types of property varies between the countries, and in general leaves little room for the small landowner ($\frac{1}{3}$ of the rural population in Turkey, $\frac{1}{4}$ in 'Irāk). Everywhere large landownership is the rule. In 'Irāk, out of 10 million hectares of arable land, 4 millions belong to the state and 6 million to private landowners. In Iran 20% of the peasants possess 8% of the land, from 1 to 3 hectares or a cor per household. The cor is both the pair of oxen used for labour and the work carried out by the peasant in one day (Ghassemlou, 128). The great landowners, i.e. the state, the chiefs of tribes, the religious *gāyḥ* and the great bourgeois businessmen, lease out on short lets their immense lands at a price which renders the situation of the peasant highly precarious. Indeed, the dues are heavy. If, in Iran, the annual revenue of the great landowners reaches 5,600 dollars a head, that of the average peasant only reaches 60 dollars (Ghassemlou, 166). In 'Irāk, before the Second World War, the income of the Kurdish peasant came to £ 20 a year (Khosbak). There are the dues in kind or in corvée labour (80%),

in kind (25%) and for the rent (5%), which fall so heavily on the peasant. In Turkey, several systems are distinguishable: *yarcılık*, where the peasant uses his own tools, plough and livestock and gives half of the harvest; *zemincilik*, where the amount of the rent depends on the situation and fertility of the soil, the manpower, the rentability of the cultivation and the degree of dependence of the peasant; and *marab- hacılık*, where, in exchange for his work the farmer only touches $\frac{1}{4}$ of the harvest (Mosalev, 13). In Kurdish Iran, the same servitudes under different names and rather similar systems are to be found: *nimchark*, in which the landowner leases out the irrigated lands and supplies the seed, and the peasant supplies the work, with the landowner taking $\frac{2}{3}$ of the harvest and the peasant $\frac{1}{3}$; *shāḥbār*, in which the landowner supplies the land, the water, the seed and the beasts of labour, and takes $\frac{1}{2}$ of the harvest; *shūl*, in which the landowner supplies soil and water and receives $\frac{1}{2}$ of the harvest; and *danawā*, in which the landowner, in return for supplying earth and seed, takes $\frac{1}{10}$ of the harvest (Ghassemlou, 132-8). In 'Irāk Kurdistan the same problems are encountered. Thus for the summer harvests, tobacco or cotton, the landowner takes $\frac{1}{3}$ and $\frac{1}{3}$ in the case of the rice; for the winter harvests, wheat or barley, $\frac{1}{10}$ or $\frac{1}{12}$. In addition, there is that which is owned or levied: 7.5% for the *zakkat*, the agent of the landowner, 12% for the government, and in addition, all that there is set aside for the *gahwān* or coffee-maker of the master, the *mudhif* or guest house, etc. (Khosbak, 48). Also, for the decentralised villages under landlordism, the revenues of the soil are distributed roughly as follows: $\frac{1}{4}$ for the landowner, $\frac{1}{4}$ for his representative in the case of the landowners who do not always live on the spot but are settled in the towns, $\frac{1}{4}$ for the share-cropper or farmer, and $\frac{1}{4}$ for the agricultural worker who has neither land nor beast, but only his labour. If account is made at the end of the year, the poor Kurdish peasant is left with empty hands and overwhelmed by debts (Rossi, 86), for he is often forced to take on ruinous loans in order to survive until the next harvest.

If such are the conditions of life of the Kurdish peasant, one can understand the rebellions which break out from time to time, e.g. that of the *moḥand* of the Kurd-Dagh (Syria) directed by Ibrāhīm Khālīl between 1930 and 1940 (cf. Th. Bois, *Les Kurdes*, 15-115), and the revolt of 20,000 families of Dizai, in 1954, who demanded the reduction of the tax to $\frac{1}{10}$ th of the harvest, the suppression of forced labour, and the suppression of gifts on the occasion of feasts or marriages (Gavan, 19).

To remedy this feudalism of the land which makes the Kurdish peasant a taxable serf, subject to forced labour at pleasure, some projects of agrarian reform have been envisaged by the governments of the regions inhabited by the Kurds. In all these lands however, the feudalists, chiefs of tribes or religious *gāyḥ*, privileged in the past, have been the stubborn enemies of these attempts at reform.

In Iran, since 1955, a law provides for the distribution of the lands belonging to the crown and state (Muḥammad Shāh, 205). In 1960, an agrarian law aimed at regulating the property of private lands by fixing the maximum at 400 hectares for irrigated lands and 800 hectares for non-irrigated lands. Provision was also made for rural co-operatives which, from 500 in the beginning, rose to 4,500 in 1965 and 8,000 in 1969. But above all, the Shāh proclaimed the "White Revolution" (26 January 1963), approved by referendum and which, in its

twelve points, was among other things to lead to the abolition of feudalism and the liberation of the peasant. In Turkey, since 1938, provision has been made for the purchase of the lands of the great landowners to distribute them to the peasants, but few have benefited from it. A legal project regarding agrarian reform was promulgated on the 22 June 1943, which envisaged the distribution of the lands of the state and of landowners whose area exceeded 500 hectares, but this art. 17 was abrogated in 1950. The price had to be paid within 30 years (Moussiev, 14). A new agrarian project began in 1961. The deplorable situation of the peasants was acknowledged, hence it was concerned with the distribution of the lands belonging to the Treasury, 8 million *dönüms* (in Turkey 1 *dönüm* = 1,000 m² approx.); those managed and cultivated by the state, quite extensive in the provinces of the east and south-east; those of *wakfs*, of which there still remained 1 million *dönüms* to distribute; and finally the private estates, whose total area exceeded 38 million *dönüms* (Vatan, 14-15). In 1965, out of 13,591,602 members of the active population, nearly $\frac{1}{4}$, i.e. 3,764,652 lived by agriculture (Esenkova, 116). They were also the most unprovided for (cf. M. Makal, *Bizim köy*, Fr. tr. *Un village anatolien, récit d'un instituteur paysan*, Paris 1963, Eng. tr., *A village in Anatolia*, London 1954).

In 'Irak, the agrarian policy of the royal government was originally rather favourable to the chiefs of tribes, Arabs or Kurds. In 1932, law No. 50 (Downson) assigned landed property, pasture or arable, to the tribes, then law no. 51 (called *kumra*) assigned to the chiefs the ownership of the properties of the tribe. In 1933, Law No. 28 forbade the peasant 'in debt' to leave the land of his master, unless his house was destroyed. Finally, in 1954, Decree No. 11 allowed the Minister of Justice to assign the national properties. Furthermore, e.g. in 1953-4, 1,594,560 *dönüms* (in 'Irak a *dönüm* = $\frac{1}{4}$ hectare) were distributed to 6,863 peasant families from the region of Sindjâr, but the major part was assigned to Ahmad al-Adjil, *ghaykh* of the Shammar (Warriner, 166).

Such a situation could not continue. After 30 August 1958, the new Republic published an agrarian law which was aimed at putting an end to feudalism, to raise the social level of the peasant and develop agriculture. According to this law, the area of properties should not exceed 250 hectares in irrigated lands and 500 hectares in non irrigated lands. The benefits of cultivation were strictly regulated. The lands thus freed had within five years to be distributed to the peasants, from 30 to 60 *dönüms* of irrigated lands or from 60 to 120 *dönüms* of non-irrigated lands. The landowners had to be compensated in goods from the Treasury at 3%, reimbursable in 20 years (Vernier, 396). There was euphoria among the peasants, who did not wait to help themselves, and a general outcry on the part of the landlords, and many rebellions had to be faced.

In these different lands, the Kurdish peasant was bound to benefit from these agrarian reforms. But it is not sufficient to have the land; he still had to have the means to cultivate it. The means are lacking or insufficient; seed is expensive, the agricultural equipment rudimentary and primitive, everywhere man-drawn ploughing methods are still in use, the indispensable irrigation works are expensive and the co-operatives cannot answer all needs. The Kurds of 'Irak, as Kurds, are the only ones to have their word today. Thus the D.F.K. at the time of its Seventh Congress, in November 1968, published its programme whose long article 14 presents its views on the group

of projects which take account of the special needs of their region (Vanly, *Le Kurdistan irakien*, 363-6). A witness records a partition of lands at which she was present in Kurdistan in 1964, Joyce Lussu, *Anche i Kurdi conquistano il loro socialismo*, in *Rinascita* *Sarda*, no. 11, No. 9, 20 March 1964, 19.

These problems of the land are not posed in the same manner for the Kurds of Soviet Armenia. Indeed, the First World War was still not finished when the peasants of the Alagöz rebelled with the cry of: "We want the land. How long are we to remain slaves?" They were excited by their young compatriot who relates it himself (Ereb Şemo, *Şirvanî kurd*, Beirut 1947, 62). After many struggles against the *kulaks*, the dream was realised, but perhaps not in the fashion originally envisaged. From then onwards, property has been collective and the peasants enrolled in the *kolkhozes* (cf. Aristova, *Kurdi Zakavkaz'ya*, 1966, 64). Instead of the plough and cart of the past, it is the tractor and the combine harvester which serve to cultivate the lands of the *kolkhozes*. Hence the standard of living of the Kurdish peasant has been noticeably raised. But perhaps this new life is somewhat idealised in the work (in Armenian) of Braine Evdal on the *Manners and customs of the Kurds of Transcaucasia*, 1957 (cf. Th. Bois, *La vie sociale des Kurdes*, 605-9; P. P. Moussiof, *Le problème agricole en Turquie*, in *Société et développement*, 1956, No. 2 (Fr. tr. in *Doc. Franc.*, *Articles et Documents*, No. 0.369, 14 June 1954, 8-15); Warriner, *Land reform and development in the Middle East, a study of Egypt, Syria and Iraq*, 1957, 1962; A. K. S. Lambton, *Landlord and peasant in Persia, a study of land tenure and land revenue administration*, London 1953, 1960; P. Rossi, *L'Irak devant la réforme agricole, in Orient*, viii/3 (1958), 81-93; *La réforme agricole en Irak, in al-Buld*, Baghdad, 12 September 1960, Fr. tr. in *Doc. Franc.*, *Articles et Documents*, No. 0.0027, 29 November 1960; *Un projet (sur) de réforme agricole, in Vatan*, Istanbul, at the 9 and 12 October 1960, Fr. tr. in *Doc. Franc.*, *Articles et Documents*, No. 0.1174, 9-10; Mohammad Reza Shah Pahlavi, *Mission for my country*, London 1961; B. Vernier, *L'Irak aujourd'hui*, 1963, ch. 19, *Structure du secteur rural*, 371-7, ch. 22, 1, *La réforme agricole*, 397-406; H. Mandras and Y. Tavernier, *Terre, paysans et politique*, Paris 1965; Jusuif Khayyat, *The Iraqi village, a study in its condition and reform*, Beirut 1950 [in Arabic]; anon., *Notre question de l'Est aux yeux d'un sociologue*, in *Yén*, 3rd yr., No. 90, 18 December 1964 (in Turkish); İsmail Benliçi, *Doğu Anadolu'da geri bırakılmışlık sorunu* ("The under-development of Eastern Anatolia"), in *Anı*, No. 10, February 1971, 46-73; idem, *Doğu Anadolu'nun durumu: sosyo-ekonomik ve etnik temeller*, ("The situation of Eastern Anatolia: its socio-economic and ethnic causes"), *Iran-Shahr*, a survey of Iran's land, people, culture, government, economy, Tehran Univ. Press 1965, published with the assistance of UNESCO, I, 117 pp.).

B. The religious impact

Kurdish society, based on the land (tribe and village) and blood (family), is coloured by a religious aspect which appears often in daily life (cf. Th. Bois, *L'âme des Kurdes*, 47-8). The central kernel of the present Kurdish habitat, to the east of the Tigris, around Lakes Van and Urmiya, as well as in the north and east of 'Irak, was contained before Islam within the Sāsānid empire (224-642) where Zoroastrianism became the state religion. But already before that, in the time of the Parthians, Christian evangelisation had encountered there some Jewish groups against pagan populations who worshipped trees, had

a solar cult and sacrificed to this devil. Some of them were converted. The *Acts of the martyrs of Persia* (Syriac ed. Bedjan, Leipzig 1892) report that these autochthonous Christians suffered under Sapor II (309-63). But at the beginning of the 5th century the church was reorganised, bishops were installed in all the Kurdish lands (cf. P. Labouret, *Le christianisme dans l'Empire perse sous la dynastie sassanide* (224-637), Paris 1904, *passim*) and a number of monasteries were built, some of which were maintained until the invasions of Timur (1336-1405); cf. Fiey, *Assyrie chrétienne*, *passim*. But the mass of the people followed the official cult, and the Kurds recognise that their ancestors could have been *magi* (q.v.) or followers of Zoroaster [Sir Mark Sykes, *The caliphs' last heritage*, 424].

The fall of the Sāsānid dynasty (642) favoured the Islamisation of the country that the Arabs had begun to invade a decade or so previously. This happened neither without a blow nor without regret. But after many combats in which they allied themselves sometimes with the Sunnis, sometimes with the heretical Kharijites, the Kurds ended by rallying collectively to the new religion. Having become Muslims faithful to the Sunna, the Kurds follow almost in their entirety the juridical school of al-Shāfiʿī (d. 804/850), as the Sharaf-nāma already recognised (I, 14) and also Ewliyā Celebi (iv, 75).

In the course of history, the Kurdish chiefs of the community have shown a fine religious zeal without the national factor intervening, beginning with Šalāh al-Dīn or Saladin (1137-93). They immortalised their passing by building mosques, schools, hospitals or simple fountains (Sharaf-nāma, ed. Cairo, 96-7). Alongside these builders, an intellectual élite, 'ulama' and fakāhā, devoted itself to the study of theology and law. Also to be noted are the famous madrasas of Bitlis (Sharaf-nāma, 455, 495), of Dīlāja (ibid., 271) and of Zakho (ibid., 147). At Alkhūt, one of these scholars worked on the construction of the Observatory of Marāgha in the 7th/13th century (ibid., 409). 'Amādiyya is also a centre renowned for its masters (cf. Damoodjī, *Imrāl Bahādin*, 59 ff.; al-'Abbāsī, *Imrāl Bahādin*). The famous university of al-Ashar in Cairo counts numerous Kurds as teachers of theology (cf. Nikitina, *Les Kurdes*, 210). The cemetery of Eyyūb in Istanbul and that of Scutari contain the tombs of numerous Kurds who, in the Ottoman period, held the post of Shaykh al-Islām (cf. Th. Bois, *La religion*, 7).

But over against this official and institutionalised Islam, there has sprung up a popular Islam, often on the fringe of the authorities, civil as well as religious, and which leads a very active life. It is the world of the small folk, peasants or artisans, illiterate for the most part, a kind of secular terzies attached to a mystical *farīka* and linked directly to a *shaykh* who serves them as spiritual guide, *murshid*. From the 6th/12th century onwards Sūfis entered Kurdistan and prospered there (cf. Loscot, *Enquête*, 23-4). Today, the principal brotherhoods strongly implanted among the Kurds are the Kādiriyya, who trace their origin to 'Abd al-Kādir al-Gilāni (1078-1166), who died at Baghād and was a Kurd himself, and the Naksh-bandiyya, who claim attachment to Bahā' al-Dīn of Bukhārā (1317-89) and are quite widespread in the Islamic world, especially in India and as far as China. This *farīka* was introduced into 'Irāqī Kurdistan at the end of the 19th century by Mawlānā Khālid after a journey to Delhi. He was of the Džaffi tribe, born at Kara Dağ in 1779 and dying at Damascus in 1826 (cf. Rich, *Ressence*, I, 140-5, 320-1; Nikitina, *Les*

Kurdes, 212-15; Edmonds, *Kurds*, 77-8). He was to encounter strong opposition on the part of the Kādirī *ghayās*, but ended by supplanting some of them. In south Kurdistan, the disciples of the Kādirī order are ordinarily called *dawāsh* and those of the Naksh-bandi are termed *Shif* (Edmonds, 63). The meetings of the brotherhood are held with the *shaykh* in his residence, *khānqāh* or *talāyya* or simply *tekke*, a kind of monastery-residence where the *shaykh* who keeps open table there dispenses his teaching to his *murids*. But in every place where a mystical *tekke* is established, in a tribe or in a village, some tensions are going to be produced almost automatically. For the *shaykh* is rich, he is the owner of numerous villages, and because of this he is opposed to the *agha* of the tribe who sees there competition with his authority; he is endowed, it is believed, with supernatural and miraculous powers and also is regarded as being by the orthodox *'ulama'* who have almost no faith in him and distrust him; finally, and above all, he often has the ambition to play a political role; whence the suspicion which he meets with from the government authorities. On the other hand, the credulity of the *murids* is well imaginable, and their fanaticism can lead to many excesses and eccentricities. Hence from time to time some individuals with an inner light arise who claim to be their *makki*, or who are reformers without a mandate but preaching social revolution. Examples abound (Campanini, *Storia*, 91-3; Nikitina, *op. cit.*, 227; Rondot, *Les tribus montagnardes*, 43; Th. Bois, *L'âme des Kurdes*, 52-3; Edmonds, *Kurds*, 74-6). A recent group of Naksh-bandi, the Nercular, was founded by the Kurd Sa'īd Nūrsī (1870-1960) in Turkish Kurdistan (cf. MIV [1960], 232-3, 338-42, [1965], 71-4). The hand of the *shaykhs* and their adepts, especially Naksh-bandis, is to be found in many uprisings in Turkey and in 'Irāq, with the bloody government reactions which follow, as e.g. the movement of Shaykh 'Ubayd Allāh of Nehrī (1880) and that of Shaykh Sa'īd of Pīran (1925), which brought about the closure of all the mystical *tekkes* in Turkey, and also the insurrections of Shaykh Mahmūd of Barzandī (1919 and 1924).

The teaching of certain *shaykhs*, in order not to be revolutionary, must be heard and followed with prudence. Such is the mystical doctrine and procedures for contemplation of Shaykh Muḥammad Amlā al-Kurdī al-Shāfiʿī al-Naksh-bandi of Arbīl (d. 1904) in his *Tamrāt al-ḥayāt*, in numerous editions (7th in 1961), cited by A. J. Arberry, *Sufism*, London 1950, 129-32, and the French translation of his mystical technique of *dhikr* by J. Guillaud, *Petite philosophie de la prière du cœur*, Paris 1953, 234-48.

But these different brotherhoods, despite all their excesses and political involvements, are always considered as integral parts of orthodox and official Islam. It is not the same with some sects who, pushing their theories to the extreme, have left Sunnī Islam, such as the Yazidis (q.v.) who, born of the 'Adawiyya of Shaykh 'Adī b. Muṣallī (ca. 1073-1162), have diverted their spirituality completely from it to the point of having forgotten their origins (cf. Th. Bois, *Les Yazides, essai historique et sociologique sur leur origine religieuse*, in *Mashreq*, iv (1961), 109-28, 191-242). Similarly, the Ahl-i Bāḥā' (q.v.) are really Shī'ī extremists. Dr. Mohammad Mokri has published numerous Guran and Persian texts concerning them, e.g. *L'isotisme kurde*, Paris 1966. Edmonds studies the members of the sect of the 'Irāqī-Iranian frontier, known by the name of Kalak, *op. cit.*, 182-201; idem, *The beliefs and practices of the Ahl-i Haqq of Iraq in Iran*, *Journ. Brit. Inst. of Persian Studies*, vii (1969),

80-102. Also to be encountered among the Kurds are some aberrant small groups in Iraq, such as the Sarli who are connected with them and, around Mawsil, the Shabik who are Kurdish Kizilbash, not without contact with the Bektashis, formerly so powerful in Turkey (Edmonds, 268-9).

Bibliographie: In Nikitine, *Les Kurdes*, 226-33, is to be found an excellent account of the theories of N. Marr, *Eghe o slove Celebi*, in *EAP*, xx (1912), 99-121; G. R. Driver, *The religion of the Kurds*, in *BSOS* (1921), 197-215; Nikitine, *Les Kurdes et le Christianisme*, in *RHR* (1922), 247-56; idem, *Une apologie kurde du sunnisme*, in *RO*, viii (1923), ii, 226-60; idem, *Les thèmes religieux dans les textes kurdes de ma collection*, in *Actes du Cong. intern. d'histoire des religions*, Paris 1925, ii, 425-34; idem, *Les Kurdes rencontrés par eux-mêmes, en Asie française* (1925), No. 231, 148-57; P. C. Customs and social traditions.

1. Dress.

Clothing is characteristic of man. The style of clothing changes from one country to another and varies with the social rank (see trials). It also evolves with the times. So it is among the Kurds. Today, the costume of the Kurds tends to fall into line with Western costume, in order to conform with the law (September 1925) in Turkey, and to follow the fashions, especially the masculine ones, for the other Kurds of the towns. But all the Kurdish women and the men in the villages keep to the traditional national costume. The evolution of Kurdish clothing can be followed through the accounts of travellers and the sketches that they give us, e.g. Campanile (1810), 135-40; Rich (1820), I, 180-2, 287-9; Fraser (1834), I, 71, 85-7; or in addition Binder (1885), 172 n. 1; Soane (1923), 399-402 and Nikitine (1956), take up the descriptions of their predecessors. One must wait for the women to have detailed information on the modern dress of the Kurds. Mrs. Aristova (1965), 208-26, speaks of the Kurds of Transcaucasia and gives some photographs of the women's jewels, and Mrs. Hansen (1961) has a very long chapter (65-98) to explain to us in detail the materials and colours of

different parts of the clothing, with what is specifically Kurdish, what is the consequence of Islamic customs, and what derives from Western influence, together with measurements, diagrams and numerous photographs, so that one may have an exact idea of the present national Kurdish costume, for men as well as for women. While jewels of every kind and in every material, gold, silver, precious stones, necklaces, bracelets and pendants, sparkle on the costumes of the women, the pride of the man is to be noted in their arms, cartridge pouches and damascened belts, chased daggers and lethal revolvers. The pipe and the tobacco pouch also form part of the Kurd's accoutrement.

2. Marriage and burial customs.

From the cradle to the grave, man is everywhere accompanied by customs or traditional rites, which vary with civilisations. Among the Kurds are to be found some customs very much alive which have been preserved from time immemorial. The choice of a fiancée, her toilette before the wedding, the price of premarital virginity, whose linen bloodied by the ruptured hymen will bear clear proof, the crossing of the threshold and introduction into her new household, the joys at the birth of the first baby, after a confinement which has nothing of a story about it (cf. A. Brunel, *Gulasar, contes et légendes du Kurdistan*, Paris 1946, 109-11), are the occasion of usages respected by all. It does not concern us to give a systematic and exhaustive account, but to indicate some examples, according to the various Kurdish regions. Kurds in general: Campanile, 103-5; K. A. Bedir Khan, *La femme kurde*, in *Hawar*, 19 (1933), 6-8/194-6; Tawilparêz, *Le mariage chez les Kurdes*, in *ibid.*, 52 (1943), 12-16/764-8. Kurds of Iraq: Barth, in *op. cit.*, 24-9/29-37; Edmonds, 225-6; Hansen, 125-38. Kurds of Iran and the Urmia region: *ibid.*, 123-25. Kurds of Syria and the Kurd Dag: K. Daghestani, *La famille musulmane contemporaine en Syrie*, Paris 1932, *passim*. Kurds of Azerbaijan: Nikitine, 108-11. Kurds of Transcaucasia: E. Avdal, *op. cit.*, 21-83 (cf. Nikitine, in *L'Afrique et l'Asie*, xlix (1960), 62-6). Kurds of the Alagöz: Eröz Şemo, *Şivanê kurd, The Kurdish shepherd*, ed. Beirut, 44-7, 114-8. Kurds of Alamut: Freya Stark, *The Valley of the Assassins*, 1946, 270-1. Yazidi Kurds: Giamil, *Monte Singar. Storia di un popolo ignoto*, Roma 1900, 45-9, 159. Joseph, *Dawit worship*, Boston 1919, 186-92; E. S. Drower, *Paraclete angel*, London 1941, 17-25, 86; S. Damluji, *al-Yazidiyya*, Mawil, 1949, 278-88. Ahl-i Hakik Kurds: M. Mokri, *La mariage chez les Kurdes*, in *L'Ét asiatique* (1962), 42-68.

The luxury rites are no less varied, whether in regard to the toilette of the dead, the funeral cortège or *hawl*, the ceremonies of mourning and the tree of the deceased, *dara fîn*, or the collective meal of condolences. Descriptions of them are found for the Kurds in general: Campanile, 82-6, with a fine elegy; Nikitine, 215-8. Mukri Kurds: O. Viličevsky, *Idrissishî Kurdî, in Paradenizistishî etnografîshî Stornîk*, I (1958), 214-28. Kurds of Turkey: Ahmed Meraf, *Biraniyê min* ('My memoirs'), Erivan 1966, 89-91. Yazidi Kurds: Lescot, *op. cit.*, 154-6; Drower, 67-8, 185-6; I. Joseph, 192-3; Damluji, 70-2. Children's funerals: Hansen, 139-43.

3. Festivals and seasonal rites.

Among the numerous festivities which punctuate periodically the life of the Kurdish people, the Islamic religious festivals are famous everywhere and so do

not merit special mention, with perhaps an exception for the *memlûd* or festival of the birth of the Prophet. Indeed, the brother-in-law of Salâdin, Muṣaffar al-Dīn Kökbûrî, governor of Arbîl, is perhaps at the origin of this festival which he had celebrated with much solemnity and gaiety in 604/1207. An account of it has been given by a native of Arbîl, Ibn Khallikân (d. 681/1282), French tr. J. Sauvaget, *Historiens arabes*, Paris 1946, 118-25. On the occasion of the festival, a panegyric is read, of which numerous specimens are to be found in Kurdish. Let us cite simply the *Memlûdnâme* of Mela Ahmed of Batî (1425-95?) edited in Cairo in 1905 and re-edited in Istanbul in 1929 and always used; Biyisa Fêxember, *Life of the Prophet*, edited in Damascus, in *Kildîrîna Hûcard*, 4 (1933); Şayyikh Mohammad Khilî, *Memlûdnâme i new-esse* ("The new account of the birth of the Prophet"), Sulaymân 1937; idem, *Memlûdnâme*, in *Kurdistan* (Tehran) Nos. 166 ff.; Mela Hasan Hartûpî, *Memlûdnâme*, in *ibid.*, Nos. 43-74 (1960-2).

A very popular festival among the Kurds, and now official in Iraq since the establishment of the Republic (1958), is *Nowruz* (see *nawrûz*), or the festival of the new year, i.e. in spring (21 May). It is a sort of national festival of the Kurds. Moreover, it has always been celebrated by the Yazîdîs, who are supposed to have preserved many ancient traditions and who call it *Sersal*. There is also the Festival of the New Year (cf. Locout, *op. cit.*, 71). The festival is in any case earlier than Islam, as "myth of the eternal spring" which was always celebrated in the Iranian world (cf. G. Widengren, *Les religions de l'Iran*, Paris 1968, 58-67). It is said to have been instituted by the mythical King Djamshîd (H. Massé, *Croyances et costumes persanes*, Paris 1938, 143). Today, the official festival is accompanied by speeches, poems, dances and theatrical scenes, where the myth and struggle of the smith Kîwe against the dragon Zuhâk or Azî Dahak is mimed, a prefiguration of the struggle of the Kurdish people for its independence. In Sulaymân, the festivities are associated with all kinds of entertainment and masquerades with a *lâle soir*. It is a real carnival (Edmonds, 34-5; Taubig Wahbi, *The rock sculptures of Gunduk cave*, in *Sumar*, 1/2 [1948], Fr. tr. in *BCEK*, vii [1949], 2-13. Erêb Şemo cites another form of carnival: *Kese gîdî, Berhang*, in *Berevêk*, Erivan 1969, 61-2. It is in connection with this festival that a special cake, *serwanî pazan*, is baked, which, by night, 'Âyîşîs or Fêlîna will come to bless by touching it with their hands. It is eaten in the family and with friends, with the aim of having offspring (Wahbi, 11-13). In Iran, on the eve of the New Year, magical rites are mixed with the rejoicings (M. Moirî, *Les rites magiques dans les fêtes du "Dernier Mois de l'Année" en Iran*, in *Mélanges Massé*, Tehran 1963, 288 ff.). The girls make vows then. Thirteen at the door, New Year. Husband in the house, baby in the lap (Massé, *op. cit.*, 199). Abroad, the Kurdish students celebrate this national festival with gaiety (Deitch Delaiz, *Nawroz and the legend of Kawa*, in *The Kurdish Journal*, U.S.A., 1/1 [March 1965], 5-5). Let us note further in *Kurdistan*, London, organ of the K.S.S.E., Nos. 7/8 (1961), the poem *The festival of Nawroz* of Salîk Karadaghî, 32.

Other seasonal festivals are celebrated above all by the shepherds on the occasion which concerns them particularly: the first lambing, *şarapîr*; the departure for the sozen or summer pasturage, *berodan*; the shearing of the sheep, *berşîr*; and above all the releasing of the rams, *beran berdan*. Erêb Şemo, *ibid.*, 58, has described these entertainments with many picturesque and lively details. Stig Wikander believed

that he had discovered in this last festival reminiscences of ancient myths (*Ein Fabel bei der Kurden und im Avesta*, in *Orientalia Suecana*, ix [1960], Uppsala 1961, 7-20. The peasants also have their traditions. At the time of the harvest, the first sheaf reaped is offered to the stranger who passes by (Hamilton, *op. cit.*, 51), and the gathering of the mulberries is the occasion of a festival with a special dance, *gîrdan*, the sweeping, which consists of sweeping the soil under the trees before the children climb them to shake them so as to allow the women to gather the berries (Edmonds, 170, n. 1).

Although it does not really concern us here as a festival properly so called, let us indicate some more or less superstitious practices which relate to the cycle of nature and whose origins stretch back without doubt into remote antiquity. If activities to make the rain stop are mentioned only rarely (cf. Nuklîne, *Une apologie kurde*, 16), by contrast T. Wahbi, *op. cit.*, 7-9, counts no less than nine different rites, more or less laughable and doubtless efficacious, to combat drought and obtain rain. 1) The prayer *noys berana* does not suffice, a *darvîsh* is to be thrown into a water tank or women are to harness themselves to a plough and till the river. Still other singular acts are to be performed in order to have one's prayers finally answered (cf. S. Reinach, *Charme pour obtenir la pluie* (en Kurdistan), in *L'Aethiopologie*, xvii [1906], 633).

4. Dances and music.

The Kurd sings always and everywhere. All the family festivals, birth, circumcision, and especially marriage, are accompanied by dances and songs, and equally the tribal or peasant gatherings and some religious ceremonies. The name of the dances varies according to whether it designates the region or the tribe where it is danced, e.g. Botânî, Serheftî, Şêxanî, or according to the different figures which distinguish them, *elgêst*, *gîrânî*, *royne*, or the rounds *gêrdan* and *peşt*. The students have a special dance *bîlîs* or *bîlîsî*, of which Tawûşpêrîs has given us some examples and has described the rhythm (*La vie universitaire en Kurdistan*, in *Hamar*, No. 53 [15 March 1943], 772-6). The old or more recent travellers admired the particularities of these Kurdish dances (e.g. F. Müllingen, *Wild life*, 378-9, or Edmonds, *Kurds*, 84; Drovser, *Peacock angel*, 130-4; Bois, *Connaissance*, 61-2, cites the name of twenty dances). Let us note that these folkloric dances are mixed, which distinguished the Kurds from the other neighbouring Muslim peoples.

Kurdish music, inseparable from the dances and songs, is part of what it is convenient to call oriental music, but it cannot be confused either with Arabic music or with Armenian or Turkish music at all, although it has had an influence at times on the songs of the neighbouring countries, such as Iran or Mesopotamia (cf. S. Jargy, *Chant populaire et musique savante au Proche Orient arabe*, in *Orient*, vi/2 [1958], 208-9). Kurdish music today is not learned, but popular, and knows neither harmony nor polyphony. Its melodies, as numerous as varied, preserve a serious, pathetic, quite often melancholy character, as a consequence quite astounding among this warlike people (cf. Dulaucier, *Chants populaires de l'Arménie*, in *Rev. des deux Mondes*, 10 April 1854, 224-35). Western travellers have not failed to draw attention to the originality of this music. Some have felt the attraction and very palpable charm of these chants; others, on the contrary, e.g. Mrs. Hansen, 129-9, have found this music "flat and false" with its 17 tones. It was an Armenian priest, Vartabed Comtas (1869-

1935) who was the first to gather and note down some popular Kurdish songs (*Quelques spécimens des mélodies kurdes*, in *Recueil d'Emine*, Moscow 1904, and re-edited in Erivan in 1959). In Erivan precisely, the Malikiian School of Music is formed of young Kurds who study the traditional songs with the old *dangêj* or troubadours. Thus Nora Cowart noted 33 *Chansons de danse kurdes*, 1960, gathered at Tiflis. For her part, Cemile Celil has published two annotated collections of *Chans populaires kurdes*. The first, at Erivan (1964), gives the Kurdish text and the musical annotation of 75 pieces; the second, at Moscow in 1965, apart from the Kurdish text, gives the musical notation and Russian translation of 100 varied songs. In 'Irâk, since 1953, a society of Kurdish music has been organised with a view to preserving, standardising and developing in Kurdish music (cf. B. A. Ali, *An approach to Kurdish music*, in *Kurdistan*, K.S.S.E., 2 March 1958), 3-6; S. S. Gevan, *Divided nation*, London 1958, 15). But Europeans too are interested in Kurdish music (cf. Dr. D. Christensen, *Tanzlieder der Hakkari-Kurden. Eine material-kritische Studie*, in *Jahrbuch für musikalische Volks- und Völkler-Kunde*, Berlin 1 (1963), 12-47). This is a very serious study of the dance, instrumental and vocal music of Hakkari, whose melodies the author analyses and whose style and rhythms he studies scientifically. See also Edith Gerson-Kiwi, *The Music of Kurdistan Jews. A synopsis of their musical styles*, in *Yovel, Studies of the Jewish Music Research Centre*, II, Jerusalem 1972.

The Islamic religion does not authorise music at all in its liturgy, and music has taken refuge in the rites of the different *farikas* where its use probably dates from the foundation of these groups (cf. Trillingham, *op. cit.*, 195, 196 and *passim*; M. Mokri, *La Soufisme et la musique*, in *Encycl. de la Musique*, Paris 1961, 1014-15). From there, music has passed without any problems into the aberrant sects of the Yazidis, into their processions and their gatherings for *sama'* or religious recital. Three religious songs of the Yazidis had already been noted by H. Layard, *Nimveh and Babylon*, 1835, 307, Nos. 567-9. Similarly, E. S. Drower (*op. cit.*, 118-19), recorded the rhythm of the drums in the course of a ceremony. As for the Abi-i Hakîk, Mohammed Mokri enlightens us on their musical customs in his article on *La musique sacrée des Kurdes "Fidèles de Vérité" en Iran*, in *Encycl. des musiques sacrées*, Paris 1960, 444-55.

Musical instruments among the Kurds are often manufactured by artisans. The most usual are, among wind instruments, the pipe, *bîlêr*, which every shepherd carries in his bag, the *zurna*, a kind of clarinet or oboe which has a place in all the dances, and the *dxwale*, a flute with two pipes of reed or bird bone, pierced with holes and whose mouthpiece has a kind of vibratory tongue. The sound resembles that of the Scottish bagpipes. The percussion instruments include the *dahol* or bass drum which is beaten on both sides, the *tepelî*, a narrow drum, a kind of kettledrum in pottery covered with a skin which is beaten with the fingers; and the cymbals, *selle*, are sometimes used by the Yazidis in their religious ceremonies. Among the stringed instruments, there are the *ribab* or monochord viol, the *keman* or *kemanche*, violin, and especially the *tenbâr*, the lute, whose player plucks the strings in the sacred and heroic songs. The nomenclature of all these instruments varies with the regions. A description of some clumsy impressions of musical instruments is found in *Sermesh le derwazeh-i folklor-i kurdîne*, Notes for an

introduction to Kurdish folklor, Hewîtî/Erbil n.d., 36-7.

5. Games, sports and hunting.

On the occasion of seasonal or other festivals, travellers have remarked among the Kurds the practice of certain popular games or sports, always in use. It is not possible to recount them all. Among the indoor games, cards, *îskembîl*, can be cited among the most frequent, especially among the townspeople; backgammon, *warid*; and above all chess, *zeirene*, the noble game par excellence. Among the outdoor games are the *cerid* or horseback fantasia; the ball game *qewaz*; a kind of hockey; and many games of pursuit or throwing, not to mention some modern sports like football and basketball and some games reserved for children. Worth noting are the fights of rams, buffaloes or partridges. Much information is to be found in Tawûşpatîz, *Les jeux kurdes*, in *Hannu*, 42 (25 April 1942), 634-6; Kurdî we Mîrîwanî, *Kurdî-î Yêrî*, Baghdad 1932, 32; M. Mokri, *Bazîh-ye Kurdî: Khawndiyên, in Yaghmâl, 2nd year, Tehran 1331/1931, Bazîh-ye Kordestan, in Tamaddun*, 2nd ser. 7, 317-20, Tehran 1332/1952. In his *Kurdish dialect studies*, I, Oxford 1961, 147, 218, D. N. MacKenzie gives the name of several Kurdish games. Bois, *La vie sociale*, 32-3/628-9 and notes 136-41.

The abundance of game in Kurdistan, furred and feathered, already mentioned above, is at the origin of the Kurd's passion for hunting. The best way of learning about this national sport is to read the two articles el Osman Sabri, who explains in them the methods employed with the art of an experienced hunter. *Nêçîr* ('Hunting') in *Ronakî*, 17 (1 August 1943, 317-23, 18 (1 Sept. 1943), 347-50. The bear is hunted in three ways (317), also the hyena (317), the ibex (318), the fox (319) and the hare (319). There are five ways of hunting the partridge, with the spear, the decoy, the rifle or the running noose, depending on whether one wishes to capture it alive or to kill it (320). Game can also be hunted with the help of birds, sparrow-hawks or falcons of three different kinds and at a more or less expensive cost (321-2). The way in which these birds are trained is also indicated (347-8). O. Sabri very much appreciates hunting the hare with the help of a hound, of which there are several kinds (348-9). The author does not forget fishing (319), which may be done with the net, hook or harpoon. Hamilton devotes a whole chapter to the hunting of the ibex, so picturesque and so difficult (*op. cit.*, 163-73). There are also to be found patterns of different bird-calls or whistles, traps, nets, running nooses or snares used for certain forms of hunting, in *Sermesh*, *op. cit.*, 99-102.

Bibliography: General works on sociology and ethnography: B. Nikitine, *Quelques observations sur les Kurdes*, in *Mercure de France*, cly (1921), 662-74; Idem, *Les vales d'Ardaïan*, in *RIM*, xlix (1927), 20-104; Idem, *La vie domestique kurde*, in *Rev. d'ethnologie et traditions populaires* (1923), 334-44; Idem, *La féodalité kurde*, in *RIM*, ix (1925), 1-20; K. Daghestani, *La famille musulmane contemporaine en Syrie*, Paris 1932; P. Rondot, *Les tribus montagnardes de l'Asie antérieure. Quelques aspects sociaux des populations kurdes et assyriennes*, in *BEO*, vi (1936), 1-30 + vi Pls.; 'A. al-'Azîzî, *'Aghâ'ur al-'Irâk*, Baghdad 1937-43; E. R. Leach, *Social and economic organization of the Rouanduz Kurds*, London 1940; E. Avdel, *Kurdish woman* (in Armenian), Erivan 1946; Idem, *Obîfai krowo mafi u Kurdov Zakavkaz'ya* ('The custom of the vendetta among the Kurds in Transcaucasia'),

māndj may combine Kurd with a form from *Māda* "Median".

Old morphological features preserved in North Kurd. are a distinction of case (nominative and oblique) and gender (masculine and feminine) in nouns and pronouns and the "agential" construction of the past tenses of transitive verbs, e.g. *az hātim* "I came", but *min xawmak di* "I saw a dream (lit., of me ... seen)". Both case and gender have been lost in South Kurd. and in the literary forms of Central Kurdish. In these dialects the pronominal suffixes, absent from North Kurd., have largely taken over the functions of the cases, cf. *min hātim* "I came", *xawek-im di* "I saw a dream". In some Central dialects, at least, the agential construction has developed in a remarkable way, with the verbal stem sometimes taking two personal endings, one representing a person only indirectly affected, e.g. *xawem pēra dīm-i* "I have seen a dream about thee (-i, lit. "art")", and even the agential suffix as well, *dā-m-i-a-u* "he (-i) gave me (-m, lit. "am") to (-ē) you (-n, lit. "are")". Note the 3rd person pronominal -i, plural -yan, in contrast to Persian -s. All dialects have an indefinite suffix, North. -ak, Cent., South -ek, but only Central and Southern share (with Gōrāni) the definite suffix -ak. In all dialects the *idāfa* (e.g., *di*), appearing in various forms, plays a considerable rôle both as relative pronoun and simple connective particle, e.g. North. *xawmak-a xawē*, Cent. *xawek-i xē* "a pleasant dream", North. *xaw-a min dī*, Cent. *xawak-a-y dīm* "the dream which I saw". In the north-east, the *idāfa* construction of both Northern and Central dialects has been contaminated, especially in the plural, by a particle *da*, -a, -i, probably of Aramaic origin, e.g. Cent. (Mukri) *piyā-l da pāld* "the king's men", North. *ku-ti xaw* (= *ku-ti di xaw*) "his sons". (This is not, however, a "plural" comparable with those of Eastern Iranian, Ossetic, Sogdian, etc.). Central and Southern Kurdish, unlike Northern dialects, have developed a secondary passive conjugation of the verb, formed from the active present stem, e.g. *kušim*, *kuš* "to kill", Cent. *kušrān*, *kuš*, South. *kušyān*, *kuš* "be killed".

Bibliography: A comprehensive list of all studies and monographs on Kurdish to 1926 is given in Minorsky's (otherwise outdated) article on "Kurdish Language", in *IEI*, II, 1233 ff. This is supplemented by a select bibliography in D. N. MacKenzie, *Kurdish dialect studies I*, London 1962. Fuller, but uncritical, lists of relevant publications appear in Z. S. Musāfīyan, *Bibliografîya po Kurdestanîya*, Moscow 1963, and S. van Rooy and K. Tamboer, *ISK's Kurdish bibliography*, Amsterdam 1968 ff. The following are most readily available: (1) *History*, D. N. MacKenzie, *The origins of Kurdish*, in *TPAS* (1961), 68-86. (2) *Grammars, dialect studies*, D. N. MacKenzie, *Kurdish dialect studies I*; K. Kurdoo, *Grammatika kurdîskî yaştika* (Kurmandîji), Moscow-Leningrad 1957; Dj. Bedir Khan and R. Lescot, *Grammaire kurde (dialekte kurmandji)*, Paris 1970; Ç. Kh. Bakae, *Gawê Kurdo Tirkmenî*, Moscow 1962; idem, *Yaştika Azerbaydžanskîyê Kurdo*, Moscow 1965. (3) *Dictionaries*, A. Jaba and F. Justi, *Dictionnaire kurde-français*, St. Petersburg 1879; Ç. Kh. Bakae, *Kurdo-Russkij slovar*, Moscow 1957; T. Wahby and C. J. Edmunds, *A Kurdish-English Dictionary*, Oxford 1966.

(D. N. MACKENZIE)

VI. — FOLKLORE AND LITERATURE

A. Popular and folk literature.

As among all peoples whose scholarly instruction is little developed, the oral literature of the Kurds is superabundant and very rich; Prof. O. Vilčeksky was able to speak of the "hyper trophy" of their folklore. A mass of documents has also been collected and published by foreign orientalists: A. Jaba, *Recueil et notices et récits kurdes*, St. Petersburg 1860; E. Prym and A. Socin, *Kurdische Sammlungen*, St. Petersburg 1890; O. Mann, *Kurdische u. Persische Forschungen*, in: *Die Mundart der Muki*, Berlin, I, 1906, II, 1909; H. Makas, *Kurdische Texte* (Mardin), Leningrad 1926; B. Nikitine, *Kurdish stories from my collection*, in *BSOS*, IV (1926), 121-38; idem, *Quelques fables kurdes d'Annam*, in *Folklore*, XI, (1929), 228-44; E. Lescot, *Textes kurdes*, I, Paris 1940, II, Beirut 1942; Th. Bois, *L'âme des Kurdes à la lumière de leur folklore*, in *Cahiers de l'Est*, Beirut, Nos. 5 and 6 (1946); S. Wikander, *Recueil de lectures kurmandji*, Uppsala-Wiesbaden 1959; D. N. MacKenzie, *Kurdish dialect studies*, London 1962-3. Kurds themselves, since the end of the First World War, have gone about collecting their treasures of folklore from the old folk or the decreasingly numerous professional storytellers and singers. Firstly, the Bedir Khān came from 1932 to 1946 in their reviews *Hawar*, *Ronahi*, and *Roya nā*; H. Cindî and E. Evdal, *Folklorê kurmanjî*, Erivan 1936; Cindî, *Folklorê kermancî*, Erivan 1937; and there is a comprehensive survey in I. M. Rostū, *Edet-i folklor-i kurdî*, Lâkol-nuwa, Bagdad 1970 (cf. Th. Bois, *Connaissance*, 117-23).

This folkloric richness is found, firstly, in the proverbs, popular sayings, enigmas or riddles. The Kurd likes to embroider his conversation with rhymed and rhythmic sentences which denote a real sense of observation. Proverbs also supply a racy summary of practical wisdom. Thousands of them have been published: E. Noel, *The character of the Kurds as illustrated by their proverbs and popular sayings*, in *BSOS*, IV (1921), 79-80; D. P. Marguerite and Emir K. Bedir Khān, *Proverbes kurdes*, Paris 1938; Lescot, *Proverbes et énigmes kurdes*, in *REI*, IV (1937), 307-50, reprinted and added to in *Textes kurdes*, I, 189-237; Prampolini, *Proverbi kurdî*, Milan 1963; MacKenzie, *Some Kurdish proverbs*, in *Iran*, *JIBFS*, viii (1970), 105-13; İsmail Hoqî Şaweyn, *Qes-e pîşman*, Bagdad 1933; Marûf Çiyawok, *Hawar bîj û pend*, Bagdad 1930; Cogercîwî, *Gosîna pîşina*, Damascus 1957; M. Xal, *Pend-i pîşman*, Bagdad 1957; Djamîl Kenna, *Amtîdî kurdîyya*, Aleppo 1957; O. Celîl, *Metela û me'deloh cîna'ta k'êrda*, Erivan 1969-71, 2 vols.; O. Celîl and C. Celîl, *Kurdîsh poslovištî i porogovorki*, Moscow 1972; J. Nebex, *Sprichwörter und Redensarten aus Kurdistan*, Munich 1970. There are numerous proverbs and sayings cited in Cindî, *Folklor*, 1937, 249-82, and in the grammars of Jardine and Beidar, as well as in the dictionary of Mardûkî, II, 1-86.

The songs are infinite in number and variety: dance songs, *dîlok*, songs of love, *kawîk*, or war, *ser* or *delak*; songs which accompany the transhumance in the spring, *serîle*, or in the autumn, *pahtok*; jollies, *lorî*; epithalamia, *kewêl* or *serkavano*; also songs of mourning, *şîn* or *gewêl*, punctuate the daily life of the Kurds from the cradle to the grave and throughout their days of hard labour. The reviews *Hawar*, *Ronahi* and *Roya nā* have published hundreds of them, as have Cindî and Evdal, *Folklor*, 342-474; Cindî, *Folklorê kermancî*, 189-245; see also Roodot, *Trois*

chansons kurdes, in *Cahiers du Sud*, No. 274 (1945), 817-24; Nikitine, *La poésie lyrique kurde*, in *Ethnographie*, xiv (1945-50), 39-53; Mokri, *Gûrânî yâ larsanî-kî-ya Anrîlî*, Tehran 1951; G. Chaliand, *Poésie populaire des Turcs et des Kurdes*, Paris 1963; Cindî, *K'arîmî emad'în N'îrîzîye Hîkîye*, Erivan 1972. Furthermore, see the collections with musical notation mentioned earlier.

Stories and anecdotes (*qetob*) abound and are full of imagination. The stories of marvels allow one to forget the worries of life; the anecdotes are replete with humour; the satirical stories do not hesitate to criticise the faults of individuals, rival tribes, religious leaders, in the spirit of the fables of the Middle Ages. Above all, the Kurds are fond of animal stories which always contain a spiritual moral. M. Duressne, in *Un conte kurde de la région de Sêwêrî*, in *JA* (1970), 107-17; Nikitine and Soane, *The tale of Suto and Tato*, in *BSOS*, iii (1923), 69-106; Nikitine, *Kurdish stories*, in *ibid.* (1929), 221-38; Lescot, *Textes*, I, 2-185; Cindî and Evdal, *Folklor*, 1936, 579-651; Cindî, *Folklor*, 1957, 161-85; M. Khasnadar, *Alman kurdi and other Kurdish short stories*, Baghdad 1969; A. Brunel, *Gulasar, contes et légendes du Kurdistan*, Paris 1946; Joyce Blau, *Trois textes de folklore kurde*, in *Études*, Brussels, vii (1965), 29-50; J. Nebes, *Kurdische Märchen und Volkserzählungen*, NUKSE, 1972.

Alongside these minor genres, the numerous much longer legends constitute choice morsels of Kurdish folklore. They can be classified in different categories which, however, are often combined. Some legends basically concern the supernatural, such as *Alamê Alam* (Lescot, *Textes*, II, 2-389) or *Sêvahaê* or *Hozbek*; others are a purely idyllic form, such as *Zelîza û Fatîl*, *Layîla û Meynûn*, *Seyîdênd û Xacê*, *Zembîlîroq*, 'the basket-seiter', *Xarçê û Xawer*, *Şîrîn û Aqayem*, *Şîrîn û Ferhad*, *Faxîr û Sêlîye*, *Mêlîn û Bîjan*; finally, the epics with an historical plot, such as *Dewmîst*, *Jûkurdî*, the adventures of Rûstem with Zoraw, Cihangir or Zendeşang and more recently the exploits of Nadîr and Topal, the Twelve Cavaliers of Merwan, Abdol Rahman Baban or Ezdîşêşê Bedur-Kan. These accounts were the glory of the *dengbêj* or professional troubadours, whose class is on the point of disappearing. All these texts can be read in the collection of Mann, Socin, Cindî etc., and also Bois, *Poètes et troubadours au pays des Soviets*, in *al-Machreq*, III (1959), 266-99; various authors, *Kurdish epic poetry from Akarî*, texts and trs. Moscow 1962; V. Milorsky, *The Gûrân*, in *BSOS*, xi (1943), 75-103; O. Dê. Dêallîov, *Kurdish gerolekshîyê epîs "Zlatokrykshon"*, Moscow 1967; O. F. Qazî, *Mêh-e Vafa*, Tabriz 1966; A. Ayyubîsan, *Çîrîke kurde*, Tabriz 1961; Idem, *Çîrîke Xec û Siyammê*, Tabriz 1956; Pîremard, *Dewmîstê sîward Merwan*, Sulaymânî 1935; Gew Mukriani, *Zembîlroq*, Hewlêr 1967; Nokri, *La légende de Bîjan û Manîfa*, Paris 1966; Idem, *Le chasseur de Dieu et le mythe du Roi-Aigle*, Wiesbaden 1957; K. A. Bedir-Khan and A. de Falgairelle, *Le Roi du Kurdistan. Roman épique kurde*, Gap, n.d.; K. A. Bedir-Khan and Herbert Oertel, *Der Adler von Kurdistan*, Potsdam 1937; Cegerçewî, *Serphîkîyîye Resîwî Dard*, Damascus 1955; J. Blau, *Le kurde du "Amîdîya el du Dîjêlê Sîwîrê"*, these *de doctorat* du 3^e cycle, Paris 1973.

B. Written and learned literature.

Alongside the mass of illiterate people, there has always been among the Kurds a highly cultivated intellectual élite. The fact was already mentioned by the Kurd Ibn al-Aghîr (d. 630/1233) in his *Kamîl* (ix, 7-8) and taken up many times in the *Şîraf-nâme* and

also by other witnesses, such as Hâjîdî Khalfîa (1658) (cf. Adnan Advarî, *La science chez les Turcs ottomans*, Paris 1939, 92, 100), or the traveller Evliyâ Celebî in his travel account (1682), who was justly ecstatic when confronted with the so well-stocked library of Abdâl Khân, the lord of Bîtlîs, cf. A. Sakisian, *Abdâl Khan, seigneur kurde de Bîtlîs au XVII^e siècle et ses témoins*, in *JA*, ccxxix (1957), 253-76. Unfortunately, these men of letters preferred to write their scientific works either in Arabic, the language of the Kur'ân, or in Persian, as did Şarîf Khân Bîdlîs (q.v.) himself in his *History of the Kurds or Şîraf-nâme* (1005/1596-7), as also İdrîs Hakkîm of Bîtlîs (d. 926/1520), who wrote the first history of the Ottoman Empire, *Hâşî bihîşt*, 'The eight paradises' (see *strutist*, 1904). The great poet in the Turkish language Fudûlî (d. 963/1556) (q.v.) was a Kurd, as was the modern sociologist Dîrîz Gök Alp (cf. J. Deny, in *RMH*, Ix (1925), 3). Even today, many poets in the Arabic language—al-Zahwî (1863-1936), Ahmad Şawwâl, the prince of poets (1868-1932), al-Ruşîfî (1875-1945), the sociologist Kâsîm Amîn (1865-1906), the novelists al-'Akhdî (1886-1964), Mûhammâd Taymîr (1892-1927) and his brother Mahmûd (born in 1894)—are all of Kurdish origin. The following historians who write in Persian, such as Mûhammâd Mardûkîhî Kurdistânî, Rashîd Yasîmî and İhsân Nûrî, or those who write in Turkish, such as M. N. Dersîmî and A. Yamilîkî, are all Kurds. If the old writers knew and composed in all the great Islamic languages, Arabic, Persian and Turkish, rather than their mother tongue Kurdish, the young authors of today use the European languages, English, French, German and even Russian, especially in Armenia, where they further add Armenian. Indeed, the Kurds have been at all times polyglots as they have been polygraphs, the same authors exercising their talents as much in poetry as in history, in the physical and human sciences and in journalism.

In 1860, A. Jaba, in his *Recueil de notices et de vécus kurdes*, 3-11, gave a brief notice on eight poets, who used the Kurmanji dialect, and almost all originating from Hakkîr. Less than a century later, 'Alî' al-Dîn Sîdîdî published in Baghdad a *History of Kurdish literature* (1953), a large volume of 634 pages in which, after an introduction on Kurdistan and the Kurds (3-66), he recounted the stages and forms of Kurdish literature (69-146), then gave substantial notices on twenty-four poets (147-334), followed by a rather dry list of 212 other authors (335-58). Even so, he confines himself to the no longer living poets of Çîrâk and Iren. Since then, there have been two more recent works of Ma'rûf Xîzmedî, *Essay on the history of contemporary Kurdish literature* [in Russian, 1967, 232 pp.] and of Çîz el Dîn Muşîfî Rasûl, *Realism in Kurdish literature* [in Arabic, 1968, 236 pp.], not to mention other studies which show the progress of Kurdology since Jaba's time and felicitously complete our information on this oriental literature still so little known in the West.

I. Origins and the classical period.

Jaba's informant gave the 15th century as the period in which the first poets flourished: Eîl Herîrî (1245-95), Şêx Ehmed Nîgânî, better-known under the name of Melayê Cîzîrî (1297-81) and Melîs Ehmed of Batî (1214-95), who were therefore contemporaries. Mîr Nîhemêd of Mukîs, nicknamed Feqîyê Teyrana, was

supposed to be even earlier than them (1307-75). All these dates are to be corrected and placed later. In fact, D. N. MacKenzie in his article *Melayê Cizîrî and Fagî Teyran*, in *Yad-nûma-yi Irân-yi Minorsky*, Tehran 1969, showed pertinently, thanks to the method of the *abjad*, that Melayê Cizîrî lived between 1570 and 1640 and his disciple, Feqiyê Teyran, between 1590 and 1660. The most famous is Melayê Cizîrî, later than Hâfîz (d. 791/1389 or 792/1390) and Dîwânî (817-98/1414-91), whose *Dîwan* of more than 2,000 verses has remained very popular among the *shaykh* and *nuflah*, much more than among the masses. It has always been read and commented on in the Kur'an schools of Kurdistan, but its text is difficult. His ideas are those of Persian Sûfism. His *Dîwan* was published by M. Hartmann, *Das kurdische Dîwan des Schéik Ahmed*, Berlin 1904, in photocopy; by Mohammed Şellî Anwâr Hesenîyî, Istanbul 1340/1922; Qodrî Cemîl Paşa, *Dîwana Melayê*, in Latin characters, in *Flower*, Nos. 35-57 (1941-3), incomplete text; and above all, the fine edition of Şayyîkî Ahmed b. al-Mella Muhammad al-Buhîlî al-Zîngîlî, of *ʿAhd al-ghawharî fi sharh Dirân al-Shayyîkî al-Dîrî*, 2 vols., 943 pp., Kamîghîlî, 1377/1958. Under the vocalised Kurdish text, at a lower level, are given, every two verses, an Arabic word-for-word translation, a more elegant total translation and finally a mystical commentary. Melayê Batî is especially known for his *Menzûb*, published by von Le Coq, *Kurdische Texte*, Berlin 1903. Feqiyê Teyran, who composed an elegy on the death of his master Cizîrî, is the author of numerous works, in particular of the *History of Şayyîkî Sar'ân*, published and translated into Russian by M. B. Rudenko, Moscow 1965, and in Persian by Q. F. Qazî, Tabriz 1967.

The succeeding generation of poets cited by Jaba is dominated by Ehmêdê Xanî (1650-1706), who settled at Bayazîd. He is the author of the famous Kurdish national epic, *Memûrî*. In this work, which has been frequently re-published, the poet adapted the popular epic *Mamê Alan*, publ. by R. Lescot, Beirut 1942, and by N. Zaza, Damascus 1957, which he recomposed according to classical literary rules, and also Islamising it more. This poem of 2,655 couplets is the real breviary of Kurdish nationalism. If the text of the popular epic *Mamê Alan* has multiple variants which have been translated into German, French, Russian, Romanian, English, Armenian and Arabic, the classical poem *Memûrî* has also had numerous editions: Istanbul 1338/1920, Aleppo 1947, Hewlêr (Libîlî) 1954; translated into Mukri by Hejar, Baghdâd 1960; with Russian translation by M. B. Rudenko, Moscow 1962; with Turkish translation by M. E. Bozarslan, Istanbul 1968. Many authors often confuse these two epics. Apart from numerous pieces of verse written in Turkish, Arabic and Persian, Ehmêdê Xanî is also the author of a rhymed Arabo-Kurdish vocabulary *Nûbûkar* 'First fruits' edited by Yûsûf Dayî' al-Dîn, al-Hadîyya al-ʿIlmiyya *fi T-fuḡḡa al-Kurdîyya*, Istanbul 1310/1892, 279-97, and also in facsimile by von Le Coq, *Kurdische Texte*, I, 2-47. His disciple and successor in his school of Bayazîd, Ismâîlî Bayazîdî (1634-1709), also left behind many Kurdish poems and a Kurmanji-Arabo-Persian glossary, *Gulzar* 'The rose garden'.

In the 18th century, mention should be made of Şerîf Xan (1681-1748), of Cûlanerg, of the family of the *amirs* of Hakkârî, author of numerous verses in Kurmanji and Persian, and Mûrad Xan of Bayazîd (1736-78), author of numerous lyrical poems.

In the same period, but at the court of the wâlis

of Ardalan or the sultans of Hewraman, appeared a whole pleiade of poets whose lyrical or religious works are in the Gêrânî dialect. One may cite Ehmêdê Textî (ca. 1640) and Şêx Mustefa Besarandî (1641-1702), whom Minorsky believes to be more recent (d. 1760). In this case, he would be contemporary with a whole group of poets, with Xânay Qubâdî (1700-50), author of a *Salawât-nûma*, and with Maḥrûnî (ca. 1783).

It is impossible to cite all the poets who lived in the 19th century and whose works have been printed between the two World Wars. Their names and the list of their works will be found cited in the literature of Xîznedar (1818-20) and Resûl (1828-31). On the poets in Gêrânî, cf. Minorsky's article, *The Gêrânî*. Some have been studied at greater length by Şîḡdî in his *History of Kurdish literature*, e.g. (247-76), Mewlewî (1806-82). It will be noted that the dates advanced by the different authors do not always coincide, and the taste of the Kurdish poets for choosing a *taḡallûs* or pseudonym will also be remarked.

Among the poets of the 19th century whose formation was purely religious, one may mention above all Nalî (1797-1855), who travelled extensively, wrote verses in Kurdish, Persian and Arabic, and whose Kurdish *Dîwan* was published in Baghdâd in 1931 and in Fribûl in 1962. Salim (1800-66), and Kurdî (1803-49) (ed. Hewlêr 1981), whose lyricism blossoms into patriotism; the Nakshbandî Mehwlî (1830-1909) expounds Sûfî theories (ed. Sulaymânî 1922), likewise, too, Mirza Rehmî Wefâ'î (1836-92) (ed. Hewlêr, 1951-61, 2 vols.). The greatest poets of the end of the century are Haclî Qadrî Koyî (1815-92), whose patriotic poems still arouse enthusiasm in many young people (ed. Hewlêr 1953, Baghdâd 1960); Şêx Rîza Talebanî (1842-1910), agnostic and satirist, very popular still today and who composed verses in Kurdish, Persian and Turkish (ed. Baghdâd 1935, 1946; cf. C. J. Edmunds, *A Kurdish lampoonist: Şayyîkî Rîza Talebanî*, in *JRCAS*, xxi [Jan. 1935]); Salih Herîqî (1851-1907), writing in traditional forms and on Sûfî themes (ed. Baghdâd 1938); Edeh, Evdelaḥ Beg Mîshabî al-Dawân (1862-1947, *Dîwan* ed. H. H. Mukriani, Rawlîndîs 1936, ed. Gêv Mukriani, Hewlêr 1969, and unpublished poems ed. M. Xîznedar, Baghdâd 1970), a delicate and romantic poet.

Let us also mention some women who have played a role in literature. Nalî Şerîf Xanîm of Ardalan (1800-47), Sîza Xanîm of Diyarbakîr (1814-65) and Mîrshaban of Berwârî (1856-1905).

2. The modern age.

The end of the First World War gave Kurdish literature an impetus which still continues, thanks to the numerous newspapers and journals which have allowed young talents to publish their poems and express their national and social ideas (see section 3, below).

It is extremely difficult to make a choice among the poets of this revival which extends from 1920 to our own days.

In the intellectual radiance of Sulaymânî, the real capital in Êrak of Kurdistan, let us cite before all Pîremêrd 'The old man' (1863-1950), pseudonym of Harî Tewfîq, an original spirit, indefatigable traveller, journalist, who devoted the last years of his life to making known to the young Kurds, who adored him, the beauties of their land, their language, their history and their literature. The tortured Bâkes, Faîq Abdallah (1905-48), did not cease to encourage the youth and to exhort them to work and study and to exalt in them love of their homeland and of goodness. Zîwer,

Abdallah Mihemed (1875-1948), is full of lyricism and sensibility in singing of nature and the national soil.

Gora, Abdallah Suleyman (1904-63), one of the greatest contemporary Kurdish poets, has abandoned stereotyped forms and classical metre, for he is the partisan and practitioner of free verse, as he has been of liberty of ideas and of life; a poet with advanced ideas, who is not lacking in lyricism to criticise social abuses. Qand', Mihemed Sêx Abdul Kerim (born in 1900), published from 1951 to 1955 numerous small books which each evoke an aspect of the Kurdistan which he celebrates with love. Let us further mention among the Kurdish poets of Iraq, Ehmed Muxtar Caf (1897-1935; ed. Sulaymânî, 1960); Hamdi (1878-1936, ed. Baghdâd, 1958) and the younger Abduh Wahid Nûrî (1903-44), Dildar (1918-48, Dîran, ed. Hewler 1962) and Dîlîzar, born in 1920, who edited in 1957 the *Quatrains* of Bâbâ Tâhir, the 5th/11th century writer, whom some Kurds claim as their own.

In Iran, at the time of the Republic of Mahâbâd, two young patriotic poets came to the front: M. Hêmin and especially 'Abd al-Rahman Hajar (born in 1920), who was the official poet and who published thousands of verses to extol love of the homeland and liberty, such as *Alekh* (Tabriz 1945); in 1958, he published a collection of verse narratives and the comedy of the Dog and the Noon, *Beitî serime û laseyî zar û mangesew*; he presented a summary of his autobiography (142-85) and several poems (185-223), in the *Kurdîkî dîalektî Mukri* of K. R. Ayyubî and I. A. Smirnova, Leningrad 1968, and published a translation of the *Quatrains* of Khayyâm (Beirut 1968).

In Kurmançî, one may note Kanişan A. Bedir Xan, writer of romantic free verse, and above all Cegerxwîn, Sêxanê Hesen (born in 1903), author of two collections: *Dîwanê Cegerxwîn* (Damascus 1945) and *Serwa ûandî* "The revolt of liberty" (Damascus 1954); an extremely vibrant and patriotic poet, preaching the instruction of youth and the union of all the Kurds, and going beyond pure nationalist aim to hope for radical social reforms; his many verses, earned in their workmanship, often preserve a classical form, but also he knows how to use more modern techniques. His rhymes are very rich. He is well-known and loved by the Kurds of Syria and Turkey (cf. Ordixanê Callî, *Poetia Cegerxwînî bajerawîn*, ["Civic poetry of Cegerxwîn"], Erivan 1966).

But the great novelty is the vitality of Kurdish letters in Soviet Armenia, including Kurmançî. Those who were the pioneers in this field were mostly from the old Yaddîs, illiterate by definition, immigrants from Turkey, who were to pick up from their new social situation. Without the least Islamic culture and without any contact with the educated élite of the rest of the Kurdish world, their works are often ideologically oriented, but of a much more natural workmanship. They ignore classical prosody and their versification gains from simplicity. Lyricism is far from absent. They sing of love of the family and the beauties of nature, such as Casimê Cellî (born in 1908) and especially Mikalîş Resîd (born in 1925), who is rich in sensibility. Some of their strongly committed poems have social inspirations. Woman must be liberated, says Etarê Sero (born in 1906) in numerous *quatrains*. Usivê Beko (born in 1909) criticises feudal exploitation; Qaxacê Murad (born in 1914), Wexîdê Nadîr (1911-47) and Emînê Evdal (1906-54) are pleased to recall the heroic times of the war of liberation. Let us further cite Hacıyê Cindî (born in 1908) and Sementê Snyabend (born in 1908), hero of the Soviet Union, who clothed in a new form the fine

popular lyric epic *Sîyabend û Xêd*, 1959. The teacher Karîdê Çaqantî, a younger man, has published in particular animal fables which are not lacking in freshness. The paper *Riya lase* of Erivan and various anthologies, not to mention numerous small booklets, make known these Kurdish poets of Soviet Armenia, all nourished by their rich folklore.

In fact, it is only since 1920 that prose has made its appearance in Kurdish letters. In order to enlarge the intellectual horizon and to enrich the vocabulary by allowing its progress and modernisation, the Kurdish men of letters have translated, at least in the shape of fragments, the works of foreign authors. In Syria and Lebanon they have translated from Preneb; in Iraq, from English and Arabic; in Iran, from Persian; in Soviet Armenia, from Russian and especially from Armenian. There have also been placed at the disposal of the potential Kurdish reader out of the plays of Shakespeare, *The tempest*, by Jamal Nebex (Baghdâd 1957); of the stories of Voltaire, *Zadig*, by Mohammad Eîl Kurdî (Baghdâd 1954); of the pages of Victor Hugo, *Gernache* and Daudet, *Les Fleurs*, translated by Zaza, or of Anatole France, J. Nebex has also translated *The sloak* of Gogol (Baghdâd 1958). But it is especially the Soviet Kurds who are the translators of Russian authors, Pushkin, Gorki, Tolstoy or Lermontov, not forgetting Lenin and Stalin, or Armenians, Abovian, Toumanian, Isahakian, etc. The principal names of the translators to be encountered are: C. Cellî, H. Cindî, E. Evdal, Q. Murad, N. Esed and T. Murad. Some even write several of their works directly in Armenian, such as C. Cellî, E. Evdal, Nadoyê Xido Melançukov and many others.

In Iraq, many articles of scientific popularisation have been translated, e.g. Dr. Hâşim Dîkirmaci, and Naci Ebas have specialised in the translation of accounts of early British travellers in Kurdistan.

In the purely literary domain, the novel is the genre which seemed the best adapted to the mentality and art of the Kurds. In the review *Hasar*, one may read the stories of Nureddin Zaza (born in 1919), and the fables in prose of Mîstefa Ehmed Botî. In these stories, Qadîr Can (born in 1918) is concerned with religious fatalism and the feudal ascendancy. But one should note very especially Osman Sebrî (born in 1909) who, whilst a poet when in the mood, is particularly a born storyteller, with a lively, simple and direct style.

In Iraq, where the intelligentsia is more numerous, history is a privileged field, with the second Husayn Hurnî Mukriani (1886-1947) as the author of varied studies: *The history of the Kurdish emirates, 1299-31*, *Famous Kurds, 1931*, *The Soran emirs, 1935*, *The Kurds and Nadir Shah, 1934*, *The Zand Kurds, 1934*, *Mukriani Kurdistan or Atropatene, 1938*, etc. General Mihemed Emîn Zekî (1880-1948), published a *Summary of the history of the Kurds and Kurdistan, 1932*, a *History of the Kurdish states and emirates in the Islamic period, 1948*, a *History of Sulaymanî and its district, 1939*, and two volumes of *Kurdish celebrities and Kurdistan, 1945-7*. All these works have been translated into Arabic. Ketîcê Hîndî (d. 1961), began the publication of his *Memoirs*, in fascicules of a hundred pages, beginning in 1956 and entitled them *A recollection, Southern Kurdistan, the revolutions of Şayyîş Mahmud* (a work still uncompleted), Tewfîq Wabîl, pioneer of Kurdish grammar, 1929, 1955, is also a historian who has studied the Yaddîs, 1962, and the origins of the Kurds and their language, 1965.

Literary criticism began with Yûnis Rûf and Dildar, Kamuran and especially Marûf Xizandaz, who

in review articles and prefaces of anthologies presented many ancient and modern poets. Xiznedar, apart from his *History of Kurdish literature*, also composed *Keç û gajeyet le şîrê kurdî da* ("Rhyme and rhythm in Kurdish poetry", Baghdad 1962). Cemil Bendi Rojbeyan, Arabic translator of the *Şîrîf nîma* in 1957, is especially interested in the poets and writers of the Zengene, Reihûr and neighbouring tribes. 'Alî Ş al-Dîn Sîglîdî published not only his *History of Kurdish literature* (in 1952), *Researches on Kurdish literature* (1968) and also the *Value of knowledge* (1970), but also five volumes of *Necklace of pearls* (1957-72), a collection of literary narratives, stories and anecdotes, in which philosophy, beliefs and history are mixed, and his *Journey in Kurdistan* (1958). Let us finally cite 'Izz al-Dîn Rasûl (born in 1935), for his works on literature and folklore (1966).

In 'Irâk also, numerous authors, writers, journalists and militants have published, in verse and prose, collections and articles in which they have pleaded the most urgent social causes of the disinherited, such as Şekir Fetah in *The companion of the children* (1948), *The Kurdish woman* (1958), *The new life* (1960); Ibrahim Eluned (born in 1912), in *Misery* (1959) and many articles in newspapers; Miharem Mihamed Emîn (born in 1921), in *Uncle Omar* (1954), *The tranquil lake* (1957) and *The path of liberty* (1954).

In Soviet Armenia, one also finds young literary critics who give in *Ris* a free their often severe appreciations of poetic works which appear. Among them are Mikailê Refîd, and especially Emîrîkê Serdar, and Ordizânê Celîl is an excellent critic. His books on Cagaxwîn, Dîndîm, on proverbs and his articles on folklores are the proof of that, and he has also published *Poems* (1954) and *Tellî Hamza*, a kind of epic (1963). But the prose writers there are less numerous than the poets. They do not enter into the domain of the dream, nor even into history properly speaking, but most of their writings set forth the wretched life that they led in the past in the time of the Turks and the revival of their present social situation. At their head is their veteran Ereş Şemo (born in 1898), who is also the most fecund. His latest compilation, *Berewek* (Erivan 1969), takes up the text of *Berbang "Dawn"* (1958), a rehearsal, revised and corrected, of *Şîrîfê kurdî* "The Kurdish shepherd" (1935), retranslated and republished in Beirut (1946), in which he narrated with much freshness and simplicity the life of his childhood as a small herdsman, the picturesque events of the life of the tribes and the implantation of communism among them; there are also his *Jîna bextewar* "The happy life" (1959) and the unpublished *Hopo*, which is its complement, in which is described the existence of the Kurds under the Soviet régime. Şemo has also published *Dîndîm* (1966), which is the romanticised history of this famous epic. He is furthermore the author of numerous articles in many Russian language newspapers on all the social and historical subjects which interest the Kurds. Elî Evdal-Rehman published in this same vein of social preoccupations, *Xatî Xanîm* "Lady Xatî" (1959) and *Gundê Mîrzanî* "The village of barons" (1968), and Rehim Gazî, *Hîyyarbin* "Awakening" (1960), which speaks of the resistance of the Kurds of Iran against their Turkish or Iranian oppressors.

Thus one sees the true novel, as it is understood in the West, does not yet really exist in Kurdish literature. It is rather the new genres which Kurdish writers prefer, even in 'Irâk. The same remark may be made with reference to the theatre. In Armenia,

from the beginnings, there were attempts with W. Nadîrî, *Rewa jînd*, "The abduction" (1935) and A. Mîrazî, *Zemane çuyî* "Time past" (1943), and recently Ismaîlê Duko, *Zemane di dîl* "Marriage without love" (1964). In all these cases, the theme is the struggle against the customs of the past age. Similarly in Iraq with Burkan, *Kîg û qubehane* "The girl and the school" (1956), and Jîrî, *Afret û nîwîştî* "The woman and the talisman" (1956), plays performed in the schools. There are also critical themes in the comic scenes of Emîn Mîrse Kerim. In 1953-4, Goran published in his newspaper *Jîn* several verse plays, including *The poor man's dream*, *The voice of death*, etc., which aim at waging a vendetta against the faults of the present society. But the *Four martyrs* (1959) is a patriotic play of Xatîd Delaîr. Cemal Abdol Qadîr Baban published *Nêrûk* (1960), a play in five acts in verse, and Zaki Eluned Henarî, *The fate of the oppressor Duhak* (1960). Let us mention especially, because it was published in Istanbul (1965), *Bîrîna reş* "The black wound" of Musa Anter (born in 1920), in which the author calls attention to the misery and ignorance of the Kurdish peasant in Turkey. On Kurdish theatre, cf. Azad Kerdî, *The Kurdish stage*, in *The Kurdish Journal*, 113-4 (1965), 83-5.

Celîl, *Efrandîndî wîskî-kurdî hîrmîndî Ermenîstandîyê sovîetî* ("Works of Kurdish writers of Soviet Armenia"), Erivan 1961.

C. The Kurdish press.

The influence of the press is basic in the national and cultural life of a people. With regard to this, the development and transformations of the Kurdish press are characteristic of the political evolution of the Kurds. Of the 119 recorded newspapers and reviews, whose periodicity is all relative, some have only had ephemeral life. The publishing centres have been moved from Istanbul to the different towns of 'Irâk, Baghdad, Sulaymânî, Hewlêr and Kirkûk; of Iran, Telîran, Mahabâd and Tabrîz; or even to Damascus and Beirut. Often these newspapers are bilingual. Most of the journals consist of a precious

and inexhaustible mine of information on language, folklore and the customs of the Kurdish land, and also on its history and geography. Furthermore to be found in these are numerous texts of poets, ancient or modern, as well as fine ideas of literary criticism. Young talents are also exercised there.

The first Kurdish newspaper, *Kurdistan*, was founded in Cairo in 1898 by Midhet Paşa Bedir Xan and his brother 'Abd al-Rahmān and moved from Cairo to Geneva and Folkestone (31 nos.); republished in Baghdad, 1971, by Kamāl Fu'ād. In Istanbul, there was the monthly *Roja Kurd* "Kurdish day", which became "The Kurdish sun", in 1912 (3 nos.). In 1916, Sureya Bedir Xan published in Turkish the weekly *Jîn* "Life" which proclaimed "Kurdistan for the Kurds". He also published there in 1917-18 the weekly *Kurdistan* (37 nos.).

Between the two wars (1920-45), the Kurdish press really began to flourish and develop. There appeared in Sulaymānî in 1920-2, *Pliskerton* "Progress" (118 nos.); in 1922-3, *Roj-i Kurdistan* "The Sun of Kurdistan" (15 nos.), re-published in Baghdad in 1973 by Djamāl Khaznadār; the weeklies *Bangl Kurdistan* "The call of Kurdistan" 1922 (14 nos.) in 1923, *Bangl haqq* "The call of truth", the official newspaper of Şêx Mehmed (3 nos.) and *Unîfê İstîqlâl* "Hope of independence", edited by Refîq Hîmî (15 nos.). In 1925-6, *Diyanê Kurdistan* "The gift of Kurdistan" of Salih Zeki Sahbqaran, in Kurdish, Arabic and Turkish, had 16 nos. In 1924-6, the weekly *Jiyane* "The resurrection" an official newspaper (56 nos.) which took the name *Jiyax* "Life" 1926-38 (556 nos.), and that of *Jin*, 1939-63, under the direction of Pîremêrd until his death (1950), exceeded a thousand nos. In 1938 there appeared the scientific review *Zanîf* "Science" of Salih Qutân, who published in it historical and literary articles, but which only had a few issues, while the weekly *Zêban* "Language" 1937-9, published by the municipality, had 70 nos. In Rawanduz, Musayn Huzmî Nûkrîmî published 1926-32 *Zarî kurmandî* "The Kurdish language" which had 30 nos. Baghdad was to become an important Kurdish cultural centre through the publication of the very numerous monthlies, *Gelawî* "Serius", 1939-49, directed by Ibrahim Elmed and *Dengê Gêlî-i Tass* "The voice of the New World" edited by the British Embassy and edited by Tawfîq Wehbl. Outside 'Irâk, it is important to mention the major reviews, in Latin characters, *Hevser* "The alarm cry", 1932-3 and 1941-3, 57 nos., and its illustrated supplement, *Renawî* "The lamp" 1941-3, 28 nos., both published in Damascus by Emir Celadet Bedir Xan, and the weekly *Roja nê* "The new day" 1943-6, 73 nos. and its supplement *Sêr* "The star" which only had 3 issues, published by Emir Kamiran Bedir Xan in Beirut. These journals provide an enormous mass of folkloric documents. Let us mention, in Erivan, the bi-weekly newspaper *Riys taz* "The new view", the organ of the Kurdish section of the Communist Party of Armenia, which appeared, in Latin characters from 1930 to 1938 (612 nos.), then in Cyrillic characters from 1953. It has now exceeded its 2,500th number. It is along with *Jîn* of Sulaymānî the best example of longevity of the Kurdish press.

The equivocal political situation in Iran between the years 1941 and 1946, especially after the proclamation of the independent Kurdish Republic (1945-6), brought about the blossoming of a whole Kurdish press in Mahābād: *Kurdistan*, 1945-6, the official newspaper (113 nos.) and a literary review of the same name (16 nos.) *Haravê nîştîman*, *Awar*, *Gir â*

gali mindalani kurd, *Helale* "The red poppy" only survived a spring. For his part, in Lîhîdîjîn, Şêx Latîf, son of Şêx Mehmed, published the journal *Nîştîman* "Homeland" which had 3 issues.

After the War and until the proclamation of the Republic in 'Irâk (14 July 1958), the journals normally appeared in both Kurdish and Arabic. In 1948-9, in Baghdad, Eladîn Sêcadî published *Nîsar* "The rock" (22 nos.), and in 1957-63, Haffa Mistela Qazî published there *Hêva* "Hope" (36 nos.). In Erbil, from 1954 to 1960, Gew Mukrtani published the bi-monthly *Hevser* "The sun", which had 188 nos. Under the Republic, in Kirkûk, 1959-62, Ray gel "Popular opinion" (34 nos.); 1959-61, Azadî "Liberty", organ of the 'Irâkî C.P. (56 nos.). In Sulaymānî, the Teachers' Union published the monthly *Bûlêl* "The flame", 1959-60, with 10 nos. In 1960, appeared *Roj-i nûve* "The new sun" with 18 nos. and the communist political and literary daily, *Bîrîns* "Belief", from July 1960 to January 1963 brought out 95 nos., while Baghdad, the bilingual daily *Xerab* "Effort", organ of the D.P.K. brought out 462 nos. in 1959-61. The Ministry of Agriculture published from 1959 to 1956, in Arabic and Kurdish, *Çarçerê kurdî* *heft â hel* (22 nos.), and the Ministry of Orientation *Îraq nûve* (24 nos.). In the course of the year 1960, the lawyer Omer Celal Huvazî published 69 nos. of the democratic political daily *Dengê kurd*. One cannot pass over in silence *Kurdistan*, a weekly, published in Tehran under the auspices of the Iranian Government from May 1959 to May 1963 with 203 nos., political, scientific, literary and social; this very interesting weekly was only circulated abroad.

The internecine Kurd- 'Irâkî war from 9 September 1961 to 13 March 1970, diminished the activity of the Kurdish press. Nevertheless, in Erbil the municipality published (1962-3) its newspaper *Hevser*, with 76 nos. In Baghdad there appeared in 1964 the first Kurdish issue of the seasonal journal *Tutis*, published by the tobacco administration, and, in 1967, *Bîrîyêrî* "Fraternity", a political newspaper of Salih Yusuf. It is this period which saw the appearance in Turkey, in Turkish and in Kurdish, several ephemeral reviews: *Dîle dî Fîrat* (1962-3) in Istanbul with 8 nos.; *Deng*, in 1963 and in 1966 *Dengê kurd* "The new voice" which only had 4 nos. before it was immediately stopped and the directors prosecuted.

The end of hostilities in Kurdistan saw the birth, from 1970 to 1973, of 29 periodicals, of which 2 were in Kirkûk, 6 in Hewlêr, only 4 in Sulaymānî, but 16 in Baghdad, which seems to indicate that the 'Irâkî capital has now become the intellectual and cultural centre of the Kurds in 'Irâk. In Sulaymānî, there is *Bîrîyêrî* (1971-2, 18 nos.); *Deng-i mamosta* (7 nos.); *Jîn*, since 1972, presented as the continuation of the newspaper founded by Pîremêrd; and since 1972, the monthly *Êstêr* "The star", intended for children. In Baghdad, there is *Bîrîyêrî*, supplement of the daily *Ta'âkkî* (1970-2, 18 nos.). Since 1976, the Philatelist Club has published *Gêlî-i pîl* "The world of stamps", in Arabic, Kurdish and English. The General confederation of trade unions has as its official organ *Hîşyarî kurdî* *haravê* "The awakening of the workers" which, since its no. 189 of December 1972, has a Kurdish section. One should mention as an annual publication *The Journal of the Kurdish Academy*, *Îs* (1973), a great volume of 800 pages whose editor-in-chief is İhsân Şîhrîzâd, Minister of Municipalities, and of which one section is in Arabic. In Iran, one should note the name *Rîga-i yakîf* "The path of unity", a monthly publication of the Iranian Govern-

ment, whose no. 2 came out in April 1971 and which continues to appear regularly (in 1978).

The different Kurdish groups abroad publish ephemeral bulletins, at times simply typed. In 1949, there appeared in French *Dengi Kurdistan* "La Voix du Kurdistan", organ of the D.P.K. in Europe. Since 1953, the Association of Kurdish Students in Europe has published in English each year *Kurdistan*, in Kurdish and in Latin characters, some annual issues of *Hilîya wêlî* "Hope of the homeland" in 1963-5, and similarly *Çiya* "The mountain" in 1965-7. The Commission for the Advancement of Kurdistan (CAK) of the United Kingdom published in English a single issue of *Kurdica*. In English also there exists one of the best publications of this genre, *The Kurdish Journal*, from December 1963 to September 1969, published by the Association of the Kurdish Students in U.S.A. Finally, in Kurdish and Turkish, *Ronahî*, "The lamp", organ of the Kurds of Turkey in Europe, since August 1971; this is now (1978) at its 8th issue.

Bibliography: The bibliographies of Edmonds and MacKenzie; R. Lesoot, *La presse kurde*, in *Roya* no. 1 (May 1943); Bishop M. L. Ryan, *Bibliography of the Kurdish press*, in *JRAS* (1944), 323-24; Cecadi, *Mejor*, ..., 351-7; Nerevan, *Notes sur la presse kurde d'Irak. Publication d'un hebdomadaire kurde en Iran*, in *Orient*, no. 10 (1959/60), 359-68; I. C. Vany, *Le Kurdistan irakien*, ..., 394-5; and especially, Jamal Kharradar, *Kurdish journalism guide*, in Kurdish, Arabic and English, Ministry of Culture, Baghdad 1973, published on the occasion of an exhibition of the Kurdish press for the 75th anniversary of the first Kurdish newspaper. (TR. BURS)

AL-KURDI, MUHAMMAD AMIN (d. 1332/1914), one of the leading figures in the recent history of the Nakshbandi order, and author of several influential works.

Born in Irbil, he made early acquaintance with Sûfism, for his father, Fath Allâh-zâde, was a Kâdiri shaykh. His own initiation was at the hands of a Nakshbandi shaykh of the city, Shaykh 'Umar, who was separated by only one link in the initiational chain from the great renewer of the Nakshbandiyya in the western Islamic lands, Mawlânâ Khâlid Baghdâdî (d. 1242/1826). After several years spent in the company of Shaykh 'Umar, Muhammad Amin received a licence himself to initiate disciples into the Nakshbandi path, and he left his homeland, never to return. He retained, however, a certain mode of reverential awareness of Shaykh 'Umar's spiritual presence through the distinctive Nakshbandi technique known as *sâbqa*. He spent many years in Mecca and Medina, enjoying numerous mystical and visionary experiences; he compared his state while in Mecca to that of Ibn 'Arabi when he began the composition of *al-Futûhât al-Makkiyya*. Inspired by a desire to visit the tombs of the *Alî al-Bayt* in Cairo, he left the Hijâz for Egypt, which was to be his residence for the rest of his life, with the exception of a return visit to the Holy Cities in 1313/1905. He lived first in the *rawdâ* of the Kurdish students at the Azhar, later moving to the village of Ambâba outside of Cairo, and finally to Bûlâk. Initially he concealed his Nakshbandi affiliations and Sûfi interests, concentrating on the study of *hadîth*, *tafsîr* and *fiqh* at the Azhar. Later he began to proclaim the path, and to accept each year a small number of disciples. Upon an indication from Shaykh 'Umar contained in a dream, he then decided to accept all who came to him, and indeed vigorously to propagate the Nakshbandi order throughout Egypt, travelling widely to numer-

ous towns and villages. He encountered opposition from the followers of other orders and from adherents of the Salafi movement, but soon came to gather a large following. In his instruction, he placed emphasis on two particular elements of Nakshbandi practice; silent *dhikr* and the recitation of a litany known as the *dhawr-i shâhidân*. He died in Bûlâk in 1332/1914 and was buried in the Kurdîa cemetery of Cairo.

He left behind him numerous *dhawrs*, the most prominent of whom was Shaykh Muḥammad Yûsuf al-Sakkâ; many contemporary Nakshbandis of Egypt are descended from him. The best known of his numerous writings is *Tamîr al-kulûb fi mawâ'id al-salâm al-ghayb*, a compendium of religious knowledge of which the third part is devoted to Sûfism. The eighth edition of this book was printed in Cairo in 1368/1949. He also wrote a biographical dictionary of Nakshbandi saints (*al-Mawâ'id al-sarîyah fi manâ'il al-Nakshbandiyya*, published in Cairo in 1329/1911, as well as manuals of *Shâfi'* and *Mâlikî* *fiqh*.

Bibliography: A comprehensive account of Muhammad Amin's life is given in a 55-page preface by Shaykh Salâma 'Azîmî to *Tamîr al-kulûb* (8th ed., Cairo 1368/1949). Some mention is made of him by A. J. Arberry in his *Sufism*, London 1950, 129-32, where Muhammad Amin's description of Nakshbandi practices of *dhikr* is summarised. The same passage from *Tamîr al-kulûb* is also to be found in French translation as an appendix to Jean Gouliard's version of *La petite psalmodie*. (HAKIM ALGAR)

AL-KURDJ, GUARD, KURDISTÂN, the names in Islamic sources for the province of Georgia in western Caucasia. Georgia comprises four distinct regions: Mingrelia and Imereti in the north west; Samtskha in the south-west (adjoining the Black Sea coastal region of Lazetia [see 122], inhabited by a people closely related to the Georgians); Kartli in the north, with the capital Tiflis (q.v.); Georgian Tbilisi; and Kakheti in the east. Topographically, much of Georgia comprises mountains, hills and plateaux, with lowland only on the Black Sea coastal plain and in the valleys of the River Rioni and its tributaries, draining westwards into the Black Sea, and of the River Kura (Georgian Mtkvari, Islamic Kur [q.v.]) and its tributaries, draining eastwards into the Caspian.

The Georgian people (who refer to themselves as Kartvel-ebl and their homeland as Sa-kartvel-o, after a mythical, semi-divine ancestor Kartlos) are linked with the Svans of northern Mingrelia and the Mingrelo-Laz in the so-called "Ponto-Zagros" group of Caucasian peoples, although over the millennia their blood must have been much mingled with that of other peoples who have invaded or have passed through their country. Linguistically, the Georgian language forms with Svanetian and Mingrelo-Laz the southern or Ibero-Caucasian group of Caucasian languages; for details, see AL-KARZ, languages. It is written in an alphabet of considerable phonetic exactness, which is traditionally considered to be the creation of St. Mesrop, inventor of the Armenian alphabet, but which apparently had two forms originally; these must at all events have been derived in the first place from Aramaic-Pahlavi scripts (see D. Diringer, *The alphabet, a key to the history of mankind*, New York 1968, 252-4).

Early history. From earliest times, Georgia has been a meetingpoint for the cultures of East and West and a place where the products of European

and Asian commerce were exchanged. In Homeric times, the western Georgian coastal region, Imereti and Mingrelia, formed the famed Colchis, land of the Golden Fleece sought by Jason and the Argonauts, whilst the lands to the east, Kartli, Kakheti and Samtskhe, formed the Caucasian Iberia, with its capital at Mtskheta Mtskhet, on the River Kur just upstream from modern Tiflis. The campaigns of Pompey in the 1st century BC brought Georgia into the sphere of Roman political and cultural influence, and to classical geographers like Strabo we owe a description of Iberia, and the fourfold class division of its society, a division not dissimilar from that of ancient Iran. The Iberians did indeed have close cultural links with the Parthians, and we find Iberian kings and nobles with Iranian names like Parnavaz and Asparukh, together with a certain spread of the Zoroastrian religion within Iberia, a process only arrested by the adoption of Christianity within Georgia ca. 330 AD, during the reign of the Emperor Constantine the Great and through the missionary efforts of a Cappadocian slave woman, St. Nino. The consequences for the future history of Georgia and its people of this conversion to Christianity were incalculable. Georgia, and Armenia [see ARMENIA] to the south of it, henceforth became bastions of the new faith against the pagan regions of the eastern Caucasus and against the Sāsānids of Persia, the enemies of Byzantium. At first dependent on the Patriarchate of Antioch, the Georgian Church, like that of the Armenians, espoused Monophysitism and rejected the formulae of the Council of Chalcedon, and at the Council of Dvin of the Armenian and Georgian Churches in 506, the Georgians seceded from Orthodoxy and set up their own national church of St. George, with its Catholicos-Patriarch resident at Tiflis.

The period of Byzantine-Persian rivalry. The old capital of Georgia Mtskheta (Ptolemy, *Geograph.*, 5.10 Μεσσητήνα = Μεσσητήνα) was sometimes called by the Arab geographers by a popular etymology Masūdī Dhi'l-Karmayn (Mas'ūdī, *Musūdī*, II, 36; cf. Marquart, *Streifzüge*, 186). According to the Georgian Chronicle, the Persian *eristav* ("ethnarch") sent against Varaz-bakur (379-93?), king of Georgia (of the Khosroid dynasty, descended from the Sāsānids), built Tiflis "between the Gates of the Caucasus" (i.e. between Darial and Darband) "to serve as a bulwark against Mtskheta" (Brosset, *Histoire de la Georgie*, I, 140).

During the wars of king Wakhtang Gurgasal (446-99?) with the Persians, the fortress (kala) and the village (*sup'ali*) of Tiflis were destroyed. Wakhtang laid the foundations of a town at Tiflis and his son Daci (499-514) completed its walls (*op. cit.*, 180, 196-201).

After 523, the Persians, having suppressed the ruling dynasty of eastern Georgia, maintained a Persian *marzbān* in Tiflis, beside whom representatives of the Georgian nobility had a nominal share in the administration of the country (Brosset, I, 226; Marquart, *op. cit.*, 397, 431-2; Djavakhov, *Khist. Vostok*, I [1912], 130). The governor of Mtskheta was under the *marzbān*. Theophanes of Byzantium (6th century) is the first Byzantine author to mention ἡ Τίφλεις (Τιφλίς) μητρόπολις under the year 571 (Theophanes apud Photium, in *Migne, Patrologia graeca*, cii, 239; cf. Nurali, *Essai de chronologie byzantine*, St. Petersburg 1855, I, 156).

The wars with the Turks and the Byzantines having distracted the attention of the Persians from Iberia, the Georgians asked the Byzantine emperor to give

them a king and the Bagratid Guaram (573-600) was set up at Mtskheta. To this king tradition attributes the "restoration of the foundations of the church of St. Nino in Tiflis" (I, 222).

After the victory gained over the Byzantines by Khosrow Parviz (after 606), the son of Guaram, Stephanos I (who was content with the title of *eristav* = "ethnarch"), joined the Persians. Later, when in 624 Heraclius and his Turkish allies laid siege to Tiflis, Stephanos defended the town bravely. Heraclius appointed as *eristav* ("chief") Adamasos of the old Khosroid family and associated with him the *eristav* Djabghu (Theophanes: Διάβγυ; according to Marquart: Tsong Yabghu Khakan). The citadel (*kala*) was taken and Stephanos slain.

The Arab conquest. The Arabs confounded Armenia and Georgia (cf. Balādhuri, *Futūh*, 194; and Yāqūt, II, 58, where Djurzan is a *sub'ra* of the country of Armāniya). According to the Georgian chronicle (*K'art'lis Ikhlovela*), the Agarians invaded Samkhetla ("Armenia"), a rather ambiguous term, for "Samkhetla of Kartli" began to the south of the river Khram, about 20 miles south of Tiflis) in the reign of Stephanos II (639-63?), son of Adamasos, who lived in Tiflis. On the death of this king, his sons Mir and Artzil withdrew to Egris in Mingrelia. In the period of their joint reign (663-8) Georgia was visited by the ferocious Murwan Kru ("Marwān the Deaf") sent by the *Amir al-Mas'mūn* Eschim (= Hishim whose dates are actually 105-15/724-43). Such mistakes and anachronisms may be explained by the fact that at this period, the national life of Georgia had taken refuge far to the west in lands not easily accessible from Ćorokh (Mandjetia). The thread of events may, however, be pieced together from Arab and Armenian statements (see ARMENIA).

In reality, Arab expeditions penetrated into Transcaucasia in the reigns of the early caliphs. According to Tabari, I, 266, in 22/643 Surāka, having made peace with Shahr-Barāz (king of Bad al-Abwāb [q.v.]), sent Habib b. Maslama against Tiflis. To the same year Tabari, I, 267, puts the peace with the people of this town, but it was actually made in 23/645 in the reign of 'Uthmān (Ya'qūbī, *Historiae*, 194; Balādhuri, 198). When Habib b. Maslama had conquered Armenia, he turned his attention to Georgia. A Georgian ambassador (Nikē = Nicolas? Tby = Theophilus?) appeared before him to testify that the *haprik* of Djurzan and his people were well-disposed. Habib's answer (cf. the versions in Balādhuri, 201 and Tabari, I, 264; Yāqūt, I, 857, rather follows Balādhuri) was addressed simply to "the inhabitants of Tiflis, in [the *rustik* of] Mandjetia (now Manglis) in al-Djurzan (= Georgian) in the land of Ĥurmuz".

Habib guaranteed the people the exercise of their religion, but he sent to Tiflis the learned 'Abd al-Rahmān b. Dīaz' to expound the law of Islam, and indeed the people of the town were soon converted to Islam.

After reducing Tiflis, Habib extended his conquests or his treaties of peace over other regions inhabited by the Georgians and their neighbours (Balādhuri, 202-3; cf. the attempts to analyse them in Ghazarian, *Armenien unter der arabischen Herrschaft*, in *Zeitschr. f. armen. Philologie*, II (Marburg 1903), 249-255). Among these, the Šanāriya play a prominent part. Ptolemy, 5.8.13: Σαναρινοί; in Armenian: Šanarkh), a very warlike Christian people who lived in Kakheti and the high Alazan and who, according to the hypothesis of N. Y. Marr, were identical with the modern Tatars, whose language is related to that of the Celts (cf. *Isr. Akad. Nauk*, 2/12 [1916], 1379-1408).

From the time of Habib's expedition to the reign of al-Mutawakkil (332-47/847-61) the Djurzan (eastern Georgians) and the Abkhāz (s.v., here in the wide sense of "western Georgians of the valley of the Rion", i.e. of Imereti) paid tribute to the Arab military commander in Tiflis (Marāṣid, II, 65; Yāqūt, II, 583). From the time of Yazid II (101-5/710-4) we have a letter in which Ḥarrāb b. 'Abd Allāh confirmed to the Djurzan the guarantees given by Habib b. Maslama (Balādhurī, 202; there is a reference there also to the *rustāq* of Manḡja's, but several place-names are still unidentified).

As to the "Murwan Krn" of Armenian and Georgian tradition, two personages seem to have been confused in this figure (Marquart): Muhammad b. Marwān, of whom the Georgians seem to have heard the Armenians speak, and his son Marwān b. Muḥammad who in the reign of Hishām was fighting mainly in Daghestān, but whose expedition against the "Gate" of the Alān (s.v.) must have passed through the region of Tiflis. His headquarters were at Kirdī (?), 20 *farsakhs* from Tiflis and 40 *farsakhs* from Bardha'a (probably Kessala below Tāvūs, which satisfies the description; see below). A *dirham* is known of 'Abd al-Malik struck at Tiflis in 85/704.

The 'Abbasids. In 141/758 the Khazars (s.v.) under Ra's Ṭarḡhān invaded Armenia (Ya'qūbī, II, 446). Ṭabarī (III, 328), speaking of the same event under 147/764, says that during the invasion of Asṭūr Khān al-Kh'arāzmi (sic), many Muslims and *ghilmān* were made prisoners and the Turks entered Tiflis. Ya'qūbī immediately after 141/758 mentions a rising of the Šanāriya. The latter were defeated by 'Amir b. Ismā'il, who then returned to Tiflis and executed his prisoners there.

Another Khazar invasion took place in 183/799. Their king came as far as the bridge over the Kur and ravaged the country, but the taking of Tiflis is not mentioned by the Arab writers (Ya'qūbī, II, 518; Ṭabarī, III, 648) while the Georgian chronicle says that in the joint reign of the brothers Ioane and Djuansher (718-86?) the Khān's general Dūzan (in Armenian Dukt'an) took Tiflis and conquered Kartli.

Of the governors whom Ḥārūn al-Rašīd (170-93/786-809) sent to Armenia, the harshest was Khuzayma b. Khānān (Balādhurī, 210). The Georgians called him Č'č'ua-Azim. Ya'qūbī, II, 210, confirms the cruelty of his second governorship. The Djurdān (read Djurzan) and the Šanāriya rebelled. Khuzayma's general Sa'īd b. Haytham defeated them, drove them out of the country and then returned to Tiflis.

Under al-Naṣrūn (198-218/813-33) a certain Muhammad b. 'Atiāb established himself in Armenia. In 214/829 he conquered the land of the Djurzan and the Šanāriya joined him (Ya'qūbī, II, 540, 565-6). Khālid b. Yazid gave *awān* to Muhammad b. 'Atiāb and defeated his allies, the Šanāriya, but the disturbances in Armenia went on (Ya'qūt, II, 566; Balādhurī, 210-11). In 215-39/830-53, Ishāk b. Ismā'il carved himself out a principality in Georgia.

Ishāk b. Ismā'il. According to Mas'ūdī, *Murūṣṣ*, II, 65, he was of Kuraygh origin. His father Ismā'il was the son of Shu'ayb, a client of Marwān II (126-32/744-50); he had settled in Georgia in the time of the caliph al-Amin (193-8/809-13) and had had skirmishes with the governor Asad b. Yazid (Ya'qūbī, II, 527). The uncle of Ishāk, 'Alī b. Shu'ayb, mentioned in the Georgian chronicle, I, 260, 265, is said to have received Tiflis from Khālid, probably after Muhammad b. 'Atiāb. But already in the governorship of Hasan Balādhurī, the second successor of Khālid, we find the name of Ishāk. When the Byzantine troops

of Theophilos (849-42) reached Wanand (near Kars), they "were cut to pieces by Sahak, son of Ismael" (cf. Stephen Asotik, II, ch. 5, tr. Dulaucier, 271). As a result of such exploits, the caliph al-Wāṣṭik (227-32/842-7) recognised Ishāk as lord of Armenia, but that did not last long. Muḥammad, son and successor of Khālid, defeated Ishāk and drove out the Šanāriya. According to the Georgian chronicle, the Georgian princes (who had less fear of the central government so far away) supported Muḥammad against Ishāk and his allies, the people of Kakheti and the Šanāriya.

Finally, in the reign of al-Mutawakkil, the Turkish commander Bughā al-Kabir al-Šarābī (s.v.) was sent to Armenia. In Rabi' I 238 (August-September 852), he left Dabul for Tiflis. Bughā watched the operations from the high hills beside Sughdabul (the reference is to the heights of Maḡhatha to the north of Isant = Sughdabul).

Ishāk made a sortie, but Bughā's *naffiṭān* (throwers of Greek fire) set fire to the town. Ishāk's palace was burned. He and his son 'Amr were taken prisoners by the Turks and the Maḡhāriha. Ishāk was decapitated and 50,000 (?) men lost their lives in the destruction of the town by fire. The Maḡhāriha took the survivors prisoners and mutilated the dead. Ishāk's wife, daughter of the lord of Sarir (= the principality of the Avars in northern Daghestān), was at Sughdabul, which was defended by the Khurweyṭhiya (people of Sasun; cf. MAYYARZARĠI). Bughā granted them *awān* on condition that they laid down their arms and he continued his operations in the direction of Djurdān and Baylāḡān (Ṭabarī, III, 1114-16; cf. Thomas Artsruni, III, chs. 9-10, ed. Brosset, St Petersburg 1874, 140-50. A Georgian inscription on the church of Aṭeal gives the Islamic date 239 for the taking of Tiflis by Bughā; cf. Djuvakhov, *Khrist Veset*, I [1912], 264). The destruction of the Muslim principality of the former clients of the Umayyads, which was a focus around which local elements gathered, was an irreparable mistake for the caliphate. The Arab authors (Mas'ūdī, II, 67; Yāqūt, II, 58) date the decline of Arab power in the Caucasus from this. Bughā was soon recalled; cf. Brosset, *op. cit.*, I, 266-8, and Thomas Artsruni, *ibid.*

There was an 'Abbasid mint for *dirhams* at Tiflis till 331/942 (pieces are known of 210, 248, 250, 294, 298, 304, 307, 312, 314, 316, 330, 331); cf. Tieszenhausen, *Monnaies des Khalifs orientaux*, St. Petersburg 1873; Pakhomov, *Monet. Grus. i. Domongolshy period*, in *Zap. Num. Otd. IRAO*, II/4 (1910); E. von Zambaur, *Die Münzprägungen des Islams seitlich und östlich geordnet*, I, Wiesbaden 1968, 89-90.

The aid which Bagrat (826-76) had lent to the caliph against Ishāk did not bring the reward desired by the eastern dynasty. The rival dynasty, called of Abkhāzia (cf. the explanation of this term above), seized Kartli. Thus Mas'ūdī (writing in 331/942), *Murūṣṣ*, II, 69, 74, says that the Kur left the possessions of Djurdān (Bagratid of the lateral line, d. 944; Marquart, *op. cit.*, 176) crossed the land of Abkhāzia (sic) and arrived in front of Tiflis, the inhabitants of which, although surrounded by infidels on all sides, still retained their courage and were numerous. The founder of the Armenian Bagratid kingdom Ashot (885-907) also intervened in the affairs of Kartli (Brosset, I, 270, n. 12). Mas'ūdī gives Mas'ūdī Dhi 'l-Karṣayn (= Mtskheta) as the residence of the king of Djurzan (*al-fanbaghī*, ingeniously emended by Marquart, *op. cit.*, 186, to the Armenian **mambaghī* > *mambghā*, a Georgian title).

The Sāḡīde, the Sāḡīride and the Shād-dāḡīde. In the meanwhile, there arose in Adhar-

bāyḡdān the first Muslim dynasty that owned the suzerainty of Baghdād, the Sāḡids (276/889 or 279-893 to 317/929; see Sāḡids and R. Vassmer, *Osmestakā Sāḡidūn*, in *Iranica Obhāḡ* *maḡ*, *Azerā* (Baku 1927), No. 5, 22-31). Abu Ṭ-Kāḡim Yūsuf went to assist the isolated Nūḡims in the north. In 299/912 (?) he came to Tiflis, the *amīr* of which was then called Dīḡ'ar b. 'Alī (cf. below), and seized the fortresses of Uḡjānno and Boḡ'orūn (on the upper lora) (cf. Brosset, I, 275, n. 2). The chronicle also mentions another expedition (between 305/918 and 311/923) of the "Saracens called Sāḡī", in the course of which Mtskheta was taken. The Muslim sources are silent about these expeditions. Immediately afterwards the chronicle mentions the appearance of the Mūsāḡfids [i.e.] or Sāḡfids at Bardha'a and in Aḡbarbāḡdān.

Bagrat III and Bagrat IV. The series of reigns "shows the greatest confusion" (Brosset), until the king Bagrat III (980-1024 ?) reunited Kartli, Abkhazie, Tao (on the Čerokh) and Andranuj. In his time, the Shaddādid [i.e.] Fāḡlūn invaded Armenia, but was defeated by the Georgians, and Mtskheta was always regarded as the royal city, although the rulers resided in Kutais (K'ut'at'isa). In 1021/1030 the Georgian and Kakhetian notables, with the help of the *amīr* Dīḡ'ar of Tiflis, undertook an expedition against the Shaddādid Fāḡlūn (Fāḡlūn of Ganḡja). But when the latter died, Liparit Orbeliani, the powerful lord of Trialet' (on the upper Khrām), captured Dīḡ'ar by a ruse and only released him on the appeal of the young king Bagrat IV (1027 ?), who evidently did not wish Tiflis to be annexed by the turbulent Liparit. Dīḡ'ar was re-established at Tiflis, but a few years later the klag himself laid siege to Tiflis. The siege had lasted for two years when suddenly the king at the suggestion of Liparit made peace with Dīḡ'ar. After the death of the latter, the elders (*ber*) of Tiflis offered the keys of the town to Bagrat, who occupied the citadel Dār al-Dīḡāl and the two "towers" Tā'sāḡikān and Ṭ'aber. The inhabitants of the Isan quarter on the left bank of the Kur, however, destroyed the bridge, and Bagrat had to turn his ballistas upon them.

The Sāḡīḡs. In 439/1048 the troops of Ibrāḡīm Yūsuf (in Georgian Bahrum-Lam) appeared for the first time in Basian (Fasin on the upper waters of the Araxes). In 445/1053 (?) the Sāḡīḡs undertook an expedition against Ganḡja, but a countermove ment by the Byzantines, who were allies of Bagrat IV, saved the town. Thereupon the people of Tiflis again invited Bagrat, but as a result of Liparit's intrigues, the Byzantines kept Bagrat prisoner in Constantinople for three years. Then Bagrat recovered the greater part of his fortresses, when suddenly Alp Arslān (455-65/1063-72) invaded Georgia (Brosset, I, 326). On 10 December 1068, Alp Arslān, accompanied by the kings of Armenia and Kakhet (Aḡsar'ian, son of Gāḡik, of the dynasty of Khorikoz (Chorepiscopi), which ruled from 787 to 1105), as well as the *amīr* of Tiflis, marched against Bagrat. All Kartli was occupied and many Christians slain or taken prisoners. The Shaddādis were given compensation. Tiflis and Rustaw were given to Fāḡlūn of Ganḡja, and Anī to Nānūḡir b. Abī Ṭ-Aswār. In the spring of 461/1069, Bagrat returned to Kartli. Fāḡlūn encamped at Isan (a suburb on the left bank) and with 33,000 men ravaged the country. Bagrat defeated Fāḡlūn, who took the road through Kakheti, but was taken prisoner by Aḡsar'ian. At the price of conceding several fortresses on the lora, Bagrat ransomed Fāḡlān and received from him the surrender of Tiflis,

where in the meanwhile a certain Sītharaba (Sayyid al-'Arab ?) was proclaimed *amīr*. This plan failed, for Alp Arslān obtained the liberation of Fāḡlūn. Giorgi II, son of Bagrat (reigned 1072-89, lived to 1125), lived in Kutais. In Kakhet Aḡsar'ian retained his possessions on condition that he adopted Islam.

David II. The revival took place under David II Aḡmāshenebāl (the "Restorer") who took the title of king "of Kartli and Abkhazie" (1089-1125?). David brought into Georgia through the pass of the Alans (Darnal) 40,000 Kīp'aks (Polevtsi) and 5,000 slaves converted to Christianity. In spite of their unruliness (Brosset, *op. cit.*, I, 379), these warlike elements enabled David to throw off Sāḡīḡ domination. He ceased the payment of the *harāḡ* and put an end to the seasonal migrations of the Turks into Georgia. He gave his daughter Ṭ'amār in marriage to the Shīrwān-Shāh [i.e.] Aḡḡutān (in Georgian, Aḡsar'ian) and treated him as his vassal.

The capture of Tiflis in 515/1121. On the complaints of the Muslims of Tiflis, the Sāḡīḡ Mēḡmūd b. Muḡammad (512-25/1118-32) sent an expedition into Georgia in which the Artukid Naḡīm al-Dīn Čhāḡī, the Mazyddid Dubays b. Sādaka (Durbaz of the Georgian chronicle) and the brother of the Sūḡḡān Ṭuḡḡrī (lord of Arran and Nakhchewan) with his atibeg Kūn-toghdi, all took part. On 18 August 1121 this army entered Trialet' and Manglis, but was destroyed by David and his Kīp'aks, after which in 515/1121-2, David stormed Tiflis, so that the town might become "for ever an arsenal and capital for his sons"; Brosset, I, 385 ? and *Additions*, I, 230, 236-41; cf. Ibn al-Aḡḡir, x, 398-9 (= Defrémery, *Fragments*, 26); Kamāl al-Dīn, Ṭā'riḡh Ṭālāb, in *Revue des hist. des croisades*, iii, 628; Yāḡūt, I, 837 (s.v. art. Tāḡfā). The Arab historian al-'Aynī (761-854/1360-1451), who utilises sources, some of which are no longer accessible (Brosset, I, 241), admits that Tiflis was burned and pillaged but, contrary to the other sources which emphasise the atrocities committed by David (Matthew of Edessa in Brosset, *Add.*, I, 230), says that the king respected the feelings of the Muslims more than Muslim rulers had done. David is also said to have promised to strike coins with Muslim legends; the coins however of the king (cf. Pakhomov, *Monet.*, etc., 77-81) bear the image of the Virgin. Great caution in dealing with the Muslims was necessary because, as the Georgian chronicle acknowledges, the fighting between Muslims and Christians was still very bitter (cf. Brosset, I, 380).

The Banū Dīḡ'as. David succeeded in Tiflis to the Banū Dīḡ'ar, of whom it is not known whether they were of Arab or purely Georgian origin. While the Georgian Chronicle (I, 387) puts at 400 years the period of Muslim rule in Tiflis, al-'Aynī gives the Banū Dīḡ'ar alone a period of 200 years. Indeed, we have seen that in ca. 300/912 the *amīr* of Tiflis was already called Dīḡ'ar [i.e. 'Alī] (Brosset, I, 275). His successor struck coins at Tiflis; *dirḡams* are known of Manḡar b. Dīḡ'ar, dated in 342 and 343 (with the name of the caliph al-Muḡ'ī li Ṭālāh), and of Dīḡ'ar b. Manḡar, dated 364, 366 (al Ṭā'if li Ṭālāh). In the time of Bagrat IV (1027-72) the *amīr* of Tiflis was called Dīḡ'ar (his father 'Alī had carried off the property of the Sveti-Tskhoveli church of Mtskheta). The Chronicle calls him Mukhet' Gwerd Dīḡ'ar (Mukhet' Gwerd is a place near Mtskheta). During the 40 years before the conquest of Tiflis by David, the town was governed by the young members of the Banū Dīḡ'ar family, each of whom in turn held power for 9 months (al-'Aynī).

The strong kings. The reign of Dimitri (1125-34) was occupied with a civil war with the Orbellani family. The Muslim rulers contemporary with him were: in Ağharbıyğlan, the *atabeg* İldeniz or Eldiguz (q.v.) (in Georgian İldiguz); at Ani, the sons of the Şeddâdids; at Khilat, Zahir al-Din Şah-i Armea (523/791-823); at Erzerum, the *amir* Saltuk b. 'Ali, whom the Georgians defeated near Ani in 548/1153; cf. Ibn al-Athir, xi, 126, year 548/1157; Münşidjimi-başı, ii, 377; Detenreyer, *Fragments*, 40. It was Dimitri who, taking advantage of the earthquake in 1139 at Gandja, carried off the famous iron gate of this town and took it to the monastery of Getal'ı (cf. Frueha, *Mém. de St. Pétersbourg*, ser. 6, *Sc. monast.*, iii, 532). The position in Tiflis is described by Ibn al-Arak, the historian of Nāyysāfīdīn, who visited Tiflis in 548/1153. He says the Muslims were in a favoured position. Every Friday Dimitri came to the mosque and sat on a dais (*ḍakka*) opposite the *ḥayṭ*; cf. Amodeo, *Three Arabic manuscripts...*, in *JRAS* (1902), 791 (al-Arak may have been the source used by al-'Aynī).

Under Giorgi III (1156-84), the Muslim kingdoms around Georgia remained the same, and the king conducted vigorous campaigns against Erzerum, Ani, Dwin, Nakhitawān, Gandja, Bardha's and Baylakān. To assist his cousin the Şihrwān-Şah Akhsitān, son of Tamar, Giorgi's *amir*, the king even went to Darband (cf. Brosset, i, 383-403, and *Add.* i, 253-7, 266; Ibn al-Athir, years 556, 557, 559, 561, 569).

The reign of Tamer (1184-1211 or 1212), the "Sun of Kartli", is the culminating point in the history of Georgia, now on the threshold of terrible trials. Having forced the diadochi of the Salgiūks to accept peace, the Christian kingdom now assumed the offensive and surrounded itself with Muslim vassals. Tamar played an important part in the creation of the empire of the Comnenoi of Trebizond (Kunik, *Осноы. Трапец. имперіі в 1204. in Учен. Зап. Акад. Наук*, ii [1853], 705-33). The troops operating from Erzerum and Ezindjān inflicted defeats on the İldenizids of Ağharbıyğlan. The sack of Ardabil by the Georgians (Brosset, i, 469-73) finds confirmation in the *Silsilat al-nasab-i safrāwīyya*, Berlin 1843, 43; cf. Khaurykov, *Mā. Asanagues*, i (1852), 380-3. The Chronicle also mentions in 1200-12 an expedition through the whole of northern Persia as far as Ronguaro (= Ramdār near Nishāpūr), but beyond Tabriz the stages in this march seem to be quite fanciful (Brosset, i, 469-73). In spite of the brilliant success of the generals Zakārd and Iwān of the Mighargrdzel family (Armenian of Kurdish origin; cf. Brosset, *Add.* i, 267), the Georgian victories were not lasting and of all her conquests, Tamar could only retain Kars (Brosset, i, 467). At home also (Djavakhoi), the growing power of the feudal lords demanded the attention of the queen. Muslim customs penetrated into Georgia; the general Iwān was given the title of *Atabeg* ("used among the Sultāns"; Brosset, i, 474). In the reign of Tamar, we find mention of a rebel, Gozan son of Abu 'l-Hesān, "*amir* of Tiflis and Kartli" (is this a scion of the Banū Dī'ar?)

The Mongols. The son of Tamar, Giorgi III Laṣhe ("splendid" in the Abkhazian language) who ruled from 1212-23, levied the *kṣandz* of Gandja, Nakhitawān, Erzerum (Kamukalak) and Khilāṣ, but in 577/1200 the Mongol troops of Subutay and Dībe (in Georgian: Suba and Iama or Čeba) made their appearance in Persia. The Georgians were several times defeated; the Chronicle (Brosset, i, 493) considers the defeat at Berēdji (on the Bōrdān) as the

turning-point in the fortunes of the Georgian armies, hitherto invincible.

Giorgi died suddenly and the throne passed to his sister Rusudan (1223-47) (*Kis-mahā*, the "maiden king" of the Muslims), a beautiful princess devoted to pleasure, whose hand was sought by her Muslim neighbours (Brosset, i, 495). In the end she chose the son of the Salgiūk of Erzurum, Muḥammad al-Dīn Toghril (in Georgian Or'ul) who by his father's orders became a Christian (Ibn al-Athir, xii, 270; *ḥaddāṭ* *gharībat* *lām yūghad mūḥakkā*). In the letter from Rusudan to the Pope Innocent III (which reached Rome in 1224), the kingeaspe of the Mongol invasion as an insignificant episode, but a new enemy was at the gate.

The *Kh* 'āras-m-ghāh Dī'alī al-Dīn defeated the Georgians at Garni in Şahān 622/August 1225; (Ibn al-Athir, xii, 283; Nasawī, ed. Houdas, 112; Brosset, *Add.* i, 309). The Georgian commander Şalwa (Djuwaynī, ii, 159; he and his brother) was taken prisoner. Tiflis was occupied on 9 March 1226, thanks to the treachery of the Persians who lived in the town. According to Djuwaynī, Dī'alī al-Dīn spared the inhabitants and allowed them to withdraw to Abkhazia, but destroyed all the Christian places of worship. Ibn al-Athir on the other hand says that the town was taken by storm (*ḥamāṣa wa-baḥrān min ghayr anṣāḥ*) and all those who did not accept Islam were massacred. Nasawī (122) also confirms the massacre of all Georgians and Armenians in Tiflis (cf. Brosset, i, 504-7). The vizier Sharaf al-Mulk was appointed governor of the town. When he left for winter-quarters at Gandja, the Georgians returned to Tiflis and burned the town, knowing that it was impossible for them to hold it (Nasawī, 125). Dī'alī al-Dīn, occupied elsewhere, did not return to Georgia till 625/1228 when al-Mındor (in Georgian "field") near Loré, he scattered the forces of the commander-in-chief Iwān, made up of very diverse elements: Georgians, Alans, Armenians, people of Seric (= the Avar of Dağıstān), Laks, Kipčaks, Svans, Abkhāz, Ilānī (= Č'an-etyi; cf. Lae), men from Syria and Asia Minor (cf. Djuwaynī, ii, 170). The Georgian Chronicle (Brosset, i, 510) says that after the victory at Boinis (= Mındor?), Dī'alī al-Dīn committed fresh atrocities at Tiflis.

Second coming of the Mongols. Dī'alī al-Dīn disappeared from the scene in Şhawwāl 628/August 1228), but the remnants of the *Kh* 'ārasmiāns disturbed the eastern part of Georgia and shut the feudal lords up in their castles. Tiflis, however, was still in possession of Rusudan, when the Mongols of Djurmaghan entered Georgia via Gandja. This took place in 1236 (Brosset, i, 331, according to d'Ohsson, ii, 75: ca. 632/1235). Rusudan left Tiflis for Kulets, and the governor of Tiflis burned the town (Brosset, i, 314: "thus was ruined the city of Tiflis").

The no'ns, of whom the Chronicle always mentions four (Carmaghan, Čaghar, Joser and Dī'ay) occupied the country and restored Tiflis. Rusudan's rule was confined to the valley of Rion.

The Mongols broke up the political organisation of the country: the Georgians were pressed into the Mongol service (expeditions against the Salgiūks of Rūm, Qubıyq al-Dīn, against the İsmā'īlīs of Alamūt, against Baghdad etc.). The country was divided into six *famans* and the Georgian feudal lords (*mī'sar*) whose fiefs underwent changes, were divided among the no'ns. The people of note had to go to Batu-*Kḥān* and then to the Great *Kḥān* in Mongolia, where they were kept for years. In this way the heir to the throne, Dawūd (called in Mongol Nariā "splendid"),

was removed from the country. A certain Fgaridan tried to unite the country against the Mongols ("he only lacked the name of king"; Brosset, I, 542), but the Mongols set up against him Dawid, son of Giorgi Lasha, who was crowned at Mtskheta. He also had to go to Batu and to Karakorum. The "two Dawids" are mentioned among those present at the *kurultay* of Guyuk-Khan in 643/1245 (cf. Duwayni, I, 205, 212; Rashid al-Din, ed. Blochet, 242). Returning to Georgia, after the accession of Möngke (1248-59), they ruled together at first.

As Hulegu did not like Dawid Narin, the latter escaped to Abkhazia. "It was thus that our country became two principalities," says the Chronicle (Brosset, I, 346). Eastern Georgia owned two suzerains: on the one side, Batu-Khan, lord of the country north of the Caucasus, wished to extend his authority over Georgia; on the other side, the Il-Khans of Persia asserted their rights over it. Dawid, son of Lasha, exasperated by the exactions of Khodja 'Asir, collector of Mongol taxes (Rashid al-Din, ed. Quatremère, 395, calls him "one of the governors of Georgia"), fled to his cousin. The *no'in* Oyrat Arghun occupied Tiflis. A reconciliation only took place when the son of Lasha had fought beside Hulegu against the troops of Berke, successor of Batu who had invaded Shirvan in 2162 (d'Osson, II, 282). In the reign of Abagha or Abaka, Berke returned to Transcaucasia and reached Tiflis, where many Christians were massacred (in 1266; cf. *ibid.*, 481).

The successor to Dawid, son of Lasha, was his son Damiir II (1273-89), who took part in the numerous campaigns of Abagha and Ahmad, but in the reign of Arghun his treasures were confiscated and he himself beheaded after being beheaded at the *ovdin*. The Georgians call him T'av-Dardebui, "the who gave his head as a sacrifice".

Several further kings were nominated and deposed by the Mongols. In vain Dawid VI (1292-1310) endeavoured to negotiate with the Khan of the house of Batu (Otakh - Toltohtoghu); he had to send to Ghazan an embassy consisting of the Orthodox Catholics and the *haji* of Tiflis (cf. Brosset, I, 675; this last detail is evidence of the revival of Islam as a result of the accession of Ghazan). The Georgians continued to take part in all the campaigns of the Mongols, which however saved them neither from persecutions (cf. the activity of the Muslim *no'in* Nawruz in the reign of Ghazan. Brosset, I, 617) nor from attempts to convert them (e.g. after the Gilan expedition of 1307).

Giorgi V. After the death of Ölgieytü (717/1317), Giorgi V (Briskinwaile, the Splendid?) was placed on the throne (1316-46) under the patronage of the *amir* Coban. Giorgi profited by the troubles in the last years of the dynasty of the Il-Khans to drive out the Mongols. He exterminated the rebels, went with his army into Imereti, and united under his rule not only the Georgian lands as far as Spex (now Ispur) but all the lands from "Nikopsia (15 miles from Sukhum on the Black Sea) to Darband".

Timur. It was during the long reign of Bagrat V (1380-95) that Timur made his appearance. The official historian of his reign represents his campaign in Georgia as a *ghihad*. Timur set out from Kars in the winter of 788/1386 (Zafar-nama, I, 402). Bagrat had shut himself up in the citadel of Tiflis. The town was captured and the King and Queen taken prisoners. The Chronicle and Thomas of Metsop (Néve, *Expositio*, 37) mention the apostasy of the King, but represent it as a clever ruse which enabled him to exterminate 12,000 of Timur's soldiers and regain his

lands. His son Giorgi succeeded him in 1395. The *Zafar-nama*, I, 705, 720, does not give these details. In 796/1394 it only mentions the despatch of four generals to the district of Akhalkalke (Akhissha [q.v.]) in order to apply the law of *ghazal*. Timur in person finally chastised the Georgians called Kara-Kalkandil ("with black bucklers" = the Georgian mountaineers, the Pshavs and Khwzura) and returned via Tiflis to Shakhid (q.v.).

In 798/1395 the Georgians, allied with Sidi 'Ali of Shakhid, inflicted a defeat on the troops of the Timurid Miran-Shah who was besieging Alindjak (near Nakhchewan) and delivered Sultan Tahir Djalayir, who was shut up in it (*ibid.*, II, 203). This event brought about its reaction in winter 802/1399 when Timur took Shakhid and mercilessly ravaged the wooded defile of Khimsha (?), probably in northern Kakheti, where a Khimsha family held a fief at Marit, to the east of Tionet? (Brosset, II, 464). In the spring of 802/1400 Timur marched on Tiflis and demanded that King Giorgi (Gurgin) should hand over Sultan Tahir. On receiving an evasive answer, Timur laid the country completely waste (*ibid.*, II, 214). Tiflis received a Khurasanian garrison, but Giorgi retired again to the mountains. After the voluntary submission of a Georgian prince named Djani-Beg and the capture of the fortress of Zari (?), Timur's troops set out in pursuit of Giorgi and laid Svanethia waste. Giorgi went into Abkhazia and sent Tahir back to Asia Minor. Through the intermediary of a Muslim named Isma'il (Brosset, I, 566) he offered to Timur to pay the *kharch*. Timur accepted the offer. Next the land of the Georgian Ivane (the *atabeg* of Samtskhe) was converted to Islam and that of the Kara-Kalkandil plundered. After resting for two months in the summer quarters of Min-gol ("1,000 Lakes") near Kars, he sent troops against the Georgians who had concentrated at Farasgird (P'ansakert, on the upper C'orokh); *ibid.*, II, 250.

In 804/end of 1401 Timur returned to Transcaucasia via Sivas-Baghdad-Tabriz. His delegates (*mu-hajjid*) went to collect the tribute (*saw wa-kharid* *aw-djarya*) from Giorgi, who sent his brother with the contributions. Timur gave Giorgi *amdn* on condition that he supplied him with troops and treated the Muslims well (*ibid.*, II, 379). In the summer of 804/1402 Timur went from Karabagh (q.v.) to Min-gol and took the fortress of Tortum occupied by Kurdjik, lieutenant of a certain Tadjil (?).

When, in 805/1403, Timur returned to Erzerum, he decided to punish Giorgi for not having come to present his congratulations on his victory over Bayazid. Al-Mingol, Ivane, son of Ak-budja, arrived with gifts as did Kustandil (Constantine), brother of Giorgi, who was then on bad terms with his brother (*ibid.*, II, 512). Shaykh Ibrahim of Shirvan went to estimate the revenues and expenses of Georgia (*ibid.*, II, 521). Giorgi sent new presents, but Timur refused them and summoned Giorgi to appear in person. In Muharram 806/August 1403 he himself laid siege to the impregnable fortress of Körtin defended by Nazal or Nazwil (the Chronicle calls it Birthwa on Alget) and took it in nine days (*ibid.*, II, 524-52). The troops then laid waste the country round (*andz*) Georgia as far as the borders (*hudud*) of Abkhazia - "which is the end of this country". Seven hundred towns and villages were destroyed, and the historian of Timur waxes eloquent over the massacres and destruction (II, 536). Timur only stopped them when the *'ulama'*. The Georgians sent 1,000 impossible to grant *amdn*. The Georgians sent 1,000 *tangas* of gold struck in the

name of Timūr, 1,000 horses, a ruby weighing 18 *misḥals*, etc.

Timūr passed through Tiflis, destroyed all the monasteries and churches and went to Baylaḳān (winter of 808/1403-4). All the country from Baylaḳān to Trebizond was given as an appanage to the prince Khālīl Mirzā (ii, 545).

Post-Timūrid period. The general disorder, after the havoc wrought by Timūr, is reflected in the part of the Chronicle which gives a brief account of the reigns. The Muslim sources (*Majmaʿ al-salāṭīn*, in *Notices and extracts*, xiv, 235 and Mirkhānd; cf. Dehémery, *Fragments*, 245) mention an expedition of Shāykh Ibrāhīm of Shīrwān, a friend of the dynasty of the Dīlshīyids against the Kara-Koyunlu Kara Yūsuf in which Kustāndīl, king of Gurgistān, took part. The allied forces were defeated to the north of the Araxes, and Kara Yūsuf slew Kustāndīl with his own hand. This happened in 825/1421-2. Also, 300 *amīdār*s (Georgian nobles; cf. Armenian *am* "race") were massacred. Vakhūshī (Brossel, i, 689) alone mentions Constantine as king and puts his death in 1424. In 1425 (1426?) on the invitation of the Persians (= Muslims) of Akhalsikhe, Kara Yūsuf invaded this region and laid the country waste (Thomas of Metsop⁴; cf. Nève, *loc. cit.*, 96; Brossel, *ibid.*, i, 399). The Chronicle confesses that down to the accession of Alexander (1433-43) "no consoler arose from anywhere". The king gradually drove out the invaders, restored the cathedral of Sveti Tekhovelī (st Mtshketa) and repaired the fortresses. The Georgian envoys who greeted Shāh-Rukh in 823/1420 at Kara-bāgh (cf. Mirkhānd, in Dehémery, *op. cit.*, 257) must have been sent by Alexander, and when in 847/1437 Shāh-Rukh arrived in Somkhetia (cf. above), Alexander sent him rich gifts, after which the son of Timūr left Georgia. In 1444/848 the Kara-Koyunlu Dīlshāh-shāh made a raid to Akhāl-tsikhe (cf. Brossel, i, 683; according to Thomas of Metsop⁴, Dīlshāh-shāh took Tiflis in 1440; cf. Nève, 149).

The partition of Georgia. At this period, Georgian tradition becomes exceedingly difficult to unravel (Brossel, i, 690-89). The history of Vakhūshī, which continues and corrects the Chronicle and agrees better with the statements of the Muslim historians, begins with the reign of Constantine III (1469-1505), during which Georgia was divided into three main kingdoms (Brossel, *ibid.*, 11-18, 147, 208, 249): Kartlī, with capital Tiflis; Imereti, with capital Kutais; and Kakheti, with capital at Gremi (Persian Gurm) and later at T'elav. In addition, the *atābeg* of Samtskhe (with capital Akhāl-tsikhe) rebelled and founded the independent principality of Saantabago (consisting of Samtskhe, on the upper course of the Kur, and of Kharjola on the Č'orokhi), the princes of which from Manuār III = Salar-pasha (1605) had become Muslims (Brossel, *ibid.*, 248). A number of local princes also became independent of Imereti (the Guris of Guria, the Dadians of Mingrelia, and the Gelovani of the Svans; cf. 249-52). In Kartlī also, Constantine III's reign was disturbed by the invasion of Bagrat II of Imereti.

The Ak-Koyunlu. In this period Uzun Hasan comes on the stage. According to Mīnādījdīm-bashī, iii, 260, he went to Georgia for the first time in 872/1466, when he liberated the Muslim prisoners and took the fortress of Čemāḳār (?). Civil complications prevented him taking Akhāl-tsikhe, but he returned to the attack in 877/1472. King Bakhtī (read: Bagrat II of Imereti) was dethroned (*shah*) and 30,000 prisoners taken from Georgia. According to Vakhūshī's version, Tiflis was surrendered to Uzun

Hasan by Constantine, evidently to prevent Bagrat getting it. Uzun Hasan left a garrison in Tiflis but entrusted its government to Constantine (cf. Brossel, *ibid.*, 13, 25). The *Ta'rikh-i Amīnī*, however, calls the governor (*iyldar*) left by Uzun Hasan, Süfī Khālīl Beg, who stayed there till the death of Uzun Hasan in 885/1478, when the Georgians re-occupied the town.

Sulṭān Ya'qūb Ak-Koyunlu invaded Samtskhe in the autumn of 891/1486 to chastise the *Atābeg* Kvarqware. In the next year, Ya'qūb sent Süfī Khālīl Beg to conquer Georgia. The construction of the forts of Aghjla kafa and Kaosani was begun by the Turkomans on the lower course of the Debeda (Bortala) at the place which commands the approaches to Georgia from the south (cf. the *Geography of Vaḥshī*). Kustāndīl (Constantine III) withdrew from Tiflis, Süfī Khālīl began the siege with the help of reinforcements which arrived in the winter; he took first of all the fortress of Kudjir (Kodjori, south of Tiflis). In the fighting around Tiflis, the Muslims suffered heavily but finally Wall aghā eshik-aghāsh took the town (3 Rabi' I 894/4 February 1489) (cf. the unpublished history of the reign of Ya'qūb, *Ta'rikh-i Amīnī*, MS. Bibl. Nat. Paris, 202, fols. 202a-5a and 155a-9a). The Chronicle (Brossel, *ibid.*, 326-7), which confirms many of the details, denies however that Tiflis was taken and adds that the people of the fief of Saharāt'ano (called Barāt-ili by the Muslims) on the Alget inflicted a defeat on the Turkomans.

The Safawids. In 907/1501 a detachment of Ismā'īl's forces under the command of Khādim-Beg invaded Georgia (*Shāhīnshāh-nāma*, quoted by Dorn). The invasion by Dīw Sulṭān in 926/1520 was stopped by the embassy of Ramat, son of Dawūd VIII, to Ismā'īl I (cf. *Hasb al-siyar*, Bombay, iii, 414², 4, 92). In 929/1523-4 the founder of the Safawid dynasty seized Aghjla kafa and by making certain promises obtained the surrender of the citadel of Tiflis; he desecrated the churches and built a mosque "at the corner of the bridge", cf. Vakhūshī, in Brossel, *ibid.*, 23 (the mosque is still standing on the right bank).

Iskandar Munghī mentions four expeditions on a large scale sent by Shāh Tahmāsp against Georgia. In 947/1540 Tahmāsp seized Tiflis, the governor of which (for Luarsab I) submitted to the Persians and became a Muslim. Next, the fortress of Barti (? Birtvis) was taken (*ʿAlam-ārā*, Tehran 1314, 63). The second time was in 1033/1546 when the Georgian princes came to pay homage to Tahmāsp at Shōrāg (near Gümr) = Alexandropol = Leninakan). The third expedition in 1056/1551 was sent from Shakhī on the appeal of the *atābeg* Kay Khusrav, son of Kharḳara (Kvarqware) who complained of the injuries done him by Luarsab (Iskandar Munghī writes Lawārsh, but the name is Iranian: Luhrāsp; cf. *Nir-zai al-bulādan*).

According to Iskandar Munghī, *ʿAlam-ārā*, 65, by the Turco-Persian peace of 951/1553 the territories of Nash (Meshki = Samtskhe), of Kartlī (Kartli) and of Kakheti were allotted to Shāh Tahmāsp, while Sulṭān Sulaymān received those of Baght-aḳuk ("with head uncovered", a nickname of the king of Imereti), of Dādīyan and of Gārīyān (Guria) as far as Trebizond and Trablis (Treboli). Luarsab I, however, continued to worry Tiflis. This provoked the fourth expedition. Barāt-ili (Saharāt'ano), Gori and Ateni were occupied and the king himself fell in battle. Vakhūshī dates the four expeditions to 1536, 1546, 1553 and 1558 respectively. Brossel, *ibid.*, 452, considers these very probable as they coincide very well

with the vicissitudes of the Turco-Persian war.

King Swinon I, son of the indomitable Luarsab, had a troubled reign (1558-1600). He was defeated by the Persians and replaced by his brother David (Dāwūd Khān), who purchased the throne at the price of apostasy. Swinon was imprisoned in Alamūt, from where he was released by Isma'īl II (984/1576-7) to checkmate the activity of the Ottomans.

Ottoman domination 986-1022/1578-1603. In 986/1578, during the reign of the weak Shāh Khudabanda, the Ottomans under Mustafā Lala Paşa penetrated into Georgia via Samtskhe, and in August seized Tiflis, from which Dāwūd Khān had fled. The Turks put a garrison of 200 men with 100 guns in Tiflis. Muḥammad, son of Ferhād-Paşa, was given the *sandjak* (paşaḥlık?) of Tiflis (von Hammer, *GÖW*, II, 423). Two churches were turned into mosques. In October, Gori received a Turkish garrison and was given as a *sandjak* to Swinon. When Mustafā Paşa returned to Erzerum, İbrahim Kull Khān, son of the Şamshāl slain by Ördemir-Paşa, and Swinon laid siege to Tiflis. Supplies were brought to the garrison by Hasan Paşa (ibid., 489), but the struggle around the town continued. In 1580 the new *serasker* Sinās Paşa arrived in Tiflis and appointed as *Beglerbeg* a son of Luarsab who had adopted Islam under the name of Yūsuf (?). Swinon made advances to the Turks which were not accepted. In Radjab 999/August 1582 Muḥammad Bey left Erzerum to bring supplies to Tiflis, but was defeated at Gori by the Persians and Georgians. Ferhād Paşa put him self at the head of a new expedition (Dhu'l Ka'da 999/December 1582) intended to strengthen the towns held by the Ottomans. In 999/1584, Ridwān Paşa left for Tiflis. Dāwūd Khān on further reflection went over to the Turks. Swinon attacked Ridwān but without success. Ferhād Paşa's Janissaries mutinied at Akhal-kalak, which forced him to retire. After the campaign of 999/1585 against Tahriz (q.v.), the Ottomans obtained from Persia the cession of Adjara, Abkhāz and of Transcaucasia including Georgia (treaty of 25 Djuṃādā I 999/March 22, 1590); cf. the *Chronicle of the Psalter of Meghri* (1559-87) in Takaishvili, op. cit., 183-224; von Hammer, II, 481-97 (Brosset has given an annotated translation, *ibid.*, 412-19). The principal source used by von Hammer is the *Nuprindama* of 'Alī (Jan. 1578-Jan. 1580). On the other Turkish sources, cf. Babinger, *GÖW*, 112, 181. Soon after the accession of Muḥammad III (1003/1593), Swinon was taken in a skirmish and sent to Istanbul, where he died in 1600. Ottoman rule, more or less undisturbed, lasted from 999/1591 till 15 Djuṃādā I 1022/21 October 1603 when Tiflis was retaken by Shāh 'Abbās I. The Turco-Persian treaty of 1021/1603 re-established the situation as it had been under Sultān Selīm (928-26/1512-20).

Shāh 'Abbās I and the Muslim Kings. The worst misfortunes fall upon Georgia (and especially on Kakheti) in the region of this monarch. Although Giorgi of Kartli and Alexander of Kakheti had fought under his banner at the siege of Erivān in 1602, 'Abbās after his victory took Leri from Georgia. He married the sister of Luarsab II (1605-16) but brought the latter to Persia and had him strangled at Gushk-kafa. In 1035/1626 'Abbās came in person to Georgia and granted Kartli to the Muslim Bagrat VI (1626-39). He then punished Kakheti. According to the official history of the reign, *'Alamdrā*, 635, the number of those put to death was 50,70,000 and the number of young prisoners of both sexes 100,000-130,000: "since the beginning of Islam no such events have taken place under any king". In 1035/1623

Kartika Khān on being sent to Georgia called to the colours 20,000 men of Kakheti and instead of leading them against Imereti had them massacred "as if at a battle" (*shihārī-wir*; *'Alam-drā*, 219). Exasperated by such treachery, the *mowar* ("governor of lower rank"; Brosset, *ibid.*, 143; the Persians write *mowar*) Giorgi Saakadze (a Muslim and till then a faithful servant of the Shāh) raised a rebellion in Kartli which the Persians did not overcome till 1035/1626 (Josse Ilaa, *Zim mowara G. Saakadze*, Tiflis 1848; Brosset, *ibid.*, 33-9, 489-97). In spite of all these disasters, the part played by Georgians in the life of Persia becomes more and more important, and Shāh 'Abbās I, owed his throne to the support of Khusrav Mirzā, brother of the King Bagrat who was *dargah* of Isfahān.

When Swinon II perished in the civil war (1629), T'eimuras I of Kakheti (1605-64, a very troubled reign marked by all kinds of misfortunes; his mother Khet'ewan was put to death at Shidāz in 1624; Brosset, *ibid.*, 167) came to Kartli, where he reigned from 1629 to 1664, after which the Kay Khusrav already mentioned arrived from Persia and set himself up in Tiflis under the name of Rostom (1634-58). The old king, brought up in Persia, took the Persian title of *shāh-āghā* and ordered his court in the Persian fashion. Persian garrisons were installed at Gori and Suram. The Georgian prisoners who had become converts to Islam returned from Persia; Persian manners and customs became the fashion. On the other hand, as if to celebrate the fusion of the two cultures, Rostom celebrated his marriage both in the mosque and in the church, and restored the cathedral of Mtskheta, etc.

In 1045/1636 Marid IV took Erivān and by the treaty of 1049/1639 Persia renounced her claims to Kars and Akhal-trikha (Taurish-Na'ud, 586); according to Vakhtang (Brosset, *ibid.*, 68), the Sultān received İmceci and Saabago and the Shāh kept Kartli and Kakheti.

Vakhtang (to Muslims, Shāh Nawāz I), adopted son of Rostom, succeeded him (1638-76). The Persophile policy continued. Shāh 'Abbās II (1052-77/1642-66) married the daughter of Shāh Nawāz. The latter, although a Muslim, favoured the Christian religion and even restored the confession and the communion of which the people "had been ashamed" in the reign of Rostom (Brosset, *ibid.*, 79). In order to give more support to Shāh Nawāz, the Muslim tribes of Adjara, Abkhāz and Karabagh (13,000 Djawāghiri and Bayats) were settled in Kakheti (cf. the *History of Shāh 'Abbās II* by Muḥammad Tāhir Wahidi, in Dorn, 109, 111 = Brosset, *ibid.*, 503-4). Shāh Nawāz fought in Imereti, but when he set his son on the throne there, the Shāh restored the situation as guaranteed by the treaty of 1049/1639.

Giorgi XI (Shāh Nawāz II) received investiture from Shāh Selayman. In 1688 he fell a victim to his own intrigues in Kakheti and the Shāh replaced him by Erekle I (1688-91, 1695-1703). This king, who had been brought up in Russia, became a convert to Islam under the name of Nazar 'Alī Khān.

The Afghan Invasion of Persia. When the Baluch and the Afghans began to disturb eastern Persia, King Giorgi with a body of Georgians was sent against them by Shāh Husayn. He restored order in Kandahar, but in 1721/1709 was treacherously slain by Mir Wāys (cf. *AFGHANISTAN*, v. History (1)), who then defeated the new Georgian forces led by Giorgi's successor, Kay Khusrav (1709-11). These events paved the way to the Afghan invasion of Persia.

Vakhtang (governor of Kartli 1703-11; king,

1711-24 with interruptions) was at first a Christian. The Persian garrisons with the connivance of certain Georgian elements went in for slave-trading. Vakh-tang tried to put down this traffic (Brosset, *ibid.*, 97, 101, 105) and in general "humbled the Muslims, especially those who garrisoned the citadel of Tiflis". Between 1714 and 1716 he was replaced by a fervent Muslim Iese (= 'Ali Kuli Khān) and only regained the throne at the price of professing Islam.

After the decisive victory of the Afghans at Gūnābād, near Isfahān (1134/1722), Shāh Husayn sought help from Vakh-tang, but in November 1722 the latter had offered his services to Russia (Brosset, *ibid.*, 117). Peter the Great, who reached Darband on 23 August 1722 had to return at once to Russia. On the other hand, the King of Kakheti Muhammad-Kuli Khān (Constantine III) took the field on the side of the Lezgis against Vakh-tang and in 1723 took Tiflis, which was plundered for three days.

The second Ottoman occupation (1135/47-1723-34). The troubles in Persia and the Russian advance disturbed Turkey. War against the *Shāh* was declared permitted. In Ramadān 1135/June 1723 the *serasker* Ibrāhīm Pasha, who had been negotiating with Vakh-tang, installed in Tiflis the latter's son Bakr (in Persian Shāh Nawāz and now given in Turkish the name Ibrāhīm Pāshā). The Janissaries occupied the citadel. Bakr soon rebelled, but the Turks sent to Tiflis reinforcements under Iese, uncle of Bakr (who now assumed the name of 'Abd Allāh). In the meanwhile the Russo-Persian treaty of 12 September 1723, was signed by which the provinces on the Caspian were ceded to Russia. As a counterpoise, through the good offices of the French ambassador, a Russo-Turkish treaty was concluded at Constantinople on 12 June 1724: Russia kept Daghestān and the narrow strip of littoral; Turkey obtained all Transcaucasia as far as Shamākhā, including the Georgian territory (von Hammer, *GOR*, iv, 205-14. The Ottoman historians of these events is Celebi-zāde; on the other sources, cf. Babinger, *GOW*, 289; Nāmi, *Feth-nāme der kākā-i Gūrdjistan*).

The deposed King Vakh-tang went to Russia with a retinue of 1,400 (August 1724). The Turks, having taken possession of Kartli, took a census and levied taxes on the inhabitants. The stay at Tiflis of the noble 'Othmān Topal Pasha alone has left a pleasing memory among the Georgians (Brosset, *ibid.*, 129). Iese did not bear the title of king, and the real power passed to Ishāk Pasha, a hereditary ruler of Akhal-tukhe established at Tiflis. After the death of Iese (1727), Ishāk Pasha was appointed governor of all Georgia (Brosset, *ibid.*, 236). In 1728 he divided Kartli among the feudal lords (*meliks*) whose dissensions made it easy for him to control them. The Lezgis continued to ravage Georgia (cf. Brosset, *loc.*; von Hammer, iv, 223, 231, 235, 280, 313).

Nādir Shāh. In 1143/1730-1 after a war in which he won little glory, Shāh Tahmāsp recognised the Araxes as the frontier between Persia and Turkey (Mahdī Khān, *Tārīkh-i Nādirī*, Tabriz 1284, 90 = tr. Jones, I, 141; von Hammer, iv, 227 dates the peace to 6 February 1732). Nādir dissatisfied, dethroned Tahmāsp and resumed the conquest of Transcaucasia. While he was operating against Daghestān (1147/ autumn of 1734) Ishāk Pasha of Tiflis set out with an army to the help of Gandja. Taimuraz, son of Nāzar 'Ali Khān (= Erekle I), and his nephew 'Ali Mirzā = Alexander (son of Imām Kuli = Dawid III) attacked Ishāk Pasha and forced him to shut himself up in the citadel of Tiflis. Nādir, highly gratified, gave presents to the two princes (*ibid.*, 114 = Jones, I,

200). At the siege of Gandja, Nādir ordered Šafi Khān Bughārī to lay siege to Tiflis with the help of the Georgian nobles (*wasirān* and *amānān*; *ibid.*, 116 = Jones, 205).

When 'Abd Allāh Pasha was defeated at Baghward near Erivān, Ishāk Pasha surrendered the citadel of Tiflis on 22 Rabi' I, 1147 = 17 Sept. 1734 (*ibid.*, 123). Nādir summoned the nobles (*āmidān* or *amānān*) of Kartli and Kakheti among whom Tahmāsp (= Taimuraz) had most importance and privileges. Nādir however appointed as *wall* of Kartli and Kakheti, 'Ali Mirzā, because he was a Muslim, and his brother Muhammad Mirzā (= Leon) had fallen in battle against 'Othmān Pasha. Tahmāsp was allowed to go to Kakheti to bring his family (*āsf*) to Tiflis. Now he was a "man of the sword and rapid decision", he fled to the mountains of "Karakalkhān (Pshaw), Rūs (Ru's, west of Gori?) and Cerkēs". Nādir sent his troops in pursuit of him, and arrived himself at Tiflis on 29 Dhimādd 1, where he distributed punishments and rewards. 6,000 Georgian families of the Kaykūl (Abots) were transported to Khurāsān (*ibid.*, 124 = Jones, 219). In 1149/1736 Šafi Khān captured Taimuraz and sent him to Persia. At the beginning of the Indian campaign, Nādir released Taimuraz but kept his young son Erekle with him.

In 1156/end of 1743, Tahmāsp Khān captured the pretender Sām Mirzā and later (1157/1744) along with 'Ali Khān Kikhiā (? the Georgian sources call him Khandjāl, Kialdjal), new *beglerbeg* of Tiflis, defeated near Ru's on the Aragvi Yūsuf Pasha of Akhaltsikhe, who by order of the Porte went to Daghestān to work for another pretender Šafi Mirzā. Arriving at Gori, Nādir, as a reward for Tahmāsp's services, transferred him to Kartli and gave Kakheti to his son Erekle (*ibid.*, 222 = Jones, II, 164; cf. Brosset, *ibid.*, 77 (Papua Orbellani) and *ibid.*, 208 (Khorkeuldzee).

In 1158/1745 Nādir levied an impost of 50,000 *tumans* on Georgia. Taimuraz went to obtain a reduction, but on reaching Tabriz he heard of the death of Nādir. The latter's successor was 'Ali Kuli Khān, husband of Khefeyan, daughter of Taimuraz.

The Bagratids of Kakheti. The period of troubles after the death of Nādir (1162/1749) and the reign of Karim Khān, a prince of a peaceful disposition, whose influence did not extend north of the Araxes, secured a respite for Georgia. The opportunity was skillfully exploited by Taimuraz (king of Kartli 1744-61) and by his son Erekle or Irakli II (king of Kakheti 1744-61; king of Kartli and Kakheti 1762-90). The reign of these Christian kings is one of the happiest periods in the history of Georgia. They conducted numerous expeditions into Transcaucasia. In 1752 the Afghān Āšād-Khān, a rival of the Zand dynasty, was defeated by Erekle near Erivān and in 1760 captured at Kazakh and sent to Karim-Khān. The Kurds of Erivān were chastised in 1765, 1770 and 1780, and the Georgian troops pursued them over the district of Bāyazīd. Almost every year the Georgians drove back successfully the incursions of the raiding bands from Daghestān (the most dangerous leader of whom was 'Umar Khān Awar). Only the Khāns of Shakhī, Muḥiddīn Celebi and Agha Kishi (in 1752-3), ever succeeded in inflicting reverses on the Georgians.

In spite of all these success, the situation of Georgia was precarious, and in 1760 Taimuraz went to Russia to seek assistance. But he only arrived a few days after the death of the Empress Elizabeth, and he himself died in St. Petersburg on the 8th/20th January 1762.

Erekle, becoming king of the united kingdoms, continued the policy of rapprochement with Russia. At the beginning of the Russo-Turkish war, a Russian force under the command of General Totleben arrived in Georgia (in 1796) and with Erekle marched against Akhal-tsikhe. The allies did not agree (cf. the letter from Catherine II to Voltaire of 4 December 1790) and the Russian troops returned to Russia in 1792. But, left alone, Erekle gained a considerable success at Aspindza and, with Solomon of Imereti, besieged Akhal-kaleki. Sulaymân Pasha of Akhal-tsikhe soon assumed the offensive. The Russo-Turkish treaty of Küçük Kaynarca (1774 [q.v.]) brought no territorial change in the lands of Georgia. The Porte only renounced the tribute of youths and maidens and other lavies (art. 23). But after the treaty, Sulaymân Pasha of Akhal-tsikhe had to send a representative to Istanbul. On the other hand, he renewed his appeals to St. Petersburg and asked that his kingdom should be united (*присоединено*) to Russia (Tsagareli, *Gramoff*, No. 144). Russia gave an evasive answer, and it was not till 24 July 1783 that the treaty establishing a protectorate was signed. Russia guaranteed to Erekle his lands and left him full control of domestic policy, but the management of foreign affairs passed to Russia. A Russian force was sent to Tiflis but recalled in 1787.

The Kadjars. During this period the Kadjars had succeeded the Zands. In 1795 Agha Muhammad Kadjâr laid siege to Shusha in Karabagh and then turned against Tiflis, which was taken on 11 September 1795 and pillaged in dreadful fashion; cf. Brosset, II/2, 260; Olivier, *Voyages en Orient*, II, 78 (testimony of an Hungarian physician who was an eye-witness). The Persian invasion was followed by an invasion by Daghistanis. In 1795 two Russian battalions arrived in Georgia; in March 1796, Russia declared war on Persia. But on Nov. 6/18, Catherine II died and her son Paul I at once recalled the Russian troops. Agha Muhammad set out again for Transcaucasia, but was assassinated near Shusha (15 June 1797). The aged King Erekle died on 15/23 January 1798.

His son Giorgi XII succeeded him. Fath 'Ali Kadjâr was occupied in dealing with his rivals. From Kars, Giorgi sent a force of 2,000 Lezgis under the command of his two sons; dynastic intrigues in the King's family rendered his position very difficult. In 1799 he sent an embassy to St. Petersburg, the object of which was as follows: Georgia should be placed not under a protectorate, but under the full power of the emperor, like the other provinces of Russia. On the other hand, the throne was to be guaranteed to the dynasty.

On 16 December 1800, Paul I signed the manifesto of annexation (*присоединения*) of Georgia, which was proclaimed on 18 January 1801 after the death of Giorgi on 28 December 1800. On 11 March, Paul I was put to death. In April the Georgian envoys begged the emperor Alexander I to appoint a Georgian prince as governor with the title of Imperial Lieutenant and king of Georgia. On 12 September 1801 Alexander I, alleging the impossibility of re-establishing the old government under a protectorate, confirmed the manifesto of Paul I and affirmed that Kartli-Kakheti was henceforth to be an integral part of the Imperial Russian dominions. The remaining members of the old Georgian ruling house were exiled forcibly to Russia.

Georgia under Russian rule. Russian possession of Georgia facilitated the extension of Russian power in Transcaucasia. The Commander of the

Caucasus, Prince Tsitsianov (himself the scion of the noble Georgian family of Tsitsishvili and governor 1802-6), had to preserve Russia's latest acquisition against several open enemies, including the Lezghian tribesmen of Muslim Daghistan and the Muslim khâns of Bakû, Shakkî and Gândja in Âdharbâyjân, nominal vassals of Persia. He now carried the war into the enemy's camp and in January 1804 captured Gândja, killing its ruler Dâvâd Khân, who had helped the Kadjâr Agha Muhammad to invade Georgia and sack Tiflis in 1795 (see above); Gândja [q.v.] was now renamed Elizavetpol in honour of the Tsar Alexander I's wife Elizabeth. But when Tsitsianov marched on Bakû in January 1806, he was killed in battle by local Persian troops, although a further expedition later in that year led to the capture of both Bakû and Darband. Pressure was also exerted on the Ottomans, and the Black Sea port of Poti captured in 1809. Sukhûm-Kal'a in Abkhâzia in 1810 and the strategic centre of Akhal-kaleki in south-western Georgia in 1811; it was only now, in 1810, that the local ruler of Imereti submitted to the Russians after strenuous fighting.

Meanwhile, Russian rule in Georgia had speedily become hated, and a mass revolt of the Georgians came in 1811, when a Bagratid prince was proclaimed King of Georgia, before the outbreak was suppressed. However, a general peace in Transcaucasia was now made between the exhausted warring parties. The Treaty of Bucharest of 1812 restored Poti and Akhal-kaleki to the Ottomans. The Treaty of Finkenstein of 1809, by which the Emperor Napoleon Bonaparte had recognised Persia's rights over Georgia, had never had any practical effect, and in the Gulistan Treaty of 1813 Russia was now confirmed in possession of Georgia, together with Daghistan and the Muslim khânates of Karabagh, Gândja, Shakkî, Shirvân, Darband, Bakû and Kûba [q.v.]. Naturally, the Persians were unreconciled to these serious losses of once centrally-controlled territories in the eastern Caucasus, and in 1826, taking advantage of the death of Alexander I and the Decembrist conspiracy in St. Petersburg, Persia invaded Georgia and Karabagh. The attack was nevertheless repulsed by General Paskevitch, and by the Treaty of Turkmenchay in 1828, the Russian frontier was firmly fixed at the Araxes and Persian influences in the Caucasus finally eliminated. An important consequence of this was that Persia was now cut off from direct contact with the Muslims of Daghistan. Paskevitch now turned to deal with Turkey in the west, aiming at the reconquest of the former Georgian province of Samtskhe, and Russian troops penetrated as far as Erzurum; the Treaty of Adrianople in 1829 handed Samtskhe over to Russia and also the Black Sea ports of Poti and Anapa, thereby cutting the Ottomans off from direct access to Circassia and the north-western Caucasus.

Muslim alarm at Russian aggrandisement in the Caucasus showed itself in the outbreak in 1829 in the eastern Caucasus of the *Murid* movement under the *Imâm*s Kâdî Molîk and then *Shamî* [q.v.], who for a quarter of a century kept large numbers of Russian troops tied down in the region. Rebellions against the Russians also broke out in the western Caucasus, in Circassia and Abkhâzia, with Turkish and British encouragement. During the Crimean War (1854-6), Georgia was the base for Russian attacks on Turkey, leading to the capture of Kars in 1855; meanwhile, a Turkish army under 'Omer Pasha landed in Abkhâzia and invaded Mingrelia.

Internally, Georgia stagnated in the first decades

of Russian rule, an especial cause of resentment being the suppression in 1811 of the Independent Georgian Church, as a focus for national Georgian loyalties, in defiance of the guarantees of the 1783 Russo-Georgian Treaty, and its forcible incorporation into the Russian Orthodox Church, with the Catholicos-Patriarch Antoni II exiled to St. Petersburg. The Russian administration cut down the feudal rights of the Georgian nobility, and taxation for the numerous was impoverished the land. In 1830-2 Georgian conspirators, grouped round such figures as Prince Alexander Bagration, an exile in Persia, made at last attempt to throw off Russian rule in Georgia; but when this failed, all hopes of a Bagratid restoration ended, and Georgia sank into what D. M. Lang has called "a mood of torpid acquiescence" for two or three decades. Only during the viceroyalty in Georgia of Count Michael Vorontsov (1845-54) did Georgia at last enjoy a measure of prosperity, educational and cultural encouragement and commercial development, with the beginnings of industrialisation in the Tiflis district as part of the distinct industrial revolution in Russia as a whole during Nicholas I's reign (1825-55). It was during Vorontsov's time that the doyen of modern Georgian studies in the west, Marie-Félicité Brosset (1802-80), visited Georgia and worked there under his encouragement. The old Georgian nobility suffered a general decline in this period of transition, accompanied by an increased disinclination on the part of the peasantry to endure their former subjugation. Outlying parts of Georgia, which had retained some autonomy, were now brought under direct Imperial rule. In 1857, the Regent of Mingrelia, Catherine Dadiani, was deposed, and in 1857 the youthful heir, Nicholas Dadiani, was compelled to cede his sovereign rights to Russia. The mountain region of Upper Svanetia was annexed by military force to the viceroyalty of the Caucasus. In Abkhazia, a region half-Christian and half-Muslim, with the Muslims looking to the Ottomans for support, the ruling prince Michael Shorvaghidze was deposed by force of arms in 1864, leading speedily to the final subjugation of the hitherto indomitable Circassians and the consequent emigration of some 600,000 Muslim Circassians to Ottoman territory in preference to living under Russian rule (see *CHAKRS*). In 1864 the serfs were liberated in Georgia, and those of Mingrelia, Abkhazia and Svaneti in the following years, although the burden of redemption payments imposed on the former serfs meant that their emancipation was formal rather than real.

There was another period of enlightened rule under the Grand Duke Michael, Alexander II's brother, Viceroy of the Caucasus 1866-82, during whose tenure of power Russia recovered during the war with Turkey of 1877-8 substantial areas of ancient Georgian territory which had been under Ottoman control since the 16th century. By the abortive Treaty of San Stefano and then the Congress of Berlin (1878), Russia acquired the port of Batum and retained her conquests of the important fortresses of Kars and Ardahan (*q.v.*), commanding the routes into eastern Anatolia (these last two districts were not recovered by Turkey till 1920 and 1921 respectively). The latter-years of the Grand Duke's governorship were however marked by the intensification of Pan-Slavist feeling which characterised Imperial policy at this time and which was calamitous for the non-Russian minorities of the empire, seen e.g. in the banning of 1872 of the use of Georgian for instruction at the Tiflis Theological Seminary, the main centre for the training of the Georgian priesthood and a focus for

Georgian nationalist and anti-Russian feeling (one of its future students was to be Joseph Dzhughashvili, the later Stalin). One aspect of the Georgian cultural reaction and re-awakening in these years was the appearance of anarchism and the Populist or Narodnik movement in Georgia from the 1870s onwards, together with the Marxist so-called "Third Group", one of whose leaders was Noe Zhordania, the future Menshevik and president of Independent Georgia (1918-21). The ending of serfdom and the break-up of feudal estates in Georgia, and the growth of railway and oil-producing industries in Transcaucasia at places like Baku, Batum, Tiflis and Kutaisi, created propitious conditions for the spread of these movements, aimed in the first place at the Russian Imperial government (which was in fact by far the largest landowner in Georgia). The 1905 revolutionary period was preceded in 1902 by peasant unrest in Guria in southwestern Georgia, where holdings were especially fragmented, and in 1905 itself, the Georgian (Marxist) Social Democratic Party organised strikes and commences. Subsequent repression by Russian and Cossack troops drew the attention of the West to Georgia's claims as a nation, seen for instance in Britain by the formation through the efforts of the Georgian scholars Oliver and Marjory Wardrop of the Friends of Georgia Committee, which worked on lines parallel to those of E. G. Browne for the Persian Constitutionalists.

During the First World War, Georgian émigrés organised themselves in Central Europe, under German patronage, and in 1915 a Georgian Legion was formed to fight on the Black Sea coastal front. In the Russo-Turkish fighting in the western Caucasus, the Muslim Georgian Lar (*q.v.*) and Ačars supported the Ottomans, and Armenian irregulars the Russians. With the fall of the Tsarist government in April 1917, the Georgian Mensheviks assumed power, but the crumbling of the Imperial Army allowed Turkey to recover her occupied territory in eastern Anatolia and to advance on Transcaucasia, wreaking vengeance on the local Armenians in retribution for Armenian slaughter of Muslims. The Muslims of Agharbaydjan refused to continue fighting against Turkey, and now, cut off from Russia itself, Transcaucasia on 12 April 1918 declared itself an independent federative republic, comprising Christian Georgia and Armenia and Muslim Agharbaydjan. The Ottomans still pressed for the retrocession of territory in Georgia lost to Russia in the 19th century, and had taken the offensive and occupied Batum. Centrifugal forces thus soon made the Transcaucasian Republic dissolve into its three component parts, and on 26 May 1918 an independent Georgian Republic, under German protection, was set up; peace was made between Georgia and Turkey in June, with Turkey regaining Batum, Kars, Ardahan, Aghalitskhe and Akhalkalaki. Hence from 1918 to 1921 a Menshevik or Social Democratic régime governed Georgia, headed by Zhordania, with a great upsurge of Georgian nationalism (Georgia's first university being opened at Tiflis in 1918) and hopes of the following of a peaceful policy of democratic socialism. After the Armistice of November 1918, British troops replaced the German ones in Georgia, with Oliver Wardrop as Chief British Commissioner to the three Transcaucasian republics, with his headquarters in Tiflis. On 27 January 1921 France and Britain recognised Georgia diplomatically as a sovereign state. However, the new state was under pressure, having to fight off Armenian claims to Georgian territory, the Kemalist Turkish forces to the south, and above all, the Bolsheviks. In February 1921 the Bolsheviks were

threatening Tiflis itself, and it fell after a heroic resistance on 25 February to a fearful sacking by the Red Army, Zhordania fleeing with his government by sea to Istanbul.

Georgia under the Soviets inevitably suffered from the recrudescence of Great Russian chauvinism and imperialism, the excesses of Russian troops provoking a guerrilla resistance movement in Georgia akin to the Basmaçi movement [q.v.] in Central Asia, culminating in a general uprising in 1923, ruthlessly suppressed. For the next two decades or more, up to 1953, Georgia groaned under the repression of Stalin and his henchman Beria, himself a Mingrelian and who exercised dictatorial powers in Transcaucasia 1932-8. Until 1936, Georgia was deprived of its autonomy and became part of a Transcaucasian Federated SSR, of which Tiflis was the capital, but in that year it became the Georgian SSR, and now forms one of the constituent republics of the USSR and includes the Abkhaz and Adzhara Autonomous SSRs and the South Ossetian Autonomous Oblast, with a total area of 27,000 sq. miles/70,000 km².

According to figures from January 1970, the total population of the republic is 4,666,000, 48% of these being town dwellers and 52% rural, the main towns being Tiflis (pop. 907,000) and the much smaller centres of Kutaisi, Rustavi, Sukhumi and Batumi. Ethnically, the population is returned as being 67% Georgian, but with considerable minorities of Armenians, Russians, Azerbaijanis, Ossetians and Abkhazians (see BSE², vii, 360-92). What proportion of all these may still be described as Muslim is unclear, but in 1922 the capital Tiflis had a fair number of Turks in its population, and in 1922, under Soviet rule, there was still being produced a local Turkish newspaper, *Yeni fikir*, and a journal, *Dan yıldızı* (see Mirzā Bālā, *Aghabekyān türk mef'ûrî*, Baku 1929); but the 1922 census enumerated only 3,055 Azerbaijani Turks and 3,984 Persians, presumably all Muslims. The Azerbaijani Turks in Georgia are naturally to be found mainly in the extension of the Aghabekyān plain to the east and south-east of Tiflis, in such districts as Borzhali and Karayaz, and they formed part of the Kazakh-Shanis al-Din tribal group (see Bālā, *JA* art. *Gurcistan*).

KURH, AL-KURH, a town and district of mediaeval Islamic times in the northern Hijāz, mentioned in early Islamic sources as of prime importance, but not now known under this name.

It seems very likely that the place had a role in the pre-Islamic history of the Wādī 'l-Kurā [q.v.], where the settlement of later Kurh was situated, although the principal towns then were Dūdān [modern al-Khuraibā] and al-Hijr [q.v.] or Madā'in Sābīh (modern al-'Ulā). According to Yāqūt, *Buldān*, Beirut 1374-6/1955-7, iv, 320-2, and al-Samūdī, *Wafā'* al-'uṣafī', ed. M. M. 'Abd al-Hamid, Beirut 1393/1971, iv, 1288, there was a well-known fair at Kurh in the Dīhābīyya, and popular tradition located there the destruction of the people of Hūd, sc. 'Ad [q.v.]. As the culture of Dēlāla and Lihyān decayed in the northern Hijāz, Kurh seems to have become the main settlement of the Wādī 'l-Kurā around the time of the coming of Islam, and *muhaddith* poets like Ibn al-Mubār [q.v. in Suppl.] and Umayya b. Abī 'l-Salt mention it. The tribe of 'Udhra [q.v.] lived in the district; the Prophet prayed in Kurh, and a mosque was built there (see Majdī al-Dīn Ibn al-Athīr, *al-Nihāya fī ghārīb al-hadīth wa 'l-shāhīh*, ed. M. M. al-Tannūṣī, Cairo 1383/1963, iv, 35, and H. Lammens, *L'aussence française entre la Syrie et la Hijāz, notes de géographie historique, in L'Arabie occidentale avant l'Islam*, Beirut 1928, 304-5).

Following a well-known process in Islamic geographical nomenclature, the name Kurh was applied both to the town, the administrative and commercial centre of the Wādī 'l-Kurā, and to the surrounding district, in effect, the Wādī 'l-Kurā itself. Hence al-Mukaddasī, 69, says that Kurh is one of the four regions (*manāzil*) of Arabia and also one of the towns of the Hijāz; al-Bakrī, *Muḥaddith* mū 'al-'adām, lii, 1056, describes it as the *kapān* of the Wādī 'l-Kurā, with a variant form of the name as al-Kurāb (loc. cit. and i, 247). It obviously flourished highly at this time. Al-Mukaddasī, 83-4, says that it was populous and much frequented by traders, and had many amenities; it had a strong citadel, a defensive ditch and walls; and Jews were a decisive element (*al-ghā'ib*) there (cf. Lammens, *op. cit.*, 307), though elsewhere (66) he states that Kurh (here meaning the district) was essentially Sunni in faith.

Where exactly, then, was the town of Kurh located, since the toponym is not in use today, although that of al-Hijr (*pace* Vidal, in *EP* s.v.) does in fact survive? C. M. Doughty (1879-7) enquired among the local people, but could find no memory of it, although he was shown a ruined site 'al-Mubbar' six miles south of al-'Ulā; he nevertheless thought that the mediaeval Kurh lay much further south towards Medina (*Travels in Arabia deserta*, London 1926, i, 161-2). Subsequently, A. Musil definitely identified Kurh with al-'Ulā (*The northern Hijāz, a topographical itinerary*, New York 1926, 295; but elsewhere, 277-28, n. 52, he placed it, more correctly, to the south of al-'Ulā). It has now been convincingly argued by 'Abd Allāh al-Najīb, himself a native of the region, that the site of mediaeval Kurh should indeed be located at the present-day ruins known

locally as al-Mabyṣṣ/al-Mābyāt (cf. *māḥ* "place where one halts for the night") along the main route down the Wādī 'l-Kurā to Nedāma. In an extensive plain, a spot well-fitted to be a flourishing commercial centre and market and a convenient staging-post, 22 miles/35 km. south of al-'Ula (al-Nasf), *The identification of the wādī 'l-Qurā and the ancient Islamic site of al-Mābyāt, in Arabian studies*, v [1979], 1-19). Jaussen and Savignac saw ruins there, and in 1968 the expedition of P. J. Farr, G. Lankester Harding and J. E. Dayton made a surface survey of the site [see *Preliminary survey in N.W. Arabia*, 1968, in *Bull. of the Inst. of Archaeology*, London, viii-x [1970], 299-304, section on "Ma'abiyat"]. Excavation of the site may well settle the question finally.

Bibliography: given in the article, but see also Abdullah al-Wahabi, *The Northern Hijaz in the writings of the Arab geographers 800-1150*, Beirut 1973, 220-2. (C. E. Bosworth)

KURHUB n. كُرْهُب al-Kurḥub, the ardent eulogist of the Zīrid princes of al-Kayrawān and of their governors, the Banū Abī 'l-Arab, and a virulent and shameless satirist. He dominated with great verve the poetic contests stirred up by his strong personality and his biting aggressiveness in the literary sessions of al-Kayrawān, owing his success as much to his lack of scruple as to the swiftness of his replies and his improvisations.

However, Kurhub remains a poet with a ready talent able to adapt himself to the thematic and formal exigencies of the genres employed by him. Variety of usage of verse-forms, suppleness of metres and purity of language combined in due course to place him in the élite of the poets of Ifrīqiya during the Zīrid period. He died at al-Kayrawān in 420/1029.

Bibliography: 'Umarī, *Masālik al-aḥyār*, ms. Paris 2397, xvii, ff. 96a-98a, and *Ṣafadi, Wāfi*, ms. Tunis 4250, xxii, 65-6, who both use Ibn Rashīk's al-Ummānī. See also 'A. R. Yāghū, *Ḥayāt al-Kayrawān*, Beirut 1962, 100, 214-15; H.-R. Idrīs, *La Berbérie orientale sous les Zirides*, Paris 1962, 791; Ch. Bouyabla, *La vie littéraire en Ifrīqiya sous les Zirides*, Tunis 1972. (CH. BOUYABLA)

KÜRILTAY, Arabic orthography of Mongol *kuriltay* from *kur-* "to collect, gather together", an assembly of the Mongol princes summoned to discuss and deal with some important question such as the election of a new *khan*. Duwaynī describes the *kuriltays* that preceded the accession of Ögedey, Güyük and Möngke. John de Plano Carpini was present in person at the *kuriltay* held in the Khangay mountains at which Güyük was elected and enthroned. The institution still survived in the time of Timur, when however it seems to have become little more than a parade. The very word has disappeared from the modern Mongolian language; it has been resuscitated by the Turks in the form *kurultay* and used in the sense of "assembly, congress".

Bibliography: Duwaynī-Boyle, i, 278-97, 228-55, ii, 555-602; J. A. Boyle, *The seasonal residence of the Great Khan Ögedey, in Sprache, Geschichte und Kultur der altäischen Völker*, ed. G. Hazai and P. Zieme, Berlin 1974, 145-51 (147); V. V. Barthold, *Four studies in the history of Central Asia*, tr. V. and T. Mätsersky, Lelden 1958, 27; G. Doerfer, *Türkische und Mongolische Elemente im Neupersischen*, I, Wiesbaden 1963, 435-7 (No. 303). (J. A. BOYLE)

KÜRIN, designation used by the Ottomans in the 16th/17th century and by the Russians in the 18th-19th centuries for the Lazghins (q.v.). Kürin (Russian: Kurinskiy yazık) is also the former designa-

tion for the Lazghin language, and appears as such in the 1926 Soviet census. (R. WIXMAN)

KÜRIN KHĀNATE (see LAZGHIN).

KŪRIYA, KAWRIYA, the Arabic name for the modern town of Coria in Spain, *monograph of the province of Cáceres on the banks of the Alagón River*. It was the Carthage of the Romans, who built its walls, as was noted by al-Kimiyari ("strong walls of ancient construction"). Al-Idrīsi states that Coria belonged to the *stilis* of al-Kaṣṣ, and was then "an attractive, well-built and spacious town, whose surrounding countryside was fertile and highly productive of fruit". Al-Isṭakhri's itinerary (43-7) places it at 12 days' journey from Cordova.

When the Muslims withdrew to the line of Coria, after the lamasins of the post-256/753 period (*Akhḥār madjūmāt*, 626/7), the town was thus left in the frontier zone, and must have been one of the major centres of the Berber settlement of the north west of the peninsula. There were frequent rebellions there. In 270/885 'Abd al-Rahmān I attacked there the rebel Abū 'l-Aswad Muḥammad b. Yūsuf al-Fihri (*ibid.*, 226/1066). Muḥammad b. Tūḥit al-Maṣnūdi rebelled there during the amirate of Muḥammad I, and in alliance with Ibn Marwān al-Muḥallī made Coria one of his main centres (Ibn Hazm, *Djama'ara*, ed. Lévi-Provençal, 466; Ibn Khaldūn, *Iḥṣār*, tr. de Slane, iv, 289). It is in this region and around this same period that the Christian sources place the revolt of Zeth/Zethi (*Cron. Alfonso III*, Valencia 1962, 62-3). The town became much fought over; it was taken by Ordóño I in 860, but recaptured by the Muslims in 862. Alfonso III besieged it without success in 868, but ended by taking it some years later. Yahyā al-Tudjībī, sent by al-Hakam II, attacked the King of Navarre and the Count of Castile near Coria (Ibn Khaldūn, *Asnaks*, i, 248). Al-Manṣūr [q.v.] passed by Coria on his route into the Christian territories during his campaign of 387/997. This town was taken by Alfonso VI (424/1079), and he fled there after the defeat of al-Zalāḥka [q.v.]. Abū Mutawakkil b. al-Aḥas mourned the loss of Coria in a letter to Yūsuf b. Tāḥīn (al-Bulal al-manṣūḥiyya, ed. Alouche, 23). It was occupied by the Almoravids in 513/1119-20, but definitively taken by Alfonso VII in 1143.

KURKÖB, a town in Khūzistān, on the road from Wāsit to Sūs (Susa). The statements regarding distances given by the Arab geographers were collected and arranged in P. Schwarz, *Iran im Mittelalter nach den arab. Geographien*, 1924, iv, 396 ff.; cf. also 431. The town was noted for its carpets; there was also a state *piras* [q.v.] manufacture there. A material called *sāsandjird* was made there, cf. de Goeje's glossary in *BGA* iv, v.v. Al-Isṭakhri and Ibn Hawkal say that the *sāsandjird* of Fāsā [q.v.] was better than that of Kurkōb; the latter was a mixture of silk and cotton, while in the former wool was used, cf. on the textiles of Kurkōb, R. B. Serjeant, *Islamic textiles, material for a history up to the Mongol con-*

quest, Beirut 1972, 45, and J. Karaback, *Die persische Naddimlerin Samaniden*, Leipzig 1951.

Bibliography: C. Le Strange, *The lands of the Eastern Caliphate*, 241, 246. Schwarz, op. cit., II, 98, where all the important quotations from the Arab geographers are given, to which should be added *Hudūd al-'Ālam*, tr. Minorsky, 131, 382.

(M. PLESSNER)

ŞURRA', Political organisation. The term *şurra'*, sing. *şari'* (A), occurs in Arabic historiography referring to a group of 'Irākians rising against 'Uthmān and later on against 'Alī, after he had accepted the arbitration. In European research, *şurra'* has been usually rendered as "reciters of the Kur'ān" (*şurra'* < š r' "to recite").

Brünnow was the first historian to try to assess the rôle of the *şurra'* as an independent group acting within a heterogeneous Khāridjite (q.v.) movement. Brünnow's results were partly rejected by Wellhausen, who held that the *şurra'* were not an autonomous movement which was merged in Khāridjism at a certain date. He claimed that the *şurra'* had been in close connection with the learned *fugahā'*, forming a wider circle of pious men around those *fugahā'*, the supposed nucleus of men of religious learning. It was the *şurra'*'s religious zeal, unhampered by scrupulous deliberation, which according to Wellhausen led them to act against an Islamic authority which in their opinion had failed to carry through the commandments of the Holy Book. Their ardour for the sake of Islam became obvious for the first time, when they took part in fighting against the Ridde (q.v.) rebels (Battle of the Yammāna or of 'Akrabā' (q.v.)). During 'Alī's war against Talba and al-Zubayr, they threw in their lots with him, and they supported 'Alī in his abortive warfare against Mu'āwiyā. When the Syrians proposed to resort to the judgement of the Kur'ān, they at first approved of 'Alī's compliance with this proposal, but later on, when the disastrous consequences of the arbitration had become obvious, they turned against 'Alī, blaming him ruthlessly for having preferred human decision to God's judgement. In the Khāridjite rebellions against 'Alī, and later on against the Umayyads, the *şurra'* are said to have been the most fanatical instigators. Wellhausen's account of the *şurra'* shows his general view of the early Muslim partum as resulting from a politico-religious conflict. This view, which aimed at studying the development of political and religious thought in Islam, has proved very fruitful, but it impedes us in realising the social conflicts concomitant to religious strife. Therefore, until recently the character of the *şurra'* was described vaguely or even misleadingly. If the *şurra'* actually had been a group of people applying themselves to a peculiar form of reciting the Kur'ān, or holding a certain view concerning the validity of the Kur'ānic commandments, why do we not find any trace of such a group in treatises on heresiology or on recitation of the Kur'ān? Besides this *argumentum a silentio*, one doubts whether Wellhausen's almost generally-accepted assumption was right that only after 'Alī's political defeat did the *şurra'*, repenting of their imaginary failure, become the fanatical partisans of the Kur'ān. For according to the sources, they had never been wholehearted followers of 'Alī's cause; hence they had no reason to consider themselves as traitors because they had urged 'Alī to accept the appointment of the two arbiters.

Recent research into the matter has tended to take the social groups into consideration, resuming in

principle Brünnow's idea. In a detailed study on Kūfa political alignments, G. M. Hinds has drawn an entirely new picture of the *şurra'*. He states that a group of people called *şurra'* first acted jointly against Sa'īd b. al-'Ās, 'Uthmān's governor in Kūfa until 33/53. The evidence adduced by Hinds proves that most of them were people who had settled in southern 'Irāk at the very beginning of the conquests and thus had acquired some privileges. But under 'Uthmān, the political situation in southern 'Irāk was changing rapidly; these early-comers who could not stabilise their position by amalgamating with an influx of population belonging to their respective tribal entities gradually lost their influence. Al-'Aṣṭar and Yazīd b. Kays, who were to play a prominent part in the subsequent troubles, were among these early-comers who feared lest they be ousted from their position. Their situation was even aggravated when 'Uthmān allowed the fighters of al-'Ādiyya now resident at Medīna to exchange their shares of 'Irākian land for landed property in the Arabian Peninsula. To carry through this measure meant first of all a careful distinguishing between the *şawfi* estates and *ghinnam*-land. The early-comers suspected that they would be the losers by these administrative measures. Fearing a blow to their pretended rights, they succeeded in removing Sa'īd b. al-'Ās from his post. They then elected Abū Mūsā al-'Aṣṭarī governor of Kūfa. During the events which led to the murder of 'Uthmān, the *şurra'* played only a secondary part, though al-'Aṣṭar figures in the list of the assassins. When 'Alī arrived in the neighbourhood of Kūfa, the powerful tribal leaders did not join him. They seem to have favoured a neutral position, which would have served their interests best. 'Alī, pursuing an egalitarian Islamic policy, did not even want to attempt a compromise with them. A coalition between him and the disappointed early-comers therefore came into being. Al-'Aṣṭar, Hudle b. 'Adī, and 'Adī b. Hāṭim are said to have been *şurra'*; now they were *şāh* leaders. During the fighting at Siffin, the *şurra'* are mentioned as separate para-tribal entities supporting 'Alī. When Mu'āwiyā suggested settling the points at issue by means of arbitration, the *şurra'* urged 'Alī to accept the proposal, because they envisaged a peace in which 'Alī would be able to accomplish an Islamic policy checking an ascendancy of the new-comers. When they felt that their dreams would not be realised, they turned against 'Alī, who refused to withdraw from the agreement. 'Alī tried to parate this dangerous internal opposition by giving high appointments to the most prominent *şurra'*, but the majority of the *şurra'* became his irreconcilable enemies. In the Khāridjite movement of the first century they are often mentioned as one of the most active groups.

In the light of these new results, it seems rather absurd to refer to the *şurra'* as "Kur'ān-readers". Shaban was the first to suggest a new interpretation. He holds that *şurra'* means "villagers" (*al-dī-şurra'*), denoting these participants in the early wars (*al-dī-şurra'*) against the Sāsānid Empire who had occupied the vacated estates of southern 'Irāk and whose *de facto* privileges had been threatened since 'Uthmān's reign. Shaban and G. H. A. Juynboll have adduced evidence corroborating this thesis, but it still remains speculative. The rendering of *şurra'* as "Kur'ān-readers" seems to be a result of the well-known fact that Muḥammad used to appoint reciters for stimulating the zeal of the Muslim fighters (see Šāhī Ahmad al-'Alī, *al-Tamīm al-dī-şurra'* 1972, 56 ff.); further-

more, the 'Irākīn *ḥurrā'* had appealed to the Kur'ān. But they did so, not because they hold some special doctrine concerning it, but because they wanted to enforce the judgement of the Kur'ān in that actual issue, where the reference made in the Ṣifīn agreement to an ill-defined "practice" (*ʿumma*) seemed dangerous for their interests.

KURRA b. SHARĪK b. MARṬIYAD b. ḤAZIM al-'Abī al-Qaṣṣārī, governor of Egypt 90-6/709-14 for the Umayyad caliph al-Walīd b. 'Abd al-Malik.

Kurra came from the group of North Arab tribes which had settled extensively in northern Syria and the Ḥims and which were in the forefront of the warfare along the Taurus Mountains with Byzantium. He himself came from the region of Kinnasīn [q.v.] to the south of Aleppo, and was thus a member of the experienced and capable cadre of Syrian Arabs whom the Umayyads liked to appoint to high civil and military office, the fact that al-Walīd's mother Walīda bint al-'Abbās was also from the tribe of 'Abs may well have helped further Kurra's career.

The early part of this last is very obscure. From indications in Michael the Syrian's chronicle, Lamens inferred that he may have served as governor of Kinnasīn or possibly of Armenia; it is obvious that he would not have been appointed to such an elevated post as the governorship of Egypt without considerable administrative experience previously.

Kurra was appointed governor of Egypt 'alā 'l-jalāl wa 'l-ḥarāḡ, i.e. as *amir* and as *amīl* or financial director, in place of the caliph's own brother 'Abd Allāh b. 'Abd al-Malik, whose governorship had been rendered difficult by economic hardship through failure of the Nile to rise sufficiently. Kurra accordingly reached the capital of Egypt, Fuṣṭāṭ [q.v.], on 3 or 13 Rabi' I 90/10 or 30 January 709 or shortly afterwards, and took up his duties there. The Arabic general chronicles give woefully little information about Kurra's governorship, if indeed they mention it at all, Tabatāi merely records the dates of his appointment and of his continued tenure of the office, and then records his death (II, 1200, 1208, 1266, 1305; repeated in Ibn al-Aṭhār).

Our best sources of historical information are naturally the local Egyptian ones, above all Kindī, *Wāḍi*, ed. Guest, 63-6, more briefly in Makrīzī, *Khitāṭ*, I, 302, also Ibn Taghribirdī, *Nuḡūṣ*, Cairo 1583/1963, I, 127-28, resumming several earlier authorities, but the information given here is fairly exiguous too. However, contemporary records, as embodied in the papyri discovered in Egypt over the last 80 years or so, round out the later chronicles and give a much better picture of the administrative and financial condition of Egypt during Kurra's governorship. They also supply a corrective to the unfavourable image of Kurra as a typically tyrannical Umayyad governor of the stamp of al-Ḥadīḡādī [q.v.], which grew up in the 'Abbāsid and post-'Abbāsid periods,

a condemnatory view which is expressed in both the Muslim and the Coptic Christian sources. Thus one oft-repeated saying attributed to 'Umar b. 'Abd al-'Azīz runs "al-Walīd in Syria, al-Ḥadīḡādī in 'Irāk, 'Uthmān al-Muzanī in Medina, Khālid al-Qasrī in Mecca and Kurra in Egypt! By God, the earth has become filled with iniquity!" (cf. the biography of Kurra in Zurīkī, *al-A'ṣām*, VI, 36-7). Another libellous story is that after the completion of the rebuilding of the mosque of 'Amr b. al-'Āṣ in Fuṣṭāṭ (see below), he called for wine and music-making and held an orgy there.

Amongst the occurrences of Kurra's governorship is mentioned a plot against his life staged at Alexandria by a group of ḥabāṭī Khāridjīs under al-Mubāḡḡir b. Abī 'l-Muḡannaḡ al-Tuḡḡībī, which failed, and the rebuilding of the mosque of 'Amr. At the beginning of 92/autumn 710, the caliph ordered Kurra to demolish some additions made by 'Abd Allāh b. 'Abd al-Malik and to rebuild the mosque entirely, Yahyā b. Ḥanzala al-'Amrī was appointed supervisor of work; the mosque was enlarged at the north-east and and in the ḡibla direction, which Kurra caused to be corrected from 'Amr's slightly inaccurate alignment. Whilst the work of rebuilding was in progress, the Friday prayers were held in the Kaṣrīyya al-'Asāl, and the mosque was completed in Ramaḡān 93/June-July 712 (see K. A. C. Creswell, *Early Muslim architecture*, Oxford 1932-40, I, 99-100, with extensive bibliography). Yet much of Kurra's governorship was necessarily taken up with the financial administration of Egypt and the economic and agricultural regeneration of the province, and it is here that the papyri give valuable information. The serious famine of 86-7/705-6 in the preceding governorship of 'Abd Allāh (see above) had left a legacy of hardship in the land. Kurra was therefore concerned to increase agricultural production and to bring *ḡhusd* land (*arḡ masād*) into cultivation once more. The chronicles mention his restoration of the Birkat al-Ḥabaḡh as an instance of this work of *ḡḡḡ*, this being planted with sugar cane [see KAṢA al-SUKKAR] and subsequently known as "Kurra's stable".

A further, controversial problem was that of the imposition of the poll-tax or *ḡḡḡḡ* [q.v.] on new Muslim converts from the Coptic community. The papyri show Kurra as keen to exact the full *ḡḡḡḡ* from these *masād*, to collect arrears of taxation and generally to safeguard the caliph's financial rights. Egypt suffered, like 'Irāk and other of the conquered provinces, from the flight of peasants to the towns in order to escape taxation, a process which had already been discernible in Byzantine Egypt; these fugitives were now rigorously pursued and brought back to their villages whenever possible. However, Kurra was equally concerned to punish tyrannical local officials, and he maintained control over the provinces by means of an efficient intelligence system or *ḡḡḡḡ* [q.v.]. The bilingual (Greek and Arabic) papyri also mention the levying of special taxes (*ḡḡḡḡ*) for the building of ships for *ḡḡḡḡ* or *ḡḡḡḡ*, presumably against the Byzantines in the eastern Mediterranean. Finally, Kindī notes that Kurra re-organised the *ḡḡḡḡ* of Egypt in 95/713-14, being the third person (after 'Amr b. al-'Āṣ and 'Abd al-'Azīz b. Marwān) to do this. As Becker observed (*Beiträge*, II, 124-3), this doubtless increased the Arab element in these departments; the official language there had already been changed from Greek and Coptic to Arabic just before Kurra's time (see *ḡḡḡḡ*).

Kurra died of the plague whilst still in office in

Safar 96/October–November 714 (Tabarī, ii, 1305) or on 23 Rabi' I 96/6 December 714 (Makrīfī, i, 302), and was succeeded (as *amir al-naḥs* only) by his trusted deputy 'Abd al-Malik b. Rūf al-Fahmī, who had been *Ṣāhib al-Ṣarf* or police chief under Kurra; Usāma b. Zayd became head of finances in Egypt.

(C. E. BOSWORTH)

KURRAM, KURAM, the name of a river which flows down from the western end of the Saif Rūh or Spīn Ghār range of the Hindu Kush–Koh-i Babā massif of eastern Afghanistan and which joins the Indus River in modern Pakistan just below 'Isā Khēl. The lower course of the river flows through Bannū (q.v.), and the middle reaches through the northernmost part of Wazīrīstān (q.v.). The upper valley, beyond the railhead of Thāl, forms what in British India and now in Pakistan is the administrative region of the Kurram Agency, a thin wedge of territory some 70 miles long and covering 1,305 sq. miles. From the headwaters of the river, the fairly easy Shūtargardān Pass leads towards Khōst and Kābul (q.v.), with the village of Fāiswār Kōt marking the present frontier between Afghanistan and Pakistan; this has always been one of the historic routes by means of which migratory peoples and armies from Central Asia and Afghanistan have descended to the Indian plains.

Little is known of the early history of the region of Kurram, though the Chinese pilgrim Fa-hien was there in the early 5th century A.D. Kurram is certainly mentioned in Ibn al-Aḥḥī, xi, 89, as the place (here spelt Kurramān) to which the Ghaznavid sultan Bahram Shāh fled ignominiously in 543/1148 when the Ghūrid chief Sayr al-Dīn Sūrt temporarily occupied his capital, Dīshkān (7th/13th century) further records that Kurramān was granted as an *iqṭā'*, together with Sūn-Jarān (? Shālān), the name of a modern left-bank affluent of the Kurram River, in the surmise of Raverly), by the Ghūrid ruler Mu'izz al-Dīn Muḥammad in 571/1176–7 to his slave commander Tāḡī al-Dīn Yildiz; Mu'izz al-Dīn used regularly the Kurram valley route for descending from Ghazna to the Indus valley (Tabakāt-i Nāḥīrī, ed. Habibī, Kabul 1341/1962–4, i, 411–22, tr. Raverly, London 1881–99, i, 498–500). The original Pathan inhabitants of Kurram were Sunnī Bangashī,

but ca. 1500 nomads of the Tūrī tribe of the Kartlānī group of Pathans appeared as vassals (*kamsāya*) of the Bangash and gradually came to control all the villages of the upper Kurram valley. The Tūrī are Shī'ī in faith, and claim popularity to be of Persian origin; in the early 15th/17th century they participated, with other Pathan tribes, in the general movement of the Rōshāniyya sect (q.v.) against the attempted domination of the Mughal Emperors of Dīhli.

In the early 19th century, Kurram never formed part of the Sikh empire of the Panjāb, but the Durrānī and Bārākzay rulers of Kābul claimed a vague suzerainty over the region. In 1845 they affirmed their claims by appointing a resident governor in Kurram, the later *amir* in Kābul Muḥammad A'zam Khān. In 1856 a British expedition was sent into the valley after Tūrī raids on the people of Khōst (q.v.). In autumn 1878 Lord Roberts entered the valley and temporarily occupied the region as an advance base during the Second Afghān War, pushing on from there to capture Khōst. The Shī'ī Tūrī began to complain of oppression by Afghān officials, and this created a sentiment in Kurram in favour of a British presence there or at least of some degree of British protection, especially as the Treaty of Gandamak made with Muḥammad Ya'qūb Khān in 1879 declared Kurram to be an assigned district, to be administered by the Government of India, together with the Khyber and the Pathan districts of northern Balūchistān. Hence in 1892 British forces moved up from Thāl at the request of the Tūrī, and in the next year the border with Afghanistan was delimited along the Durand Line at the head of the valley. In 1894 it became a political agency, and then at the time of Lord Curzon's creation of the North-West Frontier Province in 1901, Kurram became one of the five tribal agencies. British garrisons were withdrawn, and replaced by two battalions of the Kurram Militia, organised on the same lines as the Khyber Rifles (see GHAYAR PASS). It was down the upper Kurram valley that Nadir Shāh briefly penetrated with an Afghān force during the Third Afghan War of 1919.

Kurram now comes within Pakistan, and has its administrative centre in the town of Pāraḥīnār. The Pakistan government gives the Kurram Agency the same degree of autonomy as the other tribal areas, except that it enforces certain regulations identical with those prevailing in the directly-administered areas along the Indus, including the collection of land-tax; in fact, a negligible amount of taxation is collected from this economically poorly-endowed region, and the Agency receives back far more from the central government by way of subsidies and salaries of local militiamen and officials. It nevertheless forms the only tribal area along the Frontier where the central government's authority goes right up to the Afghanistan border. Administratively, Kurram is divided into two *sakhs*, an Upper Valley and a Lower Valley. The 1961 census estimated the population of the whole Agency at 200,512, with the population of Pāraḥīnār at 22,953.

(C. E. BCSWORTH)

KURRAT AL-'AYN, FĀTIMA UMM SALMĪ, also known as *Dhaldya*, *Zahrin-tāji*, *Tāhira* (see below), Persian poetess and Bābī martyr, was born in Kāzwin in 1237/1854, the eldest daughter of a famous *mudjtahid*, Hādīdī Mullā Muḥammad Sāhib Baraghānī.

She was educated in Kāzwin, and became proficient in the Islamic sciences. She was married to Mullā Muḥammad, the son of her uncle Mullā Muḥammad Taḳī, by whom she had three sons, Shaykh Ismā'īl, Shaykh Isrāhīm and Shaykh Ishāq, and one daughter. While staying with him in Karbālā, she joined the Shaykhī sect, together with her sister Mardīya and brother-in-law, Hādīdī Mullā Muḥammad 'Alī, an action that earned her the fierce hostility of her husband and father-in-law, though her own father remained neutral. She studied with Sayyid Kāzīm Raḡhū, then living in Karbālā, who was so impressed by a *risāla* she wrote on Shaykhī doctrine, that he gave her the *ḥaḡab* of Kurrat al-'Ayn. Her sectarian activities led finally to her divorce, by which time she had returned to Kāzwin. It was here that she first heard of the Bāb, and when Mullā Husayn Buḡhrāyā left for Shirāz to seek out the Bāb in Rabi' I 1260/April 1844, he took with him a letter from Kurrat al-'Ayn which so impressed the Bāb that he nominated her among the eighteen *Ḥurūf al-Hayy* ("Letters of the Living"). Later, in a letter addressed to certain Bābīs who had expressed doubt about the propriety of Kurrat al-'Ayn's activities, he described her as *Quswā-i Tāhira*, whence the name by which she came commonly to be known amongst the Bābīs and Bahā'īs. By this time she was back in Karbālā, where she is reputed to have preached without a veil, to have claimed to be the incarnation of Fātima, and to have proclaimed the abrogation of the Shar'ā. Her preaching of Bābī doctrines eventually alarmed the Ottoman authorities, and in 1263/1846 she was arrested and exiled to Iran. She travelled by way of Kirmānshāh and Ḥamadān, preaching openly on the way, and in due course arrived in Kāzwin, where she found herself subjected to the same family hostility as before. Matters came to a head when her uncle, Hādīdī Mullā Muḥammad Taḳī, a strenuous opponent of Babism, was found murdered (15 Rūh '1-Ḥa' 1263/25 October 1847). Widely suspected of complicity, it was no longer possible for her to remain in Kāzwin, and she left for Tehran, and thence for Māzandarān, where she joined the great gathering of Bābī leaders at *Badāshūt*. Here she preached constantly (sometimes unveiled, though this has been denied), and took an active part in the decisions taken there. After the break-up of the gathering by local villagers, she went to Māzandarān with some of the other leaders of the community, and stayed for some time in Nūr. In 1266/1850 she was arrested and taken to Tehran, where she was detained as a prisoner in the house of Maḥmūd Khān Nūrī, the Kulāntār [i.e.] of Tehran, for the next four years. After the attempt on the life of Naṣr al-Dīn Shāh in 1268/1852 by three Bābīs, Kurrat al-'Ayn, together with at least twenty-seven other Bābīs, was cruelly put to death by means that have been variously reported but are still unknown, the only eyewitness account—by Dr. Polak—merely stating that "she endured her slow death with superhuman fortitude".

By a strange twist of fate, Kurrat al-'Ayn was the only one of the eighteen "Letters of the Living" never

to meet the Bāb. She was famous both inside and outside the Bābī movement for her beauty, eloquence, and devotion to the cause. Her poetry, a fair amount of which has survived, is said to have been widely read by the Bābīs long after her death. Though doubts have been cast on the stories of her discarding of the veil, it cannot be denied that her way of life was extremely emancipated for her time, and she has remained a symbol of women's liberation in Iran ever since.

(L. P. ELWELL-SUTTON and D. M. MACBORN)

KURŞAN (A.), pl. *karāşina* and also *karāşin*; *karāşin*, "corsair, pirate", stems from Italian *corsale*, which has further given forms closer to the original but less commonly found, such as *karāşī*, pl. *karāşīkarāşī*, and *kursāl*, pl. *kursālīya*. In turn, Arabic has formed the abstract noun *karşana* "privateering, piracy", still in use today, as is also *karşin*, sometimes conceived of as a plural. In the colloquial there is further the verb *karşan* "to raid, act as a pirate", and the dialects also given to *karşin* the double sense of "corsair" and "boat". This latter term was an Andalusian one (cf. Pedro de Alcalá, . . . *De lingua arabica libri duo*, Göttingen 1883, 158), and it is uncertain whether one should link with the Spanish *corsario* the adjective *karşīyāfī* used by al-Sakā'ī, ed. G. S. Colin and E. Lévy-Provençal, *Un manuel hispanique de hisba*, Paris 1931, 50, to denote women who are supposed to have recovered their virginity (the two editors prudently suggest the translation "carried off by the corsairs?", and P. Chalmets, in *al-And. (1971 ff.)*, § 112, translates this term as *corsarias*).

The necessity felt by the Arabic language, probably in the course of the 3rd/9th century, to use a loanword shows that, even if piracy had long existed in the Red Sea and Persian Gulf, the Arabs (who called a pirate *ḡar al-baḡr* "sea-robber") had a distinct feeling that privateering had a different character. They

nevertheless adopted the same term to denote two distinct forms of activity, which are indeed often enough confused, even by Europeans; in fact, privateering consists of attacking enemy ships with the more or less explicit connivance of the authorities, whilst piracy proper is a purely private enterprise involving the capture and pillaging any vessels encountered.

i. The Western Mediterranean and the Atlantic

It was in the Mediterranean, "the sea of adventures" (Ch. E. Dufourcq, *L'Espagne catalane et le Maghrib aux XIII^e et XVI^e siècles*, Paris 1965, 574), that the Muslims most continuously practised *harasana* from the moment onwards when they established themselves along its shores and had to face attacks from the Christian powers there. In reality, the Arabs—and very soon, as will be seen, adventurers of European origin, renegades and captives—were merely participating in a traditional practice of the Mediterranean basin since the most early antiquity, whilst at the same time giving it, more or less consciously, a religious aura, since it was often in the name of Islam that the corsairs of the southern shores of the Sea acted, just as those of the northern shores acted at times in the name of Christianity. It was for this reason that privateering, if not piracy, soon came to be considered as an integral part of the holy war, *ghihad* (q.v.), and it is as part of this that the question is treated in the works on law.

Given the fact that it is impossible, in an encyclopaedia article, to go into detail and to trace the entire history of privateering and piracy as they were practised by men based on the coasts of the Muslim lands, what follows is a sketch of the broad features of the topic. Reference should be made to those sources which are in general well-documented and which have been utilised for this present article, and also to the articles *muslīmā* and *sarāḥa*, especially for technical details; the article *ṣirāḥ* in the Supplement should also be consulted for the topic of the ransoming of captives.

From the 1st/7th century onwards, there were added to the attacks against the islands and the shores of the western Mediterranean by corsairs coming from the Near East, raids undertaken by the people of Ifrīqiya, whose regularly organised fleets succeeded in gaining control, in the first decades of the 3rd/9th century, of Malta, Sicily and Pantellaria (see *qawṣana*), whilst the Balearic Islands were definitively taken over by the Spanish Umayyads in 290/903.

However, from the 2nd/8th century onwards, what one may properly call organised pirate activity began to take shape both in North Africa and in Muslim Spain. One notable action is that in which, after the suppression of the "Revolt of the Suburb" in Cordova (see *al-Andalus* and *qurṭuba*) in 202/818, a group of émigrés who practised piracy in the central and eastern Mediterranean gained control of Alexandria and in 212/827 seized the island of Crete, which they made into a Muslim possession and a centre for their further activities (see *ṣirāḥ*). It was likewise from Spain that there set out the Muslims who, between 278/892 and 287/894, established themselves at Fraxinetum (q.v.), where they founded a pirate state which lasted for 80 years. As early as 227/842, other corsairs sailed up the Rhône to Arles, and they renewed their incursions in 235/850 and 235/869; under the Umayyads of al-Andalus, the sailors of Pechina acquired a great notoriety in this respect (cf.

Lévi-Provençal, *Hist. Esp. Mus.*, I, 244, 349, 352, 355, II, 154-60). Some centuries later, the Khaldūn, *Hist. des Berbères*, text, I, 629, tr. de Slane, II, 227, summarised the two essential forms which the activities of the *harasana* took. "A more or less numerous group of corsairs gets together. They build a ship and choose as its crew men of proven valour. These warriors go off and descend on the coasts and islands where the Franks dwell, arriving there suddenly and carrying off everything they can find. They also attack the infidel ships, frequently capturing them, and then return home, laden with plunder and prisoners". This text is one of the ones rarely encountered on this subject in the Arabic sources, which dwell at much greater length on the Christians' naval enterprise against the Muslim lands, or on the spectacular attacks from the Atlantic made on al-Andalus by the "Northmen" from 230/844 to 355/966 (see *al-maḥāḍir*). In the Mediterranean, violent attacks by the Christians were more difficult, for a defence system had been established along the coasts, whether in Spain (see R. Ané, *L'Espagne musulmane au temps des Nasrides*, Paris 1973, 273-6) or from Alexandria to Tangier (see M. Talbi, *Émirat aghlabide*, 393).

Concerning the situation obtaining on the high seas, Ibn Khaldūn's remark (*Muḥaddima*, ed. Quatremère, II, 35, tr. de Slane, II, 42, tr. Rosenthal, II, 41) alleging that "the Christians could not even launch a plank on the Mediterranean" is probably correct for the 3rd/9th and 4th/10th centuries, when the Muslims did have command of the seas. Economic necessity accordingly compelled the states to try and assure the safety of navigation along the various commercial routes (see Ch. Courtois, in *Mélanges G. Marçais*, Algiers 1957, II, 51-9), but the international agreements made with this end in mind were not always respected by the pirates. The activities of these last were however controlled, and there are extant some interesting *fatāwas* on these. M. Talbi has published one of them (in *Cahiers de Tunisie*, 1956), pronounced by Saḥnūn (d. 240/854 (q.v.)) and concerning three associates who had organised a pirate enterprise but had then fallen out over the division of their booty. More interesting still is a *fatwa* of Muḥammad b. Saḥnūn (d. 256/870 (q.v.)) analysed also by Talbi (*Émirat aghlabide*, 334-37); it emerges from this that seizure was legal in the case of a Christian merchant ship making for a non-Muslim country, but illegal when it was a case of a building utilised for commercial exchanges between Christendom and Islam. Thus, whilst hindering freedom of navigation, pirate activity tended to divert traffic into a port, favourable to the Muslim lands.

After the beginning of the 6th/12th century and during all the Crusades period, privateering may be regarded as more often than not assimilable to the *ghihad*. The Zirids (see H. R. Idries, *Zirides*, index) organised it on a grand scale and sowed terror in the western Mediterranean, whilst the island of Djerba (q.v.), already an important base, became a real haunt of pirates, who were not content with attacking Christian ships but also infested the coasts of Ifrīqiya. Djerba was conquered in 520/1126 by 'Alī b. Yahyā, but soon resumed its traditional rôle, until it was captured in 599/1203 by the Normans of Sicily; it was to remain the plaything of Christian and Muslim rivalries until the end of the 8th/14th century, and then was to play a leading part in the events of the 10th/16th century.

Various dockyards built along the coasts of the Maghrib and al-Andalus (see *dar al-ḥimā'a*), especially at La Calle (Marāṭ al-Kharāṭ), Bône and Bougie,

provided local pirates with galleys which skimmed the coasts of the Mediterranean islands and swept the seas in search of prey. As well as the cargoes and crews seized on the open seas, the raids on the Sardinian and Corsican coasts secured slaves of both sexes which were much in demand.

Dufourcq (*op. loc. cit.*, index) has gathered together considerable material on the 7th/13th and 8th/14th centuries. From this, it appears that, despite the rulers' desires to make maritime commerce safe, the occasional prohibition of privateering warfare and concluding of international treaties, the Mediterranean remained for adventurers of all varieties a special field of activity. After having died down somewhat, from the Muslim side, in the 7th/13th century, *barqana* revived with fresh force, and the islands and shores of the Christian world were often ravaged. On the Christian side, their exploits yielded nothing in scope or violence to the Muslims; Sicily was a fine jumping-off base and arsenal, and Djarda was neutralised for a while by Roger de Lauria and Ramon Montaner.

The other bases in the Maghrib remained active, but the situation hardly changed in the course of the next century. On the other hand, it took a completely new turn in the 10th/16th century, when there began the so-called "Barbary corsairs", whose activity was to last until the 19th century. This is the period in which such figures as the Barbarossa brothers [see *ʿArūḍī* and *ḡāḡa al-ʿaḡā*], Dragut [see *ḡāḡa al-ʿaḡā*], Sinān Paḡha, Ayḡān, and many others for whom there is not space here to recount the prowess, distinguished themselves. The articles devoted to the most famous of them should be consulted, and one should merely note that *ʿArūḍī* chose Tunis as his base and from there, was able to defy the power of Charles V and to seize Algiers. After his death in 924/1518, his brother *ḡāḡa al-Dīn* (d. 933/1526), who had offered the province of Algiers to the Ottoman sultan, resumed his pirate activities against Mediterranean shipping and his attacks on the Christian towns. For his part, Dragut (d. 972/1565) set up his base in Djarda, and then succeeded Murād Aḡha, whom he had helped, together with Sinān Paḡha, in seizing Tripoli from the Knights of Malta; he may be considered as the founder of the new regency.

It is, it is true, difficult to distinguish between naval warfare, privateering and piracy in the activities of these corsairs, whose common feature is that they succeeded in founding "Barbary" states in more or less nominal dependence on the Sublime Porte and that they established pirate organisations which necessitated numerous interventions by the Europeans. The battle of Lepanto in 979/1571 [see *ʿArūḍī*] put an end to privateering, but made no difference to pirate activity, which continued to rage until the conquest of Algiers.

Amongst these pirates, Murād Ra'īs was especially notable. He was the first, in 993/1585, to venture into the Atlantic (if one accepts the expedition of *ḡāḡa al-ḡāḡa* [see *al-Mas'ūdī*, *ʿArūḍī*, I, 258-9 = § 274] and his companions from Cordova in the 3rd/9th century, see Lévi-Provençal, *Hist. Esp. Mus.*, I, 354, III, 342). Murād went on to plunder the Canary Islands, and en route, put in at Salé, which was not as yet the nest of corsairs of which later history was to have a burning memory.

It should also be noted that, at the moment when these Barbary states mentioned above came into existence, there was an event of highest importance happening in Spain, *sc.* the reconquest of Granada, followed by the exodus of the Andalusians and then,

in 1610, by the expulsion of the Moriscos [q.v.]. Like their predecessors, these last groups settled in various parts of North Africa where, without always openly proclaiming *ghidda*, they constituted a fresh impetus and a new pretext for the Barbary pirate activity, seeing in this a means of mounting a revanche. Algeria and Tunisia remained very active centres (see M. de Epalza and R. Petit (eds.), *Études sur les Moriscos andalous en Tunisie*, Madrid 1973, index), but it is from this point onwards that piracy based on the port of Salé came into prominence, and the history of this is well-documented for us (see H. de Castries, *Les corsaires de Salé*, in *Revue des deux mondes*, xvi/2 (1903); L. Brunot, *La mer dans les traditions et les industries indigènes de Rabat et Salé*, Paris 1920, 151-72; and R. Coindreau, *Les corsaires de Salé*, Paris 1948). During the 8th/14th and 9th/15th centuries, Salé [see *Salā*] had been a centre for privateering on a relatively modest scale only, like other ports of the Moroccan littoral like Tetuan [see *ṭṭṭṭṭṭ*], whose corsair fleet had however been destroyed by the Spaniards in ca. 803/1400, or al-Mahdiyya [q.v.], which on occasion gave refuge to pirates, whose captured booty was sold to the sultans. In the 17th century, however, the twin towns of Rabat became, under the influence of Andalusian emigrants, a real corsair republic, in which certain strong personalities stand out, these being used for diplomatic missions (e.g. the Bēnache and *var.* - Sidi 'Alī b. Aḡha, who was charged by Nawīly Ismā'īl with a mission to Louis XIV for the hand of the Princess de Conti). These Salé corsairs, called "Turks" by the Europeans, were generally no more Turkish in origin than were the "Barbary" pirates; they included in their ranks Andalusians and Moroccans, to be sure, but also Greeks, Russians, Portuguese, Spaniards, Frenchmen, Dutchmen, etc., renegades and even Christians. The diverseness of the polyglot crews allowed them to hoist false colours and to reassure ships under attack by addressing the enemies in the tongue of their own nation. One notable feature of the Salé pirates was that, being right on the spot for combing the North Atlantic seas, they were bold enough to sail as far as Iceland, to reach the fishing grounds of the coasts of the New World and Nova Scotia, or to enter the Channel and reprovise themselves in the Netherlands, where they had accomplices. For almost a century, from 1668 to 1757, privateering was organised by the sultans, and may be considered as taking the place of a national fleet.

There is no need here to dilate upon the various types of vessel employed by the corsairs and pirates, nor upon their arms, for these questions will be studied under *ḡāḡa* and *ḡāḡa*. It should merely be noted that until the end of the 16th century, the pirates in the Mediterranean used galleys propelled by a large number of oarsmen (sometimes more than 200) and that the later sails of these ships were only auxiliaries; on the other hand, in order to secure a speed superior to that of the merchant ships, these galleys were slender in shape (the proportion of length to breadth reaching up to 9 times) and hence unstable. In 1606, a Dutch renegade called Simon of Danser taught the Algerians to construct and to operate sailing ships, and Salé, which, because of the bar and shallow waters, could only use light vessels, benefited particularly by this innovation, and built so-called "round" (i.e. with a proportion of only 3 or 4) ships, which were much more stable.

Finally, thanks to the anonymous author of *La connaissance des Pavillons ou Bannieres que la plupart des Nations arborent en mer*, The Hague 1737 (cf.

Colindreau, *op. laud.*, 211-22), we have information about several of the flags of the Muslim corsairs.

Bibliography: The above account, inevitably brief, can only give a slight sketch of *kargana* in the western Mediterranean and the Atlantic. Outside the archives, some of which have been used by the authors cited above, and the *Sources inédites de l'histoire du Maroc*, references should be made to the works cited in this text, which usually have detailed bibliographies, and to the following basic works: F. Dan, *Histoire de Barbarie et de ses corsaires*, Paris 1649; J. Morgan, *Histoire des États barbaresques qui exercent la piraterie*, Paris 1757; L. de Mas-Latrie, *Relations et commerce de l'Afrique septentrionale avec les nations chrétiennes au moyen âge*, Paris 1886; S. Lane Poole, *The Barbary corsairs*, London 1890; P. Gossee, *The history of piracy*, London 1932 (Fr. tr. P. Teilac, *Histoire de la piraterie*, Paris 1933, 2nd edn., 1952); Ch. Pens, *Les capitifs français du Maroc au XVII^e siècle*, Rabat 1944; G. Marçais, *La Berbère musulmane et l'Orient au moyen âge*, Paris 1946, 225-8; L. de las Cagigas, *La cuestión del corso y de la piratería berberisca en el Mediterráneo*, in *Curso de conferencias sobre la política africana de los reyes católicos*, I, Madrid 1951, 127-49. II. In Turkish waters

Within a decade of the Saljuq victory at Manzikert (Malazgirt [q.v.]) in 463/1071, the Turkish invaders had extended their raids to the Aegean. In 474/1081, or shortly afterwards, the Turks of Nicaea (İznik [q.v.]) constructed a fleet at Kios (Gömlük [q.v.]), possibly for the transport of troops. However, the Byzantine Emperor, Alexios I Komnenos, barred it before it could put to sea. A more formidable Turkish maritime force appeared in 462-2/1069-9, when a Turkish chieftain called Trachas (his name is probably a Greek form of Çakal, with the aid of a Smyrnaïot Greek, built a fleet at Smyrna (İzmir [q.v.]), which harried the Aegean coast of Asia Minor from Smyrna to Adramyttion (Edremit [q.v.]) and captured the neighbouring islands of Chios (Sakla), Lesbos (Mytilene), Samos (Samsan), and possibly some other islands. The unexpected appearance of Trachas, so soon after the Byzantine destruction of Arab pirate bases in Cilicia, led to the construction of a new fleet at Constantinople in 484/1091, and the expulsion of Trachas from the islands. His rival, the Saljuq KİMLİ Arslan, poisoned him in 485/1096.

After the defeat of Trachas, Alexios I was able to recapture the coastlands lost to the Turkish invaders and built a number of coastal fortresses between Abydos (near Çanakkale [q.v.]) and Syria. Muslim corsairs did not disturb Byzantine waters again until the last quarter of the 6th/12th century, when Arab pirates reappeared in the eastern Mediterranean. This does not mean that piracy in general diminished. In fact, it increased with the growth of commerce in the Levant following the Crusades. A pattern arose of professional pirates in the Aegean and Mediterranean finding employment in the Byzantine and other fleets. The same phenomenon was to occur with the growth of Turkish fleets.

The Latin occupation of Constantinople in 602/1204 did nothing to prevent piracy, despite the presence of Venetian fleets in the Aegean. In 633/1236, the Despot Manuel of Epiros could claim that pirates made the sea too dangerous for his bishops to cross from Greece to the Laskarid capital at Nicaea. The Latin conquest seems merely to have increased the number of Latin pirates, such as the Lombard

Licario, who was to serve Michael VIII Palaiologos as Admiral after the Byzantine recapture of Constantinople in 659/1261. Muslims, however, were not in evidence. The Laskarid administration effectively fortified the boundaries with the Saljuqs in Asia Minor, preventing the Muslim access to the Aegean coast. Ibn Bībī [q.v.] refers to an *amir-i samāhī*, possibly commanding Saljuq vessels in the Mediterranean, but there are no further references to Muslim maritime activity.

Despite Michael VIII's construction of a powerful Byzantine fleet after 659/1261, his reign saw the foundation of Turkish naval power in the Aegean. Pre-occupied with regaining Byzantine territories in the west and warding off the threat of an Angevin invasion, Michael neglected his eastern frontier. Turkish raids and settlements followed and, as in the 5th/11th century, the invaders soon took to the sea. Already in 676-7/1278, there are records of pirates, including the obviously Muslim 'Saladinns' at Ania to south of Ephesus. In 681-3/1284, Michael VIII's successor, Andronikos II Palaiologos, disbanded his father's fleet, which he evidently regarded as an unnecessary expense after the removal of the Angevin threat. The results were disastrous. Not only were the seas unprotected against burgeoning Turkish piracy, but unemployed Greek sailors now defected to the Turks. After 682-3/1284, Turkish sea-raids extended to the Cyclades and even into the Sea of Marmara and Black Sea. By 700/1300, the Turks had occupied the Aegean coast and, according to the Catalan Muntaner, were pillaging Chios and the surrounding islands.

It was these years in the late 7th/13th and early 8th/14th centuries that saw the establishment of the Turkish emirates on the Aegean coast. Since these states sheltered corsairs and used their own vessels simply to collect booty by harrying foreign settlements or commerce, rather than to protect trade or acquire new lands, they may be described as "pirate-states". The most notorious was Aydin (see Aydinoglu), especially in the days of Umür Paşa [q.v.] but ships from other maritime emirates of Menteşe, Saruhan and Karaman [q.v.] also engaged in sea-borne raids. In the Black Sea, Gıyazi Çelebi (d. ca. 734/1324?) established an emirate around Sinop [q.v.], whence he made raids on Genoese and Trapezuntine commerce and settlements. The Ottomans do not seem immediately to have taken to the sea as corsairs. When Orkhan [q.v.] gave lands to Kara Mırsal after the conquest of Nicomedia (İznikmid, İznit [q.v.]) in 1737/1337, his purpose appears to have been to protect the shores of the Gulf of İznit against Byzantine raids.

During the 8th/14th century, Turkish raids became a feature of life in the Aegean. In 718/1318, corsairs from the mainland of Anatolia ravaged Santorini, and in 726/1326 Marino Sanudo reported how the Turks infested the Cyclades, their attacks made easier by the disunity among the Latin Lords of the islands. In 739/1328-9, Umür of Aydin occupied the harbour of Smyrna and began his attacks on Christian ships and on islands and territories in the Aegean and mainland Greece. In 736/1335, however, he signed an agreement with Andronikos III Palaiologos not to attack Byzantine shipping. It was possibly in part to compensate them for loss of booty that Andronikos employed Umür's troops as mercenaries in Albania. With the death of Andronikos III in 742/1341, Umür again began to raid throughout the Aegean and, between 742/1341 and 745/1344, intervened in the Byzantine civil war on behalf of his friend and ally John Cantacuzene.

Piracy particularly affected Venetian and other Latin commerce. In 732/1331, Venice had imposed a treaty on the Catalans of Athens, forbidding them to help or employ Turkish corsairs, although this did not prevent the Catalans calling on Umür to defend the Duchy of Athens against the claims of Gautier de Brienne. The activities of Umür and other Muslim corsairs eventually led Pope John XXII to assemble a fleet under the command of the Venetian Pietro Zen to which Venice, the Papacy, France and the Knights of St. John contributed vessels. This force did much damage to the Turkish corsairs and defeated the fleet of Yakubluğ Beg of Karai in the Gulf of Eöremli in 735/1334. However, it disbanded after the death of Pope John in the same year, and piracy continued as before. More effective was the Latin occupation of the port of Smyrna in 745/1344, and the death of Umür in 749/1348, after which *Khiḍr* of Aydin signed a treaty with the Latins, according to which he undertook to burn all the ships in the emirate, forbid all acts of piracy and offer no help to corsairs. Large-scale raids may have ceased, but in a letter dated 751/1350 the Doge Andrea Dandolo indicated that Turkes from Aydin continued to attack Christian shipping. Piracy based on other emirates seems also to have flourished. After 671-2/1266, Ahmed *Ghāzī* of Menteşe preyed on shipping between Cyprus and Rhodes.

Ottoman raiders began to appear on the Aegean in the 1300s. They seem to have infested the Sea of Marmara considerably earlier, leading the Emperor John VI Cantacuzene to clear the old harbour of Heptaskalon in Constantinople some time after 750/1349, as a base against Turkish pirates. The annexation by Bāyezid I [g.w.] of Sarukhān, Aydin and Menteşe brought the western Aegean shoreline under Ottoman control by the 1300s. With Bāyezid's construction of an arsenal at Gallipoli, the Ottomans were able to build sizeable fleets. In 793/1391 an Ottoman fleet of 60 vessels ravaged Chios, the Cyclades and the coasts of Euboea (Negroponte, Ighribot) and Attica. To meet this new threat, Venice allotted a fleet to Francesco I Crispo of Naxos.

The defeat of Bāyezid by Timur in 804/1402 and the subsequent restoration of the emirates put an end to the depredations of an Ottoman fleet under the Sultan's auspices, but did not otherwise prevent piracy. In 806/1403, the restored ruler of Menteşe, İlyās Beg, signed a treaty with Venice in which he undertook to prevent acts of piracy. He was evidently unsuccessful, since in 813/1410 a Venetian fleet appeared off the ports of the emirate as a forceful reminder of the *beg* to adhere to the terms of the treaty. It made no difference. In 819/1416 vessels from Ottoman territory raided the Cyclades and, at about this time, the Florentine Buondelmonti reported Turkish raids on all the Aegean islands except Patmos. Perhaps the shared reverence for the shrines of certain saints, such as St. George of Levritia, called Koç Papatr or Koç Baba in Turkish, led the Turks to leave the monks of Patmos in peace. Piracy remained endemic throughout the 9th/15th century, and measures such as the imposition of direct rule on the Venetian Duchy of Naxos in 899/1494 only temporarily deterred the corsair fleets of Karū Hāsan and others.

There were, however, significant changes in the Aegean in the late 9th/15th and 10th/16th centuries. Under Mehmed II and his successors, the Ottoman fleet became an instrument of conquest and a weapon of imperial policy rather than simply a pirate fleet of the Sultan. Mehmed II's fleet, for example,

played an important part in the conquests of Constantinople in 857/1453, Sinop, Trebizond (Trakzon [g.w.]), and Lesbos (Midilli) in 865-7/1460-2 and Euboea in 875/1470. Under his successor Bāyezid II, Ottoman fleets appeared in the Ionian Sea during the war with Venice between 904/1499 and 908/1503. As the frontiers of naval warfare moved south and westwards from the Aegean, Turkish pirates such as the famous Kemal Re'is [g.w.] extended their activities to North Africa and the western Mediterranean. By 947/1540 most of the Aegean coasts and islands were Ottoman possessions, and the odd exceptions such as the Venetian Tinos (İstindia) and the Genoese Chios, which in any case fell to the Ottomans in 974/1566, did not threaten Turkish hegemony in the area.

The Aegean was now an Ottoman sea and the Sultan had no wish to encourage piracy in his own waters. The Ottoman government attempted to control the activities of corsairs, forbidding the construction of privateer vessels without special permission. In 967/1560, the *hāzī* of Janikmid received instructions to seize an illegally-constructed ship; whereas in 972/1565, the *levendis* [g.w.] of Rhodes (Rodos [g.w.]) and Menteşe were encouraged to build ships and serve in the Imperial Fleet. The squadrons permanently based in the Aegean at Kavalla, Lesbos and Rhodes presumably guarded the seas against pirates as much as against enemy action. In the 990s/1580s Mustafa 'Ali of Gallipoli or Gelibolu [g.w.] looked back with nostalgia to the mid-century when the Imperial Fleets kept the sea free of corsairs.

It is, however, most unlikely that Muslim pirates ever disappeared from the Aegean. The western shores of Anatolia seem, in fact, in the 10th/16th century to have been a forcing ground for pirates who, after acquiring sufficient ships and booty in their native waters emigrated to Algiers (al-Ujāzīr [g.w.]), or later to Tripoli (Tarabulus al-Gharb [g.w.]) or Tunis [g.w.], where their raids on non-Ottoman Christian shipping changed them, in Ottoman eyes, from pirates to warriors of the faith. The famous *Khayr al-Dīn* Barbarossa [g.w.] and Şāliḥ Re'is of Algiers, for example, originated from the west coast of Anatolia, found fame in North Africa and, like many lesser known corsairs, later served in the Ottoman Imperial Fleet. Mustafa 'Ali specifies Kaşdaglı in particular as an area from which many North African pirates originated.

In the late 10th/16th century, piracy seems to have increased throughout the Mediterranean, and the Aegean too was affected. It is most likely that the disorders in Anatolia in this period found their counterpart on the sea.

Bibliography: There are no modern studies of Turkish pirates in the Aegean. The only coherent account, relating to the 16th century only, appears to be Gelibolu Mustafa 'Ali, *Menā'id ul-nefā'is fi kamā'id ul-maghānis*, facs. edition, Istanbul 1956, 54-9. For Izacbas, see *The Alexiad*, Books VII, VIII, IX, XI, and A. N. Kurat, *Caka Bey*, Ankara 1966. There are scattered references to piracy in Pachymeres, *Da Michaelis et Andronico Palaeologis*, ed. Bekker, Bonn 1839; Nikephoros Gregoras, fr. J. L. van Dieten, *Rhōmāische Geschichte*, Stuttgart 1973; Buondelmonti, *Liber insularum archipelagi*, ed. iii. In the Persian Gulf

Piracy has been endemic in the Persian Gulf since ancient times, which is hardly to be wondered at in view of the poverty, until very recently, of the peoples dwelling around its shores and the richness of the commerce which has at various periods passed through its waters. Piracy has flourished most in time of war or in its wake, when authority has broken down and the predatory instincts of the maritime tribes have been given full rein. Thus, for example, the Karmatian revolt, the Mongol invasions and the collapse of the 'Abbasid caliphate were all accompanied or followed by maritime depredations on an extensive scale.

To all intents and purposes, piracy in the Gulf was indistinguishable from maritime warfare, which in turn originated in political, dynastic, sectarian or racial conflict among the littoral principalities. Hostilities at sea were apt to degenerate swiftly into the indiscriminate plunder of any and all shipping, not only in the Gulf but in the adjacent seas also. Such was the case with the first great piratical campaign of modern times, that waged by the seafaring tribes of 'Uman against the trade and shipping of the Gulf, the Arabian Sea and the western Indian Ocean in the late 11th/17th century. After the expulsion of the Portuguese from Maskat, Sulayr and their other footholds on the 'Uman coast by the Ya'rubī imām, Sulṭān b. Sayf (1059/1649-79), the 'Umanīs pursued their vendetta against the Portuguese by attacking and plundering their shipping and their settlements on the coasts of India, Persia and East Africa. Under Sulṭān b. Sayf's successors, and especially the fourth Ya'rubī imām, Sayf b. Sulṭān (ca. 1103-23/1693-1722), 'Uman became a formidable maritime power; and commensurate with the increase in her naval strength the scope of her marauding activities widened to embrace vessels under any flag whenever they might be encountered. The depredations of the Maskat and 'Umanī pirates only ceased when civil strife broke out in 'Uman over the succession to the Ibādī imāmate following the death of the Ya'rubī imām, Sulṭān II b. Sayf, in 1132/1720-19.

A wave of piracy followed the Afghān incursions into Persia in the 1130s/1720s and again after the death of Nadir Shāh in 1160/1747. On both occasions, as during the height of the 'Umanī piratical campaigns, some of the chief sufferers were the European trading establishments on the Persian coast. The most notorious pirate of the 12th/18th century was Mir Muḥannaḥ b. Naṣir of Bandar Rīg, whose family, an offshoot of the Za'ab tribe dwelling on the south-

ern shore of the Gulf, had migrated to the Persian coast earlier in the century, intermarried with Persians, espoused Shi'ism and settled at Bandar Rīg. While still a youth Mir Muḥannaḥ had helped coordinate the murder of his father, and when his mother reproached him with his crime he slew her in a fit of rage. He likewise put to death his two sisters for receiving offers of marriage, and exposed his first-born child, a daughter, to die on the seashore. The greatest triumph of Mir Muḥannaḥ's career was the capture and destruction of the Dutch trading settlement on Khārg or Khārk I Island (see KĀRAO) in Rajab 1179/December 1765-January 1766. Eighteen months later he despoiled the Maskat coffee fleet on its way to Basra in the summer of 1182/1767. It was his final coup. Driven from Bandar Rīg by his own people, who had finally sickened of his monstrous cruelties, he sought refuge in Dhū 'l-Ka'da 1182/ March 1769 at Basra, where he was unceremoniously put to death by the Ottoman *mutesellim*.

An outbreak of piracy by the Ka'b of the lower Kārm followed the siege and capture of Basra by the Persians in 1189-90/1775-6. A far more serious upsurge, however, was that which occurred after the death of Karīm Khān Zand (q.v.) in 1193/1779. The coastal tribes of Fārs, most of whom were of Arab descent, threw off the authority of Shirāz and became a law unto themselves, plundering any vessels that came within their reach. Their depredations were shortly to be overshadowed by those of the Kāsimī tribal confederacy (see AL-KAWĀSIM) of Shārdja (al-Shūnkā) and Ra's al-Khayma (q.v.), who took advantage of the disturbed state of Persia to re-establish themselves at Lūga (q.v.) (which they had first seized after the death of Nadir Shāh and from which they had been expelled by Karīm Khān in 1179/1765) and to prey upon shipping—European and Indian as well as Arab and Persian—off the Persian coast and in the Straits of Hormuz.

Part of the impulse for the Kāwīm's marauding derived from their persistent quarrel with the Āl Bū Sa'īd rulers of 'Uman, a quarrel which in the last two decades of the 18th century came to focus upon control of the stretch of coast to the north of Subhār, which the Kāwīm endeavoured—with some success—to wrest from the Āl Bū Sa'īd with the object of commanding the approaches to the Gulf and waylaying vessels passing through the Straits of Hormuz. It was largely the exploits of the Kāwīm that were responsible for the southern shore of the Gulf, from Rams to Dubayy, becoming known to European mariners in these years as "the Pirate Coast". A new twist, and added strength, was given to the Kāwīm's piratical activities, and to their feud with the Āl Bū Sa'īd, by the assertion by the Wahhābīs of Najd of an ascendancy over the Pirate Coast in the first decade of the 19th century. The conversion of the Kāwīm and other maritime tribes to the Wahhābī practice of Islam injected an element of fanaticism into their piratical forays, so that the campaign of depredation that ensued took on the character of a seaborne *jihād*.

The Kāsimī sea fleet, operating with Wahhābī encouragement, if not under actual Wahhābī direction, was reckoned in 1223/1808 to number some 70-80 large dhows; if fishing and pearling vessels were included, the Kāsimī confederacy's total strength was said to exceed 800 vessels manned by 28,000-33,000 fighting men. (Another estimate, made in 1233/1818, put the resources of the Arabian maritime tribes at 69 large dhows and 161 smaller craft, manned by 10,000 fighting men.) Controlling Lūga and part of

Kijim Island, and with bases at Khawr Fakkan, Dibba and Khawr Kalba, facing the Gulf of 'Uman, the Kawāsim were able to strike at will at any ships entering or leaving the Straits of Hurmuz. Often they would lie concealed, waiting for their prey, in the deep wadling inlets of Khawr al-Sha'im (Elphinstone's Inlet) and Ghubbāt 'Alī (Malcolm's Inlet) on the western and eastern sides respectively of the Musandam peninsula (Ra's al-Dubāl), the existence of which was not known to European seamen until the first survey of the Gulf was undertaken by the Bombay Marine (the armed maritime service of the English East India Company) after 1235/6/1820. Hence the Kawāsim were able on a number of occasions to elude pursuit by the cruisers of the Bombay Marine by slipping into these hidden anchorages.

With the passage of time the Kawāsim grew bolder, ranging as far afield as the coasts of Kutch and Kathiawar, the ports of the Madrasawi and the lower reaches of the Red Sea. They sailed in squadrons of up to twenty dhows, taking their prizes by closing alongside, grappling and boarding. As often as not they would put the entire crew of a captured vessel to the sword—generally amid clamorous avowals of religious fervour. Women, children and slaves taken captive were afterwards either distributed among their captors or, in the case of the first two, held for later ransom. A fifth of all booty taken was reserved for eventual consignment to the Sa'ūdī ruler at Dir'iyya [q.v.], the Wahhābī capital. A good portion of the remainder was customarily disposed of at Bahrayn, which served as the principal clearing-house for the proceeds of Kāsimī piracy.

After the capture of a number of European and Indian ships by the Kawāsim the British authorities in India dispatched an expedition to attack Ra's al-Khayma, Lingē and the Kāsimī outposts on Kijim I. and at Shūnas, on the 'Uman coast, in the autumn and winter of 1809-10 (Sha'bān-Dhu 'l-Hijja 1214). The expedition had only partial success in crippling the Kawāsim's naval capabilities. Many Kāsimī dhows were absent from their home ports on piratical or trading voyages, while others had been hidden, after word of the expedition's objectives had leaked out ahead of its sailing, in the inlets of the Ra's al-Jibāl. The expedition's commanders were also inhibited by the orders given them not to cross swords with the Wahhābī ruler. A second expedition, dispatched in the winter of 1819-20 (Muharram-Dumādī I, 1235), after the defeat of the Wahhābīs and the destruction of Dir'iyya by Ibrahim Pasha the previous year, was far more effective in subduing the Kawāsim. Ra's al-Khayma and the other piratical ports were reduced, the Kāsimī war fleet was burned or prize, and the Kāsimī chieftains, along with the other principal gajayās of the Pirate Coast, were made to subscribe to a treaty (the General Treaty of Peace of Rabī' I, 1235/January 1820) outlawing piracy for ever.

Neither the expedition of 1809-10 nor that of 1819-20 had attempted to bring to book the man who was undoubtedly the most reckless and ferocious free-booter in the Gulf in the entire 19th century—Rahma b. Djabir, head of the Āl Djalāhima branch of the 'Utūb, whose base for more than thirty years was located at Khawr Hasan in north-western Katar [q.v.]. Rahma's blood-stained career had its origins in his falling out with the Āl Khalfā of Bahrayn [q.v.] over the division of the spoils from their joint conquest of the island in 1207/1783. From that time until the end of his life he conducted an unrelenting war

of attrition, marked as much by fierce daring as by atrocious cruelty, against the trade and shipping of the Āl Khalfā and their kinsmen, the Āl Šabāb of Kuwayt. His most remarkable single feat was his capture in Dhu 'l-Kāda 1224/December 1809 of twenty large Kuwaytī dhows, whose crews he massacred to a man. He escaped the attentions of the British expeditionary force at that time in the lower Gulf, partly because of confusion over his status (he was a Wahhābī protégé) but mainly because his stronghold at Khawr Hasan was deemed too difficult of access to attack from the sea. Some time later (in 1227/1812 or 1231/1816—the accounts vary) he fell out with the Wahhābīs and was forced to abandon Khawr Hasan. He established a new lair in 1234/1818, after the Wahhābī collapse, at Dammām, on the Hašā coast, from which he continued to harry the seaborne commerce of Bahrayn.

Rahma b. Djabir was again spared retribution at the hands of the British expedition of 1819-20, less because he had now assumed the guise of a Persian dependant than because his vendetta against the Āl Khalfā, however, brutally it might be conducted, was reluctantly conceded to come within the category of legitimate warfare and not that of piracy. As a consequence of the improved security established by the British expedition and the subsequent system of "watch and cruise" operated by the Bombay Marine, Rahma b. Djabir's fortunes steadily declined, until by 1242-3/1826 his fleet had been reduced to a single dhow. Now seventy years of age and totally blind, he had his last fight with the Āl Khalfā war fleet off Dammām in Dumādā II, 1242/December 1826-January 1827. Surrounded and outnumbered, he calmly set fire to the magazine of his ship and blew her, himself and everyone aboard to the gates of Paradise.

The last serious piratical outbreak in the Gulf occurred in Shawwāl-Dhu 'l-Hijja 1250/February-April 1835, when the Banī Yās of Abū Dhabī (Abū Zabd), hitherto little given to piracy, made a wholesale attempt upon the trade of the Gulf in a desperate bid to recoup their economic fortunes, which had been severely depressed by prolonged warfare with the Kawāsim and the loss of the annual pearl fishery for several years running. Brought to action off the Tūmb by the Bombay Marine sloop *Elphinstone* on 18 Dhu 'l-Hijja 1250/16 April 1835, the Banī Yās war fleet was outfought and scattered. The following month the British political resident in the Gulf, Captain Samuel Hennell, persuaded the rulers of Abū Dhabī, Šardīja, Ra's al-Khayma, Dubayy and 'Admān to agree to a suspension of hostilities at sea among themselves for the duration of the coming pearling season. The maritime truce signed on 22 Muharram 1251/21 May 1835 ran for a period of six months, to 29 Radjab 1251/21 November 1835. It was renewed every spring for the next seven years, being gradually extended in length to cover the full twelve months of the year. In 1259/1843 it was renewed for a ten-year period, at the expiry of which it was made permanent, in a treaty signed by the principal Trucial Šaykhs on 25 Radjab 1269/4 May 1853. Though isolated outbreaks of piracy were to occur at intervals up to this century, notably in the narrow waters between Bahrayn and the Hašā coast, the institution and consolidation of the truce system brought to an end the great age of piracy in the history of the Gulf.

KURSI, an Arabic word borrowed from Aramaic (Syriac form *kursayā*), in Hebrew: *kuss*; see Th. Nöldeke, *Mandäische Grammatik*, 128; Fraenkel, *De vocabulis peregrinis*, 27; L. Koehler, W. Baumgarten, *Lexicon in Veteris Testamenti libros*, 446) which can signify seat, in a very general sense (chair, couch, throne, stool, even bench). In the daily life of mediaeval Muslim it refers more specifically to a stool (i.e. seat without back or arm-rests), and there are a number of other terms which are applied to a throne (*karir* and *laḥḥit*, for example).

Kursi is found on two occasions in the Qurʾān (II, 256, XXXVIII, 33), and the commentators (al-Tabari, *Djāmiʿ al-bayān*, Cairo 1323, III, 7; al-Zamakhshari, *al-Kashshaf*, Calcutta 1856, I, 170; Ibn al-Djawzi, *Zād*, Cairo 1964, I, 304; al-Bayḍawī, *Anwar*, Leipzig 1846, I, 139; Ibn Kathir, *Tafsir*, Cairo 1952, I, 309-310; al-Suyūṭi, *Tafsir al-Dalāʾil*, Beirut 1969, 56; al-Kāsimi, *Mahasin*, Cairo 1957, III, 659-67) tend to accord it the sense of throne, since its function (in the first verse, the throne of God which encompasses both Heaven and Earth, in the second, the throne of King Solomon) is to bestow a particular majesty on the one who sits there. In opposition to an apparently anthropomorphic concept of God "sitting" on a seat, another explanation has been put forward according to which, of the seven heavens encircling the universe, the two furthest from the globe are the *ʿarṣ* (see below) and *kursi* (the commentators and the *Rasād al-Ḥikmah al-paʿāl*, Cairo 1939, II, 2; Ibn Sīnā, *Riḥāl al-ʿArṣ*, Ms. Nuruz-maniye 4894, fol. 494 b-495 b). *Kursi* (in the Qurʾān) need not therefore indicate a seat in the usual sense of the word. There are other interpretations of the term, some allegorical (*kursi* = the absolute knowledge of God, or his kingdom), some literal, for example: *ʿarṣ* (Qurʾān, XVII, 44; XL, 15; XLIII, 8; LXXXI, 20) = throne of God, while *kursi* = footstool, a bench set before the throne. This throne of God has been an object of debate among theologians (A. J. Wensinck, *The Muslim creed*, 67, 90, 93, 115 and especially 148, concerning *ʿarṣ* and *kursi*). The site of a certain *Shiʿi* sect, at an early period in Muslim history, attributed a particular sanctity to an empty *kursi* (al-Balādhuri, *Anṣāb*, ed. S. D. Goitein, VI, 249; J. Walhausen, *Die religiös-politischen Oppositionsparteien*, 85).

The distinction between throne (*ʿarṣ*) and footstool (*kursi*) probably reflects the tendency of mediaeval Muslims to indicate by means of the term *kursi* all kinds of supports: the word *kursiʿ*, which, among other usages (including that of footstool!) indicates an ink stand and the base of the small oriental table, may be replaced, in certain texts, by *kursi* (J. Sadan, *Le mobilier au Proche-Orient médiéval*, Leiden 1976, 91-4). To this meaning of "support", that of "lectern"

should also be added. Many examples, designed to support copies of the Qurʾān (with straight or crossed legs) adorn mosque and can be found in various museums (*ibid.*, 124-5, n. 470; J. A. Janssen, in *Mélanges Marçais*, III, 19-23 and especially O. Kurz, in *Islamic art in the Metropolitan Museum*, ed. R. Ettinghausen, 299-314). The term tends thus to become loaded (especially in colloquial speech) with senses which, in richer and more exact terminology, are covered by distinct terms. Among the other objects designated by *kursi* the following are examples: a support (stool) on which the turban is deposited during the night (Dozy, *Suppl.* II, 455-6); a chair of particular design used by women in childbirth (*ibid.*); a stool for daily ablutions (al-Tanūkhī, *al-Mustagāḥid*, 108); in mediaeval Egypt, a seat for flour sellers (Maimonides, *Tekharit*, ed. Derenbourg, I, 137); an astrolobe-stand (Dozy, *loc. cit.*); a slab into which a pointed instrument is implanted, through the base (*ibid.*); in Mecca, a kind of moving ladder (or staircase) near the Kaʿba (*ibid.*); among the Persians, a kind of stove (a low "table", under which a fire is lit; blankets are laid on this table and then wrapped round the knees to provide warmth, *ibid.*); the base of a column, pedestal (Beaune, s.v.); a plate supporting the powder compartment and percussion mechanism of the flint-lock rifle (*ibid.*); in Spain, small pieces of silver or gold worn by women in their collars and known in Spanish as *corcs* (Dozy-Engelmann, *Glossaire des mots espagnols*, 93); *kursi* is the seat of a bishop, his see, diocese etc. (Dozy, *Suppl.*, *loc. cit.*); in orthography, each of the characters (*alif*, *wāw*, *yā*) on (or under) which the *kasra* is placed; in calligraphy, a kind of embellishment in square form (Huart, *Calligraphie*, 352).

In certain miniatures illustrating an Arabic astronomical work, which represent *ghat al-kursi* (Cassiopeia) in the form of a woman seated on a chair with back and arm-rests, we find the shape of a genuinely "classical" chair (E. Weill, in *Art Orientalis*, II, 8-9 and figs. 6, 44, 47, 51), which, copied from one manuscript to another, tends to become modified to the point where it is adapted to the mediaeval Muslim concept (Sadan, *op. cit.*, 125-6). In general, the *kursi* is nothing more than a stool. But, surrounded by other lower seats (cushions for example), such a stool can draw attention to the person who is seated there (see the dimensions indicated by M. D. Lutfi in *Sumer*, xvi, 129-30, in the Arabic section, unless it is lecterns that are in question). These *kursi*-stools were of various heights. Some had straight legs, others crossed legs (they are illustrated by a rich iconography, as well as by texts: O. Kurz, *loc. cit.*; Sadan, *op. cit.*, 123-33). In the modern period, *kursi* is also applied to various chairs of "western-style" form.

Bibliography: given in the article.

(CL. HUART - J. SADAN)

KURȚUBA, Spanish Córdoba, French Cordoue, English, Italian and German Compoa (KORDOVA), Latin Compuia, a town of southern Spain situated at 370 feet above sea-level on the right (north) bank of the central course of the Guadalquivir (from the Arabic al-Wādī al-Kabīr "the great river"), the ancient Baetis, with 2,234,000 inhabitants, is at the present day the capital of the province of the same name which lies on both sides of the river in the heart of Andalusia.

The southern and smaller half of the province, practically the famous La Campiña (see KAMPANIYA), rising in the south-east to a height of over 1,200 feet, is more level, hot and fertile, being especially devoted

to viticulture, while the northern, larger half which begins in the Sierra de Córdoba immediately to the north of the town, rises to heights over 2,900 feet high in the central Sierra Morena (María Montes) with the plateau of los Pedroches which inclines in a northerly direction to the Zájar valley in the west and the Cuadernal valley in the east; this plateau is called *Istim al-Balḥita* by al-Idrīsi and by others *Fahs al-Ballāṭ* "Field of Oake", and in it lies the little town of Pedroche, known to the Arabs as *Bīṣrawj* or *Bīṣrūj* (whence al-Bīṣrūjī [q.v.]). The north has a more temperate climate and includes great stretches of hill country, suited for sheep and horse breeding (*caballos cordobeses*) and rich deposits of coal and minerals. The name Córdoba has frequently been explained as from the Phœnician: *Qbrt טובר*, "good town" since Conde first suggested this etymology in his *Descripción de España de Xerif Aldeir*, Madrid 1799, 161 (for even rather etymologies, see Mador, vi, 646 and al-Makkari, i, 355). The name is certainly not Semitic but Old Iberian (cf. Salduba, the Old Iberian name for Caesar-Augusta, whence Saragossa, Zaragoza, there is a Salduba = Marbella in the south between Málaga and Gibraltar). After the Second Punic war it became known as an important and wealthy commercial city (as *Cordubense*) under the name *Κορδοβή* or *Κορδοβή* or Corduba. It was finally taken for Rome by C. Marcellus in 152 B.C., colonised with Roman citizens and as Colonia Patricia raised to be the capital of the Provincia of Hispania Ulterior. As Cordoba had taken the side of Pompey, it was severely punished by Caesar after the battle of Munda in 49 B.C., but in Imperial times it remained the capital of the province (it was the home of the two Senecas and Lucan) alternately with Hispalis (Seville) and Italica (later the Arabic Ṭāḥṣa).

Towards the second decade of the 5th century A.D., Cordova was devastated when the Vandals conquered Baetica en route for North Africa. In 551 it passed to the Byzantines, who had come into the Iberian peninsula to help King Athanagild of the Visigoths, and the Greeks spread all through southern Spain. They probably took upon themselves the rebuilding of the old protective wall of the Roman *urbs quadrata* and the enlargement of this enclosure in a southwards direction, as far as the northern bank of the river. In 571, King Leovigild, Athanagild's successor, recovered it from the Byzantines; but although it was an episcopal see, it remained a place of no importance under the Visigothic dominion.

At the time of the Muslim conquest of Spain, Cordova was leading a precarious existence; its protective enclosure was partially ruinous on the west side, and a heavy surge in the river's height had destroyed its bridge. The freedman Muḥṣib al-Rūmī, lieutenant of Ṭāḥī b. Zayd, occupied the town without resistance in Shawwāl 92/July-August 711, and three months later, in Muḥarram 93/October-November 711, the fortified church of San Acisclo to the south-west of Cordova, where 400 knights of the Cordovan nobility had held out against the invaders, surrendered to al-Muḥṣib; he treated the Cordovan citizens with clemency and entrusted the guarding of the town to the Jews. The governor al-Hurr b. 'Abd al-Rahmān al-Ṭāḥīfī transferred the capital of al-Andalus from Seville to Cordova (97-200/716-19). His successor, the governor al-Samb b. Mālik al-Khawlāfī (100-271/719-21) restored the old Roman bridge and the ruins part of the protective enclosure, and he founded the first Muslim cemetery of the town, sc. the Naḥḥarāt al-Rabaḥ or "Cemetery of the Suburb" on the northern bank of the river. In ca. 133/750, the

governor Yūsuf b. 'Abd al-Rahmān al-Fihlī expropriated the church of San Vicente, where he established the first cathedral mosque (al-Djāmi') in Cordova. This governor (249-38/747-56) was overthrown by the Umayyad prince 'Abd al-Rahmān I b. Mu'awiya al-Dākhilī [q.v.], the only Umayyad who had escaped from the massacre of his house in Syria; the great period of prosperity of the city now began, and lasted throughout the Umayyad dynasty (q.v.) of Cordova, which was independent of the 'Abbāsids in Baghdad (138-403 or 422/756-203 or 203).

This incomparable period of splendour of the western rival of Baghdad, the city of the caliphs, is uniquely perpetuated in the great mosque lying just in front of the lofty ancient Moorish bridgehead, the Christian fortress-tower of La Calahorra (Arabised from the Iberian Calagurris), the Ka'ba of the west; although, at the reconquest in 1236, it became a Christian cathedral and was disfigured by alterations, it has on the whole faithfully retained its Arabic character with its forest of pillars, its outer court (Patio de los Naranjos), the wall which encircles it as if it were a fortress or monastery, and the bell-tower, which is a work of the 16th century constructed from the remains of the 11th/10th century Arab minaret. Also, the name el La Mezquita or "The Mosque" has remained the popular one for this building. However, all the other splendid buildings and monuments of this world-famed period of splendour in the early middle ages have disappeared except for a few wretched fragments. When the shrewd 'Abd al-Rahmān I had laid the foundations for the supremacy of his dynasty in circumstances of exceptional difficulty, by attaining some success in putting a stop to the rivalries and quarrels of not only the Arabs of North and South but also between them and the Berbers of North Africa, the Spanish renegades and the Mozarabs who remained a constant weakness to Arab rule in Spain and brought about its ultimate fall, he began the building of the great mosque in the last two years of his life 171-2/787-8. His son and successor Hishām I (172-80/788-96) completed it, and built the minaret (often called in Spain *sauma'a* and *manara* = *minara*), but 'Abd al-Rahmān II (206-38/822-32), son and successor of the *Amīr al-Hakām* I (180-206/796-822), found himself forced to enlarge the building; by extending the 11 naves southwards he added 7 transepts with 10 rows of pillars and built the second *miḥrab* into the south wall, where was later constructed the chapel of Nuestra Señora de Villavieja (833-48), while his son and successor Muḥammad I (238-73/852-86) had in 852-6 thoroughly to overhaul the older building, which had been too hurriedly put up; he devoted particular attention to the decoration of the doors and walls, railed off the *maḥṣan* reserved for the *Amīr* and the court in front of the *miḥrab* by a wooden screen and built a covered passage (*sabīl*) from Alcázar, the palace to the west of the mosque, to provide a direct and private entrance to the *maḥṣan* at the daily prayers. 'Abd al-Rahmān III, al-Nāṣir (300-50/912-61) [q.v.] who marks the zenith of the Arab epoch in Spain, rebuilt the minaret, which had been severely damaged by the earthquake of 880, in splendid fashion. He enlarged the *paḥū* or courtyard in a northerly direction, demolished the ancient *sauma'a* and built another one, the forerunner of the great Hispano-Moorish minarets of the 6th/12th century, which support an actual bell hidden behind a stone revetment. It was this same prince who was the builder of the celebrated country estate *Nadīnat al-Zahrā'* (now called Córdoba la Vieja) for his beloved al-Zahrā', one-and-a-half

hours' journey north-west of Cordova at the foot of the Sierra (cf. al-Maḥḥarī, i, 344 ff.). In 1855, Pedro de Medrano identified the remains of this town, and in 1925 the whole of its acinte was declared a national monument; since then, excavations have restored some of the splendours of the great caliph al-Nāṣir's creation, and especially, the great hall called the "Salon Rico", which is at present to a considerable extent restored. The most beautiful extension of the mosque proper (almost doubling it) was carried out by the learned and scholarly caliph al-Hakam al-Mustansir bi-llāh (350-66/964-76), son and successor of the great 'Abd al-Rahmān III, who ordered his Prime Minister or Grand Vizier (called *hājib* in Spain) Dīn'ar al-Saklābi to extend the colonnades in the mosque to the south by the addition of 14 transepts, and built a splendid new *maḥṣūra*, a new *ṣabā* and the third noble *mihrāb*, which alone has survived in its entirety. The last great extension was made by Hishām II al-Mu'tayyad's (366-99/976-1009) powerful vicer, the regent al-Manṣūr (Almanzor, d. 395/1002), who added seven colonnades to the whole length of the building in the east and thereby raised the total number of naves (previously 11) to 19, but threw the *mihrāb* out of its proper place at the end of the central axis of the sanctuary (on account of the precipitous slope down to the Guadalquivir (it was found impossible to extend the building further to the south). Like al-Zahrī in the north-west, al-Madīna al-Zāhira ("the flourishing city"), founded to the east of Cordova by al-Manṣūr to be the seat of the government and its offices, was destroyed in the period of revolution in the beginning of the 5th/11th century and has now quite disappeared.

After the complete extinction of the Umayyads with Hishām III al-Mu'tadd (418-28/1027-31), Cordova became a republic under the presidency of three *ḥāwarid*: Abu l-Hazm *ḥāwar* b. Muḥammad b. *ḥāwar* (1031-43), Abu l-Walid Muḥammad (1043-64) and 'Abd al-Malik (1064-70). In the latter year it passed to the 'Abbadids of Seville; in 1091 to the Almoravids, who in 517/1123 built the protective escante of the eastern part of the town; and in 1148 to the Almohads. With its conquest by Ferdinand III of Castile in 1236, it was doomed to inevitable decline.

Of the countless Arab scholars who belonged to Cordova, we will only mention here Ibn Hazm (d. 456/1064 (a.u.)), Averroes (Ibn Ruṣṣid (a.u.)) (d. 595/1198) and Maimonides (d. 601/1204 [see 18M MAYNO]).

Bibliography: Makḥarī devoted a whole book to Cordova, i, 297-462 (epitomised in Gayangos, *History of the Mohammedan dynasties in Spain*, 1, 200-49), though it contains many literary and historical notes referring to other places; Idrīsī, *L'Afrique et l'Espagne*, 1866, 108-14 (Arabic text) = tr. 256-66; Yāqūt, iv, 58-61; al-Kawfī, *Aḥḥad al-biḥā*, 370; Madro, *Diccionario geogr.-estadist. hist.*, vi, 646-60; Schack, *Poesie und Kunst der Araber in Spanien und Sicilien*, ii, 182-224; Contreras, *Estudio descriptivo de los monumentos árabes de Granada, Sevilla y Córdoba o sea La Alhambra, El Alcázar y la gran Mezquita de Occidente*, Madrid 1885 (2nd ed. 1878) (with drawings and plans), 40-108; Rodrigo Amador de los Rios, *Inscripciones árabes de Córdoba*, Madrid 1879, 360 ed. 1892; idem, *Una excursión a las ruinas de Medina Az-Zahra en la España Moderna* (1. julio 1906), 19-48; K. (C. F. SNEYDOLD · [M. OCANA JIMENEZ])

AL-KURTUBI, ABŪ 'ABD ALLĀH MUHAMMAD B. AHMAD B. ABĪ BARR B. FARĀZ AL-ANṢĀRĪ AL-KHAZRAJĪ AL-ANDALUSĪ, Muslim scholar of the Mālikī, law school, an expert on *ḥadīth* and well-known for his commentary on the *Kur'ān*. He is the subject of an article in the *Dihāḡ* of Ibn Farḡūn, which is devoted to biography of the Mālikī *fuḥalā*¹ of Spain and the Maghrib up till the 803/14th century. He also features in an article in *Nafḥ al-ḥib* of al-Maḳkarī. Very little information is known concerning his life. Born in Spain, he was one of those who travelled outside this country (al-Maḳkarī). Al-Dhahabī is said to have written of him: "He travelled, he wrote and he took lessons from the masters." In fact, he made his way to the Orient and settled at Munayy Abī 'I-Khaṣayb in Upper Egypt (Minat Banī Khayyāb in the version of Ibn al-Imād, *Shiḥāḥ*, v, 335); he died and was buried there in 671/1272.

Al-Dhahabī says of him, in his *Ta'rīkh al-Islām*, that he was an imām versed in numerous branches of scholarship, an ocean of learning whose works testify to the wealth of his knowledge, the width of his intelligence and his superior worth. Al-Kutubī, in his *Uyūn al-ismā'īyāt*, refers to him in approximately the same terms. But in addition to being a conscientious scholar, he was remembered as a pious man, inclined towards asceticism and towards meditation on the life after death. He appeared in public attired in a single garment and wore a small cap (*jaḥḥiya*) on his head.

Among his masters, the best known is Abū 'I-'Abbās Ahmad b. 'Unar al-Kurṭubī whose commentary on Muslim, *al-Muṣṭafī fī sharḥ Muslim*, he studied. This man was an eminent Mālikī *faḥl*, born in Cordova in 578/1173, and died in Alexandria in 656/1259. (He was a teacher of traditions and a foremost expert on the Arabic language. He travelled in the Orient where his reputation became widespread. Al-Nawawī quotes his *Muṣṭafī* in a number of places in his own work.) There is mention of two other masters from whom he learned *ḥadīth*: the *ḥafīz* Abū 'Alī al-Ḥasan b. Muḥammad b. Muḥammad al-Bakrī, and the *ḥafīz* Abū 'I-Ḥasan 'Alī b. Muḥammad b. 'Alī b. Ḥafṣ al-Yaḥṣabī.

Among his works, his biographers first mention his commentary on the *Kur'ān* entitled *al-Djāmi' li-ḥikām al-Kur'ān wa 'l-mubayyīm li-mā taḥammama min al-ḥikām wa-ḥadīth al-furḡān*. Then they refer to the following titles: *al-Asmā*, on the interpretation of the most beautiful names of God; *al-Taḥkīm fī aḥḥāl al-ḥikām*, where "he followed the pattern of the Tībān of al-Nawawī, while producing a more complete work and making use of greater learning"; *Kiṣāb al-Taḥkīm bi-ḥikām al-ḥikām* [see *al-Maḥḥāl*]; *Sharḥ al-Taḥkīm*; *Kiṣāb Kam'* al-ḥijr bi 'l-ḥudūd 'l-ḥanū'a wa-radd al-ḥijr al-ḥanū'a bi 'l-ḥudūd wa 'l-ḥanū'a, which Ibn Farḡūn considers the best example of writing in this genre; and an *Urḡfāna*, where the names of the Prophet were brought together. All these titles testify eloquently to the religious preoccupations of al-Kurṭubī.

His commentary is of great richness and of great utility. All the authors who have spoken of al-Kurṭubī acknowledge it and insist on the benefit which may be derived from it. From the introduction onwards, he puts emphasis on the worth of the *Kur'ān*, on the elevated rank of those who are its "bearers", on the eminence in the eyes of God of those who make an effort (*iḡḥād*) to derive from it by *istikhāḥ* teaching which conforms to the *ma'āwī*, that is to say, to that which God wishes to signify: "what is known with certainty by the man who

knows the Book of God, is that he is to reject that which He forbids and to remember that which has been explained to him in this Book, to fear God and stand in awe of Him, to hold himself under His protection, and to abstain from disobeying Him through shame in respect to Him; then he is charged with the burdens of the prophets (*ja-ma'nuhu bi-mawān al-b'ā'a 'l-nabīya*) and he must become a witness to the Resurrection before adopts of religions of a different persuasion (*ma'af*).¹ Surh is the high estimation placed by al-Kurtubī on the role of the commentator.

The entire Introduction is divided into chapters which constitute a sort of ethic, methodology and theology of the commentary. Attention is drawn to the superior qualities of the Kur'ān (*fadd'id al-Kur'ān*) which comes from the light of the essence of God (*ja-kana min nūr al-hāqīq*); God gives his servants the strength to bear it (4 ff.). Then (20), al-Kurtubī turns to the manner of reading the Book of God (*hayfayyat al-islām li-Rabb al-'Alāh*) in a chapter which may be compared with that of al-Ghazālī in the *Iḥyā'*, entitled *al-dāb' jūd' al-Kur'ān*; he discusses at length the problem of knowing whether the Kur'ānic text may be chanted or set to music: he maintains that it is impious to believe that the Kur'ān requires embellishment by the human voice. An important chapter (17) concerns the inward dispositions of men who pursue knowledge of the Kur'ān: they must rid themselves of all hypocritical consideration of the self (*faḡḡat min al-riyā'*) and, turning towards God through *faḡba* and *ma'af*, attain with self-purification to perfect sincerity (*ḡḡāḡ*). This could be interpreted, on account of the opposition of the two terms *riyā'* and *ḡḡāḡ*, well-known in Sūfism, as a sign of deep mystical piety, and this is confirmed by the passage which follows (20) dealing with that which the soul must observe and not neglect. Then comes a technical chapter (23) on the *ḡḡāḡ* of the Kur'ān and the effort which must be made to read and recite it correctly. A few more headings may be noted: Value of commentary and commentators (26); That respect for the Book and its sacred character is an obligatory requirement of the reader and of the "bearer" of the Kur'ān (27); Against a commentary based on personal point of view (*ḡḡāḡ*) (31); On interpretation (*taḡyīn*) of the Book through the *summa* of the Prophet (37); How to study and understand the Book and the *summa* (39); and On the meaning of the saying of the Prophet: "This Kur'ān has been revealed according to seven letters" (or readings): *musḡla 'alā sab'at al-ḡḡāḡ*; "therefore read according to that which is the easiest for you" (41). Particularly interesting is the chapter (49) on the unity (*djām'*) of the parts of the Kur'ān; it comprises a precise and concise history of the text, as far as the recension of 'Uthmān, with a study of the arrangement (*ḡḡāḡ*) of the *sūras* and verses (59). After which, al-Kurtubī defines the meaning of the words *sūra*, *djā*, *ḡāḡa*, *ḡāḡ* (65), and he replies to the question as to whether there are in the Book words foreign to the Arabic language (68), which leads him to speak of the inimitability of the Kur'ān (*i'ḡḡāḡ al-Kur'ān*) (59), of which he examines ten aspects: 1. the extraordinary stylistic arrangement (*al-naḡm al-ḡāḡ'*); 2. the method (*ḡḡāḡ*), different to all those followed by the Arabs; 3. the penetrating eloquence (*djāḡāḡ*) which cannot be that of any created being; 4. the information regarding events of the past since the beginning of the world until the revelation given to Muhammad; 5. the power to handle the Arabic language in a way that no Arab has been able to do, which has led to the unanimous consensus on the fact that God "has

placed every word and every letter in its correct place"; here al-Kurtubī refutes the Mu'tazilī concept of *i'ḡḡāḡ*: 6. the fulfilment of promises, whether absolute, or accompanied by a condition; 7. information concerning the future; 8. the teaching of *ḡḡāḡa*, the permitted and the forbidden constituting the sustenance of all men (*ḡḡāḡ al-ḡāḡ'*); 9. the salutary phrases (*al-ḡāḡ al-ḡāḡāḡ*) of which the number and the nobility are beyond the abilities of a human being; and 10. the coherence (*ḡḡāḡ*) between all that is contained in the Book whether of manifest or arcane nature, without any contradiction. The introduction ends with reflections on the *ḡḡāḡāḡ* and the *ḡāḡāḡ*.

The commentary of al-Kurtubī is principally distinguished by the recourse to a very great number of *ḡāḡāḡ*. Many are found here which are not mentioned by al-ḡāḡāḡ, and, unlike his eminent predecessor, al-Kurtubī is more interested in the content (*ḡāḡa*) than in the process of transmission. The *ḡāḡāḡ* are therefore assembled for the purpose of the reply that they offer to the question raised by the verse under discussion. Above all, the work consists of exegeses designed to clarify the meaning and implication of the Law. On this point, his work approximates to the composition of a treatise of *ḡāḡ* and of *ḡāḡ'*, and it can be understood how Ahmad 'Abd al-'Alīm al-Bardīnī, in the preface to the second edition of the *Tafsīr*, should write: "This work is such that the reader can almost dispense with the study of works of *ḡāḡ*."

Al-Kurtubī also devotes considerable space to philological and stylistic commentary, founded on the vast knowledge that he had of the work of grammarians, of works of rhetoric, as well as of books of *ḡāḡ*. In addition, there are brief references to the theological ideas of *kalām*, accompanied by discussion of doctrines. For example, with regard to the verse (11, 7) "God has set a seal on their heart", he gives the Sunnī interpretation and rejects that of the Kadariyya. But, unlike Faḡḡ al-Dīn al-Rāzī, al-Kurtubī does not attempt to derive philosophical notions and conceptions from Kur'ānic verses. Thus, when explaining the word *ḡāḡāḡ* (11, 25) in the verse of the Throne, al-Rāzī interprets it at once as denoting *ḡāḡ* in *ḡāḡāḡ* (existing through Himself) as Ibn Sīnā defined it in the *Iḡḡāḡ*, and he draws from this all the metaphysical consequences: al-Kurtubī simply gives it the sense, according to *Katāḡa*, of *al-ḡāḡ in-taḡḡir mā ḡḡāḡa* (He who concerns Himself with the government of His creation), or, according to al-ḡāḡ al-Baḡḡ, the sense of *al-ḡāḡ 'alā ḡḡāḡ naḡḡ in-mā taḡāḡ*. He who exercises His surveillance over every soul and that which it acquires, with a view to recompensing it according to its actions.

Finally, al-Kurtubī reduces considerably, but not entirely, the dependence on interpretations and especially elucidations based on accounts furnished by rabbinical legends, apocryphal gospels and other equally unreliable sources. Thus he makes very little use of the *isḡḡāḡ* (p.v.), unlike al-ḡāḡāḡ and even al-Rāzī.

Bibliography: Given in the article. The *Tafsīr* is quoted according to the 3rd Caro edition (*Dār al-Kuḡb*), 1387/1967.

(R. ARNAUD)

AL-KURTUBI, YAHYĀ B. 'UMAR B. SA'UD AL- Azmī, poet and Maliki jurist, born in Córdoba in 466/1093. He travelled extensively in the east, visiting Cairo, Baghdad and Damascus for the purpose of study. He died in Mawḡil on the 'Id al-Fitr in 567/1172. His chief surviving literary works are

Dalīl al-ahkām, *ʿAḥkām al-ʿimān* *ʿAlī*, and the poem on Muslim religious observances, the *Urḡiṣat al-wilādan*, also known as *al-Muḥaddithat al-Kurṣur* *ḥayya*, for which he is best known. The *Urḡiṣat* sets out in summary form the basic observances of the five "Pillars of Islam" in rhyming couplets designed to be easy for children to memorise, but the contents of the poem are in no way simplified for the juvenile reader. The eighteen *abwāḍ* into which the *Urḡiṣat* is divided deal both with the obligatory rīl (*farāʾiḍ*) connected with such observance, and with rules which are recommended but not obligatory (*sunan*).

The *Urḡiṣat* has been the subject of two commentaries, those of Ahmad b. Zarūk al-Fāṣī (died 898/1493) and Muḥammad b. Ibrāhīm b. Khālid al-Talāṭī (died 941/1535).

(R. Y. Ebied and M. J. L. Young)

KŪS, a town of Upper Egypt situated on the eastern bank of the Nile, some 30 km. to the north of the ruins of Thebes (al-Aḥṣur/Luxor) where the course of the river is at its closest point to the Red Sea, or about 200 km. from Kusayr [q.v.].

This large village with a Coptic name, first called Ksa or Ksi (H. Gauthier, *Dictionnaire des noms géographiques contenus dans les textes hiéroglyphiques*, v, Cairo 1928, 178) seems to have become a more important place with the name Apollinopolis Parva in the Ptolemaic age, when the Greek sovereigns of the 2nd and 3rd centuries A.D. undertook to develop commercial contacts between Egypt and Arabia Felix and the Indian Ocean through the ports of the Red Sea, and favoured the building-up in this region of various centres to the detriment of what was left of Thebes. The remains of the small Ptolemaic temple are still visible in the town. Under the Roman domination, Apollinopolis Parva was, like Coptes/Kift [q.v.], although to a lesser degree, the terminus of the caravan route from Berenice; it took the name Diocletianopolis towards the end of the 3rd century A.D. A bishop of the town is mentioned among those present at the Council of Ephesus in 431. The Greek residents would appear to have been in a minority, and when the pressure exerted by nomadic peoples between the Nile and the Red Sea brought to an end urban life, the town reverted to its Egyptian name (in Coptic form, Kōs) more than a century before the Arab conquest; this name was retained, transcribed into Arabic as Kūs. In the organisation of Arab Egypt, it belonged first to the *Amra* of Kift and al-Aḥṣur. A rampart was constructed in about 812/827 to protect the urban area against the attacks of the Bedu [q.v.].

Subsequently the town developed: al-Yaʿqūbī noted towards the end of this century that it had taken the place of al-Aḥṣur (*Buldin*, BGA, vii, 33a, tr. Wiet, 183) and according to al-Masʿūdī, in the first half of the 4th/10th century, it had taken the place of Kift (*Murūḡ*, iii, 50 = § 893). The reason for this prosperity must doubtless be attributed to the trading of its merchants with Nubia; its administrative status, however, did not change, because the

population of the town was basically Christian, and the Muslim community was comparatively small. Under the Fāṭimids, the restoration of contacts with the Indian Ocean through the ports of the Red Sea, especially ʿAyḏḥab [q.v.] brought advantages, at first most notably to Uswān [q.v.], where goods unloaded at ʿAyḏḥab joined the Nile. But at the time of the serious crisis experienced by the Fāṭimid caliphate in the mid-10th/11th century, the occupation of the region of Uswān by the negro troops who took refuge there after being expelled from the capital, after 459/1067, and the revolt of the Arab tribes of Upper Egypt, disrupted commercial traffic until the restoration of order by the vizier Badr al-Djāmālī [q.v.] in 469/1077. The traders then adopted the practice of joining the Nile at Kūs, thus avoiding the extreme south of Upper Egypt, where Uswān began to decline. The governor of the Upper Saʿīd, given the task of maintaining order in the region, installed himself in the town which became the new capital of the south and a point of surveillance on the situation in the Red Sea. Kūs was henceforward an important market on the major trade-route with the Far East, frequently mentioned in the documents of the Geniza of Cairo on account of the presence of a Jewish community providing a staging-post for these exchanges.

The establishment in Palestine of the Latin kingdom of Jerusalem, which cut the normal route of the pilgrims to the Ḥijāz, deflected towards Kūs a large proportion of the pilgrims (who used to embark at ʿAyḏḥab, which lies opposite Mecca) and added still further to the increase of traffic. A mint was established there in 516/1122 (al-Mekrizī, *Iḥṭāṭ*, in, 93) and no doubt continued to function there until the arrival of the Ayyūbids. In the troubled times that marked the decline of the Fāṭimid caliphate, the role of the governor of the Upper Saʿīd was seen as "the most important post after the vizierate" (Ibn al-Aṭhīr, xi, 197) and an ante-room of power, to which the careers of the viziers Ridwān and Shāwēr also bear witness.

In 550/1155, Tallḥ' b. Ruzayk ordered the construction of the mosque and gave to the town one of the finest minbars of the Fāṭimid epoch; the Muslim community grew, apparently through the installation of families from Uswān and Iṣnā; but the town continued to have a Christian majority.

The abolition of the Shīʿī Fāṭimid caliphate seems to have been strongly felt, from 562/1167, Kūs was besieged by the Sunnī troops of Shīrkūh, who did not succeed in capturing the town, and it seems to have been affected by the revolts in Upper Egypt that followed Saladin's accession to power in Cairo. However, when the Ayyūbids reverted to the policies of the Fāṭimids in the area of the Red Sea, the growth of Kūs continued. It served as a point of arrival for Yemeni traders in Egypt and it was a staging-post for the merchants of the "Alexandrian Kārun" (al-Nawayrī [see Kārun]). This flow of wealth into the town was reflected in the agricultural prosperity of the surrounding countryside, where the growing of sugarcane was developed, and Kūs became a centre for sugar production. The urban area outgrew its fortifications, and in the 7th/13th century Yāḡūt considered it the third city of Egypt, after Cairo and Alexandria (*Muḥṣarrik*, ed. Wistenfeld, 362). Cultural life developed; the poets Ibn Maṣrūh and Bahāʾ al-Dīn Zukayr spent part of their lives in Kūs. The town was nevertheless unable to play the part of a regional capital because the minds of the growing Muslim community of Kūs were not reconciled to Sunnī

Islam, the influence of the Sunnī counter reformation promoted by the pietist school in the neighbouring town of Kīnā [q.v.] led to the founding of the first *madrasa* of KŪs in 607/1220. Henceforward KŪs became in its turn a centre for the propagation of Sunnī Islam in Upper Egypt.

It is under the Bahrī Mamlūks that the town seems to have reached its zenith, even though the inclusion of Egypt in a political unity embracing the Syrian states had long ago deprived the governors of KŪs of the power that they had enjoyed in the last days of the Fātimid caliphate. The expeditions mounted against the Christian kingdom of Nubia in the last quarter of the 7th/13th century and at the beginning of the 8th/14th one contributed to the maintenance of a strategic role for the town, its main function being to control the highways of the South.

Doubtless following the collapse of the Latin kingdom of Jerusalem, and especially since the start of the Mamlūk period, the pilgrims to the Ḥaǧǧaz for the most part resorted to the route via the Gulf of Suez, but a certain number continued to use the 'Ayyūb route, and traders still frequented it. KŪs was then known to Europeans as a staging-post in the transporting of spices. The profits from large-scale commerce, but also from urban craftsmanship (textiles in particular), created the wealth of its markets. The Christian community continued to be important and perfectly integrated into the Mamlūk state (they were employed in the administration of the funds of the sultans and *amirs*); it was during this period that Athanasius of KŪs drafted in Arabic his grammar of the Coptic language. But the Muslim community now played a dominant role. Nothing, however, of an architectural nature remains of the Muslim city which seems to have developed around the ancient town, never penetrating the Christian enclave with its churches, grouped round the Pharaonic temple, this is because the severe post-mediaeval decline affected this peripheral zone first.

The names are known, however, of some fifteen places of education, *madrasas* or mosques, including a *dār al-ḥadīṡ*, whose Sunnī Muslim teaching was felt throughout Upper Egypt, eliminating the last traces of Shī'ism which in the Mamlūk period continued to hold out only in Uṭṭā, creating a movement of people from the minor centres of the province to KŪs, and from KŪs to Cairo, and ultimately spreading Islamic culture in Upper Egypt to an unprecedented extent. The Shāfi'ī chief Ḥādī Taḳī al-Dīn Ibn Daḳīk al-'Id al-Kuḡhayrī, al-Nuwayrī and al-Uṭluwī were the products of this social and cultural phenomenon.

The factors which had assisted the expansion of the town disappeared altogether towards the end of the Bahrī period and at the beginning of the Circassian era. The fight against the Arab tribes, constantly growing in strength since the disappearance of Christian Nubia permitted them useful access towards the upper Nile valley and Sudanese Africa, necessitated the dispatching and then the maintenance of military units at other points of the valley, especially at Asyūt [q.v.], from the middle of the 8th/14th century. On account of changes affecting the equilibrium between the Arab tribes controlling the highways, the use of the route from 'Ayyūb to KŪs came to be endangered following the disorders of 767/1365-6: goods still had to be transported to KŪs via Kuṣayr until, faced with the instability prevailing over Mamlūk territory as a result of the decline of the administration of the Bahrī Mamlūks, the traders decided to avoid Upper Egypt, unloading their wares at Tūr in the Sīzai peninsula, closer to

the Mediterranean. This occurred perhaps from 776/1374-5 onwards, the date at which a serious drought affected KŪs and the surrounding region. (al-Maḳrīzī, *Kh̲iṭāṭ*, ed. Wiet, III, 300).

Henceforward, the major commerce of the spice trade only occasionally passed through KŪs. The town, living on its assets, nevertheless remained probably the most important urban centre of Upper Egypt until the catastrophic crisis at the start of the 9th/15th century: famine, epidemic and political upheaval. According to al-Maḳrīzī, the plague of 808/1405-6 killed 17,000 people at KŪs (*Kh̲iṭāṭ*, ed. Wiet, IV, 124), or a large section of the population. In the unfavourable demographic context of the 9th/15th century, and in view of the total transformation of the regional framework which had formerly promoted the prosperity of the town, this destruction of the fabric of the town proved irreparable. When the Mamlūk state had succeeded in surmounting the problems of the early decades of the century, at least from the time of the sultanate of Barsbāy [q.v.] onwards, the governor of KŪs was nothing more than a secondary figure under the authority of the *ḥaḡḡif* of Asyūt. A section of the Muslim élite apparently left this declining city, and the proportion of the population formed by Christians began to rise once more, in an Upper Egypt no longer invigorated by commerce of any kind and henceforward less Islamised than the rest of the country. Commercial relations, on a reduced scale, with the Red Sea through the Kuṣayr highway, now tended to be directed from Kīnā, and not from KŪs; it was to Kīnā that the *ḥaḡḡif* was transferred after the Ottoman conquest. The major regional centre was henceforward Girza [q.v.], where the Hawwārī Bedouins [q.v.] settled; their hegemony was gradually established over the region in the course of the 9th/15th century and was to be maintained until the end of the 18th century. The material ruin of the mediaeval Muslim urban cadre seems to have been essentially brought about during the 17th century, a period when the city, although the seat of a *ḥaḡḡif*, appears to have sunk to its lowest depths of degradation and dilapidation. It only recovered a certain degree of vitality in the second half of the 18th century, although the population numbered only 5,000 at the time of the French expedition.

The renewal of the town dates from the end of the 19th century. The swelling of the population following the rural exodus to towns, the opening-up of the town towards the outside world by means of education dispensed by foreign missions and the Egyptian state, and the installation of a modern sugar producing industry, have brought about the rebirth of a expansive urban area, where, apart from a few isolated remains, nothing bears witness to the ancient mediaeval centre.

KŪS OWASĪ [see KOṢOWA]

KUSANTĪNA [see KUSTANTĪNA]

AL-KUSANTĪNĪ (in dialect: Ksentīn, in French: Ksentim) Raǧǧaf, Algerian dramatist, comic actor and song-writer. Under his real name Ibn al-Aḡḡar (pronounced Bel-Lakḡḡar) he was born on 11 November 1887 at Bourazou (a suburb of Algiers). His father, a shoemaker, was a native of Constantine. As a child he attended a Qur'ānic school, where his

progress was mediocre, and he learned French in the street. Some years later he was apprenticed to a cabinet-maker. In 1909 he married one of his cousins by whom he had two daughters, both dying in infancy. Having grown up in a class of petty Algerian artisans, nostalgic for the past and consistently on the verge of poverty, al-Kusantini inherited a dual legacy of bitterness and failure. He felt ill at ease in his milieu, from which he brusquely broke away in 1914, abandoning his wife and setting out to travel the world. During the first months of the war he worked as a merchant seaman; Marseilles, Malta, Salonica, India, China and America were all to be visited in turn by this son of the Mediterranean, this bit of a "card", insatiably curious, interested in everything but attached to nothing.

Four years later he returned to France, where he worked for a while in a factory in Normandy and married a Frenchwoman. In 1920 he moved to Paris and obtained employment as a cabinetmaker in the workshop of a large store. It was at this time that he began attending theatres and he even played a number of walk-on parts, in particular at the Alhambra, the Châtelet and the Odéon.

Returning to Algiers in 1926, he rapidly became friendly with some amateur comic actors ('Alalū, Dabūnū, Bash Djarrah), and, a few months later, he appeared in public for the first time in a play by 'Alalū, *Bou Akline* (*Bā 'Akline*), a play which owed its success to his flair for energetic bulconery. From the very start he made a powerful impression, with his innate acting talent and his unusual gift for improvisation, expressing himself not only with his face but with his whole body, from head to foot; he was all movement. His silhouette, his mime, the twinkle of his eye, the unexpected laugh gave a sharp edge to each response emphasising the word, with an incomparable shaft of humour. To call him a comedian would be an understatement, he was a spectacle.

In fact, he was still not sure at this time how to make his own entry into the theatre, and his first attempt—*al-'Aḥ al-waḥī*, 'The promise kept', a drama in three acts performed in Algiers in March 1927, was far from being a masterpiece. After this failure, he was luckier the following year with a comedy (*Bū Borma*), which was warmly received by the Algerian public.

Over the next ten years, al-Kusantini was to compose, stage and act in twenty-five plays, as well as a number of farces, most of which have been lost. In this brief space of time he chalked up a number of important dates in the history of the young Algerian theatre. In fact, his successes were as varied as were the responses of the public and the critics, and the conditions under which the plays were staged. Even the settings varied; sometimes the municipal theatre of Algiers, Constantine or Oran, sometimes a cinema auditorium, sometimes, in a rural district, a hastily-adapted barn. Furthermore, these performances generally gave only a meagre profit to the author and his colleagues, actors, agents, dancers and musicians.

During this same period, al-Kusantini played minor roles in French films like *Sarah la Terrible* and *Pépé le Moko*, alongside Harry Baur and Jean Gabin.

After 1938 he practically stopped writing for the stage, but, deeply attached to his profession, he was acting in the plays of his successor, Muḥyī 'l-Dīn Bāsh Tārit, almost to his last day. He died in Algiers on 2 July 1944, having lived for close on twenty years the somewhat austere existence of the milieu to which he belonged; he was however, a straight-

forward man, generous and sincere, an enemy of all forced pretence and all hypocrisy.

Written in Algerian dialect and almost entirely unpublished, al-Kusantini's work covers a wide variety of genres. But in spite of the diversity of form, the central core is one of powerful originality. His work comprises:

- (a) Approximately two hundred satirical songs, for the most part on moral and social themes, often written as parodies of well-known Arabic and French songs. About a hundred have been recorded on disc. The most successful of these are: *Man takl l-oḡḡār*, "Under the veil"; *Wād l-bīdā*, "The father's son"; *Kāla ḥulāḥ* "The gossips"; *Bū gūllū* "That gives him the itch"; *Djārī Sīd Aḥmad* "My cousin Sīd Ahmad"; *Z-mān shaddal* "Times have changed";
- (b) About thirty sketches, composed of series of humorous and entertaining scenes with two or three characters, accompanied by songs, in a realistic setting, that of the Algerian petit-bourgeoisie, whose foibles and vices are energetically satirised. Half of these have been recorded on disc: the peasant before the judge, the rustic and the man-about-town, the drunkard, the old man and the old woman, the old woman and the ghost, the mysterious table, the unwilling sportsman Bachir, etc.
- (c) Twenty-five stage-plays, listed below in chronological order: 1. *al-'Aḥ al-waḥī* (see above); 2. *Bū Borma*, comedy in three acts, Algiers, 22 March 1928; 3. *Zeghrebān ou les deux mangeurs de haschisch al le fil du roi* (Zirabān), comedy in three acts, Algiers, 15 February 1929; 4. *Tānīs w-al-Djardār*, "Tunis-Algiers", revue in two acts, Algiers, 22 March 1929; 5. *Kāḥāḥ Alābi* "Take my book", comedy in three acts, Blida, 13 November 1929; 6. *Bābā Kaddār al-jamāl* "Bābā Kaddour the Envious", or "My cousin from Istanbul", comedy in three acts, Algiers, 20 December 1929; 7. *Lungā 'l-Andalusyya*, comedy in five acts, Algiers, 28 February 1930; 8. *Shadd riḥāḥ* "Take care!", comedy in three acts, Algiers, 25 January 1931; 9. *Takḥa f-al-waḥ* "A hole in the ground", comedy in three acts, Algiers, 18 February 1931; 10. *Cruc* "Carry on talking!", comedy in three acts, Algiers, 17 January 1932; 11. *Bū Sebā* "The man with the pipe", comedy in three acts, Algiers, 18 January 1932; 12. *'Ayḡa w-Bēnāḥ*, comedy in four acts, Algiers, 22 January 1932; 13. *al-Murayḡān*, "The lunatic asylum", comedy in three acts, Algiers, 25 January 1932; 14. *Fāḥ* "They woke up!", revue in two acts and twelve tableaux, Algiers, 5 February 1932; 15. *Yā rāsī yā rāsā* "It's her or it's me!", comedy in two acts, Algiers, 7 February 1932; 16. *Zid al-ḥā* "Outdo him!", melodrama in three acts, Algiers, 2 January 1933; 17. *Alāḥ yāsirah*, "Allah protect us!", comedy in three acts, Algiers, 23 January 1933; 18. *Bābā Sāḥāḥ*, comedy in three acts, Algiers, 19 February 1933; 19. *Takḥir al-mān*, "The time is ripe", comedy in three acts, Mascara, 1933; 20. *Kāḥāḥ b-ḥāḥ*, "Take me by force!" comedy in one act, Djidjelli, 20 November 1934; 21. *Skābi ḡār* "It's my neighbour's fault!", comedy in one act, Djidjelli, 20 November 1934; 22. *Shadd miḥ* "Hold tight!", comedy in two acts, Orléansville, May 1935; 23. *Kāḥa Oūil*, comedy in two acts, Fez, 1936; 24. *Yā ḥasra 'lā*, "All this trouble you're causing me?", melodrama in three acts, Bougie, 3 July 1936 (inspired by Marcel Pagnol's film *Angèle*); 25. *Aḡḡ ḥāḥ* "What are they saying?", comedy in three acts, Blida, 19 February 1938.

The theatrical work of al-Kusantini thus presents a rich variety. It is in fact possible to classify his plays as: drama (1); melodramas (2); revues (2);

farces (8), which were performed at public festivals and whose essential object was to entertain the spectators; moral comedies (7), where the author satirises Algerian society; and finally, comedies of character (5), which describe the failings and vices of humanity. But it is clear that such a classification cannot be absolute, since all these elements, or at least the majority of them, combine, to varying degrees, in each play: there is a plot, simple to the point of being negligible, a depicting of morals and a description of human nature in general, set in motion with the taut parody of sarcasm, with man as a prey to a quasi-tragic contradiction, represented by the blunt and malicious rustic, or one of his rivals, the vagabond, the insecure, the unfortunate, condemned to do battle in the jungle of society and struggling there in his own way, clumsily, nervously, sometimes craftily, his conscience never easy, but at the same time anxious for respectability, secretly longing to integrate himself in the world which rejects him, always ready to accept the situation that presents itself, and even more than this, to be excited by outward appearances, as a means of approaching reality; in short, a Charlie Chaplin figure, drinking misette and munching Barbary figs.

The comedy of al-Kusantini depends to some extent on the characters, but more frequently on the situations, and also on the wit of the dialogue, which in most cases is not included simply for its own sake, but with the object of throwing light on a character.

However, without being totally pessimistic, the themes tackled by al-Kusantini are not primarily light-hearted—a fact too uncharacteristic of a humorist. We find here the naive provincial cheated by flatterers and mischievous servants, vain bourgeois merchants exploited by swindlers, egotistical parents sacrificing the well-being of their children for their own interests or for social traditions, etc. But this gloom, which should not be exaggerated and which al-Kusantini, a keen observer, has drawn from his own experience of life, is always concealed beneath his comic sense. At the moment where comedy is in danger of turning into tragedy, farce intervenes, with its sometimes rather crude elements, and brings back the laughter. Predictably, under these circumstances, the dénouements tend to be happy. Al-Kusantini is no more concerned than was Molière in making his endings plausible. Often, in fact, the dénouement should logically be an unhappy one; but then it would no longer be a comedy.

Al-Kusantini is a comic author and not a philosopher. It is vain to attempt the discovery of a coordinated doctrine in his works. However, it is not impossible to draw from his plays a group of ideas which make up what might be called a system of morality.

Everything which is contrary to nature and hostile to reason is anathema to al-Kusantini: the prejudices which trap Algerian society in a stifling traditionalism, the superstitions which divert the faithful from true piety, the hypocritical distortion of religion to favour the machinations of corrupt individuals and profiteers, and the greed which transforms man into a kind of moral monster. Conversely, he is eager to spring to the defence of the young, even when they are not totally irreplicable.

It is clear that such a philosophy might appear to be a somewhat superficial approach to the problems; nevertheless, the fact remains that it is a philosophy closely linked to the life experienced by the mass of Algerians between the First and Second World Wars, concerned with the images that people

saw around them every day, in the street as well as within their families, and this is fairly remarkable.

Al-Kusantini confined himself in general to making rough drafts, sketching out his ideas, laying down the simple foundations of what was to become a play on the stage. His style also reflects this improvisation: it is a comedy style, meaning that it comments itself better to performance than to reading. It is admirably suited to its purpose, natural, alive, full of ingenious features and significant images, always pleasing and witty, often provocative.

In his satirical verses, which by contrast were written before being sung, the phrases are short and staccato, punctuated by exclamations and rhetorical appeals; it could be said that they represent an almost breathless approach to the pursuit of emotion.

In conclusion, it is thanks to al-Kusantini that Arabic comedy rose for the first time in Algeria to heights similar to those attained, for example, in Athens with Aristophanes, in Rome with Plautus and Terence, and in France with Georges Courteline.

For his high qualities of theme and of form, in drama as well as in his satirical songs, al-Kusantini deserves to be long remembered.

KUSAYLA B. LAMZAM, or KASILA WER, in the tradition of the Masinista and of Jugurtha, one of the most eminent figures in the struggle of the Berbers to preserve their independence. In 55/62, at the time when the *maula* Abu 'l-Muhajir Dinar came from Egypt to replace 'Ukba b. Nafi' as governor of the recently-conquered province of the Maghrib, Kusayla was certainly "king" of the Awraba, a broad alliance of tribes of the Barina group, for the most part sedentary. The territory of the Awraba was centred at that time on the region of Tiemene, called Pomaria in antiquity, and it probably stretched from west of the Aurès range in Walila (= Volubilis) to the north of Fas. It may be recalled that Idris [p.6] was brought to power by the Awraba of Walila. At the time of the conquest, the majority of the latter were no doubt Christianised. In fact, according to al-Bakri their

capital Tiemcen maintained, along with the features of its ancient civilisation, a large Christian population until the 5th/11th century. It was at Tiemcen that Abu 'l-Muhājir was confronted by Kusayla. The new governor, preferring a policy of confrontation to one of force, took the opportunity of making an ally of the "king" of the Awraba. Kusayla became converted to Islam and henceforward lived with Abu 'l-Muhājir at Takerwān which had replaced the capital founded by 'Uqba b. Nāf, and the name of which, by its prefix, symbolised a full scheme of Arab-Berber agreement.

The death of the founder of the Umayyad dynasty, Mu'awiya, led to a change of policy. In 62/681 'Uqba set out once again for Ifrīkiya, dreaming only of vengeance and a great *ghazā*. With him, the policy of subjugating the Berbers by force took on a new lease of life. His first act was to put Abu 'l-Muhājir in irons, to take Kusayla prisoner, and to re-instate as the capital, with its former name, the place which he had initially selected for the purpose during his first term of authority. Subsequently, forcing Abu 'l-Muhājir and Kusayla to accompany him, he embarked on the major expedition which was supposed to take him—there is no serious reason to doubt it—as far as the Atlantic. On the way, in spite of the warning of Abu 'l-Muhājir, he went out of his way to humiliate the Berber "king". We are familiar with the typical scene, described in all the sources, where 'Uqba, as a means of humiliating Kusayla, forces him to skin a sheep in his presence.

In the early stages, the lightning campaign that he initiated, the more unexpected in that it followed the policy of peace and conciliation of his predecessor, seems to have had the advantage of surprise, which explains, in part at least, his initial decisive success. But resistance soon became organised. In fact, 'Uqba made no major conquest. The Barīnis, the most romanised of the Berbers, allied themselves with the Byzantines. The Awraba secretly made contact with Kusayla, their chief. He—it is not known from where—escaped from detention under 'Uqba, and assumed leadership of the resistance. Over-confident in his successes, did 'Uqba for his part, as all the sources assert, commit the foolish error of sending the bulk of his troops towards al-Kayrawān, keeping with him only a handful of men, some of three hundred horsemen? Was there an over-riding need to relieve the capital threatened by the Byzantines? Or was this more simply a question of an act of indiscipline on the part of soldiers exhausted by a long and tedious campaign? Whatever the case may have been, to the south of Biskra, at Tahūda (= Thabudea), 'Uqba found himself confronted by Kusayla at the head of powerful Barīnis and Byzantine contingents. Here he found, along with all his men, including Abu 'l-Muhājir, the epic and spectacular death of which he dreamed and which perpetuated his legend. A mausoleum, that of Sidi 'Uqba, was erected on the site of the battlefield and became a centre for pilgrimage which is still revered today.

At al-Kayrawān, there was panic, which illustrates the importance of Kusayla's victory and especially the strength of his forces. The idea of evacuating the country, proposed by Hanash al-Šan'ānī, finally prevailed over that of resistance, supported by Zuhayr b. Kays al-Balawī. So the army withdrew. But al-Kayrawān did not lose the whole of its Arab and Muslim population. It had already advanced beyond the status of a simple military camp, a fact which deserves underlining. Between the years 64-9/68-8, it became the capital of a huge Berber kingdom

ruled by Kusayla. Ibn 'Ughārī (*Bayān*, I, 31) notes that: "Kusayla granted *amān* to the Muslims who had stayed in al-Kayrawān. He established himself there as sovereign (*malik*) of all the inhabitants of Ifrīkiya and the Maghrib, including the Muslims present in that area." Hence no xenophobia, no persecution, no religious fanaticism. We may underline this fact, reported by witnesses who had no cause to flatter their adversaries. Kusayla himself, we are assured, took care not to renounce Islam after his victory. These measures are sure evidence of a political programme designed to deprive the Arabs of any religious pretext for invading the Maghrib once again.

But the wave of conquest was not yet exhausted. When the crisis which arose in the East with the revolt of Ibn al-Zubayr had abated, Zuhayr b. Kays al-Balawī set out for Ifrīkiya with a strong army. Kusayla, who was not sure of the conditions prevailing at his rear in al-Kayrawān, chose to go and wait for his enemy at Mams, 50 km. to the west of the capital, thus in a region where mountains could offer refuge in the event of defeat. The battle, in which he lost his life, went against him. But it should not be believed that it was as decisive as our sources claim. In fact, although victorious, Zuhayr preferred to evacuate the region again, so as not to succumb to the good things of this world, so we are told. In turn, he met his death on the return journey, at Barika where the Byzantines had effected a landing. Was this supposed to be a combined operation, designed to catch the Arabs in the Ifrīkian trap, a plan which failed because of poor co-ordination? If Kusayla's attempt to found a great empire governed from the city founded by 'Uqba b. Nāf had succeeded, the history of the Maghrib would certainly have taken a different turn. But were the Berbers ripe then for such a scheme? With al-Kāhina (*q.v.*), the torch of resistance passed subsequently to the Banī, but with no more lasting success.

KUSAYR, a port situated on the Alekian

shore of the Red Sea, a little to the north of lat. 26°. A gap in the maderporic barrier which runs along the coast (A. Prompt, *La vallée du Nê*, in *Bull. de l'Institut Égyptien*, 3rd ser., 1892) has allowed at various periods of history the utilisation of this anchorage which, by virtue of the sweep described by the Nile towards the east at the level of Kaṣ, Kūs and Kīnā (q.v.), is in fact the nearest access from the sea to the Nile (about 200 km.).

Remains of works from the period of the Middle Kingdom and from Ptolemaic times (P. Jouguet, in *Histoire de la nation égyptienne*, III, 94-5) show that the site was used from ancient times onwards, although it lost its importance in the Roman period when, because of difficulties in navigation through the Red Sea to Suez, landing was preferred on the coast further to the south, at the port of Berenice, in the neighbourhood of the future 'Aydhāb, despite the increased distance along the track between the sea and the Nile thereby required (G. W. Murray, *The Roman roads and stations and the Eastern Desert of Egypt*, in *Jnal. of Egyptian archaeology*, XI [1925]). Towards the end of the Romano-Byzantine period, inadequate control of the regions through which this more southerly road passed probably brought Kuṣayr an increased importance, and at the opening of the Islamic period it served as a port of embarkation for pilgrims travelling to the Hijāz.

However, when the Fātimid caliphate in Cairo revived the ancient traffic of Greco-Roman times with the Yemen and the Indian Ocean shore lands, the security which was re-established in the mountainous desert between the Nile and the Red Sea favoured the use once more of the southerly route to 'Aydhāb, a port which was moreover more or less opposite the holy places of the Hijāz. From the end of the 5th/11th century, the installation of the capital of Upper Egypt at Kūs nevertheless brought a certain amount of traffic to Kuṣayr, even if it was still much less important than that of 'Aydhāb. Whilst 'Aydhāb was over two weeks' journey from Kūs, Kuṣayr is given as only three days' journey from it, and is described as "the port of Kūs". In the Mamlūk period, naval units intended to maintain Mamlūk control over the Red Sea were stationed there, and some commercial operations were conducted through Kuṣayr. The western portoforts of the 14th century mix up, however, Kūs and Kuṣayr (which last they pinpoint correctly but call "Chōs"). The revival of Kuṣayr increased in tempo after 767/1365-6 when the abandoning of the 'Aydhāb road, by now increasingly insecure, brought about the decline of the latter port, from which large-scale commerce now turned away; but after some fifty years, it was Tūr, on the Suai peninsula, which inherited the role of 'Aydhāb as the main spice port on the Red Sea.

The local importance of Kuṣayr continued to grow in the 9th/15th century. Apart from the fact that the spice merchants sometimes still used it as a port of disembarkation, Kuṣayr became the main outlet for Upper Egypt on to the Red Sea. Corn exported to the Hijāz travelled via Kuṣayr, which had become the departure port for the Pilgrimage and whence one could also travel to the ports of Ethiopia. The inconspicuous Christian missions which tried to establish relations with the Nogs of Ethiopia set off from Kuṣayr, and Fra Mauro's map of 1460 gives it the name of "Cuser" (the site of 'Aydhāb further to the south symptomatically received that of "Chaser"). Kuṣayr's primacy was all the more firmly established because the economic centre of gravity of the Upper Ṣa'īd was from this time onwards fixed in the

northern part of the province. The beginning of the Ottoman occupation saw the rise of Kīnā, which replaced Kūs as the regional centre and also, it seems, as the main departure point for Kuṣayr. The greater part of commercial traffic continued to consist of corn, continuously despatched to the Hijāz, and of coffee imported from the Yemen. In the 18th century, Hawwāra control over Upper Egypt did not harm the port's traffic, in fact the reverse, since Kuṣayr's situation along the route to the Indies attracted the attention of the French and British as much as that of the Beys of Cairo. Bonaparte's soldiers found at Kuṣayr an agglomeration essentially made up of stalls open to the sky, with a very scanty permanent population (this being also the case with 'Aydhāb in his time), and with Hijāzī influence very strong (*Description de l'Égypte, État moderne*, I, 193-202). Under Muḥammad 'Alī, buildings for the Egyptian government were again set up at Kuṣayr. The small town became one of the district centres of the province of Kīnā. The pilgrim traffic remained each year the main source of activity for the port, but after 1859 the Pilgrimage traffic was deflected to Suez. At the time of the 1867 census, Kuṣayr had ca. 1,802 inhabitants.

KUṢAYR 'AMRA [see ARCHITECTURE]

KUṢAYY, an ancestor of Muḥammad in the fifth generation and restorer of the pre-Islamic cult of the Ka'ba in Mecca.

His genealogy is unanimously given in all sources as: Kuṣayy b. Kīlāb b. Murra b. Ka'b b. Lu'ayy b. Fihr or Kuraysh b. Ghālib (Ibn al-Kaṣbī-Caskel, *Gamāra*, Tab. 4), and his life and exploits are recorded by our sources in three recensions which only differ from each other in trifling details; these go back to Muḥammad al-Kaṣbī (d. 146/763-4), Ibn Ishāq (d. 150/767) and 'Abd al-Malik b. 'Abd al-'Azīz b. Dīrārīdī al-Makkī (d. 150/767). Kuṣayy is represented, like the usual legendary type of hero who founds a city, as having passed his childhood and youth far from his native land and in obscurity: a younger son of Kīlāb b. Murra, a descendant of the Kuraysh whose supremacy in Mecca had been replaced by that of the Banū Khuṣay'a, he loses his father soon after his birth and is taken by his mother Faṭīma bint Sa'd b. Sayāb who had married again, her second husband being a member of the tribe of Banū 'Udhāla, to that new husband's tribe in the north of the Arabian Peninsula (in the neighbourhood of Saḥḥ), according to Ibn al-Kaṣbī (in Ibn Sa'd, I, 36, 26) a place on the Syrian frontier of the Hijāz, near Tabūk (Yāqūt, II, 77), or right into Syrian territory near Yarmūk [al-Bakrī, 773]; here his original name of Zayd was changed to Kuṣayy from the root ḥ-y-y, "to go far away". Having learned his true origin from his mother, he returned to Mecca where as a result of his marriage with Hubbā, the daughter of the Khuṣay'ī chief Hulayl b. Hubayyīyya, who controlled all the arrangements for the worship of the Ka'ba and the pilgrimage, he soon acquired an important position in the city. On the death of his father-in-law, Kuṣayy managed to succeed him in his offices, either after a long struggle with the Khuṣay'a, or as a less reliable tradition has it by means of a tricky bargain which he made with (Abū) Ghubghūbān, with the son or only some more distant

relative of Hulayl (cf. Ibn Durayd, *al-Iṣṣāḥ*, 277, 7 with 282, 2). The detailed narrative of the events which brought Kuṣayy to fame is given in the article *Kuṣṭā'a*.

Becoming master of Mecca and guardian of the Ka'ba, Kuṣayy rebuilt the latter and organised its worship; he united the clans of the Quraysh, who were previously scattered, into a solid body which assured them the mastery of the town for the future; indeed it is even said that it was on this account that the name Quraysh (from *qarasha*, "to combine") replaced the old name Banū 'l-Nadr; Kuṣayy is said to have been called *al-Mudjannī* "the re-uniter". On his death, the sacred offices that had become his perquisites, were inherited by his four sons 'Abd al-Dār, 'Abd Manāf, 'Abd al-'Uzzā and 'Abd Kuṣayy, the second of whom through his son Hāshim was the direct ancestor of the Prophet. The house which Kuṣayy had built himself quite close to the Ka'ba was henceforth the centre of the civil and religious functions of the Quraysh under the name *Dār al-Nadira*. To Kuṣayy is also attributed the discovery and digging of the well of al-'Aḍḍā (Kutb al-Dīn = *Canon. Stadt Mekka*, ed. Wüstenfeld, iii, 107, below; Balādhuri, *Futūḥ*, 48; Yāqūt, iii, 19-20. al-Bakrī, 646, cf. 766).

From what has been said above, it is evident that the Quraysh regarded Kuṣayy as their true founder and the founder of the Ka'ba. The antiquity of this tradition is attested by a verse of al-A'ashā (al-Bakrī, 489) and by several of Ḥasān b. Thābit. Later historiography has tried to harmonise this old native tradition with the genealogical system which later became established and according to which Quraysh = Fahr b. Mālik b. al-Nadr (Wüstenfeld, *Geneal. Tafeln*, N.) as well as with the tradition quite different in origin and character of the Abrahamic cult of the Ka'ba and its vicissitudes under the Djuhūrūn and the Khuzā'a. Kuṣayy is therefore to Mecca "what Theseus was for Athens and Romulus for Rome" (Caetani). In the present state of our knowledge, it is impossible to say whether he should be regarded as a historical personage transformed into a hero or the mythological transfiguration of a hero. His name is found, although by no means commonly, in the Arab onomasticon: e. Nahlk b. Kuṣayy al-Sulālī, a contemporary of Muḥammad, is mentioned by Ibn al-Aḥḍar, *Uṣūl*, vi, 24-25; Ibn Ḥaǧǧar, *al-Iṣāba*, ed. Cairo vi, 257; the *Ḥamākara* of Ibn al-Kalbī (Caskel, *Tah.* 114) mentions a Kuṣayy b. 'Awf and (Tab. 125) a Kuṣayy b. Mālik. The fact that this name is to be recognised in the *Ṭāḥ* of the Nabataean inscriptions and probably also in the Kouarā of a parchment from Dura on the Euphrates (cf. Cumont, *Les fouilles de Doura-Europos*, Paris 1926, 310) does not justify us in concluding that it is of northern origin, since as we have seen, it is found among different tribes. The tradition which makes Kuṣayy pass his childhood in Syria is in favour of the hypothesis which makes the worship of the Ka'ba introduced, or at least renewed, as a result of influences from the north; perhaps in some statements of tradition (e.g. al-Kalbī, quoted by Ibn Sa'd *ib.*, 39, 2-11) we have an echo of an actual fact, namely that on the old cult of Hubal (q.v.), "the idol of the Khuzā'a" there was super-imposed that of al-'Uzzā and Manāt-Menāt, for which we have definite evidence in Northern Arabia in particular.

In any case, the figure of Kuṣayy soon became legendary; his story, as we have seen, has the characteristic features of the legends of eponymous heroes; his alleged sons are only symbols of the part played

by Kuṣayy in the religion of Mecca. If it is not quite true that he was the object of regular divine worship (the name 'Abd al-Kuṣayy borne by one of his sons does not necessarily imply the divine character of the father), he was undoubtedly venerated according to the ancestor worship, which certainly existed in pre-Islamic Arabia, although we know very little about it. The eponymous hero of the people of al-Tāhī, Thāhīlī, is analogous in character to Kuṣayy. The latter's memory remained particularly associated with the Dār al-Nadwa (q.v.).

Whatever the origins may be, it is certain that at the beginning of the 6th century A.D. the control of the Ka'ba and of the *ḥudūd* was in the hands of a clan claiming descent from Kuṣayy and that the Quraysh were agreed that he was the founder of their tribal unity. It is to be noted on the other hand that even if this clan included among its members some of the recognised chiefs of the Quraysh, among others the Banū Umayya, it was far from having complete political and financial control in its hands; the Banū Makhzum, for example, one of the most powerful families in Mecca, were not descended from Kuṣayy. It seems probable that the Meccan "republic" was constituted on the initiative and under the direction of the Banū Kuṣayy, but that the latter were forced to admit into their social organism other clans having the same rights and privileges as themselves, although the prestige of noble blood and supremacy in religious matters always remained the exclusive prerogative of the Banū Kuṣayy.

(G. LEVI DELLA VIDA)

KUṢḌĀR, *Kuṣṭā'a*, the name of a town in mediaeval Islamic Balūḥiṣṭān (q.v.), modern town and district of Khudārd in the former Kalāt state (see *Kalāt*) in Pakistan. It lies in lat. 27° 48' N. and long 66° 37' E. at an altitude of 4,030 feet, some 85 miles south of Kalāt; the long, narrow valley of the Kolacīd River in which it is situated is strategically important as a nodal point of communications, from Karāḥī and Las Bela (q.v.) in the south, from Kachh in the east, from Kalāt in the north, and from Makrān and Khārān (q.v.) in the west.

KuṣḌār was first raided by the Arabs under Sinān b. Salma al-Hudhālī, who was appointed governor over the Indian marches early in Mu'awiyya's caliphate by Zayd b. Abīhi, and then by al-Mundhir b. al-Djirdū al-'Abdī (Balādhuri, *Futūḥ*, 431-4). The 4th/10th century geographers mention it, together with Kizkārān or Kīkān (see *Kalāt*) as one of the towns of the region of Thūrān or Tūwārān, which must have lain in the east-central part of Balūḥiṣṭān (see Minorsky, *F. J. art. Tārān*), and as being *so farakkā* from al-Manṣūra in *Ṣād* Kizkārān is mentioned in the middle years of this century as being the residence

of the local ruler, but Kuṣḍār is described as the chief town, with a citadel and a flourishing mercantile quarter, to which traders from Khurasān, Karmān and India resorted, and with fertile agricultural lands around it (Ibn Hawkal¹, 324-6, tr. Kraemer and Wiet, 317-20; Muḥaddasī, 476, 478, 486; *Ḥudūd al-ʿĀlam*, 123, 373; Vākūlī, ed. Beirut, iv, 353; Le Strange, *The lands of the Eastern Caliphate*, 331-2). Kuṣḍār was certainly the seat of the local ruler by the later years of the century, the time of the rise of the early Ghaznavids, for in 367/977-8 Sebuktigin reduced the ruler of Kuṣḍār to obedience. However, his son Mahmūd of Ghazna had to come once more and attack Kuṣḍār in 402/1011 and make its ruler tributary (Uthbī, in Nāṣim, *The life and times of Sulṭān Mahmūd of Ghazna*, 74), and his son Masʿūd in 420-1/1030-1 also sent his uncle Yūsuf b. Sebuktigin to Kuṣḍār and Makrān on a punitive expedition (Bayhaqi, in R. Gelpke, *Sulṭān Masʿūd I. von Ghazna. Die drei ersten Jahre seiner Herrschaft (421/1030-424/1033)*, Munich 1937, 87 ff.).

Thereafter we hear little about Kuṣḍār. In recent times it fell within the Khānate of Kalāt. H. Pottinger visited it in 1870 and found it a small town of ca. 500 houses, it being the summer residence of Mir Vahid 'Ali of the Brahūī khangar tribe, brother-in-law of Mahmūd Khān of Kalāt (*Travels in Baluchistan and Strada; accompanied by a geographical and historical account of those countries*, London 1876, 35-7). C. Masson noted a large tepe north of the town of Kuṣḍār, with the remains of mud walls, presumably relics of the mediæval Kuṣḍār (*Narrative of various journeys in Baluchistan, Afghanistan and the Panjab*, London 1842, ii, 45-6). In 1870 a fort was constructed there and a garrison placed in it by Mir Khudūdād b. Mīhrīb Khān of Kalāt in the course of his warfare with the Khān or local ruler of Las Bōla (q.v.). Kuṣḍār town and district now form a tehsil of the Dajilwān Subdivision of the Kalāt District of Pakistan, with a population in 1962 of 26,476.

Bibliography: In addition to the sources mentioned above, see *Imperial gazetteer of India*, xv, 298-9, and *Population census of Pakistan 1961. District census reports. Kalāt*, 1-24-5, IV-2.

(C. E. BOSWORTH)

KŪSH, a Biblical personage whose name appears in ch. x of Genesis in the genealogical lists of the posterity of Noah (Nōḥ). According to the information in verses 6-7, Kūsh, the eldest son of Hām, is the brother of Mīsrāyīm, Put and Kōnāʿan (kanʿan), the father of Sōbā, Hāwīlāh, Saftiāz, Rāmāh and Sābīʿkaʿ and, by Rāmāh, the grandfather of Shēbāʿ and Dēdān Mīsrāyīm in Egypt, Put doubtless Libya, Kōnāʿan, the land of Canaan (Palestine and Phoenicia). Most of the names of the descendants of Kūsh are to be attached to the maritime regions of the Red Sea. Sōbā² has been identified hypothetically with the port of Saba in the Bay of Aden on the south-west of the Red Sea, which is mentioned in Sābō (xv, 4, 8, 10); Hāwīlāh, which is given in Genesis xxv, 18, for the western border of the Ishmaelites' territory, has been associated with the name of the South Arabian tribe of Ḥawilah, is Sabab the Ṣāḥḥar of Sābō (xvi, 42), the Sabota of Pīlay (vi, 153, xii, 53), the Ṣāḥḥar of the *Periplus of the Erythraean Sea* (27)? Whatever may be the case, it is to be located in the Arabian peninsula, as Reʿmāh is placed by various authors in Hadramawt. Shēbāʿ, which is not the Kingdom of Saba, is situated in the north-west of Arabia. As for Dēdān, this is the oasis of al-ʿUla, near Madāʿina Ṣāliḥ, in the north-east of the Hijāz.

Thus Kūsh appears to be linked by this genealogy with Arabia and the Red Sea. But in verse 8 of the same ch. x of Genesis, which seems to reflect another tradition, he is presented as the father of Nūmrūd (Arabic Nāmūd) with whom Mesopotamia is associated.

Indeed, in the whole text, Kūsh, as an ethnic term, in the ordinary way designates neither Arabia nor Mesopotamia, but the neighbouring populations of Egypt, on the south west borders of the land, i.e. precisely the region which the Egyptians called Kūsh (see also Babylonian *kūshu*, Assyrian *kūsu*, Old Persian *kūsha*). An oracle of Ezekiel (xxix, 10) also announces the destruction of the land of Egypt 'from Migdol to Syene (from the extreme north to the extreme south) and as far as the frontier of Kūsh'. In 2 Kings xix, 9, the Pharaoh Tirhāqāh, of the so-called Ethiopian dynasty, is called King of Kūsh. Everything leads us to suppose that Kūsh is the name of ancient Nubia, i.e. of the region which extends as a whole from the first to the fourth cataract of the Nile. The Septuagint translates it in general as Ethiopia, which, because of the value placed on the word 'Ethiopian' in antiquity, is at the source of the erroneous interpretation of Kūsh as 'black' or 'African'.

In the Korʾān, Kūsh is named no more than the sons of Nōḥ. Islamic tradition, which knew his name, however, supplies pieces of evidence which do not agree totally with one another or with the evidence of the Bible. They are all reported by al-Ṭabarī. According to some, Kūsh, son of Hām, is the brother of Mīsrāyīm, Kūt (Biblical Pūt) and Kanʿān (*Annales*, i, 213, 217). But elsewhere Kūsh appears as the son, and not the brother, of Kanʿān, himself presented as a fourth son of Hām (i, 219, 220; see also i, 192; Ibn al-ʿAthīr, i, 50). He is given finally as the predecessor of Kanʿān as king of the universe after the disappearance of the sons of Arifdūn (*Chronique*, French tr. H. Zoltenberg, i, 220). In all the traditions, he is the father of Nāmūd, tyrant (*mudabbir*) of Bābil, confounding with Genesis, x, 8. But if, in the general way, the paternity of the Habeshā as well as those of the peoples of Sind and Hind are attributed to him, the Nubians on the other hand are never explicitly associated with him. In the genealogy supplied by al-Ṭabarī (i, 223) on the authority of Wāḥḥ b. Munabbih, it is from Kanʿān, brother of Kūsh, and his wife Grubyl, great-granddaughter of Yāfith, that the Nubians are descended, together with the populations of Fezzān, the Zangī, the Zaghwī and all the Blacks (or, according to another passage, the blacks with fuzzy hair). Elsewhere (i, 216), it is Hām who is the only one named as the ancestor of these peoples.

The Kushitic languages.—It is from the name Kūsh that the word Kūshitic is derived, under which are grouped a body of Hamito-Semitic (but not Semitic) languages spoken by about fifteen million people, the majority of them Muslims, scattered over a vast territory of almost a million km², within which are included the populations speaking the Semitic languages of Ethiopia. The area is constituted basically by the Horn of Africa and spreads in the north into Sudanese and Egyptian territory to around the first cataract of the Nile and in the south into Tanzania, 2, i.e. as the 4th degree of latitude.

Bedja (Tā-Bedewiyē) is spoken by Muslims in the north of the area, in the northern part of Eritrea, and stretches between the Nile on the west (where it is in contact with Nubian and Arabic) and the Red Sea (where it is in contact with Semitic Tigre) as far as the environs of Kusaay. It is true that in the northern-

most part, the Muslim 'Abābde tribes are today almost entirely Arabised. At the same time, in the south, a part of the Beas Amir (Bani 'Amir) nomads have abandoned Bedja for Tigré. Between these two groups are to be distinguished, with their particular dialects, in the centre the Bighari and Hadendowa, and in the south the Halenga and Arteiga.

Still further to the south, on the shores of the Red Sea, there is the area of Saho and 'Afar, other Kushiitic languages.

Saho is the language of an almost entirely Islamised population leading a pastoral existence in the south of the Massawa region in Eritrea. The Irob-Shao Christians, who constitute an enclave on the Abyssinian plateau, have partially abandoned Saho in favour of Semitic Tigrinya.

The language of the 'Afar (Arabic Danakil) is spoken in the south of Eritrea, in the north of the region of Djibouti, and extends towards the west as far as the Awash River.

The Somali-speaking tribes who inhabit the extreme shore of the Horn at the mouth of the Tana River are also almost entirely Islamised. The most important dialects are those of the Isāk who inhabit the shore of the Gulf of Aden and the Darod tribes at the edge of the Indian Ocean; as far as the north of Kenya and who also inhabit the province of Ogaden in Ethiopia. To the north, in the territory of Djibouti and as far as Dire-Dawa in Ethiopia, it is the dialect of the Qa which is widespread.

In the valley of the Wēbi Shebelle as far as Khamar (ancient Nogadishe), it is Hawiya which dominates, while in the south, in the province of Benadir, Digil is spoken, a dialect of the Sab, also widespread in Aden among the emigrant foreigners called *Djibertis* [see *BEAUMONT*].

The Oromo (whom the Europeans, adopting an Abyssinian word resented as pejorative by the natives, call Galla) at present occupy a vast territory from the centre of the Abyssinian plateau as far as the centre of Kenya (to the north of Mombasa and along the Tana River). These are on the whole pagans. Islam, however, has conquered a part of the northernmost populations. Of the dialects of the Oromo, Mafa to the west, Tulamā in the north-east and Boranā in the south-east, are very close to each other. They are opposed to a southern dialect group, sc. that which constitutes the speech of the Barazetta and Kofira in Kenya.

Agaw, in the north of Ethiopia, occupies no more than a limited and fragmented territory, having for the most part given place to Semitic, sc. Tigrinya and especially Amharic. A northern Agaw dialect, Bilis, is spoken by a small Muslim population. Other dialects still in use are Khamar, Kharata, Kwara, Kamant and Awngy or Awya.

To the west, a group of languages relatively close to one another covers the region of the lakes (from Zway to Shamo and Lake Rudolf) and extends into the adjacent mountainous zone (the province of Sidamo). These are Gudella or Hadaya and Kamhatta in the north-west of the region in question, Alaba, Sidamo, Darasa, Burdji and Konso in the east. Generally connected with them, but without any totally compelling reason, are Gidole or Gardella, Arbore, Galabe etc. On the other hand, there is a tendency today to consider Rendille in the north-east of Kenya, on the edge of Lake Rudolf, and Bayso on an island to the north of Lake Abaya, as projections of Somali.

In the region of Omo, one can distinguish Omoto, Dawro or Kulic, Goba, Wajamo, Naru or Gatsamba,

Baditu, Zayssa, Baskatto, Doko, Cara, Hjangjero, Kaffeto, Anfilo, Shmasha or Gonga, etc.

In the same region, some languages, which are probably Kushiitic, are spoken by Nilotic peoples, sc. Gimir, Majji and Gunza.

A Kushiitic extension in Tanzania is possibly represented by Irakw and less probably by Mbugu.

There may be seen from this simple inventory, although it remains incomplete, the immense linguistic variety of the vast area generally considered as Kushiitic. It is still very inadequately explored, and numerous tongues are known to us only by a rare and insignificant documentation. There result from this problems of classification which lead at times to calling into question the very membership in the group of some of the most anciently recognised languages. There has also been a proposal to detach from the Kushiitic ensemble an Omotic group consisting essentially of the languages of the region of the Omo, and from this some authors have come to consider Bedja as a particular division of Hamito-Semitic without any special connection with Kushiitic.

In so far as the existing documentation allows one to judge, such questionings appear excessive. The existence of common traits peculiar to a body which can be called Kushiitic do not appear capable of being explained by simple phenomena of diffusion. But it is no longer as possible today to admit the traditional division into two groups: Lower Kushiitic with Bedja, 'Afar, Saho, Somali and Oromo, Upper Kushiitic consisting of Agaw, Burdji, Sidamo and the western languages. Without attempting here to propose a real classification, for which the state of studies still gives no authority, one may to some extent rely on the characteristics of these languages to discern some particular affinities. The linguistic information which is to be supplied below can justify the following table:

- A. Northern Kushiitic: Bedja;
- B. 1. Eastern and southern Kushiitic: 'Afar, Saho, Somali and Oromo;
- 2. Central Kushiitic: Agaw and languages of the region of the lakes;
- C. Western Kushiitic: languages of the region of the Omo.

The group of Eastern and Southern dialects and that of the Central dialects are closer to one another than each of the two others.

Linguistic characteristics.—These are the principal common traits in the Kushiitic languages or in the majority of them.

(i) On the phonetic plane.—The predominant syllabic type is of the consonant + vowel form, at the beginning of a word; closed syllables of the consonant + vowel + consonant type are present especially as final syllables. In the intervocalic position, the best-tolerated consonant groups have a first liquid element or are constituted by a nasal — an oral homorganic consonant (mb, nd, etc.).

The consonant system includes in general "emphatics", most often glottalised in effect, which complete, at the same point of articulation, the others formed by an unvoiced stop and a voiced stop, without always participating themselves in correlation of voicing. The majority of the languages also present a post-palatal order: *k, g, ɣ*, but none opposes a *g* to a *k*. However, one must take account of the very frequent presence of a voiced cerebral *g* which can adjoin the "emphatic", unvoiced dental.

Except in some Agaw dialects which are innovative on this point, there is no distinction in the labial zone between the spirants and occlusives. Where there is

an *f*, *i* is not opposed to *ɸ*, and the voiced equivalent is in general *b*, never *v*. The following table, in which the phonemes are put in parentheses, being frequently, but not in all cases, represented, will give an idea of the Kushitic consonant system:

labials: *ɸ*, *b*, *m*, *w*;
dental: *t*, *d*, (*θ*), (*ð*), *n*;
sibilant: *s*, (*z*);
palatal: *k*, *g*, *ɣ*, *y*;
laryngeal: *h*, *ʔ*;
liquid: *l*, *r*;

The pharyngeal *ħ*, *ʕ*, the labio-velar *kʷ*, *gʷ*, at times *kw*, the prepalatal *tʃ*, *dʒ*, at times *c*, the emphatics *ʔ* and *ʕ*, are only attested in certain languages. The minimal vowel system is triangular, with five vowels: *i*, *a*, *u*, *e*, *o*, with most often an opposition of quantity.

The majority of languages are familiar with tonal opposition, in various degrees of development. In a language like Bedja, only a small number of lexemes of the CVC-form seem to bear a characteristic descending tone, capable of constituting a distinctive morphological mark, cf. *del* "mother"; *del* "mothers"; *kwit* "sister"; *kwit* "sisters"; but in Aweya and in Mo'a for example, tones play as important a role in the morphological plan as in the lexical one: (Mo'a) *buno* "ashes"; *buno* "coffee"; (Aweya) *ʔijid* "I give"; *ʔijid* "he gives". Unlike the tonal schemes, the accentual schemes are not generally distinctive, except possibly in some forms where phonetic evolutions have accidentally conferred on them a differentiating role: (Bedja) *ha'qib adir* "I killed a lion"; *haqib adir* "I killed lions".

(ii) On the morphological plane.—Lexemes are constituted in Kushitic by constant radicals with variable morphemes, generally suffixed: (Sidanio) *min*: *min*-*iso* "he built"; *min* *d* "house"; (Omoto) *med*: *med*-*ka* "he formed"; *med* *a* "form"; (Somali) *deh*: *deh*-*da* "environment"; *deh*-*2* "to be between, among"; *deh*-*did* "between". Despite some phenomena of apophony in some languages (Bedja *dir* "to kill"; *dar* "to massacre"; *rimid* "to avenge"; *rimid* "to be revenged"), the radical vowel may be considered stable in every series of derivation, as may be seen from the preceding examples.

By far the most frequent form of radical is CVC: 90% of the verbal radicals in Kallefo, 67% in Somali. In Bedja, however, and uniquely in Bedja, it yields predominance to radicals of type CVCC or CVCVC. But analysis reveals that these roots are often derived from Semitic, and particularly from Arabic. The verbal system is based in general on the fundamental opposition of two aspects: the incomplete and completed. Conjugation is of two types. In some languages, a certain number of verbs are conjugated by means of prefixed signs. This is the case with Afar, where this type of conjugation represents more than a third of all verbs, and especially with Bedja, where it represents nearly two-thirds, but Somali and Agaw have only four verbs with prefixal conjugation. For all the other verbs and in all the other languages, conjugation is suffixal. Thus the verbal forms are constituted in principle according to one of the following two schemes:

A. *Prefixal conjugation*: sign of the person + sign of the aspect/mode + verbal root + desinence of the gender and/or number. Example Afar: *ta:ʔig* "you know" (incomplete indicative); *ti:ʔig* "you know" (completed or perfective indicative).

B. *Suffixal conjugation*: root + sign of the aspect/mode + desinence of the gender and/or number. For example Bedja: *ʔim-i-ʔi-i* "you (lem.) eat" (in-

completed indicative) *ʔim-u-i* "you (lem.) ate" (completed or perfective); *ʔim-i-i* "(il) you were eating" (modal).

These schemes are capable of minor modifications in various languages. In particular, attention is drawn to newly-developed forms by means of suffixed morphemes. The most frequently used variable morphemes are:

— for the gender and number: *i* for the feminine singular and *a* for the plural;

— for the aspect: *e* as the sign of the incomplete is often opposed to an antecedent vowel (*a*, *e*, *i*) for the completed or perfective, while the modal form is characterised by *u*; certain languages however, such as Bedja or Agaw, present some slightly different situations from this point of view;

— for the expression of the persons, the paradigm is the following: Sing. 1. (*ʔ*), 2. *ʔ*, 3. masc. (*y*), fem. *i*; Plur. 1. *u*, 2. *ʔ*, 3. (*y*). (The forms between parentheses are often represented by *al*. The identity of the system of signs with that of Semitic and Berber conjugation, whose very characteristics it presents (the same form in the singular for the 2nd pers. and the 3rd fem., distinct forms for the 1st pers. sing. and plur., the 1st pers. plur. being in addition deprived of the sign of number) has led to the positing of the probabla hypothesis that the morphemes of aspect/mode which in the scheme follow these marks, are no more etymologically than short auxiliary verbs conjugated by means of prefixes.

The completed: incomplete opposition, with possibly a modal form, does not exhaust the complexity of the Kushitic verbal systems. Periphrastic forms, constituted by means of auxiliaries, often serve to add the expression of different aspective-temporal nuances such as the near past, the pluperfect and especially the "continuous-progressive" or "co-existent". Examples: Afar: *ʔibeld iind* (incomplete + complete of *ʔid* "to be") "you were engaged in looking, you were looking"; Somali: *ʔix-a* "he eats (will eat)", *ʔix ay a* "he is engaged in eating".

As regards their conjugation, the languages of the Omo have a separate place in the Kushitic group. The scheme there is also suffixal, but the morphemes used and their modes of combination are peculiar to them. For example, Omoto: and plur. incomplete *er-daa* "you know", complete *er daa* "you knew".

The Kushitic languages distinguish various secondary verbal themes by added signs. A first method of derivation is partial or total duplication of the radical which gives the roots intensive or frequentative values: Agaw (Bilin): *ʔib* "to cover": *ʔibʔib* "to cover completely"; Sidanio: *ʔub* "to shake": *ʔubʔub* "to shake strongly"; Bedja: *beʔas* "to turn": *bebeʔas* "to turn and turn again"; Oromo: *ʔik* "to know": *bebeʔik* "to know well".

The second method is the fixing of signs to express the orientation of the process in relation to the subject: *s* (*ʔ*, *ʔ*) for the causative, *ʔ* (*ʔ*), *m*, *n* for the internal reflexive, the passive and the reciprocal. Hence in Bedja *ʔigam* "to extend" (intrans.), *ʔigam-ig* "to extend" (trans.); *dir* "to kill", *2o-dir* "to have [someone] killed"; *ʔam* "to eat", *ʔam-am* "to be eaten"; *min* "to shave", (*ʔito-man* "to be shaved"). In Oromo: *ʔeb* "to break" (intrans.), *ʔeb-s* "to break" (trans.), *beʔ-a* "he knew", *beʔ-a-a* "he understood"; *arg* "to see", *arg-am* "to be seen". In Omoto: *ke* "to go out", *ke-s* "to cease to go out"; *beʔ* "to see", *beʔel* "to be seen".

One should also mention a type of verbal composition widespread in the majority of the Kushitic languages and which consists in the juxtaposition of

an invariable element (plain verbal radical, noun, interjection, consonatopoela, etc.) and of a verb meaning "to say": 'Afar: *hə y* "to say *ho*" = "to roar"; Sidamo: *awə y* "slowly + to say" = "to act slowly"; Agaw: *yə y* "down + to say" = "to lower"; Oromo: *əl grē* "to say + up = to raise"; Omato: *ghā gā* "hush + to say = to be silent".

The Kuschitic languages of the centre and east have various series of pronominal forms. One of them, called "emphatic", is used especially to act as a subject. Other forms generally suffixal serve to express the complements of the verb and noun. The following tables will show both the common bases and the developments peculiar to the various languages:

"Emphatic" pronouns

	Somali	'Afar	Oromo	Awiya	Sidamo
(Benadir)					
Sing. 1	<i>ani</i>	<i>anū</i>	<i>āni</i>	<i>ān</i>	<i>āni, and</i>
2	<i>adi</i>	<i>adū</i>	<i>ādi</i>	<i>adi</i>	<i>ādi, ad</i>
3	mas. <i>usni</i>	<i>usni</i>	(<i>ani</i>)	<i>gi</i>	<i>idi, id</i>
	fem. <i>iyye</i>	<i>isi</i>	<i>idini</i>	<i>gi</i>	<i>ise</i>
Plur. 1	<i>anu</i>	<i>anū</i>	<i>ān(i)</i>	<i>anādi</i>	<i>anādi</i>
2	<i>isni</i>	<i>isni</i>	<i>isni(i)</i>	<i>anādi</i>	<i>anādi</i>
3	<i>iyyn</i>	<i>usni</i>	<i>isni(i)</i>	<i>idini</i>	<i>inse, inso</i>

Attached pronouns

	Somali	'Afar	Oromo	Sidamo
Sing. 1	<i>-key</i>	<i>-y</i>	<i>-ko, -Afiya</i>	<i>-ya</i>
2	<i>-ka</i>	<i>-ku</i>	<i>-ka</i>	<i>-ka</i>
2 fem.	<i>-ka</i>	<i>-ka(y)</i>	<i>-ka</i>	<i>-ka</i>
3	<i>-ka</i>	<i>-ka</i>	<i>-sa</i>	<i>-sa</i>
3 fem.	<i>-ka</i>	<i>-ka</i>	<i>-ghā, -ghā</i>	<i>-sa</i>
Plur. 1	<i>-keyn</i>	<i>-na</i>	<i>-āna</i>	<i>-nke</i>
2	<i>-ka</i>	<i>-si</i>	<i>-āna(i)</i>	<i>-nke</i>
3	<i>-ka</i>	<i>-kan</i>	<i>-āna(i)</i>	<i>-nke</i>

In Northern Kuschitic (Bedja) the "emphatic" forms, apart from the first persons, appear to be clearly constituted by an invariable base with personal suffixal signs added: Sing. 1, *ani* 2, mas. *bar-i-ak*, fem. *bar-i-ak*, 3, mas. *bar-i-ak*, fem. *bar-i-ak*; plur. 1, *ani*, 2, mas. *bar-i-ak*, fem. *bar-i-ak*, 3, mas. *bar-i-ak*, fem. *bar-i-ak*.

The languages of the west have a system of their own which is well illustrated by Omato: Sing. 1, *id*, 2, *id*, 3, 1; plur. 1, *ni*, 2, *ni*, 3, *ni*.

All the Kuschitic languages recognise a distinction of gender between masculine and feminine, at times in a vestigial state, as in certain languages of the west, for example. Among the varied signs which are used, the frequency of the suffixal morpheme *-i* for the feminine should be noted. On the syntactical plane, the essential fact is the agreement of the majority of the languages on the order determinant-determined. The only exceptions are Somali and Oromo which regularly present the inverse order; in Bedja, the qualifying adjective follows the qualified noun when the latter has a definite article. But in all the languages, the dependent proposition precedes that on which it depends (except, in certain particular cases, in Bedja and Somali) and the verb is placed at the end of the phrase after the subject and the various complements.

On the lexical plane, the certain cognate forms are still relatively few in number, above all because of inadequacy of the theory of phonetic correspondences. Nevertheless, the existence of a common vocabulary can be established in several forms. Here are some examples. Bedja: *rim*, Agaw: *gām*, Sidamo: *gām*, Omato: *sun se*, Djandjero: *sun* "name"; Somali: *madhe*, 'Afar: *madhe*, Oromo: *madhe*, Sidamo: *madhe*, Omato: *madhe* "heart"; Somali: *dar*, Oromo:

dandj, Sidamo: *daga*, Burghil: *daga*, Agaw: *dok*, Omato: *aga*, Kaffa: *dag* "way". For some words, the languages of the west present forms which distinguish them from the rest of the Kuschitic group: Bedja: *ih*, Somali: *ih*, 'Afar: *ih*, Oromo: *ih*, Sidamo: *ih*, Agaw: *ih*, but Omato: *ayfe*, Djandjero: *af*, Kaffa: *af* "eye"; Bedja: *yaf*, Somali: *yaf*, Sidamo: *yaf*, but Djandjero, Kaffa: *anō* "mouth".

Bibliography: in Ernest Renan's *Histoire générale et système comparé des langues sémitiques* (1st part only appeared, 1855; other additions revised with additions 1858, 1863, 1878), the term "Kuschite" is already used in relation to the East-African languages: "One may believe that, among the non-Semitic languages [of Ethiopia], the remains of the ancient language of the Kuschites have been preserved" (2nd ed. 1863, 339). But it was R. Lepsius who first recognised the linguistic group and definitively gave it its name in his *Nubische Grammatik mit einer Einleitung über die Völker und Sprachen Afrikas*, 1880. Kuschitic appeared there to be constituted by Bedja, Shaho (or Saho), Falasha (an Agaw dialect), Agaw, Galla (or Oromo), Dankali (or 'Afar), Somali to which is added Hottentot. In an earlier work, *Standard alphabet*, 2nd ed. 1863, he had grouped under the name of Ethiopian, the majority of these languages with Semitic Harari, but without Hottentot. For the recognition of their membership in the Hamito-Semitic family, see the information supplied by M. Cohen, *Essai comparatif sur le vocabulaire et la phonétique du chamito-sémitique*, Paris 1947, 3ff. For Kuschitic in general: A general overview of the distribution of the languages and their linguistic structures is to be found in M. A. Bryan, *The distributions of the Semitic and Cushitic languages*, London 1947, completed by A. N. Tucker and M. A. Heyan, *The non-Bantu languages of North-Eastern Africa*, London 1956; J. Greenberg, *Studies in African linguistic classification*, New Haven 1955; Idem, *The languages of Africa*, The Hague 1966. For recent perspectives, see P. R. Palmer, "Cushitic", in *Current trends in linguistics* (vol. vi, under the direction of T. A. Sebeok), The Hague 1970, and D. Cohen, *Les langues chamito-sémitiques. 4. Le couchitique*, in *Les langues dans le monde*, under the direction of M. Cohen and J. Perrot, Paris, in the press. Comparative studies. A. B. Dolgopolskiy, *Sovetskoe slovoizmenenie fonetika Afriki*, Moscow 1972. On the root, see E. Cerulli, in *Comptes rendus du GLECS*, i (1934), 44-5, ii (1937), 35-6, 85-7, iii (1938), 33-6; A. B. Dolgopolskiy, in *Voprosi Yazykovedeniya* 1967, 278-82; A. Zaborcki, in *Folia Orientalia*, xvi (1975), 263-6. On the verbal system, see B. W. Andrzejewski in *Hamito-Semitic*, ed. J. and Th. Bynon, The Hague 1975, 361-74; G. R. Castellino, *The Akkadian personal pronouns and verbal system in the light of Semitic and Hamitic*, Leiden 1961; E. Cerulli, in *Comptes rendus du GLECS*, ii (1937), 613, v (1946), 2-2, D. Cohen in *REI*, xi, 43-68; Idem, in *Comptes rendus du GLECS*, xiv (1969-70), 69-74; Idem, *Langues et techniques, nature et société*, ed. J. M. C. Thomas and L. Reinisch, *Die Kafa-Sprache in Nordost-Afrika*, Vienna 1888.

(D. COHEN)

KUSHĀNIM, MAHMOD B. AL-HUSAYN B. AL-SINOI A. SHĀHAK, ABU 'L-FATH, poet of the 4th/10th century whose death is variously given in the sources between 330/941 and 360/971, but which must have taken place ca. 350/961. Originally from a family of Sind [see **IMRĀHIM A. AL-HINDI**], he was born at al-Ramla and lived at al-Mawālī at the court of Abu 'l-Hayyāz 'Abd Allāh b. Hārūd (see **IMRĀHIM A.**), and then at Aleppo, in the entourage of Sayf al-Dawla (q.v.); he also made several journeys to Egypt, Baghdad, Damascus and Jerusalem. His verses are described by R. Blachère, *Mosianabbi*, 134, as "excessively florid and enjoying a contemporary vogue", which is confirmed by al-Mas'ūdī, who in his own lifetime, devoted long passages to him in his *Murūdj* (see index). He was closely associated with his son-in-law al-Sanawbarī (q.v.), and he is one of the creators of nature poetry in Arabic, in which he evokes visual pleasure by his descriptions of gardens, flowers and trees. But he was also a *hāhib*, an astrologer and master cook to Sayf al-Dawla; he excelled in so many branches of knowledge and activity that his surname *Kushāghim* is said to be an acrostic formed out of the initial letters of the subjects in which he excelled, or out of various adjectives—a *hāf* for *hādib al-hāhib*, *shāh* for *shāh al-shāh*, *shāh* for *shāh al-shāh* or for *shāh*, *ghim* for *ghim al-ghim*, *mām* for *mām al-mām*, *ghim* for *ghim al-ghim*, *mām* for *mām al-mām*, *ghim* for *ghim al-ghim*. It is even said that, after having studied medicine, he

added a *fā* (for *fāh*) to his name, which became *Takushāghim*, but had hardly any success.

He has left behind a *Divān*, first published at Beirut in 1373/1895-6, then at Baghdad in 1970 (by T. Kh. M. Maḥlāz); a collection of *Rasād* (Fihrist, 200), an *Adab al-nadīm al-madīm*, ed. Būlāḥ 1298, Alexandria 1399; a *K. Khawāṣṣ al-jawāb*, a *K. al-Tabāḥ*; a *Kawf al-kullīl* (al-Kalkashandī, *Subh*, i, 154, 160-3; a *K. al-Maṣṣūd* was 'a *maṣṣūd* (partial ed., carelessly done, Baghdad 1954) comprising some 20 poems on hunting, some of which are reproduced in the *K. al-Bayyāna* (cf. F. Viré, *Le traité de l'art de voler*, Leiden 1967, 2), in the *Divān* and in vol. x of al-Nuwayrī's *Nihāya*.

Bibliography: Ibn Charaf, *Questions de critiques*, index; *Tabāḥ*, *Yasim*, i, 22; idem, *Khawāṣṣ al-khawāṣṣ*, 107; Ibn al-'Imād, *Shajarat*, ii, 37 8; M. Canard, *Sayf ad dawla*, 291 3; A. Mez, *Renaissance*, index; Brockelmann, *S*, i, 137; Zirikli, *Aḥām*, s.v. (Ch. Pellat)

AL-KUSHASHI, SĀFI AL-DIN AHMAD B. MUHAMMAD B. YUNUS, AL-MADANT AL-DAGĀNĪ, Sufi mystic and scholar, b. Medina 901/1583. Little is known of his life. His family on his father's side migrated from the village of Daḡān near Jerusalem and settled in Medina. He spent part of his life as a soldier. In 1011/1602-3 he travelled with his father to the Yemen, where he studied with various of the religious teachers, especially those with whom his father, Muhammad b. Yunus had studied. An incident not specified in the sources disturbed him deeply, causing him to return hurriedly first to Mecca, and then to Medina, where he continued to study from some of the great masters of Indian origin, especially al-Shinnawi and Shihāz Allāh, and through them, the works of al-Ghawṣi al-Hindī. He was affiliated to several mystical orders, including the Nakshbandī, the Kadiri and the Shattārī. He attracted numerous students, and enjoyed a reputation for extraordinary humility. He is of particular importance because of the character of his transmission of the doctrines of the school of Ibn al-'Arabi (q.v.), particularly as reformulated by 'Abd al-Karīm al-Dīk (q.v.) to various parts of the Muslim world, including Sumatra and Java. Among his students for almost twenty years (1031-70/1614-60) was the Sumatran 'Abd al-Ra'ūf of Singkel, and numerous Dīwān associates of whom we do not know the names. His pupil and successor as *shaykh* of the Shattārīya order, al-Kūrānī (q.v.), maintained his wide circle of students, and gives much information about him in his *Al-maw* (see *Bibl.*). It is worthy of note that Tāhīr, the son of his greatest student al-Kūrānī, was a teacher of Shāh Wāl Allāh (q.v.).

His works include Sūfī interpretations of *ḥadīth*, rare among Sūfī authors, who devote most of their exegetical skill to the Qur'ān. He was noted for the extent to which he associated Qur'ānic and *ḥadīth* quotations with his views, and his skill in presenting the *ḥadīth* of every *ḥadīth* that he cited. A commentary on his rhymed credal statement al-'Aḥd al-maṣṣūd by his student Ibrāhīm al-Kūrānī entitled *Kaṣf al-sabīl* was rendered into Malay, possibly by his student 'Abd al-Ra'ūf.

His books on *ḥadīth*, *uṣūl* and *ṣawāwif* number more than fifty. One has been published (*al-Sim' al-maḥḍ fī taḥkīm al-dīḡār*, Kaydarābād 1327). Other works, listed by al-Baḡhdādī, include *Hāghiya* 'ala 'l-'Inṣān al-ḥamīl b. 'Abd al-Karīm al-Dīlī, al-Kalīm al-ṣawāf fī ṣūrah ḥikam Ibn al-'Aṣṣā, and *al-Kamālāt al-dīḡiya*. He died at Medina in 1071/1660-1, and was buried in the Baḡī cemetery.

KUSHAYR, an Arab tribe forming part of the great group of the Banū 'Amir b. Sa'qa (q.v.) whose fortunes we find them almost continuously sharing in the period before as well as after Islam.

They had particularly close associations with the tribes of 'Uḡayl and Dja'da, whose genealogical table makes them brothers. Their genealogy is Kūshayr b. Ka'b b. Raḥī'a b. 'Amir b. Sa'qa. Tradition makes the mother of Kūshayr Rayṭa bint Kūnufudh b. Mālik of the tribe of the Banū Sulaym (q.v.). During the pre-Islamic period, the Banū Kūshayr settled in al-Yamāma were involved in all the wars of the 'Amir b. Sa'qa's, especially in those against the Tamīm, the Ṣhaybān, whose chief Ḥāḍib b. Zurāra was made prisoner by Mālik b. Salama al-Kūshayr b. Kūshayr, called *Ḍhu 'l-Rukayba*, at the battle of *Djabala*, and against the kings of al-Ḥira (cf. *Nabā'id*, ed. Bevan, 70, 404-5). After Muḥammad's successes in central Arabia, the Kūshayr joined with the other tribes of the 'Amir in sending him envoys and coming to an arrangement with him; it is to this time that tradition dates their conversion to Islam (cf. the texts in Caetani, *Annali*, II, 297 [9 A.H., § 78]). Later they took part, without particularly distinguishing themselves, in the wars of conquest in Syria and 'Irāq, and settled particularly in the eastern parts of the Arab empire. In the Umayyad period they were very numerous and powerful in *Khurasān*, of which several Kūshayrs were governors (among others Zurāra b. 'Uḡba, whose family possessed a very highly esteemed breed of horses). This Kūshayr colony has as its founder and common ancestor Hayda b. Mu'āwiya b. Kūshayr, a half-mythical personage who is said to have lived to a fabulous age and to have had a thousand descendants (Ibn Ḥaǧǧar, *Iṣāba*, Cairo 1325, II, 56, No. 1890; Abū Rāḍim al-Sijistānī, *K. al-Mu'ammirin*, in Goldziher, *Abhandlungen zur arab. Phil.*, II, 97). On the other hand, we find in Mubarrad, *Kāmil*, ed. Wright, 273, a similar longevity attributed to *Ḍhu 'l-Rukayba*, the Kūshayr chief mentioned above, and indeed almost all the Kūshayrs of note settled in *Khurasān* recorded by history, belonged to the clan of Salama al-Kūshayr to which *Ḍhu 'l-Rukayba* belonged, and which seems to have been the aristocracy of the tribe.

The Kūshayr did not number many poets of note among them; the best known is Yazid Ibn al-Taḥiriyya who lived between the end of the Umayyad period and the beginning of the 'Abbāsid period.

The genealogical sources, and in particular Ibn al-Kaṭib, also mention other ethnic groups bearing the name Banū Kūshayr, two of which belonged to the southern tribes of the Aslam and the Aws (Anṣār).

Bibliography: Ibn al-Kaṭib-Castel, *Gamāra*, Tab. 101 and Register, II, 473; Wüstenfeld, *Genealogische Tabellen*, D. 127 (Register, 140-1); Ibn Durayd, *K. al-Iḥṣāḥ*, ed. Wüstenfeld, 181; Ibn Rūṭayba, *K. al-Ma'ārif*, ed. Wüstenfeld, 43, ed. 'Uḡba, 89 and index. (G. LEVI DELLA VIDA)

AL-KUSHAYRI, the name of two noted *ḡh*uṣṣān scholars.

1. **ABU 'L-KĀSIM 'ABD AL-KARIM A. HAWĀZIN**, theologian and mystic. He was born in 376/986

in Ustuwā (the region of actual Kūcān (q.v.) on the upper Atrak), the son of a man of Arab descent (from B. Kūshayr) and a woman from an Arab (from B. Sulaym) *shāḥān* family. He got the education of a country squire of the time: *adab*, the Arabic language, chivalry (*ṣurūṭiyya*) and weaponry (*isṭ'ād al-niḥā*). When as a young man he came to Naysābūr with the intention to get the taxes on one of his villages reduced, he became acquainted with the *ḡh*uṣṣān Abū 'Alī al-Daqqāk, who became his master on the mystical path. Later on he married Abū 'Alī's daughter Fāṭima (born 391/1001).

Besides his mystical exercises, he studied *fiqh* with the *ḡh*uṣṣān jurist Abū Bakr Muḥammad b. Bakr al-Tūsī (d. 420/1029) in nearby Tūs; he seems also to have visited the city of Marw *fi jalāl al-'ilm* (Subki, v, 238). In Naysābūr he studied *ḥadīth* and *uṣūl al-fiqh* with the Aḡhārī scholars Abū Bakr b. Fūrak (d. 406/1015-16) and Abū Ishāq al-Iṣfahānī (d. 418/1027).

After the death of Abū 'Alī in 403/1013, he seems to have become the successor of his master and father in law as leader of the mystic sessions (*maḡlis al-taḡhīr*) in the madrasa of Abū 'Alī (built in 391/1001), which henceforth was known as *al-madrasa al-Kūshayriyya* (later on as *madrasat al-Kūshayriyya*, "the madrasa of the Kūshayr family").

At an indeterminate date, al-Kūshayrī performed the Pilgrimage in company with Abū Muḥammad al-Djūwaynī (d. 438/1047), the father of the *Imām al-Ḥaramayn*, and other *ḡh*uṣṣān scholars; during these travels he heard *ḥadīth* in Baghdād and the *Ḥijāz*. Probably after his return to Naysābūr he held his first *maḡlis al-niḥā*, i.e. session for the teaching of *ḥadīth*, in 437/1046.

After Naysābūr had passed under the control of the Seljuks in 429/1038, al-Kūshayrī was involved in the struggles between the Hanafī and Aḡhārī-*ḡh*uṣṣān factions in the city. In 436/1045 he issued a manifesto defending the orthodoxy of Abū 'l-Ḥasan al-Aḡhārī, the document (preserved by Ibn 'Asākir, *Taḡyīn*, 122-4; cf. Subki, III, 374 f.; Halm, *Der Wesir al-Kunduri*, 224 ff.) was signed by the most renowned *ḡh*uṣṣān scholars of the city. When in 446/1054 the Hanafī-*ḡh*uṣṣān conflict broke out into a violent *fitna*, al-Kūshayrī was imprisoned by his adversaries, but was rescued some weeks later by his partisans by force of arms. As a reaction to these events, he wrote his famous "Complaint", *Shikāyat al-ḡh*uṣṣān *bi-mi' nāliḥum min al-mukāṣa* (preserved by Subki, III, 399-423, separately ed. by Muḥammad Ḥasan, see below), by which he denounced al-Aḡhārī against the slanderous accusations of his adversaries (analysed in Halm, *Der Wesir al-Kunduri*, 224 ff.).

In 448/1056 al-Kūshayrī went to Baghdād, where the caliph al-Kāṣim commissioned him to teach *ḥadīth* in his palace. After his return to *Khurasān* he left Naysābūr, now dominated by the Hanafī faction, and emigrated with his family to Tūs, where he stayed until the accession to the throne of sultan Alp Arslan in 455/1063. When the vizier Niğm al-Mulk re-established the balance of power between the Hanafīs and the *ḡh*uṣṣān, he returned to Naysābūr where he lived until his death. He died on 16 Rabi' II 465/30 December 1072 and was buried in his madrasa besides his father-in-law Abū 'Alī al-Daqqāk. He left six sons and several daughters; some of his numerous descendants (cf. the pedigrees in Belliet, *Patricians*, 280-4; Halm, *Avsharīyat*, 68) officiated as *ḡh*uṣṣān of the *ḡh*uṣṣān Maṣṣāf mosque in Naysābūr.

Even if al-Kūshayrī's studies covered the whole scale of the traditional Islamic sciences, his writings

mostly deal with mystical topics. His great mystical treatise, the *Ushūf al-ghayb*, was composed before 410/1019; the *Tarīkh al-nubūh* is an introduction to the practice of *isṭisrāʿ*, and the famous *Risāla* (composed in 438/1045) is a most important compendium of the principles and terminology of Sūfism (analysed by R. Hartmann). In all his works (cf. Subki, v, 159; Brockelmann, I, 556 f.) al-Kushayrī tried to reconcile mystical practices, suspected by so many scholars, with the principles of the *Shariʿa*.

Bibliography: al-Kushayrī, *Ushūf al-ghayb*, ed. Ibrāhīm Dīyānī, 5 vols., Cairo 1390/1970; *Arbaʿ rasāʾil fiʾl-ṭiswāʿ*, ed. 2. **ABU ʿL-NASR ʿABD AL-RAḤM B. ʿABD AL-RAḤM B. ḤAWĀZM**, son of the loomer; *Shāfiʿi* (jurist and Aghʿar) theologian. Born in Naysābūr before 434/1043, he studied *ṭasīr* and *ḥadīth* with his father and with the *Imām al-Haramayn al-Dīnawayn*. When in 469/1077 he publicly taught Aghʿar *kalām* in the Nishāpūryy madrasa in Baghdād, he provoked the wrath of the local traditionalist Hanbalī faction supported by the masses, and caused a violent *fatwa*. The vizier Nizām al-Mulk, who protected the young scholar, had to summon him to Isfahān, from where he sent him back to Naysābūr. There Abu ʿl-Rasid died, after a peaceful life, in 514/1120, in his eighties.

Bibliography: *ʿAbd al-Ghaffār al-Fārīsī, Siyāh*, in Frye, ed. *The histories of Nishapur*, vols. 45b-46a; Ibn ʿAsākir, *Tahyīn*, 308; Ibn Khallikān, *Wafayāt*, iii, 207 f.; Ibn al-ʿImād, *Shadhārāt*, iii, 321 f., iv, 45; Subki, *Ṭabaqāt*, vii, 159-66; Brockelmann, I, 557; G. KUSHBEGI [see KOSH BEGI].

AL-KUSHDĪ [see ʿALI AL-KUSHDĪ].

KUSHIYAR a. **LABĀN B. BASHARUT**, ABU ʿL-HASAN al-Dīfī, Persian astronomer and mathematician. He was born in Gilān, to the south of the Caspian sea, in the first half of the 4th/10th century, probably between 323/924 and 332/944. The

date of his death is equally obscure, but was probably in the first quarter of the 5th/11th century. Very little is known of his life; most of it was spent in Baghdād, with the peak of his career in ca. 990/1000.

His principal works comprise two *zīj*s, the *z. al-ghaym* and the *z. al-bāgh*, as well as an arithmetical treatise, the *ʿUṣūl ḥisāb al-ḥisāb*. His astronomical tables mark an advance on those of Abu ʿl-Wafāʾ and al-Battānī. Whereas the latter only indicate the values of sines and the cotangent, Kushiyar also gives those of the tangent, and the values of these functions are given by him to the third sexagesimal.

His other great work, the *ʿUṣūl ḥisāb al-ḥisāb*, contains the first description of the "Indian system of calculation", i.e. of the system of numeration by position (the value of the figures depending on their place in a number), which brought about a revolution in the ways of calculating used in the Near East. The work is divided into two parts. In the first, the author works out logarithms for the four basic arithmetical operations and for finding the square root. Whole numbers are treated within the decimal system, and fractions in the sexagesimal one. The second part deals with this latter system, already used by the astronomers, but set forth by Kushiyar in a way of attenuation by position. He shows how whole numbers can be converted from the decimal into the sexagesimal system, and then sets forth logarithms for the basic arithmetical operations, for finding the square root and for finding the cube root. Finally, he gives a famous multiplication table, called "the table of sixty", for multiplying within the sexagesimal system. In these various calculations, he already makes use of the elementary rules for multiplying and dividing both positive and negative whole powers. As for the figures which he uses, his calculations made in the sexagesimal system he uses the Arabic alphabetical characters, the *ḥisāb al-ghaym*, but for those in the decimal system, the so-called "Indian" figures, the origin of what were later called "Arabic numerals". Kushiyar's system of logarithms for finding the square root forms the basis for the theory of decimal fractions which was subsequently to be elaborated by al-Karāḍī and al-Samawī.

Bibliography: A. S. Siddiq, in *Dict. of scientific biography*, vii (1973); Sezgin, *GAS*, v, 343-5 and bibl. cited there; *ʿUṣūl ḥisāb al-ḥisāb*, in M. Levey and M. Petrucci, *Principles of Hindu reckoning*, Madison, Wis. 1965, 55-83; A. Kharabāsh, *Kushiyar*, thèse de doctorat de 3^eme cycle, Sorbonne, unpubl., with a tr. of the *ʿUṣūl* based on the Aya Solyma ms 4857; A. P. Youskevitch, *Les mathématiques arabes*, Paris 1976, 70. See also various articles by P. Lunkey cited by Saïdan and Sezgin.

[K. JAQUENET]

KUSKUSU (A.), a word probably of Berber origin meaning couscous, a culinary preparation containing semolina which is the national dish of the peoples of North Africa. It appears with the article and with a final *n* in an anecdote depicting an Oriental being advised by the Prophet, in a dream, to treat with al-Kushayrī a sick Maghribī, this anecdote, related by Dozy (*Suppl.*, s.v.) is very well known and is probably responsible for leading Moroccan scholars to adopt the form attributed to the Prophet. L. Bauer (*Wörterbuch der arabischen Umgangssprache*, Wiesbaden 1957, 402), heard *kushkush* (*kushkush* in Palestine, describing it as "Teigkugeln in Fleischdampf gekocht"). Couscous was known in Spain, and the word *kushkush* is provided with the article in the *Kitāb al-Ṭabākh* published by A. Hueli Miranda (Madrid 1965, 181), but this is a case

of an arabisation which is not found in vernacular Arabic, where the word never takes the article; *ksks*, *ksksa*, *ksksus*, *ksksin*, etc., which betrays its non-Arabic origin. The equivalent term among the majority of the Bedouin tribes of Algeria and al-Tlemcen is *fīḥu* used alone, elsewhere it is 'aygh, m'āgh, or wā'ma, all of which illustrate the importance of couscous in the minds of the people, especially those in rural areas, who make it the invariable staple of their evening meal.

The quality and the weight of the grains as well as the presentation of the dishes offer a considerable diversity, which is covered by the generic terms cited above but which is expressed by means of a detailed and extremely varied vocabulary according to regions. We confine ourselves here to a description of the general processes.

Couscous may be prepared at any time, but it is exclusively the work of women; some even opt of preference the nights of Monday and of Friday to take advantage of the *ḥaraka* [p.r.] which is attached to them. The housewife makes an invocation and she must not see or hear anything that might constitute a bad omen; on the contrary, it is the custom to speak in her company only of asints, of the prosperity of the land, etc.

To make her couscous, the woman sits on the ground, places in front of her a wooden plate called *ḡefna*, *ḡā'a*, *ḡasriyya*, etc. and, to one side, a receptacle containing lightly salted water and a sack of semolina; in some regions, a little flour is also used and to the salted water are added a few drops of *āḥḥa* water (rain of early May preserved in a flask). The housewife takes a handful of semolina, puts it in the plate, sprinkles it with salted water applied with the hand or with a spoon and proceeds to roll it (verb *ḥṣṣ*) with the flat of her hand, until small grains are formed with the size of small buckshot. When the stock of semolina provided is exhausted, the grains are passed through a sieve, and the bigger ones are rolled again until they acquire the desired dimensions or set aside to make a coarse couscous called *māḥawwā*, *ḥarḥāḥ*, *ḥarḥuḥ*, *wārdū*, etc. The grains are then cooked in steam and may be kept for some time.

When they are to be eaten, the housewife cooks them for a second time. In a cooking pot (*ḥandra*), she boils water to which she adds vegetables (chick-peas, turnips, wild teasels, etc.) and/or mutton or beef sometimes browned in a little oil, she puts the couscous grains in a special receptacle (*ḥuḥḥā*), a conical vessel made of earthenware or plaited alfalfa, the perforated, smaller base of which is placed over the cooking-pot and sealed by means of a twist of straw. Escaping, the steam passes through the holes and cooks the couscous. The housewife takes care that no curds are formed, and when the grain is cooked, she tips it into a bowl, garnishes it with a little butter and covers it with gravy. The vegetables and the meat are most often laid out on the grain. The diners make pellets with their thumb, index and second fingers, and flick them dexterously into their mouths.

In the preparation of couscous with sugar (*ṣaffa*, *māḥūf*), the cooking-pot contains only water; once cooked, the grains, which are generally finer, are garnished with rather more butter, and the cone which they form in the dish is decorated with ground sugar and cinnamon.

Among the other varieties, we mention *ḥarḥāḥ*, with fine grain, eaten cold, without butter, and moistened with a little milk; *ḥarḥāḥ*, made with barley semolina; this is called *ṣakā* in Morocco. The *Kūbā al-Ṭabāḥ* gives the recipe of *fityānī* which is

prepared by cooking grain in gravy and which is sprinkled with cinnamon; it also mentions *ḥarḥāḥ* with chicken.

Couscous is quite widely known at the present time, especially in France where it is found commercially produced in food tins and sold "pre-cooked"; conical utensils ("couscoussiers") made of metal are also produced. Restaurants serve several varieties of this Maghribi dish accompanied by a sauce strongly seasoned with pepper (*warḡa ḥarra*; *harisa*).

KUSS b. SĀ'IDA al-ḤADĪ, a semi-legendary character of Arab antiquity pictured as the greatest orator of all the tribes (al-Ḥabīb, Bayḍā, I, 52) and whose eloquence has become proverbial (*al-Ḥabīb min Kuss*; al-Maydānī, *Maḡama*, I, 117-18; 'Imād al-Dīn al-Isfahānī [p.r.] even formed an adjective rhyming with *ḥadīṣ* in the title of his history of the conquest of Jerusalem by Saladin, *al-Fatḥ al-ḡusṣī* "of Kussian inspiration"). He is also a heroic figure, described as being also the poet, sage, judge, etc. par excellence of the Arabs of his time. His genealogy cannot be established with certainty, but the nearest to reality seems to be: Kuss b. Sā'ida b. 'Amr b. Ḥawāl b. 'Adī b. Mālik b. Ayḍān b. al-Namir b. Wāḥa b. al-Ṭamāḥān b. 'Awḥā Maḥāb b. Yaḥdum b. Aḥā b. Du'mān b. Iyād (cf. Ibn al-Kaḥbi-Caskei, Tab. 274 and Register, II, 475). Moreover, his very name poses a problem, since it is unique (cf. however the toponym Kuss al-Nāṣir, in Yaḥdū, IV, 97-8); although it is given without the definite article, it could well be connected with *ḥass* and *ḥissā* and point therefore to a relationship more or less close to the Christiana clergy. It is not impossible that Kuss had relations with the Christians of Naḡḡān, but it is wrong to take him, as has sometimes been done, as the bishop of that town, perhaps on account of an assimilation brought about by the phrase "eloquent as the bishop of Naḡḡān" (see e.g. al-Djāzī, *Ḥaya'at*, III, 83). Legend, which also credits him with a number of miracles, has it that he presented himself at the court of the Emperor of Byzantium, but he seems to have delivered his orations in the regions between 'Irāk (where the Iyād [p.r.] had been established, but had lost however their independent existence by the end of the Dīlshīyya), the Hīdžāz and Syria. Nothing is known of the date of his death, which Cheiḥo (Ṣān'arā' al-Naḡḡawīya, 211) fixes arbitrarily in 600 A.D., and, it is at Rūḥān, one of the dependencies of Aleppo, that his tomb was fixed, becoming the goal of a still much-followed pilgrimage in the 7th/13th century (al-Harawī, *Ziyārāt*, 3120; Yaḥdū, II, 829; D. Sourdel, in Syria, xxxi [1953], 89-107). Interred beside him were said to have devoted an elegy (in *ḡawī* metre, and the rhyme-*ḡawī*) which is often

Drachmann, *The mechanical technology of Greek and Roman antiquity*, Copenhagen 1963 (D. Hüll).

KUṢṬANTĪNA, KUṢANTĪNA, CONSTANTINE, a town in Algeria and the chief town of the *ghidya* (department) of the same name. It lies 330 miles east of Algiers and 30 miles south-east of Skidda (former Philippeville), which is the port for Constantine, with which it is connected by railway, in lat. 36° 22' N. and long. 10° 56'. The population in 1965 was 255,000.

The situation of Constantine makes the town a natural fortress. It is built on a rocky plateau in the form of a trapezoid, bounded on the south-east, north-east and north-west, by deep ravines and connected with the surrounding country on the south-east only by a narrow isthmus. The plateau itself declines rapidly from north to south. The Kasba on its highest point is 2,500 feet above sea-level, while the Marabout of Sidi Rāshid not a mile away is only 2,270 feet high. Of the ravines which represent the moats of this natural fortress, the most remarkable is that which runs along the south-east and north-east faces of the plateau, at the bottom of which the Rummel (Wādī 'l-Ramī) flows. This river runs along a narrow gully, a real cañon, the walls of which rise sheer upright to a height of 500 to 600 feet, disappears for 1½ miles under three subterranean passages which the water has hollowed out, makes its exit in waterfalls and descends to the verdant plain of al-Hamma. Across this gorge, above which on the right bank rises the plateau of Manǧra (2,340 feet), the Romans threw a bridge which existed for several centuries after the Arab conquest. Al-Bakrī (*Description de l'Afrique*, ed. and tr. de Siane, Ar. text 63, tr. 131-2) mentions it, and al-Idrīsī (ed. de Goeje, 111, ed. Naples-Rome, III, 205) describes it as one of the most remarkable works which it had ever been granted him to see. Consisting of two rows of arches, one above the other, 227 feet high, a road and an aqueduct bringing the water necessary for the town ran across it. It collapsed in the 7th/13th century, was rebuilt in the 16th by order of Sāliḥ Bey under the supervision of a Spanish engineer, and finally breaking down in 1947, it was replaced by an iron bridge 423 feet long crossing the Rummel at a height of 328 feet. Another bridge is, farther up the river, to connect the plateau of Manǧra with the quarters previously in existence to the southwest of the town.

This last preserves an originality of aspect which is in striking contrast to that of other Algerian towns. It resembles a great Kabyle village rather than an oriental city. It is an agglomeration of houses with clay roofs, penetrated by an irregular system of narrow, tortuous streets, which sometimes descend like stairways to the edge of the ravine, the heights of which are crowned by houses. A few monuments recall the past history of Constantine. The great mosque dates from the time of the first Hafṣid sovereigns (7th/13th century). The mosques of Sūk al-Ḥaṣāl, of Sidi Laḥdār and of Sidi al-Kattīnī, all of which were built in the 18th century, belong to the Turkish period, as does the palace built by Ahmad, the last Turkish Bey, just before the French conquest.

The origins of Constantine are obscure. But in all probability, the site must have been occupied at a very early period by autochthonous peoples. The classical texts mention the existence of a town named Cirta at this place. The origin of the name (*kari* "town" (see *KARYA*)) would lead one to suppose that the Carthaginians had established a colony there. In any case, Cirta appears in the period of the Punic Wars as the capital of the kings of Numidia; Syphax

had a palace there. Masinissa and his successors erected important buildings in it and invited Greek and Roman merchants thither. During the civil wars of the 1st century B.C., P. Sittius Noverianus, an adventurer, seized Cirta and on the latter's ultimate triumph received the town and territory. Cirta then became a Roman colony under the name of Colonia Cirta Julia or Cirta Sittienorum. Juba II made it his capital after the restoration of the kingdom of Numidia by Augustus and lived there for seven years (24-17 B.C.), till he was forced to exchange Numidia for Mauretania. Cirta still remained the capital of the republic of the "four colonies", then in the 3rd century A.D. It became that of the province of Numidia Civilis or Numidia Cirtensis established by Maximianus Hercules in 297. In the course of the civil wars which followed the abdication of Diocletian, the inhabitants recognised the authority of the usurper Alexander and gave him asylum after he had been driven from Carthage and thus brought upon their heads the wrath of Maxentius. The latter took Cirta and razed the town to the ground in 311. It was rebuilt in 313 by Constantine, the conqueror of Maxentius, and received the name of Constantine which it has retained to the present day. At the Vandal invasion, Constantine was occupied by the barbarians, but given back in 442 by Gaiseric to the Emperor. After the destruction of the Western Empire, Constantine remained independent, till the Byzantines, victorious over the Vandals, brought Northern Africa under their sway in 533. It remained subject to them till the invasion of North Africa by the Arabs.

The chroniclers are silent as to the date at which it fell into the hands of the Muslims. It is probable, however, that it was not affected by the first Arab incursions but was only occupied at the end of the 1st/7th century at the same time as Carthage and the other Byzantine strongholds which were the last to surrender. Included in the province of Ifrīqiya, Constantine owned the rule successively of the governors of Kayrawān, the Aghlabids, the Fāṭimids, then the Zirīds. The latter retained it even after the Hammūdids had deprived them of a portion of the eastern Maghrib. They lost it entirely at the Hīlālī invasion. The Hammādīd al-Mu'izz took advantage of their troubles to seize the town and include it among his own possessions. The successors of al-Mu'izz retained the town for a century in spite of a revolt instigated by the uncle of the amīr al-Nāṣir. After the capture of Bougie by the Almohads, Yabā, the last king of Bougie, sought refuge in Constantine, then giving up any idea of further resistance, surrendered to 'Abd al-Mu'min whose troops took possession of the town. Attacked unsuccessfully by 'Alī b. Ḥilāniya in 581/1183, Constantine remained faithful to the Almohads till the final collapse of the empire founded by 'Abd al-Mu'min.

At this period, Constantine was a very prosperous city: "Kusanīnat", says al-Bakrī (*op. cit.*, 63, tr. 131-2), "is a large and ancient town with a numerous population; ... it is inhabited by various families who were originally part of the [Berber] tribes established at Mīla, in the land of Naǧāwa in that of Kaṣṭīlīya, but it belongs to certain Kutāma tribes. It has rich bazaars and a prosperous trade". Al-Idrīsī describes Constantine (Kusanīnat al-hawā, "of the air", because of its position) as a populous and commercial town. "The inhabitants, he continues, "are rich; they have agreements with the rural population (al-'Arab) and co-operate with them for the cultivation of the soil and the preservation of the harvests.

Their silos are so good that corn may be kept in them for a century without suffering any deterioration. They collect large quantities of honey and butter, which they export to the outside . . ." (loc. cit.).

When the Almohad Empire broke up, Constantine recognised the authority of the Hafsid Abū Zakariyyā¹, who was proclaimed at Tunis in 628/1230 (see *Ḥaḥḥids*). The history of the town under the Hafsids (7th-10th/13th-16th centuries) is very confused and disjointed. The rulers of Tunis attached great importance to the possession of Constantine; they frequently lived there and delighted in improving it, they usually entrusted its government to princes of their own family. Nevertheless, in spite of their precautions and trouble they lost it on several occasions. In 687/1288 for example, in the reign of Abū Ishāq, the governor Ibn al-Wazīf rose against the sovereign of Tunis, who had to send his son, Abū Fāris, to retake the town by force. In 693/1284, its inhabitants opened their gates to the pretender Abū Zakariyyā² of Bougie; in 704/1305 at the suggestion of the governor Ibn al-Amīn, they submitted to the Hafsid sovereign of Tunis, whom they cast off almost immediately afterwards, however, to place themselves again under the authority of the king of Bougie, Abū 'l-Bakr³. The latter succeeded in restoring to his own advantage the unity of the Hafsid kingdom in 705/1309 and for some years maintained peace in the eastern Maghrib. But new troubles were not long in arising. From 712/1312 to 719/1319, Constantine was almost independent under the authority of the vizier Ibn Qhamr, who succeeded in placing on the throne of Tunis a prince of his own choosing, Abū Yahyā. In 725/1325, the revolt of another vizier, Ibn al-Kāṭūn, exposed the inhabitants to an attack, which proved unsuccessful, from the 'Abd al-Wāḥids. The wars which then broke out in the eastern Maghrib between the Marīnids and the 'Abd al-Wāḥids, as well as the good government of the governors Abū 'Abd Allāh and Abū Zayd, son and grandson of Abū Yahyā, king of Tunis, gained Constantine a few years of respite. But peace, which had only been established with difficulty, was again broken in the middle of the 8th/14th century by Marinid expeditions. Abū 'l-Ḥasan entered Constantine without striking a blow and supplanted Hafsid authority by his own in 748/1347. The defeat of Abū 'l-Ḥasan at Kayrawān brought about a revival in favour of the Hafsids and one of them, al-Faḍl, took advantage of the occasion to seize the town. He held it for only a short time. The former Hafsid governor, Abū Zayd, set at liberty by Abū 'l-Ḥasan, retook Constantine, then abandoning his protector, proclaimed as Sultān a son of al-Ḥasan named Taḥḥfin. Soon afterwards, Abū Zayd's brother, Abū 'l-'Abbās, overthrew him and dethroned Taḥḥfin. He in his turn took the title of Sultān, repulsed the Dawāwida and Sawtīkash Arabs, who had laid siege to Constantine in 756/1355, but could not prevent the town being taken by Abū 'l-Ḥanīn, who came in person against it. He regained it from the Marīnids in 761/1360. Becoming Sultān of Tunis in 772/1370, Abū 'l-'Abbās maintained peace in the province of Constantine till his death. His successor Abū Fāris had on the other hand twice to reconquer the town from his brother Abū Bakr, who had seized it with the help of the Arab tribes.

We have no exact details on the history of Constantine in the 9th/15th century. Rebellions against Hafsid rule were, it seems, less frequent than in the preceding century, but its authority was more nominal than real. During this period, the real masters of Constantine were the chiefs of the Awlād

Sala, a section of the Arab tribe of Dawāwida, in the town itself the exercise of authority was in the hands of a few families, clients of the Awlād Sala. Such, for example, were the family of 'Abd al-Mu'min of Marabout origin, whose chiefs exercised by hereditary right the functions of *shaykh al-Islām* and *Amir al-Rakab* (leader of the caravan of pilgrims to Mecca); the family of the Banū Bāḍis, whose members had arrogated to themselves the duties of *shaykh*; and that of the Banū 'l-Faḡḡān (or Laḡḡān), famous as legal authorities.

The arrival of the Turks in Northern Africa reopened an era of troubles for Constantine. There were two parties in the field. The one, led by the 'Abd al-Mu'min, was favourable to the maintenance of Hafsid suzerainty; the other, led by the Laḡḡān, invited the Turks thither. According to Vayssettes, a first attempt by the Turks to occupy the town was made as early as 923/1517. According to Mercler, Hasan, one of Khayr al-Dīn's lieutenants, forced the people of Constantine to recognise his master's authority in 923/1519 or 926/1520. The submission of the town was only an ephemeral one, however, for in 932/1526 a representative of the Hafsid sovereign of Tunis was residing in the town. It is not till 940/1534 that the establishment of a garrison definitely marks the occupation of Constantine by the Turks. Their authority was not firmly established without difficulty. The belated partisans of the Hafsids did not bow at once to the Turkish yoke, but sought to rid themselves of their new masters. In 972/1567-8 they massacred the Turkish garrison and expelled their supporters. To restore order, the Pasha Muḥammad had to lead an expedition against Constantine, the inhabitants of which did not dare resist but opened the gates without showing fight. Another rebellion broke out in 1572 and was suppressed with the greatest rigour. The 'Abd al-Mu'min who had instigated it, was deprived of their privileges, and from that date ceased to play a predominant part in the affairs of the town. They resigned themselves to their fall with a very bad grace. We find them again in 1652/1664 taking advantage of the difficulties caused to the Turks by the revolt of the Kabyles and the insubordination of the great Arab chiefs to stir up risings again which were, however, speedily put down. After being selected as the capital of the beylik of the East in the 10th/16th century, Constantine enjoyed complete tranquility for the half century following the period of government of the Bey Faḥat (1646/1657). But the intervention of the Algerians in the affairs of Tunisia ended in exposing Constantine to the reprisals of its neighbours. In 1112/1700, Murād Bey of Tunis, victorious in two battles against 'Alī Khōḍja Bey of Constantine, laid siege to the town and blockaded it for three months. The Dey of Algiers at length received warning of the precarious situation of the town by a messenger, who had succeeded in escaping from Constantine after being let down the cliff by a rope, and sent an army to its help, the arrival of which the Tunisian general did not dare await.

The 18th century marks the zenith of Turkish domination at Constantine. The beylik was held during this period by men of energy and intellect, ruling like independent sovereigns rather than as docile representatives of the Dey of Algiers. Such were Kalāyān Hasan Bey, called Bū Kamyā (1723-35), Ḥasan b. Ḥusayn called Bū Ḥanān (1736-54), Ahmad al-Kullī (1756-72) and above all Šāḥī Bey (1771-92). Constantine owes to them many public works and buildings of general interest. Bū Kamyā built the

mosque of Sūḥ al-Ghazāl; Bū Ḥanāḥ made new streets and built the Mosque of Sīdī Laḥḥāq. Ṣāliḥ Bey rebuilt the bridge over the Rummel and the Roman aqueduct bringing the waters of the Djibāl Wabāḥ to the city; he also built the mosque and madrasa of Sīdī al-Kattānī and commissioned Italian artificers to build him a palace adorned with fountains and marble columns purchased in Italy.

A period of anarchy and disorder succeeded this brilliant epoch. Ṣāliḥ Bey himself, deposed by the Dey of Algiers, to whom he had given offence, tried to stir up a rebellion but perished miserably. Seventeen Beys ruled Constantine in the period 1792-1826. Some of them only held office a few months or even a few days; almost all were distinguished by their cruelty and rapine. Constantine suffered much from this state of affairs. To the internal disorder were soon added attacks by the surrounding peoples. The Kabyle hordes of the Marabout (Ibn al-A'raḥ) Sulaymān (Kāhya) rose against the Turks and advanced up to the walls of Constantine in 1804. A Tunisian army commanded by Sulaymān Kāhya besieged the town three years later. It was blockaded for two months (April-May 1807) and was once bombarded. The approach of a relieving army from Algiers caused the Tunisians to raise the siege, and in their retreat they lost 1,167 prisoners and all their artillery.

Aḥmad, the last Bey of Constantine, possessed those qualities which were lacking in his predecessors. Intellectual, active, ambitious and energetic, he unfortunately made himself hated by his acts of cruelty and by the exactions levied by him to raise funds to build a palace in Constantine to replace the old Dār al-Bey. After the French occupation of Algiers, he sought to profit by the disappearance of the *edna* to create an independent principality in the east, and had the title of Paḡā given to him by the Ottoman Porte. Deposed by a decree from General Clausel on 15 December 1830, he nevertheless retained possession of Constantine. The hesitation on the part of the French government, which tried to come to terms with him for his voluntary submission and after the failure of these negotiations did not wish to enter on a dangerous campaign, delayed his fall. But in 1836, Marshall Clausel, then governor-general of Algeria, obtained permission to undertake an expedition against Constantine. Leaving Bone on 2 November, the French troops arrived without difficulty in sight of the town and took up a position on the heights of the Maḡūra and of the Kudya. Two sorties by the besieged, led by Iḥo 'Ṣā, *Ḥāliḥ* of the Bey, were repulsed; on the other hand, two attacks by the French in the night of the 22-3 December also failed. Clausel decided to raise the siege and returned to Bone after a retreat which was rendered very difficult by bad weather. This check was made good the following year. An army under General Damérout had siege to Constantine on 6 October 1837. He was killed on 12 October; but his successor, General Valée, ordered an assault on the 13th. The town was taken after fierce fighting by columns led by Colonels Combe and Lamoricière. Aḥmad Bey, who had left Constantine on the approach of the French troops, retired to the south where he held the country against the French for eleven years longer. It is said that the siege of 1837 was the nineteenth that Constantine had to endure.

After the French occupation, Constantine, the administration of which had been entrusted to a *ḥāim* under the supervision of the military authorities, became the headquarters of a *commandement*

supérieur and the base of French operations in the eastern province. At first under military law, it was not given a municipal government till 1848 and became the capital of the *département* in 1849. Since then the town has developed considerably. It has in fact remained a market and centre of supplies for the tribes of the east; its native industries have survived and supply the population of the surrounding country with cotton skulls and articles of leather.

(AL-) KUSANTİNIYYA, Constantinople.

I. TO THE OTTOMAN CONQUEST (1453).

The city, which Constantine the Great on 11 May 330 raised to be the capital of the Eastern Empire and which was called after him, was known to the Arabs as *Kusantiniyya* (in poetry also *Kusantīna*, with or without the article); the older name *Byzantion* (*Ḥusaynā* and various spellings) was also known to them, as well as the fact that the later Greeks, as at the present day, used to call Constantinople simply *ἡ πόλις* as "the city" par excellence (*Maḥūdī*, li, 406 = § 1291 n.; Ibn al-Aḥḥār, i, 235; Abu T-Fidā, ii, 39; Dimaghḡī, 241, 259; Ibn Battūṭa, ii, 431). From *αἰς τὴν πόλιν* arose the Turkish name "İstan bul" (q.v.). *Kusantiniyya*, with the variant *Kusantiniyya*, remained the official designation on coins and firmans under the Ottomans.

The campaigns of the Arabs against Constantinople. It is said that the Prophet himself had foretold the conquest of Constantinople by the faithful. The Ottoman historians adduce the following *ḥadīṭ*: "You shall conquer Constantinople, peace be upon the prince and the army to whom this shall be granted!" ('*Ālī*, *Kuṣṣa al-aḥḥār*, v, 232; Solakzāde, 194; Ewliyā, i, 32, 73; 'Alī Ṣāṭī, *Ḥadīḥ al-jūd*, i, 21; Suyūṭī's *al-Djāmī al-aḥḥār* is given as authority; older references are wanting. As a matter of fact, the Umayyads set about this enterprise with the energy and valour that inspired the early warriors of Islam. In the year of the world 6146 (beginning 1 September 653), according to Theophanes, 345, a fleet was equipped in Tripolis "against Constantinople", which under the leadership of Aḡḡuladōp (i.e. Busi b. Abī Artāḡ) defeated the Greek fleet at Phoenix (Fīnāks) on the Lycian coast [see *ḡḡḡ* AL-ḡḡḡ in Suppl.], but did not reach Constantinople; at the same time, Mu'āwīya had invaded Byzantine territory by land.

In the year 44/644 took place the campaign of 'Abd al-Raḥmān b. 'Iḥādīd, who advanced as far as Pergamon; the admiral Busi b. Abī Artāḡ, according to Arabic sources, is said to have reached Constantinople (Tabarī, ii, 86).

In the course of the next years, Fāḡila b. 'Ubayd advanced as far as Chalcedon, and Yazīd, son of Mu'āwīya, was sent after him (according to Theophanes, in the year 6139 of the world, beginning 1 September 666; according to Elias of Nisibis, Yazīd

appeared before Constantinople in 51/572); a fleet commanded by Busr b. Abi Ar'at supported this enterprise. In 672 a strong fleet cast anchor off the European coast of the Sea of Marmora under the walls of the city. The Arabs attacked the town from April to September; they spent the winter in Cyzicus and renewed their attacks in the following spring until they finally retired "after seven years' fighting". A great part of the fleet was destroyed by Greek fire; many ships were wrecked on the return journey (Theoph., 353 ff.). There are difficulties in the chronological arrangement in Theophanes of the various phases of this seven years' blockade. The land army seems to have appeared before Constantinople in 47/667 and the fleet to have finally retired in 53/673. The Arab historians vary between the years 48, 49, 50 and 52 and place the death of Abū Ayyūb in the year 50, 51, 52 or even 55. As the fighting around Constantinople was spread over several years, the difference in the estimates is not so unacceptable.

This siege has acquired particular renown in the Arab world, as the Ansārī Abū Ayyūb Khālid b. Zayd fell in it and was buried before the walls of Constantinople; the finding of his tomb during the final siege by Mehemmed II was an event only comparable to the discovery of the holy lance by the early Crusaders at the siege of Antioch. (The grave of Abū Ayyūb is first mentioned by Ibn Kutayba, 240; according to Tabari, III, 2304, Ibn al-Athir, III, 385, Ibn al-Djawal and Kazwini, 408, the Byzantines respected it and made pilgrimages to it in times of drought to pray there for rain (ṭarīq); the Turkish legend is given very fully in Leunclavius, *Hist. Mus.*, 41 ff. and in the palm-taking monograph by Hādīdī 'Abd Allāh, *al-Āḡār al-maḡdīdiyya fī 'l-mawāḡib al-ḥādīdiyya*, Istanbul 1957.)

There was a truce for over 40 years between Byzantines and Arabs until in 97/715-16 Sulaymān b. 'Abd al-Malik came to the throne. A ḥadīth was at this time current according to which a caliph who should bear the name of a prophet was to conquer Constantinople. Sulaymān took the prophecy to refer to himself and equipped a great expedition against Constantinople. His brother Maslama led the army which was equipped with siege artillery through Asia Minor, crossed the Dardanelles at Abydos and surrounded Constantinople. The Arab armada anchored partly near the walls on the coast of the Sea of Marmora and partly in the Bosphorus; the Golden Horn was barred by a chain. The siege began on 25 August 716 and lasted a whole year; Maslama then found himself forced to retire owing to the attacks of the Bulgars and the scarcity of provisions (Theophanes, 386-99; full details in Ibn Miskawayh, ed. de Coorje, 24-33; cf. also Tabari, II, 1314 ff.; Ibn al-Athir, iv, 17 ff.; cf. the vivid account in Gelzer, *Pergamon unter Byzantinern und Osmanen*, 49-64). There are many references to Maslama's hazardous march among the later Arabs. Even several centuries later they knew of "Maslama's Well" at Abydos, where he had encamped (Mas'ūdī, II, 317 = § 738; Ibn Khuradādhbih, 104), and the mosque built by him there (Yāqūt, i, 374). 'Abd Allāh b. Tayyib, the first Muslim to lead an attack on the "Gate of Kustantīniyya" was one of Maslama's comrades (Ibn Kutayba, 275). Maslama is said to have made the building of a house near the Imperial palace for the Arab prisoners of war one of the conditions of the treaty of peace and to have built the first mosque in Constantinople (Mukaddasi, 147; Ibn al-Athir, x, 18; Dimashqī, 327); finally, he is credited with building the Tower of Galata (Dimashqī, 228) and the 'Arsh

Ḥamī in Galata (Hādīdī Khattāf, *Taḥwīm al-tamārīq*, year 97 A.H.). Ewlyā and his sources have made two stages out of Maslama's campaign and embellished their narrative with incredible stories. Nerkes (d. 1041/1634) discusses Maslama's campaigns in the fourth section of his *Pentateuch*, following, so he says, Muḥyī 'l-Dīn al-'Arabī's *Musmū'at*.

Only on one other occasion did an Arab host appear within sight of Constantinople, namely in 165/782. Ḥārūn, the son of the caliph al-Ma'mūn, had marched through Asia Minor unsupported and encamped at Chrysopolis (Scutari). The Empress Irene, who was acting as Regent for her son Constantine, hastened to make peace and agreed to pay tribute (Theophanes, 455 ff. under the year 674 of the world [781-2]; Baladhuri, 268; Tabari, III, 504 ff.; Ibn al-Athir, vi, 44 = year 155/781-2). Ewlyā and his authority (Muḥyī 'l-Dīn Khattāf, died 957/1550 according to Rieu, *Catalogue*, 48 ff.) have made no less than four regular sieges of Constantinople out of the campaigns of the Arabs under al-Ma'mūn and Ḥārūn against the Greeks. After the second, Ḥārūn gained a quarter in the city by a trick similar to that by which Dido gained the site of Carthage (Leunclavius, *op. cit.*, 54; Ewlyā, i, 81 = *Travels, etc.*, II, 1, 25); the same story is given by Clavijo, 23, of the settlement of the Genoese in Galata, and Ewlyā, *Travels*, II, 66, of the building of Rumeli Hisar by Mehemmed II.

The Arab accounts of Constantinople date from the 3rd/9th century. They considered the Dardanelles, the Sea of Marmora and the Bosphorus as a single "canal" (*ḥadīq*), connecting the Mediterranean with the Black Sea. Isṭakhṛī and others mention the great chain which prevented the entrance of Arab ships; this is probably the chain, which was stretched between Galata and Constantinople in time of war, that is referred to. The high double walls of the city with their towers and gateways, including the Golden Gate, the Aya Sofya, the Hippodrome with its monuments (notably the Egyptian obelisk), the four brazen horses at the entrance to the palace, and the great equestrian statue in bronze of "Constantina" (really of Justinian, the so-called Augustus) are described by them in greater or less detail. Ibn Hawqāl and Mukaddasi devote particular attention to the Praetorium where their countrymen, prisoners of war, were kept under a mild custody and to the mosque attributed to Maslama (Yāqūt, i, 709, s.v. *Balālī*, and Constantine Porphyrogenitus, *De ceremoniis*, i, 592, 767). The most detailed account is that of Ibn al-Wardī (8th/14th century); he mentions the bronze Obelisk of Porphyrogenitus, the Pillar of Arcadius and the Aqueeduct of Valens and also knew that the Golden Gate was closed. Ibn Baṭṭūṭa (II, 431-44) described from his own observation the monastic life of his time; the latest notices are given by Fīrūzbādī (d. 827/1415) in his dictionary the *Ādām*.

Apart from prisoners of war, numerous Muslim merchants and envoys from the caliphs and other Muslim rulers sojourned in Byzantium; the Mamūlik Sultāns occasionally banished either troublesome persons with their families; Salḡūk Sultān and pretenders (ḥafīḍ) Arslān I, Kaykhusraw I, Kaykāwūs II repeatedly spent long periods in Constantinople; remarkable details of their life in the capital are given by Byzantine writer and in the Salḡūk historians.

No definite traces have as yet been discovered of the two sieges by the Arabs and the residence of Arabs and other Muslims in Constantinople; in particular, the mosque of Maslama has not come to

light; it is first mentioned by Const. Porphyre, *De adm.*, ch. xlii (Bonc *Corpus*, I, 1, 22); it was destroyed in a popular rising in 1200 and pillaged by the Crusaders in 1203 (Nicetas Chonlates, 696, 731, ed. Bonn). According to Ibn al-Ajir, *ix*, 381, cf. x, 18 (whence Abu 'l-Fida' derives his information), it was restored in 1211/1049-50 by Constantine Monomachos at the request of the Salgiuk Toghril Beg. According to Makrid (I, 177, ed. Quatremere), Michael VIII Palaeologus built a mosque about 660/1261-2 which the Mamluk Sultan Baybars equipped in splendid style. The accounts of the 'Arab Djami' and other buildings by the Arabs in Constantinople belong to the domain of fable.

2. AFTER THE OTTOMAN CONQUEST (see ISTANBUL).

KÜSTENDIL, KÖSTENDIL (in Serbian: Čustendil), a town of some 35,000 inhabitants in Western Bulgaria. It was in the Serbo-Bulgarian Middle Ages a small fortified stronghold on a hill above the wide plain of Küstendil, serving as a princely residence, and was known as Velbužhd. In Ottoman times it was capital of the *sandjak* of Küstendil, and was an Islamic cultural and administrative centre of some importance. The town is the indirect successor of the Roman *Parthalia*, of which substantial remains have been unearthed.

The Ottoman chroniclers Sa'd al-Din and Münezzidimbashi mention that the ruler of the land of Konstantin (the son of the Serbian nobleman Dejan) accepted Ottoman overlordship in 773/1371-2, after the latter had captured the strategic fortresses of Ihtiman and Samokov. Nesirli mentions Konstantin among Murad's vassals during the Karaman Campaign. 'Ashirpashazade, Ornek Beg and the Anonymus Giese do not however mention the acquisition of the land of Konstantin. This prince married Helena, the daughter of the Bulgarian Tsar Ivan Alexander (their daughter married Manuel Palaeologus, emperor of Byzantium), and died as a loyal Ottoman vassal in the Battle of Rovine in 1395 assisting Bilyald I against the Walachians (797/1395). He left no suitable heir behind. The memory of the princely couple is perpetuated by the monastery of Poganovo in the ravine of the Erma north of Küstendil, today just across the Yugoslav border. Konstantin's lands, including the towns and castles of Stip, Radomir,

Petrit, Melnik, Vranja and the rich silver mines of Kratovo (places today partly in Yugoslavian, partly in Bulgarian territory), were transformed into an Ottoman *sandjak* known as Kostadin-ili, the land of Kostadin. There are some traditions that the Bulgarian population rose in revolt in the difficult years of the Fezret Dewri and around the time of the accession of Murad II. The fortified town had allegedly to be retaken, after which it was dismantled. The unreliable population was transferred to the neighbouring villages. Whether true or not, it is at least certain that in the time of Murad II a new open town was founded below the 'Castle Hill', grouped around a mosque, a caravanserai and a school. The new settlement became known as Ilija-yl Küstendil, or Ilija in Turkish, Konstantinova Banja or Velbužka Banja in Slavic. The Turkish form Köstendil appears to be a corruption of Kostadin-ili.

At the end of the 13th/14th century and the beginning of the 15th/16th century, important groups of Turkish colonists from Asia Minor were settled in the *sandjak* of Küstendil. According to an Ottoman census from the beginning of the 16th/17th century, these groups numbered 6,040 families. The Christian section of the population then comprised 56,958 families. According to the census of 925/1519, the city itself counted a Muslim population of 393 families and 60 bachelors, as well as 47 Christian families, six bachelors and eight widows, perhaps altogether 1,800 civil, non-administrative inhabitants. In spite of this relatively small size, Küstendil appeared in 1499 to the widely-travelled Rheish knight Arnold van Hartl as "eyn gar grosse schone Stadt". This source also remarks that "Wruckabaina" (Velbužka Banja) had a palace where the sultan kept a number of his wives. At the beginning of the 16th century, Jordan Ivanov still saw a "Seray Kulesi", situated next to a fine basin (*hamam*) built and paved with large slabs of marble. Tower and basin were situated in the "Seray Mahallesi".

In the 16th/17th century, Küstendil witnessed a rapid expansion. In 966/1559 an anonymous Italian traveller described it as a town with "about a thousand houses, built in the Turkish manner, many mosques and quite a number of baths. The town is inhabited by Turks and some Jews..." We passed the night in a Khan, called Imaret, which in our language is an inn. A Sandjakbeg ordered the construction of this very convenient building for the traveller and stranger, for the salvation of his soul." During this century, a number of military commanders and members of the administration erected a considerable number of mosques and caravanserais, and opened up mineral baths. Mehmed-i 'Ashik in his *Menâşir-i 'ashim* (Halet Efendi, No. 616, I, fol. 212a) noted in 997/1589 twelve mineral baths, many with stone-built domes over the disrobing section and over the bathroom proper, others even with separate rooms. The most beautiful was the so-called Beg Ilija's. In 894/1489 the *beglerbeg* of Rumeli, Khâdim Süleyman Pasha, had erected a large domed mosque and a double bath in the city, and had laid out a water supply system which brought good drinking water from the village of Bogodol, some 15 km. away, to the town. The villagers of Bogodol received a privileged status as *pa-yaldiz*. The *ishir defteri* of 925/1519 also attributes an *imaret* and a number of shops to this governor. (The mosque, very similar to that built by Khâdim Süleyman Pasha on the banks of the Tundja in Edirne, was demolished shortly before the Second World War.) Other important buildings were the 'Imaret Djami', with

caravanserai, *madrasa* and bath, erected in 937/1531 by Mehmed Beg (the building was often confused with the mosque of Muḥiddīn; see Ayverdi, *Osmanlı mimarisinde Fatih devri*, iv, İstanbul 1974, 806, which enumerates and continues the old mistakes). The mosque was demolished in 1949. Other 10th/16th century buildings, happily preserved, are the Dervish Banya from 973/1566 and the large mosque of Ahmed Beg from 983/1575-6, this last now serving as a local museum.

According to the Ottoman census register of 981/1573, the town then numbered 623 Muslim households, 90 Muslim bachelors, 84 Christian households, 28 Christian bachelors, 14 widows and a Jewish community of four families. The whole population, including the members of the administration and their families, amounted perhaps to 4,000 souls. By then the number of Muslim *mahalles* had risen from six (in 925/1519) to 21, the number of *imams* of mosques from seven to seventeen. An Ottoman *ḡileb* register (*Türkî İmri ve Bâlgarskâta İstoriya*, iii, Sofia 1972, 129-30) from 981/1573 gives a fair cross-section of the composition of the town's population. A total of 57 Muslim *ḡilebs* are registered against six Christians, all given by name, patronymic and profession. Both groups were almost all craftsmen, leatherworkers, smiths, *muḥafifs*, *keḡaḡifs*, goldsmiths, shoemakers, soapmakers, cartwrights, etc. Out of the number of *ḡilebs* in the villages of the *ḡadā* of Küstendil, 538 were Christian against 20 Muslims, from which may be concluded that the Bulgarian Christian element continued to be the bulk of the rural population.

In the 11th/17th century, the development of Küstendil apparently stagnated: the city had suffered badly from earthquakes in 993/1585 and 1051/1641. Ewliya Çelebi (*Seyahat-nâme*, vi), who visited it in 1071/1660-1 and left his signature on the Iron wall of the Ahmed Beg Mosque, counted eleven small *mahalles* with 1,100 houses, and he further made some important notes on the Islamic buildings of the city, among which he mentions a number of mosques, three *madrasas*, five *tekkes*, six schools and twelve mineral baths "with lofty vaults and many basins".

In March 1690 Küstendil was occupied by an Austrian force under Antonio Valerio Žić, which led to a considerable diminishing of the Muslim population. In about or after that year, the entire settlement was surrounded by a wall with towers and gates, and the Castle Hill was again fortified. A picture of these works, made at the end of the 17th century by the Dutch artist Harrewyn, is preserved in the "Frenten Kabinet" of the Amsterdam Rijksmuseum.

In the early 19th century, Küstendil recovered slowly. St. Denis gives the number of inhabitants in 1807 as 7,000. J. Hültz (*Beschreibung des europäischen Türkei*, Munich 1828, 250-1) gives the same number. Ami Boué (*Revue d'histoire*, i, Paris 1836) counted 9,000 inhabitants, Bulgarians and Muslims. The *Sel-nâme* of the Tuna Wilâyetü of 1285/1869 mentions 16 mosques in Küstendil, three *madrasas* and 16 *tekkes*. When in 1878 Küstendil came within the frontiers of the newly-established Bulgarian state, most of the Muslim inhabitants emigrated. In 1890 Jireček (*Das Fürstentum Bulgarien*, Prague-Vienna-Leipzig 1891) counted in 1890 80,689 inhabitants, of which only 581 were Turks. Jireček still saw nine head-covered mosques. Jordan Ivanov noted in 1908 ten mineral baths. Today (1979) only two mosques and one of the baths remain preserved, and the Muslim element is reduced to a handful of families.

Küstendil produced some Ottoman scholars and men of letters, such as Saadberzide Hâletî (d. 973/

1566); Şhehîd Mehmed Efendi Küstendilî, scholar, poet, and calligrapher who was for a long time *muḥfîd* of the town (d. 1272/1855-6); and especially, Küstendilî Mollaizade Süleyman Şeyḡhî Efendi, for a long time *ḡayyik* of the Nakshibendî convent of Küstendil, who left behind some 26 works including a *History of Küstendil*, the Nakshî Dergâh, built by Süleyman himself, and in the yard of which he was buried, was demolished shortly after Bulgaria became independent.

Bibliography: In addition to the works mentioned in the text, see on the Roman and mediaeval town: Jordan Ivanov, *Küstendil-shiget Hisarlık i negovite starine*, in *Izvestiya Edgarskoto Arheol. KUSÖF, Kusöf, eclipse of the sun or of the moon. As regards linguistic usage, it may be noted that *al-kusaf* is used alike for the eclipse of the moon (*kusaf al-kamar*) and for that of the sun (*kusaf al-shams*), e.g. in *al-Farghani*, *Kusaf b. Laka*, *al-Battani*, *al-Biruni*; but they are often distinguished as *al-khusuf*, eclipse of the moon, and *al-kusaf*, of the sun, e.g. by *al-Kazwini* (on the linguistic usage, it should be noted that according to the *Mafatih al-ulum*, ed. van Vloten, 222-3 the viliḡ form, as in *in-kusafat al-shams*, should not be used, although this is very often done; e.g. by *al-Kazwini* and others).

The eclipse of the sun and of the moon have from the earliest times attracted the liveliest attention. Ptolemy, following Hipparchus, studied the theory of eclipses, and following him the Arabs and Syriacs, etc. We shall deal first with the eclipse of the moon. It must be premised that the apparent path of the moon—we must adhere to the geocentric view—cuts the ecliptic in two opposite points, which however in course of time come to move on to the

ecliptic. These points are called *al-dhawāḥir* (Persian *ghawz dār*, nut-shape, or less correctly *ghay dār*, globe-shape), they are also called *al-tūḥāt*, "dragon" (see below). All the planets have of course such *ghawāḥir*; without an addition the word always refers to the moon. Their positions are given in the Ephemerides. The massive ball into which, according to Ibn al-Haytham, the moon is inserted, and which carries it along as it moves, is called *falak al-dhawāḥir*.

The eclipse of the moon is caused, as was early recognised, by a dark body coming between the sun and the moon. It was at one time thought that this was a dragon, which ended at two opposite points on the globe of the heavens and had the same motion as the nodes of the moon. Eclipses occur when we cannot see the moon, because the head or tail of the dragon comes between us and the moon. From this idea comes the name for the crescent and waning nodes, i.e. the points where the moon passes through the ecliptic, "head, *al-ra's*" and "tail, *al-dhanab*", which were retained long after the "dragon" had disappeared. The sign \square for the length of the node is a distorted dragon. The astrologers credited this dragon with certain influences on the horoscope. But Severus Sebokht (ca. 650) (*F. Nau, Notes d'Astronomie syrienne*, in *J.A.*, Ser. 10, xvi [1910], 15) long ago dealt this, as there was no dragon and the calculations in question referred to the movements of the nodes. But we still find in al-Bīrūnī's *Taḥṣīn*, etc. the assertion that head and tail have separate natures. The head is hot, auspicious, and indicates increase (of property etc.). The tail is cold, brings misfortune, and indicates diminution of wealth, etc. Eclipses of the sun or of the moon are really caused by the earth coming between the sun and moon or the moon coming between the earth and the sun. Instead of *ghawāḥir* we often have the word "node" *ʿaḍ* and *ʿaḍā* used, also in combination with *ra's* and *dhanab*.

The shadow of the earth arising in the first instance, because the sun is considerably larger than the earth, consists of a cone-shaped convergent shadow (the shadow) on one side and a divergent shadow (penumbra) on the other side. Only in the shadow is there absolute darkness. As the diameter of the shadow at the place of the moon's path is considerably greater than that of the moon at the same point, under certain conditions, the moon may remain some time in the shadow and therefore be perfectly eclipsed for the period. Ibn al-Haytham, for example, investigated these conditions very fully (*E. Wiedemann, Beitr. xii, Über eine Schrift von Ibn al-Haytham, "Über die Beschaffenheit der Schatten"*, in *SBPMS Erl.* [1907], xxxix, 266).

If earth, sun and moon were very small bodies, mere points, eclipses would only take place when the sun and moon were exactly in the nodes. But as they are large, eclipses also occur when these bodies have passed beyond the nodes, i.e. have experienced an alteration in latitude and longitude. A total eclipse occurs when the breadth is smaller than the difference between the diameter of the shadow and that of the moon, a partial eclipse when it is larger than the latter but smaller than the sun of the diameters; if it is however equal to the latter, there is only a contact but no eclipse.

Taking into consideration the shadow alone, the *maḥṣūf* (cone) or *panawḥar* (pine-cone)—its cross-section is called *al-ʿayn al-ṭūl*—we have the following: the entrance into the shadow is called *ḥaḍʾ al-kusaf*, beginning of the eclipse; the phase from this beginning of the eclipse, to the beginning of totality, is

called *kuṣaf* (falling, the *ḥuṣṣawāṣ* of Ptolemy), the middle of the path covered in shadow is called *wasf* (middle). The phase which corresponds to complete emergence is called *lanām al-ingitāʾ* ("the completion of disappearance"), *al-makhṭ* ("stop, stay") means the phase in which the moon is eclipsed; in a partial eclipse there is no such stop. A *kuṣaf* *ḥull al-ḥamar bīd makhṭ*, a total eclipse without a stop, is said to occur when the moon's path is such that the darkened moon touches the cone of the shadow at only one point; then a total eclipse exists at this point only. For the case of total eclipse, the place where it begins is called *awwal al-makhṭ* and where the moon begins to emerge from the shadow, *ākhir al-makhṭ*.

A diminution of light but no complete extinction also occurs when the moon moves through the half-shadow. In his classical work on the shadows Ibn al-Haytham (see above) discussed the theory of this question and checked it by observation. In very rare cases, however, the whole of the eclipsed moon does not appear quite black but shows different colours, especially a dark red; this was observed by various early astronomers and minutely described by Ibn al-Haytham (his statements agree with modern observation, e.g. Joh. Müller, *Lehrbuch der kosmischen Physik*, § 9, p. 196). Al-Bīrūnī further studied these colours (*al-Kānūn al-Masʿūdī, maḥṣūl vii, bāb vii, faṣṭ iii*); he also examines critically earlier views and particularly Indian ideas on the astrological significance of the colours (cf. E. Wiedemann, *Über die verschiedenen bei der Mondfinsternis auftretenden Farben nach Bīrūnī*, in *Eders Jahrbuch für Photographie, etc.*, 1914). This light on the completely eclipsed moon is explained by the fact that the sun's rays are diverted in passing through the earth's atmosphere and thus enter the shadow and illuminate the moon. According to the amount of moisture in the atmosphere, these diverted rays are more or less coloured. For the possibility of a solar eclipse, the conditions are the same as for a lunar one.

Solar Eclipse: As the angle at which the moon appears to us is smaller, although only slightly, than that at which the sun appears, the moon can never completely cover the sun. Therefore even at a so-called total eclipse of the sun, even if the centres of sun and moon and earth all lie on a straight line, a narrow rim of light still remains. Bright formations, the coronas and the protuberances radiate from this. They are described by al-Bīrūnī in *al-Kānūn al-Masʿūdī, maḥṣūl viii, bāb xi* (cf. E. Wiedemann, *Ercheinungen bei der Dämmerung und Sonnenfinsternis*, in *Arch. f. Gesch. d. Med.*, xv [1923], 43).

The local times at which the same lunar or solar eclipse appears at different places are obtained from the difference of their geographical longitudes. The calculations are made difficult by the fact that these bodies show a considerable parallax. This partly explains the great differences between the calculated and true values.

It would take us too far to go into the details of the theoretical considerations, for example when each eclipse begins, how long it lasts, its periodicity, etc. In the works of al-Farghānī, Kustā b. Lūḡā, al-Kazwīnī, al-Dīghmīnī, al-Kharrāqī, and particularly in that of Abu 'l-Farajī, *Le Livre de l'Entomisme de l'esprit*, ed. F. Nau, Paris 1899, also in the *Kutub al-Taḥṣīn* etc. of al-Bīrūnī, we find more or less full general descriptions, while the works on astronomical theory like the *Zīj* (tables) of al-Kh'ārazmī, of al-Battānī, the *Kānūn al-Masʿūdī* of al-Bīrūnī, the *Zīj* of Naṣīr al-Dīn al-Ṭūsī, etc., give information about

mathematical considerations and the particular observations to be made (on the above scholars, cf. H. Suter, *Die Mathematiker und Astronomen der Araber*, in *Abhandl. zur Gesch. der math. Wissensch.*, x [1900]).

To obtain a standard for measuring the amount of the eclipse, the diameter of the sun or of the moon, was divided into twelve equal parts, called "fingers" (*ḥḍa'* or *ḥḍa' al-kusuf*) and the number of these that were eclipsed was calculated. In the West one spoke of "digits". In the same way, the surface is imagined to be divided into 12 equal parts and it is calculated how many of these are eclipsed. The latter may be calculated from the former which refer only to length. Al-Battānī, for example, gives tables in connection with this. The diopter of Hipparchus was used to measure the magnitude of a lunar eclipse. Two rods are fixed at right angles to a rod. The one with a small round hole is fixed and the other with a larger round hole can be moved towards the other. The second hole is so placed that at an appropriate distance from the other the moon is seen to fill it exactly. A dark plane is pushed in front of the second hole. The amount a of the shifting of its edge from one side of the hole, which bounds the dark side of the moon, to the edge of its bright part, is measured, and the magnitude b of the shifting over the whole surface of the moon and their relation expressed as $a:b$. The amount g in fingers of the eclipse is $g = \frac{a}{b} \cdot 12$.

Bibliography: Given in the article. For details of eclipse computations, see now E. S. Kennedy, *A survey of Islamic astronomical tables*, in *Transactions of the American Philosophical Society*, N.S., xlv/2 (1956), 123-77, esp. 143-4.

(E. WIEDEMANN)

KŪT AL-'AMĀRA, a place in al-'Irāk (lat. 32° 30' N., long 45° 50' E.), on the left bank of the Tigris, between Baghdad and 'Amāra, 100 miles south-east of Baghdad as the crow flies. *Kūt* is the Hindustānī word *kūt* meaning "fortress" (see *kōrwat*) found in other place-names in al-'Irāk, like *Kūt al-Mu'ammir*, *Kūt al-'Amāra* is often simply called *Kūt*. *Kūt* lies opposite the mouth of the *Shatt al-Hayy*, also called al-*Gharraf*, the old canal connecting the Tigris with the Euphrates, which has several junctions with the Ruphrates, e.g. at Nāshīrya and Sūk al-Shuyūkh. The plains to the north of *Kūt* are inhabited by the Banū Rabī'a, a division of the great tribe of Banū Līm (q.v.). *Kūt* is not an old town; it has been proposed to identify it with al-Madhāq mentioned by Yāqūt (iv, 275; cf. Le Strange, *Lands*, 38, and H. H. Schaeder in *Islam*, xiv, 17). In the beginning of the century and down to 1860 it was a miserable little village surrounded by walls of terre pisée (Keppel in 1224, according to Ritter, *Petersen*, *Reisen im Orient*, Leipzig 1860, II, 1501). But after Messrs. Lynch obtained a concession for a line of steamers between Baghdad and Basra, *Kūt* became an important station on the river and the result was a considerable increase in its population. In the last period of Turkish administration (beginning 1861), *Kūt* was the capital of a *ḥaḍa'* of the same name in the *sandjak* of Baghdad. About 1890 the population was estimated at 4,215 (Guinet), almost all *Shī'īs* (but including about 100 Sunnis and 100 Jews). The *ḥaḍa'* extends northwards as far as the mountains of Luristān (q.v.). The plain at the foot of the mountains is watered by the river Kalāl and contains several villages, the Turkish ownership of which was disputed by the Persian authorities. The population of the *ḥaḍa'* likewise grew after 1861, and

about 1890 numbered 30,000, all Sunnis (except the population of *Kūt* itself).

It was at *Kūt al-'Amāra* during the course of the First World War that several thousand British and Indian troops were cut off by Turkish forces and compelled to surrender on 26 Jumādā II 1334/29 April 1916, after a siege lasting five months.

Kūt was first taken by the Sixth British-Indian division under Major-General Charles Townshend in *Dhu 'l-Ka'da* 1332/late September 1915. Continuing his advance northwards, in an ill-judged attempt to occupy Baghdad, Townshend was repulsed at Ctesiphon in late November by the Turkish Sixth army under Yūsuf Nūr ad-Dīn Bey and forced to retire on *Kūt*. Here he decided to stand, for the ostensible purpose of blocking a Turkish advance down the Tigris to 'Amāra, or by way of the *Shatt al-Hayy* to Nāshīrya. In fact, however, his troops were exhausted, he was hounded with many wounded, and the Turks, under their new commander, Khallī Bey (later Pasha), were hard on his heels. If he had not halted at *Kūt*, his division would almost certainly have been caught in the open and destroyed.

Kūt was invested by the Turks on 27 Mubarram 1334/5 December 1915. Townshend's force consisted of just under 13,000 infantry and artillerymen (he had sent his cavalry south before *Kūt* was encircled) and over 3,000 Indian non-combatants (cooks, drivers, etc.). A quarter or more of the fighting troops were sick or wounded. The Arab population of the town, which Townshend allowed to remain, numbered about 6,000. The besieging force was made up of one-and-a-half divisions (about 7,500 men) of the Turkish Sixth Army, whose total effective strength of something under 30,000 men was mainly disposed between *Kūt* and Shaykh Sa'd, 30 miles to the east. Its tactical direction lay with Field-Marshal von der Goltz, head of the German military mission in 'Irāk.

Desperate endeavours were made by the main body of the British expeditionary force between January and April 1916 to relieve the garrison at *Kūt*. In a series of severely fought actions, notably at Shaykh Sa'd, Hanna and Duḡayyā, the British and Indian troops suffered 23,000 casualties, while Turkish losses were estimated at 10,000. The British efforts were in vain, and in the last week of April Townshend asked Khallī Pasha for terms. When the Turkish commander indicated that he would not be content with anything less than unconditional surrender, Townshend suggested, with the concurrence of the Cabinet in London, that the *Kūt* garrison be freed on parole in exchange for its guns, stores and one million pounds sterling. On the orders of Enver Pasha (q.v.), the Turkish Minister of War, the offer was rejected, and the fact of its having been made was afterwards used to good effect by the Turkish government to discredit Britain's reputation in the Middle East. A last-minute attempt to persuade Khallī Pasha to change his mind was made by Colonel W. H. Beach, head of military intelligence in 'Irāk, and Captains Aubrey Herbert and T. E. Lawrence of Military Intelligence, Cairo, who were authorised to double the ransom offered. The attempt failed, and twenty-four hours later, after destroying his guns and stores, Townshend surrendered, under a solemn guarantee from Khallī Pasha, which was afterwards reaffirmed by Enver Pasha that his troops would be treated as "the honoured guests of the Turkish nation".

During the siege, the garrison at *Kūt* had suffered

casualties of 1,128 men killed or died of wounds (478 of them Indian non-combatants) and 2,300 wounded. Nearly 350 of the Arab inhabitants had been killed and over 600 wounded, though more were to die after Turkish forces had re-occupied the town. The Turks allowed the worst cases among the British and Indian wounded, 1,475 in all, to be sent down to Bagra in exchange for Turkish prisoners of war. Nearly 12,000 British and Indian troops, along with their Indian camp followers, went into captivity in Anatolia and elsewhere. By the end of the war more than 4,000 of them, including 70% of the British rank and file, had died from disease, starvation and inhuman treatment at the hands of their Turkish captors.

Küt was retaken by the Mesopotamian expeditionary force in Dujmāda 7 1335/late February 1917, opening the way for the occupation of Baghdad a fortnight later. After the war, in the administrative reorganisation that accompanied the institution of the mandate, Küt was made the principal town of a new *mudīra*.

None of the popular accounts of the siege of Küt and the 'Irak campaign of 1914-17 published in recent years (e.g. A. J. Barker, *The neglected war*, London 1967; R. Braddon, *The siege*, London 1969; R. W. Miller, *Kut: the death of an army*, London 1969) is of any scholarly value.

(J. H. KRAMERS [J. B. KELLY])

KUTADGHU BILIG ("Knowledge that brings happiness"), the first long narrative poem in Turkic literature as well as the oldest monument of Turkic Islamic literature. A relatively long (6,645 distichs) didactic work, it is in Karakhanid, the earliest variety of Eastern Middle Turkic and the first literary language of the Muslim Turks. Its author, Yūsuf Khāṣṣī Hājjib of Balasaghūn [i.e.], a Muslim Turk educated in the Arabic and Persian languages and in the classical Islamic sciences, completed his work in 462/1069-70 in Kāshghar and dedicated it to Akū 'All al-Hasan Tahghāṣī Bughra Khān (d. 495/1102), ruler of the eastern Karakhanids [see *ILK-KHĀNS*].

The *Kutadghu bilig* has come down to us in three manuscripts: the Harāt ms., dated 842/1430, which is in the Uyghur script and was made from an unknown version in the Arabic script; and the Farghāna and Cairo mss., both undated and in the Arabic script.

It is essentially a political essay which, in an Islamic setting, describes an ideal monarchy of the Sāsānid type. The main goal of this monarchy is the public good, which is conceived of as the strength

of the king and the happiness of his subjects. This ideal kingdom is based on dedicated service rendered by highly-qualified state officials and servants to a wise and noble ruler of royal descent, who properly rewards those who serve him. Islam, of an Avicennan and Fārisian hue, has a vital role in it. Every individual must possess the faith and act in accord with it. He should not renounce this world: services rendered by ascetics in seclusion are of little value, since they produce no public good. Through his services to God and men, he should rather aspire to obtain both this world and the hereafter.

The author presents his views in a series of dialogues, in which the chief participants are a king, Kūn Toghdī; his ministers, first Ay Toldī and, after his death, his son Ögdūlmish; and the ascetic Ögdūrmish, a relative of Ögdūlmish. The author uses these characters symbolically: Kūn Toghdī represents the true path; Ay Toldī, happiness, Ögdūlmish, reason; and Ögdūrmish, destiny.

No one source or model for the *Kutadghu bilig* has been discovered. Frequent references in it, however, indicate a broad spectrum of still-unidentified sources: poetic works (*shāfir sāsi*); sayings of elders (*öring baylıghı ar, köktin, awatgha*), the learned (*biligh, bögü, belgi*), the wise (*akushigh*), and notables (*sarlar beshi, öskän begi*); as well as proverbs (*ishkha mañal*). Some of these references appear to be direct quotations, especially those in the form of quatrains.

The *Kutadghu bilig* follows the rules of Arabic-Persian prosody, but also includes a few elements of the traditional Turkic syllabic versification. It is in the *mathnawī* form and in the *mutadarrir* metre (— / — / — / — / —). The quatrains (*rubā'is* or *tuyuqs*) embedded in the poem are all in the same metre, and all have the rhyme pattern *aaba*. Alliteration and rhythmic-syntactic parallelism, features of pre-Islamic Turkic prosody, occur quite frequently. The author's style is concise and expressive. He favours such stylistic devices as epithets, apostrophes and rhetorical questions, and he often indulges in word-play and folk-etymology.

The language is very closely related to Late Uyghur, although the Persian language—colloquial and classical—has left an imprint in the form of loan-translations and direct borrowings, both on its grammar and vocabulary.

Philological research on the *Kutadghu bilig* is at a fairly advanced stage. The three extant mss. have been published in facsimile. There is also a good critical edition, translation into Modern Turkish and thorough philological analysis by R. R. Arat (*Kutadghu bilig. I. Metin*, Istanbul 1947, II, *Tercüme*, Ankara 1958). Its language has been described, very sketchily, by M. Mansuroğlu (*Das Karakhanidische, in Philologische Monographien Fundamenta*, 1, 87-112). Most of the lexical material of the *Kutadghu bilig*, with illustrations, has been included in the Old Turkic dictionary, prepared by Nedialov and his team (*Drevnoturkiskiy slovar*, Leningrad 1969). The best content-analysis of the work to date is that given by A. Bombaci in his book on the history of Turkish literature (*La letteratura turca*, Milan 1969, 83-96).

(A. J. E. BONGKLOSTET)

KUTAHYA, modern KÜTAYYA, a town of north-western Anatolia, lying at an altitude of 3,252 feet/991 m. in lat. 39° 25' north and long. 29° 59' east. It is in the south-western corner of the well-cultivated plain of the Fersuk Çay, which eventually runs into the Sakarya river; the old town nestles on the slopes of the hill called 'Adjem Dağı, which is crowned by the ruined citadel. In classical times it was Cottaenum, the city of Cotty, and the largest city of Phrygia Salutaris, an early centre of Christianity and then in Byzantine times the seat of an archbishopric.

Kutahya was taken by the Turkmen Sulaymān b. Kutubmush in ca. 472/1080, in the aftermath of the battle of Mantzikert or Malazgirt (q.v.), and until the battle of Dorylaeum remained under Saljuq control. It then reverted to the Greeks for a brief while as a frontier fortress subject to Turkmen attacks, and was retaken in 579/1183 by the Saljuks under Kılıç Arslan II (q.v.). It later passed once again to the Byzantines but was finally regained by the Saljuks in 631/1234. In the 8th/14th century it formed the centre of the beylik of the Germiyan-oghullar (q.v.). Süleymān Shah Çelebi (ca. 765-90/1363-98) transferred Kutahya, with others of his towns, to the Ottoman prince Bayezid Yıldırım when the latter married his daughter Dewlet Khātūn. Süleymān's son Ya'qub Çelebi tried to recover it on the death of Murād I (791/1389), but it was regained by Bayezid in the following year. After the Ottoman defeat at Ankara (804/1402), Kutahya was taken over by Timur, who installed his son Shah Rukh as governor whilst he himself went on towards Ephesus. In the subsequent period of succession squabbles in the Ottoman ruling house, Kutahya fell briefly into the hands of the Karamānid Mehmed I [see KARAMANID-OGHULLAR] (814/1411), but was recaptured by

Ya'qub Germiyanī with Ottoman help. When Ya'qub died at Kutahya in 839/1429, the principality of the Germiyan-oghullar passed, according to his bequest, to the Ottoman Murād II.

Under the Ottomans, Kutahya was the capital of a *sandjak* of Anadolu, and then in 1842 a *sandjak* of the province of Khudāwendigār (q.v.); in 1902 it comprised the *kādzā* of Kutahya, Eski Shehir (q.v.), 'Uşak (q.v.), Kedis or Gediz and Simak. Kutahya was the lastest point reached by the Egyptian army of Ibrahim Pasha b. Muhammad Pasha (q.v.) in its advance on Istanbul (1833), and his camp at the nearby hot springs of Yenidze was the scene of diplomatic negotiations which followed the intervention of the European powers. In ca. 1890, Cuiwet numbered the population of the town at 22,066, including 4,000 Greeks and 3,000 Armenians; there were 24 mosques, 21 *madrāsas*, 62 *derwish tekkes*, 4 churches, 9 caravanserais, 11 baths and 12 potteries. Kutahya was indeed formerly an important centre for the production of glazed, polychrome pottery with floral decorations, the so-called Rhodian ware, and this is still produced today in a somewhat cruder form; carpet weaving has also been an important family craft. A standard-gauge railway runs from Balıkesir to Kutahya and joins the Eski-Sehir-Aytem Karahisar line a few miles further on. Kutahya is today the capital of an il (formerly *vilayet*) of the same name; in 1975 the town's population was 82,442 and that of the N 470,423.

The monuments of Kutahya, from the Germiyan and early Ottoman periods, are significant, and include the Kutubhane Džami' (1777/1375-6), the Ulu Džami' (814/1411), the Ya'qub Çelebi Džami' (837/1433-4) and the Karagözü Ahmed Džami' (915/1509); notable is the use of tiles for roofing rather than lead. There are also some interesting old houses remaining.

(C. E. BOSWORTH)

KUTAI now a *hadapaten* (regency) in the Indonesian province of Kalimantan Timur (East K.) [see BORNEO in Suppl.] which stretches along the Mahakam river. It covers 40,000 km.² and has 250,492 inhabitants, among them 137,229 Muslims (1971). It is rich in oilfields (near Balikpapan), gold, and timber.

The population consists of Kutinese, probably originally Malays who immigrated as pagans, and whose Malay language now bears the influence of Javanese, Buginese and Banjarese; Bugianese, from South Sulawesi, and especially from the old kingdom of Wajo, who appeared as sailors, ship-builders and traders since the first half of the 17th century; Banjarese, who may have participated already in the colonisation of Kutai by Hindu-Javanese from Banjarmasin, which later on kept close contacts with Kutai; Bajau, who originate from the Sulu Islands and who came first as sea-

nomads until they finally settled on the coasts; several Dayak tribes, living mainly in the interior and up-river areas; and some 245 Chinese and 246 Indian traders (1971).

In the hillside area of Muara Kaman, some plates with votive inscriptions in Sanskrit from the 4th century A.D., which belong to the oldest known Hindu relics in the archipelago, have been discovered. The Hindu kingdom of that area, which in the course of time moved more to the interior, obviously developed independently from the Hindu and Buddhist empires in Java, and was only conquered and consequently Islamised by Kutai around 1630 A.D.

Kutai itself appears in history as a dependency of Majapahit at the time when Gajah Mada was *patih* of that kingdom (1331-64), as is stated in the *Nāgarakṛatīgama* (24, 1).

According to the *Salasilah raja-raja di dalam negeri Kutai Keria Negara*, or Chronicle of Kutai, Islam was first introduced during the reign of Raja Makota by Tuan di Bandang (In Buginese sources known as Dato' ri Bandang), who only stayed for a short while, and Tuan Tunggang Parangan, both of whom arrived from Makassar, most probably in the first years of the 17th century. In his efforts to spread Islam, Tuan Tunggang Parangan extensively used magical means, as the *Salasilah*, composed under the reign of Raja Makota's grandson Paengran Adipati Sinum Pami Mendapa ing Martapura before 1635, eloquently narrates.

This *Salasilah* reveals a still-existing attachment to the animistic and magical mentality which is stronger here than in other Malay chronicles. It tries to avoid anachronism, such as the mentioning of Islamic terms or customs in its narratives about pre-Islamic events, and although it shows a remarkable familiarity with the moral and legal prescriptions of the *Taḡīb al-salīfīn*, or *Makota segala raja-raja*, and the Javanese *Panjji* narratives as well as the *wayang*, it gives the impression that the *adat* law (see KDA, IV, Indonesia) which remained in use even at the sultan's court at Tenggarong, was to a large extent the old, indigenous one.

An important role in the history of Kutai was played by the Buginese settlers, most of whom originated from Wajo, and who were centred on Samarinda, forming the strongest "foreign" colony and enjoying some kind of internal autonomy under the *Pua Adu* or *Maloa* elected from among their own nobility, but reconfirmed by the sultan (until 1860). In 1726-7, prince Aru Singkang from Wajo conquered for a short time Pasir and Kutai, but usually the Buginese supported the sultan, especially in his fights against the pagan Dayaks and the pirates. The relations with the Dutch, who first appeared in 1633, were, generally speaking, smooth, and these preserved to the sultan a considerable degree of internal jurisdiction based on Islamic and *adat* law.

(O. SCHRENNING)

KUTĀMA or **KETAMA**, one of the great Berber families; when Islam was introduced into North Africa, they occupied all the northern part of the region of the Constantines, between the Awrās (g.u.) and the sea, that is the region containing the towns of Ikjān, Sejjī, Bāghāya, Ngauš (Nikāwus), Tigust (Tikust), Milla, Constantine, Sickda, Djidjelli, Bellema, and also Lester Kabylia. One legend

flattering the national pride makes them to have been descended from the Hinyarites brought there by Ifrikus. Kutāma, the eponymous ancestor of their race, was said to be the son of Berner. He had two sons, Ḥarsen and Issūda, from whom are descended all the tribes of the Kutāma. They do not seem to have played a part in the civil and religious wars which desolated North Africa from the time of Ukkā to the days of the Aghlabids; we do not find them among the Kharrīdīs. When Ubayd Allāh gave himself out to be the Mahdī, his emissaries met some Kutāma pilgrims in Arabia and converted them to Ismā'īlī doctrines. The principal convert was Mūsh-ahīf of the Sakyān, a branch of the Djānīla whose name survives in the town of this name. The missionary (dā'ī) Abū 'Abd Allāh al-Sijī (g.u.) settled in Ikjān and succeeded in maintaining his position there in spite of the efforts of the Aghlabids. From there he was able to extend his conquests and to deliver the Mahdī, who was a prisoner at Sedjilmāsa.

The empire of the Fātimids was thus founded with the help of the Kutāma. It was they who furnished its main strength and supplied the means of conquering Egypt. But these continual efforts exhausted them. Those who remained in the Maghrib after the departure of al-Mu'izz were forced to submit to local rulers, as Ibn Khaldūn tells us. In our day the principal representatives of the Kutāma are the Zūwāra of the Qurjūra and the population around Djidjelli and in Lester Kabylia. We do not know at what date Ismā'īlī doctrines disappeared from among them, but long afterwards their attachment to this teaching was regarded as a subject of obloquy, and for this reason the powerful tribe of Sedjikh, of Kutāma origin, renounced all connection with this family. At the present day, all the Berbers of this region are Sunnīs.

Bibliography. Ibn Khaldūn, *Kutāb al-'Ibār*, IV, 32 ff., v, 148-32 (*Hist. des Berbères*, tr. de Slane, I, 297-9, II, Append., 510 ff.); M. Taḥbi, *Emirat aghlabide*, index; F. Dachraoui, *Le califat fātimide au Maghreb* (in the press); H.-R. Idris, *Zirides*, index; R. Brunschvig, *Hafsides*, index.

(R. BASSET)

AL-KUTĀMĪ ("the falcon"), the name of several poets (including one from Dubay'a b. Rabi'a and another from Kalb; see al-Āmidī, *Muḥṭalif*, 166); the best-known of these was 'UWAYY A. 'SḠUWAYY A. 'AMR, who probably came from the Dīgham b. Baḥr of Taghlib (see Ibn al-Kalbi-Caskel, *Register*, 474). On account of one of his verses, he was also given the name of Sarī' al-Ḥawālī "the one felled by beautiful maidens". Like his fellow-tribesman and maternal uncle (?) al-Akḥṭāḥ (g.u.), he was involved in the quarrels of the second half of the 8th/9th century between the Taghlib and Kays 'Aylan in the region of the Khābār (g.u.).

In opposition to late sources which depict him as a convert to Islam, it seems correct to follow the author of the *Aghānī*, who states that he remained a Christian. The verses favourable to Islam figuring in piece No. 20 of the *Dīwān* could have been added later or could have resulted from an attitude dictated by gratitude; the eulogies of the Umayyads, and especially of 'Abd al-Malik b. Marwān (No. 29), prove nothing about his adhesion to Islam. This point has been discussed by Father L. Cheikho, with strong arguments (*Saḥānīn al-Nayrānīyya ba'd al-Islām*, 297-302).

Al-Kutāmī's *Dīwān* was published, with notes, by J. Barth (*Dīwān des 'Umayyad al-Scheykh al-Qutāmī*, Leiden 1902), together with an anonymous com-

mentary, and has also been the subject of a somewhat enlarged edition by I. Sāmarrāʾī and A. Maǧlūb (Beirut 1966). The first edition contains 35 pieces of varying length (the longest of 100, 71, 66 and 58 verses) and 9 isolated verses, making a total of 764 verses, to which should be added 52 hemistiches of *radīas*.

Al-Kutāmī was a Bedouin poet who detested the townspeople, and who hymned his own military exploits and those of his tribe, together with the virtues of *sayyids* like Zufer b. al-Ḥarīṭ. According to Ḥadīdī Khālifa (ib. No. 5649), he died in 101/719-20.

Bibliography. In addition to the references given above and the introductions to the editions of the *Dīwān*, see Ibn Sallām, *Tabaḥāt*, ed. Šajāk, 452-7 and index; Ibn Kutayba, *Šiʿr*, 453-6; *al-Ġhāṣi*, xx, 118-31 (ed. Beirut, xii, 175-236); Abū Tamīm, *Ḥamāsa*, I, 128-9; Bagdādī, *al-Ḥisāba*, ed. Būlūk, I, 391-4 = ed. Cairo, II, 320-6 (ibid. No. 143); Brockelmann, S I, 94-5; R. Blachère, *JLd*, 474-5. (H. H. BRAUN [CH. PELLAT])

KUTAYBA a. MUSLIM, AND ḤAFS KUTAYBA a. ABĪ ŠĀṬUḤ MUSLIM a. ʿAMR AL-BAḤDĪ, ARAB commander under the Umayyad caliphs. He was born in 45/669 into a family influential at the court and with extensive possessions in Baṣra. His father Muslim was the boon-companion of Yazīd b. Muʿāwīya, and during the revolt of al-Mukhtar [q.v.], he was in charge of the prison at Baṣra; but he later sided with Muʿāwīya b. al-Zubayr and was killed in 72/691-2 when Muʿāwīya's dominion in ʿIrāq was ended, after having failed to secure a pardon from ʿAbd al-Malik. The family nevertheless continued to be important in Baṣra, and a tribal mosque of their branch of Ḥabība, the *masǧid Baṣī Kutayba*, is mentioned (see Ballāḥshūrī, *Asnāḥ*, ivb, 11, 87, 91-2, v, 347-8).

Kutayba himself attracted the attention of the governor of ʿIrāq and the east, al-Ḥadīdīdī b. Yūsuf, after participating in the warfare against the rebel ʿAbd al-Rahmān b. Ashʿath [see 108 AL-ASHʿATH]. He was given the governorship of Rayy in 83/701 after he had expelled from there the rebel ʿUmar b. Abī l-Salt [see G. C. Miles, *The numismatic history of Rayy*, New York 1938, 9]. Then at the end of 85/704 or beginning of 86/705 he was appointed by ʿAbd al-Malik to succeed al-Muʿaddal b. al-Muhallab as governor of Khurāsān under al-Ḥadīdīdī, thus reversing the position in Khurāsān, where the Yamani Muhallabids had previously been dominant, for the Bahāli tribe [q.v.] generally allied itself to the Kayi or North Arab interest in the Marwīd period.

There thus begins the ten years' governorship of Kutayba, which contributed much to the extension of Islam in what is now Afghanistan and Central Asia, and which forms one aspect of the wave of Arab expansionism which characterised al-Walīd's caliphate. Kutayba's administrative talents, backed by the authority of al-Ḥadīdīdī, had full play in the consolidation of Arab rule in Khurāsān, although the momentum was not maintained after his death. An appreciable factor in his success here seems to have been some recognition of the position of the indigenous Iranian population, and some care to use their administrative talents. There were in his time perhaps as many as 7,000 *mawālī* troops registered in the *shūḥr* and receiving regular pay, and in addition to these regular forces, Kutayba required *ad hoc* levies of soldiers from the towns of Khurāsān for his spring and summer campaigns into Central Asia; in Tabarī, II, 1245, the contingents from Bukhārā and

Kh̲w̲ārazm besieging Samarkand in 93/712 are described as "the slaves" (*al-ʿabād*). Also, he left the local Persian *dāpāns* in power on payment of tribute, apart from the planting of Arab garrisons in Bukhārā, Samarkand and probably Kāth in Kh̲w̲ārazm. With regard to the Arab tribesmen in Khurāsān, Kutayba organised these, on the Baṣra model, into the five groups of the Azd, Tamīm, Abī al-ʿAlīya, Bakr and ʿAbd al-Kays; at least, it is in his time that such a division is first mentioned. (See for general reviews of Kutayba's political and social policies, Gibb, *The Arab conquests in Central Asia*, 29-31, and Shaban, *The ʿAbbasid revolution*, 63 ff.)

The military campaigns of Kutayba's governorship have been divided by Gibb, *op. cit.*, 31 ff., into four periods: firstly, the recovery of Bādghīs and Tūkhristān in 86/705; secondly, the conquest of Baykand and Bukhārā from the local Soghdians, 87-90/706-9; thirdly, the consolidation of Arab authority in the Oxus valley and the securing of Kh̲w̲ārazm and Samarkand, 91-97/71-12; and fourthly, expeditions into the Jaxartes valley from Shāh against Isfīdjab and Farghāna, 98-101/713-15. Many of these undoubtedly remarkable successes were achieved through Kutayba's own blend of military skill and ruthlessness, combined with a willingness to use treachery, if need arose, and to exploit local divisions, as amongst the princes of Tūkhristān and Soghdia and amongst the rival claimants to the throne of Kh̲w̲ārazm.

In 86/705 Kutayba moved against the princes of the upper Oxus valleys of Shūmān, Akhrān and Čaghāniyān, and he also persuaded Tarkhān Nizāk, ruler of the northern Hepthalite principality in Bādghīs [see NAWĀTIL], to submit to the Arabs and accompany Kutayba on the ensuing campaign against Bukhārā. The campaigns of 87-90/706-9 against Baykand and Bukhārā were long and arduous. Kutayba's savage sackings of Baykand stiffened the resistance of the Soghdians under Wardān Khudāh, but Dohhārī was in the end stormed against fierce local resistance, apparently backed up by Turkish help. A tribute of 200,000 dirhams was imposed on the city and an Arab garrison placed in it; in 94/712-13 Kutayba built a mosque inside the citadel, but had at the outset to pay the local people to attend the worship. In 97/709-10 Kutayba and his brother ʿAbd al-Rahmān b. Muslim were occupied with suppressing the last rebellion of Nizāk, now in collusion with the Yabghu (Arabic term *Dābbāya*) or local ruler of Tūkhristān. On capturing Nizāk, Kutayba had him killed, despite his earlier promise of *aman* or quarter; and although in the poetry quoted by Tabarī, II, 1225-6, we find Nahār b. Tawṣrā praising Kutayba's behaviour as salutary for the interests of Islam, like that of the Prophet towards the Jews of Medina, we also find a verse by Ṭahīb Kutāba warning against calling perfidy "resolute action". However, for the first time, Arab rule became reasonably secure in lower Tūkhristān, and Balḫ now develops as a centre of Arab power and Islamic culture; a subsequent governor of Khurāsān, Asad b. ʿAbd Allāh al-Kasrī, was to move temporarily the provincial capital from Marw to Balḫ (128/736).

In 97/711 Kutayba was in Sūstān, which was at that time under the subordinate governorship of his brother ʿAmr. Here, the Arabs in their strongholds of Zarang and Bust faced the powerful ruler of the southern Hepthalites, the Zunbils of Zabulistān (see ZUNBIL). Kutayba's presence scared the Zunbils into temporary submission, but as always happened, once the Arab forces departed, all obedience was

renounced. The conquest of Kh̲w̲ārazm in 937/78 was a spectacular feat of Kutayba's, and it led to the tentative implanting of Islam there, though it was several decades before the people of the province or their Shābe were fully converted; for details, see Kh̲w̲ārazm. In the last years of his governorship, Kutayba's attention was focussed on Soghdia again. In 937/78, on the way back from Kh̲w̲ārazm, he attacked Samarkand and imposed a fresh peace treaty on its ruler Gh̲h̲urāh; the breaking thus of an earlier agreement considerably tarnished Kutayba's reputation in Soghdia amongst the Iranian population. It may be that it was at this point that the Western Turks or Türgesh intervened in Transoxania at the request of the Soghdian princes; at all events, Kutayba endeavoured to secure the regions of the Jaxartes adjacent to the steppes of Turkistan, moving into Shāsh and Ushrūšana, and in 943/713-14 he led a series of raids into Farghāna. Whether Kutayba had expressly in mind the securing of the trade route through Central Asia towards China is uncertain, and the report in Tabarī, ii, 1276, that his troops crossed the Tien Shan Mts. to Kāgh̲j̲ār was rejected by Gibb as a fabrication, see his *The Arab conquest of Kashghar in A.D. 715*, in *BSOS*, ii (1923), 467-74.

The fall of Kutayba in 967/75 was ultimately the result of the change of régime in Damascus from al-Walīd to Sulaymān, the death of Kutayba's patron al-Hajjāj, and an expected reversal of the favour previously shown to the Kayāl elements in the empire. Kutayba was campaigning in Farghāna when he heard the news of al-Walīd's death, and though the new caliph confirmed him in his governorship, he feared an imminent change of attitude. He therefore proclaimed rebellion against the caliph's authority, but was supported only by his own family, the inadequate power base of his fellow-Bahlul tribesmen, and his bodyguard of Iranian archers; the mass of the Arabs mutinied and refused to support him, as also did the Persian *mawālī* troops under Hayyān al-Nabāṭī, formerly his faithful supporters. He and several of his family were therefore killed by their soldiers in Dhu'l-Hijja 96/August 715, or according to some sources, later in that autumn at the beginning of 716, and Wakt' b. Abi 'l-Sūd al-Tamīmī assumed power in the east in his stead.

Kutayba's death meant a halting for several decades, and indeed, a definite regression, in the momentum of Arab conquest beyond the Oxus; the Soghdians and their Turkish allies were now able to mobilise their forces for counterstrokes. He is undeniably one of the heroic figures of the age of Arab conquests, even if the Bahlul tribal tradition enshrined in Tabarī tends at times to exaggerate his exploits, and this halo placed around his head brought about much confusion in the sources over the events surrounding his death.

The descendants of Kutayba continued to be influential in both the later Umayyad and the early 'Abbāsid periods, with various of his sons and grandsons attaining official posts; his son Muslim (d. 149/766) was twice governor of Basra, and his grandson Abū 'Amr Sa'īd b. Salm (d. 227/832) was governor of Armenia, Mārrāsh, al-Djazīra, Sīstān, Sindh and Tabaristān.

Bosworth)

AL-KUTB (a.), pole.

1. As an astronomical term

In Arabic, *kuṭb* covers nearly the same field of semantic aspects as Greek *ὁ πόλος*: a pivot around which something revolves (in Arabic, especially the pivot for mill stones), which was extended to the revolution of the sky, designating the axis of the celestial east-west movement and, more specifically, its two 'poles' (*LA*, Beirut 1955, i, 683b f.; Lane, *Lexicon*, s.v. *kuṭb*; Liddell and Scott, *Greek English lexicon*, s.v. *πόλος*). Hence later, in Arabic translations of Greek works, *kuṭb* was often used as a rendering of *πόλος*, (e.g. Ptolemy, *Almagest*, i, 3 (both translations, al-Hajjāj b. Yūsuf b. Ma'ar, and Ishāq b. Hunayn); but Aristotle, *De caelo*, has *al-fa'laḥ* in all instances, cf. Badawī's edn., Cairo 1961, 232 f., 280, 294).

The celestial pole was a known feature among the Arabs already in their 'pre-scientific' period, i.e. before their contact with the scientific literature of the Greeks. Certain traditions concerning the location and nature of the pole have been transmitted in some philological and astronomical books (Ibn Kutayba, *K. al-Amud*, Hyderabad 1956, 122 f.; Abū Hanīfa al-Dīnawarī, *ṣūṭat al-Ma'ārik*, K. al-Azma'a wa 'l-amkhana, Hyderabad 1332, ii, 71, 371 ff.; Ibn al-Ajdābī, *al-Azma'a wa 'l-amud*, Damascus 1964, 65 f.; Ibn Ma'nūr, *K. Nihās al-aḥār*, Istanbul 1928, 126, 173; Abū 'l-Ḥusayn al-Ṣūfī, *K. Summar al-kawākib*, Hyderabad 1954, 271 (repeated by al-Kāwīnī, *Kosmographie*, ed. Wostenfeld, i, Göttingen 1849, 29; tr. H. Ethé, *El-Kawākib Kosmographie*, Leipzig 1868, 54); al-Bīrūnī, *K. al-Jam'īn*, ed. and tr. R. R. Wright, London 1934, 77 [§ 163]; idem, *al-Kāwīn al-Mas'ūdī*, Hyderabad, iii (1956), 995 f.). Here it is stated that the (north) pole was not a star, but merely a spot (*naḥḥa*, *naḥḥa*) in the sky. Its place was assumed to be in the middle of the figure of a fish (*ismaka*, al-Bīrūnī has instead: *ḡhalī ḥallūḡḡī*, "an elliptical figure") formed by two curved lines of stars, one consisting of the five stars β, ζ, ε, δ, α Ursae Minoris, and the opposite one of very small and faint stars (most of them not registered by Ptolemy in his *Almagest*), among which Fl. 5 and 4 Ursa Minoris and 32 H Camelopardalis in some places, this statement is corrected, with the addition that the true place of the pole is not in the very middle of that figure, but more in the direction of a Ursa Minoris, near one of the small stars in the curved line of faint stars, (al-Ma'arīfī, Ibn al-Ajdābī, al-Ṣūfī, *loc. cit.*). This difference in location obviously reflects the effect

of procession, due to which the place of the north pole was near the star γ Camelopardalis in A.D. 1000, and still more southwards in A.D. 500. It was also observed that the opposite point of the sky, the south pole, was invisible in the lands of the Arabs (Ibn al-Kutayba, *loc. cit.*, 222; Ibn Manjūr, *op. cit.*, 173).

After the introduction of scientific astronomy, it was known that this pole belonged to the equatorial system, hence it was occasionally called *ḥaṣṣ al-mi'ādāt al-naḥla*, "pole of the equator", besides its other designations, such as simply *al-ḥaṣṣ*, or *al-ḥaṣṣ al-ḥamīdī* (and *al-ḥamīdī* respectively), *ḥaṣṣ al-ḥudayy*, *ḥaṣṣ banāt ma'ab*, *ḥaṣṣ al-falak*, *ḥaṣṣ al-ḥuṭ*, etc. Al-Bīrūnī seems to be the first to declare a Uraiae Minoris (= "Polaris") to be the nearest bright star to the (north) pole, at his time, and hence to serve as a substitute for the pole *ar-ṣayyānī* 'anī 'l-ḥaṣṣī li-annahū fī zamānina akrahu 'l-ḥayyirāt shayh (Tahīm, 77 [563]). At the same time, the ecliptical system was assigned two poles, as well, which were called *ḥaṣṣ al-falak al-burūdī* and *ḥaṣṣ al-dā'irāt al-burūdī*, "poles of the ecliptic" (al-Sūfī, *loc. cit.*, 53 f.; al-Bīrūnī, Tahīm, 55 f. [536]; idem, Kānūn, li, 993, 995 ff.; al-Kazwīnī, *op. cit.*, 27, tr. 59, and 32 f., tr. 108).

North and south pole became of actual value for the Islamic navigators of the Indian Ocean (ca. A.D. 1500), who used both of them for altitude measurements in order to fix their position and determine their routes. In their terminology the north pole was generally called *al-ḡāh* (a word of Persian origin, used both for the pole itself and for the Pole Star). Travelling south of the equator, they also acquired a complete knowledge of the south pole, *ḥaṣṣ al-sayy* ("the pole [in the region] of the star α Carinae"), or simply *ar-ḥaṣṣ* (as opposed to *al-ḡāh*), which they observed—*ar* contradistinction to the north pole—not to be marked by a bright star near it, but having the two Magellanic Clouds at some distance (Abnād b. Mājid and Sulaymān al-Maḥab; in English tr. see G. R. Tibbetts, *Arab navigators in the Indian Ocean*, London 1971; the glossaries and indexes, 518 and 547 [s.v. *al-ḡāh*], 538 [s.v. *ḥaṣṣ*], 609 [s.v. *Polaris*, Pole, North-South]).

The poles also seem to have excited the fantasy of astrologers, for two lists of magic virtues (*ḥāwaṣṣ*) pertaining to each of them are repeated by Ibn Manjūr (*op. cit.*, 246-53; partially also in al-Kazwīnī, *op. cit.*, i, 30 f. tr. 64 f. and 40, tr. 85 f.).

In modern terminology, the terrestrial poles are also called *ḥaṣṣ* (with adjective *ḥaṣṣī*, "polar").

Apart from this, is the construction of the astrolabe al-ḥaṣṣ signifies the central pivot, or axis (elsewhere also called al-*muḥaww*), which keeps together its different discs, the spider, and the rule (al-*ḥādūd*), latitudes (since the 10th century) as *al-ḥaṣṣ*, *al-ḥaṣṣ*, *al-ḥaṣṣ*, etc. See ASYURLAN, al-*ḥaṣṣ* 'Brazmī, *Maḥṣūṣ al-ḥaṣṣ*, 235; al-Bitrānī, *Opus astronomicum*, ed. Nallino, i, Milan 1903, 141 and 319; al-Bīrūnī, Tahīm, 195 [535], etc. Latin: J. M. (P. KURITSCH)

a. in mysticism

In Islamic mysticism, this term (lit. "pole", "axis") denotes either the most perfect human being, *al-insān al-kāmil* [q.v.], who heads the saintly hierarchy (see al-*ḥaṣṣ* and *waṭi*) and is also referred to as *al-ḥaṣṣ al-hāṣṣ* ("the [temporal] phenomenal ḥaṣṣ"); or else *al-ḥaṣṣ al-muḥammadiyya* (see *ḥaṣṣ*) which manifests itself in *al-insān al-kāmil* and is sometimes referred to as *al-ḥaṣṣ al-ma'nawī* ("the [cosmic] noumenal ḥaṣṣ"). Both meanings of the term are covered by 'Abd al-Razzāk al-Kāshānī's definition: "the place of God's appearance in the world at all times" (Kamāl al-Dīn Abī 'l-Ḥanā'im 'Abd al-Razzāk b. Ḥamāl al-Dīn al-Kāshānī [al-Kāshānī] al-Samarḥandī, *Kutub ḥiṣṣat al-sūfiyya*, ed. A. Sprenger, London-Calcutta 1845, 141; cf. Mubayl 'l-Dīn b. al-'Arabī, *al-Futūḥāt al-Makkiyya*, Bōlāk 1274/1857, ii, 6).

The conception of the temporal *ḥaṣṣ* (A. *ḥaṣṣ al-waḥī*, *ḥaṣṣ al-waḥī*, *ḥaṣṣ al-zamān*, F. *marāḥ al-waḥī*), referred to by some authors as *al-ḥaww* ("the helper") (q.v. in Suppl.), who exists by virtue of the cosmic *ḥaṣṣ* or *ḥaṣṣ al-ḥaṣṣ*, manifest in him, has been traced back to al-Hallāj [q.v.], whose *ḥaww* (i.e. the image of God with all his arms) [q.v.] and *ḥaṣṣ* [q.v.] in Adam may be considered as the prototype of the conception of *al-insān al-kāmil* (cf. A. E. Adīb, *The mystical philosophy of Muḥyī al-Dīn Iḥṣān Arabī*, Cambridge 1939, 79, 189), and also further back to pre-Islamic ideas, in particular to Iranian, Neo-Platonic and early Christian thought (see T. Andrae, *Die Person Muhammads in Lehre und Glaube seiner Gemeinde*, Upsala 1927, 333 ff.; and H. H. Schaefer, *Die islamische Lehre vom Vollkommenen Menschen, ihre Herkunft und ihre christliche Gestaltung*, in ZDMG, N.F. iv [1925], 192-258).

The notion of the *ḥaṣṣ* as head of the saintly hierarchy is found in the teaching of al-Hakīm al-Tirmidhī [q.v.] outlined by 'Aṣḥ b. 'Uḡmān al-Hudayrī in his *Kaṣf al-maḥṣūb* (see R. A. Nicholson, tr., *The Kaṣf al-Maḥṣūb. The oldest Persian treatise on Sūfism*, Leiden-London 1907, 224, 228). The scriptural justification for the belief in this hierarchy, of which the different forms mentioned by a variety of authors are discussed by E. Blochet, *Études sur l'isolatisme musulman*, in JA, xx (1902), 77 ff. (in addition, see Ḥasan al-'Idwī al-Hamāwī, *al-Nafāḥāt al-Sūdāḥiyya fī Ṣiḥāb al-Burda al-Bāṣiriyya*, Cairo n.d.; Sayyid Ḥaydar Ḥamīd, in La philosophie Sūfite, ed. H. Corbin and O. Yahia, Bibliothèque iranienne 16, Tehran-Paris 1969, 446; and H. Corbin, *En Islam iranien. Aspects spirituels et philosophiques*, Paris 1970-71, i, 118 ff.), is a *ḥaṣṣ* attributed to Ibn Maṣ'ūd (cf. Abū Muḥammad 'Abd Allāh al-Yāfi'ī, *Rasā'id al-ṣayyidīn fī kishāyat al-ṣāḥib wa 'l-awliyyā* wa 'l-aḥbāb, Cairo 1286/1869-70, 10; Yūsuf b. Ismā'īl al-Nabḥānī, *Shawāhid al-ḥaṣṣ fī 'l-istiḥṣān bi-ṣayyid al-ḥaṣṣ*, Cairo 1323/1905-6, 10; Ḥalāl al-Dīn al-Suyūṭī, *al-Kāṣir al-dīl 'alā wuḥūd al-ḥaṣṣ wa 'l-awliyyā wa 'l-aḥbāb*, Cairo 1351/1932-3, 27). The reliability of the *ḥaṣṣ* of this *ḥaṣṣ* was discarded by Muḥammad Rashīd Riḍā (al-Manār, xi [1908], 50 ff.). Other *ḥaṣṣ*, all without *ḥaṣṣ*, mentioning the existence of a saintly hierarchy headed by the *ḥaṣṣ*, are listed in al-Yāfi'ī's *Rasā'id al-ṣayyidīn*, 10 (see also al-Zamzāmī al-Siddīqī, *al-Abdāl wa 'l-muḥṣib* wa 'l-aḥbāb fī ḥaṣṣ al-sayyidīn Rasā'id al-Muḥṣib, in al-Masīra, li/6 [Cairo, September 1952], 18 f.), including the most frequently cited one attributed to Ḥuḡu 'l-Nūn al-Maṣī [q.v.].

The tentative suggestion by R. A. Nicholson (*The*

idea of personality in *Sufism*, Cambridge 1923, 44 ff.) that al-muṣṭafī, mentioned in al-Ghazālī's *Mishkāt al-anwār*, is identical with the *ḥuṣṣ* as al-ḥakīm al-muḥammadiyya was discarded by W. H. T. Gairdner, *Al-Ghazālī's Mishkāt al-anwār* ("The niche for light"). A translation with introduction, London 1924, 23 ff., who had earlier questioned L. Massigne's suggestion that al-muṣṭafī is an obscure allusion to the doctrine of the *ḥuṣṣ* as the head of the saintly hierarchy (idem, *Al-Ghazālī's Mishkāt al-anwār and the Ghazālī problem*, in *Isl.*, v [1914], 144).

Each of the various ranks in the saintly hierarchy has also been conceived of as being headed by a *ḥuṣṣ*. From these *aḥḥāb* the saints who belong to these different ranks receive their knowledge, which they owe in the last resort to the supreme (temporal) *ḥuṣṣ* (cf. Ibn al-'Arabī, *Futūḥāt*, ii, 7; Ahmad Diyāb al-Dīn al-Gümüşhānī, *Ḍiymī' al-ṣulṭ al-ṭawīd*, Cairo 1920, 4; 'All Salīm 'Ammār, *Abu 'l-Ḥasan al-Shādhilī*, 'asruhu, ta'rīḥuhu, 'ulūmuhu, taṣawwufuhu, Cairo 1931, i, 192; Ahmad b. Muḥammad b. 'Ayyād, *al-Maṣāḥir al-'aliyya fī 'l-maṣāḥir al-Shādhilīyya*, Cairo 1964, 20 ff.).

For Muḥyī 'l-Dīn b. al-'Arabī (q.v.), the universal rational principle, the *raḥ* Muḥammad, or al-ḥakīm al-muḥammadiyya through which Divine knowledge is transmitted to all prophets and saints, finds its fullest manifestation in and is identical with the *ḥuṣṣ*, who is al-insān al-kāmil. He is the cause of creation, for in him alone creation is fully realized. He is al-baraqā' (q.v.), the *ḥaḥīqat al-ḥakīm*, or in other words he is Muḥammad as the inward aspect of Adam, i.e. the real Adam (Mankind) or al-lāḥūt (q.v.), which is forever manifesting itself on the plane of al-nāṣūt (q.v.) in prophets and saints (i.e. in *aḥḥāb*) who come within the category of al-insān al-kāmil, since they are perfect manifestations of God and have realised, in mystical experience, essential oneness with Him. This makes *aḥḥāb* infallible, and since there is only one *ḥuṣṣ* at a time (al-ḥuṣṣ al-wāḥid), he is God's real *ḥaḥīqat* (q.v.), who is the preserver and maintainer of the universe, the mediator between Divinity and human, who passes on knowledge of the *maḥdūt* (degrees of mystical perfection [see *MAḤDUT*]), which cannot be entered by anybody else except by him, through virtue of his being in the *maḥdūt* laṣṭik al-tawḥīd (absolute transcendence of God); cf. Ibn al-'Arabī, *Futūḥāt*, i, 168 ff., 201 ff., 253 ff.; ii, 7 ff., 77, and in particular iv, 80 ff.

These ideas were further elaborated by 'Abd al-Karīm al-Dīlī (cf. Nicholson, *Studies in Islamic mysticism*, Cambridge 1921, 86 ff.). They were rephrased and/or simplified by other authors (cf. Blochet, 86 ff.) and have remained part of the mainstream of Islamic mystical thinking ever since.

An identical conception of the *ḥuṣṣ* as the active principle (or interior, *bāḥin*; cf. al-Kāshānī, 141) in all inspiration and revelation, comparable to the *voûc* in Neo-Platonism and manifesting itself in the form (*ṣawā*) of a prophet, is found earlier with 'Umar b. al-Farīd (cf. Muḥammad Muṣṭafā Hilmī, *Ibn al-Farīd wa 'l-ḥaḥīqat al-ḥakīm*, Cairo 1943, 273). This idea is noted by Hilmī, *ibid.*, 277, has a striking similarity to the Ismā'īlī (q.v.) belief in the personification of al-'akl al-anwāl in (al-insān) al-nadīf. Other authors have equally drawn attention to the similarity between the Shī'ī conception of the *Imām* as a manifestation of the Divine Logos and the conception of the cosmic *ḥuṣṣ* in Islamic mysticism, or the possible identity of both concepts (see e.g. Kāmil Muṣṭafā al-Shayḥ, *al-Ṣiḥā bayn al-ṭawḥīd wa 'l-taḥayyū*, Cairo 1969, 463, and Corbin, *En Islam*

iranien, i, 92). Several authors have noted the analogy between the Ismā'īlī (Fātimid) *al-ṣiḥā* hierarchy and the mystical hierarchy under the *ḥuṣṣ* (see e.g. al-Shayḥ, 457 ff. and Y. Marquet, *Des ḥuṣṣ al-Saḥā* à al-ḥaḥīqat 'Umar (b. Sa'īd Taḥ), *marabout et conquérant tennouier*, in *Arabica*, xv [1958], 27) or have regarded the mystical hierarchy as derived from it. The historical possibility of such a derivation was discarded by W. Ivanow, *An Alī-Isma'īl Fragment*, in *Collectanea*, i, The Isma'īl Society, Series A, No. 2, Leiden-Bombay 1948, 166.

Among the Shī'ī scholars, some have stated explicitly that *ḥuṣṣ* and *Imām* are terms which have the same meaning and which refer to one and the same person (Amolī, *La philosophie shī'ite*, 223; 'Alīḥa Sayyid Muḥammad Husayn Taḥṭābī, *Shī'ite Islam* [ur., ed., introd. and notes by Seyyed Hossein Nasr], London 1973, 114; Corbin, *En Islam iranien*, ii, 76). The notion of the saintly hierarchy headed by the *ḥuṣṣ* is considered by H. Corbin as basically a Shī'ī idea which has been appropriated by Sūfī mysticism (see e.g. his *En Islam iranien*, i, 229, iii, 279; cf. al-Shayḥ, 213). Several of his publications contain phenomenologically-inclined analysis of the hermeneutics involving conceptions of *ḥuṣṣ* in a perspective of Iranism (see e.g. his *L'homme de lumière dans le soufisme iranien*, Paris 1971, *passim*, and his *En Islam iranien*, i, 186 ff.).

Conceptions of a saintly hierarchy headed by the *ḥuṣṣ* and distinct from the hierarchy headed by the *Imām* are found in the works of 'Azīz al-Dīn Nasafī (cf. M. Molé, ed., *Azizoddin Nasafi, La livre de l'homme parfait (Kitāb al-Insān al-Kāmil)*, Bihl, Iranienne xi, Tehran-Paris 1962, 20, 26) and 'Alī al-Dawla Simnānī (idem, *Les Kubrānīyya entre Sūnisme et Sūnisme aux huitième et neuvième siècles de l'Hégire*, in *REI*, xlix [1961], 107 f.; cf. Corbin, *op. cit.*, ii, 74). Similar conceptions are held in contemporary Shī'ī mysticism (cf. R. Gramlich, *Die Schī'ischen Denkschriften Persiens, Zweiter Teil: Gänge und Lehre*, Wiesbaden 1976, 160 ff.). Shī'ī mystics have referred to the twelfth *Imām* as *ḥuṣṣ al-aḥḥād* (Corbin, *En Islam iranien*, ii, 74-5, iv, 357) or *ḥuṣṣ al-ḥakīm* (Gramlich, *op. cit.*, 158), and to the head of a *ṣaḥība* (q.v.) as *ḥuṣṣ*, *ḥuṣṣ-i ḥawārī* and *ḥuṣṣ-i zamān* (idem, 159 ff. for further references and additional detail).

Belief in the existence of *aḥḥāb* and in the whole saintly hierarchy was denounced by Ibn Khaldūn (cf. Ibn Khaldūn, ed. de Sana, ii, 164; iii, 74, 105-6; Ibn Khaldūn, *Ṣiḥāf al-Ṣaḥīḥ li-taḥṭīḥ al-Maḥdūt*, ed. M. B. T. al-Tanjī, Istanbul 1958; H. S. Nyberg, *Kleinere Schriften des Ibn al-'Arabī*, Leiden 1919, 113 f.), and has been under attack by those adhering to a non-mystical conception of Islam up to the present day (see e.g. 'Abd al-Raḥmān al-Wakīl, *Hādīth al-ḥuṣṣ*, Cairo 1975/1955, 174 ff.).

The *ḥuṣṣ* is regarded as being able to perform distinct *ḥarāmāt*, which reveal his *maḥdūt* (cf. Ibn 'Alī) *Alīḥ al-Sakandārī*, *Laḥā'if al-mīnān*, Tunis 1364/1886-7, 57 f.; and 'Ammār, i, 193), to know the meaning of the letters at the beginning of the *ṣāras*, which he has received from God directly—this qualifies him for al-ḥaḥīqat (al-lawt, *op. cit.*, ii, 98), which is known as *ḥaḥīqat al-ṣiḥāf* (see e.g. 'Abd Allāh b. 'Alawī b. Ḥasan al-'Alī, *Ḥuṣṣ al-ḥaḥīqat fī bayān al-ṣaḥīḥ*, Bombay 1312/1894-5, 263; Muṣṭafā Yūsuf Saḥīm al-Shādhilī, *Ḍiymī' al-ṣulṭ al-ṭawīd*, Cairo 1930/1931-2, 270)—and to incorporate the *ṣiḥāf* of the *ḥuṣṣ*, the *ḥaḥīqat*, the *al-lawt* and of all those who belong to the saintly hierarchy (al-Gümüşhānī, *Ḍiymī' al-ṣulṭ*, 4; 'Ammār, i, 192).

in consequence of the fact that he is the means by which al-*ḥaḥ* sees his own names and *ṣifāt* (cf. 'Abd al-Kādir al-Djīlī, *al-Inṣān al-Kāmil* fi *ṣūfīyat al-ṣūfīyīn* wa-*ṭ-ṣūfīyāt*, Cairo 1328, II, 48). All secret beings and every animate and inanimate body have to give him their pledge (*ḥay'a*) except for the following three classes of beings: al-*afādī*, who belong to the angels and are independent of the *ḥuḥ* (cf. Ibn 'Arabī, *Fuṭūḥ*, I, 223); the *ghayb* who are under the authority of al-*Khādir* (q.v.) (cf. Muḥyī 'Dīn b. al-'Arabī, *Kitāb Maṣnū' al-ḥuḥ* wa-*ṣ-ṣūfīyāt* wa-*ḥikmī*, Haydarābād 1948, 4); and those belonging to the tenth stratum of *riqā'at al-ḥayy* (see al-*Ḥayy*), namely al-*ḥakamāt* or al-*ḥakīmīn* (cf. al-'Idrī, *op. cit.*, II, 101). According to Dāwūd al-Kayṣarī in his *Shāhīd Maḥādīn al-ṣūfīyāt al-ḥakīmīn* the relevant section is published in al-Tirmidhī, *Kitāb al-ḥakīmīn*, ed. 'Uṭmīn T. Yabū, Beirut 1965, 494 f.) only the *awḥād* (q.v.) do not come under the authority of the *ḥuḥ*; they are equal to him in rank, they owe to God everything they are but they have not been granted the *makām al-ḥakīmīn* (ibid., 495). In another treatise, *Mafīḥ al-ḥayy* al-ḥakīmīn, al-Kayṣarī states that al-*Khādir* was the *ḥuḥ* in secret at the time of Mūsā before the latter became *ḥuḥ* on the plane of manifest being (see Andrae, 345).

Belief in al-*Khādir* as a mortal being identical with the temporal *ḥuḥ* is reported as being held by contemporary Shī'ī mystics (Gramlich, 146). The possibility of such an identification is implicit in the conception of a mortal *Khādir*, related by Ibn Ḥajar al-Askalānī, *al-Jidā' fi ṭayr al-Sāḥib*, Cairo 1358/1939, I, 434-5. This scholar, however, expresses himself in a *fatwā* to the effect that the orthodoxy of the belief in the *ḥuḥ* (al-*ḥayy*) cannot be established (cf. al-'Idrī, II, 98).

Early belief in the existence of a saintly hierarchy headed by the *ḥuḥ* (cf. Nicholson, *Studies*, 78 f.) seems in the course of time to have been elaborated into a conception of a secret assembly (*ḥay' al-ḥayy*) where the saints presided over by the *ḥuḥ* directed the affairs of the seen and unseen worlds (see Ahmad b. Muḥarrak al-Sayyidī, *al-Ḥay' al-ḥayy* min *ḥikmī* 'Abd al-'Azīz, Cairo 1392/1875, 6, 1, 2 ff. al-Sayyidī relates the sayings and ideas of his *ḥay' al-ḥayy*. 'Abd al-'Azīz al-Dabbagh. Al-Dabbagh's description of the composition and functioning of the *ḥay' al-ḥayy* has found its way into the works of Muḥammad al-Maḥdī b. Muṣṭafā b. 'Azīz, *al-Sayf al-rabbānī fi ḥikm al-ṣūfīyāt* 'alā al-*ḥay' al-ḥayy*, Tunis 1310/1892, 3, 74; and 'Ubayd Allāh Sāḥib b. Muḥammad al-Kusanḍālī al-Hanzālī, *Faṭḥ al-Rahīm al-Rahmān bi-ḥay' al-ḥayy* al-ḥayy, Cairo 1312/1894, 5, 176). This conception is prominent in certain mystical traditions to the present day (see Muḥammad Zakī Ibrāhīm, *Ma' al-Badawī al-muṣṭafī 'alayhī*, in *al-Muṣṭafī*, xv/7 (Cairo, June 1965), 15; and idem, *Ma' al-Badawī al-ḥayy al-ḥayy* wa-*ṣ-ṣūfīyāt* al-ḥayy, in *al-Muṣṭafī*, xx/11 (August 1970), 12 f. and 'Abd Rabbīh b. Sulaymān al-Kalūṭī, *Fayd al-Wahhāb fi bayyān al-ḥayy al-ḥayy* al-ḥayy *ḥayy* 'an al-*ṣūfīyāt*, Cairo 1964, v, 57 ff.).

Opinions as to the whereabouts of the *ḥuḥ* vary. According to Ibn al-'Arabī (cf. *Fuṭūḥ*, I, 168; *Maṣnū' al-ḥuḥ*, 4), the *ḥuḥ* is corporeally present at Mecca; according to Ahmad Muḥammad Riqwān, *al-Nafīḥ al-rabbānīyā*, Cairo 1390, 270, his bodily presence is confined to Upper Egypt. Popular belief in Egypt held him to be miraculously present in a niche behind one of the doors of Bāb al-Zuwayla, the southern gate of Cairo (see E. W. Lane, *An account of the manners and customs of the modern Egyptians*, London 1860, 232 f.; and H. H. Harrison, *The Bab al*

Meṣnū' al-ḥuḥ, in *MW* viii (1918), 443-4), which was a site for veneration and votive offerings (cf. J. W. McPherson, *The Moslems of Egypt*, Cairo 1947, 142). In contemporary Islamic mysticism, the dominant view seems to be that only his spirit is seen at Mecca, i.e. at the Ka'ba, which is the *makām* (q.v.) of his spirit and the throne of his heart (see Muḥammad Zakī Ibrāhīm, *Kalām al-muḥammīdī h-maḥādī al-ḥayy*, in *al-Muṣṭafī*, xv/6 (June 1965), 3).

A few cases are found where a *ḥay' al-ḥayy* explicitly that the *ḥuḥ* will always belong to this particular *ḥay' al-ḥayy*. Examples are al-'Azīzīyā (see the relevant section in F. de Jong, *The Sūfī orders in post-Ottoman Egypt*, forthcoming) and al-*Shāhīdīyā* (see Ibn 'Ayyād, 105). The latter *ḥay' al-ḥayy* teaches that God gave Abu 'l-Ḥasan al-*Shāhīdī* the *ḥay' al-ḥayy* after the death of Abu 'l-Ḥajjīdī al-Uḡūrī (b. 'Ayyād, ibid., 35). The *ḥay' al-ḥayy* is referred to as the *ḥay' al-ḥayy* (Abū Bakr b. Muḥammad al-Bannānī, *Maddar al-ḥayy al-ḥayy al-ḥayy*, Cairo 1350/1932, 90) going back to 'Alī b. Abū Tālib through his son Hasan, who is considered the first *ḥuḥ* (al-Sakandārī, 59; Ibn 'Azīz, 75; al-Kusanḍālī, 181).

Distinct cosmological systems revolving around a conception of *ḥuḥ* and derived from the ideas outlined above, and presenting or incorporating a modified version, have been developed and have gained some degree of significance at distinct times and places. Notable are, in chronological order, Abu 'l-Faḍl 'Allāmī's (q.v.) presentation of the Muḥammadī emperor Akbar (q.v.) as *insān al-ḥayy* or temporal *ḥuḥ* around whom the world revolves in his *Aḥbar-nāma*; Ahmad Surhūdī's (q.v.) conception of the *ḥayy*—the vicar of God on earth to whom the *ḥuḥ* is a servant under his rule, a rank which he ascribed to himself and which was claimed by four of his descendants (S. A. A. Rizvi, *Muslim centralist movements in Northern India in the sixteenth and seventeenth centuries*, Agra 1965, 266 ff.); this belief seems to have influenced the teaching of Mīr Dard (cf. A. Schimmel, *Path and grace. A study of two mystical orders of eighteenth-century Muslim India*, London 1976, 82); and Tiḡṣāl doctrine centred upon the belief that Ahmad al-Tiḡṣālī (q.v.) was *ḥayy al-ḥayy* and *ḥuḥ al-ḥayy* simultaneously (J. M. Abū-Nasr, *The Tijaniyya. A Sufi order in the modern world*, London 1965, 27 ff.).

Before and after Ahmad al-Tiḡṣālī, *ḥayy al-ḥayy* or were considered to be *ḥayy al-ḥayy*. Some examples from among the earlier mystics are listed in Gramlich, 168, n. 920. Other notable examples among the later mystics are Abū Sa'īd b. Abī 'l-Ḥayy (see Muḥammad Nūr al-Dīn Munawwar b. Abū Sa'īd Sa'īd, *Asrār al-ḥayy al-ḥayy al-ḥayy al-ḥayy*, ed. Ḥabīb Allāh Sa'īd, Tehran 1348, 352 f.), 'Abd al-Rahīm al-Kināwī (cf. Ahmad Husayn Diaburūh, *Kalām al-muḥammīdī 'an ḥayy al-Kināwī* 'alā 'Abd al-Rahīm al-Kināwī', n.p. Kindī, 1388/1968), Abū 'l-Ḥajjīdī al-Uḡūrī (see Ibn 'Ayyād, 35); Abū 'l-Ḥabīb al-Mursī (see al-Sakandārī, 68); 'Abd al-Kādir al-Jīlī (q.v.), Ahmad al-Rīfā'ī, Ahmad al-Badawī (q.v.), and Ibrāhīm al-Dastūqī (q.v.). The last four of these are frequently referred to as al-*ḥayy al-ḥayy* (see Muḥammad Maḥmūd al-Sūfī, *al-Tasawwuf wa-ḥikmī*, Cairo 1970, 15, 24; cf. Muḥammad Zakī Ibrāhīm, *Ma' al-Badawī al-ḥayy al-ḥayy*, 6 ff.). In some mystical cosmologies they are presented as occupying a position of pre-eminence in the successive stages of pre-creation out of al-nūr al-muḥammīdī before their birth, as successors to the four *ḥayy al-ḥayy* during their lifetime, and as continuing forces in the world of the unseen after their death

(see 'Akhl Maḥbar, *Kuḥra min baḥr al-Kur'ān*; *darul Aḥī 'l-'Aynayn*, in *Sandāt* v (Cairo-Madr al-Shaykh, April 1967), 42; and Muḥammad Zakī Ibrāhīm, *Maf' al-Badā'ī*, 8 ff.; cf. idem, *Kulaymat muḥammadiyya li-mawḍi' al-ashjā*, 8 ff.).

In some mystical traditions, those belonging to the asatid hierarchy, including the *ḥafīd*, are held to be identical with the serious mystical teachers present at a certain time but whose spiritual rank remains undivulged to those outside this hierarchy (cf. 'Imrān Aḥmad 'Imrān, *al-Talbiya fi taḥqīq ḡhayk al-tarbiya*, Asyūṭ 1334/1936, 14). This tenet may imply the belief that potentially everybody can become *ḥafīd* by means of following the *ḥafīd*, i.e. by means of the method prescribed by a distinct mystical tradition (cf. Sulaymān al-Dīmal, *al-Fatāwā al-islāhiyya bi-taḥqīq Taḥf al-Dīnāliyya bi-'l-dakā'iq al-ḥafīziyya*, Cairo 1913, I, 224).

The statement by J. S. Trimingham, *The Sufi orders in Islam*, Oxford 1971, 163 f., that the conception of the *ḥafīd* has gone through a process of vulgarisation would seem to be in need of further substantiation.

Bibliography: given in the article.

(P. DE JONG)

KUTB AL-DĪN [see MAWḌūd b. ZANGI; AL-NABRAWĀLĪ].

KUTB AL-DĪN AYBAK, the first ruler of the Indo-Muslim state which arose after the death of the Ghūrīd Shihāb al-Dīn (Mu'izz al-Dīn) Muḥammad b. Sūn in 1206 and was subsequently to be based at Dihlī. Brought as a slave from Turkeṣtān first to Nishāpūr and then to Ghazna, he was purchased by Muḥammad, then engaged in the reduction of the independent Hindu principalities in northern India, and rose to be *amīr-i akḥḥar* (master of the horse) and *naḥḥat* of Kohīstān (now Ghurām in Pātālā) and Sāmāna. The sources for this period, composed either under Aybak's hegemony or under his successors, ascribe to him personally the capture of Meerut, Dihlī, Rōi ('Allgaḥ), Thankr (Bāyāna), Gwālāyā, Badā'ūn, Kanawḡj and Kāḥḡḡḡ, between 587/1191 and 599/1202-3, and the sack of Nahrwāra in Guḡḡḡḡ (593/1197).

On his master's assassination in 602/1206, he moved from Dihlī to Lahore, where he is said to have ascended the throne on 17 Dhū 'l-Ka'da/25 Juno, and which became his permanent residence. Aybak's precise status is problematical. No coins of his are extant, and the statement of Hasan Nizāmī that the *ḥafīd* was read and coins struck in his name is not corroborated elsewhere. Dīwānī on the contrary specifies at one point that these prerogatives were retained by Muḥammad's immediate successor Ghīyāth al-Dīn Maḥmūd, who now reigned at Firz-kūh, though elsewhere he says that Maḥmūd conferred on Aybak the title of Sultān. In view of Aybak's slave rank, it is most likely that he was simply manumitted by the new Ghūrīd sovereign, as we read in Ibn al-Aḡḡir, and remained his subordinate, receiving a diploma and canopy of state as *malik* of Hindustān. Aybak's attentions appear to have been absorbed by the situation in the north-west, where the Ghūrīd empire was succumbing to pressure from the Kh'wārazm-Shāh Muḥammad b. Tekīsh, and it is significant that no efforts to extend the Muslim conquests in India are recorded for his reign. He engaged in hostilities with another Ghūrīd slave officer, Tāḡ al-Dīn Yildīz, who was based at Ghazna and who endeavoured unsuccessfully to take Lahore in 603/1206-9. Aybak's own subsequent occupation of Ghazna, however, was merely temporary, and he was

expelled by the citizens in favour of Yildīz. He died at Lahore in 607/1210-1, of wounds sustained in an accident during a game of polo (*ḡwḡḡḡ*), and his successor Arḡm Shāh, whose relationship to him is uncertain, was soon set aside in favour of the *muḥḡḡ* of Badā'ūn, Aybak's son-in-law Iltutmīsh (q.v., and see also ORIEL SULTANATE).

Aybak, who has achieved renown as the builder of the Kutb Minār (q.v.) at Dihlī, was a patron also of the literary arts. Fakḡh-i Mudabbir (q.v. in Suppl.), author of a manual of war, the *Aḡḡḡ al-ḡḡḡ*, dedicated to him his book of genealogies, and it was probably under Aybak's régime that Hasan Nizāmī (q.v. in Suppl.) began writing his florid *Tāḡ al-ma'āḡḡ*, which was completed under Iltutmīsh. Both are important sources for the early period of Muslim rule in Hindustān.

Forting Fund, iv); Hasan Nizāmī, tr. in Elliot and Dowson, *History of India as told by its own historians*, London 1867-77, II, 212 ff.; Ibn al-Aḡḡir, xii, esp. 123-5; Dīwānī, tr. H. G. Raverty, *Tabaḡāt-i Nāḡrī*, London 1873-81 (*Bibliotheca Indica*), 398-9, 409-72, 502-3, 512-13, 605-6; A. B. M. Habibullah, *The foundations of Muslim rule in India*, 2nd ed., Alīshāhād 1961, 61-92. (P. JACKSON)

KUTB AL-DĪN BAKHTIYAR KAKI, a Sufi who settled at Dihlī during the reign of Iltutmīsh (q.v.).

Kh'wāḡḡa Kutb al-Dīn Bakhtiyār (Ahmad b. Mūsā al-Kākī al-Uḡḡī) was a native of Uḡḡ, a town in eastern Fārgḡḡḡ. The *ḡḡḡḡḡ* literature depicts him as the disciple of Mu'izz al-Dīn Ḥishḡḡ (d. 634/1236), the founder-figure of the Ḥishḡḡ affiliation in India. The accounts disagree on whether the two contemporaries first met at Uḡḡ, or at Isfahān, or in the Sūfī circle of Abū Ḥalī 'Umar al-Sahravardī (d. 632/1234), or in the mosque of Abū 'l-Layḡ al-Samarḡḡndī at Bagḡḡḡ. After years of wandering, Kutb al-Dīn came to Multān early in the 7th/13th century during the rule of Naḡir al-Dīn Kāḡḡḡ (d. 625/1228). There Farīd al-Dīn Mas'ūd (d. 664/1265) sought his company, while Bahā' al-Dīn Zakarīyāḡ (d. 666/1268) seems to have encouraged his departure for Dihlī. Kutb al-Dīn settled outside the walls of Dihlī near the tank, *ḡḡḡḡḡ ḡḡḡḡ*, during the reign of Iltutmīsh (607-33/1211-36), but declined the office of *ḡḡḡḡ al-islām* offered to him by the Sultān. Kutb al-Dīn was well-known for his Sūfī practice of listening to music (*samā'*), and is said to have died during a *samā'* performance on 14 Rabi' I 633/27 November 1235. His tomb is in the vicinity of the Kutb Minār at Mīhravālī. The Kutb Minār (q.v.), completed by Iltutmīsh in 629/1229, is believed to derive its name from Kutb al-Dīn Bakhtiyār (not from Kutb al-Dīn Aybak).

The Ḥishḡḡ affiliation venerates Kutb al-Dīn as one of the outstanding members of its founder-generation in India, and records him in its *silsila* as the link between Mu'izz al-Dīn and Farīd al-Dīn. Kutb al-Dīn is the alleged compiler of the apocryphal *maḡḡḡ* of Mu'izz al-Dīn, entitled *Dalīl al-ḡḡḡḡ* (Lucknow 1866), whereas his own sayings supposedly have been collected by Farīd al-Dīn in the spurious *Fawā'id al-islāmīn*. A more reliable source, however, appears to be the *Mafāḡḡ al-islāmīn*, which was compiled in the immediate circle of Kutb al-Dīn's associates at Dihlī.

KUṬB AL-DĪN AL-ʿIZNĪ, MUHAMMAD AL-RUMĪ, early Ottoman Hanafī scholar and father of Kuṭb al-Dīn-izide Muhammad [q.v.]. He was born at Iznik [q.v.] and died there on 8 Dhū 'l-Ka'da 821/7 December 1418. Popular story puts him in contact with the conqueror Timūr when the latter occupied Anatolia, and he was the author of commentaries on the work of the great Spanish mystic Ibn al-Arabī [q.v.].

Bibliography: Tāshköprüzāde, *al-Shahā'id al-mu'miniyya*, Beirut 1395/1975, 24. German tr. O. Rescher, Constantinople-Galata 1927, 18-19. (ED.)

KUṬB AL-DĪN MUBĀRAK [see *KHĀLIDĪ*]

KUṬB AL-DĪN MUHAMMAD [see *SHĀRAZMĪ*].

KUṬB AL-DĪN SHĪRĀZĪ, MAHMŪD B. MAS'ŪD A. MUḤSIN, Persian astronomer and physician, was born in Šāfir 634/October 1236 in Šīrāz and died in Tabriz on 17 Ramaḡān 712/February 1311.

Like many Muslim medical men, Kuṭb al-Dīn belonged to a family of distinguished physicians; at the same time, however, he was not only a prominent medical man, at least as regards his writings, but he distinguished himself also in astronomy, philosophy, and the treatment of religious problems. This versatility induced Abu 'l-Fidā' to give him the name *al-mutaḥḥasin* "experienced in many fields". He received his medical training with his father Qayṣ al-Dīn Mas'ūd al-Kāzarīnī, i.e. of Kāzarūn (to the west of Šīrāz), in the hospital of Šīrāz. He lost his father at the age of 14 and then became a pupil of his uncle Kamāl al-Dīn Khayr al-Kāzarīnī and Shāra al-Dīn al-Zakī al-Ruḡḡīnī (Suyūfī has Ruḡḡāwī) and Shams al-Dīn al-Kutubī; he then went to Naṣr al-Dīn al-Tūsī, studied with him and surpassed everyone. It was probably Naṣr al-Dīn who stimulated him to study astronomy. While still quite young he conceived the idea of editing the *Kuṭbiyyāt*, the first theoretical part of the *Ḥāshiyat* of Ibn Sīnā. He next sought instruction with the physicians in Šīrāz and then studied deeply the works of earlier scholars. He then travelled in Khurāsān, the two 'Irāqs, Persia, Anatolia, and Syria. Everywhere, as he tells us in the introduction to the commentary on the *Kuṭbiyyāt*, he sought the acquaintance of scholars. It was probably after these journeys that he became associated with the Mongol rulers of Persia, the Il-Khāns; in what year and under which ruler this happened, we do not know. In any case in 688/1282 he was *ḥāḍi* of Sīwās and of Malatya in Anatolia under Ahmad Nikudār (686-328/1281-4). There he was still engaged on the *Kuṭbiyyāt*; he must have played a part in politics, as Ahmad sent him with his uncle Kamāl al-Dīn to Egypt to the Mam-

lūk Sulṭān al-Manṣūr Sayf al-Dīn Kalāwūn (678-89/1279-90 [q.v.]). He was sent to report the former's conversion to Islam, no doubt the result of Kuṭb al-Dīn's influence, and to conclude a peace between the Muslims and the Mongols. The latter part of his mission was a failure. In Egypt also he collected material for the *Kuṭbiyyāt*. He dedicated the work, probably finished shortly after his return from Egypt, to Muhammad Sa'd al-Dīn, Ahmad Khān's vizier, and called it *al-Tuḥfa al-Sa'diyya* "the present to Sa'd", or *Nuḥat al-ḥukamā'* *wa-raḥḥat al-aḥbāb* "the delight of the wise and garden of the physicians".

In his later years Kuṭb al-Dīn retired to Tabriz. Towards the end of his life he ardently studied *Ḥādīth* and made critical notes on the subject, e.g. on the *Ḥamā' al-usūl* ("Encyclopaedia of principles") and to the *Ṣaḥāb al-Sunna* ("Commentary on the Sunna"). Ibn Shāhba and al-Subḍī give a sketch of the character of Kuṭb al-Dīn. He had a brilliant intelligence, combined with unusual penetration; at the same time his humour was innocent; he was known as "the scholar of the Persians". It is evidence of his efforts to preserve his independence that, in spite of his prestige with princes and subjects, he lived remote from the court. He also led the life of a Sūfī. It is emphasised that he had many pupils; among these was Kamāl al-Dīn al-Fārisī (see below), who cannot praise him highly enough; he also induced al-Tabrizī (d. 766/1364; see Brockelmann, II, 271, S II, 293-4) to come to critical decisions (*mudhakamāt*) on the *Ḥāshiyat* of Ibn Sīnā on points disputed between Naṣr al-Dīn and Fakhr al-Dīn al-Rāzī (Hādījī Khāṣṣa, No. 743). He neglected his religious duties; nevertheless, al-Suyūṭī mentions that in Tabriz he always performed his *ṣalāt* with the congregation. He loved wine and sat among the seers. He was a brilliant chessplayer and played continuously; he was also skilful in the tricks of the conjurer and played the small viol (*rubāb*). His commentary on the *Ḥikmat al-ighrāk* ("the philosophy of illumination") of Suhrawardī is undoubtedly connected with his religious attitude. Nevertheless, as Hādījī Khāṣṣa (No. 1166) emphasises, Kuṭb al-Dīn distinguished himself in theology. He annotated the *Kur'ān* very thoroughly and in a fashion that won recognition in his *Faḥ al-mannān fi taḥṣīl al-Kur'ān*; in the *Fi muḥḥilāt al-Kur'ān* he also dealt with passages in the *Kur'ān* difficult to reconcile with one another. He wrote a commentary on *al-Kashshāf* 'an ḥaḍrāt al-tawṣīl of al-Zamakhsharī. Kuṭb al-Dīn played a special part in the history of optics, because he called the attention of his pupil Kamāl al-Dīn al-Fārisī [q.v.] (d. ca. 730/1320) to the *Optics* of Ibn al-Haytham [q.v.], with which he had become acquainted on his travels, and procured a copy for him. Al-Fārisī wrote a commentary on it and extended it by his own observations. It is noteworthy that Kuṭb al-Dīn so completely forgot Ibn al-Haytham's expositions that he based his observation not on rays of light like the latter, but on rays of vision.

In the two comprehensive astronomical works *Nahāyat al-sadrā fi darayāt al-aflāk*, the "highest intelligence in the knowledge of the spheres", and *al-Tuḥfa al-ghābiyya fi l-hay'a*, which are very similar to each other, Kuṭb al-Dīn has given what is conceivably the best Arabic account of astronomy (cosmography) with mathematical aids. It closely follows the *al-Tadhkirat al-nasiriyya*, the memoranda of Naṣr al-Dīn al-Tūsī, his teacher. But Kuṭb al-Dīn's works are very much fuller and deal with many questions which Naṣr al-Dīn did not touch; they are therefore much more than commentaries. The

Nihāya discusses, for example, details of the cosmography of al-Khīrakī or Ibn al-Haytham, which are again found in Roger Bacon. Passages from these works are discussed by E. Wiedemann in: *Zu den optischen Kenntnissen von Kuṭb al-Dīn al-Schīrāzī*, in *Archiv für die Gesch. der Naturwissenschaft.*, etc., ii (1912), 187-93; *Über die Gestalt, Lage und Bewegung der Erde, sowie philosophisch-astronomische Betrachtungen von Kuṭb al-Dīn al-Schīrāzī*, in *ibid.*, 395-422; *Beiträge*, xxvii, *Auszüge aus al-Schīrāzī's Werk über Astronomie*, in *SBPMS Erl.* xlv (1912), 27-35, reprinted in *Aufsätze zur arab. Wissenschaftsgesch.*, Hildesheim 1970, I, 802-10; *Erscheinungen bei der Dämmerung und bei Sonnenfinsternissen nach arabischen Quellen*, in *Archiv für Gesch. der Medizin*, xv (1923), 47-5; *Inhalt eines Gefäßes in verschiedenen Abständen vom Erdmittelpunkt*, in *Zeitschr. für Physik*, xli (1923), 59-60.

One work is entitled *Sharḥ al-faḥḥira al-nagīziyya*. As an appendix to the *Nihāya*, Kuṭb al-Dīn wrote the *Fī ḥarakāt al-dahandja wa 'l-wiḍa bayn al-mustawī wa 'l-munḳanī*, "On the motion of rolling and the connection between the straight and the crooked". Other works are *al-Tahyira fī 'l-hay'a* and a work with a very peculiar title, *Kitāb faḥḥu fī lā talum fī 'l-hay'a*, "Work on astronomy; I have composed it but blame it not".

Besides the works by Kuṭb al-Dīn already mentioned, there are also recorded a treatise on diseases of the eye and a commentary on the *Urduza* of Ibn Sīnā; a work on medical ethics, the *K. Bayān al-ḥāḍja ilā 'l-faḥḥ wa-dāb al-ḥabīb* *na-waḥyāḥim*; commentaries on the work, mainly grammatical of al-Sakkāki and on a work of Ibn al-Hāḍib, and an encyclopaedia of philosophy, the *Durrat al-ḥaḍī*, written for one of the Ishāḡwād amirs of Glān (see *ROMAN*), which includes an important section on music.

After his death, Zayn al-Dīn Ibn al-Wardī wrote verses on Kuṭb al-Dīn, in which he expresses surprise that the mill (raḥ) of knowledge still turns after it has lost its axis (ḥafḥ).

(E. WIEDEMANN)

KUṬB AL-DĪN-ZĀDE, MUḤVI AL-DĪN MUHAMMAD b. KUṬA AL-DĪN IZKĪ, Ottoman scholar and mystic. He was born in the early 15th century, the son of Kuṭb al-Dīn Izkī (d. 821/1418 (q.v.)), himself a scholar and the author of works on *taṣawwuf* and *fīqh* (see *‘Oṭmānīlī mu‘allifleri*, i, 144, romanised version, i, 124-5). He was in his early years the pupil of the famous *muḥḥid* Shams al-Dīn Muḥammad, Moḥā Fanārī (d. 834/1431) (see *FANĀRĪ*), and later became interested in Sūfism. He wrote several works, many of them commentaries, e.g. on the mystical works of Ibn al-‘Arabī and his pupil Ṣadr al-Dīn Muḥammad al-Kānawī, and others on the interpretation of dreams (*taṣbīr al-ruḥyā*). He died in 885/1480 and was buried in the Taṣīr Khān cemetery at Edirne.

(E.O.)

KUṬB KHĀN LODĪ [see 1501s].

KUṬB MINĀR, a lofty tower of red sandstone, said by Ferguson (ā, 206) and Diez (165) to be one

Reconstruction of the area of the Kuṭb Mosque. From left to right: 'Alā'ī Darwāza (705/1305), Kuṭb-Minār (591/1198) and unfinished tower 'Alā'ī Minār (after A. Volwahren, *Islamisches Indien*, Munich 1969, 40).

at the most beautiful buildings of its kind in the world.

It is situated about 12 miles from the modern city of Dhill [q.v.], in the ruins of the first city of that name, and about 160 feet from the great mosque which was erected by Kutb al-Din Aybak [q.v.] in 590/1193, just after the capture of the city from the Hindu king, Prithviraj. Like the Minar at Ghazna [q.v.] and the Minar at Koyl [q.v.] (no longer in existence), it is an isolated structure, from which the *mu'adhdhin* gave the call to prayer, and is 235 feet in height; it is not attached to the mosque, but stands in the southeastern corner of the southern outer court, which was added in 522/1125 to Aybak's mosque by Iltutmish [q.v.]; it is not straight, but tapering, and is divided into five stories, above each of which (with the exception of the topmost story) are boldly projecting balconies, with richly-sculptured bands of inscriptions below them. The basement story appears to have been built while Aybak still recognised the overlordship of Mu'izz al-Din Qutub [i.e. before 502/1205]; the second, third and fourth stories were built by Iltutmish, but during the reign of Firuz Shah Taghlik [q.v.] the building was struck by lightning, and this king in 769/1368 had it repaired and added a fifth story. The two uppermost stories, both of which in their present form are probably the work of Firuz Shah, have a plain surface, chiefly of white marble, with bands of red sandstone; but the rest of the surface of the tower is entirely of red sandstone, and is not round but made up of flutings, which in the basement story are alternately round and angular, in the second rounded only, and in the third angular only. The line of each fluting is carried up unbroken through each story. The inscriptions are partly historical in character and partly made up of quotations from the Qur'an; they have been reproduced and translated in *Epigraphia Indo-Moslemica* (1911-12).

Recently, the prototype of this Minar was discovered in the ruins of the tower at Kh'adja Siyah Pögl in Afghan Sistan: in the ground plan of the regularly alternating 8-rounded and angular flanges, we can recognise the transition between the Eastern Iranian stellate plan, continued for example at Ghazna [see GHANAWDZ, Art and monuments] and the round plan of Dirm [see DIRM] in Central Afghanistan (K. Fischer, ed., *Nirruz*, pls. 252-4).

The tower derives its name from the saint Kh'adja Kutb al-Din Bakhtiyar Kahl (d. 633/1235 [q.v.]), who was held in high honour by Iltutmish.

KUTB SHAHI, the name of an Indo-Muslim dynasty that dominated the eastern Deccan plateau as one of the five successor states to the Bahmani kingdom. Basing their power on the city and hill-fort of Golkonda [q.v.], the Kutb Shahi kings achieved *de facto* independence with the decline of the parent Bahmani kingdom in the early 16th/16th century, maintaining effective rule until Mughal armies under Aurangzeb conquered and annexed the kingdom in 1687/1687.

The founder of the dynasty, Sulṭān Kūṭb al-Mulk, was a Turkoman adventurer of the Kara Koyunlu clan [q.v.] who, having migrated from Persia to India as a youth, rose in Bahmani service until in 903/1496 he was appointed governor over the easternmost Bahmani dominions. Although he never claimed legal sovereignty during his long rule, Sulṭān Kūṭb managed to carve out for himself and his descendants the broad territorial outlines of a kingdom over which they held effective sway for nearly two hundred years. He also gave the dynasty ideological definition by declaring *Shi'ism* the official creed, following the precedent set by Shāh Ismā'īl of Persia in 907/1501. This orientation, continued by all of Sulṭān Kūṭb's successors, caused the dynasty to identify ideologically with Persia as its link with *Dār al-Islām*, rather than with the Ottoman or Mughal empires, which were Sunni. The sequence of Kutb Shahi kings is as follows:

Kutb al-Mulk	901-50/1496-1543
Djauṣhīd b. Kūṭb	950-71/1543-50
Subbān b. Janashīd	957/1550
Ibrāhīm b. Kūṭb	957-88/1550-55
Muḥammad-Kūṭb b. Ibrāhīm	988-1020/1560-1612
Muḥammad b. Muḥammad-Kūṭb	1020-35/1612-26
'Abd Allāh b. Muḥammad	1035-83/1626-72
Abu 'l-Ḥasan, son-in-law of	
'Abd Allāh	1083-98/1672-87

Throughout most of the 16th/16th century and the early 17th/17th century, the Kingdom of Golkonda was engaged to constant warfare either with the most powerful two of its sister successor states to the west, Bidjāpūr and Ahmadnagar, or with the Hindu state of Vijayanagar to the immediate south. These conflicts were sustained by mutual jealousies and petty intrigues, resulting in constantly shifting military alliances among these four principal states of the Deccan. Thus, although Golkonda, Bidjāpūr and Ahmadnagar were able to band together to 972/1565 to crush Vijayanagar and sack its wealthy capital in the battle of Talikota, immediately after this battle the three Muslim states resumed their mutual hostilities. This situation prompted increasing intervention in Deccan affairs by the Mughal empire, which was expanding its imperial interests in the 17th/17th century. Finally, in 1045/1636 Shāh Jahan forced 'Abd Allāh Kutb Shah to recognise the Mughal government's ultimate suzerainty over Golkonda in a "Deed of Submission". By clarifying Golkonda's relationship to Dhill, however, this arrangement relieved 'Abd Allāh of further anxieties about Mughal aggression so long as tribute was paid, and freed him to expand Kutb Shahi arms southward as far as the Palar river (near Madras), absorbing a number of petty Hindu principalities formerly dependent upon Vijayanagar.

But the reign of 'Abd Allāh's successor, Abu 'l-Ḥasan Kutb Shah, witnessed a dramatic transformation in the internal ruling structure of the kingdom as a number of Pishwas, especially the brothers Madanna and Akkanna, acquired the reins of central authority. This development, combined with the

1. Dillī, Kutb Minār (594/1198) and 'Alā'ī Darwāza (703/1303). (A. Volwachen, *Inde islamique*, Fribourg 1971, 17)

2. Kütüb Minâr, decoration and inscriptions. (A. Volwaken, *Inde islamique*, Fribourg 1971, 19)

state's official Shī'ī ideology, arrears of unpaid tribute to the Maghals, the general chaos in the Deccan prompted by the rise of the Marāṭhās, and renewed expansionist sentiment in the Mughal government now under Aurangzib, led to a determined Mughal effort to end Golkondā's subordinate but semi-independent status and annex it to the Empire. In 1681/1682, after a protracted siege of Golkondā fort, the Mughal conquest and annexation of the kingdom was accomplished.

In its two centuries of rule, the Kutb Shāhi monarchy sank roots deep into Indian society and culture by successfully integrating multiple groups into its political fabric, by founding an efficient economic basis for the kingdom, and by forming a distinctive Indo-Muslim culture that accommodated itself in important ways with the pre-existing Hindu culture. On the political level the dynasty, faced with the choice of dislodging or absorbing the indigenous class of Hindu warrior chiefs (śāyaks) already dominant in Telugu society, adopted the latter alternative, employing śāyaks in garrisons throughout the kingdom and even in the royal guard at the capital. The other indigenous elite group, the Brahmins, were likewise absorbed into the dynasty's political structure, especially in the central revenue administration as clerks, accountants, and even chief administrators. On the local level too, virtually the entire revenue system was entrusted to Brahmins who functioned as agents, brokers or accountants. In fact the more important members of this rural gentry received royal orders guaranteeing their tenure, frequently hereditary, and assuring them of royal support against rivals.

By far the greatest share of the kingdom's revenue was derived from the land tax, collected in cash through a highly-organised and ruthlessly efficient revenue bureaucracy. Further contributing to the kingdom's economic stability, and also its anterior wealth, was the successful exploitation of a number of diamond mines discovered in the Krishna river valley during the early years of the dynasty's history. The diamond enterprise became a vast state monopoly that involved several hundred thousand labourers, officials, and merchants, and made Golkondā the world's most important diamond market in the 11th/12th century.

A distinctive aspect of the dynasty was its composite culture that combined Islamic and Indian styles, as reflected in the nature of its rule, in the flourishing of Telugu, Persian, and Dakṣiṇī literature, and in painting and architecture. Having lived seven years in exile in Vijayanagar, where he learned Telugu and acquired a Hindu wife, Ibrāhīm Kutb Shāh set the tone of this syncretic culture. He adopted not only the usual symbols of Muslim sovereignty (sikka, āqīqa, etc.), but also the style of a traditional Hindu rājā, reserving tax-free lands for the support of Brahmins and temples, erecting pillars on which the sworn loyalty of śāyaks was inscribed, patronising Telugu poets, and reviving the ancient Telugu monarchical tradition of building large irrigation works. Moreover, extensive contact between Hindus and Muslims in the Deccan gave rise to a new language, Dakṣiṇī, which achieved its first literary expression in Golkondā in the 10th/16th century, with Sultān Muḥammad-Kutb himself being one of the foremost writers in the language. A blending of Hindu and Muslim styles is similarly reflected in contemporary painting and architecture, especially the architecture of Haydarābād. Planned in 993/1600-1 by Muḥammad-Kutb Kutb Shāh as a suburb of

Golkondā fort, the city of Haydarābād [q.v.], with its gardens, bazaars, palaces, and such architectural masterpieces as the Ġarminār, has indeed remained the dynasty's most lasting legacy.

KÜTHÄ, a very old town of 'Irāk, on one of the canals joining the Euphrates and Tigris and one stage from Bagdad on the Kūfa road. The town as well as the canal are often mentioned in cuneiform inscriptions (cf. the references in Maistner, *Babylonien und Assyrien*, 230-5, Indices, s.v. Kuth and the map by Schwesinger in vol. II). The town is said to be identical with the place mentioned in 2 Kings, viii, 24, from which came a part of the people whom the king of Assyria settled in Samaria in place of the deported Israelites. The course of the canal, at least for its western part, coincided with that of the modern Ḥabl Ibrāhīm; on modern maps, this last ends in the *Shatt al-Nil*, the Arab geographers make no reference to this, but make this canal flow direct into the Tigris (cf. Le Strange, *The lands of the Eastern Caliphate*, Map II facing p. 23).

The Arab geographers distinguish two places called Kūthā Rabbā and Kūthā al-Tāqī, but only give further information about the former. (The distances from other places are collected in Streck, *Die alte Landschaft Babylonien*, II.) The geographers also mention the bridge of boats over the canal at Kūthā, which gave it the further name of *Qīṣr Kūthā*, and the Abraham legends, which are associated with the town; al-Mukaddasī (*BGA*, III, 121) actually calls the town *Madīnat Ibrāhīm*, and to this day the ruins of the town are erroneously located in the Tell Ibrāhīm which lies approximately on the site of the ancient Kūthā. Abraham is said to have been born at Kūthā, and the name of the town comes from that of his maternal great-grandfather. When his mother (her name is very variously given; Yāqūt writes *Bēnā bint Karnabā b. Kūthā*; the Talmud, *Babbi bairā*, יצא, אֶלְמִלְכָּה; for other names, see Eisenberg, *El' act. israhel*; and *The life of the prophets according to Arabic legend*, I. *The life of Abraham* [in Hebrew, 1912], p. n.) was about to give

him birth, she had to take refuge from Nimrod in a cave outside the town. Later, Nimrod threw her into a fiery furnace; therefore, in the time of the Arab geographers, many heaps of ashes were still pointed out which came from this fire.

Kūthā is also the name of the *ḡassidī* around the town, which comes within the district of Ardaḡūr Pāpākūn and is in turn divided into 10 *naḡḡas*. According to al-Mas'ūdī (*Tanbih*, BGA, vii, 79), Ur Kaghā (the Biblical Ur Kasdim) from which Abraham migrated is a place *min bilād Kūthā*. The *nabī* from Kūthā is Kūthī or Kūthānī.

Besides Kūthā in Mesopotamia, Yāqūt and al-Bakrī also mention a place of pilgrimage of this name in Mecca.

KUTHAM a. 'ABBĀS b. 'ABD AL-NUTTALIN AL-HAḡḡMIL, Companion of the Prophet, son of the Prophet's uncle and of 'Umm al-Faḍl Lubāba al-Hilālīyya, herself Muhammad's sister-in-law. Although the *Sīra* brings him into contact with Muhammad by making him one of the inner circle of the ḡaḡḡmī family who washed the Prophet's corpse and descended into his grave, and although his physical resemblance to the Prophet is also stressed, he was obviously a late convert to Islam, doubtless following his father al-'Abbās [p.a.] in this after the conquest of Mecca.

Nothing is heard of him during the reigns of the first three Orthodox Caliphs, but then 'Alī on his accession made Kutham governor of Medina (36/656), and in the next year, when menaced by his rivals for the caliphate, Talha, al-Zubayr and 'Ā'isha, he made him governor of Mecca and al-'Ta'if. He seems to have retained this office all through his cousin's caliphate, leading the Pilgrimage in 38/659 (cf. Ibn ḡuḡḡam, iii, 1018, 1020, tr. Guillaume, 667-8; Ibn Sa'd, ii/2, 70, iv/2, x, 22, vi/2, 100; Balāḡhūrī, *Ansab*, i, ed. Hamidullah 447, 369, 377-8; Tabarī, i, 2830, 1833, 3092, 3206, 3399, 3343; Muhammad b. ḡabīb, *al-Muḡāḡir*, 17, 46; Ibn ḡuḡḡam, ed. ḡhān 'Abbās, vi, 351; etc.).

After this comparatively undistinguished career, Kutham achieved fame through the manner of his ostensible death. He was with the army of ḡhurḡḡn under Sa'īd b. 'Uḡḡḡn b. 'Aḡḡn when the latter invaded Transoxania in 56/676 (cf. Gibb, *The Arab conquests in Central Asia*, 19-20), and was allegedly killed (thus in Muhammad b. ḡabīb, 167, and Zubayr, *Nasab Kuraysh*, 27) or died a natural death (thus in Balāḡhūrī, *Ansab*, 412) at the siege of Samarkand in 57/677. Tabarī makes no mention of Kutham's death in his account of this campaign, and Ya'qūt, *Buldan*, 208, tr. Wiet, 129, and Narshakhī, *Tarīḡḡ al-Bulḡān*, tr. Frye, 40, state that he in fact died at Marv.

Whatever the truth of the matter, the supposed tomb of Kutham at Samarkand subsequently became a shrine and pilgrimage place; Barthold plausibly surmised that this cult was probably built up by his family, the 'Abbāsids, when they came to power. It is, however, equally possible that some existing pre-

Islamic cult of Soḡḡḡia was Islamised and transformed into the cult of Kutham. In the inscriptions of the later buildings making up the shrine complex of Afrāsiyāb, the citadel area of Samarkand and the heart of the pre-Mongol invasion city (see SAMARKAND), Kutham is generally referred to as the *Shāh-i sūdā* 'Ewing prince' or *Shāh-i ḡuḡḡn* 'prince of the youths', and I. I. Rempel has suggested that Kutham is a syncretistic figure incorporating elements of the Islamic prophet Khidr (see AL-KHAḡIR) and of Sūdāwūḡ and other ancient Iranian heroes (in G. A. Pugachenkova, ed., *Is istorii vostochnogo goroda*, Tashkent 1972, 36-53).

The shrine flourished greatly and was added to in ḡarakhānīd and Salḡūḡk times, so that a whole complex was formed there, and during Saḡḡḡr's sultanate, probably in the 320s/1230s, a *Madrassa Kūthamiyya* was founded. When Ibn Battāḡa visited Samarkand two centuries later, in the reign of the ḡaḡḡatayid 'Alī' al-Dīn Tarmashīrīn (726-34/1326-34), he found the shrine opulently appointed and much visited by the local people of Samarkand plus the Tatars of the region. It had a *sūfiyya* [p.a.] or hospice attached to it for pilgrims and travellers, and a son of the 'Abbāsids, the *amīr* ḡhīyāḡ al-Dīn Muḡammad b. 'Abd al-Kāḡir, great-great-grandson of the penultimate ḡaḡḡḡid caliph al-Mustasḡir (623-40/1226-42), who had migrated from Fārk to Transoxania, acted as *nāḡir* or superintendent of the shrine (*Rihla*, iii, 52-4, tr. Gibb, iii, 568-9). The shrine continued to attract royal patronage, including from the Timurids; a mausoleum, possibly to be ascribed to Kutluḡ ḡhā, one of Timur's wives, was built in 762/1362, and in the next century, Ulugh Beg [p.a.] added to it. Alterations were, indeed, made to it up to the early 19th century.

Rogers and 'Adī Yāsīn, in *Iran, Jnal. of the Brit. Inst. of Persian Studies*, 25 (1977), 125-42. (C. E. BOSWORTH)

KUTHAYYIR a. 'ABD AL-RAHMAN (better known as KUTHAYYIR 'AZZA and often called al-Mulāh after Mulayh, a sub-tribe of ḡhuḡḡ'a, or Ibn Abī Dīḡm'a, after his maternal grandfather), a poet of the 'Uḡḡḡrī school of the Umayyad period. Like other poets of the same school, his life was a favourite field for the imagination of story-tellers who wrote entertaining *asḡḡr* literature. In such cases, legend plays such havoc with history that it becomes almost impossible for later critical studies to separate one from the other. Legends were introduced to suggest pseudo-historical occasions for some poems, and some poetry was made to suit stereotypes of the ideal lover. Other factors, both political and sectarian, made it easy for the *muḡḡḡ* to shroud Kuthayyir's character with ever thicker layers of legendary material. Nowhere else does authentic poetry stand in sharp contrast to the alleged character of its writer as it does in the case of Kuthayyir. When stripped of such accretions, the biography of such a poet becomes a mere skeleton.

Kuthayyir's parents were both from ḡhuḡḡ'a, and lived in Medina or in the adjacent hills to the east. If we believe al-Marzubānī, who states that the poet lived 80 or 81 years (*Muḡḡḡ*, Cairo 1960, 241), then he must have been born ca. 73 or 24/643 or 644 (since

there is no doubt that he died in 105/723). This date of birth seems very early if we consider that there are no traces of his poetical activities before 60/679, a fact which makes one think that he could not have been born earlier than 40/660. Although Kuthayyir's father died when he was still in need of a guardian, he is nevertheless accused of being an undutiful son (this is more likely a reflection of much later sectarian prejudice). When his father was afflicted with a sore in one of his fingers, Kuthayyir considered that as a heavenly punishment for the father, who used to raise that same finger whenever he swore falsely. The pious interpretation here is ignored, and the sharp comment is taken as indicating an unofficial attitude. Kuthayyir's uncle became a watchful guardian who, to keep the boy away from the vices of urban life, sent him to tend a herd of camels in the oases. At that stage, so the legend says, a brass figure trudging heavily appeared to him and ordered him to begin to recite poetry. Thus his inspiring *ghayf* disclosed himself to him at an early age. Yet it was not this *ghayf*, but the author of the legend, who reduced the camels to sheep and took Kuthayyir to al-Bijār on the Red Sea coast where, on his way, he met a group of women, from among whom a young girl approached him in order to buy a sheep. The lad, who in his manhood became known for his proverbial stinginess (*ḥāṣiṣ*, al-Buḥārī², Cairo 1943, 163), gave her a sheep and refused to accept payment. This girl was inevitably 'Azza, the daughter of Humayl from the Ḥamra tribe, who entangled Kuthayyir with her beauty. According to later evidence from a woman who knew 'Azza, 'Azza is described as a "sweet", pretty, clean and pale-skinned woman, whose conversation was most enchanting. 'Azza's family must have previously given her as a wife to a first suitor because, shortly after that heady meeting, Kuthayyir's poetry became very embarrassing to them. That same husband is referred to in his poetry as a jealous, impotent old man (*karḥal*), who used his authority over his wife to make her scold her lover and abuse him. It is also probable that the migration of 'Azza and her husband to Egypt (ca. 67/686) was not only due to a drought that broke out in the Mijāz, but also represented the husband's wish to avoid embarrassment. Nevertheless, Kuthayyir, who cared but little about the feelings of his rival, found in travelling to Egypt a good opportunity to see both 'Azza and his friend 'Abd al-'Aziz b. Marwān, governor of Egypt. Through the latter, the poet's attachment to the Umayyad caliphs and amirs was strongly established, an attachment which endured until his death.

Yet at a date previous to these travels, Kuthayyir is said to have met a man called *Khandaḳ* who attracted him to the Kaysāni beliefs. In its early stage, the Kaysāniyya sect (*q.n.*) must have been compatible with the belief in the right of 'Alī's son, Muḥammad b. al-Ḥanafiyya, to the imamate, as successor to his half-brother, Husayn. The poet's relation with Ibn al-Ḥanafiyya is a historical fact, to which Kuthayyir's own poetry attests. Ibn al-Ḥanafiyya was imprisoned by the rebel and anti-caliph 'Abd Allāh b. al-Zubayr, and that imprisonment was strongly resented by the poet (*Diwan*, Beirut 1971, 224). As for the other Kaysāni beliefs, such as those of the occupation of Ibn al-Ḥanafiyya in the mountain of Raḡwā, near Medina and his final return (*raḡ'a*), or the transmigration of souls, nothing is explicitly or implicitly expressed about them in Kuthayyir's poetry. Even his two surviving elegies for his friend *Khandaḳ* are completely silent about any doctrines or beliefs. Yet the poet was later

identified with the extremist Kaysāni poet, al-Sayyid al-Himyari (d. 173/789), and some of the latter's poems were ascribed to him. The *ruḥḥas* about his Kaysāni beliefs hardly conform with the accepted Kaysāni doctrines. Ludicrously enough, instead of believing in the return of his *amīn*, Kuthayyir, according to these *ruḥḥas*, believed in his own *raḡ'a*. In examining similar traditions, one can discover not only contradictions but also a humorous strain which was intended to mock Kuthayyir's own character. Kuthayyir's attachment to the Kaysāniyya must have been a short, emotional interlude, to which he was driven by his friendship with *Khandaḳ* and his pity for Ibn al-Ḥanafiyya's imprisonment. When the latter acknowledged the caliphate of 'Abd al-Malik in 69/688, the poet felt no ambivalence in his allegiance and became an Umayyad partisan till the end.

Some traits in Kuthayyir's character made it easy to ascribe rather ridiculous beliefs or modes of behaviour to him. He was a very short, ugly, red-faced, long-necked, huge-headed and very slender man, who adopted a haughty and conceited manner to mask his limitations. His naiveté and lack of urban sophistication are easily detected in his poetry. In one of his poems he bristles at 'Azza's humorous comment that he has become pale and rough in manner of late, and accuses her of ridiculing him only to please her husband (*Diwan*, 379). Yet he explicitly acknowledges, in the same poem, that he had really become a shadow of a man, "like the remnants of a rope", totally bony but, in spite of all that, naturally handsome, without adornment, "like a Byzantine *dhīr*". Madness, which must be taken to mean no more than eccentricity, becomes an easy accusation. But no mad person, in reality, could have enjoyed the durable labour and esteem which the poet gained from his Umayyad patrons, or could have become so well-loved that nearly all the men and women of Medina would throw his funeral in order to bid him a final farewell. Kuthayyir was also accused of being insincere in his love. Considered as a 'Uḡri lover, this accusation might be true; at a certain time, he was temporarily attracted to another woman called Zafīna, whose "magical tie" was easily broken by 'Azza. Other tales about his unfaithfulness in love are mere elaborations on the same theme by *ansār* writers. His poetry, in a way, gives credence to such an accusation because it shows a sober restraint which falls short of a passionate abandonment to love. Love, in Kuthayyir's poems, is conceived in the terms of friendship. Let it be also remembered that he, unlike other 'Uḡri-love poets, like al-Maḥḥūn or even his tutor *Ḍiḥlīl*, did not restrict himself to love-poetry. Not only his eulogies, but also his harsh satirical poems against his beloved's tribe, testify that love, in his heart, was rivalled by other strong emotions. His elegies on his friends, *Khandaḳ* and 'Abd al-'Aziz, are not less in warmth than his love poems. His eulogies, though not so warm, are lengthy and symmetrical. In them, the poet's hard Bedouin life or the pangs of his forlorn love, are sharply contrasted with the luxurious life of the patron (*wamdaḳ*), and this latter is also drawn in contrast to the hardships which the patron faced in an inevitable war. Although the Umayyad *amīr* is an Arab child who has, sometimes, the eyes of a snake and who seized sovereignty by force, it seems as if the poet resorts to a special set of distinguishing Umayyad attributes in his eulogies. Friendship, rather than financial benefit, is the stronger incentive for such poems. This feeling of social equality helped

the poet to preserve much of his dignity. But when such a feeling is exploited in love-poetry, it reduces the sense of sacrifice to a minimum. The lover even, in moments of self-esteem, acquires the awe of the sovereign when he describes how admiring women feel towards him and how he enjoys the sight of entreating "subjects". It is true that this is not always the case, but, being there for once, it can outweigh all his other expressions of total absorption in love.

Kutāyyir was a prolific poet. During his long life, he appears never to have stopped writing poetry except for a certain period, after the death of 'Azzā and 'Abd al-'Aziz (36 99/705-17); the poet's use of a simple and direct style of composition helped that profuseness. When writing on love or praise, or combining both themes in one poem, his vivid descriptions of the scenes from the Hīdājir or those on the route to Egypt or Syria add much to the length of his poem. It is said that, of *Amayyāt*, he wrote 30 of considerable length. However, all that has survived of that poetry, scattered through the available sources, does not exceed 2,000 lines.

KUTLUĠH-KHĀNIDS. 2. a dynasty in Kirmān [q.v.] in the 7th/13th century, descended from the Kara-Khitay [q.v.] of Transoxania. The dynasty, successively vassals of the Khwārazm-Shāh, the Mongol Great Khān and the dynasty of Hūlāgū Khān (Ilkhān), lasted from 619/1222 or 620/1223 to 706/1305-6, but never had more than local importance. It entertained close relations with the neighbouring dynasties of the Atābegs of Yazd, the Salghūrids of Fārs and the Nuṣratīdids [q.v.] and came into occasional contact with the caliph and with India. The founder of the dynasty (from 619 or 620) was Naṣr al-Dunyā wa 'l-Dīn Abu 'l-Fawāris KutluĠh Sultān Burāk-Hādījib [q.v.], son of Kuldūr (?), d. 632/1235. His title [KutluĠh Sultān] was given him by the caliph, although his conversion to Islam was of a very recent date. He had a son Rukn al-Dīn Khādījagūh (or Muḥarrak Khādījagūh) and four daughters, of whom Sawīdī Turkān was married to Caḡatay Khān, Khān Turkān to her cousin Kuṭb al-Dīn and the two others to members of the family of the Atābegs of Yazd.

Burāk appointed as his successor his nephew and son-in-law Kuṭb al-Dīn Abu 'l-Faṭḥ Muḥann-

mad Khān, whose father Khāmshān Tāyagū b. Kuldūr (variants: Khāmshūr, Khāmshūr, Tānāk) is perhaps identical with the Kara-Khitay chief captured by the Khwārazmians in 607/1210, cf. Barthold, *Turkestan*, 364. Kuṭb al-Dīn at the end of a year had to retire into Mongolia on the approach of Rukn al-Dīn, son of Burāk and Ukā-Khātūn, who after spending some time at the Mongol court received from Ögedey investiture for the fiefs of Kirmān and Narmashīr. He ruled for 16 years. He was not well disposed to the Tāghīks and men of letters, according to the *Sinā al-'ulā'*.

In 650/1252 he had in turn to make way for Kuṭb al-Dīn, who had in the interval been serving in China under Maḥmūd Yalawāt and upon whom Mōngke after his accession conferred the *yastīk* over Kirmān. Kuṭb al-Dīn was authorised by the Kāpān to put Rukn al-Dīn to death as he was suspected of intriguing with the caliph. He soon suppressed a rising by a pretender who claimed to be the Khwārazm-Shāh Djalāl al-Dīn. He severely punished the Kūc and Balūc (see BALUCHISTAN and KURJ). His successes were attributed to the advice of his wife, KutluĠh Turkān Khātūn, whose wisdom is highly praised by the historians. Some doubts exist as to her origin; according to the *Tārīkh-i Gurīda* she had been the concubine (*surriyāl*) of Burāk (according to the *Hādīk al-siyar*, that of Ghuyāth al-Dīn, brother of the Khwārazm-Shāh Djalāl al-Dīn) and would thus be a different person from Khān Turkān, daughter of Burāk; this last might explain her feud with the sons of Kuṭb al-Dīn.

Kuṭb al-Dīn died in 655/1257. His son Hādījagūh being a minor, the notables asked the Kāpān to entrust the government to the widow of Kuṭb al-Dīn 'Īsmat al-dunyā wa 'l-Dīn KutluĠh Turkān who ruled 655-82/1257-82 (in 662/1264 her powers were confirmed by Hūlāgū; cf. Raghīd al-Dīn, ed. Quatremère, 403).

Hādījagūh when he grew up sought to get into touch with the sons of Ögedey and acted with little regard for KutluĠh Turkān, but the latter, strong in the support of her daughter Pādshāh-Khātūn, married to Abaka-Khān, forced Hādījagūh to retire to Dihlī in 666/1267-8. Then the other son of Kuṭb al-Dīn, Suyurghatmīsh, successfully disputed Turkān's power and she went to Tabriz, where she died in 681/1282-3. Her daughter Bībī Khātūn, who had married the amir 'Aḡud al-Dīn Hādījagūh, removed her remains to Kirmān. Marco Polo went through Kirmān (ca. 1272) in the reign of KutluĠh Turkān.

Djalāl al-Dīn Abū Muṣaffar Suyurghatmīsh (681-92/1282-94) received his investiture from the Il-Khān Ahmad, but could not agree with his sister Pādshāh-Khātūn. She had been brought up among her brothers under the name of Hasan Shāh (cf. *Ming-shān*) to enable her to escape compulsory marriage with a Mongol prince. She became, however, the wife first of Abaka and after his death, of his son Tāyghātū. The latter on coming to the throne in 690/1297 gave Kirmān to Pādshāh-Khātūn. The princess, who was a poetess of talent, was of a vindictive and passionate nature. At first, Suyurghatmīsh governed the province in the name of the Pādshāh, but she later threw him into prison. He was freed by his wife Khudāwān-sāda Kardughīn, daughter of Mengü Timūr b. Hūlāgū and the Salghūrid [q.v.] princess Abīsh, ruler of Fārs, and by his daughter Shāh 'Ālam. Geykhātū, however, handed him over to Pādshāh-Khātūn, who had him strangled. His death was followed by the execution of his vizier, who was captured by stratagem. In 694/1295 Baydā,

husband of 'Alam Khātūn, became king, and Pādshāh was handed over the vengeance of the wife and daughter of Suyurghatmīsh. In the reign of Pādshāh Marco Polo (ed. Yu-le-Cordier, 23, 92) passed through Kirmān on his return journey (ca. 1293).

In 695/1296 Muza'far al-Dīn Abu 'l-Hāfiḥ Muḥammad Shāh Sulṭān b. Ḥaḍḍāḍ succeeded his aunt by command of Ghāzān Khān, but his brother slew his vizier and rebelled in Kirmān. The troops of Fārs and Īrāq besieged Kirmān for 18 months. Muḥammad al-Dīn came from Tābēz, forced the town to surrender and executed the ring-leaders. His methods must have been summary, for his new vizier left him in terror. Muza'far al-Dīn, who loved wine, died in 703/1303-4 as a result of his excesses.

His nephew Sulṭān Kutb al-Dīn II Shāh Dīyān b. Suyurghatmīsh succeeded him and ruled for two years and a half (until 706/1306-7). As he was very cruel and did not pay his dues regularly to the Mongol treasury, Öljeytū deposed him and appointed a simple governor in Kirmān, Nāṣir al-Dīn Muḥammad b. Burhān. Kutb al-Dīn II retired to Shīrūz to Kardoḡīn, wife of his father. His daughter Kutluḡ Khān (*valīdat al-salṭīn*) in 729/1328-9 became the wife of Muḥarrir al-Dīn Muḥammad, the real founder of the Muza'farid dynasty, who later took possession of Kirmān (In 741/1340-1).

Before the earthquake of 1896 there still existed in Kirmān the *Kabba-yi sahr* (remains of the *madrasa* of Turkānābād) bearing the date 640/1222-3 (i.e. contemporary with Rukn al-Dīn). This "green mausoleum" was the family tomb for the dynasty (cf. P. M. Sykes, *Ten thousand miles in Persia*, London 1902, 60-2, 194, 264). Turkān Khān founded the little towns of Sar-āshyāb and Catrūd, to which she brought a water supply. Suyurghatmīsh built the *madrasa* of Derb-i Naw, where he was buried.

Bibliography: The special history of the Kutluḡ Khānids is the *Sinai al-ḥudūd* b. 'l-ḥadīrat al-ṣafā, written in 716/1326-17, cf. Storey, i, 358, 1297. The author Nāṣir al-Dīn was the son of Khwādja Muntadhab al-Dīn Yazdī, the trusted adviser of Kutb al-Dīn (cf. the Paris ms., B. N. Persian No. 1377, l. 125). On Burhān, Rukn al-Dīn and Kutb al-Dīn, cf. Diuwaynī, ed. Kazwīnī, ii, 211-18, tr. Boyle, ii, 476-82. On the whole dynasty: *Tārīkh-i guida*, ed. Browne, 527-35, 625; *Nirghvān*, ed. Rawṣat al-ṣafā, Bombay 1266, iv, 128-31; cf. E. A. Strandman, *Chauandamir's afhandling om Örtöke-tashka* i Kirmān, Helsingfors 1869; *Khvāndamir Ḥabīb al-ṣiyar*, Bombay, 413, 10-12; Münedḡīm-baḡhī, Turkish tr., Istanbul 1285, iii, 537; Rieu also quotes Waṣṣāf, iii (to the year 694) and the *Geography* of Ḥāfiḡ (Ibrū, part II, which seems to contain full references. Cf. also d'Obsson, *Hist. des Mongols*, iii, 5, 19, 32, 131-3, 396; iv, 90-3, 269, 483; Zambauer, *Manuel*, 237; Boyle, in *Camb. Hist. of Iran*, v, 323.

2. The title Kutluḡ Khān was conferred in 629/1232 by Ögeydey on Abū Bakr b. Sa'd, the Salḡmīd (q.v.), cf. d'Obsson, iii, 398.

(V. MINORSKY)

KUTLUḠ-SHĀH NOYAN, a notable Mongol amir in Ilkhānid Persia, especially during the reigns of Ghāzān Khān and Öljeytū (694-716/1295-1326). He was a member of the Mangut tribe, and a descendant of Čingiz Khān's general Dedei Noyan.

After the accession of Ghāzān, Kutluḡ-Shāh led the pursuit of the amir Nawrūs, besieged Harāt,

where Nawrūs had taken refuge, and captured and executed him in 696/1297. He was also charged with the execution of the fallen amir Sadr al-Dīn. In 698/1299 he was sent by Ghāzān to Rum to suppress the revolt of prince Sölmīsh. In 699/1299 he accompanied Ghāzān's invasion of Syria, and was subsequently appointed by him *shaykh* of Damascus. He commanded the right wing of the Ilkhānid army when the Mamlūk forces were defeated at Hims. During the Syrian campaign of 703/1303, Kutluḡ-Shāh was less successful; he was defeated by the Mamlūks at Marḡ al-Suffar. He among others was held responsible by Ghāzān, and together with his fellow-general Cūbān he was sentenced to be beaten with rods at the judicial enquiry (*yādgāh*) which followed his precipitate return to Persia. Any eclipse that Kutluḡ-Shāh may have suffered as a result of this defeat was only temporary, however. On his accession in 704/1304, the Ilkhān Öljeytū appointed him commander-in-chief. But in 707/1307 Öljeytū's armies invaded Gilān, and during the campaign Kutluḡ-Shāh was defeated and killed. His death cleared the way for the later ascendancy of Cūbān in the Ilkhānid state.

Kutluḡ-Shāh's eminence among the amirs of his time is amply attested in anecdotes concerning him. Kāshānī records that during a dispute at court between Hanafis and Shāfi'is during the reign of Öljeytū, Kutluḡ-Shāh urged in his exasperation that the Mongols should abandon Islam—of whose tenets he is represented as having a very curious conception—and return to the *yasaq* and *yāsān* of Čingiz Khān (*Tārīkh-i Čagayir*, ed. M. Hambly, Tehran 1969, 98 = Aya Sofya MS 3099, f. 178a). On the other hand, in Ibn Bazzāz's *Safwat al-aṣfā*, a near-contemporary life of Shaykh Saḍī al-Dīn of Aḍabīl, he is shown as a devotee of Shāfi'ī ḡayyās, and there is an entertaining account of how in a contest of piety and abstinence, Kutluḡ-Shāh's favoured ḡayyās was beaten by Ghāzān Khān's candidate, Shaykh Zāhid Gilālī (ed. Ahmad b. Karīm Tabrizī, lith. Bombay 1921, 389 = Aya Sofya MS 3099, f. 286b).

KUTŪN, KUTŪN (A.), cotton.

1. In the mediaeval Arab and Persian lands.

In the period of the Arab conquests cotton had already been propagated from India to eastern Persia and the neighbouring lands. It was cultivated everywhere and a flourishing industry produced cotton goods there. The Arab geographers, in describing the economy of these lands in the 'Abbāsid period, speak especially of the production of cotton goods, but there is good reason to suppose that these factories used the cotton planted in their own regions.

In modern Afghanistan, Kābul and Herāt had cotton factories which were known for the excellent quality of their products. Kābul exported cotton goods as far as China. Marw and Nishāpūr were the most important centres of the cotton industry in Khurāsān. The province of Marw also exported large quantities of raw cotton, much appreciated for its softness. The cotton materials produced at Marw, especially muḥama, a cotton and silk fabric, were so renowned that, according to al-Ḥaḍḍābī, in all countries fine materials originating from Khurāsān were called *khāshgānī* (after the name of Marw).

The industry of Nishāpūr was known for the material called *kajlī*. The cotton goods of these two towns passed in the caliphal empire, according to an observation of al-Dīlībī cited by al-Thaʿālibī, as the best in the world. Transoxania also produced large quantities of cotton. From the province of Shāsh it was exported into the Turkish lands Samarqand, the small town of Wadhār not far from it, Bukhārā and Tawāwis were the most important centres of the cotton industry there, whilst Bukhārā was renowned for its heavy cotton goods, whose firm fabric was praised. The cotton plantations had even been introduced into cold lands such as Khwārazm. Factories for cotton goods were also developed there, whose products, such as those called *araḥḡ* and *amur*, enjoyed a great reputation.

Dīlībī itself produced cotton and had factories which worked it, although on a smaller scale than those of Khurāsān. The Arab geographers of the 4th/10th century relate that the cotton of the province of Rayy was exported as far as ʿIrāq and Aḡharbāyḡān. Speaking of irrigation by means of subterranean canals in the province of Iṣfahān, Ibn Hawḡal remarks that it served for the cultivation of cotton. In Kirmān, there was a flourishing cotton industry at Bamm which doubtless used the raw material produced in the province. As for the province of Fārs, there is no room for doubt about its presence there, for Ibn Hawḡal points out to us the rate of tax levied on the cotton plantations in the district of Shīrāz. Yazd and Aherkūya themselves had factories which certainly worked the cotton cultivated in their provinces. However, in this part of Persia, the cultivation of flax and its manufacture prevailed over that of cotton.

At the end of the 3rd/9th century and beginning of the 4th/10th century, there were already cotton plantations in Upper Mesopotamia, Syria and Palestine, but in these lands they constituted a new sector of agriculture. Al-Isṭakhṡī, writing in the first half of the 4th/10th century, relates that in most of the lands of Rās al-ʿAyn, in Upper Mesopotamia, cotton was cultivated, and Ibn Hawḡal speaks of the cotton plantations and cotton goods production in the town of ʿArbān, in the same province. Al-Mukaddasī, for his part, mentions cotton plantations in the district of Harrān. Later on, Yāqūt mentions cotton goods' production at Herza, a small town near Rās al-ʿAyn. In the 4th/10th century much cotton was also planted in the province of Aleppo and in Palestine, in the region of the Hāla and in the Dīawlān, near Bāniyās. To judge by the description of Palestine by al-Mukaddasī, it was also cultivated near Jerusalem. A passage in the description of Upper Mesopotamia by Ibn Hawḡal reveals that the cotton plantations increased considerably in the 4th/10th century in this land, when the new lords, who had replaced the caliphal régime, established large estates and introduced the cultivation of industrial plants such as cotton. Ibn Hawḡal speaks of the Hemdānids, but there is reason to suppose that other dynasties were also involved. Whatever may be the case, the cultivation of cotton as yet only played a modest role in this period within the total agricultural production of these lands. Indeed, Ibn Hawḡal specifies that cotton goods were imported from Upper Mesopotamia into Syria.

In Egypt, the cultivation of cotton constituted, in this period and also later, under the domination of the Fātimids, a still more limited agricultural sector. Several papyri, it is true, testify to the cultivation of cotton in Egypt, in the 2nd-4th/8-10th

centuries, and other documents refer to cotton plantations in Egypt under the Fātimids. According to al-Idrīsī it was even exported in this period from Egypt to Libya. On the other hand, numerous Judaeo-Arabic documents preserved in the Cairo Geniza from the second half of the 5th/11th and first half of the 6th/12th century show that cotton and cotton goods were imported from Sicily and especially from Syria and Palestine.

The same observation will be made as to the cultivation of cotton in the Maghrib in this period; it was planned almost everywhere but on a relatively small scale. Ibn Hawḡal mentions the cotton plantations in the districts of Tunis and M'sila in Algeria. Abū ʿUbayd al-Bakrī mentions too the cotton plantations in the province of M'sila and speaks of them further in his description of Mostaganem in western Algeria. In Morocco, cotton was planted, according to the reports of the Arab geographers, in the districts of Fez, Fādila, Bagra and Kurt. In Islamic Spain it was cultivated, in the 4th/10th century, in the province of Seville and also in the district of Guadix, to the east of Granada.

In the period of the Crusades, the cultivation of cotton developed to a great extent in Syria, especially in its northern provinces. Several treaties concluded between Venice and the Ayyubid princes of Aleppo and Ḥakīm report the export of cotton from their states. However, the great rise of cotton cultivation in Syria was to begin later, after the fall of the Crusader states. When the farmers lost the great markets provided by the Crusader towns, there was a glut of cereals and they went over apparently to the cultivation of cotton. Already in 1304, some Venetian emissaries went to visit the Mamlūk governor of Safad, doubtless to negotiate with him concerning the trade in cotton, the plantations of which had increased considerably in his province. The depopulation following the Black Death and the still further diminished demand for cereals accelerated this development, so that the export of Syrian cotton became an important sector of the Levant trade.

The connection between the reduced demand for cereals and the increase in cotton production emerges clearly from the development of agriculture in Upper Mesopotamia and Armenia. Marco Polo relates, at the end of the 13th century, that the provinces of Muḡh and Mārdīn produce enormous quantities of cotton which was worked there. Ḥamd Allāh Mustawfī, writing in the first half of the 8th/14th century, also speaks of the cotton plantations in the district of Mārdīn and still others in the districts of Bīzābād, Bartālā and Irbil in Upper Mesopotamia and in the environs of Wāladjīrd in Armenia. The Venetian ambassador Giusseppe Barbaro, who travelled across these lands in 1474, also mentions the cultivation of cotton and the cotton goods' factories at Mārdīn as well as plantations in the district of Hīn Kayfī. The fiscal regulations of Uzun Hasan, then lord of this country, refer to the cotton industries of Urfa, ʿArabgr and Erzīndjān, towns today forming part of Turkey. In ʿIrāq cotton was cultivated then in the districts of Baghdād, Kūfa and Hilla. The accounts of Ḥamd Allāh Mustawfī of the agricultural production of several provinces of Persia are particularly significant in this regard, in so far as they mention cotton plantations in some districts which do not figure as producers of cotton in earlier sources. He speaks of large harvests of cotton in several districts of Aḡharbāyḡān, Dīlībī, Kūhīstān and Kirmān. There is no doubt that the diminution of the population and consequently of the demand for

cereals after the Mongol conquests led also the farmers of these regions to go over to the cultivation of cotton. Al-Mawṣil and several other towns then became centres of the cotton goods industry and their products were exported to other lands, such as Egypt.

In this latter country, the production of cotton also increased from the middle of the 7th/13th century, although it was still imported from the Sudan. The Irish pilgrim Simeon Simeonis, who in 1323 passed by Fawwā in the western delta, describes the plantations of cotton which he had seen there and later, at the beginning of the 9th/15th century, Emmanuel Piloti relates that cotton is the most important product of the province of al-Ḡharbiyya. Arnold von Harff, a German traveller of the end of the 9th/15th century, saw cotton plantations on his way from Kafya to Ghazza. In the late Middle Ages, Egypt was also able to export cotton to Europe.

Nevertheless, in no other country of the Near East was the role of cotton, in the late Middle Ages, as important as in Syria, nor was the volume of its production as considerable in relation to other crops; Syria exported large quantities of cotton to Europe, where it served as the raw material for the flourishing textile industries in Lombardy and southern Germany. The great centres of the plantations were the region of Aleppo, the province of Hamā and the northern districts of Palestine. In northern Syria cotton was cultivated especially in the districts of Djabala, Ḥazāz and Sarrīn (called Siamo by the Italians, by confusion with al-Ṣūm), and in Palestine in the environs of Acre and in the valley of Jazīr. But cotton was also planted in the province of Tripoli and on the coasts of Lebanon, near Bayrūt, Sayda and Tyre. In the travel books which pilgrims in the Holy Land have left for us, there is mention of cotton plantations near Jaffa and Ramla. In Transjordania cotton was planted in the district of 'Ajlūn. According to the Merchants' Guide of Pegolotti, the cotton of Hamā was considered the best, and this statement is corroborated by numerous price lists of the Venice market. But all varieties of Syrian cotton were more appreciated in Europe than the cotton originating from other countries, such as Turkey, Cyprus, Egypt or Malta. It was appreciated for its longer fibres and for being more flexible. Part of the Syrian cotton fed the cotton goods' industry (especially "bocasin" from the Turkish *böğâsî*) which flourished at Ba'labakk, in the villages of the Lebanon, to the east of Tripoli and in the villages near Aleppo. It appears however that this industry only worked up a small part of the cotton produced in the country and that the greatest part of it was in fact destined for export. From the end of the 15th century, the Venetians made the largest purchases, while the Genoese traded especially in the cotton originating from the Balkans or Turkey, where there existed important plantations in the provinces of Konya and Sivas. The Catalans, who, at the end of the 14th century, still bought on a large scale in Syria, were supplied in the 15th century especially in Sicily. Venice sent each year two convoys of cogs to Syria, one in February and the other in August. Numerous documents which have been preserved in the archives of Italy allow us to evaluate the volume of the export of Syrian cotton by the Venetians. It will be concluded that in some periods of good (political and economic) conjuncture, the Venetians exported each year from Syria 8,000 sacks of raw cotton (apart from relatively small quantities of cotton thread) and in others, 5,000. Since a sack contained, on average, 150 kg., the value of these exports may be evaluated at

90-140,000 ducats a year. But when the price of cotton rose, at the beginning of the 15th century, from 24.5 ducats a *ḡṣār* (of northern Syria) to 30.5 ducats, the Venetian investment rose to 200-250,000 ducats and more. Also, there were some years in which the Venetians bought Syrian cotton for 300,000 ducats.

The registers of fiscal returns made in Palestine in 1525-6 and 1551-6 indicate the large volume of cotton production in Galilee and also in the district of Jaffa after the conquest of the land by the Ottomans. Indeed, Syria still exported cotton to Egypt and other countries until the end of the 18th century. In Egypt cotton was cultivated, at the beginning of the 19th century, near Damanḥūr on the western branch of the Nile and in the provinces of Samannūd and Manṣūra on its eastern branch. But these plantations were not of great extent. Then, in 1818 or 1819, the French engineer Louis Alexis Jumel discovered in Carro a species of cotton which was distinguished by its long, strong fibres and began to cultivate it with the help of Muḥammad 'Alī. As the new species fetched a much higher price in Europe than the others, it was cultivated from 1822 on a large scale, principally on the eastern bank of the eastern branch of the Nile. Always under the sponsorship of Muḥammad 'Alī, experts on cotton cultivation were invited to Egypt and in 1838 a type of agricultural code (*ḡāḡid ṣūṣ'at al-falāḡ*) containing detailed instructions for the cultivation of cotton was published. However, the great rise of its cultivation in Egypt only began in the 1860s, when the Civil War in America made the price of Egyptian cotton rise and the plantations were greatly enlarged. It is from this time that cotton has come to occupy a place of the first rank in the agriculture of Egypt.

2. In the Ottoman Empire.

In western Turkish dialects, *pan(m)buk*, *panbuk*, *bamuk* or *manuk* (see G. Clauson, *An etymological dictionary of pre-thirteenth century Turkish* "cotton" is derived from Middle Persian *pambuk*, while in eastern dialects cotton is *pakka*, *hakkia*, or *bakia* (Radloff, *Versuch eines Wörterbuches der Türkischalekt*, iv) and cotton cloth *hökküty* (Mahmüd Kışgıncı, *Dünya Lügati-i Türk*, facs. ed. B. Atalay, 550; in *Chinese paper*, see J. R. Hamilton, *Les Ouïghours*, Paris 1935, 57-8). In Uyghur, *kebes* designated cotton. The word *bäs* (*bas*) is a common word for coarse cotton cloth in various dialects (*bas* in the forms of *bis*, *biz*, or *bös*, with a theory of its derivation from the Greek βύσσος, Assyrian *bisu*, W. Bang, *Vom Kötterischen zum Osmanischen*, Berlin 1921, 24 n. 2, now challenged, see G. Doufleur and S. Tescanu, *Wörterbuch des Chaldäisch*, Budapest 1930, 92, H. Ecsedy, *Böt, an exotic cloth in the Chinese imperial court*, in *Alt-orientalische Forschungen*, III, 145-63).

Continuing a long tradition of cotton growing and industry in Central Asia, the Uyghur Turks produced cotton and exported cotton textiles to China, as recorded in the Chinese sources of the 9th century (Hamilton, *op. cit.*, Index, s.v. *po-tse*). Under the *Sahjoks* [q.v.], cotton production and manufacture had apparently a considerable development in Asia Minor, in which principal towns had cotton bazaars (for instance, *panbuk farūghān* in Romya, Afāki, *Manāshik*, 618) and caravanserais of cotton textiles (for al-Khān al-Bazzāz in the *Sād al-Bazzāzān* in Kırşehir, see A. Temir, *Caca oğlu Nūr al-Din*, 23). "Cotton fabrics edged with gold embroidery" of *Lādhik* (Laodicea-on-Lykos, today Denizli) noted by Ibn Battūta in 733/1332 (tr. Gibb, II, 425) were famous all over Anatolia and referred to as late as the 9th/15th century (see *Āshik*: *Faṣḥa-zāde*, ed. Giese, 52).

Although European markets preferred better-quality northern Syrian types (Hmā, Aleppo) and those of Cilicia and Cyprus (in the 1300s, Pegolotti: *colours*; Heyd, *Histoire du commerce du Levant*, II, 463), a substantial part of the cotton imported into Europe in the 8th/14th and 9th/15th centuries came from western and southern Anatolian ports—Ayasothuk (Ephesus), Bahat (Pamphilia), Alanya (Alaiyya, Candeior), Antalya (Satalia), and Ayas (Lajazzo) (Heyd, II, 463; H. Wesscher, 1335; M. Mazzaoui, *ib.* 2). Cotton was grown in the immediate hinterlands of these ports. The island of Chios became the main entrepôt of the Anatolian cotton exported by the Genoese in this period. In the mid-15th century, the value of the annual export of cotton via Chios was estimated at 600,000 ducats. Turkish cotton was re-exported by the Genoese to other European countries and even to the Maghrib (J. Heern, 393).

Over the course of time, Venice tried to monopolise the import and distribution of imported cotton in the West. Venetian annual cotton trade with Lombardy alone was estimated to be worth 250,000 gold ducats in the 9th/15th century (Wesscher, 1337; M. Mazzaoui, *ib.*). By the end of the 10th/16th century, Venice imported an average 4,000 tons annually from the Levant (8,000 sacks from Cyprus and 6,000 from Izmir). The expanding Swiss and German flax industries were dependent on the cotton imported from the Levant.

Although first known in Germany in ca. 978/1570,

cotton from Brazil and the West Indies became a serious competitor only after the mid-18th century. At that time, the cotton industries in France and England began to experience rapid growth. Favoured by special trade privileges (see *tarıfzān*) granted by the Ottomans, France, England, and the Netherlands were then directly importing cottons from the Levant, and superseded Italy in cotton industries in the 18th/17th century. The war of Cyprus (1570-1) can be taken as a turning point for the Venetian decline.

Cotton-producing areas in the Ottoman Empire before 1850 Ottoman survey books, customs registers, guilds and price regulations, as well as *hādi court* records, attest to a very active cotton manufacturing industry with export capacity in Anatolia, both in the small towns near main cotton producing areas as well as in the large cities with extensive dye-houses in the 9th/15th and 10th/16th centuries.

Apart from a growing demand by the Europeans and from internal trade, the state's need of cotton products for the navy and army too appears to have become one of the factors contributing to the extension of cotton production and that of certain kinds of cotton fabrics. According to the tax regulations of the 9th/15th and 10th/16th centuries (see Ö. L. Barkan, *Kanunlar*, Index, s.v. *panbuk*, *şenbe*), taxes on cotton produce were collected in the provinces of western Anatolia (Kuduwendığır, Karasi, Kütahya, Aydınlı, of the Aegean Sea and Greece (Triccala, Morea, Euboea, Chios), of southwestern Anatolia (Karaman, Hamid-ili, Iç-ili, Adana, Sis, Özer) and south-eastern Anatolia (Malatya, Behsul, Arabkir, Kemahli, Ergani, Mardin, Urfa, Diyarbakır, and Mawşil). Northern limits of cotton cultivation on the southern Mediterranean coast reached as far as north as Eğirdir lake (X. de Planhol, *De la plume pamphylienne*, fig. 7). Today, the cotton cultivation is concentrated in the valleys of Gediz and the two Menderes rivers, and in the Çukurova (Cilicia), and to a lesser degree, in the Antalya, Hatay, Mar'ash, and Diyarbakır areas (*Atlas of Turkey*, map no. 75).

The Ottoman survey of the Aydınlı provinces dated 859/1455 (Bayvekilat Arşivi, İstanbul, No 1/121), which included the Küçük-Menderes and Büyük-Menderes valleys with the Izmir (Smyrna) area, attest to extensive cotton cultivation in the region. In many villages (Adalcitli, Yusuflu, Boodeghan, Haydara, Orta-Seydi, Calıhuu, Kulu-begia, Kutlidi, etc.) cotton production was near or sometimes exceeded wheat production. Kulu-begia, for example, where two Turkish nomad groups had settled, produced about 8.44 tons of cotton against 5.83 tons of wheat in 858-9/1454-5. These were flooded lands and mostly settled by Turkish nomads by the mid 15th century. Obviously, cotton production in this area was oriented to supplying distant markets as well as to supplying towns and cities exporting cotton goods in the region. In the interior, the Boypazarı-Mikkahideli area in the Sakarya-Kizirmir valley, a number of villages (Çeltik, Karaköy, Sürmeş, Kayalar, Sobran, Kileğici-viran, Baş-viran, Yarımda-Avşar, Çay, etc.) showed a different structure with a much more limited production of cotton compared to other crops—wheat, barley, and rice (see the *tehrir* and *uşak* registers of Kuduwendığır province, ed. Ö. L. Barkan). Apparently, this area supplied cotton to the nearby towns as well as to Ankara, the important centre of loom industries in this region. The area of Tokat, another important centre of cotton industry, displays a similar situation. Here, Venk, Karahisar, Nükar, Felis,

Kataz, and Karakush; in particular, cotton cultivation constituted only a small percentage of the overall agricultural production (H. İslamoğlu, *Dynamics of agricultural production*, ch. 2). The general trend, however, showed an increase in cotton production, over ten times in some areas. In no case is there a shift to monoculture in the period before the 13th/19th century.

According to the Ottoman surveys of the 16th/16th century (Soysal, 32), 6,506 hectares or 19% of the cultivated land in the *sandık* of Adana was devoted to cotton, while barley and wheat cultivation took an area four times larger. By the middle of the 12th/18th century, the cotton production of the Çukurova appears to have been quite important. O'Hegerty (200) tells us that in the good harvest years, "cotton of Adana" was exported from İmîr.

Varieties of Indian *Gossypium herbaceum*, the so-called *yerli* ('native') cotton, were well suited to the climate and soil conditions, and were known as the only varieties cultivated in Asia Minor until the 13th/19th century. Yielding a coarse fibre, thick, short, and of unequal length and curl, this variety was not considered suitable for fine cotton fabrics. However, in the Kırkışah area in the Bakırçay valley, in the Hamid-ili, Gelibolu (Gallipoli) the Çukurova (Adana, Cilicia), and Tokat areas, superior varieties were produced for making fine bogazlı fabrics. It was in the second half of the 13th/19th century that American and Egyptian varieties were introduced and cultivated in Asia Minor and the Balkans. In 1333/1912, however, 90-95% of the cotton production in western Anatolia and the Adana region still came from the *yerli* varieties (W. F. Brück, *Türkische Baumwollwirtschaft*, tr. C. Issawi, *The economic history of Turkey*, Chicago 1980, 242-6; *Türk sınıat tarihi*, 129-35).

At the exhibition of İstanbul of 1279/1863, many qualities of cottons from various parts of the Empire were displayed: 21 varieties from western Anatolia, 4 from İpe (İzmir), 3 from Adana, 2 from Mar'ash, 1 from Mardin, 1 from Diyarbakır, 7 from Amasya, 6 from Serez, 4 from Filibe, 3 from Edirne, 3 from Drama, 1 from Trikkala, 1 from Rhodes, 9 from Syria, and 4 from Egypt. Egyptian cottons were considered the best quality, while those of Aydin, though of short fibre, were preferred for their colour and strength (*Türk sınıat tarihi*, 166). Of the varieties of western Anatolia, that of Samsun and Kırkışah were rated first, with those of Akhişar, Kaşaba, Kink, and Bayındır coming next. Kırkışah and Akhişar, as well as Gelibolu, were the chief suppliers of the İstanbul cotton industries in the 11th/17th century (*Eşraf supariat*, in the *Muhtesat Arşivi*, İstanbul).

Cotton-producing lands were listed among the best quality lands, and a higher land tax was imposed (Ulucay, doc. 41). Tithe on cotton was, as a rule, one-tenth, while in grain it was one-eighth.

Irrigation works for cotton growing were carried out only on large farms organised and created by the elite (see *Vakıflar dergisi*, II, 364-5). On big farms, *orakçılar*, sharecroppers, were usually employed, and one-third of the crop went to the landowner (at Turgutlu in Sarukhan, see Ulucay, doc. no. 33). Such farms of the elite were almost always converted into *mekaf*. On lands under the *timar* (g.v.) system, cotton was grown by individual peasants using primitive means, and often with no irrigation. Disputes arose when cotton prices were low and the *timar* holder tried to leave the tithe to the peasant and ask instead for cash (examples in Ulucay, docs. 33, 41).

In Ottoman Egypt, cotton was grown on irrigated land in parts of Middle Egypt and the Delta. Egypt, however, had to import cotton from Syria to meet the needs of its cotton industries. By the end of the 12th/18th century, the imports of Syrian cotton reached 2,000-3,000 bales (Raymond, I, 190, 250, 273, 317-18). A special *muhakkaza* (g.v.) was established on the cotton trade in the ports of Rosetta and Bülâk in 1132/1720-1 and 1162/1740 respectively, which provided evidence of the growing importance of cotton in the Egyptian economy. During the same period, the cotton markets at Bülâk, Damietta, Rosetta, Mahallat al-Kubra, Mansûra and Semendû, united under one *muhakkaza*, brought 2,195,000 paras per year in tax revenues collected on cotton grown in Egypt or imported from Syria. The total annual of this cotton was approximately 24,000 bales (1 bale = 325 *rafi* or 143.9 kg). The *muhakkaza* figures show an eight-fold increase in the period 1169-82/1755-68, falling to half that amount in the following period 1182-1213/1769-98 (see S. Shaw, *Ottoman Egypt*, Index, s.v. cotton; for the following period, see E. R. J. Owen, *Cotton and the Egyptian economy*, Oxford 1965).

Already in the 9th/15th century, the coastal plains between Drama and Karalerye (Verroia) and Vodena formed an important cotton producing area in Rumili. In 1263/1751, the Venetian consul Choidas estimated the total amount of raw cotton exported from this area to be 13,000 bales (7,000 for France, 4,000 for Venice; in Salonica, 1 bale was equal to 110, sometimes 100 okkas, see Svocenos, 245), while in 1212/1797, Felix de Beaujour's estimate was 60,000 bales of both raw cotton and cotton yarn exported (40,000 to Germany, 10,000 to France). In 1212/1796, de Beaujour gives a record 98,500 bales for the total export of raw cotton (50,000 to London and Amsterdam, 30,000 to Germany and 12,000 to France). De Beaujour that only 10,000 bales were consumed in the area itself.

The cotton boom in the second half of the 12th/18th century was apparently responsible for the structural changes in the area, i.e. the shift from rice cultivation to cotton, the reclamation of new land for cotton agriculture, the extension of big *efendi* and commercialisation of agriculture, and the growing prosperity of the big *aydın* with increasing control of the land and peasant labour.

The organisation of cotton trade and industries. The *hâkî* court records and market regulations provide us with quite detailed information on the processes of cotton trade and manufacture in the Ottoman lowlands (see *İhtisat* regulations in *Tarih vakıfı*, nos. 5, 7, 9; for court records see Elucay).

In cotton producing areas, *hösak*, i.e. cotton bolls, and cotton cleaned from its seeds, was brought to nearby town markets, usually by camels (Ulucay, doc. 25). In towns, special markets, *perde pazarı*, were reserved for cotton sale. Most of the crop was purchased in small quantities by local *güvânlis* or *fulân*, spinners who were poor townfolk, mostly women. Usually, foreign merchants from the port cities tried to reach producers or local markets through their agents. In order to get the best grade cottons, the merchants, in keen competition among themselves, used a system of advanced payment for a crop directly to the producers through their "factors". The system of a future contract was bitterly denounced by the French, since they said it caused scandalous competition, resulting in higher prices (Nelson, II, 433). Also, native middle-men or speculators in the cotton trade, mostly consisting of numbers

of the Ottoman élite along with Jews and Armenians in the Izmir area, bought the next season's produce in advance. Such contracts, called *salam*, widely practised in Islamic countries, were strictly regulated in Islamic law because of the uncertainty about the subject of contract (see al-Taḥwīṭ, *Kitāb al-Ṣūrah al-kābir*, ed. J. A. Wakīn, New York 1972).

The customs registers provide definitive evidence that there was a group of Anatolian merchants who specialised in the cotton trade and who took their cotton goods as far as the northern Black Sea ports (İnalcik, *The Black Sea*, 91-107). The cottons in bairacks or bales were taken in caravans into centres such as Kayseri, Ankara, Bursa, Kaşgamonu, Tokat and other parts of the Empire or by sea to Europe. Public regulations provided that all cotton imported for sale in the large cities had to be brought into a special building, called the *peñbe ḥabūdūl*. Cotton was to be weighed, taxed, and distributed there. For accommodating caravan merchants with their cotton goods, special caravanserais (*ḥabūd-ḥānī*, *ḥabūdāt al-ḥuṣn* in Egypt) were built (Raymond, II, 640).

In the *peñbe ḥabūdūl*, each member of the guild of *ḥallāḍīn* purchased his share of cotton at the officially-fixed price (*marjā-i ḥallāḍī*) under the supervision of the *ḥallāḍī* and *yigil-bağl* of the guild. The *ḥallāḍīn*, or carders, separated the fibre from the seed by beating (*ta'ma* or *talman*) the cotton with a *kemân* or *yay*, a bow-like instrument, to make the cotton clean and fluffy. The *ḥallāḍīn* were also cotton dealers in the cities. According to a regulation dated 1338/1717 (Istanbul *ḥudūd mī'mānārī*), there were 104 *ḥallāḍī* in Istanbul, 15 in Galata (Pera), 9 in Üsküdar and 4 in Eyyup.

Each group of artisans was responsible for a stage in manufacturing. They were organised in *hıfrets*, guilds, and their shops occupied the same street or *hıfda*.

For example, in Magnisa, a relatively small town but an important centre of production of cottons, we find *ḥamukūḡīlar* (cotton dealers), *ḡrillāḡīlar* or *baḡḡīlar* (weavers of coarse cottons), *baḡḡāḡīllar* (weavers of fine cottons), and *ḥemās* (dealers of cotton stuffs) directly involved in cotton trade and industry, while *ḡoyūḡīlar* (dyers), *ṭahyēḡīlar* (cap-makers), *yorḡḡḡḡīlar* (quilt-makers), and *ṭavīlar* (tailors) were considered as related crafts. In 980/1572, there were 330 *ḥallāḡīn*, 220 dyers, and 130 *ḥemās* in Magnisa (Ulucay, doc. 64). Each craft guild elected its governing body, a *ḡayyāḡ*, a *ḥallāḡī*, a *yigil-baḡl*, and a committee of experts (*ḡul-ḡḡebs*) responsible for the supervision of the guild regulations, called *nīḡm* or *ḡānūn* [q.v.]. *ḡrillāḡ* in Magnisa had an *ahḡī baba* [see *agḡl*] as the head of the guild (Ulucay, doc. 38, dated 1044/1634). In important cities, these men obtained through local *ḡāḡīs* the Sultan's diploma empowering them to exercise authority over their guild members and to get the support of the local law-enforcing bodies.

In Istanbul, the guilds using cotton goods were *ḡayyēḡīn* (tailors), *ḡamukūḡīyān* (makers of wadded headgear for men), *ṭahyēḡīyān* (makers of head-dresses for women), *yorḡḡḡīyān* (quilt-makers), *ḡmukūḡīyān* (shirt makers), *ḡulḡemāḡīyān* (dealers of muslim turbans), *yorḡḡḡīyān* (dealers of napkins and handkerchiefs), and *ḡallāḡīyān* (tent makers); for Cairo, Evliya Çelebi (x, 370-1) gives a similar list of crafts and dealers. In both cities, guilds dealing with cottons were included in the group of 24 crafts connected with clothing or home furnishings, headed by the chief tailor.

Bemās (in Turkish *benâs*), textile dealers, can be classified into two groups: big merchants of international or interregional connections; and local traders (see *Edirne azker ḡassām*, ed. Barkan, 143, 261, 303, 306, 308, 325, 344, 353, 406, 421). The former dealt with costly goods, cottons, silks, and woollens, products of Anatolia, Aleppo, Damascus, Yemen, Egypt, Baghdad and India. Their stocks and credits amounted to big sums, sometimes over one million *akḡas* or about 15,000 Venetian ducats in the 10th/16th century. They supplied the local guilds of dressmakers, cap makers, etc. with imported materials or re-exported them to distant areas usually on credit. These big merchants usually had their shops in the *ḡassāyḡa* or *ḡassāḡiān* (in Turkish, *bedestān* or *bedestīm*) in the cities (see İnalcik, *The hub of the city: the Bedestān of Istanbul*, in *International Journal of Turkish Studies*, 1, 1-17), and were the wealthiest and most respectable members of the society. As far as their social background was concerned, many of them came from the ruling élite (*ibid.*).

The second group included these dealers of modest capital, dealing only in local trade in the city. Their stocks usually consisted of cheap cottons, and a large variety of textiles in small amounts. In Edirne, we find former Janissaries among their ranks (Barkan, *op. cit.*, 306, 308), but also a big merchant of Janissary origin (270).

Some of the big *bemās* specialised in importing or selling particular kinds of cotton goods.

Market dynamics. Artisans and dealers in cottons had a variety of difficulties as a result of shortages of raw materials, competition from other centres of production, and intrusions by related guilds in procurement of raw materials and marketing. It was in large cities or export-oriented production centres with a dynamic economy that strains and conflicts were particularly acute and recurrent. There was a kind of delicate balance established by custom and regulation among the guilds which performed successive stages of manufacturing. If one guild in cotton crafts or some members of it diverged from the standards or marketing rules laid down in the regulations, the other guilds were disturbed and the whole system affected. Consequently, the government was usually scrupulously conservative in keeping the old standards and regulations, and often intervened authoritatively to restore the established norms. However, should the public interest require modifications, the innovations were accepted and introduced into the regulations. It was usually through the local *ḡāḡī* [q.v.] that the government changed the regulations; he consulted with the guild officers and elders in making these changes.

In the regulations, the quality and measures of each product were laid down. Prices were fixed periodically, every three or six months, by the *ḡāḡī* in consultation with the representatives of each guild. *ḡrillāḡ*, for example, were required to make coarse cotton fabrics called *baladī*, three *arḡin* or 2.04 metres long, and *ḡuḡak* or *ruḡ* or 49.5 cm wide, with 1,600 threads at warp (*Bursa ictisāḡ*, II 7, 33, 908/1302).

It was the duty of the officers of the guild, *yigil-baḡl* and *ahḡ-i ḡāḡī*, in particular, to supervise the standards during the process of manufacturing. The goods were also inspected by the *mukḡasib* [see *nīḡm*] when marketed. Periodically, the government conducted inspections using special inspectors (*mukḡiḡḡ*) sent from the capital (see *Bursa ictisāḡ*, *loc. cit.*). In target cities, growing demand and the

import of cheaper grades of cottons caused difficulties for the town handicrafts under regulations with strict standards. Despite the periodic inspections, the regulations and standards for town handicrafts were often ignored in order to produce cheap products so as to compete with imports (see *ibid.*).

Not being organised as a guild, spinners of cotton yarn in cities came from among the poorest segments of the population, mostly poor women and children. They purchased cotton at the cotton market directly from the peasants or from the *hallağs*. This group of spinners, the real proletarian in the Ottoman cities, was particularly vulnerable to the speculation which caused unfair competition and unemployment among them. They often claimed that the merchants caused shortages and high prices by purchasing and re-exporting the imported cotton. Also, since too many spinning wheels depleted quickly the cotton supply at the market, the government restricted the number of the wheels in a town so that hand spinners could find enough raw cotton for their use (Uluçay, doc. 25). Sensitive to the complaints of the poor masses in the towns, the government repeatedly ruled that no merchants could purchase raw cotton until after the town spinners and weavers had completed their purchases at the cotton market.

Cotton manufacturers in large cities distant from the cotton producing areas were usually supplied with imported cotton yarn (*Bursa İhtisâsı*, II-7, 33) as opposed to bulky raw cotton with high transportation costs. Under regulations, imported yarn was to be available to the weavers directly from the importers. The regulations forbade the dealers of cotton yarn of the city to re-sell imported yarn to merchants—a measure taken to prevent the prices of cotton goods from going up and disrupting the price system set up by the regulations. Actually, better prices offered by the Europeans tempted local merchants to engage in smuggling with the foreigners. The government acted energetically to prevent this (Faruqi, *Şekirleşme*, ch. 2, 73-4).

The important issue for *brasas*, sellers of cotton textiles, was to protect their monopoly of sale in the city. Both weavers in the city or merchants from outside (in Magnisa, native Armenians or those of Persia) sometimes sold their wares in the bazars of *hâns* (caravanserais) or as peddlers in the back streets. All finished goods, however, either locally made or imported, had to be sold under regulation to the dealers of cotton in the city (Uluçay, docs. 16, 44, 43, 48, all belonging to the 11th/17th century). In Magnisa the *brasas* obtained the Sultan's order, which protected their monopoly and banned Armenians of Persia from having shops and competing with the town dealers (Uluçay, doc. 61; cf. A. Refik, *İstanbul 1200-1200*, 40-1).

Brasas were also concerned with keeping up the standard in the size of the cottons and the quality of cotton and dyes used in the fabric. The finished goods were to be inspected and stamped by the government agents at a specified place in the cotton textile market (*boghast pazarı*). Those products found short of standards were fined one *akçe* for each two *parmales* (1 *parmale* = 2.53 cm.) of coarse *boghast* and for one *parmale* of fine quality (Uluçay, doc. 3). The *1000-i tamga* or stamp tax was a *akçe* for each two *ghirâ's* (1 *ghirâ* of the bazaar = 68 cm.) of fine cotton fabrics such as *elvan*, *aladja* and white *boghast* and for each ten *ghirâ's* of *astarlı*, a kind of coarse cotton fabric (this rule was valid in the provinces of Şarukhân, Aydin, Mentesh, and Sugla in Ramađân 1070/1659; Uluçay, doc. 46).

Concentration in cotton loom industries. In the 12th/18th century, the makers of towels of all kinds (*peştemâl*, *hanul*, and *telediş*), kerchiefs (*mahrana* or *mahrana*), white 'raw' *aladja*, and bundle wrappers (*boghast*) were permitted to work only in the workshops in the three *hâns* in the district of Kizilâş in Istanbul (Siddîk, *Gedikler*, Istanbul 1323/1907, 17).

Again in Istanbul, the makers of printed cottons (*basmağs*), all located at *Wâkî-khân*, were organised in 27 *gedik* or workshops with patent. In 1138/1725, there were 192 *basmağs* in the *gedik*, each *gedik* consisting of one master, one associate (*şekir*) and several journeymen (*halkîya* or *halfe*). Thirty-three of them were Muslim and the rest were Armenian. The *halkîyâs*, or head of the guild, was Muslim, while his associate was an Armenian. Considered as 'workers' (*amale*), they worked for merchants or individual citizens in return for a fee (*Esnâf nisâmları*). Such centres of manufacturing activities were created, as a rule, as part of the *nahf* [g v.] establishments and were rented to the members of the guilds (see A. Refik, *İstanbul 1200-1200*, 98). Thus the state or the members of the ruling elite became instrumental in constructing 'factories' (*halkîyâ*) or workshops which brought together the artisans of the same manufacture in one place. The confessed purpose for it was to serve the public by making goods abundant and cheap (*niyeden ve ictihâs*). The fees for the shops included the provision that the leasers acquired the monopoly of the manufacture of a specific product. In 1202/1690 the *basmağs* obtained such a monopoly in an area from the Black Sea mouth of the Dosphorus down to the mouth of the Dardanelles on the Aegean. Also, the Ottoman government sent orders to the main production centres for large quantities of sailcloth for the navy (Uzunçarşılı, *Bahriye*, 315) and coarse cottons for lining and underwear for the soldiery in Istanbul (Uzunçarşılı, I, 282-4).

Government orders involving the output of large quantities of cotton goods in a limited period of time appear to have generated changes in the volume, prices, and even in the organisation of manufacturing in the centres of cotton production. The areas most affected by this situation were those closest to the Ottoman capital or those connected with it by sea—Gelboğa, Bergama, Cyprus, Livadia, Athens, Euboea, Sidia and Aleppo (Uzunçarşılı, *Bahriye*, 315; Faruqi, *Şekirleşme*, 65-73).

Export centres. It can safely be said that, next to leather manufactures, the cotton industry with a large export capacity was the most important of all the industries in the Ottoman dominions, particularly in western Anatolia, Syria, upper Mesopotamia and southern Macedonia. It constituted the foundation of economic prosperity and urban development in the empire until the 13th/19th century. The high cost of transport of the bulky raw cotton accounted for the concentration of cotton industries in districts near cotton production areas, whereas finished goods, costly cotton textiles, *boghast* and *dulband*, as well as cheaper cottons, *kirbas* and *astar*, and cotton yarn were sent by sea or land to all part of the Empire and to Europe.

First among the main areas of cotton industries with large export capacity was western Anatolia during the 9th/15th and 10th/16th centuries. The most active towns in this region at this period were Bergama, Magnisa, Menemen, Tire, Uşak, Gordes and Denizli. Tire specialised in making pillow and mattress cases, *aladja*, as well as cotton thread, called

Cottons imported in the northern Black Sea lands in ca. 1164/1750.
(1 grough = 40 para = 120 akça; 1 arşin = 68 cm; 1 okka = 1,2628 gr.)

	Thousand in grough	Price	Origin
<i>Tokât-bazması</i> (prints of Tokât)	100	6 10 para per arşin	Tokât
<i>Boghast</i> (fine cotton fabric)	400	2½ grough per piece of 10 arşin	Tokât, Kaşamonu, Amasya
<i>Astar or bez</i> (coarse, cotton fabric)	250	—	from various Anatolian towns (Corum-bezi, dag- bezi, etc.)
<i>Dülhend</i> (Muslin)	10-12	17-20 grough per piece	—
<i>Çember</i> (handkerchief and headress)	250	6½ grough per piece	Anatolian as well as Euro- pean and Indian kinds
Cotton shirts	4	2½ grough per piece	—
Cotton yarn	7-5	2½ grough per okka	—
Towels of Serres	8-10	—	Serres
<i>Pehlimalı</i>	10	13 para to 10 grough per piece	Sinope, İstanbul
Threads	16-18	30-33 para per okka	—
<i>Gediz-bezi</i>	600 bales	50-65 para per piece of 20 arşin	Gediz in western Anatolia

Source: M. de Peyssonnel, *Traité sur la Mer Noire*, Paris 1757.

rahe-yi Tire or simply *Tire*. Bergama specialised in sailcloth for the navy. The Hamid-ili was known in the 9th/15th century for its large exports of *boghast* from such centres as Ulu-Borlu (Borlu), Eğirdir, Burdur and Isparta. Products from this area were sent to the great transit centre of Bursa, where they were dyed and re-exported (on the dependence of the area on Bursa market, see *Tarih vakıfları*, II-7, 34). The Hamid-ili appears to have dramatically increased its production of cotton fabrics by the mid-10th/16th century (Faruqi, *Şehirciye*, 96).

During the 10th/16th century, the Antalya and the Silişke-Mut areas on the Mediterranean coast appear to have been among the most important areas of cotton growing and processing (Faruqi, *Şehirciye*, 96-7). The Karaman-Konya area, with centres at Konya and Lârandâ, exported fine cottons, *dülhends*, *boghastis* and ordinary *bez* to İstanbul and the Black Sea region. The *boghast* of Karaman was found among the imports of Buda (Hungary) in 980/1572 (L. Fekete and Gy. Káldy-Nagy, *Rechnungsbücher türkischer Finanzstellen in Buda*, Budapest 1962, 227).

Aleppo, along with Antakya (*Antakhi* cottons), Kilis, 'Ayntab (Gaziantep) and Mar'ash made up another major area of cotton industries with large capacity for export to the other parts of the Ottoman lands, Egypt, and Europe. *Halabî* cottons were among the imports to Kalta as early as 892/1487 (Kaffa Customs Register). The *habbia-i penbe*, cotton scales tax in Aleppo, amounted to 13,000 akças and dues at dyehouses to 50,000 akças in 926/1520 (*Tapu defteri*, 93). Half-a-century later (*Tapu defteri*, 544), the increase to 38,350 and 71,274 respectively can be taken as a proof of the development in cotton trade and industries in Aleppo. In the 1091/1680s and 1105/1690s, the costly cotton fabrics of the area, white and blue "daman" (of Hamâ), handkerchiefs and cotton yarn were among the imports to France (Masson, I, table VIII). Hamâ is described as "a city where the population made cotton yarn, cloaks for women, and towels" (Evliya, III, 60). Aleppo was also a transit centre for Indian cloths coming via Bosra-Baghdad in the 11th/17th century (Şahîlcioğlu, *Beşlerle Türk tarihi*, IX, 67). In Aleppo, imitations

of the Indian cottons were made, while *halabî* fabrics were imitated in Bursa and İstanbul.

Further east, Mardin (Göyünç, *Mardin*, 130, 169) and Diyarbakır were important centres of cotton loom industries. Coarse cottons and red cotton yarn of Diyarbakır were exported to İstanbul and Europe.

In northern Anatolia, the Kaşamonu-Amasya-Tokât area developed as an important centre with large outlets in the northern Black Sea countries. According to the customs registers of Kaffa and Akkerman about 1000/1500 (Inalcik, *The Black Sea*, 95, 103), these lands imported large quantities of cotton textiles as well as cotton yarn and raw cotton. The imports included varieties of cotton cloths, such as *kubâs*, *boghast*, *alaga*, and *halabî*, as well as quilts, handkerchiefs, aprons, bath wraps, covers, shawls, belts, and tents. Judging from the merchants taking these goods to Kaffa, one can conclude that western and southern Anatolian centres of cotton industries too took part in this trade also. Moreover, merchants came from large centres of the cotton trade and industries: İstanbul, Kaşamonu, Sinope, Amasya, Marzifon, Tokât, and Bursa in northern Anatolia, and Bergama, Uşak, Gordes, Menemen, Tire, and Denizli in western Anatolia (ibid., 101). Merchants from Bursa imported cotton manufactures of Hamid-ili; those from İstanbul cottons of western Anatolia, and those from Kaşamonu and Sinope cottons of the Amasya-Tokât area.

Altogether, cottons exported from Anatolia to northern Black Sea countries amounted to over one million grough in the mid-18th century. It appears that foreign cotton imports were negligible in this period.

The pattern of cotton trade between Anatolia and the north did not change much, as demonstrated by a comparison of this table with the data from the customs registers of Kaffa, Akkerman and Kili of the 1500s.

Indian competition and the Ottoman cotton loom industries. Apparently it was the Levant market that originally contributed to the expansion of Indian cotton industries. India began to manufacture the

Ottoman types of cotton or cotton and silk fabrics much in demand in Turkey—*alagja* and *kupul*—in the 10th/16th and 11th/17th centuries (*allegjes* and *estances* in the English East India Company documents, see Chaudhuri, 502, 504). *Alagja* and *kupul* were varieties already popular in Turkey before 900/1500 (Customs Registry of Kaifa, Akkerman and Kûh).

Indian textile imports to Turkey go back to the 9th/15th century. In 875/1470, Mahmûd Gâwân (49) sent his agents from India to Bursa "with *ahmîsha* (cloths)" to trade there and in the Balkans (*Bihiden*, xiv, 69, 75, 95). The list of the Indian textiles, as found in the court records of Edirne, includes Indian dark-blue *kupul* (*Kupul-i Hindî lâğja-ward*) (960/1553), Indian napkins (*peşkir-i Hindî*) (977/1569), Indian kerchiefs (*maframa-i Hindî*) (979/1572 and 1036/1608), kerchiefs of *Ser-hindî* and *Be-kûrî* and Indian *bogzast*, turbans, quilts, and girdles (*Edirne ashraf kassabı*, ed. Barkan, 220-3, 128, 147, 224, 335-8, 431). Home-made *fûta* and *bifta* were used in Turkey in much earlier times than in Europe (*phalares* and *biftas* in English, see Chaudhuri, *ibid.*).

It is possible that while the Indian industries, alert to the demands of the Levant market, made necessary adjustments in fashion and varieties (Chaudhuri, 239-40, 249), the original Indian luxury fabrics became popular in the Ottoman lands, as in Europe, particularly from the mid-17th century onwards. The fashion and use of Indian textiles became so widespread in the Ottoman lands that an Ottoman historian, Na'imâ (iv, 293) claimed in the 1122/1700s that bulion sent to India to pay for Indian luxury textiles, had reached an alarming point for the whole economy of the Empire. He recommended the use of home-made products instead. At any rate, it was before European cottons dominated the Ottoman market in the 13th/19th century that Indian cottons, *flaa* muslins, prints, *alagja* and *kupul* types, as well as Indian cotton yarn, invaded and apparently threatened the Ottoman native cotton industries. It was during the period 1072-1164/1660-1750 when India became the chief producer and exporter of cotton textiles in the world that Indian cotton fabrics began to be imported in great quantities into the Ottoman markets.

By 1102/1690, the Indian exports to this area were estimated at five times as many calicoes as to the British and Dutch markets (Chaudhuri, 245, 26) although no figure is available. Indian textiles reached the transit centres of the Empire, Baghdad and Aleppo via Hormuz and Basra on the Persian Gulf and Djidda and Mecca via the Red Sea. In the spring of 1029/1620, in a caravan from Baghdad to Aleppo with 120 merchants, there were ten Indian merchants, all Muslims. Most of the merchants in the caravan were carrying indigo, drugs, silk, and Indian textiles. Although Arab and Persian merchants made up the majority of the merchants in the caravan, there were also Turks, Armenians, Christian Arabs and Italians (five persons). Two Persian merchants from Hamedan had Indian wares, including indigo, drugs, and three bales of cloth of Lahore, all estimated to be worth 12,000 grouch (H. Sahillioğlu, *Bir İtticak kervanı*, 63-6).

In the Persian Gulf, Basra and Bandar 'Abbâs (Gombroon) were two outlets through which Indian textiles entered the Ottoman and Safavid territories (R. W. Ferrier, *The trade between India and the Persian Gulf and the East India Company in the 17th century*, in *Bengal: past and present*, lxxxix/2, No. 168 (Calcutta, July-Dec. 1970), 180-98). An

East India Company memorandum dated 1107/1695 tells us that "the Moors drive a great trade from hence (sc. from Surat) to Persia, Bussora, Aden, Mocha, and Judda, where they dispose of those goods which from hence are carried throughout the Grand Signor's Dominions" (Chaudhuri, 295). Gujarat was the main emporium of Indian textiles to Basra. Turkey also received luxury fabrics from the Punjab by the land route via Lahore and Kandahar or Sind (Chaudhuri, 242-43).

Also, an important part of the cotton fabrics imported by the Dutch and British from India was re-exported to America, West Africa, and the Levant (K. Giamann, *Dutch-Asian trade*, Copenhagen 1958, 133-4, 143). In the last three decades of the 11th/17th century, however, the European market showed a great demand for Eastern textiles when the use of Indian cotton textiles became fashionable, beginning with the women of the upper class (Giamann, 133; Chaudhuri, 280-3; Masson, ii, 195). The fashion spread to lower classes, and initiated a dramatic increase in demand for cotton fabrics, despite the government prohibitions of the use of imported cottons which were brought about under pressure from the domestic industries of woollens and linen (prohibitions in France in 1098/1686, 1112/1700, and 1121/1709; in England in 1112/1700 and 1133/1720; cottons banned by the Church as "the manufactures of the Infidels", see Chaudhuri, *ibid.*, and Masson, ii, 277-8). The French imports of coarse cotton cloths from the Ottoman lands rose to about 3 million French livres in 1115/1703. The imported cotton fabrics were dyed and "printed" in Marseilles and an important part of them re-exported to Spain and Italy (Masson, 298-9). Thus the Levant shared with India the boom in the production and export of cotton textiles to Europe. This boom reached its maximum in the period 1122-64/1700-50. With their superior quality, the Indian textiles, however, dominated western markets through the East India Companies of Holland and England, while Levantine products, cotton yarn and coarse fabrics, were chiefly imported into France. Peyssonel (*Traité*, i, 31), the French consul in Ismir and the Crimea in the mid 11th/18th century, found that the export of French textiles to the Levant was limited mainly by the successful competition of the native cotton manufactures. The French export of cottons to the Levant in 1104/1789 was only 42,000 livres' worth (Masson, ii, 495; then 3 French livres = £). Red cotton yarn from western Anatolia and Diyarbakir exported from Izmir always found a ready market in the West, due to its high quality in dyeing and its low price. It was exported in great quantities to the Netherlands (O'Hegarty, 204) and to France.

Cotton yarn exported to France
(value in French livres)

	1700-02	1750-4	1786-9
Southern Syria	735,000	1,305,000	421,000
Aleppo	46,000	41,000	268,000
Cyprus	—	—	97,000
Egypt	213,000	267,000	156,000

Istanbul	3,200	73,000	15,000
Total	1,292,200	1,624,000	2,908,000

Source: R. Paris, *Le Levant*, 314.

By the end of the 12th/18th century, the annual cotton yarn production of Thessaly and Mece donia reached 20,000 bales, or about 2.5 million kg., half of it dyed (F. de Beaujour, cited by Svoronos, 248). The Austrian firm of Starinberg, established in Salonica in 1190/1776, became a spectacular success. By 1204/1789, it had opened several factories which produced cotton yarn in Serres and Larissa (Svoronos, 282-3). Importing cotton and cotton yarn mostly through Marseilles, Switzerland too developed a cotton textiles industry, and in 1274/1760 a Swiss consulate was established in Salonica with the main purpose of promoting the cotton trade (Svoronos, 285, 292).

Cotton yarn and textiles from Egypt to Europe, i.e., France, Leghorn and Venice, consisted of only a small part of Egypt's total exports (Raymond, i, 180). However, cotton textiles from Cairo, Mahallat al-Kubra and Rosetta, called *dumyat* (*Dumyaf?*), *agamy* (*Agami*), and *mellawy* (*Mahallaw*), which were mostly exported to France, increased rapidly from 1133/1720. These exports reached their peak in the period 1143-52/1730-9 with an average of 609,362 livres, or 30.5% of total export. They then experienced a decline, to 291,708 livres in 1786-9 (the figures include exports of fabrics of flax, which made up one-third of the total in 1798). The decline was explained by the deterioration in quality, possibly a result of competition with western cottons (Raymond, i, 230).

England's share in the import of Egyptian tissues was less than 10% during the same period (Raymond, i, 174, 180-2). On the other hand, Egypt itself imported cotton fabrics from Syria, Izmir, Bursa and Istanbul. Syrian cottons or silk and cotton fabrics, such as *Anaki*, *Nabusi*, *huzi*, *alaga*, and *Sinai*, were an important part (about 43 million *paras* by the end of the 12th/18th century) of the Egyptian imports from that country (Raymond, i, 190). Before the English cottons invaded the area, Cairo was the main emporium of Indian textiles imported via the Red Sea. The total value of the Indian, European, and Syrian cloths imported was estimated at 500 million *paras*. The growing imports had a disruptive effect on the domestic textile loom crafts in Egypt as early as the turn of the 12th/18th century (Raymond, i, 191, 193, 199).

European competition. It is generally accepted that the reversal of the roles in cotton manufacturing and export between East and West occurred in the period 1164-84/1750-70. After 1184/1770, England, France, Germany, Austria and Switzerland began to export their cotton textiles to the Levant markets in growing quantities. Already by the mid-18th century, Western governments, changing their policies

of prohibition, permitted the expansion and protection of their domestic cotton manufactures.

Note the first-place ranking of the British in the export of cotton goods already at this time, and the dominance of the French woollens in the Levant market.

It is said that while the British cotton industries developed under the impact of Indian trade, the French developed under the Levantine one (Masson, ii, 434, n. 2). From 1233/1730 onwards, in order to protect national industries and those of its colonies in the Antilles, the French government imposed a heavy duty (20 livres per quintal) on the cotton yarn imported from the Levant (Masson, ii, 201). Already by 1142/1729, the French noted with pride that French imitations of Indian cotton prints found an outlet in Istanbul and were exported even to manufacture the white cotton cloths themselves, thereby reducing their import from the Levant and Holland (Masson, ii, 436, 436).

In the second half of the 18th century, of the great variety of imports from Germany (Leipzig) and Austria to the Ottoman Empire, cotton textiles, muslins, and the so-called *indennes*, were at the top of the list. German cotton goods had quite a large market at Izmir (55,600 pieces annually) and Bursa (30,000 pieces) (C. Aubin's report, ed. A. Cunningham). English cotton products exported to Germany also reached the Balkans through the Leipzig fair. Along with Leipzig, Vienna was another important centre for the Ottoman trade. Here we find 268 Ottoman resident merchants by 1181/1767, including a number of Muslim Turks (a certain Molla Husseyr owned six storehouses and Molla Hasan four). During the period 1164-1227/1750-1812, when Austrian-Ottoman trade showed great development, raw cotton and cotton yarn became the principal exports from the Serres area to Austria and Germany (V. Paskaleva, 40-56).

However, the Eastern cotton yarn still had the advantage of lower prices due to the cheaper food and lower wages in the Levant (Masson, ii, 436-7). The cotton yarn imports from the Levant continued. By the 1195/1780s, while French cotton industries found markets, first in Spala and then Italy for their products, whose designs appealed to the taste of the populations there, the Muslim population of the Levant did not favour the imitations of the West. Western cotton industries would definitively conquer the Eastern markets only when they succeeded in solving the problem of price differential (by using machines) and when they imitated or created designs and colours which attracted an eastern clientele.

The introduction of dyeing methods from the Levant was a crucial factor contributing to the success of western cotton industries and exports. The Dutch and the French finally succeeded in learning the special technique known as *Edirne* dyeing. Consequently, Turkey's export of red cotton yarn was reduced (O'Hegarty, 204; Masson, ii, 439-40). This reversal of the situation was apparent in the rapid growth in raw cotton imports and the diminishing proportions of cotton textiles and yarn from the Levant. Between 1212/1700 and 1203/1788, the French imports of raw cotton increased ten times, representing 39% of the total imports from the Levant, while cotton yarn did not make the same progress.

As has been seen above, change was a rather long process and one achieved in stages. For some time the Levant continued to export its cotton cloths, now in a raw state, undyed, then mainly its cotton

Cotton textiles exported to Istanbul in 1191/1777
(value in French livres)

	Muslins	Woollen Cloths
Britain	691,000	656,000
Netherlands (1778)	258,000	383,000
Venice (1782)	97,000	217,000
Trieste (1782)	108,000	220,000
	("bour" and muslins)	(Austrian and German pro- ducts)
French	42,000	7,148,000

yarn, especially those dyed red with *alizari*; and finally only its raw cotton. On the other hand, invasion of the Levantine markets by western products was realised only after the industrial revolution in England with its mass production of cheap and finer quality cotton yarns (the so-called twist and mule) and prints. The dramatic change occurred in the period 1754-1817/1780-1815, and led to a situation in which the Levant became totally dependent on the western cotton industries for the supply of cotton yarn and textiles and for the sale of its raw cotton.

British supremacy and impact of the industrial Revolution. It was to the cotton imported from the Levant that the first cotton industry in England owed its foundation. First, lustians, made with a cotton weft and a linen warp, were produced in Lancashire under Elizabeth I at some time before 994/1586. By the middle of the 17th/17th century, the cotton industry was considered to be a well-established industry in England, although it depended upon a regular import of raw cotton from the Levant, Izmir, Cyprus, Acre and Sidon (A. C. Wood, 74-5).

During the period 1691-1818/1680-1770, the Levant suffered a decline in its exports of cotton and cotton goods to Britain. This was mainly due to the overall decline of the English trade in the Levant, as well as to the English domestic policies against the use and manufacture of cotton goods (R. Davies, *Devenshire Square*, 29-31). Another factor, a more enduring one, was the competition of colonial supplies to England from the West Indies and India. After the mid-18th century, when British cotton industries were encouraged, the cotton trade experienced a revival from which western Anatolia emerged as one of the main sources of supply.

Cotton imported from the Levant was approximately 300 tons in the years 1711-13/1699-1701, 150 tons in the 1733/1720s and 1743/1730s, and over 500 tons in the 1764/1750s (Davies, *op. cit.*, 173). Also some Levant cotton was imported to England through the Netherlands (Wood, 160). In the 1784/1770s, large cargoes in British ships from the Levant consisted of cotton and fruits. The "cotton boom" was responsible for the revival of the British trade in the Levant in the period after 1794/1780, when the English industry made its tremendous advance (R. Davies, *op. cit.*, 187, 241-2).

British cotton manufacturers had to compete in the Levant not only with the Indian fine cotton textiles—muslins and calicoes in particular—but also with Indian cotton yarn. The Ottoman consumer did not at first favour the British imitations of Indian cottons, but price became a key factor, and by 1725/1800, he came to prefer the cheaper British manufactures (Aubin's report). For the manufacture of fine cottons, Indian yarn was imported into the Levant until 1800, when it was replaced by British "twist", a strong thread used mostly for the warp (Aubin). "Twist" invaded Ottoman markets as far as the cotton production centre of Diyarbakir via Trebizond, and Central European markets via Salonica (Aubin). The demand of the Istanbul weavers alone was estimated at 10,000 okkas and that of Izmir and its hinterland at 400-500,000 lbs. Also, British imitations of Indian muslins, widely used in turbans, veils, and headgear for women, superseded the Indian imports in the Levant. By 1727/1812, other more popular English cotton textiles, all of them imitations of Indian cottons, were printed calicoes (with a consumption estimate of 35-40,000 a year in Izmir), chintz (Hindt *Chintz*,

Persian and Turkish *chintz*, shawls and "shirting", etc. (Aubin gives a long list in his report).

Cheap, durable, bright in colour, the English cotton goods thus enjoyed a "prodigious demand" over the Levant from Cairo to Istanbul. This was considered to be a trade of the "highest importance" for England (Isaac Moremer's report dated 1814, cited by Wood, 192-3). Although raw cotton imports from the Levant showed a great increase during the same period, their value was not significant when compared to that of the manufactured cotton goods exported to the Levant. Turkish cotton was only one-twelfth of the total imported by Britain.

British imports of raw cotton from the Levant
(in Sterling Pounds, declared value)

After India, Germany too experienced losses at the Levant market for cottons in favour of British manufactures. During the Napoleonic Wars, the British took advantage of the rising prices in Germany and the closure of Trieste and Fiume, principal transit ports for Austrian-German exports. Great Britain's interest in the Levant as an important market for British manufactured cotton goods grew particularly from 1741/1825, when the full impact of the Industrial Revolution was felt at home. Taking advantage of its role as a protector during the Egyptian crisis, Great Britain had the Ottoman government sign the commercial treaty of 1754/1838 which awarded Britain favourable conditions and turned the empire into an open market for its cotton industry (V. J. Puryear, *International economics and diplomacy in the Near East*, repr. Archon Books, 1969, 207-30; F. E. Bailey, *British policy and the Turkish reform movement*, Cambridge 1942, 39-178; Mübahat Küçükoglu, *Osmanlı İktisadi İhtisadi münasibeleri*, 1838-1850, Istanbul 1976). The principle of free trade was virtually introduced into Turkey before it was accepted in Great Britain (Puryear, 117). From 1754/1838 to 1769/1852, British imports of cotton textiles tripled and those of cotton yarn doubled, 63.9 to 125.8 million yards and 5.6 to 11.9 million lbs. respectively (Küçükoglu, 82, 86). The value of the British cottons imported to Turkey rose approximately from one thirty-eighth in 1741/1825 to one ninth of the total production in 1772/1855 (Bailey, 86).

Ottoman-British Trade in 1769/1852
(official value in £)

Total imports to Great Britain	Total imports to the Ottoman Emp.
2,232,283	8,489,100 (of this, textiles were over 3 million in 1850)

Sources: Bailey, 74; O. Kurnuş, *Empirealism*, 49.

The Ottoman trade occupied third place in Great Britain's foreign trade in 1769/1850 (Bailey, 82-3).

In the Ottoman Empire, the break-down occurred first in the cotton yarn production, which directly affected spinners, the poorest section of the population in rural and urban areas. In 1749/

1833 D. Urquhart tells us (*Turkey and its resources*, 148) that "their own yarn being unequal, heavy in weaving and liable to break, the weavers prefer much the English yarn". Also, the first serious crisis in cotton loom industries appears to have occurred in the period 1241-6/1825-30 (Urquhart, 47-51, Ö. C. Sarg, in Ch. Issawi, *Econ. history of the Middle East*, 48-51. At a later date, in 1279/1862, another Englishman, Lewis Parley (*The resources of Turkey*, 59-60) observed that "Turkey is no longer a manufacturing country. The numerous and varied manufactures which formerly sufficed, not only for the consumption of the empire, but also stocked the markets of the Levant, as well as those of several countries in Europe, have, in some instances, rapidly declined, and in others became altogether extinct... The printed calicoes of Tokat... the muslin looms of Scutari and Timova [in Thessaly] which in 1812 numbered 2,000 were reduced in 1847 to 200... Baghdad was once the centre of very flourishing trades, especially those of calico printing... Aleppo was still more famous, for its manufactures of gold thread, of cotton tissues, ... and pure cotton called nankeens gave occupations to more than 40,000 looms, of which, in the year 1856, there remained only 5,560... now taste has changed. Cloth and every variety of cottons have supplanted silk. English muslins are preferred to those of India, and cashmere shawls were replaced by the Zebras of Glasgow and Manchester." He adds (61) that Great Britain "will continue to find Turkey an increasing and profitable market for our merchandise."

An American observer (C. Hamilton, *Among the Turks*, New York 1877) tells us how, following the free trade granted by the treaties of 1254/1838, "five thousand weavers in Scutari were without employ, and reduced to the most deplorable beggary. The last colors and firm material of Diarbekr disappeared, ... and Bursa towels came from Lyons and Manchester... Thus, all the industries of Turkey have perished."

Apparently, all these figures given are simply rough estimates, sometimes grossly exaggerated. In Aleppo, for example, in the period before 1273/1856, only 1,000 looms with an annual output of half a million pieces are mentioned in John MacGregor, *Commercial statistics*, 140; cf. Issawi, *Econ. history of the Middle East*, 221; also Viquesnel's more modest figures, *ibid.*, 51. In a French report cited by Chevalier (*Les tissus shawls*, 300), the total number of looms manufacturing cotton-silk textiles in Damascus and Aleppo was estimated at 25,000 for the year 1241/1825. The report dated 1261/1845 considered the ruin of native cotton loom industries in Syria to be the result of the growing imports of low-priced cottons from Europe. English cotton yarn and prints headed the imports. However impressionistic, these Western reports demonstrate the dramatic disruption in Ottoman cotton industries by the mid-19th century. In the 1277/1860s, the first Turkish journalist (see İhsan Sungu, *Yeni Osmanlılar*, in *Taninimat*, 1, 787) became the mouthpiece of the population in their distress, and blamed the government's westernisation and free market policies as well as the shift in taste and fashion to Western products, for the depression.

In a survey of the Ottoman economy made in 1332-3/1913-5 (*Osmanlı sanayii*, ed. G. Ökçün, Ankara 1970, 134; V. Eldem, *Osmanlı imparatorluğunun iktisadi şartları hakkında bir tetkik*, Ankara 1970, 76), it was observed that 80 % of all cotton production (20,000 tons in 1333/1915) was exported

abroad, while imported cotton manufactures constituted the major part of the overall imports. By 1335/1915, modern cotton factories in the Ottoman lands numbered only nine (altogether 82,000 looms and 68,500 spindles employing 3,024 workers), all of them making only cotton yarn and coarse cotton textiles (*ibid.*, 133; Eldem, 130-1). However, by the end of the 13th/19th century, Konya, Karaman, Antaiya, Niğde, Afşar, Tokat, Merzifon, Mar'ash, and Antep (Şayntab) were still mentioned as the important centres of cotton loom industries (Oppel, 525). At the turn of the 13th/19th century, as a result of the disorders, a number of cotton weavers left Aleppo for Egypt, Şayntab and Mar'ash. Şayntab made great progress in cotton manufactures, especially in red dyed yarn in the 1900s (Oppel, 526).

Some branches of the Middle Eastern loom industries, though adhering to the traditional techniques and types, resisted and survived the invasion of western machine-made cottons, thanks to the rural population's conservatism which favoured old-fashioned fabrics of the urban centres as luxuries. In Turkey, *alaşia* and *kupa* are still popular with the peasants who use them in clothing and furnishings. As in the past, in these fabrics the wool is cotton and the warp is silk (or rather artificial silk).

Glazed and stiff, these fabrics still preserve traditional colourful designs and stripes (cf. Syrian *alaşia* and *kupa* manufactured today in Aleppo, see Chevalier, 308).

(H. İNALCIK)

KUTR means in Arab geometry (1) the diameter of a circle or of any section of a cone and the diameter of a cone; (2) the diagonal of a parallelogram or of any quadrilateral; (3) in trigonometry, the hypotenuse of the so-called umbra triangle; as such it is either the secant or the cosecant of an angle, according as the side opposite it is the tangent or cotangent of this angle; in the first case it is called *şifâr al-pîl al-awval* ("hypotenuse of the first umbra"), in the second case *şifâr al-pîl al-thâni* ("hypotenuse of the second umbra").

Bibliography: M. Soules, *La langue des mathématiques en arabe*, 283-5. (H. SUTAN)

KUTRABBUL, a place name of 'Irâk. Also given as Katrabbul, the name is regarded as Persian in origin. (1) Yâkût lists a village (*karya*) of that name which was situated between Bağdâd and 'Ukbarâ. This Kutrabbul was reportedly frequented by pleas-ure seekers, who recognised the quality of the local wine. As a result, the village is often mentioned by such poets as Abû Nuwâs (q.v.) and in tales comparing the virtues of different wine-bearing locations. (2) Kutrabbul also refers to one of the four major administrative subdistricts (*jassâğî*, and in Yâkût, also *kırs*) of the greater urban area of Bağdâd. The sub-districts, which also included Bâdîrâyâ, Nahr Bûk and Kalwâdhâ, were in existence before the Islamic occupation of the area and may have continued to serve some administrative function after the construction of the Islamic city. Kutrabbul and Bâdîrâyâ occupied the lands west of the Tigris River with the Şîrât Canal serving as a boundary between them. The geographers speak of Bâdîrâyâ being east of the Canal and Kutrabbul to the west, though it would perhaps be more correct to speak in terms of south and north. Kutrabbul thus came to represent the area which comprised the Round City of al-Manşûr (q.v.) and the northwestern suburbs, including the military cantonments of al-Harbiyya.

(J. LASSNER)

KUTRUB, the werewolf. The Arabic word goes back to Syriac *kānfrōpōs* (or *kānfrōpō*), which was subsequently transformed into the Arabic *kufriyūb* in the same way as other names of animals, like *ghuwāwūd* "locust" or *ḥawafūd* "hedgehog". *Kānfrōpōs* itself is the Syriac transcription of Greek *λύκονφροπος*.

The saga of the werewolf is by itself indigenous to Aecidia in the central Peloponnesus (see Pausanias, vii, 2), but has many parallels amongst the Romans, Celts, Teutons and Slavs. Originally it was unknown to the Orient, and the Arabs came to know the figure of the werewolf in the 2nd/8th century at the earliest. According to an oft-repeated anecdote, Shihawayh once described his pupîl Muhammad b. al-Mustandir as *kufriyūb* *laylîy*, so that the latter was subsequently known by the nickname of Kutrub (see following

article]. The poet Abū Dulāma called his mother *ḥḥayḥ al-ḥutrub* (*Aḡḥān*, ix, 133, 'x, 159), but alleged earlier evidence for the word in 'Abd Allāh b. Mas'ūd (d. 32/652-3) (*Zamakhshari*, *Fāḥ*, ii, 177/360 *Biḡḡāw*) and Imru' al-Qays (ed. Muhammad Abū 'I-Faḍl Ibrāhīm, no. 76, 36) is forged. Al-Ḥāḍir does not seem to refer to the *ḥutrub*, but al-Mas'ūdī (*Musāḡ*, iii, 319 = § 1203) mentions it amongst several fabulous beings. Muhammad b. 'Abd Allāh b. Zafar (d. ca. 564/1166) apparently confuses it with the *ḥutrub* (see al-Ḥāḍir, *Hayawān*, index, and al-Mas'ūdī, *ed. cit.*). Although the werewolf was integrated into the demonological world of the Arabs, it never attained the popularity which was always enjoyed by the *djinn*, the *ghūl*, the *ʿifrīt* and the *ghayfān*.

The Greeks, however, saw in the werewolf not only a fabulous creature, but also the manifestation of a mental disorder. Following Marcellus of Side, Oribasius (*Synopsis of Eusebius*, viii, 9), Aëtius of Amida (vi, 11), Paul of Aegina (ii, 16) and later Byzantine physicians described lycanthropy as a kind of melancholia which caused the diseased person to shun the company of mankind, to seek out solitude and frequent cemeteries, and to roam about aimlessly with hollow eyes and lost in gloom. Through the translations of the works of Paul of Aegina in the 3rd/9th century and of Aëtius of Amida in the following one, the Arabs likewise came to know about this alleged illness. Paul of Aegina's information is quoted by Ḥubayr b. al-Akhnaf (d. 184) (*Kiṣāb al-ḥawā*, i, Ḥaydarābād 1935, 203 ff., 222), and Aëtius's chapter was the model for the descriptions of 'Alī b. al-'Abbās al-Maḡḡalī (*Kāmil al-ḥawā* al-ḥabībī, i, 333), of Abū 'I-Kāsim al-Zahrāwī (*Kiṣāb al-ṭabīb*, Ms. Chester Beatty 4009, fols. 110-11), and of Ibn Sīnā (*Kāḥūn*, Rome 1293, i, 315/Būlūk 1294, i, 71).

Finally, the term *ḥutrub* is also a component of the plant name *ḥiḍḡ al-ḥutrub* (a translation borrowed from the Syrian *ḥiḍḡ al-ḥutrub*), mostly used to indicate the mandrake root (*yabrūḥ*).

(M. ULLMANN)

KUTRUB, the cognomen of Aḥmad b. MUHAMMAD b. al-MUSTAḤIR, grammarian and lexicographer of Baṣra in the 2nd/8th century, the freedman of Sālim b. Ziyād. He was born in Baṣra, where he studied not only grammar with the founders of that science, 'Isā b. 'Umayr, Yūnus b. Yaḥyā and Shibawayh (who is said to have given him his nickname), but also theology with the famous Muṭazzilī authority al-Nazzānī. He became the tutor to the son of the military commander and minister Abū Dulaf al-Qaḥṭī (see al-KāḡIM b. 'Isā, and DULAF), and died at Baghdād in 206/821. According to Ibn al-Sīkṭī, his pupil, he was not to be regarded as a reliable authority for lexicography.

Kutrub holds a very important place in the history of Arabic grammar, as the first grammarian known to have written a work on the three following topics: (1) words with two opposing meanings (*al-falāḥ* (s.c.)); (2) words with the same consonant skeleton capable of having three different meanings (*muḥallāt*) according to whether they have one or other of the three vowels; and (3) the explanation of the causes and occasions (*ʿilāl*) of grammatical phenomena.

Furthermore, Kutrub seems to have held original

ideas about syntax. Al-Zaḥīdī in his *K. al-Ḥāḍir* (ed. M. al-Mubārak, 70, 77) states that Kutrub, as opposed to all the other Baṣian grammarians, did not believe that the *ʿrāb* affected nouns in order to show their different functions and to distinguish them from each other; he asserted that there are nouns with the same *ʿrāb*, whose function differs, and nouns with differing *ʿrāb* but with the same function, and accordingly held that *ʿrāb* only affects a noun in order to distinguish two grammatical states, sc. at the end of a speech unit, without a final vowel, to mark pause (*waḥḡ*), and within a speech unit, with a final vowel, to mark liaison (*wasl*) with the succeeding word.

Of the 18 works listed by Ibn al-Nadīm in his *Fihrist* and which dealt with exegesis and theology as much as grammar and lexicography, only four have survived, the *K. al-Muḥallāt*, ed. E. Wilmshurst, Marburg 1857, and R. Soussi, Tunis 1398/1978; the *K. al-ḥāḍir fī ḥ-ḥawā al-bahīya*, ed. K. Geyer, in *SBAN Wien*, cv (1888), 380-92; the *K. al-falāḥ*, ed. H. Koller, in *Islamica*, v (1932), 242-84, 385-462, 493-544; and the *K. al-ʿamān*, still unedited.

(G. TROUPEAU)

KUTTĀB (A., plural *ḥutūb*), itself probably plural of *ḥutūb* ("scribe"), a type of beginners' or primary school. The term is frequently synonymous with *maktab* in Arabic and Persian and *mektep* in Turkish. In Ottoman it was also called *mekteb-ḥāḡim* or *mekteb-i ḡayn* or *ḡayn makteb*, ('children's school'); later, in the *Tanzīm* era, it was more generally referred to as *ḥutūb makteb* ('beginner's school') and then as *sh makteb* ('primary school'). European writers have often called it "Qur'anic school".

The *ḥutūb* was formerly widespread in Islamic lands. Although the appellation was almost universally applied to Muslim beginners' schools, *ḥutūb* has also been known to designate Jewish *heder*-type schools in Arabic-speaking countries. While there are no precise indications as to when they were first established, they spread during the Umayyad era in the wake of the conquering armies, and the *ḥutūb* system was already wide-spread in early 'Abbasid times. There is some evidence that the structure and teaching methods of the *ḥutūb* were modelled on the Byzantine primary school (Leconte, in *Arabica*, i (1954), 374 ff.), but its curriculum was purely Islamic and Arabic. The early *ḥutūb* was an important agent for socialising different ethnic groups into the Islamic faith and its way of life. Later, in the Ottoman Empire, it served as vehicle for transmitting the values of the Ottoman Islamic society from generation to generation. The *ḥutūb* provided a common educational basis for all who attended it. It was homogeneous in its aims and methods, and thus differed from the indigenous traditions of education, which displayed remarkable diversity. Until the penetration of Western models of education in modern times, the *ḥutūb* was the only vehicle of public instruction for young Muslim children. Even up to the present, it has displayed remarkable staying-power by continuing to compete tenaciously with other educational institutions in many Islamic countries.

Since basic education (see *TARBIYA*) was usually imbued with a religious spirit, and its professed goal was to produce a true believer, much of it was closely connected with the mosque (see *MASJID*). Consequently, the *ḥutūb* was frequently attached to a mosque, whose *othmān* also provided further instruction.

The *kutīb* itself was located in any sort of room available, a tent in the desert or even (as in Uganda) in the open. If specially constructed, a *kutīb* consisted (in the Ottoman Empire, at least), of a large domed, unadorned hall in which all the pupils sat crosslegged on mattresses in a rough semi-circle, usually next to low desks. Such buildings were generally erected by philanthropists (through a *wakf* or otherwise) or by the pupil's parents, who also provided the teacher's fees (in money and food). In the Middle Ages, wealthier families sometimes set up a private *kutīb* for their children. The state hardly intervened until well into the 19th century, so that fees, physical arrangements and the curriculum were agreed upon between teachers and parents alone. There are even recorded instances of teachers volunteering their services without pay, though in many other cases they were underpaid, and some had to send their pupils to collect alms for them (as in Nigeria, in the late Middle Ages). In other instances (mostly in Africa and possibly in Iran), school-children performed all sorts of tasks for their teacher in lieu of school fees.

Boys formed the overwhelming majority of pupils in the *kutīb*, while girls studied, if at all, separately (although there are recorded cases of coeducation, chiefly in Iran and India). Attendance was voluntary, and there was no precise age-limit: pupils enrolled at age four or above and, in general, studied for between two and five years. All the pupils studied in the same room—there was seldom, if ever, a division into groups by age—and each pupil progressed at his own rate. Instruction was usually carried out from sunrise to sunset (or earlier) daily; Fridays (and Thursdays in the Maghrib) as well as some festivals, like Ramadan, were free days. The *kutīb* was open throughout the year, except when economic needs (such as harvesting) or natural calamities (like floods) prevented attendance. Due to the character of the *kutīb*, its student body was almost exclusively Muslim. There were, however, infrequent cases of others attending, as in Iran even during the reign of al-Mutawakkil (who forbade the attendance of non-Muslim children) and in Egypt, where a few Copts attended in the late 19th century.

The teacher was called *muallim* or *mu'allim* and later *mu'addib* in the Arab lands (in some cases, the *mu'addib* was a higher rank, namely the more learned or the private tutor); *hâdîm* in Turkey; *maktâbî* in Iran; *mullâh* in some parts of Central Asia; *lebbe* in Ceylon; and *mallam* (from *mu'allim*) in Nigeria and some other areas in Africa. He was popularly referred to as *fiḍī*, or *fiḍīh*, probably the vernacular for *faḍīh*. In the larger *kutīb*s he was sometimes aided by an assistant (*mu'ad*, literally "repeller"), or, in other cases, by a senior pupil (*ʿarfī*, literally "monitor"). All these persons frequently adopted the carrot-and-stick approach: beatings (see *ḥalaka*) were administered to the lazy or unruly, while the meritorious, who had mastered a large section of the Qur'ān by heart (*ḥafīẓa* [s.v.]), were offered prizes, usually sweets or even the honour (in Morocco and Haḍramawt) of being led around on a camel.

At first, when books were very difficult to acquire, the teacher used to dictate the material, which his pupils wrote down with a pen or reed (*qalam*) on a tablet (*lawḥ*). Afterwards, the pupils read the material aloud, with the teacher correcting their errors and elaborating on some points. Emphasis was generally laid on memorising. Since independent thinking was frowned upon, as liable to lead to the weakening of belief and disobedience, learning by rote was custom-

ary. This method was, to a large extent, self-defeating, as it meant studying difficult subject-matter in a barely understood language. Literary Arabic was hardly known even by Arab children, not to speak of non-Arab Muslims. Even among the latter, however, the Qur'ān was initially taught in Arabic, although it was clear that the pupils could not understand the language. Only later were difficult passages sporadically explained in the local language, such as Turkish, Persian or Urdu. The teaching of Arabic *per se* in these schools was instituted in the Ottoman Empire only in 1781, by Sultan 'Abd al-Hamīd I (Persian was added then, also, but not Turkish). However, this revolutionary innovation was in effect introduced in only a few schools; it became more widely accepted, along with other reforms, in the *Tanzimat* era (beginning in 1846, the study of Turkish was also added, selectively).

While the general aims of the *kutīb*s were universally identical—to impart the rudiments of instruction required for the formation of a good Muslim—there were obvious qualitative differences between the towns and countryside, as well as substantive variations in emphasis in the curriculum. The Qur'ān was studied in all the *kutīb*s, with stress laid on memorising and absolute accuracy. The teacher began with the *Fātiḥa*, then proceeded to the shortest, the 114th, *sūra* (*al-Nās*) and continued back until the class reached the longest, the 2nd, *sūra* (*al-Baqara*). When a pupil had mastered all this, he began to practise his recitation in the correct order.

As a general rule, the early-morning hours, considered the best time of the day, were earmarked for studying the Qur'ān. At other times, prayer and religious rituals were imparted regularly. In the eastern Arab lands (Egypt, Palestine, Syria and 'Irāq), Arabic grammar and poetry were usually studied as well. This was likewise the case in Muslim Spain, where composition was also added to the curriculum. While in Algeria, Morocco and among the Muslims of Africa south of the Sahara, little was learned besides the Qur'ān, in Tunisia *ḥadīṣ* was generally included as well. Some calligraphy and a smattering of arithmetic were added in some *kutīb*s in Turkey as well as in Iran, where Islamic history and fragments of Persian poetry (e.g. from Sa'di and Hāfiz) were occasionally included, from the 7th/13th century onwards. A little Persian poetry was also taught in the *kutīb*s of Afghanistan and the parts of Central Asia ruled by Imperial Russia. In some *kutīb*s in Ceylon, Arabic grammar, elementary arithmetic and the writing of Tamil in Arabic characters was practised in addition to the Qur'ān. All considered, one may surmise that although the *kutīb*'s curriculum laid a basic foundation for further study, many of the pupils who ended their education at this level were hard to put to use if profitably, except for prayer.

Since the mid-19th century, the *kutīb* has exhibited signs of change. Some reform has been promoted from above, as in the Muslim parts of the French possessions south of the Sahara, where the authorities initiated a campaign to supervise these schools and improve their quality (their success has not always been evident). Elsewhere the *kutīb* stood in competition to the newly-imported Western-type primary schools, which also imparted a Muslim education but in more efficient ways. The *kutīb* has held its own in Egypt, partly because this was the first Arab country that attempted to adapt it to modern requirements and integrate it into the state system,

An inspector of these schools (*Muḥafīẓ al-maḥāṣin*) was first appointed in 1835; since 1867, the Ministry of Education has been officially empowered to inspect these schools regularly (in the Ottoman Empire, a Ministry of Education to supervise the *kutāb* and other schools was established by an *irade* in 1846). By 1890, official supervision of *kutāb* was fairly widespread in Egypt, and its effectiveness was increased by governmental grants-in-aid. Later, Muḥammad 'Abduh [q.v.] was instrumental in expanding their curriculum (which today includes object lessons). Indeed, there are recorded cases of 20th century Egyptian children attending an elementary school in the morning and the *kutāb* in the afternoon, or going to the *kutāb* in the early morning before school.

The fortunes of the *kutāb* in the 20th century have accordingly varied. In the Sudan, it has coexisted with the more general schools introduced by the British soon after they had defeated the Mahdist [q.v.] forces. In Zanzibar, in 1907, the British director of education decided to make the Qur'ān a basic component of the general curriculum and to integrate the *kutāb* into the school network. In India (e.g. in Bengal) the British rulers tried to increase the number of *kutāb* and raise their standards by introducing secular studies (The Reform Scheme, 1914). The same trend was evidenced in the British administration of Arab education in Palestine after the First World War. In Syria, in the 1933-4 school year, there were still 1,229 *kutāb*, with an enrolment of 34,110 children; more recently, however, the bulk of Islamic education is carried out in secular government schools. Although in Iran western influences began to affect the *kutāb* adversely in the 1890s, and a Ministry of Education was set up in 1920 to foster modernism, as late as 1939 there were still 2,356 *kutāb*, compared to 1,118 state primary schools.

In recent times, the fortunes of the *kutāb* have as a rule suffered wherever Muslims are in a minority, e.g. in the Soviet Union, where all these schools were closed by the authorities in 1928. Much the same occurred in Yugoslavia in 1946. In India, however, they made a comeback after Partition, sponsored by active Muslim organisations. The *kutāb* is in a decline (although no detailed statistics are available) in countries undergoing modernisation, especially in urban areas. The extreme instance is Republican Turkey, which disestablished these schools in 1924 and closed them down in 1926—although some have continued to function surreptitiously in remote villages. The opposite case is to be found in theocracies like the former monarchical Libya or in Saudi Arabia where the *kutāb* (sometimes under other names) has long provided the only type of basic instruction in both the desert and rural areas, modernised primary schools have gradually been introduced there only recently.

In some other Islamic countries, the *kutāb* has survived thanks to efforts towards raising its level and enriching its curriculum and to the generosity of various philanthropists. In yet others, the *kutāb* flourished for a while due to the importance ascribed to it by anticolonialist movements. In Morocco during the 1930s, the prestige of the *kutāb* (called *madīd*, from *madīd*) increased because it served as a focus for nationalist propaganda against the French Protectorate. In Algeria during the 1930s, an Association of 'ulama' set out to revive the *kutāb* and increase their number as a means of protecting the younger generation against the modernising influences of the French. Later, in January 1964—less than two years

after independence—a decree reorganised basic Muslim education to suit the new situation. Elsewhere, too, *kutāb* instruction still continues to have current relevance; in 1962, for example, an Upper Volta politician in search of Muslim votes claimed that he had studied in such a school.

Practically all newly-independent Arab states, as well as Pakistan, Malaya and Indonesia, have attempted to incorporate the *kutāb* into the national school system, to supervise them and to provide them with a better-organised curriculum, including regular class hours, examinations and grades. While the integration of the *kutāb* into the state systems of education may well ensure their continued existence, particularly in rural areas, state supervision is gradually altering their original character. This is especially so since in all Islamic lands the study of the Qur'ān and of Islam has become a standard part of the core curriculum of basic instruction.

- AL-KUTUBI**, ABU 'ADALLAH MUHAMMAD b. SHU'AYB AL-DĀRĀNĪ AL-DIMASHQĪ (686 [?]–764 [1287–1363]), Syrian historian. The date of his birth is uncertain, since only one ms. of Ibn Ḥajjār's *Diwan* fills the blank that was to contain it. It is plausible, however, and neither confirmed nor contradicted by the fact that a highly personal obituary notice in the *Uyūn* (Ms. Cambridge 699, fols. 7b–8a, anno 735) speaks of a young scholar born in 706/1306 as "our friend" (ṣāhibnā). Born apparently in Dārayūs in the Ghūta, he spent all his later life in Damascus. He possibly went there to study with famous ḥadīth scholars such as Ibn al-Shihna (apparently), Ahmad b. Abī Ṭālib al-Ḥadīdī, ca. 624 [?]–730 and al-Muzāl (654–742), but, being very poor, he went into the book trade and acquired a sizeable fortune. He had personal contact with the great al-Dhahabī, who quoted verses to him (*Uyūn*, anno 748). A fellow historian, Ibn Kathīr (d.c.), took part in the funeral service for him on Saturday afternoon, 11 Ramaḍān 764/24 June 1363.
- If there is practically nothing known about his life, this is due to the fact he did not occupy any major official position in the scholarly-political establishment. His two surviving works were, however, highly esteemed and much used. His large history *Uyūn al-tawārīkh*, is represented in many libraries but usually only by individual volumes (presumed autograph in Topkapısarayı, Ahmet III 2922, cl. Cat. Kutsalay, iii, nos. 5853–65, O. Spies, *Brüderg. in Abh. f. d. Kunde d. Morgenlandes*, xix/3 [1932], 76). It has been little studied and not yet been edited, possibly on the *a priori* assumption that most of its contents is known from other sources. It does contain valuable information; see, e.g., F. Sayyid's introd. to *Faḍl al-ʿUṣāl*, Tunis 1303/1974, 45–5, for the bibliography of Abu Ḥ. Kāsim al-Kaʿbī al-Balkhī. That al-Kutubī considered new information not to be found else-

where as the hallmark of a successful history is shown by his statement to this effect in connection with al-Dīnārī (*ʿUyūn*, anno 739), even if this statement should turn out not to be original with him (cf. Ibn al-ʿImād, *Shadharādī*, vi, 124). The value of the *ʿUyūn*'s contemporary section, preserved in Cambridge 699 (Add. 2923) and Ahmet III 2922, vols. 22, 24, has been stressed by E. Ashtor. It contains al-Kutubī's own observations, principally on Syrian intellectual and religious life. The close relationship of the *ʿUyūn*, for its last two decades (years 741-750/60), to Ibn Kaṭīr's *Biddya* (cf. also Hādīdīl Khallīl, 1185 f.), has been tentatively explained by Ashtor as being the result of al-Kutubī having used Ibn Kaṭīr's original notes; however, despite first-person references in Ibn Kaṭīr, it could well have been the other way round, especially if al-Kutubī was so much older than Ibn Kaṭīr.

Al-Kutubī's other work, *Fawa'id al-ʿaṣayif*, has been edited repeatedly (Būlūk 1283, 1299; ed. M. M. ʿAbd al-Hamid, Cairo 1954; ed. Iḥṣān ʿAbbās, Beirut 1973-4, utilizing autograph volumes written in 733/1332, Ahmet III 2921, cf. Cat. Karakul, iv, nos. 6403-7). Following Ibn Khallīl's and using al-Ṣafadī's *Wafī*, it contains a wealth of biographical and literary information, mainly on Syrian literateurs, which is noteworthy for its uniqueness and for the intimate glimpses it offers of Syrian cultural life.

Roventhal, *A History of Muslim Historiography*, 1966; Ibn al-ʿImād, *Shadharādī*, vi, 203, quoting *Duray*; Brockelmann, I, 400, II, 60, S II, 48. E. Ashtor, in *Israel Oriental Studies*, I (1971), 277-84. § al-Munadīdīd, *Muṣṣaḥ al-muṣṣarrafīn al-dīnīyīn*, Beirut 1390/1978, 183-6. A. J. Asberry's identification of the copyist of Ms. Chester Beatty 5493 with al-Kutubī (*NMIA*, xxiv (1949), 234 f.) was silently retracted in Asberry's catalogue of the Chester Beatty collection. [F. Roventhal].

AL-KUTUBIYYA [see MARRAKUṢH].

KUTUPHANE [see MAKṬAB].

KUTUZ, AL-MALIK AL-MUʿAẒẒAR SAYF AL-DIN AL-MUʿIZZ, third Mamlūk sultan of the *Dawlat al-Turk* or Bahri dynasty. A nephew of Ibn al-ʿImād, Shāh Djalāl al-Dīn, Kutuz (whose original Muslim name was Maḥmūd b. Maḥmūd) was taken prisoner by the Mongols and sold to a Damascus merchant who, in turn, sold him to the Mamlūk amir Aybak in Cairo. Aybak, as the husband of Shaghar al-Durr, became in 648/1250 al-Malik al-Muʿizz, from which title Kutuz derived his *nisba*, al-Muʿizzī.

While still a youth, Kutuz claimed on the basis of various prophecies that he would rule Egypt and avenge his uncle by defeating the Mongols. A major step toward fulfilling that ambition was taken in 650/1253 when Aybak deposed his Ayyūbīd co-sultan al-Malik al-Aḥmad Mūsā and appointed Kutuz viceroy of Egypt (*naṣīb al-saltana*). In the following year Kutuz was one of those *mamlūks* who assassinated Aybak's rival to the throne, Alāḍy, a leader of the Bahri regiment. When Aybak was himself murdered in 655/1257 at the instigation of Shaghar al-Durr and was succeeded by his young son al-Manṣūr ʿAlī, Kutuz retained the viceregency and managed the affairs of state. In 655-6/1257-8 he led expeditions against Bahriyya amirs and their Syrian Ayyūbīd allies. In the following year (657/1259), however, Kutuz and the Bahriyya were reconciled and joined

forces to combat a Mongol invasion of Syria. In addition, claiming that al-Manṣūr ʿAlī was too immature to defend Muslim territory, Kutuz deposed him and had himself proclaimed sultan. Thus Kutuz was the first of many *mamlūks* to depose the son of his *ustād* in order to make himself sultan, thereby setting, according to Ibn Taḡhībīrdī (Cairo, vi, 56) "an evil precedent which led to the decline of affairs in Egypt".

Kutuz promised those amirs who protested against this act of usurpation that he would step down from the sultanate once the Mongols had been defeated. To secure the co-operation of the Ayyūbīds of Syria, Kutuz proffered his allegiance to al-Malik al-Nāṣir of Damascus and Aleppo and volunteered to defend him against the Mongols. To Hülegü himself, however, Kutuz offered only defiance and in 658/1260 put to death the envoys whom Hülegü had sent to demand his submission. Proclaiming a *ḡhāḍ*, Kutuz led an army from Egypt into Palestine. Although the Mamlūk amirs were reluctant to join battle against the Mongols, Kutuz succeeded in persuading them to march with him and sent Baybars al-Buadukālī, the future sultan, at the head of an advance force. Kutuz first secured the neutrality of the Franks at Acre and then met, and defeated, the Mongol army at ʿAyn Djalūt. After the battle Kutuz marched to Damascus, which he used as a base from which to clear Syria of Mongol troops and to establish Mamlūk rule in the province, appointing his own amirs to some key posts and retaining Ayyūbīds in others. During the march back to Egypt, Kutuz was murdered at al-Kaṣayr, near al-Sāḥiyya. Though the court historian Ibn ʿAbd al-Zāhir returns that Baybars was the sole assailant, it is clear from other sources that this historian was attempting to establish Baybars' unique claim to the sultanate according to "the law of the Turcs" which states that *man ḡalaba malikā kāna ḥakīm al-malūk*. (Shāḥī b. ʿAlī, quoted in al-Raṣād al-ṣāḥīr, ed. al-Khowālīq, 31).

There is also disagreement over the motivation for the assassination. Several historians claim that Kutuz reneged on his promise to award Baybars the viceregency of Aleppo after ʿAyn Djalūt, but Ibn al-Dawādārī says that Kutuz had already aroused Baybars' enmity by rebuking his brother amirs for cowardice during the battle. Ibn ʿAbd al-Zāhir claims that Kutuz offended Baybars by refusing to share the glory of the *ḡhāḍ* with him. In any event, it is clear, as Baybars al-Manṣūrī points out, that the enmity between Kutuz and the Bahriyya was of long standing, and Bahriyya ambitions for the sultanate were undoubtedly a factor. The disposition of the body of Kutuz is also a point of dispute, with Ibn Taḡhībīrdī claiming that Baybars transferred it from the original grave when it became a site of pilgrimage, while others merely say that it was buried in Cairo. Be that as it may, the sources are virtually unanimous in hailing Kutuz as a hero of Islam for the victory at ʿAyn Djalūt.

Bibliography: The fullest contemporary source that has been published is Ibn ʿAbd al-Zāhir's *al-Raṣād al-ṣāḥīr fī ṣiḥat al-Malik al-Zāhir*, ed. A. A. al-Khowālīq, Riyadh 1976, see index; a shorter version of this source was edited and translated by Fatima Sadeque, *Baybars I of Egypt*, Dacca 1956, index. KUṬUD (أ.ا.), the verbal noun *kaṣada* "to sit", which developed into a technical term. (1) In the *ḡalāt* (ق.و.) it indicates the sitting posture which is the penultimate component of a *raḳ'a* (ق.و.). For descriptions and illustrations, see Lane, *Manners and customs of the modern Egyptians*, 3rd edn., London 1842, i, 107, postures 7 and 13, and T. P. Hughes, *A dictionary of Islam*, London 1885, 467. (2) In early Islamic history it is the designation of the political attitude of a faction of the *Khawārij*, the *kaṣada* (also called *kuṭūd*, *kuṭūn* and simply *kaṣad* after the analogy of *ḥarīs*, pl. *ḥarūs*). This designation is sometimes taken to refer to "self-declared non-rebels" [M. A. Shaban, *Islamic history A.D. 600-750* (A.H. 134), Cambridge 1971, 151], although the generally accepted notion is "quietism". This notion may have been derived from the pre-Islamic custom with the Arab tribes to "abstain from" warfare, raiding, etc. (in Arabic, *kaṣada* 'as) during *Ḍhu 'l-Kaṣa*, one of the four sacred months.

The quietist is extolled in a probably spurious tradition dating possibly from the end of the first century A.H.: "There will be a *ḡalāt* (ق.و.); he who does not take an active part in it (*kaṣad*) is better than he who does (*kaṣad*)", cf. *Concordance*, v, 430, left column, first trad., where Ibn Ḥanbal, i, 269 and 285, may be added to the list of references.

(G. H. A. JURYAWALL)

AL-KUWAYT (conventionally spelled Kuwait), the capital city, situated in lat. 29°20' N and long. 47°39' E, of an emirate of the same name situated on the Arabian shore at the head of the Persian Gulf. The mainland state is bounded by 'Irāk to the north and west and by Saudi Arabia to the south. Kuwait also owns a number of islands and islets, the largest and most important of which are Būbbiyan, Warba and Faylaka. The total area of the state is approximately 6,900 sq. miles.

1. Geography and economy

At least two explanations have been suggested for the origins of the name: one is that it is a diminutive form of *kūf* ("fort"), and this in turn is said to refer to the existence of a small Portuguese defensive settlement there in the late 16th century. The other less general derivation suggests that in local usage Kuwayt means "a number of small wells", and that these exist near the low sandstone ridge called Ra's Aḡūṣa, which is where the modern town was founded in the early 18th century. European sources usually refer to this settlement as Grana or Grame, which is probably a corruption of al-Kuwayn, an islet in the bay about four miles west of the centre of the town, near to which there was a good anchorage.

The bay is the largest in the Persian Gulf, with a maximum length of 20 miles (east-west) and a maximum breadth of 20 miles (north-south). It is the only

good natural harbour near the head of the Gulf. The terrain is mainly flat and arid with occasional low hills; the highest point in the country, less than 1,000 ft. in elevation, is in the south-west. The coastlands are low and sometimes marshy. Natural vegetation is very sparse and consists of scrub and stunted bushes. Spring rains sometimes produce a short-lived cover of grass. Oases are few; the largest is al-Djāhira, some 18 miles west of the capital city. Permanent surface water does not exist, neither do springs. In the past drinking waters were drawn from wells which were often brackish, and it was also brought by boat from Baḡra. Some drinking water now comes by pipeline from the Shaḡḡ al-'Arabi, but a large sea water distillation plant is the most important source of supply. The underground water table near al-Rawḍaṭayn in the north is also tapped for additional supplies.

The climate is hot, but often less humid than at other places in the Gulf. Summer daytime shade temperatures usually reach 105° F. to 110° F., but temperatures of over 120° F. have been recorded. The coldest month is January, when the daily maximum shade temperature is usually about 60° F. to 65° F. but temperatures as low as 24° have been recorded inland. Frosts sometimes occur in the desert but are almost unknown at the coast. Rainfall occurs chiefly between October and March and is slight: the average is under 5" per year. Winds in winter are generally from the north-west and are relatively cool. Southerly winds in the spring and early summer are mainly hot and dry, those from the south-west later in the year are also hot but are often damp. Sandstorms more often occur during the winter than during the summer.

Before the discovery and exploitation of oil, the chief coastal occupations were trading, pearl and other fishing, and boat building. In the interior, nomads herded sheep, goats and camels and there was a little settled cultivation. The port served much of north-eastern Arabia, as well as acting as an entrepôt for trade with the south of 'Irāk and southern Persia. Horses, animal products, fish and pearls formed the major traditional export items. Imports were chiefly foodstuffs and piece goods. In 1904, some 460 pearling boats worked out of Kuwait and their crews numbered about 9,200 men. In the winter, about a third of these went to Ceylon for the pearling season there. The world-wide economic depression which began in 1929, and the introduction of cultured pearls from Japan, greatly reduced the demand for Gulf pearls. Boat-building using wood and fibre from India employed about 300 men in 1904, but this number obviously increased, for in 1912-13 as many as 120 pearling boats were reported to have been built. In 1904 the population of the town was estimated to be about 35,000. Of that number, about 1,000 were Persians, up to 200 were Jews and the Negro population was said to be about 4,000. By 1932 the population of the state had risen to about 152,000. Since that date it has grown very rapidly, because of changes which spring from the development of the oil industry. According to the census of April 1975, the population of the state was over 990,000. This very sharp rise was due chiefly to immigration, but the native birth rate is also very high. The same census reported that non-native-born residents made up 53.6% of the population; many of these were Palestinians or other Arabs, but immigrant workers have also entered Kuwait in large numbers from Iran and the Indian subcontinent. There is a significant European and American community.

The first oil exploration concession was granted in December 1934, and oil was discovered in 1938 at al-Burkân, but the Second World War halted the development of these fields. The Kuwait Oil Company, which held the concession, was owned jointly and equally by the Anglo-Persian Oil Company (later the British Petroleum Company) and the Gulf Oil Corporation of the United States of America. Production began in 1946, and in that year approximately six million tons of oil were exported. The Abidân crisis of 1951 and the resulting embargo on oil supplies from Iran gave much impetus to the development of the oil industry in Kuwait. In 1956 production exceeded 54 million tons, and Kuwait was at that time the largest oil producer in the Middle East. By 1972 production had reached 148 million tons, but Kuwait was no longer the leading regional producer, having given way to Sa'ûdî Arabia and Iran. In January 1973 the Kuwait Oil Company and the Government of Kuwait reached an agreement under which the state was to acquire immediately a 25% share in the Company, and by 1982 this would have risen to a 51% controlling interest. The Kuwait National Assembly, however, expressed strong disagreement with these terms, and there were demands for the immediate nationalisation of the Company. Further negotiations were held and in December 1975 a new agreement was signed which transferred full ownership of the Company to the Government with retrospective effect from March of that year. During the War of October 1973, Kuwait joined other Arab countries in restricting production, and for the first time since oil had been produced output showed a decline. The sharp increase in oil prices in 1973 encouraged the authorities to give increased attention to the question of conservation in order to extend the life of the oil reserves, the country's only known natural asset. A limit on production has been established of two million barrels per day, equivalent to about one hundred million tons per year; at this rate, it has been estimated that the state's known reserves should last at least until the middle of the next century. Kuwait was a founder member of both the Organisation of Petroleum Exporting Countries (established in 1960) and of the Organisation of Arab Petroleum Exporting Countries (established in 1968). The latter institution has its headquarters in Kuwait and the Kuwaiti authorities have taken an important and active part in the work of both bodies.

The recent development of the oil industry has had some striking economic and social effects. From being a relatively poor society of traders, fisherfolk, boat-builders and herdsmen, the country now (1976) has one of the highest levels of income per capita in the world, and the state provides an impressive array of social services. Kuwait has become, despite its harsh environment, one of the most highly-urbanised states in the world. The dependence on oil is overwhelming, with over 90% of government income currently being derived from oil production. The pearling and boat-building industries are no longer of economic importance. Fishing has been modernised and catches of shrimp are sold in Japan, Western Europe and the United States of America rather than locally. Agriculture is of little significance; less than 3% of the land is regarded as cultivable and only about 1% is actually in use. Imports now consist of construction materials, consumer goods and industrial equipment as well as foodstuffs and textiles. Exports, apart from oil and related products such as petrochemicals and fertilisers, are negligible. Ships of all the major

maritime nations now use the port, the airport is served by many daily international flights; and the most modern means of international telecommunication are widely available. Oil revenues have enabled the government to offer significant amounts of financial aid to poorer states, both Arab and non-Arab. By 1977 loans worth over US \$ 1,500 million had been provided.

2. History

Archaeological excavations on Faylaka Island have revealed traces of settlements dating back to 2500 B.C., but relatively little is yet known of the history of Kuwait prior to the 18th century and the assumption of power by the first members of the present ruling dynasty of Āl Šabāh in about 1700/1756.

The Sāsānid King Šāhīr I is said to have had a great ditch dug from Hit on the river Euphrates to the northern shore of Kuwait bay to protect the Sawād [q.v.] from Arab raids, and it was in the neighbourhood of Kuwait that Khālid b. al-Walid is reported to have defeated a force of Persians in 12/633. The foundations of the modern state date from about the end of the 17th century when a group of Qutub Arabs, who claimed to be a branch of the 'Anzāsa confederation [q.v.], migrated into the area. According to local tradition the three clans—the Āl Šabāh, the Āl Khālifa, and the Āl Djalāhima—were expelled from their previous settlements near Umm Qasr by the Ottomans because of their acts of brigandage and piracy. By the middle of the 18th century, the Āl Šabāh had achieved a position of local dominance. The Āl Khālifa [q.v.] left Kuwait in 1779-80/1766 and migrated to Zubara in Qatar before taking control of Bahrayn in 1797/1783. The Āl Djalāhima left Kuwait later and they too went to Qatar.

The first mention of Kuwait by a European is that of E. Ives, who refers to it as Graine, but he does not give the name of the ruling *shaykh* at the time of his visit in 1758. Niebuhr refers to the town as having a population of 10,000, but he noted that during the hot months the number declined to about 3,000. He reported that the harbour contained 800 ships and that the inhabitants were employed in fishing and pearling; but like Ives, he does not give the name of the ruler.

Kuwait grew in prosperity after Karīm Khān Zand had seized Basra in 1760/1776, for during the three-year Persian occupation, the East India Company used Kuwait instead of Basra as the terminal point for its caravan route from Halab (Aleppo) to the Gulf. According to Capper, who did not visit the town, the ruler of Graine was very friendly towards local British officials in 1793/1779; and in 1807/1793, after a quarrel with the Ottoman authorities in Basra, the East India Company's Agency was moved from there to Kuwait. The Agency returned to Basra in 1810/1795. It was at this period that Kuwait was often threatened by Wahhābī raiding parties.

The next century-and-a-quarter of Kuwait's history was to be shaped by three sets of circumstances and by the relations between them. Those circumstances were threats from Northern and Central Arabia, the uncertain and varying nature of the relations between Kuwait and the Ottoman Empire, and the emerging interest of first Great Britain, and later of other European powers, in this large natural harbour at the head of the Persian Gulf.

The temporary eclipse of Wahhābī power in Najd and al-Haṣā after their conquest by Muḥammad 'Alī in 1232-4/1817-19 reduced the threat to Kuwait for a

time. When a British officer visited Kuwait in 1252/1836, he found that Egyptian envoys were present in the town, and the re-entry of Muḥammad 'Alī's forces into Eastern Arabia shortly afterwards increased British suspicions about the extent of Egyptian ambitions. An officer of the Indian Navy surveyed the island of Faylaka in 1255/1839 as a possible base for British military forces, but it was concluded that the island was unsuitable. The harbour at Kuwait was also surveyed at this time. The withdrawal of Egyptian forces in 1256/1840 meant that British interest began to wane. The fact that Kuwait had not been heavily involved in piracy meant that the crucial system of relations, which had been established by Britain from 1820 with Bahrain and the other *shaykhdoms* of the lower Gulf, was not extended to Kuwait. Although Kuwait was involved in the slave trade, the anomalous nature of her relations with the Sublime Porte meant that the British government was reluctant to seek engagements for the suppression of that trade from Kuwait similar to those which had been secured from the Arab rulers of the lower Gulf.

The economic fortunes of Kuwait fluctuated throughout the 19th century. Stocqueler, who visited the town 1246-7/1831 estimated that its population was only about 4,000. Some revival appears to have occurred, for Palgrave, who was in Arabia in 1278-9/1862-3 but who did not visit Kuwait, reported that the town was well-governed and that trade was flourishing. The same author described Kuwait as the natural maritime outlet for the trade of the *Dijab al-Shammār* area, and Guarnant, who visited that region in 1280/1864, reported that many horses were exported from there to India via Kuwait. The possibility of building a railway line from the Eastern Mediterranean to the Euphrates and onwards to the head of the Persian Gulf had been suggested as early as 1856, but the construction and opening of the Suez Canal in 1869 put a temporary end to such plans.

The relationship between the rulers of Kuwait and the Sublime Porte had varied ever since the *Al Sabāh* had established themselves in Kuwait, but it was rarely anything other than vague and nebulous. Occasionally, as in 1871, the Ottoman authorities in Iraq were able to exercise some sort of sovereignty over the *Shaykh* of Kuwait, and the town was then used briefly as a staging post for the Ottoman annexation of al-Ḥaṣā, Kuwaiti boats being employed to transport some of the troops. In May 1896 the ruler of Kuwait, Muḥammad b. Ṣābāh, was murdered and he was succeeded by his half-brother Mubārak. There was much suspicion that Mubārak was implicated in the death, and intense family rivalries threatened the position of the new *Shaykh*. In order to consolidate his authority, Mubārak tried to secure the recognition and support of both the Ottoman and the British governments. The former showed some signs of seeking to extend its influence over Kuwait. The latter initially declined Mubārak's invitations, but when it became known that a Russian entrepreneur, Count Karpis, was seeking a concession from the Ottoman government to build a railway line from the Eastern Mediterranean to the Persian Gulf, with Kuwait as the suggested railhead, British interest quickly revived. The concern of the British government was also increased by the belief that the Russian government might be seeking permission to construct a coaling station on Kuwait Bay, and in Ramaḍān 1315/-January 1899 an agreement was reached under which *Shaykh* Mubārak gained British support in return

for a promise not to cede, sell, lease, mortgage or otherwise dispose of territory to a foreign government or national without specific permission from the British government. Increased international interest in Kuwait became even more apparent in 1900 when a party of German railway engineers visited the area to seek a suitable site for the terminus of a possible extension to the Persian Gulf of the projected Berlin-Baghdad railway. *Shaykh* Mubārak opposed these plans, believing in part that they would tend to lead to an increase in Turkish control over Kuwait. After a prolonged period of diplomatic negotiations, the British and Ottoman authorities completed in 1903 a draft convention concerning their interests in the Persian Gulf. Under article 1 of this convention, Kuwait was recognised as an autonomous *ḥaḍra* within the Ottoman Empire. That document also laid down the land frontiers of Kuwait, but the outbreak of the First World War prevented the draft convention from being ratified. In 1914 the British government sought the support of *Shaykh* Mubārak against Turkish forces in Southern Iraq, and among other reassurances the ruler was informed that the British government recognised Kuwait as an independent government under British protection.

The Ottoman authorities were not the only threat to the independence of Kuwait at the end of the 19th century. The value of that port as an outlet for the trade of *Dijab al-Shammār* attracted the attention of the rulers of the *Al Rashid* [q.v.], and that clan was engaged in open rivalry with the *Al Sa'ūd* [q.v.]. Much turbulence was caused in Northern Arabia in the late 19th and early 20th century by that contest for power. 'Abd al-Rahmān b. Fayṣal *Al Sa'ūd* and his son 'Abd al-'Aziz took refuge for a time with *Shaykh* Mubārak, and a raiding force from Kuwait was defeated by the forces of 'Abd al-'Aziz b. Rashid near Ḥāḥ in March 1901. The recapture of al-Riyāḍ by the *Al Sa'ūd* and the curbing of the power of the *Al Rashid* reduced the immediate threat to Kuwait, but as the power of the *Al Sa'ūd* increased it looked as if they rather than the *Al Rashid* would now pose a danger to *Shaykh* Mubārak.

In 1913 'Abd al-'Aziz b. 'Abd al-Rahmān *Al Sa'ūd* succeeded in expelling the Turks from al-Ḥaṣā and in gaining an outlet to the Persian Gulf. This meant that Kuwait was now encircled to the west and the south by the territory of the *Al Sa'ūd*. In December 1915 the British authorities signed a treaty at al-'Uḳayr with 'Abd al-'Aziz b. 'Abd al-Rahmān *Al Sa'ūd*, among the provisions of which was a promise by the latter not to attack Kuwait. Shortly before the signature of this document, *Shaykh* Mubārak had died and there was renewed family rivalry over the succession. Mubārak's eldest son *Dijābir* became the *shaykh*, but he died in February 1917, and was succeeded by Mubārak's second son Salīm. Salīm was by no means as prudent as his father had been in his relations with either the British or with the *Al Sa'ūd*. He allowed the harbour of Kuwait to be used for the transport of supplies to the Turkish army and from February 1918 the port was blockaded by ships of the British navy. This blockade was lifted in the autumn after the cessation of hostilities between the Allied Powers and the Ottoman Empire.

The lack of a defined frontier meant that relations between the *Al Sabāh* and the *Al Sa'ūd* were unlikely to be easy or harmonious, but the activities of the *Ikhwān* [q.v.], and particularly their building of a *ḥiḍra* at Kārya al-'Uḳayr, made matters worse. In 1920 'Abd al-'Aziz b. 'Abd al-Rahmān *Al Sa'ūd*

imposed an embargo on trade with Kuwait) and this ban lasted until 1937, doing much harm to the prosperity of Kuwait. Fear of an *Ikhwan* attack prompted the building of a defensive wall around the city and in October 1920 a force of *Ikhwan* led by Fayṣal b. Sulṭān al-Dawṣṭī, the leader of the Mutayr tribe, attacked the nearby oasis of al-Dijahra. This attack did not succeed, but *Ikhwan* raids continued to pose a threat to the security of this part of north-eastern Arabia until the movement was finally suppressed by 'Abd al-'Azīz b. 'Abd al-Rahmān Al Sa'ūd in 1930 after it had rebelled against his authority.

Shaykh Salīm died in February 1921 and he was succeeded by Ahmad b. Dījābir, the eldest son of the previous ruler. Shaykh Ahmad endeavoured to improve relations with the Al Sa'ūd, and in December 1922 a Convention was signed at al-'Ukayr in which a fixed frontier between the two states was established. The new territory of Kuwait was very much smaller than that which had been allotted to it in the draft Anglo-Ottoman convention of 1913, and Shaykh Ahmad believed that the British authorities had not supported his claims against those of 'Abd al-'Azīz b. 'Abd al-Rahmān Al Sa'ūd as strongly as they should have done. This belief was an important factor in Shaykh Ahmad's reluctance to grant an exclusive oil concession to the Anglo-Persian Oil Company; and it strengthened his later determination to secure the involvement of an American company in the development of Kuwait's oil resources. (The growth of the oil industry has been treated in section 1 above.)

In 1920 Great Britain had been awarded the Mandate over 'Irāk by the League of Nations, and in April 1923 the British High Commissioner for 'Irāk recognised the frontier between Kuwait and 'Irāk as being that which had been laid down in the Anglo-Ottoman draft convention of 1913. There have, however, been disputes about this boundary. The most serious occurred in June 1968, when the 1899 agreement between Great Britain and Kuwait was terminated and Kuwait became a fully-independent state. The Government of 'Irāk immediately claimed that Kuwait was rightfully an integral part of 'Irāk. The ruler of Kuwait, Shaykh 'Abd Allāh b. Salīm (who had succeeded Shaykh Ahmad in 1950) appealed to Britain for military assistance. This request was granted and the dispute was debated by the Security Council of the United Nations. On 20 July Kuwait was admitted to the League of Arab States and that body resolved to preserve the independence of its new member. In 1963 Kuwait became a member of the United Nations.

In November 1968 a new constitution was promulgated and elections for a 50-member legislative assembly were first held in January 1963. The Constitution was suspended in August 1977 as a result of internal political difficulties.

(R. M. BURKELL)

KUWWA (pl. *Kuwwa*), Arabic term denoting "strength, power".

1. Lexicographical study. Ibn Sida defined the word *kuwwa* as the opposite of weakness (*naḥīḍ al-ḍa'f*), cf. Kur'an XXX, 54: "It is God who has created you from weakness (*min ḍa'f*) and who then, after weakness, has given you strength (*kuwwa*)". It is thus the concept of strength and of vigour which is paramount. A man is described as *ḥaṣī* when he is strong in himself, and as *muḥṣī* when he owns a robust mount. On the other hand, like the word *ḥaṣa* (which also has the sense of "ability to act"), *kuwwa* denotes a thread which is part of a rope. As may be read in a *ḥadīṭh* of Ibn Dayiām: "Islam is unravelled link by link, as a rope is unravelled thread by thread (*Aslamu ka-kuwwatu*)". Abū 'Ubayda observes that when such threads become loose (*tukḥḥu*), the rope is liable to be broken. This may be seen as a further example of the idea of strength and solidity. Thus it is primarily a physical force that the term *kuwwa* evokes in the language.

Numerous words in Arabic have similar meanings. Attention has been drawn above to *ḥaṣa*, defined in *L* as power over something (*al-ḥudra 'alā ḥaṣa*). The term *ḥudra* is itself given as a synonym of *kuwwa* (*ḥudra*); it is employed, as *maḥḍar* of the verb *ḥadara*, in the expression *ḥadara 'alā 'ḥaṣa* *ḥudratu*, with the sense of possessing (*malaka*) something. Possession is the exercise of a power, either physical or judicial. Furthermore, just as the idea of power-to-act implies possibility and aptitude, so *kuwwa* has been likened on the one hand to *imkān* (possibility) and to *istidād* (disposition). *Kuwwa* in the sense of possibility is, according to al-Tahānawī, the power or the faculty which is a preparation (*istakyya*) to produce a thing or its opposite, whereas *istidād* is limited to preparation for production of a single effect.

2. *Kuwwa* in the Kur'an. A quite frequent use is that which gives this word the meaning of power in the sense of capacity to act, to fight, to win, and which applies it either to communities or to individuals. Thus in IX, 69, there is reference to "those who before you were stronger than you in power (*ashaddu minhum kuwwatan*) and were richer in goods and offspring". Speaking of man at the Day of Judgment, God says (LXXXVI, 10): "He will then have for himself neither strength nor succour". A second use of a more moral nature is to be found in verses where there is the injunction to "take" the Revelation "with strength" (*bi-kuwwa*)" (cf. among other verses, II, 63 and 93; VIII, 243). Al-Zamakḥsharī explains the word with the expression:

"with effort and firmness" (*bi-ḥiṭṭ wa-'azima*). Finally and most importantly, *kuwwa* is attributed to God with the sense of *ḥudra*; for example in LI, 58, where it is said: "God is the Provider of all good things; He is the unshakable Master of power (*ḥuwa 'l-kuwwan 'l-ma'in*)" and in XLf, 15: "God, who has created them, is stronger than them in power (*ashaddu minhum kuwwatan*); elsewhere we find "There is no power but through God (*lā ḥuwwata illā bi-llāh*)" (XVIII, 39).

3. *Kuwwa* in theology. In the discussion by the Mu'tazila concerning the attributes, and with regard to the doctrine of *taḥṣīl* which stripped the divine essence of all its attributes, by reducing them either to this very essence, or to simple names, it was necessary to stress that the revealed Book speaks of the power (*kuwwa*; cf. above), as well as of the knowledge (*'ilm*) of God. In the *Mahdāt al-Islāmiyya*, al-Ash'ari notes that one group of Mu'tazila, on the basis of XLI, 15, "claim that in saying that God has power, we are led to say that He is powerful (*ḥadur*). They take *kuwwa* purely and simply as a synonym of *ḥudra*. But they maintain this point of view only in regard to *kuwwa* and *'ilm*, being two substantives which occur definitively in the Book of God, and not in regard to the other attributes of the essence such as life (*ḥayāt*), sight (*ḥayāt*) and hearing (*ḥayāt*). This is, according to al-Ash'ari, the doctrine of al-Nazzām and the majority of the Mu'tazila of Baṣra and Baghdād. A second group understands "knowledge" in the sense of the object of knowledge (*ma'fūm*), and "power" in the sense of the object of power (*maḥḍar*). To say that God has a power (*ḥudra* = *kuwwa*), therefore signifies, not that there exists in Him such an attribute, but that created beings depend on Him in such a fashion that they could be called *maḥḍarāt*. This is why, when Muslims see rain, they say: "That is the power of God", meaning that it is a *maḥḍar*. These theologians reserve this explanation, among the attributes of the essence, for knowledge and power, for a purely scriptural reason, as has been seen in the case of the preceding group. A third group assert that God has a power which is identical to Himself (*ḥudra kiya ḥudra*), and the same applies to His knowledge; but they extend this interpretation to all the other attributes of the essence: this is the thesis of Abū 'l-Hudhayl and his disciples. A third group comprises the disciples of 'Abd al-Hudayl, who is known to have sacrificed the texts to the requirements of reason: it can neither be said that God has knowledge and power, nor that He does not have them. This contradicts the formal declaration of the Kur'an.

Ibn Ḥazm, in addition to the verse XLI, 15, quotes a *ḥadīṭh*. When instructing his Companions how to formulate a prayer to obtain a favour (*shahāda*), the Prophet says: "O my God! I ask You for this favour through Your knowledge; I ask You for it through Your power" (*ḥudra = kuwwa*). Then Ibn Ḥazm puts power on the same level as knowledge: *kuwwa* and *ḥudra*, like *'ilm*, belong to God really and not metaphorically; they are nothing other than He, although it cannot be said that they are God, because if power were God, God would be power, which is false. The same applies to knowledge. These terms play the same role as the word *naḥs* (soul) in the verse VI, 17: "It is He Himself (his soul) that ordains mercy". The expression "soul of God" is a description of Him (*shāḥir 'anāhu*), but indicates nothing at all other than Him.

4. *Kuwwa* in philosophy. In his *Isṭiḥṣāt al-'ulūm al-Islāmiyya*, al-Tahānawī gives a panoramic

survey of the question. *Kuwwa* is the origin of the act (*maḥḍa' al-fiʿl*), whether or not it is differentiated, and whether or not it is accompanied by awareness (*ʿilm*) and by will (*irāda*). In this general sense, *kuwwa* is dependent at the same time on nature (*ḥaḍḥa*), the principle of involuntary movement, and on the soul, the principle of voluntary movement. There is thus a distinction between the power of the spheres (*al-kuwwa al-falāhiyya*) which produces a unique act, and the power of the elements (*al-kuwwa al-ʿaṣariyya*) which produces acts that are differentiated in terms of the various combinations of elements, and which has also been called *al-kuwwa al-ṣubḥiyya*, executive power of imposed labour, as a way of recalling that all power to act comes from God, taking inspiration from, among others, the verse XXII, 65: "Have you not seen that God has pressed into your service (*saḥḥāna lakum*) all that is on the earth?" Nevertheless, in the Qurʾān, this term is also applied to the stars, as in XIII, 2, since the Book makes no ontological distinction between the limmanent and the subliminary world. After elemental power come vegetative power, the faculty of the vegetal soul, and animal power, the faculty of the soul of animals. Finally, the term *kuwwa* is also applied to the origin of the change that is produced in one thing, transforming it into something else (*maḥḍa' al-taḥayyur fi shayʾ ḡayr min shayṭu ḥuṣṣ ḡayr*).

By origin is understood the cause (*ʿaṣab*), whether it is efficient (*fiʿl*) or not. In effect, the power can be active or passive, engendering qualities or receiving them (*ḥabūl*). As the origin of the change, it can be applied solely to its receptacle (*maḥall*), as is the case with the form (*ṣūra*) of the air which demands the production of humidity in the matter which it pervades. It can also be the origin of change in its receptacle first, then in another thing: this is the case with the form of fire which produces heat and dryness in its matter and transmits these features to neighbouring objects. But the power of change can act from the start in something other than a receptacle: this is the case with the rational soul which acts immediately on a thing other than itself in producing a change in the body.

According to Fakhr al-Dīn al-Rāzī, some powers have substantial forms (*ṣuwar ḥuṣṣiyya*), such as the power of fire, others have a basis in accidents which happen to the substance. Consequently, there is no generic notion of *kuwwa*, as it is impossible to unite substance and accidents in a single genre.

5. *Kuwwa* in medicine. As an extension of its philosophical usage, this term is frequently employed in medicine. Al-Tahāwī indicates that the physicians introduced three divisions: natural power; animal power; and psychical power. The natural and animal powers include powers served by others (*maḥḍūmā*) and powers which serve them (*ḡāḍimā*). The first are, in the realm of the living, those which operate with a view to the preservation of the individual, the faculty of nutrition and the faculty of growth, or with a view to the preservation of the species, generative power (*muṣallilā*) and plasmatic power (*muṣaṣṣa*). The second are four in number: the power of attraction (*ḡaḍibā*), the power of retention (*maṣikā*), the power of digestion (*ḥaḍma*) and the power of repulsion or of evacuation (*ḡaḍiʿa*). These four faculties are served in their turn by heat and cold, dryness and humidity. As for psychical powers, they are divided into two types: the power of perception (*muḍrikā*) and the power of motion (*muḥarrikā*). Perceptions are external (*ḡhira*), in the case of the five senses, or external (*ḡhira*), in the

case of the aesthetical sensations. The power of movement comprises on the one hand the power that facilitates movement (*ḡaḍibā ilā ʿal-ḥaraka*) with the faculty of desiring (*ḡaḥiyya*) which may be positive or negative, and the power of inclination (*maḥḍiyya*) which guides the former towards the act; and on the other hand, the power responsible for the setting in motion (*maḥḍiyya ilā ʿal-ḥaraka*).

6. *Kuwwa* in human psychology. This is the faculty of deliberate voluntary action. It operates in accordance with a certain order; first there is a representation of the movement to be executed, then a desire, then a will to achieve the end envisaged, and finally the realisation of the movement and the act. Certain philosophers introduce an intermediary between the faculty of desire and the active power: they call it *idḡimā*, a term which seems to correspond to the *δογματισμός* (consent) of the Stoics. It is the decision (*ḡalām*) which follows after a hesitation (*ḡaraddud*) between action (*fiʿl*) and non-action (*ʿaṣab*), as a result of which one of the two parties prevails (*ṣatardḡib*). According to others, there is no intermediary, but a desire which may continue to grow until the decision and the act are put into effect. *Idḡimā* is nothing more than this desire at its maximum intensity. As for the followers of Ibn Sīnā, they reckon that *idḡimā* depends on will and that there is a great difference between desire and will.

A position of eminence is given to the power of the intellect (*al-kuwwa al-ʿāliya*). All theories concerning the intellect, from the end of Antiquity, throughout the Hellenistic period and until the time of the *falāsifa*, depend on interpretations of the third book of Aristotle's *Treatise on the soul*.

7. The notion of *kuwwa* and Greek influences on *ʿaṣāfa*. The numerous meanings applied to the term *kuwwa* in philosophy may be examined, with a view to comparison with Greek thought, from two points of view. The concept *δύναμις* has two opposites in the writings of Aristotle: 1. *ἀδύναμια* (*al-kuwwa* or *ḡaḥi*, inability or weakness); 2. *ἐνέργεια* (*fiʿl*, activity, reality). *Kuwwa* in the former sense is dealt with in the *Categories* and *Metaphysics* (v, ix), in the latter mainly in the *Metaphysics*, vii ix. It may be here observed that inability is to be distinguished from impossibility (*ἀδύνατον* = *muṣṭaḥim* or *maḥḍim*).

8. *Kuwwa*, to be more accurate *kuwwa ḡaḥiyya* (productive ability), being the second species of the category of quality (*ποιόν* [cf. *MAḤḤAL*]) is defined, with Aristotle, as that arrangement by which some one or some thing comes into action quickly and easily, while *al-kuwwa* predisposes to undergo something easily and quickly. Activity and passiveness are here to be conceived as opposites, which exclude one another. They cannot be present at the same time in one and the same subject. *Kuwwa* in this sense is the positive capability for a definite activity or, as the Stoics expressed it; the qualities of things are active forces, agencies. The orthodox *kalām* referred this doctrine only to the activity of God. Muslim theologians said for example—of Christian dogmatics—that God's qualities (*ṣifāt*) are the sources (*maḥḍir*) of his actions. The philosophers, however, referred it in the first place to the workings of nature. Nature is endowed with many forces and abilities and each ability has a corresponding inability. Inability, however, is nothing positive but a deprivation (*στέρησις*, *ʿadam*) or a decay (*φθορά*, *ṣawā*). *Al-kuwwa* is not an absolute nothing but a non-existing of what according to Aristotle

belongs to a thing from its nature. It is especially emphasised that the transition from *hurewa* to *la-hurewa* (or from active to passive) takes place not continuously but without intermediaries, i.e. suddenly, timelessly. The Muslim philosophers are, for the most, usually content to explain these sometimes very questionable assertions with the examples given by Aristotle. In the *Logic* (*Categories*) these are with reference to living beings health (ability) and sickness (inability), and in the organic world, hardness and softness. In addition, in other branches of knowledge, rest is sometimes defined as deprivation of motion, blindness as a want of ability to see, wickedness as the non-existence of good, and so on. All these deprivations (*στερησεις*) are regarded with Aristotle as accidents of matter. Hence the practice (at least since Ibn Sina [cf. *Tis' rasad*], 64) who probably follows a Greek exposition) of distinguishing 'adam as accidental principle from the essential principles: matter and form.

Al-Farabi (*Abhandlungen*, ed. Dieterici, 87, fr. 11) first discussed the question whether suffering (*παθησις*), as the term is used under the category of quality, meant the same as suffering as the last (roth) of the categories. Perhaps he was led to this by a passage in Aristotle (*De anima*, 417b) in which "suffering" is said to have two meanings: 1. it is a kind of decline (*φθορα*) through the opposite (see above); and 2. the preservation (*σωτηρια*) of the possible through what is active, and in this way that thereby a natural basis is evolved for its own being. Instead of a decline we have here a question not only of a mere survival but also of a higher development, a suffering in *domum partem*, an endurance (passive, receptive, contemplative) of higher influences (see *ATHAR*).

B. More important than the contrast between *hurewa* and *la-hurewa* for the history of philosophical terminology became the distinction between *hurewa* and *fi'i*, or, to use the language of the schools, power and action, commonly found in the formulae *bi 'l-hurewa* (*δυνάμει*) and *bi 'l-fi'i* (*ἐνέργεια*). Both expressions are closely connected with the two fundamental conceptions of Aristotelian philosophy, matter and form. Power is peculiar to matter, action to form. Power and action are called *δυνάμεις* (Arab. *qudwat*, attributes) of matter and form. Aristotle sought in this way to reconcile a static with a dynamic consideration of the world. Matter and form (see *AAWA*) are names for the constituents of the existing, power and action for the stages of development of the becoming. These fundamental conceptions cannot be defined more exactly. Like Aristotle, the Muslim philosophers endeavour to illustrate them by examples.

The development from power to action presupposes a continuous world of becoming, time and change. According to one principle of Aristotle, which was taken over by the Muslim thinkers, at least with reference to the world, the infinite cannot be real. But in time, especially if it is conceived without beginning and without end, lies the ongoing possibility of all that possesses its limited reality in any particular moment. Under definite conditions, if there is no obstacle in the way, the possible advances to full realisation by stages. Possibility and realisation are to be regarded as termini of a development taking place within time. This process, the development from power to action, is called by Aristotle motion (*κίνησις*, *haraka*) which is defined as the realisation (*ἐνέργεια*) of the possible as such. The end (to be *bi 'l-fi'i*) is called in Arabic also *hawl*

(perfection) just as Aristotle uses *ἐνέργεια* and *ἐντέλεια* synonymously.

The concept of an originally pure (i.e. without quality) possibility which can in course of time become everything, is according to Aristotle a conceivable abstraction. Everything becoming is already more or less formed, realised; deprivation is an accident of matter, not as the neo-Platonists asserted, matter itself. Aristotle himself did not succeed in carrying through logically his distinction between the principle of deprivation (*υπόστασις*) and matter as pure possibility. The Muslim thinkers who were under neo-Platonic influences were naturally still less able to do so. They often identified 'adam and *hurewa*. Usually however, they endeavoured to represent our world of becoming as a hierarchy of positive forces or powers. The process of becoming is then to be conceived as a co-operation, a working into one another of active and passive. With Aristotle, the Stoics, etc., they talk of active and passive, moving and moved, ruling and serving forces, which by no means rule one another out. Two aspects of one and the same process are thus described. One and the same power may therefore be active, moving, ruling with respect to what is below it in the order of stages of being but passive, receptive, contemplative with respect to those above it. In other words *hurewa* and *fi'i* are used in the correlative sense exactly like matter and form. A material more or less formed, e.g. clay, is matter for bricks and the formed brick is material for a building. Similarly, in the sperm there is the potentiality to become a boy, in a boy a potentiality to become a man. In other words, the sperm possesses the immediate potentiality for a boy, a remote potentiality for a man.

Amongst the Isma'ili thinkers, the problem of power is equally put forward in another form, in the shape of the idea of receptiveness (*qubul*). Whilst the Primal Intellect receives at a single stroke (*daf'at* *adhafat*) everything which rightfully makes up its being, the "creatures" inferior to it are incapable of this. Hence they receive successively in the course of time the characters and qualities which belong rightfully to their essence and which make up their secondary perfection. This explains why these latter gradually become transformed according to the different kinds of movement. It is through this that the power of generation (*lawm*) is explicable. But when they have reached their perfection, certain beings tied down to matter are unable to keep it and decline into final corruption (*fasad*); in this way, the force of destruction may be explained.

The whole theory is closely connected with the dynamic view of the existence of the world. Thus as in Aristotle, in the Muslim philosophers physics, including psychology, are developed into a hierarchical system of natural forces and faculties of the soul. In place of faculty we sometimes find parts of the soul (*qurra*, *ag'as*), Platonic terminology, also used by Aristotle). Gnostic influences may be traced, in the doctrine of the faculties of the soul especially and their localisation (in al-Farabi, Ibn Sina and al-Ghazali). Al-Farabi deals with this in his *Fuṣūṣ* (i.e. *Abhandlungen*, ed. Dieterici, 72 ff.; wrongly ascribed to Ibn Sina in *Tis' rasad*], 47 ff.; cf. his "Model State" [ed. Dieterici, 34 ff.). Ibn Sina (*Kitab al-Nafs*), Cairo 1913, 258 ff.; cf. *Ighārāt*, ed. Forget, 123 ff.) enumerates some 15 *qurra* from the highest faculty of the reasoning soul to the powers of the simplest bodies. Al-Ghazali (*Ta'ālufi*, ed. Bouyges, index) is acquainted with over 30 *qurra*; but some are synonyms.

As briefly explained above, in the world of becoming *hewma* is earlier in time than *h'v*, but *h'v* —so his Muslim successors teach following Aristotle— is always the earlier in the sense of the higher. What is potential cannot of itself devolve into actuality. God who is the perfectly real, according to the Muslim philosophers, brought the world from non-existence (*'adam*) to existence (*awdād*) or from *hewma* to *'v* (*h'v* *h'v*). The spirits (*'ahā*) which act as intermediaries between God and the world are usually called real. It is the activity of the last heavenly spirit, the *'ahā fa'āl*, which as Ibn Sīnā, following al-Fārābī, expresses it, gives everything earthly its form (*awdād al-jawar*; cf. for this expression *Enneads*, v. 9, 3), or, as Ibn Rushd prefers to say, brings everything potential here into actuality. This is however not a distinction in principle between the two philosophers, with Aristotle they regard matter and form as substances, potentiality and activity as their attributes (*landāh*).

C. In the *Theology of Aristotle* (ed. Dielerici, 94) is the following remarkable passage: "In this (sensu) world, action is preferable to potentiality, in the higher (intelligible) world, however, potentiality is preferable to action". This pregnant sentence is not found in the *Enneads* but corresponds completely to the utterances of Plotinus (*Enn.*, v. I, 6 f.; 3, 13 f.; 4, 21 f.; 5, 13 f.). According to a general principle of Plotinus—not however always logically carried through—the categories and main conceptions of Aristotelian philosophy are only to be referred to the sensual world. If they are applied to the spiritual world, they have another but higher meaning. The higher *hewma* is an intensification of the productive faculty discussed under A. In addition, there is an exchange of value in the factors potentiality and actuality.
